Whole mature soybeans may be soaked, ground and made into a white liquid which looks like milk. In China "soybean milk is prescribed for babies allergic to human milk, and it is also recommended for invalids."

"Soybean milk is used in cooking in both China and Japan. It is because of this product that the soybean has been called 'the cow of China.'"

For adult Chinese a "typical breakfast is hot soybean milk with bread–a sesame bun or a cruller."

"A byproduct of soybean milk is soybean milk skin (*fu p'i*)" [yuba] which forms on the surface of heated soymilk and can be skimmed off and dried into sheets.

Dried yuba can be "rolled up and deep fried to make the crisp crusty bean sticks (*fu tzu*)" [dried yuba sticks] which appear in both Chinese and vegetarian dishes.

A by-product of the manufacture of soymilk is okara, a high-fiber sediment that is generally fed to pigs in China. Yet okara can be made into pancakes, etc.

"The most important derivative of soybean milk is bean curd [tofu],..." In China it is often pressed, and in both China and Japan it is deep-fried. Or it can be frozen and dried.

3388. *SoyaScan Notes.* 1980. Chronology of soybeans, soyfoods and natural foods in the United States 1980 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 4. An embargo on the sale of grain to the USSR is announced by President Carter in retaliation for the Soviet invasion of Afghanistan. Though the embargo was lifted in 1981, it led to a subsequent reduction on Soviet purchases of U.S. soybeans and products.

Feb. Second issue of *Soycraft* magazine published by Leviton. 5,000 copies. On Shurtleff's suggestion, Leviton decides to change the magazine's name to *Soyfoods* in future issues.

Feb. New England Soy Dairy holds a big press conference and soyfoods luncheon in Boston.

Feb. First statistics on the size of the U.S. soyfoods industry and market published by SANA (Soyfoods Association of North America) and The Soyfoods Center.

Feb. Plenty, a Third World development and relief organization run by The Farm in Tennessee, works with the people of Solola, Guatemala to open a solar-heated soy dairy. They make tofu and soy ice cream. Partial funding comes from Canadian International Development Agency (CIDA). A promising, original concept and model for taking soybeans and soyfoods to Third World countries.

March 10. Tempeh Production by Shurtleff and Aoyagi published by The Soyfoods Center.

March. Trader Vic (Bergeron), internationally famous San Francisco restaurateur, publishes a poster titled "Put a Little Tofu in Your Life," containing a lovely Polynesian girl and names of tofu recipes served at his restaurants. Three major newspaper stories on his tofu cuisine follow.

March. Soja Soyfoods Cafe opens in Toronto, Canada.

March. Hip Pocket Tofu Deli and Rainstar, a distributor of soyfoods, open at same location in Columbus, Ohio.

March. A second commercial source of tempeh starter culture is now available from Ann Arbor Biological Supply and GEM Cultures, run by Gordon McBride and Betty Stechmeyer.

April. "Climbing Curd," an article on tofu, published in Time magazine, as a result of the New England Soy Dairy Press Conference in February.

May. New England Soy Dairy puts Numu brand soymilk on the market after 2 years of product development. It is quickly withdrawn and dropped, due to short shelf life.

May 5 -June 9. Shurtleff and Aoyagi do Soyfoods America Tour: 20 public programs, 30 media interviews, and 5,800 miles of driving to promote and teach about tempeh and tofu. Ends in Champaign, Illinois where Shurtleff attends the INTSOY Short Course on Soybean Processing for 2 months.

May. Gary and Chandri Barat start selling soyfoods (Whipped Tofu Mousse Pie, Tofu Muffins, Tofu Spinach Quiche) at street fairs in New York City under the name Legume. During 1980 both Legume and Quong Hop & Co. in South San Francisco introduce tofu quiches (both sold frozen); these are America's first tofu entrees to be sold frozen.

June. "Tofu" by Nancy DeRoin published as a cover story by *Cuisine magazine.*

June. U.S. Supreme Court rules that man-made organisms created by genetic manipulation can be granted copyright protection. This ushers in a new era of research on and commercialization of soybean varieties by private companies.

June. INTSOY and Land of Lincoln Soybean Farmers establish International Soybean Institute, headed by Russ Odell, to expand soybean utilization overseas.

June. American Soybean Association's *Soya Bluebook*

publishes its first information on the new wave of U.S. soyfoods producers.

July. *Das Miso Buch* (The Book of Miso), by Shurtleff and Aoyagi published in German by Ahorn Verlag.

July 9-13. Third Annual Soycrafters Conference at the University of Illinois. Organized and financed by Richard Leviton. 270-285 attendees from 10 foreign countries. Very successful, with a profit of $7,000. Third issue of Soyfoods magazine published by Leviton. A new Board of Directors is elected with Luke Lukoskie as chairman.

July. Mark Brawerman starts Jolly Licks (later renamed Pacific Trading Co.), a soyfoods marketer-distributor, in San Francisco. First product is soymilk ice cream. Quickly expands to tofu cheesecakes, tofu tamales, etc. Best existing model of this new concept.

Aug. 15. Archer Daniels Midland Co. enters the soy protein isolate market with its purchase of Central Soya's isolate plant.

Aug. Wildwood Natural Foods, Inc. formed in Fairfax, California. Original owners are Paul Duchesne, Paul Orbuch, Bill Bramblett, and Frank Rosenmayr. They do very creative work with prepared, convenience tofu products, such as sandwiches and salads.

Aug. *Tofu: Everybody's Guide,* by Stephen Cherniske published by Mother's Inn Center for Creative Living.

Aug. *The Soy of Cooking,* by Norton and Wagner self-published.

Aug. 20. "Tofu Gaining Popularity as a Cheap Protein Source," by Sylvia Porter published in the *Washington Post.* This is the earliest known publication to mention David Mintz's work with tofu. It describes the numerous deli products he makes from tofu. Ice cream is not mentioned.

Sept. 3. "Tofu: Trader Vic's Creativity Americanizes an Asian Staple" by Harvey Steiman published in San Francisco Examiner. Trader Vic is one of America's foremost restaurateurs.

Sept. Richard Leviton (Soyfoods Association) and Thelma Dalman (food service director for Santa Cruz city school system) lobby for tofu in Washington, D.C. USDA grants 1-time approval for a test program using tofu in Santa Cruz County School Lunches. But this failed to set a national precedent.

Sept. Soyfoods Association board holds first meeting in Colrain, Mass. Plans fund raising program that fizzles.

Sept. 17. New-Age Foods Study Center (run by Shurtleff & Aoyagi) changes its name to The Soyfoods Center. Creates new logo and letterhead.

Sept. 24. "A Couple on a Tofu Mission in the West" (about William Shurtleff and Akiko Aoyagi) by Lorna Sass, published in The New York Times.

Oct. First issue of *The Beanfield* (named after a chapter in *Walden* by Henry David Thoreau) a monthly soyfoods newsletter, published by Leviton. Name changed to *Soyfoods Monthly* in March 1982.

Oct. Tofu and The Bountiful Bean Plant in Madison, Wisconsin are on the Today Show for 2 minutes. This TV segment is aired 2-3 times.

Oct. 13. "With his Book on Tofu William Shurtleff Hopes to Bring Soy to the World" by Dianna Waggoner published in *People* magazine (circulation 3.4 million). The same issue noted: "Model Cheryl Tiegs" has been eating tofu for several years and gives it some of the credit for helping her to lose 35 pounds in 1972. Her favorite recipe for Oriental Pudding (with "1 block tofu (4 ounces)") is published.

Oct. Severe nationwide shortages of peanuts and peanut butter. Soyfoods producers miss a golden opportunity to make and sell soynut butter.

Nov. 9-14. World Conference on Soya Processing and Utilization held in Acapulco, Mexico, organized primarily by the American Soybean Assoc. 1,100 participants from 35 nations; of these approximately 300 registrants and 250 student attendees were from Latin America. Proceedings published in March 1981 issue of Journal of the American Oil Chemists' Society. Leviton attends and mans a SANA booth, but is not invited to speak.

Nov. Soyfoods Center publishes three pamphlets on soyfoods in Spanish: *Que es el Tofu? Que es el Tempeh? Que es el Miso?*

Nov. *East West Journal* and Michio Kushi stop misusing the term "tamari" and start using the proper term, shoyu or "natural shoyu."

Dec. The Soyfoods Center and Soyfoods magazine merge and computerize their mailing lists of people and organizations world wide actively interested in soyfoods. 5,000 names now on list. Soyfoods Center pays all costs of computerization. By mid-1981 there were 10,600 names in 50 categories. List is available for rent.

Dec. Farm Foods starts national ad campaign for Soy Ice Bean with full-page color ads in national magazines: New Age, Whole Foods, East West Journal, and Vegetarian Times.

Dec. First branch of the International Soyfoods Center Network starts in Sweden, run by Ted Nordquist. Headquarters are in Lafayette, California.

Dec. *The Tofu Primer* by Juel Andersen published by Creative Arts.

Dec. Soymilk viili first made (on a home scale) by Gordon McBride and Betty Stechmeyer of GEM Cultures in Fort Bragg, northern California. This cultured milk product, similar to the traditional Finnish dairy product, has a thick consistency almost like honey.

Dec. New England Soy Dairy becomes the first of the new generation of Caucasian-run tofu companies to top $1 million in annual sales (they hit $1.2 million). With only 6 workers in the plant, they are making $4,000 profit per month during the last quarter.

* In Diamond v. Chakrabarty, the U.S. Supreme Court upholds by 5 to 4 the patentability of genetically

altered microorganisms, opening the door to greater patent protection for any modified life forms.

3389. Allred, Paul. 1980. Re: Work with soymilk and Loma Linda Foods. Letter to William Shurtleff at Soyfoods Center, Dec. 2 p. Typed, with signature on letterhead.
• ***Summary:*** "I became interested in the soybean potential at the World's Fair in Chicago in 1934 when Henry Ford displayed all of the parts that he made from the soybean. They... made gear shift knobs to sell. This made quite an impression on me and I bought one of the knobs. Later around 1940 I learned of the work Harry Miller was doing and followed his work through the years and became personally acquainted with him. I began to experiment with soy milk as early as 1940 and at present am with Loma Linda Foods still experimenting." Address: California.

3390. Bau, H.M.; Debry, G. 1980. L'art de l'utilisation du soja: Habitudes et traditions [The art of soya utilization: Customs and traditions]. *Cahiers de Nutrition et de Dietetique* 15(4):277-84. Oct/Dec. [40 ref. Fre; eng]
• ***Summary:*** "For many centuries, soybeans have meant meat, milk, cheese, bread, and oil to the people of Asia. Because of their great food value, they not only have long had a definite place in the oriental diet but now belong in the diet of America and of the entire world. In Europe, the use of soybean products in the quotidian diet is still limited, however it is sure that they will be an important factor in the balanced diet of the future."

Note 1. Soyfoods Center has a 16-page English-language translation of this article.

Note 2. *Webster's Dictionary* defines quotidian (derived from the French *quot* = as many as + *dies* = day) as "occurring every day." Address: University of Nancy, France.

3391. Fernando, L.H. 1980. Cereals and pulses as sources of food. *Alafua Agricultural Bulletin* (*Apia, Western Samoa*) 5(4):12-14. Oct/Dec. [3 ref]
• ***Summary:*** "In terms of edible dry weight more than two-thirds of the world's nutritional requirements of human food is supplied by the cereals. Of the proteins supplied, half is contributed by the cereals, as compared with less than one-third from animal sources. The rest of the proteins for humans is derived largely from pulses.

"Cereals and pulses are therefore important in human nutrition. For this reason their possible value supplementing root crops in the South Pacific is worthy of consideration. At the outset, however, I should acknowledge traditional attitudes to cereals and pulses in this region and possible causes underlaying apparent indifference to these foods in countries other than Fiji... Pulses such as soyabean, peanut, pigeon pea, cowpea and winged bean are promising, except that crops such as peanut are eaten by rodents before harvest. The pulses will supply much needed protein, cheaper than from animal sources." The author then discusses three cereals (maize, sorghum, and rice) and four pulses (soyabean, peanut, winged bean, and cowpea).

Concerning the soyabean: It "is the most important of the pulses, followed by the peanut... There is a range of soyabean varieties and some of these are well adapted to tropical conditions. A few varieties have been grown very successfully at the University of the South Pacific School of Agriculture at Alafua in 1979 and experiments are being continued. The crop takes three months from sowing to harvest, the plant sheds its leaves, and the stem with the pods can be uprooted. Cultivation is easy, and like other legumes, nitrogen-fixing bacteria of the Rhizobium type that are found in the root nodules are able to fix atmospheric nitrogen, thus saving expenditure that would otherwise be necessary for nitrogenous fertilizer. Soyabean is now the most important source of vegetable oil; soyabean milk is a substitute for cows milk, particularly where cattle rearing is not a practice. After extraction of oil, the residual cake is a high-protein food or feed." Also discusses: Peanut, winged bean, and cowpea.

Note: This is the earliest document seen (March 2010) concerning soybeans in Samoa (formerly Western Samoa), or the cultivation of soybeans in Samoa. This document contains the earliest date seen for soybeans in Samoa (April 1979), or the cultivation of soybeans in Samoa (1979, probably in about April). The source of these soybeans was Sri Lanka. In April 1979 L.H. Fernando brought 3 varieties of soyabeans (Bragg, PB1, and Improved Pelican) from Sri Lanka to Western Samoa. Address: Head, Crop Production Dep., USP [Univ. of the South Pacific] School of Agriculture, Box 890, Apia, Western Samoa.

3392. Tofu Shop (The). 1980. December. New soyfoods restaurant or deli. 768 18th St., Arcata, CA 95521.
• ***Summary:*** Matthew Schmit. 1981 Feb. 13. "Fresh tofu comes to Northern Cal." "The Tofu Shop of Arcata, California, officially opened its doors on December 12, 1980..."

Questionnaire filled out by owner of restaurant or deli. 1982. Restaurant opened for business in Dec. 1980. Lists the company's most popular soy-based menu items in descending order of popularity: 1. Tofuburger (authentic). 2. Tofu-vegetable sushi rolls. 3. Tofu spinach turnovers. 4. Tofu pumpkin pie. 5. Tofu cream pie. 6. Tofu vegetable patties. 7. Tofu tahini salad. 8. Tofu potato salad. 9. Carob soy pudding. 10. Happy-dragon soydrink. The highest weekly total sales over the past 6-2 months: $1,200 in Oct. 1981 because of deli expansion and return of students to Humboldt State. The average weekly deli sales during this period: $850. Note: The company also sells $850/week wholesale. Average hourly wages paid to workers: $3.50. The business startup cost (amount of money it cost to get the business started):

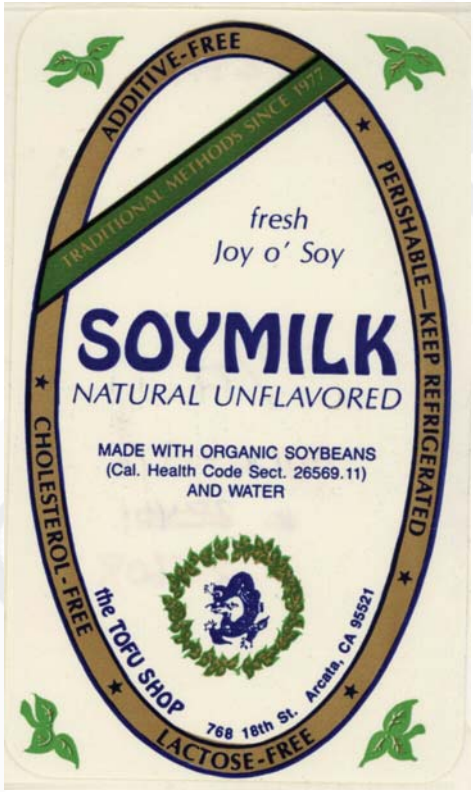
$11,000. Current profitability status: Profitable. Plans for the future: Deli display cooler, steam table for hot food, tempeh production. Advice the owner would give to someone starting a similar business: Choose the perfect community. Prepare a detailed business prospectus. Obtain sufficient capital (plus some extra). Prepare for at least one year of double-time work. Love soyfoods. Be professional. Other: "Our goal has been to develop a model for the 'all-American neighborhood tofu shop,' which produces its own fresh tofu and other soy products; where the neighbor down the street can grab a quick bite on the run, or pick up staple groceries (tofu, soymilk, soy margarine, bread, etc.) for home cooking. A large portion of our business is from people who walk to our shop. A balance of wholesale / retail and deli foods / groceries makes small scale tofu production feasible."

Shurtleff & Aoyagi. 1982. Report on Soyfoods Delis, Cafes & Restaurants. p. 3. Started in Dec. 1980 by Matthew & Suzanne Schmit, who formerly ran Far Pavilions in Telluride, Colorado.

Packet from Matthew Schmit. 2002. Sept. 24. He encloses three original, undated menu leaflets, all vegetarian: (1) Earliest, printed in about 1982, is dark blue ink on tan paper. 3 panels each side, each panel 22 x 9 cm. The menu is on the inside 3 panels. On the 1st panel: Welcome! The Tofu Shop Deli and Grocery. A nice (3 by 2¼ inch) illustration of "The Tofu Shop Specialty Grocery and Deli" appears in the center. "We make our own tofu fresh daily..." (2) Similar. Printed in about 1987. Blue ink on light beige paper. Prices have risen a little. (3) Larger. Printed in about 1992, green ink on beige recycled paper, 8½ by 14 inches, folded into 4 panels on each side. More menu items in these categories: Green salads. Deli salads. Tofu salads. Burgers. Sandwiches. House specialties. Soups & sides. Beverages. Tofu cold-cuts. Address: Arcata, California.

3393. **Product Name:** Carob-Soy Pudding.
Manufacturer's Name: Tofu Shop (The).
Manufacturer's Address: 768 18th St., Arcata, CA 95521.
Date of Introduction: 1980. December.
Ingredients: Tofu, carob, honey, soymilk, walnuts, coconut, spices.
Wt/Vol., Packaging, Price: 8 oz.
How Stored: Refrigerated.
New Product–Documentation: Leaflet 1980, undated. "New deli foods from The Tofu Shop" (768 18th St., Arcata, California 95521). "Your local soyfoods producer." In the upper left corner is a dragon in a round circle. In the lower right is a little man whose body is a paper deli takeout container; he has two arms and two legs, and is wearing a top hat.

3394. **Product Name:** Fresh Joy o' Soy Soymilk [Natural Unflavored].
Manufacturer's Name: Tofu Shop (The).
Manufacturer's Address: 768 18th St., Arcata, CA 95521.
Date of Introduction: 1980. December.
Ingredients: Organic soybeans (California Health Code, Sect. 26569.11), and water.
Wt/Vol., Packaging, Price: Pint or quart plastic bottles.
How Stored: Refrigerated.



New Product–Documentation: Leaflet 1980, undated. "New deli foods from The Tofu Shop" (768 18th St., Arcata, California 95521). "Your local soyfoods producer." In the upper left corner is a dragon in a round circle. In the lower right is a little man whose body is a paper deli takeout container; he has two arms and two legs, and is wearing a top hat. Pints or quarts.

Label. Received July 1988. 2.5 by 4 inches, vertical oval. Self adhesive. Gold, blue, and green on white. "Fresh Joy o' Soy Soymilk. Natural Unflavored." "Additive-Free. Traditional Methods Since 1977. Cholesterol-Free. Lactose Free." Address: 768 18th St., Arcata, California 95521.

Note: This is the company's 2nd and nicest soymilk label in Arcata; it was first used in 1983 The first (sent by Matthew Schmit in March 2009), which first appeared in Dec. 1980, was round, 3 inches in diameter, green and yellow on white. A large, horizontal, white oval in the middle enabled the product name ingredients, and volume to be stamped on in blue ink, as follows: "Fresh Joy O' Soy. Ingredients: Water, organic soybeans. 16 Fluid ounces (1 pint)."

As of 2002, the unflavored soymilk is sold in pints, quarts, half gallons, and gallons.

3395. Tofu Shop (The). 1980. New deli foods from The Tofu Shop (Leaflet). Arcata, California. 1 p. Single sided.
• ***Summary:*** Across the bottom is written: "Your local soyfoods producer." In the upper left corner is a dragon in a round circle. In the lower right is a little man whose body is a paper deli takeout container; he has two arms (with white-gloved hands), two legs (with white spats and black shoes), and is wearing a top hat.

The top half of this leaflet reads: "Dear friends and customers, We hope you'll try our new, ready-to-eat deli foods! They're all made with our traditional-style tofu. Each item is tasty, low in calories, and cholesterol free. And of course, they're all packed with high quality protein.

"Every tofu shop deli product you order is custom-made just for you, and delivered fresh to the northcoast cooperative warehouse in Eureka. This means a high quality product for your customers, and a good shelf life for you.

"You can help by keeping these fresh foods well refrigerated (34-37ºf) and observing the pull date on each label. Thank you.

"Happy eating, The Tofu Shop

"P.S. Just a note about our tofu! It's handmade right here in northwestern California, shipped fresh, and our traditional slow-cooking technique gives it a sweet, delicate taste."

On the bottom half are listed (with ingredients and weights, but without prices) soy products made by the company: Tofu: 14 oz. 14 oz package, or 10 lb bulk. Soymilk: Unflavored pints or quarts. Salads (8 oz): Potato-Tofu Salad, Tahini-Tofu Salad, Tofu Egg(less) Salad. Desserts (8-10 oz): Carob-Soy Pudding, Cocoa-Carob Creme Pie, Pina-Colada Creme Pie, Pumpkin-Tofu Pie. Address: 768 18th St., Arcata, California 95521.

3396. Tofu Shop Deli & Grocery. 1980. Welcome to the Tofu Shop (Sign). 768 18th St., Arcata, CA 95521.
• ***Summary:*** Sign (8½ by 11 inches, in black calligraphy on white) sent by Matthew Schmit 2002 Sept. 24. It was located inside the Tofu Shop. "A blending of the delicatessens of the West with the tofu shops of the Orient. We produce tofu, soymilk and other soyfoods using traditional methods and demonstrate how these versatile foods are adapted to the Western Diet. Try our take-out deli. We use the finest ingredients which are often organic and locally produced. Browse our shelves for specially chosen condiments and grocery items to tastefully enhance your own homecooking with soyfoods. Thank you for you patronage." Address: Arcata, California. Phone: 707-822-7409.

3397. **Product Name:** Soymilk [Plain], and Soysage.
Manufacturer's Name: Central Soyfoods.
Manufacturer's Address: 11 W. 14th St., Lawrence, KS 66044. Phone: 913-843-0653.
Date of Introduction: 1980.
Wt/Vol., Packaging, Price: Soymilk: Glass jar. Later in ½-gallon plastic bottle.
How Stored: Refrigerated.
New Product–Documentation: Talk with Jim Cooley of Central Soyfoods. 1989. Feb. 16. The original plain soymilk had nothing added. It is presently sold only from the shop. Competition from Tetra Pak soymilks has hurt his sales. In March 1990 the company was selling only 10 gallons/week of soymilk and only directly out of the shop. It retailed for $1.80 per half gallon.

3398. Chaij-Rhys, S. 1980. A diet pattern for total vegetarians. *Adventist Review* (*Hagerstown, Maryland*) 157:1014-15. *
• ***Summary:*** This food guide was prepared specifically for vegans, especially vegan Seventh-day Adventists. An attractive feature of this guide is its use of a simple numerical formula to help the user remember serving recommendations. The plan calls for 1 daily serving of nuts, seeds, or legumes; two servings of fortified protein-rich foods such as fortified soymilk or meat analogs; three servings of vegetables; four servings of fruit; and five servings of grains and cereals.

3399. Chen, Steve. 1980. Nutrition and production of soymilk. Paper presented in Bangkok, Thailand. Taipei, Taiwan: American Soybean Assoc. 10 p. [4 ref. Eng]
• ***Summary:*** Contents: Introduction: Commercial products mentioned include President and Wei-Chuan in Taiwan; Vitamilk in Bangkok (Thailand); Magnolia, Bonus, Yeo Hiap Seng, and Drinho in Singapore and Magnolia. Nutrition of soymilk: Composition of soybeans, antinutritional factors, composition of soymilk. Production of soymilk: Purposes of soymilk production, varieties of soymilk, basic steps of soymilk production, beany flavor of soymilk, production methods, soymilk quality standards. Conclusions. Address: American Soybean Assoc., Taiwan.

3400. **Product Name:** [Soymilk (Plain, Vanilla, Coffee)].
Foreign Name: Tônyû (Banira, Koohii).
Manufacturer's Name: Chiba Seisen Shokuhin Kogyo. (Chiba Fresh Foods Manufacturing Co., Ltd.).
Manufacturer's Address: 1788 Mizunuma Chonan-machi, Chosei-gun, Chiba-ken 297-01 Japan.
Date of Introduction: 1980.
New Product–Documentation: Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that Chiba Seisen Shokuhin Kogyo first made commercial soymilk in Japan in 1980.

K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. This company introduced Tônyû, Tônyû Banira, and Tônyû Koohii in 300 ml puroo packs. No date of introduction is given. packs.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64.

3401. **Product Name:** Soy Drink (Soymilk).
Manufacturer's Name: Denver Tofu Co.
Manufacturer's Address: 6150 N. Federal Blvd., Westminster (N. Denver), CO 80221. Phone: 808-538-1305.
Date of Introduction: 1980.
New Product–Documentation: Talk with Haru Yamamoto. 1988. Aug. 25.

3402. **Product Name:** Soy Ice Bean (Named Soy Ice Bean from mid-1979 to early 1982. Honey Sweetened) [Honey Vanilla, Carob, Strawberry, Orange, Banana, Chocolate, Wildberry, Mocha, or Peanut Butter Carob Chip].
Manufacturer's Name: Farm Foods.
Manufacturer's Address: 156 Drakes Lane, Summertown, TN 38483.
Date of Introduction: 1980.
Ingredients: Almond Espresso: Water, soy powder [powdered soymilk], honey, soy oil, almonds, pure coffee concentrate, soy lecithin, locust bean gum, guar gum, Irish moss.
Wt/Vol., Packaging, Price: 16 fluid oz (1 pint) carton.
How Stored: Frozen.
New Product–Documentation: Labels. Brown and white on orange wood motif. "Serve soft for full flavor. Non dairy frozen dessert."

Ad in *Whole Foods.* About 1980-81. p. 69. "Farm Foods Soy Ice Bean. The completely vegetarian frozen dessert." Note: The powdered soymilk in this product was made by Loma Linda Foods in Mt. Vernon, Ohio. Shurtleff and Aoyagi. 1985. *Tofutti and Other Soy Ice Creams.* p. 46-47.

3403. **Product Name:** [Soyatole Soymilk].
Foreign Name: Soyatole.
Manufacturer's Name: Industrial de Alimentos S.A.
Manufacturer's Address: 146 Poniente 789, Col. Ind. Vallejo, Mexico 17, DF, Mexico.
Date of Introduction: 1980.
New Product–Documentation: Soya Bluebook. 1980. p. 51; 1982. p. 63.

3404. **Product Name:** Island Spring Soymilk (Flavored) [Raspberry, Orange, Vanilla, Coffee].
Manufacturer's Name: Island Spring, Inc.
Manufacturer's Address: P.O. Box 747, Vashon, WA 98070.
Date of Introduction: 1980.
Ingredients: Raspberry: Soy milk with mixed fruit concentrate and raspberry concentrate.
Wt/Vol., Packaging, Price: 8 fluid oz (236 ml) plastic jar.
How Stored: Refrigerated.
New Product–Documentation: Labels. 1980. 5.5 by 1.75 inches. Self adhesive. Raspberry is black and white on raspberry. Orange flavor is black and white on orange. "100% Non-Dairy. No sugar. No preservatives." Talk with Luke Lukoskie. 1987. Oct. 19. Island Spring Inc. Fact Sheet and Price List. 1988. This product is still being sold. Now called "Soymilk" and sold 16 quarts or 9 half gallons to the case. Form filled out by Yvonne Kuperberg. 1988. Oct. 1. Gives flavors. Not currently produced.

3405. Itona Products Ltd. 1980. The story of a milk that isn't (Leaflet). Wigan, England. 4 panels each side. Each panel: 23 x 10 cm.
• ***Summary:*** Other products include brown rice pudding, soya custard, Granymels, Noot Bar. Address: Leyland Mill Lane, Wigan, England.

• ***Summary:*** The following soyfoods are listed with photos of most labels: Golden Archer brand Soya Plantmilk, Brown Rice Pudding, Beanmilk Custard. Granny Ann brand High Fibre Biscuits, Noots (roasted salted soya beans), Noot Bar, Beanmilk Chunky Bar. Itona TVP, Beef flavoured mince, or chunks, Natural chunks, Tonabanga, Tonaburga, Tona 'C' Food (like seafood). Address: Wigan, England.

3407. **Product Name:** Lactasoy (U.H.T. Soymilk/Cow's Milk Blend).
Manufacturer's Name: Kickapoo (Thailand) Co. Ltd.
Manufacturer's Address: 3532 Sukhumvit Rd., Bangna, Bangkok 26, Thailand.
Date of Introduction: 1980.
Ingredients: 1989: Soybean 10%, sugar 7%, whole milk powder 2.5%, vegetable fat 1.7%.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton. Later 250 ml. Retails for 5.50 bhat (1984).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Soya Bluebook. 1982. p. 78. "Lactasoy." Tetra Pak Co. 1983. Brochure. Packaged in Tetra Brik Aseptic 250 ml. at top of front panel: "Supplementary Food." Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 105, 121.

A photocopy of a page from a market study of unknown origin, sent by Anders Lindner. 1984. March 9. Lactasoy, is made by Kickapoo Thailand Co. Ltd. in a plant with a production capacity of 4,000 liters/hour (UHT). It is packaged in Tetra Packs and can be classified as a milk product that is in competition with UHT milk.

Photocopy of Label sent by Anders Lindner. 1989. "Supplementary food."

Letter from Monica Kjellker Gimre of Alfa-Laval. 1990. May 30. Alfa-Laval sold a complete soymilk plant to Kickapoo in Thailand. It had a capacity of 4,000 liters/hour and began operation in 1980.

Label sent by Claire Wickens from Thailand. 1994.

June 15. 250 ml. Blue on white. Ingredients: Soybean 10%, sugar 7%, whole milk 2.5%, vegetable fat 1.7%. The product is now packed in a Combibloc carton. The address has not changed.

3408. **Product Name:** Bottled Soymilk.
Manufacturer's Name: Matsuda-Hinode Tofu Co.
Manufacturer's Address: 526 Stanford Ave., Los Angeles, CA 90013.
Date of Introduction: 1980.
Wt/Vol., Packaging, Price: Bottle.
New Product–Documentation: Soya Bluebook. 1980. p. 50.

3409. **Product Name:** Vito or Vita (Powdered Soymilk).
Manufacturer's Name: Nestlé Products (M) Ltd.
Manufacturer's Address: Malaysia or Philippines.
Date of Introduction: 1980.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 123. "By 1980 Nestlé was selling a powdered soymilk in Malaysia and the Philippines, brand named Vito or Vita, thus becoming the first company to market soymilk regionally in Southeast Asia."

Michael Loh. 1990. "An overview of export opportunities in the new markets." Filipro, Inc., which is the Philippines' licensee for Nestle S.A., reported increasing market acceptance of its re-launched powdered soya milk product Vita (chocolate flavor), and a soy-based baby cereal named Ceresoy.

3410. **Product Name:** Soymilk.
Manufacturer's Name: Pyung Hwa Food Co. Inc.
Manufacturer's Address: 2139 Dundas St., Toronto, ONT, M6R 1X1, Canada. Phone: 416-534-0237.
Date of Introduction: 1980.
Wt/Vol., Packaging, Price: 600 gm.
How Stored: Refrigerated.
New Product–Documentation: Talk with Jhasun Koo, owner and founder. 1989. May 4. He started making soymilk in 1980, but no longer makes it.

3411. Quong Hop & Co. 1980. Quong Hop. Quality soy foods since 1906. Now vacuum packed. Recipes inside (Leaflet). South San Francisco, California. 3 panels each side. Each panel: 22 x 9 cm.
• ***Summary:*** Contains 6 recipes, one for each of their products, with a color photo of each. The products are Soy Milk, Savory Baked Tofu, New Leaf Tofu Burgers, Fresh Tofu, Deep-Fried Tofu Cutlets, and New Leaf Tofu Dressing.

The top half of one panel shows an old black-and-white photo of two men standing in a Chinese food store, surrounded by wooden, boxes, sacks, and shelves. Plainly visible on the back wall is a wooden plaque with two large gold letters bearing the company name. [Note: In a 1986 leaflet from Quong Hop & Co. we are told that this photo was of "The Family Store, 1911"]. The Chinese characters for "Quong Hop" appear on the back wall. The text reads: "The traditional soy foods of China have been our family's business for three generations. Since 1906, when our doors opened in San Francisco's Chinese settlement, we have maintained a firm commitment to quality in every product we manufacture. In 1976, we were the first company to pioneer a return to the use of traditional, time-proven methods and completely natural ingredients in the commercial manufacturing of fresh tofu and soy milk. Today, our organic Nigari tofu is widely regarded as the finest made. To further develop the expanding soy foods marketplace, we are now offering a complete line of vacuum-packed soy products. Our historical commitment to quality and, more recently, to the adaptation of soy foods to the American marketplace, have

placed us at the forefront of the 'Soy Foods Revolution'. We offer a growing line of soy products based on Western Recipes, including Tofu, Burgers, Creamy Tofu Dressing, and soon Tofu Salad and other items." Address: 161 Beacon St., South San Francisco, California 94080.

3412. **Product Name:** Tofu Cutlets Marinara.
Manufacturer's Name: Quong Hop & Co.
Manufacturer's Address: 161 Beacon St., South San Francisco, CA 94080. Phone: 415-873-4444.
Date of Introduction: 1980.
Ingredients: Tofu cutlets (organic tofu, whole wheat flour, wheat germ, soy milk, safflower oil), tomato sauce (water, tomato paste, onion, spices, salt), cheese.
Wt/Vol., Packaging, Price: 10.5 oz.
How Stored: Frozen.
New Product–Documentation: Label. 1981. 3 by 2 inches. Self adhesive. Red and brown on white. Shurtleff & Aoyagi. "From the Soy Deli. New Leaf Quality Soyfoods." 1980. List of soyfoods products. Frozen entree. Talk with Ben Lee. 1988. Sept. 30. Introduced in 1980. Frozen.

3413. **Product Name:** Tofu Eggplant Marinara.
Manufacturer's Name: Quong Hop & Co.
Manufacturer's Address: 161 Beacon St., South San Francisco, CA 94080. Phone: 415-873-4444.
Date of Introduction: 1980.
Ingredients: Organic tofu, eggplant, breading (whole wheat flour, wheat germ, soymilk), safflower oil, tomato sauce (water, tomato paste, spices, salt), cheese.
Wt/Vol., Packaging, Price: 10.5 oz.
How Stored: Frozen.
New Product–Documentation: Label. 1980. 3 by 2 inches. Self adhesive. Red and orange on white. "From the Soy Deli." Baking instructions. Shurtleff & Aoyagi. 1980. List of soyfoods products. Frozen entree. Ad in Whole Foods. 1981. Sept. Talk with Ben Lee. 1988. Sept. 30. Introduced in 1980.

3414. **Product Name:** Dari-Pro Products (Isolated Soy Proteins Blended with Carbohydrates).
Manufacturer's Name: Ralston Purina Co.
Manufacturer's Address: Checkerboard Square, St. Louis, MO 63164.
Date of Introduction: 1980.
New Product–Documentation: Designed as a functional replacement for nonfat dry milk in specialized applications.

3415. **Product Name:** Brightsong Tofu Soysage (Meatless Okara-based Sausage).
Manufacturer's Name: Redwood Valley Soyfoods Unlimited.
Manufacturer's Address: P.O. Box 371, Redwood Valley, CA 94570.
Date of Introduction: 1980.
Ingredients: Okara, wheat germ, whole wheat flour, nutritional yeast, unrefined safflower oil, soymilk, shoyu, natural herbs and spices.
Wt/Vol., Packaging, Price: 1 lb units.
How Stored: Refrigerated.
New Product–Documentation: Label. 1980. 4 by 3.5 inches. Self adhesive. Black on white. "100% Vegetarian. To use: Remove lid, bake 350º / 40 minutes, or form patties or balls and cook. Pizzas too!" Ingredients: Okara, wheat germ, whole wheat flour, nutritional yeast, unrefined safflower oil, Soy Juice, tamari, natural herbs and spices.

Label. 1980. 5.5 by 4.5 inches. Paper. Red, black and blue on white. "New! A 100% vegetarian meat substitute. No preservatives or chemical additives. High protein and fiber, low calorie and fat. No cholesterol." Ingredients on label: Organic okara (soy fiber), toasted wheat germ, Red Star T-6635 nutritional yeast, organic whole wheat flour, safflower oil, well water, tamari, honey, garlic, onion, salt and other natural herbs and spices.

Label. 1981. 3 inches square. Self adhesive. Red and blue on white. "New! Just slice, heat and eat!" Ingredients: Organic okara, organic whole wheat flour, toasted wheat germ, nutritional yeast, safflower oil, well water, shoyu tamari, honey, garlic and other natural herbs and spices. Label. 1981. 3.5 by 4 inches. Self adhesive. Red on white. "Pre-baked! Use on pizzas or burgers, fried or baked. Great scrambled with Missing-Egg Salad." Ingredients: Organic soy fines, organic whole wheat flour, peanuts, toasted wheat germ, nutritional yeast, soy oil, filtered water, real tamari, honey, garlic, salt and other natural spices.

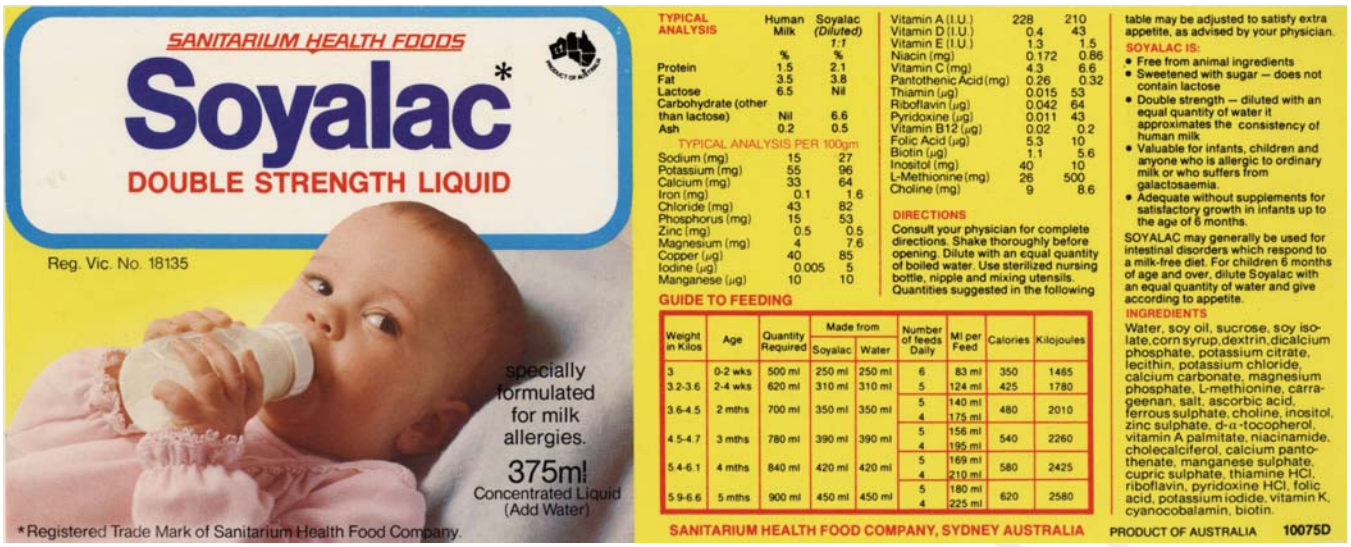
3416. **Product Name:** Sanitarium Health Foods Soyalac Double Strength Liquid (Soymilk).
Manufacturer's Name: Sanitarium Health Food Co.
Manufacturer's Address: 148 Fox Valley Rd., Wahroonga, N.S.W. 2076, Australia.
Date of Introduction: 1980.
Ingredients: Water, soy oil, sucrose, soy isolate, corn syrup, dextrin, dicalcium phosphate, potassium citrate, lecithin, potassium chloride, calcium carbonate, magnesium phosphate, L-methionine, carrageenan, salt, ascorbic acid, ferrous sulphate, choline, inositol, zinc sulphate, d-alpha-tocopherol, vitamin A palmitate, niacinamide, cholecalciferol, calcium pantothenate, manganese sulphate, cupric sulphate, thiamine HCL, riboflavin, pyridoxine HCl, folic acid, potassium iodide, vitamin K, cyanocobalamin,



biotin.
Wt/Vol., Packaging, Price: 375 ml can.
How Stored: Shelf stable.
Nutrition: Diluted 1:1: Protein 2.1%, fat 3.8%, carbohydrate other than lactose 6.6%, ash 0.5%.
New Product–Documentation: Soya Bluebook. 1980. p. 51. Letter from Sanitarium Health Food Co. 1981. Label. 10 by 3.5 inches. Full color with yellow background. Photo shows baby drinking from a bottle. "Specially formulated for milk allergies."

3418. **Product Name:** [Semper Tube Feeding Formula {Liquid, Based on Soy Protein Isolate and Milk Protein}].
Foreign Name: Sondnäring.
Manufacturer's Name: Semper AB.
Manufacturer's Address: Sektor Industri, Sveavagen 166, Box 231 42, S-104 35 Stockholm, Sweden. Phone: 08-7299700.
Date of Introduction: 1980.
Ingredients: Incl. soy protein isolate.
Wt/Vol., Packaging, Price: Cans.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Form filled out by Anders Eriksson. 1981. Nov. "The tube feeding formula is based on soy protein isolate and milk protein."

Talk with Leif Christensen of Semper. 1990. July 6. Followed by letter (fax) of July 10. From 1980 until the present Semper has introduced 3 varieties of Sondnäring liquid, partly based on soy isolate, UHT-sterilized, in cans packed under aseptic conditions.

• ***Summary:*** The authors conducted pilot plant studies on the manufacture of spray-dried soymilk. The process is described. Address: Inst. de Technologia de Alimentos, Campinas, Sao Paulo, Brazil.

3422. **Product Name:** [Tofu, and Soymilk].
Manufacturer's Name: Unimave Tofu.
Manufacturer's Address: Rua Mouzinho da Silveira 25, 1200 Lisboa, Portugal.
Date of Introduction: 1980.
New Product–Documentation: Letter from Sjon Welters. 1982. April 16. "In Portugal some macrobiotic centres are busy in promoting soyfoods as part of the macrobiotic diet. They produce tofu and soymilk on a small scale. This macrobiotic centre is very active and did have a lot of

success and publications. A friend who studied at Manna for a while, José Parracho is planning to make tempeh and tofu in Portugal. The business will be Quinta da Portugesa in Setubal."

Letter from Miguel de Abreu in Belgium. 1989. Oct. 2. His profession is a natural foods, macrobiotic, vegetarian cook. He began in April 1978, when he started cooking at Unimave, a vegetarian macrobiotic cooperative in Lisbon, Portugal. "Around 1980 we started making tofu and soymilk at Unimave on a community scale... Today I am living in [Oostduinkerke] Belgium with my wife and we would like to start making tofu" and tofu products.

Note: This is the earliest known commercial soy product made in Portugal.

3423. **Product Name:** [Soy Bean Drink (Egg, Peanut, or Sesame)].
Manufacturer's Name: Wei-Chuan Foods Corp.
Manufacturer's Address: 125 Sunchiang Rd., Taipei, Taiwan. Plant at No. 518, Chung-Hsin Rd., Sec. 5, San-Chung City, Taiwan.
Date of Introduction: 1980.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Soya Bluebook. 1981. p. 61.

American Soybean Assoc. 1982. Checkoff Successfile. Taiwan #302. "Soymilk helps Taiwan bridge the nutrition gap." Wei-chuan Foods, a major Taiwanese food company, has initiated its own soymilk production within the last two years.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 96, 98. Taiwan's largest producer of dairy products is its second largest producer of soymilk. Photocopy of Label sent by Anders Lindner. 1989. Illustration on the front panel of one carton shows a smiling Bugs Bunny type rabbit, and on another carton is a Mickey Mouse. Text in Chinese.

3424. **Product Name:** [Wei-kan Soy Bean Drink].
Manufacturer's Name: Wei-kan Co.
Manufacturer's Address: Taiwan.
Date of Introduction: 1980.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: American Soybean Assoc. 1982. Checkoff Successfile. Taiwan #302. "Soymilk helps Taiwan bridge the nutrition gap." The Wei-kan Co., a major Taiwanese food company, has initiated its own soymilk production within the last two years.

3425. Bahna, Sami L.; Heiner, Douglas C. 1980. Allergies to milk. New York, NY: Grune & Stratton. 202 p.

• ***Summary:*** "The demand for wet nurses grew considerably during the 17th and 18th centuries. Women of high social level in European countries increasingly wanted to use surrogate breast-feeding, claiming that breast-feeding might ruin their figures or impair their health. As Wickers implied, perhaps the greatest force behind the declining popularity of nursing among the well-to-do was that it interfered with the mother's participation in social activities. Animal milk for infant feeding rose in popularity about the middle of the eighteenth century, with a preference of ass's and goat's milk over cow's milk.

"At the beginning of the twentieth century, reports of milk allergy began to appear in the German medical literature... Reports in the British literature did not appear until the 1940s. Since then, increasing numbers of physicians have become aware of the condition, and a spate of articles has been published confirming that cow's milk allergy is a real problem, that it can involve several systems of the human body, and that it may be manifest in a wide variety of symptoms and signs." Address: 1. Asst. Prof. of Pediatrics, Louisiana State Univ; 2. Prof. of Pediatrics, UCLA.

3426. Billoni, Mike. 1980. Thirty years below zero. Buffalo, New York: Rich Products Corp. 149 p. Unpublished manuscript. 28 cm.
• ***Summary:*** A colorful history of Bob Rich and Rich Products. Contents: 1. Introduction. 2. Early years. 3. Early athlete (football). 4. Coach. 5. Marriage (to Janet). 6. Wilber Farms Dairy. 7. War Food Administration (and Henry Ford's work with soy). 8. Growth of [soy-based] whip topping. 9. The institutional customer. 10. Aerosol cans. 11. Eclairs. 12. Bobby (Robert Edward Rich Jr.). 13. Jones-Rich (in 1960 Rich and Wilber Farms Dairy acquired the R.W. Jones Dairy; the combination was the largest dairy in Buffalo, New York). 14. Coffee Rich (and Rex Diamond, including the reason that Bob Rich felt he had no choice, in 1964, to terminate Rex Diamond. The U.S. Food and Drug Administration had ruled that sodium caseinate was not a dairy product, "even though it originally may have been derived from skim milk solids." Coffee Rich was the "first non-dairy frozen coffee creamer in the world"), 15. Ellis Arnall (fighting lawsuits by the dairy industry against Rich's dairylike products and winning every one!). 16. Acquisitions.

"Ford believed the cow should be replaced and set up the George Washington Carver laboratory for experiments with the soybean.

"These experiments resulted in a soybean milk which was supplied to Ford Hospital. The purchasing agent invited Rich to visit the laboratory and he readily accepted. It was in the laboratory where he met the laboratory manager, Holton 'Rex' Diamond, who showed Rich the continuous soybean extraction system the Ford Company patented.

"When Rich told Diamond of his interest in manufacturing a soybean cream, with emulsifiers added,

that could be whipped, Diamond suggested he contact the Ford Motor Company to obtain the rights to their continuous extraction system.

"Diamond told Rich that Mr. Ford was not interested in seeing the use of soybean milk products expanded but that Ford Motor Company would grant him the rights to their 'Rube McNutt' [sic, Rube Goldberg or Boob McNutt] system for $1.

"When Rich returned to Buffalo that weekend, he visited with his friend, Dr. Alexander Schwarcman, who was director of research at the Spencer Kellogg Company. Dr. Schwarcman was most enthusiastic about the idea of a whipping cream from an all-vegetable source.

"Rich continued working as the Milk Market administrator for the state of Michigan but on his return to Buffalo every weekend, he spent more time overseeing the development of his soybean cream project than he did on his Wilbur Farms Dairy operation.

"'When we realized we had something here I wrote the Ford Motor Company asking for the patent rights, which I had been told were readily available, but I did not receive an answer,' Rich recalled."

Ford's general consul told rich that Ford did not want to be responsible for creating competition for America's dairy farmers. Rich took that news to Howard Faust in Buffalo; Faust told Rich that he thought they could extract the protein from the soybean using a batch system–which meant (if it worked) he would not need the Ford patent.

The system designed by Faust extracted 68% of the protein from the soy flakes, whereas Ford's continuous process extracted only 32%–a huge improvement.

"Realizing he was on to something big, Bob Rich Sr. incorporated Rich Products in November 1944. His 12-truck garage behind the Wilber Farms building was converted into a laboratory and a production plant for a non-dairy whipping cream while a nearby city-owned piece of property was leased to house the trucks of the dairy.

"In January 1945, Rich Sr. resigned his position as Michigan's Milk Market administrator to return to Buffalo to devote all of his time to this new breakthrough in the dairy business."

Bob Rich's father, who had been a dairyman all of his life, thought his son's new venture was "nonsense." But Bob Rich's wife noted: "He has always had an incredible drive and a keen foresight to see a light at the end of the tunnel. He knows what he wants to achieve in everything he does. That has proven to be a real gift" (p. 7-6 to 7-8).

"The industry founded by Robert E. Rich Sr. on April 1, 1945, owes its inception to the food restrictions and government red tape imposed by World War II conditions... Sales of whipping cream were forbidden during the war. So Bob Rich Sr. went to the soybean to find a replacement."

Rich recalls: "Our first production run of whip topping was on March 30, 1945, and we sent it out to our Wilbur Farms Dairy retail customers, with a note attached. 'The miracle cream from the soybean.'" This cream was "much less expensive, would last longer, and whip better."

By the late 1940s Reddi-wip. sold in an aerosol can, had become a big competitor. By 1952 Rich products had eight salesmen in the field. On Saturday mornings Rich would meet in his office with his Whip Topping team: Jerry Hannon, Herb Kusche, Joe Robida, Rex Diamond, and Ed Andrews (p. 10-6).

Pete Slaughter, a Rich salesman from Texas, found a remarkably simple way to demonstrate grocery store to buyers that Rich's Whip Topping superior to Sta-Wip, made by the Reddi-Wip company. He simply sprayed each onto a separate blotter. The Sta-Wip was absorbed into the blotter whereas the Whip Topping stood up in a nice mound (p. 10-8 to 10-9). Address: Buffalo, New York.

• ***Summary:*** A vegetarian cookbook. Page 45 describes how to sprout various seeds and beans, including soybeans. The section titled "Soybeans Simplified" (p. 66-75) begins by asking "Why are soybeans so highly praised?" then gives recipes for: Basic cook soybeans. Soyburgers (from cooked, mashed soybeans). How to make soy milk (12 cups, using soy flour or soybeans). Soy "coffee." Tofu (soybean curd). Tofu sandwich spread. How to roast soybeans (dry). The last page of the section, titled "Soybean Terminology" gives 1-2 line descriptions of: Soy grits, soy meal, soy granules, soy flour, soy powder (extra fine soy flour, used to make soy milk), soya (implies that the product has been toasted), roasted soybeans, tofu, miso, tamari.

Other soy-related recipes include: Wheat-soy pancakes (with soy flour, p. 169). Soy fritters (with mashed soybeans, p. 222). Simple soy bean loaf (p. 228). Vegetarian sukiyaki (with tofu and soy sauce, p. 231). Soy cheesecake (with tofu, p. 291). Address: Illinois.

3433. Fessler, Stella Lau. 1980. Chinese meatless cooking. New York, NY and Scarborough, Ontario, Canada: New American Library. 298 p. Illust. by Janet Nelson. Index. 20 cm.
• ***Summary:*** This vegetarian cookbook, which contains more than 180 recipes, demonstrates vividly how much Chinese vegetarian cookery depends on soyfoods–especially tofu (bean curd). The glossary includes excellent descriptions of bean curd–fermented red (*nan-ru*), bean curd–fermented white (*tofu-ru*), bean curd–pressed threads or noodles, bean curd sheets (*tofu-pi* [*yuba*]), bean curd sheets (*er-ju*), bean curd sheets–pressed or hundred-leaf (*bai-yeh*), bean curd sticks (folded bean curd sheets), brown bean paste or brown bean sauce, bean paste–Szechuan hot bean or spicy soy, bean sprouts–soy or yellow, fermented or salted black beans, Hoisin sauce, Oyster sauce (with soy), soy sauce, soy sauce–light or thin.

The chapter on soups stocks notes that soybeans or soybean sprouts have a delicate flavor and are most suitable for making stock. Soy sprouts, which are much larger than mung bean sprouts, have a more chewy texture and a very sweet, delicate taste; they are often used to strengthen the flavor of a dish (see recipe p. 90).

Soy-related recipes (each with the name written in Chinese characters) include: Mixed pressed bean curd threads (p. 68). Spinach and deep-fried bean curd puff salad (p. 70). Soybean sprout salad (p. 73). Pressed bean curd salad (p. 76). Monks in a storm of wind and snow (Asparagus and bean curd salad, p. 82). Soybean sprout stock (p. 90). Deep-fried bean curd and mung bean noodle soup (p. 93). Spinach and bean curd soup (p. 98). Seaweed and bean curd soup (p. 99). Soybean soup (p. 100). Soybean with fried gluten soup (p. 101). Asparagus and bean curd soup (p. 106). Goddess of Mercy (Kuan-yin) soup (With bean curd and tiger lily bulbs, p. 112-13).

One long chapter (p. 118-160) is titled "Bean curd dishes, mock meat dishes, and mock fish dishes." It gives good definitions of and home-scale recipes for: Bean curd. Deep-fried bean curd puffs. Plain pressed bean curd cakes. Five-spice pressed bean curd cakes. Braised deep-fried bean curd puffs. Bean curd with oyster sauce (not vegetarian). Braised bean curd. Spicy bean curd. Steamed bean curd with spicy bean paste sauce. Bean curd with tomatoes. Bean curd with fresh mushrooms. Cold bean curd. Stubborn stones' obeisance (Fried bean curd with vegetables). Braised frozen bean curd with chives. Braised Fukien [Fujian] bean curd. Stir-fried Chinese chives with pressed bean curd. Stir-fried pressed bean curd with carrots and bamboo shoots. Mock lion's head (with five-spice pressed bean curd). Stir-fried green peppers with mock meat (pressed bean curd). Mock moo goo gai pan (Stir-fried pressed bean curd with vegetables). Mock roast duck (with dried bean curd sheets and soy sauce). Mock soy sauce chicken (with fresh or frozen hundred-leaf bean curd sheets). Mock velvet chicken

(fried bean curd with egg whites). Spicy mock chicken (with mock soy sauce chicken). Mock ham (with dried bean curd sheets). Bock abalone (braised gluten balls). Mock mu-shu pork (with five-spice pressed bean curd, shredded). Fried mock squab (with chopped pressed bean curd). Mock twice-cooked pork (with five spice pressed bean curd). Bean curd with thousand-year eggs.

Other interesting recipes include: Wheat gluten (homemade mein jin or vegetable steak, p. 165-66; At Chinese grocery stores, wheat gluten is sold in various forms–fried, dried, steamed, boiled, canned, and frozen). Fried gluten balls. Boiled gluten. Lo Han vegetable dish (with fried wheat gluten balls, p. 169-70). Chinese mustard greens in black bean sauce (p. 173-74). Stir-fried leeks with bean curd (p. 186). Fresh soybeans stir-fried with fresh mushrooms (p. 187). Boiled fresh soybeans in their pods (p. 188). Bean sprouts stir fried with wheat gluten (p. 190). Stir-fried soybean sprouts with bean curd puffs (p. 191). Cauliflower and bean curd sticks (p. 192). Winter melon with red fermented bean curd sauce (p. 195). Stir-fried asparagus with fermented bean curd (p. 197). Stir-fried lettuce with white fermented bean curd sauce (p. 198). Sweet and sour fried gluten and cabbage (p. 208). Two immortals in the apricot garden (fried gluten with vegetables and almonds, p. 209). Braised eggs with bean curd sticks (p. 213-14). Scrambled eggs with fermented bean curd (p. 214). Bean curd with salted eggs (p. 216-17). Wonton soup (with fresh bean curd, p. 233-34). Fried wontons (filled with five-spice pressed bean curd, coarsely chopped). Soybean milk, sweet soybean milk, and salty soybean milk (p. 247-48). Deep-fried crullers (*yu chiao;* sometimes served in hot soymilk, p. 249-50). Noodles with spicy bean paste sauce (and five-spice pressed bean curd, p. 258-59).

Note 1. This is the earliest English-language document seen (Oct. 2011) that uses the term "red fermented bean curd" to refer to red fermented tofu.

Note 2. This is the earliest English-language document seen (Oct. 2011) that uses the term "white fermented bean curd" to refer to regular white fermented tofu. Address: Cornell Univ., Ithaca, New York.

• ***Summary:*** K.S. Lo writes that the 1970s have been a decade of ups and downs. "For no sooner had we launched a new range of products, namely, precooked Chinese dishes, infant weaning food, and cheese from soybean milk; then we were forced to suspend all three. What was thought to be a great leap forward in diversification, turned out to be a great flop. The expensive lesson learned is never to leap before one learns to run." Fortunately the next venture, a line of fruit juices and traditional flavored teas in Tetra Brik cartons, was successful as "all the new products became extremely popular from the moment of launching."

Today over 10,000 shops in Hong Kong and the New Territories carry Vita products. Sales gave grown from HK$24.7 in 1970/71 to HK$106.3 in 1979/80. In 1972 the Vitasoy line was expanded with the addition of a larger and 10 oz bottle, which became very popular. In 1975 the company installed the first Tetra Brik packaging line in Hong Kong and launched UHT Vitasoy. The disposable pack was accepted immediately.

"In 1976, on seeing the success of the new Tetra Brik container, the company decided to branch out into the packaging of fruit juices. An initial line of 4 flavors was selected: orange, mango, guava, and kalamansi. This new range was so successful that over 30% of the juice market was captured in the first 2 years of marketing. Then 3 more items were added to the Tetra Brik Line: Chrysanthemum Tea, Sugar Cane Juice and Lemon Tea." In 1978 the new Aberdeen factory was completed and that summer Vita carbonated drinks were launched in 4 flavors: Cola, orange, cream soda, and root beer. The principal of "consumer sovereignty" was followed.

In 1979 the company entered into an agreement with the People's Republic of China to expand and modernize the Kwong Ming Dairy Farm in Shum Chun. Also in 1979 exporting of the full range of Tetra Brik products to other parts of the world commenced. As part of its community service program the company is currently supplying multi-vitamin fortified Vitasoy to refugee camps. Color photos show: (1) K.S. Lo, seated informally on the arm of a chair, dressed in coat and tie. (2) A bottle of Vitasoy. (3) Young people in Hong Kong happily socializing and drinking Vitasoy, "Hong Kong's favourite high protein drink." (4) A map of the world (2-page spread) showing "International export markets" of HKSPB. (5) The outside of the Aberdeen plant. (6) Two packaging lines. (7) The R&D lab. (7) The board of directors seated around a long oval wooden table. All new soy and non-soy products are sold under the Vitasoy or Vita brands (2-page spread). Address: Hong Kong.

3436. Hyoe, Murakami; Richie, Donald. eds. 1980. A hundred *more* things Japanese. Tokyo: Japan Culture Institute. 215 p. Illust. (some color). 22 cm. [Eng]

• ***Summary:*** The section titled *Daizu* (soybeans, p. 48-49) begins with the often-told story of Ogyû Sorai (1666-1728), one of the outstanding Confucian scholars of the Edo / Kamakura period and official tutor to the shogun. When Sorai was young and poor, he was unable to afford any food other than okara, the lees of tôfu (soybean curd). The local tofu maker would occasionally take pity on him and treat him to a feast of fresh tofu. Yet far from being malnourished or sick from his okara diet, the young man thrived on this protein-rich food, and went on to become a great man.

The great soy triumvirate–soy sauce, miso, and tofu–towers high in Japanese cookery. Other foods from the soybean are soy milk, soy oil, and yuba.

A song from the Edo period states: "The nightingale stays far from the crowds.

"Twelve kilometers from the saké shop,

"Eight kilometers from the tofu shop."

A large photo shows a tofu-maker cutting cakes of tofu.

A yatai (p. 66) is a movable nighttime street stall from which food and drink are sold. They are a compact wooden restaurant on wheels. The food may include oden, fried bean-curd cakes [fried tofu].

On pages 44-45 is a section on "Umeboshi (pickled plums) and on pages 46-47 a section on "Kaisô (algae; seaweed [sea vegetables]). These include wakame, which is invariably found floating in the morning's miso soup. Also nori, tengusa / agar, hijiki, and konbu. Address: Tokyo.

3437. Imai, Yoshitsugu. 1980. Anata no kenko o mamoru, tônyû no subete [All about soymilk to keep you healthy]. Aichi Prefecture, Japan: Marusan Shokuhin. 86 p. [Jap]

3438. Jordan, Darryl; Jenkins, Suzy. 1980. Plenty Agricultural Program: Guatemala. Summertown, Tennessee: Plenty. 46 p. Illust. 28 cm. Presented to UNICEF Guatemala.
• ***Summary:*** This is the single best report on the innovative 1978 Plenty-UNICEF project in the San Andres Itzapa area (Chimaltenango) of the Guatemala highlands. Most of the report focuses on trials with soybeans and other crops (written by Darryl Jordan), but there is also an excellent supplement, with 15 magnificent, lively photos showing the local people involved in the soy dairy project. Many of these photos were taken by Jenny Banks Bryant and others.

Contents: Preface, by Edward Sierra, executive director of Plenty. Soybean variety trials. Photoperiod response experiment. Soybean insects and diseases. Continuation of the soybean project. Grain amaranth. Quinoa. Winged bean. Cover crops and crop rotations. Nematodes. Fertilizer use. Seed collection. Plenty report for UNICEF, by Suzy Jenkins (Plenty soy technician). Supplement: Soy utilization and nutrition. List of figures: Field data for soy variety trials. Graphs of soybean yield data. Three graphs of soybean yield data. Yield equivalents for soybeans. Oil and protein analyses. Relative yields of protein for various crops. Crop rotation.

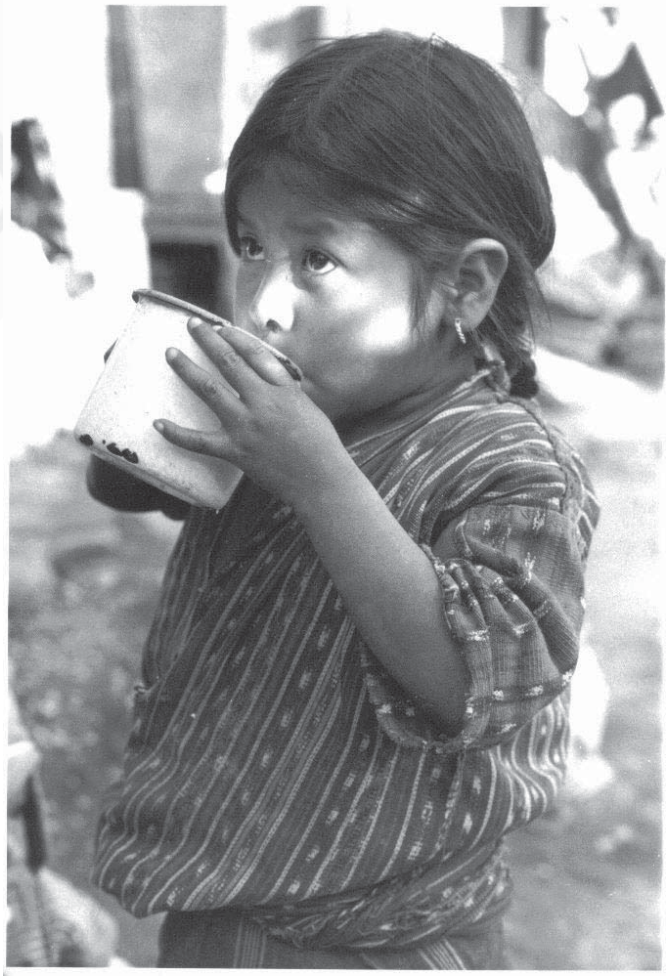
A table (p. 12) shows field data on INTSOY variety trials in 1978. The highest yields came from the soybean varieties Davis (40.1 bushels/acre = 4,161 lb/manzana; 1.7 manzanas = 1 hectare), Cobb (34.6 bu/acre = 3,590 lb/manz.), Bossier (32.8 bu/acre = 3,400 lb/manz.), Forrest (31.4 bu/acre = 3,251 lb/manz.).

Photos in the Plenty report for UNICEF show: (1-3) Severely malnourished babies lying on their backs. (4) Suzy Jenkins holding Baby Cruz, now age 8 months, after 4 months of soymilk. "She is one of several children who were able to regain good health."

(5) Suzy Jenkins (5' 4"), a Plenty volunteer (on left) walking with her friend Juana (4' 10"), each carrying water in a pot on their heads for a soy demonstration in Solola. "Juana stands about the average height for the ladies of Guatemala. She eats a protein-deficient diet.

(6) A Mayan lady grinding soaked soybeans on a *metate*, traditionally used for grinding corn / maize. (7) Add the ground soybeans and, stirring regularly, cook for 20 minutes over a wood fire. Suzy stirs.

(8) Ladle the cooked soybean slurry into a colander lined with several layers of cheesecloth and set over a pot to



catch the soymilk. Soy pulp [okara] remains behind in the cheesecloth.

(9) "Soymilk, slightly sweetened, contains 9.1 grams of protein per cup. One pint of soymilk or 1 cup of tofu will provide nearly one-half of a child's total protein requirement for a day. Children love it." (10). To make soy cheese [tofu]: Add vinegar (or other coagulant) to hot soymilk, causing it to separate into curds and whey. Ladle or gently pour the mixture into a colander lined with several layers of cheesecloth and placed over a pot. The cheesecloth catches the curds, while the whey drains through into the pot. The whey can be used as a soup stock; it contains some vitamins and other nutrients.

(11) A happy group enjoying their soymilk. (12) Press the curds to make tofu, which can be sliced and fried, eaten plain with salt, or scrambled and fried with onions and tomatoes. A boy, standing, is enjoying a tofu sandwich. (13-15). People eating tofu, which is a complete protein; when served with grain foods like tortillas or bread, its protein quality is increased. Address: 1. Plenty Agricultural Technician; 2. Plenty Soy Utilization Technician. Both: The Farm, Summertown, Tennessee.

3439. Kasin, Miriam. 1980. The age of enlightenment cookbook. New York, NY: Arco Publishing, Inc. v + 342 p. Illust. Index. 25 cm. [1 ref]

• ***Summary:*** A vegetarian cookbook. The chapter on Basic Ingredients discusses dairy substitutes (incl. recipes for soy milk [made from whole soybeans or soy flour], coconut milk, nut milk {from blanched almonds or raw cashews}, and soy margarine [free of preservatives]), bean curd (as a substitute for panir), and soy flour. The chapter on beans (p. 129-37) has recipes for: Roasted soybeans. Aduki (azuki) beans. Stewed soybeans. Soyburgers. Soy loaf. Bean curd (tofu or dofu). Stir-fried or deep-fried bean curd. Scrambled bean curd.

Other soy-related recipes include: Soy mayonnaise (p. 170). Soyburgers or tofu sandwiches (p. 186). Soy spread or dip (with whole soybeans, p. 187). Soy noodles (with equal parts soy flour and unbleached white flour, p. 201). Noodles and bean curd (Japan, kitsune udon or domburi, p. 205).

3440. Miller, Lani; Rodgers, Diane. 1980. We love your body. Seattle, Washington: Morse Press, Inc. vii + 256 p. Illust. by Joanie Oliver. 25 cm.
• ***Summary:*** A natural foods, vegetarian cookbook. The glossary describes soybeans (incl. soy flour, milk, and tempeh, p. 246), tamari sauce, and tofu (p. 247).

3441. Nelson, A.I.; Wei, L.S.; Steinberg, M.P. 1980. Foods from whole soybeans. In: F.T. Corbin, ed. 1980. World Soybean Research Conference II: Proceedings. Boulder, Colorado: Westview Press. xv + 897 p. See p. 745-62. [12 ref]
• ***Summary:*** Contents: Introduction: Nutritional value. A concept for preparation of whole soybeans for human food use: Inactivation of the lipoxygenase system, use of sodium bicarbonate blanch, inactivation of anti-nutritional factors, effects of quality and variety of soybeans for direct food use, use of the concept. Home preparation of soymilk: Introduction, experimental, results and discussion, conclusions, recommendations. Soybean breakfast and patty foods: Introduction, raw bean treatments, hydration, tenderization, trypsin inhibitor inactivation, soybean foods.

Weaning or breakfast foods: Soy-whole wheat, soy-corn, soy-sweet potato. Fried patty meat substitute: Soy-potato, soy-rice. Conclusions. Notes. Address: Dep. of Food Science, Univ. of Illinois, Urbana, IL 61801.

3442. Null, Gary. 1980. The new vegetarian cookbook. New York, NY: Macmillan Publishing Co., Inc.; London: Collier Macmillan Publishers. x + 310 p. Recipe index. 24 cm.
• ***Summary:*** One chapter (p. 52-60) titled "Soybeans and Soybean Products" discusses: "Whole, raw soybeans" [green vegetable soybeans], dried soybeans, soybean milk soy flour, soy grits, soy flakes, tempeh, tamari, miso, and tofu. The long section on tofu begins: "As a high-quality source of complete protein, tofu (soybean curd, usually called bean curd) is hard to beat, not to mention inexpensive, low in calories and versatile." It ends: "As you become more familiar with tofu, you'll come up with many of your own innovations. But no matter how you choose to serve this natural, high-protein food, serve it often and savor its benefits!"

Page 78, under "Bean Sprouts," states that "Soybeans make the most delicious sprouts, but are a little more difficult to grow" than mung bean sprouts. Page 88 notes that tamari and miso are good alternatives to salt.

Soy-related recipes include: Miso tofu soup (p. 132-33). The section titled "Tofu Dishes" (p. 199-208) includes: Butternut tofu. Tofu cauliflower casserole. Herby tofu croquettes. Mushroom and tofu sautéed in miso. Tofu Orleans. Red and green peppers with tofu. Soba tofu dinner. Tofu eggplant Parmesan. Yogurt tofu casserole [with cow's milk yogurt]. Tomato tofu and kidney beans. Bulghur, lentil and tofu casserole. Tofu à la king. Sesame tofu (Tofu plus sesame seeds). Hot breakfast for two (tofu with oatmeal, raisins, and walnuts).

Soy-enriched wheat berry bread (p. 242). Page 304 contains a list of food suppliers, including Chico San, East West Journal Mail Order, and Walnut Acres (Penns Creek, Pennsylvania). Address: New York City, NY.

3443. Orlowski, J.K.; Nelson, A.I.; Wei, L.S. 1980. Effect of formulation and processing variables on the quality of soybean yogurt (Abstract). In: F.T. Corbin, ed. 1980. World Soybean Research Conference II: Abstracts. Boulder, Colorado: Westview Press. 124 p. See p. 34.
• ***Summary:*** "Soybean yogurt was prepared using Illinois process soybean base developed by Nelson, et al., (1975). This base contains 7.5 percent soy solids, about 3.8 percent protein and is excellent for making yogurt since it is bland and has no beany off-flavors. A frozen culture of *Streptococcus thermophilus* and *Lactobacillus bulgaricus* was used to inoculate sterile, 2 percent fat cows' milk for preparation of a medium used for inoculation of soy base...

"Six percent added sugar as 3 percent sucrose and 3 percent cerelose, fermented to a pH of 4.21, was the preferred sample. This was probably due to its desirable sugar / acid balance. The Illinois process soybean yogurt is also adaptable to flavoring with fruit and appears promising as a new food product."

Note: This is the earliest English-language document seen (Aug. 2013) that uses the term "soy base" to refer to a concentrated form of soymilk from which regular soymilk or soymilk products (such as soybean yogurt) can be made by adding water, flavors, sweetener, etc. Up to this time, researchers at the University of Illinois generally used the term "soybean beverage base" instead of soy base. Address: Dep. of Food Science, Univ. of Illinois, Urbana, Illinois.

3445. Roquib, M. 1980. Utilization of soybean (*Glycine max* (L.) Merr.) as a supplementary human food to combat protein malnutrition in West Bengal, India (Abstract). In: F.T. Corbin, ed. 1980. World Soybean Research Conference II: Abstracts. Boulder, Colorado: Westview Press. 124 p. See p. 37.

• ***Summary:*** Recently major efforts have been made to extend soybean cultivation throughout the State of West Bengal, India, and work has been started to popularize soybean as a food among people in low and middle income groups. In 1976-78, as part of this effort, an experiment was conducted to (1) test the acceptability of full-fat soy flour, whole soybeans, and soybean milk among consumers; (2) test the acceptability of chapatties [chapatis] made from regular wheat flour to that made with wheat + soy flour in varying proportions; (3) explore the possibilities of introducing soy-based tiffin foods and finding their costs.

Consumers generally accepted foods in which soy flour or whole soybeans were substituted. They did not accept soymilk as such, but they were very willing to accept foods prepared using soymilk or "soymilk residue" [okara]. Chapatties made with 0, 10, 15, and 20% "full-fat soyflour were equally acceptable in terms of texture, smell, taste, and cooking qualities. With fresh and good-quality soyflour, its proportion can be raised to 25 percent in such foods." Address: Faculty of Agriculture, Bidhan Chandra Krishi Viswa Vidyalaya, West Bengal, India.

3446. Thio, Goan Loo. 1980. Processing and application of soya beans for human nutrition at home and village levels (Abstract). In: F.T. Corbin, ed. 1980. World Soybean Research Conference II: Abstracts. Boulder, Colorado: Westview Press. 124 p. See p. 35-36.
• ***Summary:*** "It is of utmost importance that the less developed and the developing countries avail themselves of simple methods for processing soya beans into easily digestible soya products, which can be manufactured at home and village levels. These products should have a high nutritive value and preferably a neutral, bland taste, so that they can be incorporated into local dishes of the countries concerned, without the risk of being refused by the population. Because of the neutral bland taste, these soya products will take on the taste and flavor of the national dish into which they are incorporated. In this way they will in most cases be directly accepted by the consumers. Soya products like soya milk and soya bean curd (also called toufu [tofu]), which have proved to be high quality protein sources and which have existed for thousands of years, can easily be flavored or spiced so that they will become as delicious as meat and fish dishes.

"Soya milk can be prepared easily at home and village levels just like soya bean curd and soya steak (also called tempeh). The most important factor is the absence of the beany taste in these products, and also the absence of trypsin inhibitors and of hemagglutinins. Especially for babies and toddlers these two antinutritive factors should be inactivated. As they both belong to the proteins, simple heat treatment during a few minutes at temperatures above 90 C is sufficient. With soya products prepared at home and village levels, a great variety of delicious dishes and high quality weaning food can be prepared." Address: Royal Tropical Inst., Amsterdam, The Netherlands.

• ***Summary:*** A good handbook for vegetarian as well as vegan parents. Contains nutrition facts as well as good tips for feeding babies, plus special recipes for babies. Covers babies up to two years of age. Contains extensive, positive information about soyfoods, especially tofu and soymilk, including the nutritional value, specific uses in infant nutrition, and how to make each food at home. Tofu may be introduced to an infant's diet at age 8-9 months. Appendix B contains brief reviews of baby food cookbooks, most published after 1970. The author was born in 1951. Address: Ithaca, New York.

3450. INTSOY. 1980? Soybean Foods Research Centre (SFRC), Gannoruwa (Brochure). 3 p. Undated. Publisher not given.
• ***Summary:*** Contents: Introduction. Home level. Village level. Commercial level: Full fat soya flour, coconut milk substitute, soya cereal extrusion cooked blends, soya milk (beverage), soya oil and meal, soya and cassava extrusion cooked blends, soya-maize extrusion cooked blends, Oriental soya foods (tofu and tempeh), soya sauce. Future plans.

3451. Pural. 1980? Spécialités Pural [Pural specialties]. France: 14 p. Undated. 21 cm. [Fre]
• ***Summary:*** This Seventh-day Adventist company sells

the following soy-related products: Sojlactis (soymilk). Sojanelles (meatless soya quenelles or dumplings). Granotose and Frika-Vita. Grano-san (a paté that includes soy flour). Sandwich-san (with soy flour). New products: Sojanelles épicées, Pasta-Chuta (with soy proteins). Sojafleish (soymeat based on TVP).

3452. **Product Name:** SoyAmaze (Soy Mayonnaise).
Manufacturer's Name: Soy Plant (The).
Manufacturer's Address: 211 East Ann St., Ann Arbor, MI 48104. Phone: 313-663-0500.
Date of Introduction: 1980?
Ingredients: Soymilk, safflower oil, sesame oil, cider vinegar, honey, salt.
Wt/Vol., Packaging, Price: 16 oz.
How Stored: Refrigerated.
New Product–Documentation: Label in Soy Plant scrapbook from about 1980. 4½ by 3 inches. Black on white. 16 oz. "Serving suggestions; Use in cold salads, on sandwiches. Add spices, or chives, serve on baked potatoes, rice & vegetables, or tofu filets... (Separation may occur, stir before using)." This product was sold in plastic tubs, unpasteurized, like a fresh dressing.

3453. Bushman, Don H. 1981. Re: Soy beverage manufacturers in Southeast Asia. Letter to William Shurtleff at New-Age Foods Study Center, Jan. 9–in reply to inquiry of Nov. 26. 1 p. Typed, with signature.
• ***Summary:*** In Thailand: Green Spot started producing soy beverage in the early 1970s. At least three other companies, Coca-Cola, Nestle, and Siam Foods have plans to start making Soy beverage in Thailand in the next year.

In the Philippines, Nestle started making a Soy beverage (Vita) in Nov. 1988.

In Southeast Asia, soy beverages are advertised almost daily on TV, in newspapers, etc., but only for brand promotion. Address: Director, South-East Asia, Room 1501, 15th floor, Liat Towers Orchard Rd., Singapore 0923. Phone: 737-6233.

3454. Root, Waverley. 1981. A cordial bow to the byproducts of the soybean. *Los Angeles Times.* Jan. 15. p. J42.
• ***Summary:*** This article is indebted to: Simonds, Nina. 1979. "Chinese cuisine: Bean curd." *Gourmet.* Sept. p. 28-29, 84-91.

The soybean, which offers extraordinary versatility as a human food, can be transformed into soybean milk, "the soybean milk skin [yuba] derived from the milk, the bean sticks [dried yuba sticks] made from the milk skin, the also edible sediment given off by the milk [okara], untreated bean curd [regular tofu and perhaps silken tofu], pressed bean curd which produces bean curd noodles [pressed tofu noodles], more tightly compressed bean curd cakes, and frozen-and-thawed bean curd [dried frozen tofu]." Note: This is the earliest English-language document seen (April 2013) that uses the term "frozen-and-thawed bean curd" to refer to dried-frozen tofu.

In the process of making "pressed bean curd, another soybean food is created–bean curd skin [*pai yeh,* pressed tofu sheets], which should not be confused with soybean milk skin [yuba]. Dried bean curd skin," which needs no refrigeration and is often stuffed, for example with chopped meat, is sold by weight by Chinese specialty shops throughout the world; five or six sheets weigh one ounce.

"There is a whole family of foods made from fermented bean curd" [fermented tofu]. Bean curd can be fermented in various ways. Bean curd loaves, for example, can be stored for the winter in a cool dark place; micro-organisms from the air cause fermentation. "The loaves acquire a fungoid coating, which has to be scraped off, and as far as I know is not used for food,..." Fermented bean curd, which has been called "soybean cheese," is easier to digest than unfermented bean curd. Bean curd can also be marinated in rice wine, flavored with spices, and then allowed to ferment. A most unusual type of fermented tofu is stinky bean curd (*sh'ou tou fu*), a favorite Chinese snack. In Taipei, there are many street vendors who ply the streets with their portable deep fryers. This fermented tofu is usually deep-fried and usually eaten with one's choice of soy sauce, vinegar, mashed garlic, and chili paste.

Other fermented foods include miso, natto, hamanatto (which is of Korean origin), tempeh (of Indonesian origin), and shoyu (Soybean sauce, soy sauce).

"It is said that the best grades of soy sauce can take as much as six to seven years of aging to reach perfection, and that the making of a superb soy sauce requires 'as much art in its preparation as good French wines.'"

Flavorings are added to some Chinese soy sauce "various herbs, especially citronella; spices (ginger); aromatic vegetables (onions); and not only fermented fish, but even fermented chicken meat. To produce three liters (3.1 quarts) of sauce requires on kilogram (2.2 pounds) of beans.

"Fukien has the reputation of producing the best soy bean sauce in China and consequently stews many foods in it, giving them a color which has caused the culinary techniques of this region to be called 'red cooking.'"

Soybean sauce is "often an important ingredient in many more complicated sauces–for instance Hoisin sauce in China and Worcestershire sauce in England."

3455. Flinders, Carol. 1981. Notes from Laurel's Kitchen: Chinese cooking, vegetarian style, uses soybeans for meat. *Hartford Courant* (*Connecticut*). Jan. 21. p. E8.
• ***Summary:*** The traditional teachings of both Buddhism and Taoism prohibit the eating of any food that requires killing animals, birds, fish, or other sea creatures. For this reason "the native culinary genius of China has produced a superb vegetarian cuisine. It has flourished for centuries, mainly in

Buddhist monasteries."

Now Stella Lau Fessler has written "Chinese Meatless Cooking" which contains authentic recipes. The next step is to locate a store in your town that sells Oriental foods. Tofu, sesame oil, and even shiitake mushrooms are now widely available.

"Soybeans make an impressive showing throughout the recipes: As tofu in many forms (did you know there's a fermented tofu, 'tofu-ru,' which aficionados compare with blue cheese?), as soybean milk, and even as just plain soybeans, boiled fresh in the pods."

3456. Stechmeyer, Betty. 1981. Re: The Finnish clabbered milk product, "viilia." Letter to William Shurtleff at Soyfoods Center, Jan. 28. 1 p. Typed, with signature.
• ***Summary:*** "I've been working with a Finnish clabbered milk product, "viilia," which makes a very passable soy milk cultured product. Dr. Wang in Peoria [Illinois] is quite excited about its potential as a totally vegan cultured soy milk product. She now has a starter and was in hopes of having a full-time researcher work on it. The ultimate deadline would be [to have] cultures available at the SANA conference in July." Address: GEM Cultures, 30301 Sherwood Rd., Ft. Bragg, California 95437.

3457. **Product Name:** [Soymilk, and Soy Yogurt].
Manufacturer's Name: Alternatur.
Manufacturer's Address: Korte Spekstraat, Hallaar, Belgium.
Date of Introduction: 1981. January.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1981. March 4. This was the second earliest known soy yogurt made in Europe, and the first made after 1911.

3458. Dominguez de Diez Gutiérrez, Blanca. 1981. Re: Teaching about tofu, soymilk, and other soyfoods in Mexico. Letter to William Shurtleff at Soyfoods Center.
• ***Summary:*** Blanca never really ran a tofu shop in Mexico. She only taught how to make it, especially in Jalapa, Veracruz. Address: Apartado Postal 65, Zacatepec, Morelos, Mexico.

3459. **Product Name:** Granose Soya Milk (Plain, or with Carob).
Manufacturer's Name: Granose Foods Ltd. (Marketer). Made in Belgium by Alpro.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1981. January.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1983. July 20. STS. 1985. Containers for Soymilk. Shows color photo of 500 ml Tetra Brik carton. Orange and green on white. "100% Vegetable. Rich in protein. High in polyunsaturates." Use by 7/84.

Form filled out by Alpro. 1990. May 30. Alpro began making this product (2 flavors) in Jan. 1981 in 500 ml cartons. Granose stopped buying it from Alpro in Dec. 1984; DE-VAU-GE became the new source.

Note: This is the earliest product seen in Britain that uses "Soya Milk" as the product name.

3460. **Product Name:** Soymilk [Plain].
Manufacturer's Name: Lecanto Tofu.
Manufacturer's Address: Route 2, Box 764, Lake Butler, FL 32054. Or: Route 3, Box 150, Lake City, FL 32055.
Date of Introduction: 1981. January.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Jean Huffman. Address is given as P.O. Box 444, Lecanto, Florida 32661. Talk with Marvel Huffman. 1988. May 17. She made this soymilk mainly for the Chinese in Gainesville.

3461. **Product Name:** Frozen Buddha (Soymilk Ice Cream) [Chocolate Mint, Pineapple Coconut, Lemon Coffee, Chocolate Almond, Lime Ginger, Carob, Blueberry, Maple Walnut, Vanilla, Apricot, or Holiday Spice Eggnog].
Manufacturer's Name: Metta Tofu Products.
Manufacturer's Address: Wren Rd., Denman Island, BC, V0R 1T0, Canada.
Date of Introduction: 1981. January.
How Stored: Frozen.
New Product–Documentation: Letter from Lulu Yoshihara of Denman Island, BC, Canada. 1981. Sept. 9. Last spring, her neighbor Ray Lipovsky, "the tofu man," started making Frozen Buddha, "a soy ice cream, which is very, very popular (because it is very, very delicious). I'll enclose the lid with this letter..."

Label. 1982. Undated.

Letter from Ray Lipovsky in reply to questions from William Shurtleff. 1982. Aug. 8. Q5. When did you start making Frozen Buddha [soy ice cream]? Ans: Jan. 1981.

Spot in Soyfoods. 1983. Winter. p. 49-50. "How to Freeze the Buddha." Monthly production of 1,500 liters in the winter.

3462. Soy Plant Co-op Inc. (The). 1981. Price list effective 1/28/81 [28 Jan. 1981]. Ann Arbor, Michigan. 1 p. 28 cm.
• ***Summary:*** This hand-lettered sheet contains four columns: Manufacturer, product, unit price, and case price. The Soy Plant is manufacturer of: Tofu, plain soy milk, flavored soy milk, tempeh, miso garlic dressing, and Soyanaise (soy mayo). Other manufacturers are Sunshower (fruit juices and butters), Hills Brothers (apple cider), Toper (pickles), Westbrae (miso–3 types), and Canadian Soya (Soya Lecithin

Spread, non-hydrogenated). Address: 711 Airport Blvd., Suite #1, Ann Arbor, Michigan 48104. Phone: 313-663-TOFU (663-8638).

3463. Webber, Harry. 1981. Perry Webber, Madison College, and Madison Foods (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 8. 2 p. transcript.
• ***Summary:*** Harry Webber, the son of Perry A. Webber, attended Madison College from 1930 to 1935, then 1939-1943. He left in 1943 to go to medical school. Harry remembers the foods served at Madison. Vigorost was a gluten meat invented by Perry. There was also Nutmete or Notmete, and several others. They were served to students and widely retailed at health food stores. Ed Bisalski, the sales manager, traveled around the USA selling these foods.

Perry Webber first went to Madison in about 1931. He earned his doctoral degree at Michigan State, graduating in about 1930-31, then went to Madison. Years before that he had been a missionary in Japan.

Harry went to Japan with his father, Perry, for 3 years. Harry's mother has written a biography of Perry; he will send Soyfoods Center a copy. Emmanuel Missionary College asked that she write the book. His interest was in food chemistry. He was head of the chemistry department at Madison. In the early 1930s he got interested in soy.

P.A. Webber and his family went to Japan from 1935 to 1939, then came back to the USA just before World War II, and went to Madison College–where Perry did lots of work with soyfoods.

Perry Webber was good friends with Dr. Harry Miller and he got interested in soymilk through Dr. Miller, probably first in Japan. He visited with Dr. Miller in Japan and saw his program, but Perry was interested in soymilk before 1935. His brother was in Tokyo at the Adventist hospital.

Sam Yoshiwara knew Perry Webber well and was one of his students in Japan. Perry sponsored him to come to the USA. Sam worked in the food factory at Madison College.

There is a small book about Sutherland and Madison by a man who taught Spanish at Madison. Address: M.D., 913 Meadowwood Dr., Modesto, California 95355. Phone: 209-521-1410 OF. 209-529-4291 HM.

3464. Chen, Steve. 1981. Re: Soymilk in Taiwan. Letter to William Shurtleff at Soyfoods Center, Feb. 9–in reply to inquiry. 2 p. Typed, with signature on letterhead (photocopy).
• ***Summary:*** (1) Our major soymilk producers in Taiwan are:

(a) Wei Chuan Food Ind. Corp., No. 125, Sung-Chiang Rd., Taipei, Taiwan. They started making soymilk in 1980 and now make about 50,000 packs/day. Product names: Wei Chuan Soy Bean Drink. Flavoured Soymilk (Egg & Peanut).

(b) President Enterprise Corp., No. 2-20, Yen-Hang, Yuan Kang Hsing, Tainan, Taiwan. They started making soymilk in 1978 and now make about 200,000 packs/day (15 million liters/year). Product names: Flavoured Soybean Milk (Eggs, milk, peanut, strawberry).

(c) Tsin Tsin Food Industry Corp. No. 91, Section 3, Nanking East Rd., Taipei, Taiwan. They started making soymilk in 1978 and now make about [?] packs/day. Product names: Tsin Tsin Soya Bean Milk (Original flavour).

(2) Taiwan Tofu Association: Mr. Y.P. Yang, Secretary-General No. 9, Lane 133, Taiyuan Road, Taipei, Taiwan.

(3) We have announced your four books in our *Food Today,* December, 1977 to our 10,000 readers.

(4) Soymilk in the Cantonese is "Tou Chuang" while in the Mandarin "Tou Chiang".

(5) There are six soymilk plants operated by the local Farmers' Associations (FA). Their individual production in 1980 (in bottles):

Pao-shan 980,000
Chu-tung 850,000
Feng-lin 350,000
Lo-tung 5,820,000
Yuan-shan 2,150,000
Chia-Li 1,030,000.

They market their soymilk locally, within their townships. They started making soymilk in 1983 and now make a total of about 4.55 million liters/year.

(7) Greenspot in Thailand started making soymilk in 1958.

(8) I don't know when Yeo Hiap Seng`s soymilk changed to Vitabean and I have not heard of Vegemilk.

(9) The most recent developments with soyfoods in Taiwan are: automatic production of tofu using Japanese Takai equipment; continuous production of bean skin [yuba] by the automatic equipment; and enrichment of meat balls and fish balls with soy proteins.

(10) Per capita consumption of tofu in Taiwan is:
1975–37.07 kg. (= 81.55 lb.)
1976–37.62 kg.
1977–32.79 kg.
1978–35.80 kg.
1979–34.93 kg.
Source: Taiwan Food Balance Sheet (JCRR and CAPD).

Sincerely yours, Steve. Address: Country Director, American Soybean Assoc./Taiwan, Taiwan Branch Office, P.O. Box 3512, Taipei, Taiwan, The Republic of China. Phone: 7815880,7812110.

3465. Miller, Jim. 1981. Re: Chronology of Quong Hop's firsts in American soyfoods. Letter to William Shurtleff at Soyfoods Center, Feb. 9. 1 p. Typed, with signature on letterhead.
• ***Summary:*** In response to Shurtleff's request for additional information about Quong Hop's "contributions to the making of soyfoods history in the West, I thought I would send along the following list of firsts and other significant things pertaining to our own involvement in soyfoods, just to set the record straight."

1972–"The first orientally owned and operated tofu company to make a significant move to introduce tofu to the American consumer."

1972–"The first producer of fresh soymilk for the health and natural food as well as the oriental food market."

1973 Jan.–"The first to promote tofu in its many varieties as an economical and nutritious alternative to meat and dairy products using the enclosed pamphlet and other p.o.p. [point of purchase] material for supermarket promotions."

1975 Dec.–"The first commercial producer of tofu to use organically grown soybeans."

1976 Aug.–"The first commercial producer of tofu to use natural nigari."

1977 June–"The first commercial producer of tofu burgers" [labeled "Tofu Burgers"]. Note: Azumaya started commercial production of tofu burgers labeled "Ganmodoki" in about 1937.

1978 April–"The first producer of vacuum packed nigari tofu."

1980 May–"The first to produce aseptically packed creamy tofu dressings requiring no refrigeration."

1980 Sept.–"The first to produce a line of frozen tofu entrees for sale to the Western market for natural convenience stores." Address: Quong Hop & Co., 161 Beacon St., South San Francisco, California 94080. Phone: 415-873-4444.

3466. Stechmeyer, Betty. 1981. Re: Just a brief note to accompany the "viilia" starter. Letter to William Shurtleff at Soyfoods Center, Jan. 28. 1 p. Typed, with signature.
• ***Summary:*** "Most of my references are 80 year old Finns from here in Ft. Bragg." Gordon McBride's mother is Finnish and age 82.

"She says that traditionally viilia starter was spread in a soup bowl to which was added 'fresh' (straight from the cow) milk 'at blood temperature.' Cover with a paper or cloth to keep it clean and leave it at room temperature for a day or two. The creamy top layer is called viilia which was thicker and the portion of choice. The lower, less rich, piima was often whipped for a refreshing drink.

"My experience with making soy viilia has resulted with good consistency, and a slightly 'beany' flavor that is easily masked by fruits, etc. if one wishes. I have had little to no luck keeping a soymilk starter for more than a few generations with each succeeding batch being weaker in consistency" [than the one before it].

"Homogenized milk will not give the layering because of the mixing of the butterfat but gives a fine viilia starter for soy."

Note: The next day Akiko made out first soy viilia and we liked it very much. Address: GEM Cultures, 30301 Sherwood Rd., Ft. Bragg, California 95437.

3467. Howse, Eric. 1981. Seventh-day Adventist work with soyfoods worldwide (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 12. 2 p. transcript.
• ***Summary:*** Howes was the International Director at the General Conference in Washington, DC, until he retired. Soyfoods are a rapidly growing component of Adventist food work worldwide. Discusses: Sanitarium Health Food Co. in Australia, DE-VAU-GE in West Germany, Granose Foods in England. A major new component is low-cost extruders making TVP. Address: 6471 Penn National Drive, Fayetteville, Pennsylvania 17222. Phone: 717-352-7239.

3468. Schmit, Matthew. 1981. Fresh tofu comes to Northern Cal. Arcata, Clifornia. 2 p. Feb. 13. Unpublished manuscript.
• ***Summary:*** "The Tofu Shop of Arcata, California, officially opened its doors on December 12, 1980, after a year of low-key planning and three months of shop/equipment renovation. Owners Matthew and Susanne Schmit label the shop 'a soy deli and whole grain bakery,' and have designed the wholesale and retail operation to be a family run business.

"Upon entering the 500 sq. ft. shop, customers find themselves in a quaint, hand-crafted retail area, offering a full line of whole grain breads and a variety of 'tofu-support grocery items' such as sauces, condiments, sea vegetables, grains, and cookbooks. Deli specials, recipes-of-the-week, and soy news items are listed on central bulletin boards. Regular deli features include soymilk, tofu cheesecake, tofu-pumpkin pie, ganmo patties, and tofu-spinach turnovers. Behind the service counter customers can see dough mixers and baking ovens, and portions of the tofu-making process are also visible from the shop's front windows–all an attempt to bring the consumers closer to the source of their food.

"The traditional-style cauldron shop is presently producing 100 pounds of firm nigari tofu per day with a capacity of 300 pounds per day. The equipment is all American made and adapted to its present function. Grinding is done with a C.W. Bell steel plate grinder. Soymilk is extracted with a traditional cider press. Settling boxes are actually stainless steel steam table inserts with drilled holes. Pressing is done with a custom-made jig using cargo jacks as adapted by Surata Soyfoods of Eugene, Oregon (Soyfoods, Summer, 1981).

"Future plans for the shop include upgrading the tofu equipment to increase production capabilities, and at the same time developing the deli facility to attract a larger cross-section of the community. Matthew and Susanne Schmit are dedicated to the community-level tofu shop concept and are happy to play a part in the growth of a viable small shop model in the United States. For information call or write: The Tofu Shop, P.O. Box 4716, 768 18th Street, Arcata, California, 95521. Phone: (707) 822-7409." Address: 768 18th St., Arcata, California 95521. Phone: 707-822-7409.

3469. Yoshimura, Sam. 1981. Re: Chronology of work at Madison Foods and reminiscences. Letter to William Shurtleff at Soyfoods Center, Feb. 20. 2 p. Typed, with signature.

• ***Summary:*** 1937-1943. Sam attended Madison College and received a B.S. degree in nutrition in 1941. "At that time extensive study on soy beans and human nutrition was conducted at the college under the direction of Francis Dittes, (Ph.D. in nutrition) Phillip Chen, (Ph.D. in chemistry) and Perry Webber (Ph.D. in nutrition). Madison Foods (owned by the college) was manufacturing various canned and dried vegetable protein products including Kre-O-Soy (soy milk) and Cheze-O-Soy (seasoned tofu) and marketed them nationally. I received valuable experience working in the food plant.

1943-1946. Sam went to Emmanuel Missionary College located in Berrien Springs, Michigan (now renamed Andrews University), and received a B.S. degree in agriculture in 1945.

1945-1956. Sam returned to Japan and re-established San-iku Foods (owned by the Japan Missionary College). The college was closed during World War II. The company made canned and baked products based on wheat and soy proteins and marketed them extensively, including at Mitsukoshi, Seibu and other department stores. A series of pilot scale tests of soy milk production was conducted under the direction of Dr. Harry Miller. However, they did not start commercial production due to the somewhat weak public response to the product.

1956-1963. He worked for Madison Foods in Tennessee, where he was responsible for managing the production, research, and development program. Various canned vegetable protein products were produced. Madison Burger based on wheat and soy protein and improved Cheze-O-Soy were well accepted by the market. At the beginning of 1962, production of Infa Soy using Dr. Harry Miller's formula, was started under the direction of his son, Willis Miller; J.B. Craw was general manager at that time.

1963-1964. Sam left Madison Foods and went to work for Madison Hospital (owned by the organization). He was assigned to develop economical vegetable protein products suitable for hospitals, schools and other institutions. A series of frozen products including the so-called "Sam's Chicken," made with wheat protein [gluten] and tofu, were formulated. The product was well accepted by institutions as it had a torn chicken-like texture. "It was a least expensive product. I understand a dish prepared with Sam's Chicken (supplied by Southern Missionary College) received recognition at the International Restaurant Show in Chicago several years ago.

1965 to present. He joined Worthington Foods after Worthington acquired Madison Foods. Worthington sent him to Africa Basic Foods Inc. in Uganda, East Africa, to assist development of soy protein products. During his 6-month stay the company produced soy milk, tofu, CSM (combination of corn, soy and powdered skim milk) and other high protein products for hospitals and the school lunch program. It was a missionary project for the company to take part in solving kwashiorkor problems. It was an unforgettable and rewarding experience for Sam. He is a staff member of the R&D department, especially assigned to develop new products. He is also a professional member of the Institute of Food Technologists.

For information regarding Krem-O-Soy and other products from the early days of Madison Foods, contact Dr. Register (Chairman, Dep. of Nutrition, Loma Linda Univ.) or Dr. Shirou Kunihara at the same university. They were students at Madison College and did R&D work for the food plant. The son of Dr. Philip Chen (deceased) is at the Weimar Institute, Box A, Weimar, California 95736. Address: 8200 Colonial Meadows, Westerville, Ohio 43081. Phone: 614-882-0625.

3470. Adler, Jerry; et al. 1981. The browning of America: Drought, waste and pollution threaten a water shortage whose impact may rival the energy crisis [of the 1970s]. *Newsweek.* Feb. 23. p. 26-30, 35-37.

• ***Summary:*** In the western states, the "Federal government has spent billions of dollars to divert water so farmers can grow crops on arid land, but that creates trouble of another kind; mineral residue from decades of irrigation has poisoned once fertile soils...

"Most alarming of all, vast underground reserves of water, deposited over thousands of years, have been seriously depleted in a matter of decades. All water comes as rain from the sky, but 92% of it either evaporates immediately or runs off, unused, to the oceans. One-quarter of the water that irrigates, powers and bathes America is taken from an ancient network of underground aquifers. In 1950, the nation took 12 trillion gallons of water out of the ground; by 1980, the figure had more than doubled, and each day, 21 billion more gallons flow out than seep in. Water from the great Ogallala Aquifer (map, page 28), which stretches from West Texas to northern Nebraska, is being used up, as irrevocably–and some would say as wantonly–as the oil that lies beneath it... 'there are some people projecting that as early as the year 2000, there will be parts of Nebraska with their water supplies so depleted that farming may never return.' The nation's water outlook now is frighteningly reminiscent of the oil outlook a decade ago...

"The energy crisis and the water shortage are inextricably linked. The limiting factor in irrigation tends to be the high cost of electricity to run the pumps as the water table recedes...

"Just as Americans have discovered the hidden energy costs in a multitude of products–in refrigerating a steak, for example, on its way to the butcher–they are about to discover the hidden water costs. Beginning with the water

that irrigated the corn that was fed to the steer, the steak may have accounted for 3,500 gallons. The water that goes into a 1,000-pound steer would float a destroyer. It takes 14,935 gallons of water to grow a bushel of wheat, 60,000 gallons to produce a ton of steel, 120 gallons to put a single egg on the breakfast table."

The Ogallala Aquifer, named "after an Indian tribe that once roamed the High Plains, is perhaps the largest underground reservoir of fresh water in the world–an estimated 2,000 million acre feet (1 acre foot = 325,851 gallons) trapped in sand, gravel, and silt laid down by the rivers of the Pliocene and early Pleistocene." Eventually the river and plentiful rain waters were trapped between a layer of impermeable shale on the bottom and an erosion-resistant rock cap on top. "Every year farmers withdraw more water from the Ogallala than the entire flow of the Colorado River. But because sparse rain barely penetrates to the aquifer, very little water flows back in. Water tables are falling from 6 inches to 3 feet a year, and, on average, the Ogallala has 40 years of useful life remaining; in some localities the bottom will be reached much sooner...

"Already, irrigated acreage is declining in five of the six states that draw water from the Ogallala, with predictable results: lower yields and a shift down the water scale from corn crops to cotton or sorghum... Gerald Higgins, an economist with the Texas Department of Water Resources, predicts that 'corn will disappear from the Texas High Plains within the next few years.'...

"But like most states, Texas lets its farmers pump away. The last American frontier is underground, where miners, developers and big farmers race each other to the bottom of the aquifer... For years, Houston [Texas] slowly sank as water was sucked from beneath it; California's San Joaquin Valley has dropped by nearly 30 feet in some places. The compacted subsoil loses its capacity to hold water, so that even if pumping stopped the aquifers could never fully recharge. There are innumerable large and small aquifers underlying the United States, supplying nearly one-half its drinking water."

"Innocent practice of irrigation can cause ecological havoc. Irrigation water carries dissolved salts, which build up in poorly drained soil as the water evaporates and eventually make it impossible to grow most crops. By 1990, as much as a quarter of California's immensely productive San Joaquin Valley could be threatened."

How the nation spends its water (all figures in 1,000 million gallons. Source: U.S. Water Resources Council). Rainfall and other precipitation: +4,200. Evaporation -2,787. Streams to the oceans, Mexico, and Canada -1,328. Input into ground water -61. Withdrawn from ground water +82 (so deficit of 21,000 million gallons of year as America overdraws its ground-water supply). Consumption (106, all minus): Agriculture 87.7 (82.7% of total consumption), manufacturing and minerals 8.2, domestic (people in and around their homes) 7.3 (6.9% of total consumption), power generation 1.4, public lands 1.4.

Another basic problem is water pollution. "Not even 4,000,000 million gallons of rain a day can dilute the results of decades of folly and greed... Cattle feedlots in Iowa, pesticide-laden potato fields in Long Island and bacteria from human sewage have all contaminated precious ground water... The contamination of ground water is almost irreversible."

"Even the seemingly innocent practice of irrigation can cause ecological havoc. Irrigation water carries dissolved salts, which build up in poorly drained soil as the water evaporates and eventually make it impossible to grow most crops. By 1990, as much as a quarter of California's immensely productive San Joaquin Valley could be threatened."

Page 36 discusses the fight over Colorado River water, the $1,600 million Central Arizona Project which will deliver more than 1 million acre-feet a year to fast-growing Phoenix and Tucson, water wars in Los Angeles and Inyo County over the Owens River, and the Peripheral Canal (which was later defeated by voters). "The government's century-old policy of encouraging the settling of the West through cheap water is increasingly viewed as an anachronism... The old pork-barrel approach to Western water projects in Congress is also breaking down... In the long run Americans will have to learn that the era of cheap water, like the era of cheap energy before it, is over."

A sidebar describes how Israel makes very efficient use of its scarce water–25 inches of annual rainfall.

3471. Del Valle, F.R.; Villanueva, H.; Reyes-Govea, J.; Escobedo, M.; Bourges, H.; Ponce, J.; Munoz, M.J. 1981. Development, evaluation and industrial production of a powdered soy-oats infant formula using a low-cost extruder. *J. of Food Science* 46(1):192-97. Jan/Feb. [24 ref] Address: Chihuahua, Mexico.

3472. *Food Engineering International* (*Chilton's*). 1981. 'Mechanical cow' gives milk made from soya. Jan/Feb. p. 54-56. [Eng; ger; fre; spa]

• ***Summary:*** Brazil is considering a plan that would extend the nation's milk supply by mixing 30% of a soy milk with the cow milk supply. Soy bean prices are low in Brazil, and a liter of soy milk can be manufactured for one third to one fourth the cost of a liter of cow milk. Soy milk is not new to Brazil; From 1968-1970 Coca-Cola Co. introduced experimental soy milk production, but the project was discontinued because the price was still too high and the packaging was expensive.

Now Roberto Moretti, a food technology professor, has developed a mini soy milk plant popularly called the "Mechanical Cow," which is easy to run, compact, and relatively inexpensive; installed in schools, factories,

hospitals, etc. it can make inexpensive soymilk (US$0.10/liter, flavored, sterilized and refrigerated) that needs no packaging. One "mechanical cow" can produce 200 liters/hour. Moretti also produces a dryer. Some hospitals are using the mechanical cow to make soymilk that is mixed at the 30% level with cow milk to lower the price of the latter.

3473. **Product Name:** Soybean Beverage (Soymilk).
Manufacturer's Name: Hoven Foods.
Manufacturer's Address: 506 6th Ave. South, Seattle, WA 98104.
Date of Introduction: 1981. February.
Ingredients: Water, soybean extract, sugar, sodium bicarbonate, sodium benzoate.
New Product–Documentation: Leviton. 1981. Soyfoods. Winter. p. 17.

3474. John, Harrison W. 1981. Adventist food industries: Recent developments. *Spectrum: Journal of the Association of Adventist Forums* 11(3):28-36. Feb.
• ***Summary:*** One of the most informative articles ever written about Seventh-day Adventist food companies worldwide. "Ever since Ellen G. White's health reform message of 1863, Seventh-day Adventists have had a 'theology' of nutrition." In 1979 food sales for Adventist manufacturing and marketing companies totaled $188 million, up 95% over 1974 sales of $96 million, and up 3.68 times over 1970 sales of $51 million. The most successful company is Sanitarium Health Food Company in Australia. Sales for the 5-year period 1975-75 totaled $400 million. Their most popular product is read-to-eat "Weet Bix," a breakfast cereal that outsells Kellogg's Corn Flakes.

In Europe: Earned income figures for 1978 were impressive. DE-VAU-GE's income was $12.2 million (second only to Sanitarium Health Foods in Australia). Nutana's was $7.6 million ($10 million in 1979), and Granose's was $1.8 million. Nutana showed an impressive tenfold sales increase from 1973 to 1979.

Profit figures, however, were not impressive. In 1978 Granose lost about $295,000 and Nutana $5,903. DE-VAU-GE's profits were unknown. Granose had been a consistent money looser; between 1975 and 1978 it lost an average of $101,000 a year and its net worth decreased from $331,902 in 1975 to $113,515 in 1978. Thus in October 1979 Sanitarium Health Foods of Australia was asked to take over the management of ailing Granose. Loma Linda Foods in the USA has also had problems. Though 1978 sales were $11.7 million, they lost $390,000. In April 1980 management and control of LLF was transferred to Sanitarium of Australia. In about 1978 Granix in Argentina and Superbom in Brazil entered the vegetable protein market with TVP and are currently producing 700 tons/year. In 1976 a "World Foods Service Expansion Program" was started to finance expansion of food production into countries having serious nutritional problems. Low-cost extrusion cookers making TVP were a key part of this program. Address: Rockville, Maryland.

3475. Johnson, L.A.; Deyoe, C.W.; Hoover, W.J. 1981. Yield and quality of soymilk processed by steam-infusion cooking. *J. of Food Science* 46(1):239-43, 248. Jan/Feb. [18 ref] Address: 1. Food Protein R&D Center, Texas A&M Univ; 2-3. Kansas State Univ.

3476. **Product Name:** Soy-Ya!
Manufacturer's Name: Joy of Soy.
Manufacturer's Address: Minneapolis, Minnesota.
Date of Introduction: 1981. February.
New Product–Documentation: Leviton. 1981. Soyfoods. Winter. p. 17. "A honey-flavored soymilk provided in quarts and pints."

Leaflet (front and back, printed black on yellowish orange). 1981. "Soy-Ya!" "Soy-ya! is a nutritional alternative to dairy milk made from soybeans and water." Contains a nutritional analysis plus 6 recipes.

3477. Leviton, Richard. 1981. World Soya Conference: Exporting mainstream soybean technology. *Soyfoods* 1(4):13-15. Winter.
• ***Summary:*** A report on the week-long World Conference and Exposition on Soya Processing and Utilization, convened in Acapulco, Mexico on 9 Nov. 1980. It attracted over 600 technical registrants, 200 exhibitor personnel and spouses, and 200 daytime Mexican students from a total of 42 nations. Address: Colrain, Massachusetts.

3478. Leviton, Richard. 1981. Making soymilk in America. *Soyfoods* 1(4):16-24. Winter.
• ***Summary:*** A review of soymilks available nationwide and a detailed analysis of Numu, New England Soy Dairy's problematic soymilk and the reasons for its failure in September 1980, at a cost of $40,000. Also discusses: Vitasoy (imported to California). President Soybean Drink (imported to California). Soy Fresh (made by Quong Hop in California since 1972). Soy Moo (made by Health Valley in California). Fresh Soybean Juice (made by Wy Ky of Los Angeles). Soymilk (made by Mighty Soy). Soybean Beverage (made by Hoven Foods, Seattle). Soy Juice (made by Redwood Valley Soyfoods Unlimited [Richard Rose]). Plain Soymilk (made by Island Spring, Vashon, Washington). Nutrisoya (made by Victor Food Products, Toronto, Canada). Soy-Ya! (made by Joy of Soy, Minneapolis, Minnesota). Soy Milk (made by White Wave of Boulder, Colorado). Soyalac and Soyagen (made by Loma Linda of Mt. Vernon, Ohio). In 1978 Nasoya introduced Vidasoy–prematurely; it was a disaster. A photo shows Stephen Yu holding a bottle of Victor Foods' Nutrisoya. Address: Colrain, Massachusetts.

3479. Leviton, Richard. 1981. Putting tofu in the lunch boxes of America: A report on serious soyfoods marketing. *Soyfoods* 1(4):54-61. Winter.
• ***Summary:*** About New England Soy Dairy, Timothy Metzger and Dannon Yogurt, Larry Needleman and Bean Machines, Thelma Dalman (Food Service Director for Santa Cruz city school system), Al Jacobson (The Wizard of Foods, "a tidy, bustling, elfin, walking idea man") and his Garden of Eatin', Paul Duchesne and Wildwood Natural Foods, Steve Demos and White Wave. A photo shows Victor Food Products on sale in Canada: VFP Tofu, and VFP Nutrisoya soymilk.

A sidebar by Timothy Metzger, gives an interesting history of marketing dairy yogurt in America. Dannon introduced its yogurt to the U.S. some 38 years ago (i.e. about 1943). Concerning Wildwood (p. 61): "In Fairfax, just over the hills from the Golden Gate Bridge and San Francisco, Paul Duchesne's Wildwood Natural Foods appears to fulfill the dreams of many soyfoods proprietors by combining both light tofu manufacture with light sandwich production in a clean, efficient, and industrious little shop. Mr. Duchesne designed his shop as a tofu showcase with broad wall-to-wall front windows so that passers-by may glimpse tofu production during the days. Wildwood produces a line of eight packaged vegetarian sandwiches including *Brown Rice and Tofu Sandwich* (with vegetables in a whole wheat bun), *Tofu Vegetable Salad, Two Beans in a Bun, Carrot-Raisin Salad, Marinated Bean Salad,* and *Beet Salad.* While they enjoy the luxury of a delivery van for San Francisco accounts, Mr. Duchesne impressed upon me the fun of using a bicycle that pulls a small flat trailer for on-the-street sales in Fairfax on those endless California summer days when folks are out relaxing on their skateboards and zipping down the street on roller skates and sailboats crisscross Sausalito Bay." Address: Colrain, Massachusetts.

3480. Leviton, Richard. 1981. With spoon in hand: A survey of soymilk ice creams. *Soyfoods* 1(4):62-64. Winter.
• ***Summary:*** Soymilk ice creams are on the rise in America. Discusses: Ice Bean (made by Farm Foods in San Francisco, but removed from the market in early 1980). Jolly Licks Ice-C-Bean (developed and marketed by Mark Brawerman's Jolly Licks of San Francisco). Soy Freeze (made by Island Spring of Vashon, Washington). Soy Dream (formerly named Ice Dream Frozen Dessert, made by Quong Hop & Co. in South San Francisco). Soy Dream (developed and marketed by Al Jacobsen's Garden of Eatin' in Los Angeles). Polar Bean (made by White Wave Soyfoods of Boulder, Colorado). Soy Dream (made by Joy of Soy in Minneapolis, Minnesota). Sunflower Frozen Desserts (made by Susan Gershuny and Kirk Meyer of Tivoli, New York). Soy Softee (made by Cindy and Steve Hassell of The Granary in Northampton, Massachusetts, and sold from a soft serve machine in their retail store).

For most products, the flavors and ingredients are given. Photos show: Cindy Hassell of the Granary in Massachusetts holding up a cone filled with her Soy Softee. Many pints of Ice Dream. Mark Brawerman of Jolly Licks. Address: Colrain, Massachusetts.

3481. Leviton, Richard. 1981. Tofu plant profiles: Soycrafters on the Island [Luke and Suni Lukoskie of Island Spring on Vashon Island, near Seattle, Washington]. *Soyfoods* 1(4):42-44. Winter.
• ***Summary:*** "From the back step of Island Spring's soyfoods plant on Vashon Island near Seattle, Washington, when you take a moment's break from making tofu and look out over the orchard and small plane airstrip, you enjoy a stunning view (when the sky is clear) of towering, snowcapped Mt. Rainier, rising 14,000 feet above sea level some 120 miles to the south. Island Spring, Inc., founded in 1977 by Luke Lukoskie and Suni Kim, his wife, shares space in a broad, squat building with Wax Cannery, a small-scale orchardist and fruit juice bottling company that constructed the Island Spring production space to their specifications. Outside the tofu plant, there's a miscellany of second-hand steam kettles and bulk holding tanks and Army surplus discards, that Mr. Lukoskie was quick to scrounge up and rejuvenate for his production needs.

"The Island Spring plant is tightly laid out with five long aisles of equipment, workspace, and production supplies, flanked by an overhead loft that runs along the back wall and houses dry materials, coagulants, labels, and boxes. Immediately outside the shop, a metal silo stores 50,000 pounds of dry bulk soybeans which are augured, when needed, into the shop for soaking in either steam kettles on wheels or in stainless steel twin compartment moveable tanks. The soaked beans are then scaled up in measures (the batch size is 140 pounds of beans and 30 gallons of water) on a large industrial scale wrapped in plastic against the ubiquitous moisture, placed in polyethylene tubs, and hoisted to the floor of their five-foot raised platform. The worker mounts the platform to dump the hydrated beans into the hopper of their soybean mill (a J.C. Ford Master wet corn grinder, which they bought for $2,850 in 1976; 548 Monterey Pass Road, Monterey Park, CA).

"The worker tends two adjacent 60-gallon steam kettles that receive (alternately) the ground soybean puree from the mill; the foam is sprayed down with cold water, and when the cooking is finished, the slurry is pumped into their home-made, hand-hydraulic soymilk press. After extraction, the soymilk is pumped into one of three steam kettles that serve as curding barrels. Each barrel, which has a 120-pound capacity, produces three 40-pound batches of tofu curds, or enough for three forming boxes. The soymilk is coagulated using either nigari or calcium sulfate. The curds are then ladled into the three forming boxes, most of the whey is drained off before ladling, and buckets filled with water are

hoisted on top of the lids for weight. The finished tofu is sliced on the lid which floats in the water in the cooling tank; it's sliced according to an imprinted grid that forms a cutting pattern on the tofu during pressing. The cooling tank, which is 25 feet long and was purchased for only $300, holds 1,800 pounds of tofu, has circulating cold water, and freon coils for chilling the water (not presently used). Metal screens on four-inch risers are set on the tank bottom to facilitate packing and to prevent the tofu from making contact with the tank bottom. Almost all of the tofu (silken and regular) is packaged in 16-ounce tubs, then packed in cardboard boxes and cooled until delivery. In late October the daily tofu production was 15 batches (1,800 pounds) requiring four people working 6½ hour shifts. Mr. Lukoskie reports that 70 percent of their tofu sales are to Washington supermarkets.

"Island Spring produces both regular and silken tofu (calcium sulfate-based, made every 10 days in 120-pound batches) for a weekly total of 10,000 pounds. One thousand pounds are converted into Delicious Steamed Tofu, fresh griddled slabs of tofu packed in a soy sauce, 480 pounds of Soyloaf, 210 quarts of Soyfreeze [soy ice cream] (described in With Spoon in Hand, this issue), nine gallons of soymilk daily, and some 700 pounds of soy tempeh every week.

"Let's look briefly at the Island Spring tempeh process. For tempeh, the daily batch size is 80 pounds of dry soybeans that produces 260 eight-ounce units. They use a CeCoCo dehuller for bean dehulling, an item they purchased second-hand in 1976 for less than $1,000 (purchased originally in Japan in 1966); this removes most of the hulls and the rest are skimmed off when the beans are boiled. The dehulled beans are kept at a racing boil for 30 minutes in a portable steam kettle, followed by spin-drying in the centrifuge. This requires three or four loads to get the beans sufficiently dry. This stage is slow as each load handles only 25 pounds of beans.

"The inoculated beans are packed in shallow tofu tubs which have no bottom aeration or drainage; therefore excess moisture in the beans condenses on the top lid and "rains" down on the fermenting soybeans (rather than escaping as steam), sometimes causing spoilage or retardation of the Rhizopus. The beans and inoculant are blended thoroughly in a Leland rotary mixer and vinegar is added; then the inoculated beans are scooped out and placed in eight-ounce tubs to be stacked on trays on moveable bakery racks. The tubs are heat-sealed with film and holes are pricked in the film with a special nail punch. This punch has been sterilized for one hour in a special Sterilizing Hood that purifies and filters air with fans and ultraviolet light; the hood is also used as a sterile workspace for tempeh starter production. The tempeh is incubated in a 6 foot x 6 foot incubator at 85ºF for 12 to 18 hours. For the last step, they apply 'crack-and-peel' tempeh labels over the pin-pricked film, and refrigerate until delivery.

"As a soy plant, Island Spring is a model to emulate, impressive for its efficiency, economy and scale, thrift, ingenuity, and product wholesomeness. Specifically, here are 14 points of commendation: (1) their bulk soybean storage and auguring system, one of only a few such systems in the country; (2) the innovative use of steam kettles and the concept of 'kettles on wheels' which saves space; (3) the efficient but inexpensive dehuller and wet grinder, both not commonly known; (4) the trim production floor layout designed for compartmentalization of products, high-volume production, and efficiency; (5) the large cooling tank with inside raised mesh and freon coils' that was still inexpensive; (6) the use of removable steam injection hoses for the 'kettles on wheels'; (7) the marvelous steaming bell that is lowered over the racks of Soyloaf to the floor with a steam hose injected in the side, then hoisted up out of the way when not in use;

"(8) iodine dip buckets for hand disinfecting, soaking tanks for production cloths, and the general high level of sanitation awareness; (9) the Sterilizing Hood used for tempeh starter production and purification of the nail punch; (10) the use of shallow broad sinks at the curding barrel stations for utensils used in coagulation; (11) the electric insect grill suspended from the ceiling; (12) the simple pumping system that moves the puree from the grinder to cooker, slurry from cooker to press, and soymilk from press to curding barrels; (13) the use of both nigari and calcium sulfate, unusual among Western shops; (14) their unique batch-piecework payment schedule that enables some production workers to earn over $7 an hour, including a health plan and flexible schedule, making Island Spring workers just about the highest paid soycrafters in the country.

"Island Spring has not only mastered the demands of engineering a smooth production system with low-technology, low-expense solutions, they have also introduced North America's pioneer Soycrafters Apprenticeship Program, an invaluable service where soycrafters are trained for three weeks in all aspects of soyfoods production and business management. Apprenticeship Program Director Steven Sloan reports they receive 50 inquiries a month, that they have graduated 15 students already, and that several of them have since inaugurated their own soy plants in places like Utah and Mexico. Other innovations continue. The tempeh makers are experimenting with producing preformed tempeh burgers by incubating the tempeh in round petri dishes; already they are selling 75 four-ounce patties weekly. To streamline tofu production, Mr. Lukoskie will install a new Okita three-compartment cooker and a Brown-Sweco soymilk extraction unit; and to simplify forming box tofu pressing, he will construct a series of overhead hydraulic beam presses with cement weights. With this new system he expects to increase his production capacity per hour by 25 percent. In addition, Island Spring is the first shop in America to install Bean Machine's brand new BMI Disintegrator for soybean grinding.

"As for new products, Younghee Kim, Suni Kim's sister, is developing a commercial *kim che* [*kimchi, kim chee, kimchee*] (fermented Chinese cabbage, very popular among Koreans) for the Western, rather than Oriental (which has suppliers) market in Seattle. Their label describes *kim che* as 'a spicy Korean pickled condiment in a piquant sauce,' and includes, in one-pint jars, 'napa cabbage, green onions, garlic, ginger, red pepper, water, salt.' *Kim che* contains no preservatives with a shelf life of at least 50 days, and requires refrigeration after opening."

Photos show: (1) Emptying hot okara into a steel barrel at Island Spring. (2) Suni Kim Lukoskie. (3-4) Two views of the inside of the plant. (5) Laminar sterilizing hood for tempeh-starter. Address: Colrain, Massachusetts.

3482. Leviton, Richard. 1981. Tofu plant profiles: Competing in the Diho Market [Maung Myint and Mrs. Jin Yee Lee of Mighty Soy in Los Angeles, California]. *Soyfoods* 1(4):46. Winter.

• ***Summary:*** Mighty Soy opened in August 1980. The two owners employ three workers. Together each day they produce 700 pounds of tofu (both silken and firm), 500 pints of soymilk, and 100 x 14-ounce containers of Soybean Gelatin Dessert (a pudding made by adding gelatin to hot soymilk). The prestigious Diho Market is "an Oriental supermarket with the largest section of tofu, soymilk, tofu pouches, and soy products I've ever seen in a store." The tofu arrives here at $0.42 a pound wholesale and the competition is fierce among companies like Hinode, Wy Ky, American Foods, and Mighty Soy. Photos show: Maung Myint. His hydraulic forming box presses. Address: Colrain, Massachusetts.

3483. Moretti, Roberto H. 1981. The Mechanical Cow: Low cost soymilk machine. *Soyfoods* 1(4):53. Winter.

• ***Summary:*** An illustration (line drawing) shows the Mechanical Cow, made by Vanguarda Mecanica in Brazil. A group of light, simple, easy to maintain pieces of equipment, it makes low-cost soymilk in four stages: (1) Soaking soybeans; (2) Grinding the soybeans in water at 98ºC, filtering the mixture in synthetic cloth and a centrifuge; (3) Formulation; (4) Sterilization (continually in a heat exchanger at 133ºC for 2 minutes) and cooling.

All machine parts that contact the soymilk are made with stainless steel. Production capacity is 200 liters/hour; 1 kg of soybeans yields 8 liters of soymilk containing 3% protein.

Vanguarda Mecanica complements its soymilk machine with a Dryer of Soymilk Residue [okara] which is practical and economical. In 2 hours and 10 minutes it can dry 20-22 kg of okara–the amount resulting from 2 hours of soymilk production.

Dr. Moretti has sold 90 mechanical cows, which are in operation in Brazil, Paraguay, Ecuador, and the Seychelles Islands. The soymilk machine costs $15,000 and the okara drier costs $12,000, both F.O.B. Brazil. Moretti's Cow won first prize in 1979 among 200 patented inventions in Brazil. He is looking for American distributors. Address: Dr., Vanguarda Mecanica, Av. Prof. Atillo Martini, 374, Cidade Universitaria, Barao Geraldo, Campinas, Sao Paulo, Brazil.

3484. **Product Name:** [PHAG Soya Drink].
Foreign Name: PHAG Soja-Drink.
Manufacturer's Name: PHAG Sàrl (Produits Hygièniques Alimentaires Gland) (Marketer-Distributor). Made in Belgium by Alpro.
Manufacturer's Address: La Ligniere, CH-1196 Gland, Switzerland. Phone: 022/64 11 18.
Date of Introduction: 1981. February.
Wt/Vol., Packaging, Price: 0.5 liter Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: This company was founded in 1895. Leviton. 1983. Report on soyfoods research and speaking trip to Europe with American Soybean Assoc., Oct. 8–Nov. 15. p. 17. Product seen at Reformhaeuser in Switzerland. Retailed for F1.65/500 ml.

Letter from Remy Mayer of PHAG. 1990. Oct. 2. This product was introduced in Feb. 1981. His company distributed the product, which was made by a manufacturer in Belgium [probably Alpro]. "PHAG is written officially in capital letters. It is an abbreviation of 'Produits Hygièniques Alimentaires Gland.'" On the company's letterhead, the logo is an illustration of the profile of a squirrel. Below the logo is written: "Force de la nature–Kraft der Natur" ("The Power of Nature"). After the company's name is written "Alimentation naturele–Neuzeitliche Nahrungsmittel" ("Natural foods–Modern foods"). New labels were created in 1985 after DE-VAU-GE began soymilk production.

Labels sent by Mayer. 1991. Jan. 24. 500 ml and 1 liter Tetra Brik Aseptic cartons. Red and green on white.

3485. **Product Name:** President Soybean Drink.
Manufacturer's Name: President Foods Co. (Importer). Made in Taiwan by President Enterprises Corp.
Manufacturer's Address: Hawaii.
Date of Introduction: 1981. February.
Ingredients: Soybean, refined sugar, filtered water, emulsifier, skim milk powder, vitamins A, B-1, B-2.
Wt/Vol., Packaging, Price: 8.5 fluid oz package.
New Product–Documentation: Leviton. 1981. Soyfoods. Winter. p. 17. "This imported product is available in California Chinatowns." Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 16, 33, 46, 95-98. "President, a large food conglomerate and the largest soymilk maker in Taiwan, set up offices in Hawaii by early 1981, then began to import to the U.S. Its first test market was in Seattle."

3486. Purves, Rebecca. 1981. Vegan diets for young children. *Nutrition and Food Science.* Jan/Feb. p. 4-6. [8 ref]
• ***Summary:*** In 1944 a group of strict vegetarians formed the Vegan Society and called their diet a vegan diet to distinguish it from an ordinary vegetarian diet. Vegans are people who do not eat any food of animal origin. In recent years vegetarian and, to a lesser extent, vegan diets have increased in popularity. The usual reason is ethical: a distaste for eating animal flesh and the abhorrence of animal suffering. The children's diet contained soya milks (Plamil and Granogen). There are hazards of a vegan diet though: Bulkiness (especially for children), monotony, deficiency of vitamins B-12 and D. Conclusion: The anthropometric measurements made indicated that the children were growing normally, although there was a tendency for them to be shorter in stature and lighter in weight when compared with standards. Address: Nutrition Dep., Queen Elizabeth College, Univ. of London, England.

3487. Shurtleff, William. 1981. Dr. Harry Miller: Taking soymilk around the world. *Soyfoods* 1(4):28-36. Winter.
• ***Summary:*** Contents: Introduction. Growing up (1879-1902): Birth, early contact with Dr. J.H. Kellogg, marriage. Early years in China (1903-1911). Washington, DC (1912-1925). Pioneering soymilk in China (1925-1939): Research, development of plant, destruction of plant 13 Aug. 1937, U.S. patent, No. 2,078,962 for soymilk process and equipment, work before return to U.S. Introducing soyfoods to America (1939-1949): In Mt. Vernon, new products, work with AMA, American Soybean Assoc. speaker and lifetime member 1958, contact with K.S. Lo and Vitasoy. Research and work around the world (1949-1977): Quick visit to Shanghai, death of second wife, sale of International Nutrition Foundation, Taiwan work, Indonesian plant, Trinidad, Libya, Japan, old age and relationship with William Shurtleff, the "Great Man." Contains 5 photos, and a sidebar titled "Early History of Soymilk."

Among the many people who pioneered in bringing soyfoods to America and to the West, two men of great vision, dedication, and perseverance deserve special mention: Dr. Harry W. Miller and William J. Morse. Dr. Miller, the well-known 'China Doctor'(after his biography by that title), was a world-famous missionary doctor and surgeon, and founder of more than 15 Seventh-day Adventist hospitals around the world. He was one of those unique individuals who was both a dreamer and a doer, and who inspired almost everyone who knew him.

"Like W.J. Morse, he considered it his personal 'responsibility to awaken the West to the wonders of the soybean and to promote its use as food. (But where Morse was interested in soybean agronomy, livestock feeding, and food, Miller was interested only in food uses.) Dr. Miller can also be considered the founder of the modern soymilk renaissance in Asia. The development and popularization of soyfoods, and especially soymilk, was his lifelong hobby and despite his other numerous and demanding careers, he never lacked the time, over a span of almost 75 years, to continue his ongoing research and work in this new field that he loved so well.

"Growing Up (1879-1902): The first of five children of Amanda Ehlers and John Oliver Miller, Harry was born in a log cabin on a farm in the small town of Ludlow Falls, Ohio (just north of Dayton) on 2 July 1879. His father was a school teacher. He later wrote that he delighted in working on the family farm but found it 'disgusting' to have to kill and eat the animals he had raised. When he was 12, Harry's parents became Seventh-day Adventists. Two years later, after much study, at the annual camp meeting, he and a friend decided to be baptized and become Adventist church members.

"At age 15 Harry entered secondary school at the Adventist-run Mt. Vernon Academy in Mt. Vernon, Ohio. He loved the strict, puritan atmosphere, the vegetarian diet, and the teachings of the church. In 1898, at age 19, he enrolled in medical school at the newly opened, Adventist-run American Medical Missionary College in Battle Creek, Michigan, which was associated with Dr. John Harvey Kellogg's Battle Creek Sanitarium (founded in 1866), the largest and most progressive medical institution of its kind in America at that time, and the birthplace of modern dietetics. Opposing the popular cures of the day (drugs, bleeding, etc.), the sanitarium recommended diet (especially a simple grain-based vegetarian diet), exercise, hydrotherapy and good mental health as the foundations of healthful living and natural healing. These teachings had a lifelong effect on Miller.

"Working to pay his own tuition, room, and board, Miller led guided tours through the sanitarium and food factory, which forced him to learn more about the various foods (America's first meat analogs and breakfast cereals) and how they were made. Miller was deeply influenced by the personality and teachings of Dr. J.H. Kellogg, who personally taught a number of the classes Miller attended, treated him like a son, and helped put him through college. One of America's great pioneers of both nutrition and of soyfoods, Kellogg stressed to the small class the importance of preventive medicine, nutrition, and diet. He strongly opposed the use of alcohol, tobacco, caffeine, and narcotics. Miller later noted that almost all the students in the small class lived past the age of 90; Kellogg lived to age 91, Miller to 97½ and one classmate to 101.

"Miller graduated in 1902 and was married to a classmate-doctor, Maude Thompson, the same year. During an internship autopsy, Dr. Miller cut his finger badly and suddenly contracted systemic blastomycosis, an infection considered at the time to be fatal. With deep faith he prayed to God, promising that if he were to be healed, he would go anywhere in the Lord's service. To the astonishment of

his doctors, Miller was miraculously healed. This greatly deepened his faith. Shortly thereafter a call came from the Adventist church for a missionary doctor in China. Miller accepted the challenge. For the rest of his life he prayed for his patients before all operations (minor or major), and, according to others, apparently his great faith was rewarded by their recovery.

"Early Years in China (1903-1911): In October 1903, Dr. Miller and Maude, together with another physician couple, sailed for China, stopping briefly in Japan. In Kobe, at the home of fellow Adventists, Myrtle Lockwood first introduced Miller to soyfoods serving an entree called Tofu Loaf, with which Miller was particularly impressed. In China the couple went deep into the interior, near the center of Honan Province, where they found great poverty and malnutrition. They both learned Chinese, dressed like the local people, and even adopted the hair style of a long queue and shaved pate. They also ate Chinese foods, and soon Miller was visiting local tofu shops, learning about and sampling tofu, yuba, curds, soymilk, and the like. He found that tofu was much more widely consumed than soymilk, although the latter was quite widely used as a spicy hot breakfast soup and a warm, sweetened beverage. Dr. Miller later said (1961) that many Chinese and other East Asians told him that they did not drink much soymilk since they believed it caused them intestinal disturbances, which tofu did not. Perhaps this was why soymilk was not generally fed to infants-and children.

"In 1905, Dr. Miller's beloved wife died suddenly of an unknown disease. He was 26. 0ut of his deep sadness grew an even deeper commitment to help the impoverished and suffering millions of China. After a brief return to America two years later, where he married Marie Iverson, Miller returned to Shanghai. Two daughters were born in 1908 and 1910. Then Dr. Miller contracted a severe unknown disease and was forced to return to America in 1911.

"Washington, D.C. (1912-1925): Miller eventually managed to heal himself of what he later learned was a vitamin deficiency illness called sprue. During recovery he taught the Bible at Mt. Vernon Academy, his former alma mater and in 1912 his first son. Harry Willis, Jr., was born. Soon he was called to the position of medical superintendent and surgeon of the Adventist-run Washington Sanitarium and Hospital, which he developed into a Mecca for congressional leaders of the day. He became consulting physician to three U.S. presidents. In Washington he pioneered new techniques of thyroid goiter surgery, which lowered fatalities from 50 percent to about one percent. He eventually performed over 6,000 goiter surgeries around the world. In Washington he also met Dr. W.J. Morse and Dr. J.A. LeClerc, both soy pioneers from the USDA. He later wrote that these men filled him with 'inspiration, enthusiasm, and information,' and both later made frequent visits to Miller's soymilk plant in Ohio. In 1915 a fourth child, Clarence, was born.

"Prior to 1917 the Sanitarium had used a lot of dairy products on its vegetarian menus, but in that year, with World War I under way, all milk supplies from the local dairy were requisitioned by the Walter Reed Military Hospital. The sanitarium bought its own herd, but the problems that Miller found with contamination, animal disease (tuberculosis), and the like, convinced him of the need to develop a good alternative to dairy milk. In the small food plant connected with the hospital, where several soyfoods were already being produced for use in the lacto-vegetarian diet, Miller began a few basic soymilk experiments in 1925." Continued. Address: Lafayette, California.

3488. Shurtleff, William. 1981. Soymilk at Loma Linda. *Soyfoods* 1(4):24-26. Winter.

• ***Summary:*** This is a detailed, step by step description of how soymilk is made by Loma Linda Foods at their plant in Mt. Vernon, Ohio, based on the author's visit to that plant. Loma Linda sells nine types of soymilk under two brand names: Soyalac is specially formulated for infants and Soyagen is for adults. Soyalac constitutes 75-80% of the companies total sales. i-Soyalac is an infant soymilk made from soy protein isolates; like regular Soyalac it is sold canned in 3 forms: concentrated, ready-to-feed, and powdered. Regular Soyalac outsells the isolate-based product by 2 to 1. "Of all the Loma Linda soymilks, their best seller is Soyalac concentrate, followed by their i-Soyalac concentrate, their ready-to-feed Soyalac, and then their powdered Soyalac. Their main competitor is Worthington's Soyamel, which is sold powdered in Pure Pak cartons at health food stores.

"Of the 70-75% of all babies in the U.S. that are raised on a formula rather than breastfed, 25% of these are fed a soy-based formula and 75% a dairy-based formula. Loma Linda presently has about 7% of the soy-based infant formula market. The largest shares of that market are held by Ross Labs' Isomel (approximately 50%), and Mead Johnson's Prosobee (40%). Wyeth Labs in Pennsylvania also has a 3% share... Of the adult soymilk market, Loma Linda's Soyagen (made with whole soyabeans) has about 60% and Worthington's Soyamel (made with soy protein isolates) has about 40%."

One interesting observation is that babies raised on a soy-based infant formula generally have a strong dislike for the flavor of cow's milk. Some 7% of U.S. babies are allergic to cow's milk and a small percentage are allergic to the lactose in mother's milk. Address: Soyfoods Center, Lafayette, California.

3489. Shurtleff, William. 1981. Dr. Harry Miller: Taking soymilk around the world (Continued–Document part II). *Soyfoods* 1(4):28-36. Winter.

• ***Summary:*** Continued. "Pioneering Soymilk in China (1925-1939): In 1925 Miller accepted the church's invitation

to return to Shanghai to develop a network of Adventist health care facilities, the first of which was the Shanghai Sanitarium and Hospital, which opened January 1, 1928, with Dr. Miller as medical director. Deeply touched by the high infant mortality rate caused by malnutrition, Dr. Miller began again in 1926 to turn his attention to soymilk, working on it steadily in his spare time at a small food plant located behind the hospital building. A growing number of orphaned infants began to appear at the hospital. Their only hope of finding food was to find a wet nurse or to be fed cow's milk, which was very expensive in China and which not all infants tolerated well.

"Dr. Miller was determined to develop a soymilk that had good flavor and digestibility, could be formulated to nutritional equivalency to mother's milk, was low in cost, and had a good storage life. Preparing his soymilk at the small soy plant in the typical Chinese way, with cold extraction of the soymilk from the okara, followed by cooking, he began to study ways to remove the beany flavor and make the soymilk more digestible.

"On his medical travels in other parts of China, and in Korea and Japan, he visited tofu shops and studied their methods. He believed that the beany flavor resulted from natural oils in the soybean; perhaps if the soymilk were spray dried and then reformulated with fresh soy oil, the flavor would improve.

"In the early 1930s, returning to America on furlough, he purchased the necessary equipment for a small soy dairy and had it shipped to China; a motorized stone mill, an American extractor, and a small homogenizer. Soon he was making improved formulated soymilk for the babies, patients, and staff at the Shanghai Sanitarium. The Chinese, too, liked the flavor. Some friends cajoled that it was 'undignified for a talented surgeon to be always playing around with beans.' Miller was undaunted, yet the beany flavor persisted.

"One day, in the mid 1930s, the breakthrough came as he was standing in the kitchen of the compound working with slurry from a tofu maker. He later wrote: 'I heard a divine voice behind me that said "why don't you cook it longer with live steam?" No one had ever thought of that before. Soon the staff and patients noticed the improved flavor and digestibility, and he added some soy oil or peanut oil during homogenization to make it even better. With new enthusiasm he began more baby feeding experiments. Soymilk was added to what was called the sanitarium's 'Universal Diet,' which also included whole wheat bread and half polished rice, plus other soyfoods. During a trip to the Philippines at this time he learned from refiners of coconut oil that steam distillation and flash pasteurization improved flavor of foods containing fats by driving off volatile oils and gases.

"So promising was the new product that Miller began to move forward on three fronts: controlled feeding studies on infants, establishment of a commercial soy, dairy, and application for a U.S. patent. In 1932 Dr. Miller had established the Vetose Nutritional Laboratory for furtherance of his research. For two years (1936-37) he fed formulated soymilk to several hundred small children at the Shanghai Clinic, running control tests with fresh cow's milk and various types of American and European prepared baby foods. The study turned out well and the results were published in the April 1936 issue of the prestigious *Chinese Medical Journal*, an English-language publication read widely in the U.S. and China. Here it was officially noted that babies could be nourished from birth fully as well with soymilk as with animal milks. This led to increased interest in the product. Dr. Miller later wrote: 'I regarded that work as of far greater importance than the building up of the sanitarium because it had to do with the preservation of thousands of lives that otherwise would be lost if they did not have a proper substitute for mother's breast milk, since cow' milk is beyond the economic level of the Chinese people and almost all Oriental races.' In later years follow-up infant feeding studies were done by other researchers using Dr. Miller's soymilk at the Indigent Hospital in the Philippines, at Tokyo University, and at Ohio State University at the Children's Hospital in Columbus, Ohio.

"In January 1936 Dr. Miller and his oldest son, Willis (who did much of the plant design and equipment construction and was the production manager), opened a full-scale soy dairy, the first of its kind in the world, on Pingliang Road in Shanghai, not far from the Shanghai clinic. The milk was cooked with live steam in open-top kettles. Soon a fresh liquid beverage, called Vetose Soya Milk, was available in natural, chocolate, and acidophilus flavors, in half-pint and quart bottles. The tangy acidophilus, cultured, bottled (but not sterilized) and delivered chilled was a real favorite. Ice cream was sold to institutions and meat analogs were under development. Production skyrocketed, doubling each month. Eventually the entire city of Shanghai had a soymilk route with thousands of families receiving door to door deliveries (by three-wheel pedicycles with carts behind them) of 3,000 quarts and 4,000 half-pints a day. The commercial product sold for less than dairy milks and cost less than one-fourth as much to produce. The soymilk proved so successful that it was soon included in rations for the Chinese army. A system for making dehydrated soymilk was also set up using a locally made Grey Jensen spray dryer; the government planned to use the dehydrated soymilk in rations that were lighter in weight and could be stored longer.

"But the Japanese were now invading China and on August 13, 1937, just eight months after the plant opened, it was totally destroyed by Japanese crossfire and bombs. (At the same time another soy dairy was being run by Julean Arnold of California and Nellie Lee, a Chinese, both of the China Nutritional Aid Council, in Dr. Fu's Children's Hospital in Shanghai. They provided their soymilk to 25,000 to 37,000 refugee children a day and distributed millions of

biscuits containing 40 percent okara from their soy dairy.) The Japanese occupied Shanghai in November, 1937, and soon thereafter the Shanghai Sanitarium was closed, to become a refugee center. The political situation forced Miller to leave Shanghai.

On May 4, 1937, while his Shanghai soy dairy was still in full swing, Dr. Miller was awarded U.S. Patent No. 2,078,962. He introduced methods for eliminating beany flavor, and for the use of a centrifuge, and an homogenizer. In the patent he referred to his product as 'vegetable milk;' however subsequent pressure from the powerful dairy industry and the USDA convinced him to Latinize the name to Soya-Lac. This term was first used in late 1939 for Miller's first American soymilk; the spelling had been changed to the present one-word Soyalac by September 1941.

"Miller's patented process was as follows: Soak 1 part by weight of soybeans in 8 parts of water at 60 to 75ºF for 6 to 10 hours. Grind well in a burr mill, adding a little water while grinding, to produce a mixture of 20 gallons water and 25 pounds ground beans. Extract the soymilk through a fine cloth in a centrifuge at 2,500 RPM in either of two ways: (1) before heating; or (2) after bringing to a boil, stirring constantly, in a caldron and simmering briefly. Now to the simmering soymilk add 7 pounds each grain sugar (dextrose, maltose) and oil plus 3 ounces salt. Return to the boil and simmer, stirring constantly, for 30 to 60 minutes, or until the flavor changes from 'beany' to 'nutty.' Homogenize in a colloid mill or homogenizer to give a milk containing 3.5 to 4 percent protein and 5 percent fat. Cool, bottle, and refrigerate, or dehydrate.

"From late 1937, Dr. Miller was in Hankow-Wuhan establishing the Wuhan Sanitarium Hospital, where he also had a small soy dairy. Eventually over 15,000 Chinese refugees, escaping the Japanese troops in the north, filled the hospital compound. Finally in January 1939, as the war got too hot, Dr. Miller left China and returned to America in April of that year." Continued. Address: Lafayette, California.

• ***Summary:*** Continued. "Introducing Soyfoods to America: Undaunted, Dr. Miller returned to the U.S., convinced that soymilk was destined for worldwide acceptance. He decided to settle in Mt. Vernon, Ohio, where he had formerly gone to school and later taught. Dr. Miller's oldest son, Willis, had returned from Shanghai after the plant there had been destroyed and in 1938 started his own business, Miller's Soy Foods, in Utica, New York. Later that year it moved to Washington, DC, and was successfully marketing canned soymilk, okara spreads, and gluten cutlets.

"When Dr; Miller returned to the U.S. he suggested that he and his son go into business together; Willis liked the idea. Working with his son, Dr. Miller set up a company called the International Nutrition Foundation and then began searching for a suitable site in Mt. Vernon for their new soy dairy. Soon they found a 140-acre farm, containing a number of fine springs, located several miles outside of town–and for the remarkably low price of $7,000. Dr. Miller borrowed money from his brother Clarence to purchase this farm, then moved into the one large house on the property. Willis moved his soyfoods equipment from Washington, DC, into a garage near the house and got the plant running while the new buildings were being built. In April 1939 Clarence, Dr. Miller's second son, left his job in Washington, DC, and went to Mt. Vernon to help with the work; he later became accountant and treasurer of the soy business. To help raise money for the soymilk operation, Dr. Miller set up a private part time medical practice, with an office in one wing of the local hospital. Although he had very little money, Dr. Miller made plans for a 60- by 130-foot building, which he planned to enlarge later by adding a second story. A local high school had been recently torn down and he obtained all the bricks for free if he would haul them away. So each evening after his medical work was done, Dr. Miller and his sons trucked the bricks over to their land, cleaned them, and built the new soy dairy building. The surgeon's skilled hands were not too delicate for the rough work. The original building still stands strong; today it houses the office, lab, and pilot plant where Loma Linda still makes Soyalac.

"The new plant was completed in the fall of 1939 and the first products, canned Soya Lac (made in a pressure cooker and fortified with vitamins and minerals) and Soy-A-Malt were available late that year; powdered Soya Lac was first produced in 1940. But contrary to Miller's expectations, the American public was simply not ready for soymilk; acceptance was painfully slow. He decided that, in order to survive, he would have to develop new products, try to get his soymilk approved by the American Medical Association, and, in the meantime, sell his soymilk and related soyfoods to ready markets in East Asia.

"With his typical boundless energy, Dr. Miller, now 61 years old, started by setting up a plant near the soy dairy to can fresh green soybeans of the tasty, large-seeded or vegetable variety, which were grown on the farm. Partially because of the mushrooming growth of interest in soyfoods during World War II (due to the rationing and high prices of meat, milk, eggs, and cheese), these found a ready market and became his most profitable product, with 40,000 cases a year being sold at supermarkets and health food stores around the Midwest by 1943. The company's best selling product (which was not as profitable due to the high production costs) was Miller's Cutlets, a canned gluten entree. He began to develop other meat analogs similar to those developed initially by Dr. J.H. Kellogg at Battle Creek. He now perfected his acidophilus soymilk

but sold it only to the local Mt. Vernon hospital since he did not want to kill the culture by sterilization required for long distance distribution. (In 1934, Kellogg had patented a similar acidophilus soymilk.) He made tofu from his basic soymilk and did extensive experiments, working with Ohio State University, in making a fermented tofu cheese; tofu was pressed as hard as possible, inoculated with Cheddar microorganisms, then allowed to ripen. The product was fairly good but often excess moisture in the tofu led to the growth of unfriendly bacteria. Next came a soymilk ice cream. Dr. Miller put all of his medical income into the soyfoods business and by 1940 the company was producing an exciting line of vegetarian soyfoods and meat substitutes, sold nationwide, mostly at health food stores. A pamphlet of that year lists the following, all sold under the brand name 'Miller's': Soya Lac, a liquid soymilk in natural and chocolate flavors sold in 13 ounce and 30 ounce cans. Soy-A-Malt, spray dried soymilk in natural and chocolate flavors in one-pound cans. Soya Sauce, produced in South China. Soya Curd, made by coagulating Soya Lac with lactic acid to make curds, then blending this with tomato puree, pimento, and soy sauce. Soya Loaf, made from a seasoned mixture of okara (soy pulp and gluten). Soya Spread, for sandwiches, also made from okara and sold in 16-ounce jars. Whole Soya Bean Flour, a naturally alkaline full-fat soy flour. Green Soya Beans, canned, vegetable type. Giant Soya Beans, cooked and canned mature vegetable-type soybeans, and Soya Beans with Tomato Sauce, edible soybeans canned with tomato puree and malt.

"Products added years later included Vegetable Chili Con Carne and Vegetable Chop Suey, both sold in 16-ounce jars with wheat gluten used in place of meat. In 1942 Kellogg's Battle Creek Food Company had a similar line of soyfoods: Soy Protose (a meat analog), Soy Gluten Wafers, canned Green Soybeans, Soy Flour, Soykee (soy coffee), and Soy Acidophilus. A few years later Dr. Miller developed Vege-Links, the world's first meatless wiener, made of seasoned okara and wheat gluten packed in a sausage casing, and Vege-Chee, a cheese analog made of curdled soymilk.

"During the years that he was developing new products, Dr. Miller made countless trips to the American Medical Association trying to convince them that the research he had done in China proved that his Soyalac was an acceptable substitute for dairy milk in feeding both infants and adults. But the AMA, apparently strongly influenced by the dairy industry, refused to grant any recognition to the product. Finally, after one fruitless trip, a member of the board took Dr. Miller aside and explained frankly that he would never get endorsement for his product unless he started to market his product specifically for that 7 percent of U.S. infants who are allergic to cow's milk, and avoided unfriendly comparisons with cow's milk. Dr. Miller was not too pleased, since he had hoped that soymilk would gradually replace cow's milk in the American diet. He felt that soymilk made much more efficient use of the world's land to feed people, and that it was a lower cost, more healthful product of comparable nutritional value. Yet he reluctantly accepted the AMA's advice and within a few months had their approval. Soyalac began to be prescribed by physicians for allergic infants and soon started to sell quite well." Continued. Address: Lafayette, California.

3491. Shurtleff, William. 1981. Dr. Harry Miller: Taking soymilk around the world (Continued–Document part IV). *Soyfoods* 1(4):28-36. Winter.

• ***Summary:*** Continued. "From 1939 to 1941 most of Miller's powdered soymilk and some of his other soyfoods were sold in the Philippines and China. However World War II cut off his business, so he began to promote his soymilk more vigorously in the U.S. not only as an allergy-free infant formula that would not clog the nipple, but as a healthful beverage that alkalized the bloodstream and was good for diabetics, postoperative patients, ulcer and colitis patients, and those with atherosclerosis.

"Before World War II started, Dr. Miller had set up a branch of his International Nutrition Laboratory and a Soymilk plant in the Philippines at 41 Nagtahan in Manila. It was run by Paul Sycip (pronounced SIS-up), a private Chinese Christian (but not Adventist) businessman, who had come briefly to Mt. Vernon to learn Miller's process, and buy equipment. Miller was in the Philippines helping to set up the plant when the Japanese attacked. During the war the Japanese stole all of the soymilk equipment but did not harm the building. In 1948 Mr. Sinclair Pinnick, a foreman at the Mt. Vernon plant since 1944, went to the Philippines, took new equipment, and got the plant reestablished. It produced regular soymilk, the first ever in the Philippines.

"The expanding success of Soyalac encouraged the growth of competing products but Dr. Miller didn't mind. A true evangelist, he was happy to see the message finally reaching the people.

"To fully appreciate Dr. Miller's great energy and diverse talents, we should note that during the early 1940's, as he developed, produced, and marketed his line of innovative new soyfoods, he also maintained an active medical practice, partially because the other two doctors at the hospital where he worked were called for military duty, and partially to support his work. Prior to World War II he would fly to the Philippines about once a year, do 12 to 15 thyroid surgeries a day for two to three weeks, give half of his income to the hospital there, then return to America with the balance. In 1942 he and his brother bought the local hospital in Mt. Vernon where he worked; his son Clarence came in to manage, renovate, and expand it. Miller was the only surgeon in Knox County (population 35,000).

"At his Mt. Vernon soy dairy, Miller was always the first one to start the day's work. One day, while experimenting with a new formula, he cut off end of his finger in a food

grinder. He calmly picked up the severed part, walked into his office, and sewed it back on.

"During the years he spent introducing soyfoods to America, Dr. Miller was one of the most active supporters of the American Soybean Association, a regular speaker at conventions and contributor of articles to the Soybean Digest. His first speech was "The Role of the Soybean in Human Nutrition" (1940) and his first article "Soybeans and the Orient" (1943), was followed by "Feeding the World with Soya" (1946), "Survey of Soy Foods in East Asia" (1948), and others. Then in September 1958 he was made an honorary member of the Association and awarded a gold medal.

"By the late 1930s the seeds that Dr. Miller had planted in East Asia began to sprout. It is interesting to note that most of the remarkable expansion of interest in and production of soymilk that has taken place throughout Asia during the last half of the twentieth century can trace its origins directly back to the work of Dr. Miller.

"While Dr. Miller was in Shanghai, an Adventist named Howard Hoover had come and learned the soymilk process, then started his own soy dairy and health food plant in a mission school in Canton in about 1938. This was the first offshoot.

"In 1940 Mr. K.S. Lo of Hong Kong asked Hoover if he would help him set up a plant. Hoover got approval from Miller, then went to Hong Kong and designed Lo's first plant. [Note: K.S. Lo recalls the origin of has company quite differently; we accept his version of the story]. By 1940 Lo's Hong Kong Milk Factory was making homogenized soymilk and selling it in natural and chocolate flavors, like dairy milk, in standard half-pint bottles sealed with a paper cap and hood. The soymilk was sweeter and a little thinner than Miller's and had more of the natural (so-called beany) flavor, which the Chinese prefer. By 1942, when the Pacific War broke out, Lo's company had gone broke. But in 1945, after the war, the company reopened as the Hong Kong Soya Bean Products Co., Ltd, and reintroduced their product, now called Vitasoy, not as a milk substitute, but as the world's first soymilk soft drink. By 1974 Vitasoy passed Coca Cola to become Hong Kong's best selling soft drink, with sales of 150 million bottles a year. In the meantime many other large soymilk plants had started up in Singapore, Malaysia, and Thailand.

"In 1948 the Chinese Quartermaster Department, with the help of Dr. Miller's son, Willis, set up the largest soymilk plant in the world in Shanghai, using a process patterned after that used in Ohio, to make spray-dried soymilk. Costing over $1,000,000, it had a capacity of 5 tons of dry soymilk every 12 hours. The dried soymilk would be mixed with puffed rice, pressed into wafers, and packed into cans, then opened in the field and soaked with hot water for rations. The plant was completed and ready for operation (Dr. Miller was at the dedication ceremony) just prior to the Communist takeover of Shanghai in 1949.

"Research and Work Around The World (1949-1977): In 1949, at age 70, Dr. Miller accepted the invitation of the Adventist church to take over the direction of the Shanghai Sanitarium and reestablish a soy dairy there. China was in the throes of revolutionary war and Shanghai was still held by the Nationalist forces. A daring pilot dropped Miller at the besieged Shanghai airport, hardly pausing to stop. But Shanghai fell to the Communists in May 1949; Miller was soon evacuated, and returned to America.

"In 1950 Dr. Miller's second wife died. Shortly thereafter he decided to sell his Mt. Vernon business. There was the increasing pressure of running a food plant and although sales were good ($1.25 million gross in 1950) profits were only $120,000 due to high taxes. He wanted to devote more of his time to research and medicine. Although offered a large sum of money by a private company outside the Adventist denomination, he decided to divide the company into two parts, the meat analogs and the soymilk plus related products, and sell these to Adventist-run firms. In June 1950 he sold the meat-analog part of his business (gluten meats, nut loaves, frankfurters, etc.) to Worthington Foods in Worthington, Ohio, a private company owned by Adventist laymen that had been making meat analogs since 1939. They bought the patents, recipes and formulas, equipment, technology, and good will that went with Miller's meat analog business. Most of these analogs contained no soy. Worthington kept the brand name "Miller's" for several years thereafter as they sold Miller's Cutlets, Miller's Burger, Miller's Stew, Vege-Links, and the like. Willis Miller worked with Worthington for some time after the sale.

"In early 1951, Dr. Miller sold the rest of his business at a very low price (book value) to Loma Linda Foods of Riverside, California. This sale included the Mt. Vernon land, buildings, equipment, technology, and recipes and formulas for soymilk, canned fresh green soybeans, Vege-Cheese (a canned tofu cottage cheese) and related products. All these products continued to be produced in Ohio. Loma Linda Foods, an integral part of the Seventh-day Adventist Church, was founded in 1906 and had run a plant in Riverside making meat analogs, soymilk, and other foods since 1936. Dr. Miller had always believed that the process for making soymilk was not something that he had originated; the key to it had been a gift to him from a higher power. Thus, he felt it was simply not his to sell. So he gave the process to the Adventist church but sold the rest of the business to Loma Linda Foods (they operate the Mt. Vernon plant to this day), and loaned them the money to buy it. They paid him in installments and he returned half of the money to them for them to set up laboratories and a pilot plant in their headquarters at 11503 Pierce Boulevard in Riverside (the town was then called Arlington). Here he established the International Nutrition Research Foundation, which he further endowed heavily with his own funds; 95

percent of its future research was on soyfoods. He bought a home nearby. For the three years following his wife's death he worked intensively on soyfoods research. In 1951 Loma Linda first introduced Soyagen, a lightly fortified soymilk for adults to match their Soyalac for babies. Miller did extensive work on further eliminating the beany flavor from soymilk using a vacuum pan and flash pasteurization. By 1958 his labs had developed new and improved soymilks, soy cream, improved acidophilus soymilk and ice cream, cottage cheese, a soy-cream cheese spread, cholesterol-free cheese, and a non-dairy margarine." Continued. Address: Lafayette, California.

3492. Shurtleff, William. 1981. Dr. Harry Miller: Taking soymilk around the world (Continued–Document part V). *Soyfoods* 1(4):28-36. Winter.

• ***Summary:*** Continued. "In 1953, at the age of 74, he married for a third time (his wife was about 35) and shortly thereafter was asked to establish an Adventist Sanitarium in Taipei, Taiwan. With it, of course, he started a soy dairy at a school, which supplied the school, the Sanitarium, and the surrounding community with soymilk daily. In 1956, when it came time for Miller to leave Taiwan, Generalissimo Chiang Kai-shek personally gave him China's highest award, the Blue Star of China, in appreciation for his tireless service to the people of China in saving the lives of thousands of infants with the use of soymilk and in establishing some twelve sanitarium-hospital clinics. At the time, the Generalissimo, who had been a former patient of Dr. Miller's, recalled how he had become so fond of the sanitarium's soymilk that he had once sent his private plane over 1,000 miles to Shanghai to replenish his supply.

"In 1954 the World Health Organization became interested in Miller's work with soymilk. His oldest son, H.W. (Bill) Miller supervised the construction of a joint FAO / UNICEF soymilk plant in Yogyakarta, Java, Indonesia, which opened in 1957 and produced about two tons a day of a spray-dried soymilk called Saridele.

"After filling in for other surgeons in Trinidad and Libya from 1956 to 1957, Miller went to Japan in 1957 to spend seven months as medical director and surgeon at the Tokyo Sanitarium-Hospital. He was now 79. Despite his busy medical routine, he found time to set up a small soymilk pilot plant in the hospital kitchen where they made soymilk, soy whipping cream, soy ice cream, and soy spread, which were served to the staff and patients. In cooperation with the Japanese Ministry of Health, he then developed the concept of helping existing small tofu producers to set up a soymilk operation right in their shops by adding on a boiler, pressure cooker, homogenizer, cooler, and bottler. The equipment could be installed for less than $2,000 and would enable each plant to produce 150 pounds of tofu and 200 gallons of soymilk a day using three trained workers. Miller personally helped at least one small rural tofu shop set up such a system; their soymilk was sold fresh and hot or cold and bottled for half the price of fresh dairy milk.

"Starting in about 1955 Dr. Miller began to recommend that the Adventist-run Japan Saniku School serve soymilk instead of cow's milk to the students; however the staff hesitated because of questions about its nutritional value and flavor. In 1957 two Japanese Adventists, Mr. Hidekazu Watanabe and Mr. Hanzo Ueda (who ran a tofu shop at the time) started making Japan's first soymilk on a small scale in Hachioji, Tokyo, bottling it in 180-ml bottles, and selling it locally. Mr. Watanabe later described the great value to them of Dr. Miller's ongoing technical, nutritional, and spiritual guidance.

"After some time, directors of the Saniku School visited the small soymilk plant, liked the soymilk flavor, and understood its nutritional value. In 1959 they bought similar equipment, set up a small plant in the school, and started to produce soymilk, which was bottled in 180-ml bottles and served to the students at every meal. In 1969 the Saniku School set up an independent food production company called College Health Foods (which later became today's Saniku Foods) and through it, with the help of Loma Linda Foods in America, began to produce Soyalac soymilk infant formula. That same year, the Luppy Soymilk Company started and went on to produce Japan's first widely popular commercial soymilk.

"By 1980 Japan's largest soymilk producers were Kibun Foods (33,000 pacs a day), Saniku Foods (23,000 pacs a day), Okazaki Marusan (23,000 pacs a day), and Mitsubishi Kasei (18,000 pacs a day), A typical pac is 200 ml (6.8 fluid ounces).

"Prior to 1960, a small soymilk plant similar to those established by Miller in Japan, was set up at the Adventist-run Mountain View College in Central Mindanao, Philippines. The college farm raised edible soybeans and the 700 students were served fresh soymilk each morning for breakfast and fresh tofu for lunch.

"In 1960 Dr. Miller again accepted the invitation of the Adventist church to start a new hospital, this time in Hong Kong. As always, it was accompanied by a little soymilk plant. By 1960 soy dairies had also been established in Hong Kong at the South China Union College and at an Adventist-run college in Bandung, Indonesia.

"Dr. Miller spent most of his time from 1960 to 1973 in East Asia. He practiced surgery until the age of 93. In 1961 his biography *China Doctor* by Raymond S. Moore was published by Harper & Bros. In 1963 Dorothea Van Gundy Jones in *The Soybean Cookbook* wrote: 'Certainly Dr. Miller has done more than any other person to introduce soybeans and soybean products, especially the milk, to the population of this country.'

"In 1973 Dr. Miller formally retired from medical practice and returned to California, where he spent the last few years of his life doing the work he loved so much:

soyfoods research. He lived about one mile from Loma Linda Foods in Riverside, and he walked to work each morning. He continued his experiments with tofu and soymilk, making improved acidophilus soymilk, tofu-based cheese, and cheese spreads. He made a good tofu-based Cheddar cheese but could not make it melt. His later years were not as productive as they might have been since, in old age, he had lost most of his sense of smell; when he would ask others how new products tasted, they would often tend to flatter him instead of giving an honest and objective response. Yet this work was still of real potential value.

"In 1972 the Southern Asia Division of the Adventist church asked Mr. Pinnick of Mt. Vernon to go to India to set up a soymilk plant at their Spicer Memorial College in Poona. In March 1973 Dr. Miller flew over from Hong Kong to help the operation get started. Pinnick writes: 'He would work all day with us at the plant (at age 94) then spend nearly-every evening speaking to some group on healthful living. There seemed to be no limit to his endurance.'

"Starting in 1975, while in Japan, I exchanged numerous letters with Dr. Miller. He typed each letter himself and was always full of questions about new developments in tofu and soymilk production in Japan. In 1976 he sponsored and hosted a program about tofu and soymilk that my wife and I did for several hundred members of the faculty and community of Loma Linda University, La Sierra campus. During the day of our visit he took us through his pilot plant and described his latest experiments making tofu-based fermented cheese spreads. He seemed extremely alert and well informed.

"Dr. Miller died on New Year's Day, 1977, at the age of 97, just as he was getting ready to go to his beloved church.

"Harry Miller was a shining example of what the Chinese call 'The Great Man.' He dedicated his life to the welfare of all beings, human and nonhuman. He chose a life of voluntary simplicity, finding his real joy in giving. Close associates estimate that, in professional fees alone, he turned over some $2.5 million to the hospitals, church, and nutritional work with which he was connected. Spiritual values were at the center of his life. Though world famous, he was the most humble of men; though very busy, he had time for each person who needed him. His vision was fifty years ahead of his time. He left an indelible impression on the world. Would that he could he here with us now to see the blossoming of his work in America and around the globe.

"The author wishes to give special thanks to Dr. Miller's two sons, Willis and Clarence, and to Glen Blix, plant manager at the Loma Linda Mt. Vernon plant, for extensive information provided in interviews and letters. For a bibliography of Dr. Miller's publications, send a SASE to *Soyfoods* magazine." Address: Lafayette, California.

3493. Shurtleff, William. 1981. Early history of soymilk. *Soyfoods* 1(4):31. Winter.

• ***Summary:*** Note: This was published as a sidebar to the article "Dr. Harry Miller: Taking soymilk around the world."

"It is important to understand Dr. Miller's soymilk research, writing, and product development in their proper historical perspective.

"Soymilk is thought to have been developed in China by Liu An, King of Huai-nan in about 164 B.C. In most parts of China, soymilk has long been used as a spicy hot breakfast soup (*sien tou-chiang*) or as a warm, sweetened beverage (*t'ien tou-chiang*). Yet it had not traditionally been used as a substitute for mothers milk or cow's milk in infant feeding. and its nutritive value for infant feeding was virtually unknown. By 1923, as described with photographs by Piper and Morse in their classic, *The Soybean,* a soymilk factory in Changsha, China (p. 231) was selling soymilk in bottles, each sealed with paper, and carried in baskets suspended from shoulder poles. This was 13 years before Dr. Miller's soy dairy opened in Shanghai.

"The first known mention of soymilk in a Western publication was in 1895 by H.C. Prinsen Geerligs, a Dutch scientist who lived and traveled in Southeast Asia, and wrote an article entitled *'Einige Chinese Voedingsmiddelen Mit Soyabonen Bereid'* [Some Chinese Foods Made with Soybeans]. The first English-language article on soymilk, entitled 'Soybeans and Soybean Products,' was published by H. Trimble in 1896 in the *American Journal of Pharmacology.* In 1906 Katayama in Tokyo wrote 'Condensed Vegetable Milk,' and in 1907 J. Rurah published the first article on infant formulas entitled 'The Soybean in infant Feeding' in *Archives of Pediatrics,* followed in 1910 by 'The Soybean as an Article of Diet for infants.' Some 30 journal articles had been published by 1928 and at least 66 by 1936. In 1926 Dr. Ernest Tso of the Peking Union Medical College published his first of many studies in English on feeding infants water-extracted soymilk. Entitled 'Soybean Milk–Infant Feeding,' it appeared in the *American Journal of Physiology.* He published five more similar studies prior to 1931.

"The first patent for soymilk was issued to Li Yu Ying in Britain in 1910. A German patent was issued to Goessel in 1911. The first U.S. patents were issued to Goessel (1913), Li Yu Ying (1913) and Monahan and Pope (1915); the latter was the first issued to American citizens. By the time Dr. Miller started his soymilk research in 1925, some 30 patents had been granted; there were 66 patents by the time Dr. Miller received his in 1936.

"Soymilk was being produced in the West as early as 1911, when a Chinese plant near Paris was reported to produce soymilk, fermented soymilk, tofu, soy sauce, soy flour, soy bread, soy preserves, etc. (Beltzer 1911). Allergy to cow's milk and lactose intolerance stimulated the development of the first soy-based infant formulas in the U.S. Most of these were made from soy flour and contained the fiber in the soymilk. In 1929 Mead Johnson Co. produced

the first soy-based infant formula in America. Called Sobee, it was made from a mixture of full-fat soy and barley flours homogenized with olive oil, had a dark tan color and beany flavor, and contained many complex carbohydrates that led to intestinal gas (flatus) and poor-smelling stools, but in 1929 it was a godsend to infants allergic to cow's milk (Sarett 1976). Also in 1929 Dr. Ernest Tso in Peking published a nutritional study of Sobee, entitled 'A Vegetable Milk Substitute in North China,' in the *American Journal of Physiology.* (At this time Dr. Miller knew both Dr. Tso and Sobee well).
The second commercial soymilk in America was developed by Dr. Julius F. Muller. In 1934, while director of allergy research for the Borden Company, he developed a soymilk product for his own child, who was highly allergic to dairy milk. in 1936-37 this liquid milk, made from homogenized soy flour, was introduced by Borden as Mull-Soy. In 1934 Dr. J.H. Kellogg received the first U.S. patent on a method for making acidophilus soymilk; Miller had produced a similar product in China in 1936.

"By 1935 Henry Ford was running a soymilk pilot plant near his main automobile factory in Michigan. By 1936 Loma Linda Foods was making soymilk in southern California. By 1938 Dr. Miller's son, Willis, was making canned soymilk in New York and Washington, DC, and in early 1939 Jethro Kloss had written *Back to Eden* containing many creative soymilk recipes and he may have been producing soymilk at his health food factory near Nashville, Tennessee... all this prior to Dr. Miller's introduction of Soyalac to America in the fall of 1939.

"Although it is clear that Dr. Miller was not the first to do research on soymilk, receive a patent, or produce a commercial product, he still deserves great credit for almost single-handedly popularizing the use of soymilk on a large scale around the world, especially for feeding infants suffering from allergies or malnutrition, for starting the first large scale commercial soy dairy in East Asia and assisting in the foundation of many subsequent ones, and for producing the first major commercial fiber-free soymilk in America, a product that was generally considered to be better tasting and less prone to clog nipples than the various flour-based products, although at least one set of tests showed it to have a significantly lower protein quality as measured by PER (Gyorgy 1962).

"Although Dr. Miller originally intended soymilk for general consumption, it has come to be most widely used in America for feeding babies. Today, the U.S. infant formula market is comprised of 75 percent dairy milk based products and 25 percent soymilk; Soyalac has only five to six percent of the latter market (all competing products are made from soy protein isolates). A full 75 to 80 percent of all Loma Linda's soymilk goes to feed babies." Address: P.O. Box 234, Lafayette, California.

3494. **Product Name:** Fresh Soybean Juice (Soymilk. Renamed Wy Ky Soy Beverage by 1983).
Manufacturer's Name: Wy Ky Food Products Inc.
Manufacturer's Address: 235-37 San Fernando Rd., Los Angeles, CA 90031.
Date of Introduction: 1981. February.
Ingredients: Soybeans, water, natural flavorings.
Wt/Vol., Packaging, Price: 16 oz plastic bottle.
How Stored: Refrigerated.
New Product–Documentation: Leviton. 1981. Soyfoods. Winter. p. 17. Soya Bluebook. 1983. p. 63.

3495. Miller, Harry Willis, Jr. ("Willis"). 1981. Work with soymilk in the United States and China (Interview). Conducted by William Shurtleff of Soyfoods Center, March 8. 2 p. transcript.
• ***Summary:*** Discusses his work with soymilk around the world. Address: 450 Neeleys Bend Rd., Madison, Tennessee 37115. Phone: 615-868-2483.

3496. Lo, K.S. 1981. Re: Early history of Hong Kong Soya Bean Products Co., Ltd., makers of Vitasoy. Letter to William Shurtleff at Soyfoods Center, March 19. 3 p. Typed, with signature on letterhead.
• ***Summary:*** William Shurtleff sent K.S. Lo a copy of an article he [Shurtleff] had written about Dr. Harry Miller, and asked for Mr. Lo's comments. "Strangely enough, it was Julian [sic, Julean] Arnold and not Dr. [Harry] Miller who first launched me onto the road of making soya bean milk. I happened to be in Shanghai in the Winter of 1936, and, while there, I attended a talk given by Julian Arnold on the subject: 'Soya Bean, the Cow of China'. I soon left Shanghai to return to Hong Kong, but, Arnold's message kept ringing in my head. Not long after, Japan invaded China and the first wave of refugees started to arrive in Hong Kong in 1938 [sic, 1939]. As I recall, a refugee camp was set up in Argyle Street on Kowloon side to receive them. Most of these refugees were either sick or suffering from malnutrition and required urgent medical care. Some of them were suffering from beri-beri. A small group of volunteers including myself used to visit the camp to find out what could be done for them. And when I saw so many were unable to walk because of beri-beri, the story of the wonder bean, as related to Arnold, came to my mind. I, therefore, suggested to our group to buy some soya bean, a stone-mill and a cooking pan and sent them to the camp. We enlisted a group of people from the camp to prepare soya bean milk in the crudest form and gave one bowl to each person every morning. The results were quite startling, as many of them showed significant improvement in their health after the first month. This little experiment gave me the full confidence in the nutritional value of soya bean milk and I decided to make it available to the masses of people in Hong Kong who could not afford to buy cows' milk.

"It is far from my intention to try to belittle Dr. Miller's

contribution in the development of soya bean food, but, I think it is fair to say each of us develop our own products and marketed them independently. He concentrated more in promoting it among medical profession, hospitals and churches; whereas I took it to the street level and catered to the mass market in competition with the soft drinks. As the result, the sales of my Company are far greater than any governmental or private institution could have hope to reach. Last year alone, my Company sold over 8 million cases of soya bean milk in Hong Kong, and, since 1979, we had been exporting our products, packed in tetrabrik, to all parts of the world. There can be no question that our commercial success in Hong Kong has inspired many other companies throughout Asia and other parts of the world to follow suit.

"I thank you once again for sending me your article and I hope that my comments will help to put the record straight."

"P.S. After 45 years when it first started in a refugee camp, Vitasoy is still serving the refugees of another era. To-day, they are distributed daily to all the Vietnamese Refugees Camps in Hongkong to bring better nutrition to the Vietnamese children. I am also send you a copy of the 40th Anniversary Brochure of my Company." Address: Chairman, Hong Kong Soya Bean Products Co., Ltd., 41 Heung Yip Rd. Aberdeen, Hong Kong. Phone: 5-528211.

3497. Hicks, Alastair. 1981. Re: History of the full-fat soy flour factory in Thailand. Letter to William Shurtleff at Soyfoods Center, March 25. 2 p. Typed, with signature on letterhead.

• ***Summary:*** "The full fat soy flour factory in Thailand commenced production of soyflour during commissioning trials which I ran in the week April 24-28, 1978, as food engineer to the project. The location is Mae Chan, a small village outside Chiang Rai in the far north of Thailand, near the Golden Triangle. The plant was initiated by the ASEAN Sub-Committee on Protein, whose chairman is Professor Amara Bhumiratana, Director of the Institute of Food Research and Product Development (IFRPD), Kasetsart University, Bangkok, Thailand.

"The king of Thailand, King Bhumibol Adulyadej, provided the land and buildings, as part of the Thai contribution to the project. One aim of the Royal Preserved Foods Project is to encourage Hill tribe farmers to grow crops other than opium poppies, in this case, nutritious soybeans, as part of an overall crop substitution program...

"The factory is able to make the following products: cleaned soybeans (up to 3 ton/hour); clean, cracked, debittered soybeans (a possible tempeh raw material); enzyme inactive full fat soyflour. The latter products can be produced at 1.1 tonne/hour. Enzyme active products could also be produced. Most of the full fat soyflour is utilized in the production of Kaset Infant food, a baby food produced at the I.F.R.P.D. in Bangkok. This product in turn is supplied to the hundreds of baby health centers throughout Thailand.

"For further information on these and other details, I suggest you write to Professor Amara... Meanwhile, I would like you to record the Department of Food Technology, Hawkesbury Agricultural College of Advanced Education, Richmond, N.S.W., Australia, as a center for soyfoods processing and research in Australia.

"We have an ongoing program of agricultural research in soybean varieties suitable for the Asian market. Related to this we have developed tofu trials and soybean canning trials. Presently we are developing soymilk from full fat soyflour and tempeh as a soyfood in Australia." Address: Lecturer, Dep. of Food Technology, Hawkesbury Agricultural College, Richmond, NSW 2753, Australia. Phone: (045) 701 333.

Address: 1-3. Ethos Research Group, Summertown, Tennessee 38483. 4. Colorado Epidemiologic Studies Center, Ft. Collins, CO 80523.

3499. Lo, K.S. 1981. Re: Two letters of appreciation for Vitasoy soya bean milk. Letter to William Shurtleff at Soyfoods Center, March 31. 3 p. Typed, with signature on letterhead.

• ***Summary:*** Mr. Lo encloses letters from H.D. Dale, M.D., Medical Director, Sham Shui Po Transit Centre, Kowloon, and Walter Schmidt, Coordinator of Refugee Activities, Hong Kong Christian Service, Migration Services Dept. The Vitasoy was given to refugees from Vietnam in late 1979– children under age 5 and old people over age 65, and to all pregnant women. "There was a marked improvement in the general health of all those receiving this added supplement." Address: Chairman, Hong Kong Soya Bean Products Co., Ltd., 41 Heung Yip Rd. Aberdeen, Hong Kong. Phone: 5-528211.

3500. Aguilera, J.M.; Lusas, E.W. 1981. Review of earlier soya-protein fortified foods to relieve malnutrition in less developed countries. *J. of the American Oil Chemists' Society* 58(3):514-20. March. [50 ref]

• ***Summary:*** Contents: Introduction. Types of soya products: Soybean milk (Philsoy in the Philippines [3,500 bottles/day], unnamed products made in India [a small plant at a university makes nearly 700 liters/day], Mexico, and Brazil), soya-based beverages (Vitasoy in Hong Kong [produced about 120 million bottles in 1970], Puma in Guyana [in the early years, sales volume was about 29 million bottles/year; by 1976 Puma was still in regular production], Saci in Brazil [introduced in 1969, discontinued in 1976], an unnamed spray-dried infant beverage from full-fat soy flour in Mexico [developed by the NRRC at Peoria, Illinois],

whey-soya drink mix [WSDM] developed by USAID), soya-fortified cereals (Ten PL-480 products such as CSM, CSB, WSB, WSDM used worldwide [a table shows product names, percentage soya flour, percentage protein increase by fortification, and amount of soy flour used in tonnes; the most soy flour has been used in CSM, CSB, and WSB], Superchil and Fortesan in Chile, Incaparina no. 14 in Colombia, ProNutro in South Africa, Maisoy in Bolivia, Lisha in Tanzania, Thriposha in Sri Lanka, Leche Avena in Ecuador, Cerex in Guyana, Faffa in Ethiopia, Bienestarina [Bienstarina] in Colombia, and a milk-like formula using soya flour in Venezuela). Soya-based infant formulas. Conclusions. Address: Food Protein R&D Center, Texas A&M Univ.

3501. **Product Name:** Soyamel (Plain Soymilk with Vitamins).
Manufacturer's Name: Alpro.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1981. March.
New Product–Documentation: N.V. Vandemoortele Protein Division (manufacturer's brochure). 1979. "Soyamel: A New Source of Proteins. 9 p. Gives details about Soyamel soymilk, including the nutritional composition and technology used to manufacture it, but does not say that the product is being made commercially.

Soyfoods Center Computerized Mailing List. 1982. Feb. 22. The company is listed as N.V. Vandemoortele. The first listing for Alpro appears on 20 June 1983. Chr. Daems is Marketing Manager. Phone: 51 30 96 01.

Form filled out by Alpro. 1990. May 30. Alpro began making this product (plain with vitamins) in March 1981 in 500 ml cartons. This was the first of Alpro's own soymilk brands, sold only in drug stores and pharmacies.

Note 1. The product was announced about 2 years before it was available.

Note 2. The term Soyamel, a registered trademark of Worthington Foods Inc., was first used in about 1954 to refer to a powdered soymilk made by Worthington.

3502. **Product Name:** Soymilk.
Manufacturer's Name: Aqua Agra.
Manufacturer's Address: 100 Highline Dr., Longwood, FL 32750. Phone: 305-339-8157.
Date of Introduction: 1981. March.
How Stored: Refrigerated.
New Product–Documentation: Talk with Don Wilson, founder and former owner of Aqua Agra. 1993. Nov. 24. In early 1981 Don started making soymilk, which he sold in bulk to the nearby Seventh-day Adventist Florida Hospital–but not to any of the chain stores. He sold about 300 gallons a week.

3505. Dubois, Donald K.; Hoover, William J. 1981. Soya protein products in cereal grain foods. *J. of the American Oil Chemists' Society* 58(3):343-46. March. [12 ref]
• ***Summary:*** Contents: Abstract. Introduction. Quality factors. Defatted soy flour. Enzyme-active soya flour (defatted; "processed to retain its lipoxidase enzyme activity. This enzyme effects changes in bread doughs which result in the bleaching of carotenoid pigments and which produce peroxides that strengthen gluten proteins"). Full-fat, high-fat and lecithinated soya flours. Soya grits. Soya protein concentrates. Soya protein isolates. Milk replacer blends (to replace nonfat dried milk in baked goods). Soya bran / fiber. Nutrition. A photo shows W.J. Hoover.

An estimated 132 million lb of soya flour was sold to the baking industry in 1978.

Making soy protein isolates involves three main steps: (1) The protein is extracted from defatted soy flour; (2) The protein-rich curd is precipitated (isolated) from the soya whey; (3) The isolated proteins are neutralized to a pH of 6.5 to 7.

The largest use for soya products in the bakery foods industry is in combination with other ingredients, such as sweet dairy whey, to replaced nonfat dry milk in baked goods. Milk replacer blends containing 20-40% protein are sold commercially.

"Soya bran / fiber" is made by toasting then grinding the soybean seed coat. The resulting product has a crude fiber content of about 38%, making it one of the highest fiber sources available commercially. It can be used in multigrain breads, in blended fiber systems or as the sole source of added fiber in such breads.

Note: This is the earliest English-language document seen (June 2013) that uses the term "Soya bran" to refer to soy bran.

Adding soy protein to white bread increases its nutritional value. The approximate PER for different types of white bread is as follows: Regular–0.7. With 3% soya flour added–0.83. With 6% soya flour–1.3. With 12% soy flour 1.95. In addition to increases in protein quality, at the 12% soya flour level, the protein content is increased by 50%. Wheat flour fortified with soy protein has been used worldwide in mass feeding programs, including school lunch programs, since 1975. This commodity is available through

the U.S. Food for Peace Programs (P.L. 480). Address: American Inst. of Baking, Manhattan, Kansas.

3507. Fukushima, D. 1981. Soy proteins for foods centering around soy sauce and tofu. *J. of the American Oil Chemists' Society* 58(3):346-54. March. [41 ref]
• ***Summary:*** Contents: Abstract. Introduction. Soy sauce varieties: Koikuchi, usukuchi, tamari, saishikomi, and shiro shoyu. Soy sauce manufacturing process (for each of the 5 types). Miso. Other fermented products: Tempeh and natto. Tofu and related products: Regular and silken tofu, dried-frozen tofu, deep-fried tofu. Fermented tofu (Sufu). Other soy products: Soy milk, fermented soy milk beverages, yuba.

This paper discusses traditional Oriental soy protein foods which are growing rapidly in popularity in the USA among non-Asian-Americans.

"Generally speaking, soy sauce is divided into two groups: fermented soy sauce and chemical soy sauce. Fermented soy sauce has a long history as a human food, whereas chemical soy sauce has a history of only several decades. In fermented soy sauce, the proteins and carbohydrates contained in the materials are hydrolyzed very slowly under mild conditions below 30ºC for over six months, whereas in chemical soy sauce they are hydrolyzed quickly by hydrochloric acid at 80ºC for 8-10 hours. Chemical hydrolysis is a cheap and rapid process, but during the hydrolysis, various secondary reactions occur and produce undesirable compounds, e.g. dark humins, furfurol, dimethyl sulfide, hydrogen sulfide, levulinic acid and formic acid, which are not present in fermented soy sauce. Furfurol, dimethyl sulfide and hydrogen sulfide, which have strong, bad odors in themselves, are derived from pentose, methionine, and sulfur-containing amino acids respectively. Furthermore, tryptophane, one of the nutritionally important amino acids, is destroyed almost completely. As shown in Figure 1 [two chromatograms], the main organic acid of fermented soy sauce is lactic acid, whereas the main organic acid of chemical soy sauce is formic acid. Levulinic acid, present in chemical soy sauce, does not exist naturally.

"To improve the odors of chemical soy sauce, semichemical soy sauce was devised. It is made by hydrolyzing raw soybeans with a lower concentration of hydrochloric acid (7-8%) as the first step, followed by fermenting the hydrolysate with osmophilic yeasts in the presence of wheat koji." In Japan, chemical soy sauce is not used as a soy sauce in itself, but as an extender for fermented soy sauce.

Table 1 gives the typical chemical composition (per 100 ml) of the five varieties of traditional soy sauce in Japan, including Bé [Baumé; a measure of the relative density of liquids], sodium (koikuchi is lowest at 17.6%, usukuchi is highest at 19.2%), total nitrogen (koikuchi has 1.55 gm, tamari has 2.55 gm or 65% more), formol nitrogen, reducing sugar, alcohol (koikuchi is 2.2%, by far the highest), pH (ranges from 4.6 to 4.8), and color.

A brief description of each of the five traditional varieties: (1) Koikuchi: This "dark-colored" shoyu is by far the most popular of the five types of fermented soy sauce in Japan, comprising 85% of the total. It is an all-purpose seasoning with a strong aroma, complex flavor, and deep, reddish-brown color. These characteristics are mainly derived from the use of equal amounts of wheat and soybeans in the koji; (2) Usukuchi [light-colored] shoyu is characterized by a lighter, red-brownish color and a milder flavor and aroma. It is used mainly for cooking when one wishes to preserve the original flavor and color of the food itself. As in koikuchi, equal amounts of soybeans and wheat are used in the koji, but the fermentation is done under conditions which prevent the development of a dark color. (3) Tamari shoyu has a higher amino acid content, but it lacks aroma. The koji is made primarily from soybeans with little or no wheat. (4) Saishikomi (twice-fermented) shoyu is made using equal amounts of wheat and soybeans in the koji, but using raw (unpasteurized) soy sauce instead of salt solution, which is mixed with the harvested koji. Saishikomi is characterized by aroma and full-bodied taste. (5) Shiro (clear, or "white") shoyu is made by using a very high ratio of wheat to soybeans in the koji, and further by fermentation under conditions which prevent dark color development. It is characterized by a very light yellow to tan color, though the amino acid content is very low because of the low soybean content in the koji. Flow sheets (Figures 2-5) show the process for manufacturing koikuchi, usukuchi, and tamari shoyu. Each has three basic parts: Koji making process, brine fermentation process, and refining process.

Concerning soy sauce production and consumption: The total annual production of soy sauce in Japan in 1979 reported by the Japanese Agricultural Standard (JAS) was 1,252,431 kiloliters (kl). In 1979 in Japan, about 70% of the soy sauce products in Japan were purely fermented, 25% contained some semichemical soy sauce, and the remaining 5% contained chemical (HVP) soy sauce. The most recent estimates of annual consumption of soy sauce in the USA are as follows: Fermented soy sauce 17,850 kl; Chemical (HVP) soy sauce 25,500 kl. Within fermented soy sauce, production of koikuchi soy sauce is estimated to be 16,500 kl/year.

In Japan an "instant tofu powder" is actually a spray-dried soy milk. This product was made and introduced by *Nihon Tanpaku Kogyo* (Japan Protein Industry) about 15 years ago (ca. 1966) and was used mainly as a raw material for making regular or silken tofu in order to save time.

"Recently, however [1973], the product was placed on the market as an instant powdered tofu [named *Hausu Hontôfu*] by Hausu [House] Foods Co."

Other figures show: (5) Manufacturing process of rice miso. (6) Manufacturing processes of soy milk used for making tofu, regular tofu, and silken tofu. (7) Manufacturing process of freeze-dried tofu (kori-tofu). (8) Manufacturing process of fermented soy milk beverage. *Lactobacillus casei, L. acidophilus,* and *L. bulgaricus* are usually used as starters. One such product recently appeared on the market in Japan.

A photo shows D. Fukushima. Address: Kikkoman Foods, Inc., Walworth, Wisconsin 53184.

3508. Harrison, G.R. 1981. What's holding up the introduction of soya into the human diet in Latin America? *J. of the American Oil Chemists' Society* 58(3):443-46. March.
• ***Summary:*** An excellent analysis, with many specific examples, of why soya is not more widely used in foods in Latin America. There have been many failures in trying to get soya products introduced. "In 1975, Brazil tried a law requiring 3% soya flour in all bread and baking products. The law was never enforced because the flour millers, as well as the bakers, refused to comply. Why?" Probably because it would require some changes in the manufacturing process and add some extra work.

"In Colombia in the early 1970s, it was required to add 10% soya flour to bread. The flour was not blended with the soya and the small separate package of soya flour was taken out, thrown away, or sold. The regulation was not enforced because the bakers refused to cooperate. In Mexico, 60% of the soya flour used for human consumption is used in bakery products. Our bakers use soya flour for its functional properties, not for nutritional value. They may not understand nutrition but they do understand moisture retention, longer shelf life, more even browning, better texture and better color. Also, they understand economy when they can partially substitute for eggs and milk in dessert breads and cakes using soy flour, enabling them to sell their product cheaper without affecting either profits or nutritional value... We see successful sales of soya flour to bakers and a bright spot in the otherwise rather dull picture of soya for human consumption." The article concludes: "Governments cannot force people to eat 'nutrition,' because the majority of people are not nutrition-minded. Poorer people will not eat specially prepared 'poor people food,' even if it is free. They want to eat what rich people eat. And last, but not least, the only way to introduce a new food is to provide an economic motive to the food service industry so they will blend the new, cheaper food with existing, well-known dishes. It is imperative to request the blessing of the government, if not their active participation. We believe that surely, by now, we have no governments that refuse to accept soya products as healthful and nutritious foods for human consumption." A photo shows Gil Harrison. Address: American Soybean Assoc., Mexico City 5, D.F., Mexico.

3509. Holmes, Charlotte Van Gundy. 1981. The life of T.A. Van Gundy (Three interviews). Conducted by William Shurtleff of Soyfoods Center, March-May 1981. 6 p. transcript. Also 3 letters from Charlottte in March, April, and May 1981.
• ***Summary:*** Birth and early life: Theodore Ananias Van Gundy (his friends called him "Van") was born on 8 July 1874 in the tiny rural community of Osoflaco, near Arroyo Grande, on the California Coast midway between San Francisco and Los Angeles. In 1886, at age 12, he became a Seventh-day Adventist, and began to show his mechanical talent by building an engine powered by steam from his mother's stove. He went to college in Healdsburg, California.

Early work with peanut butter: In 1897, at about age 23, he began his first commercial food production, making peanut butter (which, at the time, was a new food) with Dr. Hare in Fresno, California. In February 1898 he married Lulu Pond and moved to San Jose. It is not known what became of his peanut butter business.

Founding La Sierra Industries in 1928: In the fall of 1928 (probably not in 1927 as reported by Dorothea Van Gundy Jones in 1963), T.A. Van Gundy moved to La Sierra, California (now a suburb of Riverside) and started La Sierra Industries, the business that would make his famous as a soyfoods pioneer. The plant was on a lot behind his brother-in-law's home. By continuous experimentation and using equipment he designed and built himself, he soon developed a line of eleven soyfood products, plus canned garbanzos (chick peas), brown rice, and whole wheat. The first eight La Sierra-brand soyfood products were probably on the market by late 1929. They included Smoein (bacon-flavored smoked soy powder), Soy Beans (canned, unseasoned green-seeded type or with tomato sauce; his next products developed after Smoein), Soy Milk (canned, with the beany flavor removed by processing with live steam), Soy Cheese (canned tofu, with pimiento added to prevent graying after canning), Soy Flour, Soy Mamenoka (roasted soy flour; a Chinese name), Soy-Co (soy coffee substitute with an excellent coffeelike flavor; coarse grind or fine), B-Nuts or Beanuts (oil-roasted soynuts), B-Nut Butter (soynut butter made from B-Nuts), Soy Spread (canned okara or soy pulp, salt, mace, and other seasonings; it had a soft consistency and was said to taste and smell like "potted chicken"), Soy Gluten (a meat analog made of soy spread mixed with ground wheat gluten, resembling Dr. John Harvey Kellogg's Protose, but with soy), and Soy Cereal. In 1929 or 1930 he designed and built the mill that produced this Soy Cereal, a ready-to-eat, toasted and shredded, all-soy product. Address: California.

3510. Itona Products Ltd. 1981. Retail price list. Itona Works, Leyland Mill Lane, Wigan, WN1 2SB, England. 1 p. Undated.

• ***Summary:*** The list of all-vegetarian products includes: Minced beef. Beef chunks. Ham chunks. Unflavoured mince. Minced beef. Beef chunks. Ham chunks. Tonabanga. Tonaburga. Tona 'C' food fish cake mix. Golden Archer Soya Beanmilk. Golden Archer brown rice pudding. Granny Ann high fibre biscuits. Ito coffee substitute. Noots. Noot bar. Granymels. Golden Archer Beanmilk Custard. Beanoot butter. Super soya lecithin powder 500.

The company's directors are: E.J. Hampson, M. Armitage, D.J. Hampson (sales director), and J.T. Hampson. Address: Wigan, England. Phone: Wigan 34761/2.

3511. Liener, I.E. 1981. Factors affecting the nutritional quality of soya products. *J. of the American Oil Chemists' Society* 58(3):406-15. March. [145 ref]

• ***Summary:*** Contents: Abstract. Introduction. Heat-labile factors: Protease inhibitors (incl. trypsin inhibitors), lectins (hemagglutinins; they have the unique property of binding carbohydrate substances), goitrogens, antivitamins (antivitamin D, antivitamin E, and antivitamin B-12), phytate, phytic acid. Heat-stable factors: Estrogens (incl. isoflavones, genistin, daidzin, coumestrol), saponins, flatulence factors, lysinoalanine, allergenicity.

Goitrogens: Unheated soybeans have been reported to cause significant enlargement of the thyroid gland of rats and chicks; this effect can be counteracted by supplementing the diet with iodine (as potassium iodide) or partially eliminated by heat. Several cases of goiter have also been reported in human infants fed soybean milk, a situation which could likewise be alleviated by iodine supplementation. Therefore iodine supplementation of soyamilk infant formulas is recommended as a precautionary measure against the goitrogenic potential of this product.

The component responsible for the goitrogenic effect of soybeans is still unknown. It appears to be concentrated mainly in the curd, but goitrogenic activity has also been detected to a lesser extent in toasted soya flours, concentrates, and isolates. Unlike most goitrogenic plants of the Cruciferae family, soybeans do not contain glucosinolates. The goitrogenic principle in soybeans has been reported to be a low molecular weight oligopeptide; this appears to be inconsistent with the observation that the goitrogenicity of soybean curd was not eliminated by proteolytic digestion.

Most of the evidence indicates that, whatever the goitrogenic principle is, it seems to exert its effect by inhibiting the uptake of iodine into the thyroid gland. However other researchers believe that goiter from soy-containing diets may result from an increased fecal loss of thyroxine or a simple iodine deficiency (Halverson et al. 1949; Van Middlesworth 1957; Beck 1958; Hydowitz 1960; Shepard et al. 1960). One study (Kimura et al. 1976) found that female rats which were fed defatted soybeans with an iodine-free diet for 6-12 months showed thyroid carcinomas. This effect, however, was completely prevented by iodine supplementation.

"Heat-stable factors: Estrogens. The banning of the use of diethylstilbestrol [DES] as a growth stimulant for animals in meat and poultry production has served to focus attention on the possible toxic effects of naturally occurring estrogens." Fig. 9 shows the structure and formula of isoflavonoid compounds isolated from soybeans (Naim et al. 1974). Table 9 shows the estrogenicity of compounds isolated from soybeans and their potency relative to DES. The compounds are genistin, daidzin, glycitein 7-O-Beta-glucoside, and coumestrol. All figures are from other sources (Naim et al. 1974; Bickoff et al. 1962; Knuckles et al. 1976). Address: Dep. of Biochemistry, College of Biological Sciences, Univ. of Minnesota, St. Paul, MN 55108.

3512. **Product Name:** [Meiji Sunglow Soymilk (Plain)].
Foreign Name: Meiji San-guroo Tônyû (Pureen).
Manufacturer's Name: Meiji Milk Products Co. Ltd. (Meiji Nyugyo).
Manufacturer's Address: Kyobashi 2-3-6, Chuo-ku, Tokyo 104, Japan.
Date of Introduction: 1981. March.
Wt/Vol., Packaging, Price: 200 ml aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. Tonyu [Soymilk. 2nd ed.]. p. 72. Meiji Nyugyo launched Meiji San-guroo Tonyu (Pureen) in a 200 ml long-life (aseptic) carton in March 1981.

Soya Bluebook. 1983. p. 63. "Sungrow Soy Beverage." Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64. Note that Meiji started to market Sunglow soymilk, made and private labeled for them by Marusan, in April, 1979.

3513. Moretti, R.H. 1981. Soy milk developments in Latin America. *J. of the American Oil Chemists' Society* 58(3):521-22. March.

• ***Summary:*** Dr. Harry Miller introduced soy milk into Latin America. From his writings, a Brazilian, Dr. Barretto of Laticinios Mococa, developed Solein, a mixture of 30% soya milk and 70% cow's milk; it was introduced in 1967. Still sold, it is powdered and canned. Almost simultaneously Dr. Suberbie in Mexico developed Sustilac, introduced in 1968, and made from sprouted soybeans. The pregermination reduces the amount of oligosaccharides. His company, Compañia Industrial de Alimentos, still produces soya milk, with all products being in powdered form. They also developed Isolac (20.3% protein) and Soyamalt (24.4% protein). Soyamalt is sold in strawberry, vanilla, and nut flavors. In 1968 the Coca Cola Co. introduced into Brazil the soya milk Saci in 200 ml bottles.

During the 1970s powdered Provesol was developed in IIT, Colombia, by Dr. Diaz Delgado. The process was

later sold to a Brazilian company, Olvebra, which started production in 1975 with the Coca-Cola pilot plant. The canned powdered product is sold as Novo Milk (sweetened, with orange, chocolate, banana, and strawberry flavors), and as Novo Vida, which has the same composition as Provesol (50% protein, 25% fat, 19% carbohydrates, and 19% fiber). Novo Vida is widely used in the school lunch program in Brazil, and well accepted.

In 1975-76 ITAL, the Inst. of Food Technology in Brazil, developed a soya milk brand named Vital. It was packaged in Tetra Pak cartons. Several flavors were developed and tested by school children and industrial workers. It was well accepted but limited by the high cost. In 1977 it was packed in polyethylene bags with a 2-3 day shelf life.

"In 1976 a new concept of soya milk processing was developed in Brazil. This technique consists of producing on a small scale, the soya milk at the market spot. The project was called 'mechanical cow' and produces 200 liters/hour of sterilized soya milk with 3.0% protein, 1.9% fat, 1.2% carbohydrates, 0.5% ash, 8.0% added sugar and at pH 7.0.

"This project was introduced in 1977 and, presently, there are 80-90 'mechanical cows' in Brazil." The is idea already being exported to Paraguay, the Seychelles Islands, and Ecuador. A detailed description of the process and its main advantages are given. Being very inexpensive, "the equipment can be bought by very small entrepreneurs, or by the government to implement school lunch programs or health programs. The equipment uses only water and electricity and does not need a steam generator.

"Presently, the Brazilian federal government gives tax exemptions for this equipment when it is bought in a full package: Mechanical Cow, polyethylene bag filler, and residue [okara] dryer, which shows Brazil's interest in the project and also the success of the product all over the country.

One kg of soybeans can produce 8 liters of 3% soya protein milk, which has the antitrypsin factor correctly inactivated. Packed soya milk can stand for 2 days at room temperature and 10 days refrigerated at 5ºC. The cost to make 1 liter of this formulated soya milk is US $1.10. Address: Dep. Food Technology, FEA/UNICAMP, Sao Paulo, Brazil.

3514. **Product Name:** [Soymilk (Plain, Coffee, Orange)]. **Foreign Name:** Morinaga Tônyû (Pureen, Koohii, Orenji). **Manufacturer's Name:** Morinaga Milk Co. (Morinaga Nyugyo) (Marketer). Made in Japan by Mitsubishi. **Manufacturer's Address:** Shiba 5-33-1, Minato-ku, Tokyo 108, Japan.
Date of Introduction: 1981. March.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that Morinaga Nyugyo first sold commercial soymilk in Japan in 1981.

K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. States that these three products were introduced in Nov. 1981 in 200 ml long-life packs, and distributed nationwide. Product (coffee flavor) with Label (200 ml Tetra Brik carton) purchased in Tokyo in June 1983.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64. In March 1981, Morinaga Milk Co., Japan's third largest milk company, was licensed by Mitsubishi to distribute their soymilk.

• ***Summary:*** A detailed look at soyfoods (such as Vital and Gestal soymilks) developed by ITAL, and a listing of 47 commercial institutional soyfood products produced by 9 companies in Brazil in 1980. Address: Instituto de Tecnologia de Almentos (ITAL), Caixa Posta 139, 13.100 Campinas, Sao Paulo, Brazil.

3517. *Prevention* (*Emmaus, Pennsylvania*). 1981. A health food dictionary: Soybeans. March. p. 144-46.
• ***Summary:*** Soybean foods include soybean oil, tofu, tamari, soy milk, tempeh, miso, soybean sprouts, soy flour, soy ice cream, and soy nuts.

The article ends: "Do yourself a favor. Get to know the soybean." Address: Emmaus, Pennsylvania.

3518. Russo, J.R.; Bannar, R. 1981. Aseptic packaging: How far will it go? *Food Engineering* 53(3):49-60. March.

3519. Soycrafters Assoc. of North America; Soyfoods Center. 1981. Estimated soyfoods industry statistics (News release). Sunrise Farm, Heath Rd., Colrain, MA 01340. 1 p. March. Updated in Aug. 1981.
• ***Summary:*** 1. Number of companies manufacturing tofu, tempeh, miso, soynuts, soy sprouts, soy sauce, secondary soyfoods, soy delis & restaurants, in the USA, Canada, and Latin America. 2. Production statistics for USA and Canada: Raw soybean usage, food production, employees, and retail sales value are given for 4 types of tofu makers (caldron, steam kettle, pressure cooker, factory), tempeh, soynuts, and soy delis and restaurants. With totals. Actual gathering of statistics was done largely by Soyfoods Center. Address: 1. Richard Leviton, Colrain, Massachusetts; 2. W. Shurtleff, Lafayette, California.

3520. Ye, E-C. 1981. Case-control study of 100 gastric cancer cases. *Zhonghua Yu Fang Yi Xue Za Zhi* (*Chinese J. of Preventive Medicine* [*Peking*]) 15(2):107-09. March. [Chi; eng]*
• ***Summary:*** A case-control study of 100 gastric-cancer and age-matched controls conducted in Shanghai, China, showed significantly lower relative cancer risk among those who consumed soymilk frequently. Address: China.

3521. Webber, Alfred B. 1981. Perry Webber, Madison College, and Madison Foods (Interview). Conducted by William Shurtleff of Soyfoods Center, April 3. 2 p. transcript.
• ***Summary:*** Alfred is a son of Perry Webber. Perry's first interest in soyfoods started in Japan, during his first stay there in 1912. He loved Japanese food, and he ate lots of it, but he especially liked Inari-zushi, which contained aburage [dep-fried tofu pouches]. He used to go to the Shinoda sushi-ya, a sushi shop in Kanda (now Awajicho)–stopping in on his way to language school. At one time they named a type of sushi type after him, calling it the "Webber Sushi. He was used in some of their promotional material. Perry was also very fond of tofu and of miso soup, but he got interested in soyfoods via aburage. The thought is was a delicious form of protein, not known or used in U.S.

2. Perry met Dr. Harry Miller in about 1936 when Miller was a missionary in China; a number of meetings were held in Shanghai. Alfred was attending the SDA Far Eastern Academy in Shanghai, when his dad came from Japan to China. The main reason for Perry's trip was for him to set up a research lab for analyzine soymilk products in Dr. Miller's soymilk plant in Shanghai. Perry was biochemist and had graduated with a PhD.

Not much soy used in the early days of Saniku Foods. In 1935 Saniku started using soy, he thinks. But mostly they used puffed rice and wheat, and nutmeat.

Madison Foods had difficulty processing soy flour to make into milk, before it was made into tofu. They ordered a mill from Japan for this and began grinding whole soaked soybeans to make tofu. Perry liked plain tofu and wanted to sell it like this in the U.S., but at Madison they wanted to season it to make "Soy Cheese" [seasoned tofu]. Perry helped to develop Vigorost (which Alfred loved) and Yum.

Alfred thinks production of soymilk at Madison was started in 1935-37, when Perry had returned to Japan. During those years it really became a commercial product. When Perry returned to Madison in 1939-40, Madison was already well into production. So Alfred does not know to what extent Perry helped to develop it.

Another person who knowns details in Sam Yoshimura, a student of Perry's in Japan. He is the best man to talk to about production of soyfoods in the U.S. He was a great friend of Perry's, and he developed new food products.

Perry was treasurer of the American Soybean Association (ASA) in about 1933 or 34. He may have been secretary too. Alfred went with Perry to the ASA convention

at Baton Rouge, Louisiana, where Perry gave a slide show and lecture on soybeans and soyfoods in the Orient. Alfred also went with Perry to the research labs at Ford Motor Co. and talked with Edsel Ruddiman; they did not meet Henry Ford, however Perry gave a talk to leading Ford research scientists.

Perry was a great friend of Dr. John Harvey Kellogg. He did reasearch work for the Kellogg Food Co. He visited Dr. Kellogg and talked about soyfoods. He also developed preservatives for crackers for the Sanitariun Food Co.

Alfred suggests I talk with Ed Bisalski, who is now in Arkansas. Address: M.D., 24424 Univ. Ave., No. 122, Loma Linda, California 92354.

3522. Bonsembiante, Mario; Rioni, M.; Bittante, G.; Aghina, C. 1981. Fonti proteiche alternative all caseina nei sostitutivi del latte per vitelli in svezzamento [Protein feedstuffs to substitute for casein in milk replacers for weaning]. *Zootecnica e Nutrizione Animale* 7(2):89-108. April. [66 ref. Ita]
Address: 1. Professore ordinario, Istituto di Zootecnica, Via Gradenigo, 6-35100 Padova [Padua], Italy.

3523. Chen, Steve. 1981. Nutrition and production of soymilk. *Food Industries Monthly* 13(4):5-13. April. [1 ref. Eng]
• ***Summary:*** Originally presented in Bangkok, Thailand in 1980, then published as a 10-page booklet by the American Soybean Assoc., Taiwan. Address: Country Director, American Soybean Assoc., Taiwan.

3524. Dutra de Oliveira, J.E. 1981. Methionine supplementation of soy protein formulas. *American J. of Clinical Nutrition* 34(4):605-06. April. [6 ref]
• ***Summary:*** Research shows that methionine supplementation definitely helps rats. However, there are too many discrepancies in the available data to generalize about the effect of methionine supplementation on soya products used for human consumption–including infant formulas. Whether such supplementation is beneficial or not in a soya product depends on many factors, such as the type of product used, the nature of processing, the amount of protein added to the formula, and the method of biological testing. Address: Faculdade de Medicina, Univ. of Sao Paulo, Ribeirao Preto, SP, Brazil.

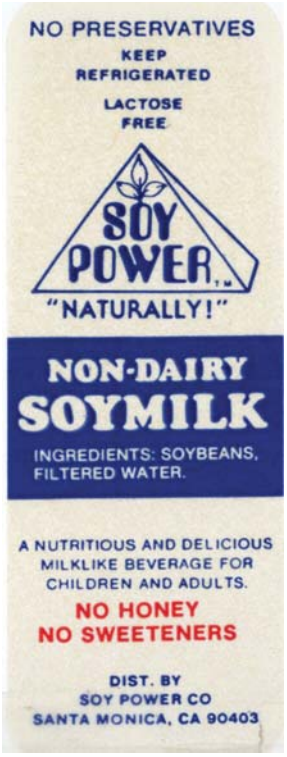
3525. **Product Name:** Amasake Rice Pudding [Plain, or Cinnamon].
Manufacturer's Name: Fresh Foods.
Manufacturer's Address: Boulder, Colorado.
Date of Introduction: 1981. April.
Ingredients: Brown rice, koji, spring water.
Wt/Vol., Packaging, Price: First in bulk, then in 8 oz and 16 oz plastic tubs.
How Stored: Refrigerated.
New Product–Documentation: Talk with Robert Nissenbaum. 1988. Feb. 7 and 11. In 1983 Gloria Gilbert of Fresh Foods in Boulder was making amazake and selling it as a pudding in small tubs. She never made a beverage. This product was introduced before her Rice Dream. She also made regular sandwiches and deli-type products.

Talks with Gloria Gilbert. 1988, Feb. 22, and 1989 Sept. 11. She learned about amazake in late 1980 from Rebecca Greenwood (Wood), and she learned how to make it from *The Book of Miso* by Shurtleff and Aoyagi. In April 1981 she started making Amasake Rice Pudding in Boulder. She is sure of the date because it was just after the assassination attempt on President Reagan in March 1982; the same day she sprained her ankle. That injury led her to decide that she wanted to change her lifestyle and work for herself, making amasake and selling it at Pearl Street Market. The first flavor was plain, followed by cinnamon. Initially she made it out of her home kitchen. In Dec. 1981 she bought a sandwich business from Marty Roth and Barbara Svenning to expand her product line. Note that Gloria was making amazake before she ever met Martin and Barbara. In Jan. 1982 she first gave her business a name, Fresh Foods, registered it as a legitimate food processor, got her first labels and logo, rented a commercial kitchen from a Greek guy, perhaps on Walnut Street, in Boulder, and made the amazake and the sandwiches there. At Then she made her food products at Rainbow Juices' kitchen, then at a kitchen on Sterling Drive. The ingredients were just brown rice, koji, and spring water. It was sold initially in bulk (she distributed it in 5-gallon plastic pails) at the deli of the Pearl Street Market. She had no label; the deli had its own sign. After it did very well there, she then packaged it in 8 and 16 oz. tubs. All her products were made in the purist macrobiotic way, with the bran left in. She now works for Louis Harris & Associates, the pollsters. Her favorite amazake now is that made by Creative Kitchens in Florida, plain and carob.

Note: This is the earliest known commercial pudding based on rice or amazake.

3526. Luttrell, W.R.; Wei, L.S.; Nelson, A.I.; Steinberg, M.P. 1981. Cooked flavor in sterile Illinois soybean beverage. *J. of Food Science* 46(2):373-76, 382. March/April. [26 ref]
Address: Dep. of Food Science, Univ. of Illinois, Urbana, Illinois.

3527. **Product Name:** Soymilk [Honey, Carob, or Plain].
Manufacturer's Name: Soy Power Company, Inc. (Distributor). Made in Los Angeles by Wy Ky.
Manufacturer's Address: 235 Montana Ave. #105, Santa Monica, CA 90403.
Date of Introduction: 1981. April.
Ingredients: Carob: Soybeans, filtered water, honey, carob.
How Stored: Refrigerated.



New Product–Documentation: Labels. 1981. 1.5 by 4 inches. Self adhesive. Honey: Red on white. Plain: Blue on white. Carob: Brown on white. "No preservatives. Lactose free." On Plain and Honey: "A nutritious and delicious milklike beverage for children and adults." Talk with Kevin Cross. 1988. Sept. 22. Originally made by Wy Ky. Now made by Mighty Soy in Los Angeles.

3528. *Soyanews* (*Sri Lanka*). 1981. Hospitals take to soya milk. 3(9):1. April.
• ***Summary:*** "Two hospitals in Kandy... are now using soya milk in the preparation of curries for patients." They started in February of this year. The patients and staff who tasted the curries can't tell the difference. "The soya bean milk is supplied by the Gannoruwa Soyabean Foods Research Centre in powdered form. Kitchen staff in the two hospitals are pleased with the use of soya milk as preparation is now shorter and less tedious.

"A 250 gm packet of soya milk powder is equivalent to the amount of milk extracted from about 5 coconuts, the manager of SFRC, Mr. T.D. Siriwardena told Soyanews."

"He added that the hospitals using soya milk can make further savings and added nutritional gains if they prepare the soya milk in their own kitchens from raw soaked beans.

"This would involve, he said, the use of a motorised stone grinder which can be turned out locally. But the long term advantages are many, Mr. Siriwardene said. As Tofu is an excellent food for invalids and convalescents, the next step in the preparation of soya milk is the making of tofu..." The residue [okara] is available at no extra cost for making rotis, and it can partly replace the coconut that goes into pol sambol.

"Last year the General Hospital in Colombo tried out using the slurry (the ground paste from soaked soyabeans) directly in curried and found that it was well received by patients."

Note: Sri Lanka may be the first developing country to begin to grasp the great potential of soymilk and tofu for its food culture.

3529. Soyfoods Center; Soycrafters Assoc. of North America. 1981. Soyfoods production in America and the West (News release). Lafayette, California: New-Age Foods Study Center. 1 p. April. Updated in Sept. 1981 in a neater format.
• ***Summary:*** A table shows production statistics for 25 types of soyfoods. Number of manufacturers in the USA, Canada, Other West, Total; Tons of raw soybeans/year used by each food. Yield of food from 1 unit weight of soybeans. Wholesale value. Retail value. Number of people employed. Address: P.O. Box 234, Lafayette, California 94549.

3530. *Toyo Shinpo* (*Soyfoods News*). 1981. Tônyû shijô no ?? [Soymilk market in Japan]. May 11. p. 3. [Jap]
• ***Summary:*** Mr. Machida estimates that the amount of soymilk produced in Japan was 4,000 tonnes (metric tons) in 1978, 8,000 tonnes in 1979, and 10,000 tonnes in 1980, worth 300 million yen (US$13 million). The retail price for 200 ml averages 60 yen. Much effort is being put into promoting the slogan "Drink the healthful alkaline beverage" on TV. In March of this year, Meiji Nyugyo started making SunGlow Soymilk.

3531. Shurtleff, William. 1981. Analysis of the U.S. and Western world tofu industry. Lafayette, California: Soyfoods Center. 1 p. May 17. Unpublished typescript.
• ***Summary:*** In this 1-page summary, prepared for Kikkoman Corporation, a table gives the following statistics for the years 1979, 1980, and 1981: Number of tofu manufacturers in the USA (120, 145, 159), Canada (7, 14, 19), other non-Asia, total. Raw soybeans used (tons/year) in USA. Percentage of total raw soybeans used for all soyfoods in the USA. Yield (pounds of tofu made from 1 pound of soybeans) (2.5). Tons of tofu produced in USA (16,250, 20,500, 26,000). Wholesale value (million dollars) (12.0, 17.5, 25.0). Retail value (million dollars) (23.2, 33.9, 48.5). Number of production employees (602, 759, 965).

Notes: The largest food uses of soybeans in the USA in 1981 are: Soy flour and grits (defatted) 52.6% (of all soybeans used), textured soy flour (incl. TVP) 19.7%, soy protein isolates 16.9%, soy protein concentrates 7.7%, soy sauce 1.2%, tofu 0.8%, soymilk and dairylike products 0.6%.

Estimates of regional markets for tofu: Largest market–California. Second largest–East Coast from Massachusetts

to Maryland. Third largest–Pacific Northwest. Fourth largest–Northern Midwest (Wisconsin, Michigan, Illinois, Minnesota, Indiana).

Addresses of tofu manufacturers is included. Address: The Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

3532. Anuradha Industries. 1981. Display ad: Amisoy: Spray dried soyabean milk powder. *Times of India* (*The*) (*Bombay*). May 24. p. 13.

• ***Summary:*** The top half of this full page ad shows an Indian woman doctor (wearing eyeglasses and appearing quite westernized) looking at a large can of 'Amisoy.' "Working for several years we have now succeeded in manufacturing a spray dried soyabean milk powder comparable to those in International Market.

"Amisoy is readily constituted into a palatable beverage (Soya milk). Fortified with all essential vitamins and minerals and has been tested experimentally. A special infant food of clinically established value. A good diet supplement for those hypersensitive to milk."

"Marketed by Anuradha Industries."

Note: "Amisoy" was the name of the earliest isolated soy protein developed by Central Soya Co. in Chicago, Illinois, USA in the early 1950s. It is not known if this soya milk and the name of the isolated soy protein are related in any way. Is the isolate an ingredient in the soya milk? Address: 1, Shriniketan, 14, M.K. Road, Bombay–400 020. Phone: 311803.

3533. **Product Name:** Amisoy: Spray dried soyabean milk powder.
Manufacturer's Name: Anuradha Industries.
Manufacturer's Address: Bombay, India. Phone: 311803.
Date of Introduction: 1981. May.
How Stored: Shelf stable.
New Product–Documentation: Ad by Anuradha Industries in *Times of India.* 1981. May 24, p. 13. The product is still on the market in Jan. 1982.

3534. **Product Name:** [Asashoku Soymilk (Dairylike, Coffee, or Orange)].
Foreign Name: Asashoku (Soimiruku, Koohii, Orenji).
Manufacturer's Name: Asahi Shokuhin.
Manufacturer's Address: San Shain 60 40F, 3-1-1, Higashi-Ikebukuro, Toshima-ku, Tokyo 170, Japan.
Date of Introduction: 1981. May.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Products with Labels (Tetra Brik cartons), purchased in Tokyo in June 1983. 200 ml. Each carton has an illustration of a lion on 3 panels. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.

K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. States that these 3 flavors, in 200 ml Tetra Brik cartons, were introduced in May 1981, and distributed to most of central Japan.

• ***Summary:*** Describes a high rate of rickets in preterm infants fed soy-based formula. Address: Section of Neonatology, The Children's Mercy Hospital, Univ. of Missouri Kansas City School of Medicine, Kansas City,

Missouri.

3536. Central Soya Company, Inc. 1981. Fact sheet: Products, Central Soya Company, Inc. and subsidiaries (Leaflet). Fort Wayne, Indiana. 2 p. May. FS-17. 28 cm.
• ***Summary:*** Lists all of the company's current products, including the brand name and the customers to whom each is sold. Major soy products include: Soy flours (Soyafluff, Soyabits, Soyalose, Soyarich). Textured soy proteins (Centex, Response, Bontrae). Edible soy protein concentrates (Promosoy, Promocaf). Lecithin (Actiflo, Centrol, Centrophil, Centrolene, Centrolex, Centromix, Centrophase, Centrocap, RG Lecithin). Refined edible vegetable oils (Centrasoy, Centracreme, Centracote). Packaged vegetable shortenings (Centrasoy, private label).

Soybean mill feed (Soybran Flakes). Livestock and poultry feeds (Master Mix, Provimi). Soybean meal (Central, Flow Coated). Address: Fort Wayne, Indiana 46802. Phone: 219-425-5100.

3537. Hildebrand, D.F.; Hymowitz, T. 1981. Two soybean genotypes lacking lipoxygenase-1. *J. of the American Oil Chemists' Society* 58(5):583-86. May. [32 ref]
• ***Summary:*** The USDA soybean germplasm collection was screened for genotypes lacking lipoxygenase-1. Two varieties or plant introductions (PI) were found: 133226 from Indonesia and PI 408251 from Korea.

Lipoxygenase [linoleate: O_2 autoreductase, EC 1.13.11.12] is widely considered to be the principal cause of the undesirable flavors in soy products, especially soymilk. Moreover, the lipid hydroperoxides resulting from lipoxygenase action can lead to loss of nutritive value by the destruction of certain vitamins and protein. In addition, lipid hydroperoxides and their breakdown products may have toxic effects.

Soybean seeds contain at least three lipoxygenase isozymes, each having a molecular weight (MW) of about 100,000. With linoleic acid the substrate, lipoxygenase-1 (L-1) has a pH optimum at 9.5, L-2 has a pH optimum at 6.5, and L-3 has a broad pH optimum from 4.5 to 9.0. The isoelectric points of the three isoenzymes are also different. L-1 is the most acidic. L-1 is the most reactive with free linoleic acid, whereas L-2 and L-3 are most reactive with methyllinoleate or trilinolein. On an equal protein basis, L-1 is 2.5 times as active as L-2 at its optimum pH, and L-2 is 2.5 times as active as L-3 or L-3b. L-1 is at least 36 rimes more stable than L-2 at 69ºC. Address: Dep. of Agronomy, Univ. of Illinois at Urbana-Champaign, Urbana, Illinois 61801.

3538. **Product Name:** Canned Tofu, Instant Powdered Tofu [Powdered Soymilk with a Separate Coagulant], Silken Tofu.
Manufacturer's Name: Japan Food Corp. (Importer). Made in Japan.
Manufacturer's Address: San Francisco, California.
Date of Introduction: 1981. May.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: FIND/SVP. 1981, May. "The tofu market: Overview of a high-potential industry." p. 103. A tofu importer.

3539. Keltner, Steve; Druding, David; Littell, Annee. 1981. New Arkansas regional tofu producer: Summercorn Soyfoods. *Swallows* (*Newsletter of the New Destiny Federation of Food Co-ops, Fayetteville, Arkansas*). Spring. p. 8-9.
• ***Summary:*** The soyfoods business grew out of Summercorn Bakery. It is now producing tofu, soymilk, and soysage. Contains 6 photos of the tofu making equipment, including photos of Keltner, Druding, and Claudia Smith. Annee is Druding's wife.

3540. Obis, Clare Barrett. 1981. The versatile soybean. *Vegetarian Times* No. 46. May. p. 66-71. [7 ref]
• ***Summary:*** One place you won't hear any arguments about soybeans is in the kitchen of knowledgeable cooks. "High in protein, fiber and minerals, soybeans are one of nature's truly universal miracle foods." "Here is a sampling of recipes from some of our favorite cookbooks" (cites 7).

How to use soy flour. Soy coffee cake (with 1 cup soy milk and 1 cup soy flour). Tofu cheesecake. Spiced tofu marinade. Tofu spinach pie. Soy burgers. Soya paté. Scotch eggs. Arancini Siciliani (Soybean and rice croquettes). Creamy tofu dip or dressing. Dairyless, eggless quiche. Scherezade casserole. Shepherd's pie (with tofu). Zuccanoes. Spicy Sichuan tofu. Soy stock gravy. Tofu stroganoff. Tofu stuffed mushrooms. Vegetable bean noodle bake. Address: Chicago, Illinois.

3541. Shenai, J.P.; Jhaveri, B.M.; Reynolds, J.W.; Huston, R.K.; Babson, S.G. 1981. Nutritional balance studies in very low-birth-weight infants: Role of soy formula. *Pediatrics* 67(5):631-37. May. [29 ref]
• ***Summary:*** Describes a high rate of rickets in preterm infants fed soy-based formula. Address: Dep. of Pediatrics, Univ. of Oregon Health Sciences Center, Portland, OR.

3542. **Product Name:** Non-Dairy Soymilk.
Manufacturer's Name: Summercorn Foods Inc.
Manufacturer's Address: 401 Watson, Fayetteville, AR 72701. Phone: 501-521-9338.
Date of Introduction: 1981. May.
Ingredients: Filtered water, organic whole soybeans.
How Stored: Refrigerated.
New Product–Documentation: Steve, David and Annee. 1981. Spring. Swallows. Summercorn Soyfoods is now producing tofu, soymilk, and soysage. Label. 1981. 2 inch diameter. Black on white. "Sugar and salt free. Keep

refrigerated."

3543. Wang, Hwa L. 1981. Oriental soybean foods: Simple techniques produce many varieties. *Food Development* 15(5):29-34. May.
• ***Summary:*** Methods of preparation are given for the following soyfoods: Tofu, soy sauce, miso, hamanatto, sufu, tempeh, natto. A table gives local names, descriptions, and uses for traditional East-Asian non-fermented soyfoods: "Fresh green soybeans (mao-tou, edamame)," soybean sprouts (huang-tou-ya, daizu no moyashi), soybean milk (tou-chiang), protein-lipid film (tou-fu-pi, yuba), soybean curd (tofu, tou-fu, tubu, tahoo, touhu, taufoo, dou-fu, dan-fu), and soybean flour (tou-fen, kinako). Local names, organisms used, substrate, and description of the product are given for traditional East-Asian fermented soyfoods: soy sauce, miso, hamanatto, sufu, tempeh, and natto.

Note: This is the earliest English-language document seen (April 2013) that uses the word "taufoo" to refer to Chinese-style tofu. Address: NRRC, Peoria, Illinois.

3544. Jacklin, Michele. 1981. The Good Harvest Food Coop Inc. Soy what? For 10 years! *Hartford Courant* (*Connecticut*). June 18. p. B5E.
• ***Summary:*** Good Harvest, in Middletown, Connecticut (about 10 miles south of Hartford), is celebrating its 10th anniversary. The membership numbers between 600 and 700 depending on the time of year. The produce still looks fresh and the loaves of bread (some of which use soy as an ingredient) are freshly baked. "The tofu, sesame tahini paste, seven kinds of granola and carob are popular items, but not for junk food addicts who need their daily fix of additives and preservatives."

Several months ago the food coop added a snack bar, whose menu changes daily. "Favorites include lentil stew, sandwiches stuffed with hummus (garbanzo beans) and guacamole, tofu (soy bean curd) pot pie, carrot juice and carob brownies." During warm weather, "soy milk softees," which resemble milkshakes, are very popular. Meat and fish are not sold. Address: Staff writer.

3545. Lo, K.S. 1981. Re: More on the early history of Hong Kong Soya Bean Products Co., Ltd., makers of Vitasoy. Letter to William Shurtleff at Soyfoods Center, June 26. 2 p. Typed, with signature on letterhead.
• ***Summary:*** This letter contains Mr. Lo's responses to six questions asked by William Shurtleff in a letter dated 25 April 1981. (1) Mr. Lo does not have a history of his company in English. Having retired from active management of the company, he does not like to dig into past records. (3) "In the year 1936, I was working for the late Mr. EU Tong-Sen, a multi-millionaire from Malaysia. I was in Shanghai on a certain mission on his behalf and spent about six months there. I was then 26 years of age... (4) The sales of my company in 1980 of eight million cases include both bottles and tetrabriks products packed 24 bottles or briks to a case." Address: Chairman, Hong Kong Soya Bean Products Co., Ltd., 41 Heung Yip Rd. Aberdeen, Hong Kong. Phone: 5-528211.

3546. Murray, Megan Baldrige. 1981. Tofu fever in New York. 3 p. June 30. Unpublished English-language manuscript. Published in Japanese in Sept.
• ***Summary:*** "This American tofu lover, David Mintz... started experimenting with tofu as a milk and cheese substitute five years ago [i.e. in 1976]... Mintz found that he could make cream sauces, quiches, and souffles without needing to use dairy products if instead he used tofu. Says Mintz, 'I've got tofu fever. Its a food of the future, a miracle food... The whole secret is tofu's flexibility. It lends itself to becoming Dutch chocolate ice cream, and it can also become roast duck... I dream about it. Its a miracle food I never expected to see. I have to learn how to harness it.'

"After several years experimentation with ice creams based on tofu, Mintz is now producing his own tofu ice creams... in several flavors: vanilla, chocolate, maple-walnut, peach, apple, apricot rum, and peanut butter & chocolate. He is making 275 gallons a week... Mintz loves to introduce his customers to tofu. He is proud of the tofu wedding he recently planned, in which the bride and groom started off their married life on a tofu menu." Address: New York.

3547. *Toronto Star* (*Ontario, Canada*). 1981. Meals are meatless for many families (Advertorial). June 30. p. B13. Advertising supplement.
• ***Summary:*** "There's a quiet revolution shaping up on your dinner table.

"Many families are eating meat analogue (meat substitute to you and me). Long acclaimed by many vegetarians and members of the Seventh-Day Adventist church, the meat analogue looks and tastes about as much like meat as margarine resembles butter, and that's close enough for many.

"Some are frozen and ready to serve, some come in sealed tins and complete a recipe, others in packages, dehydrated so that you can slip them into your knapsack when you aren't making stews and casseroles at home. Names like Vegetarian Burger, Sizzleburgers, Prosage Links and Big Franks abound, not to mention Vegetarian Stakelets, Stripples (like bacon). You name your favorite meat, fowl, or fish and manufacturers such as Loma Linda Foods or Worthington Foods will probably be able to offer a reasonable facsimile.

"The soybean has been a staple of the oriental diet for hundreds, if not thousands of years. It is a complete protein, and enthusiasts are quick to note the absence of cholesterol and animal fat content. Add wheat gluten to capture the 'mouth feel' of flesh food, peanuts for the taste and fibrous

texture, a bit of seasoning here and there, extrude the whole, cook to taste, and voila, the meat analogue!

"Soybean drink [soymilk] is another entrant in the huge North American beverage sweepstakes. With its white colour and nut-like flavour, it offers an alternative to milk for drinking and cooking."

3548. *Daizu Geppo* (*Soybean Monthly News*). 1981. Saikin no tônyû shijô o kataru [Discussion of Japan's soymilk market today]. June. p. 4-23. [Jap]
• ***Summary:*** On May 22 industry leaders from various companies met to discuss the market. The industry is only about 10 years old. In 1980 the value of soymilk was estimated to be about 3,000 million yen, and in 1981 it was 5,000 million yen. About 3,000 tons of soybeans are used to produce soymilk compared with 450,000 tons for tofu. Soymilk and cow's milk complement one another as products, rather than competing. One is animal and the other is vegetable. Kids need more animal protein and adults need more vegetable protein. Soymilk gives stamina whereas dairy milk gives growth. The price of soymilk is a little higher than that of dairy milk. About 10% of Japanese are allergic to dairy milk. Kibun makes soymilk potage (thick and creamy soup) and also ice cream. Drinking a 50:50 mixture of soymilk and dairy milk gives a better flavor and complementary nutrition. At any department of the Kibun company they answer the phone by saying "Tonyu no Kibun" (Kibun, the soymilk company).

3549. *Daizu Geppo* (*Soybean Monthly News*). 1981. Tônyû-rui no Nihon Nôrin Kakaku (JAS) ni tsuite [Japan's JAS standards for soymilk]. June. p. 24. [Jap]
• ***Summary:*** This is the earliest document seen (Sept. 2000) concerning soymilk standards or a standard of identity for soymilk.

3550. Krieger, Verena. 1981. Die schweizerische Sojaforschung [Soybean research in Switzerland]. Bruchmattstr. 24, CH-6003 Lucerne, Switzerland. 2 p. June. Unpublished manuscript. [Ger]
• ***Summary:*** Most Swiss people would be astonished to hear that there is a Swiss Soybean Growers Assoc. (*Vereinigung schweizerischer Soja-Produzenten; VSSP*), established in Nov. 1973 through the efforts of Dipl. agricultural engineer Edgar W. Schweizer. Following Schweizer's untimely death [on 15 April 1979], most of the practical soybean cultural experiments ceased. But private industry such as Nestlé is now showing active interest. Address: Lucerne, Switzerland.

3551. **Product Name:** [Midori Soymilk (Plain, Soft, with Barley Malt Syrup, or Fermented)].
Foreign Name: Midori Tônyû (Sutoreeto, Sofuto, Bakuga, Hakko).
Manufacturer's Name: Kyushu Nyugyo.
Manufacturer's Address: Kyushu, Japan.
Date of Introduction: 1981. June.
Wt/Vol., Packaging, Price: 200 ml aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. Tonyu [Soymilk. 2nd ed.]. p. 72. Note: Midori means "green" in Japanese.

3552. Leviton, Richard. 1981. The soybeaning of the American kitchen. In: R.B. Yepson, ed. 1981. Home Food Systems. Emmaus, Pennsylvania: Rodale Press. 475 p. See p. 99-115. [14 ref]
• ***Summary:*** The United States is the world's leading producer of soybeans, harvesting 136 billion pounds a year. Yet instead of enjoying foods made directly from soybeans, we feed them first to animals, converting them into meat and dairy products.

"Meanwhile, East Asians, who have lived with the soybean for millennia, and who are not as affluent as we, have a simple, economical and healthful answer: simple, nutritious, inexpensive foods such as tofu, tempeh, soymilk, miso, and many others less known in the West." Address: Colrain, Massachusetts 01340.

3553. **Product Name:** [Soyalac Healthy Child {Soymilk}].
Foreign Name: Soiyarakku Genki na Ko.
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1981. June.
Wt/Vol., Packaging, Price: 425 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Soiyarakku Genki no Ko was introduced in June 1981 in a 425 gm can and distributed nationwide.

3554. Smith, Paul. 1981. Re: Pioneering work with debittered full fat soy flour and with soybeans in Australia. Soybean production in Australia. Letter to William Shurtleff at Soyfoods Center, undated. 2 p. Handwritten. Plus comments on draft of History chapter.
• ***Summary:*** Comments on "History of Soya in Australia" manuscript: Vincent R. Smith was a soyfoods pioneer in Australia. In 1951-52 he began to manufacture Australia's first whole (full-fat) heat-treated (debittered) soy flour. From 1953-54 to 1974-75 V.R. Smith also canned soybeans in tomato sauce or puree. In 1956 he founded Soy Products of Australia Pty. Ltd. Between 1965 and 1974-75 Mr. Smith developed and manufactured two soyabean meat substitutes–Soya Bean Luncheon Loaf, and Savoury Roast–for Bellevue Health Supplies, as part of his product range within F.G. Roberts' Health Foods Proprietary Ltd. This latter company has since been absorbed within Soy Products of Australia

Pty. Ltd. Technically and nutritionally these products were excellent, but they were discontinued due to rising labour costs, the small Australian market, and competition from larger, more highly automated companies like Sanitarium and Heinz. At the time, possibly due to the very cheap cost of meat in Australia, there was very little market interest in soyabeans either as a food, meat substitute, and/or extender.

By 1981 Soya Products of Australia Pty. Ltd. was making debittered full-fat soy flour and grits, Soy Crunch (a breakfast cereal containing soy grits), Soy Compound (containing dry soymilk, whole soy flour, malt, and lactose), and several types of Muesli containing soy grits. The company's main role is in supplying high grade, human consumption quality raw (enzyme active) and debittered (heat-treated) soy grits and soy flour to industry [food processors] for a wide variety of uses: cakes, biscuits, bread, bread premixes, pizzas, breakfast cereals and mueslis, hamburgers, smallgoods, baby foods, soy milk, soy ice cream, tofu, and calf- and piglet rations.

Interest in soyfoods is growing in Australia, and will continue to grow fostered by increasing health consciousness and the rising prices of meats of all kinds. After the end of the Vietnam war in 1975, there was a big influx of Vietnamese into Australia, swelling the number to 50,000, of which 30,000 are ethnic Chinese. There are also some 10,000 Indonesians currently residing in Sydney alone.

Letter: "Thank you for your hospitality during my visit to the USA... We are now more than fully occupied running, maintaining, and expanding our soy flour mill and our health food business. In the last two years we have made substantial improvements in our quality control, throughput, and heat-treatment process. We have also been working on improving our bulk unloading and grain cleaning system, and plans for extending and further automating our plant are well in hand... We are actively participating in research and development work on soy flour and its end uses: particularly in the areas of liquid and powdered soymilks and soy ice cream.

"We were amongst the first people in Australia to use soya beans to make products for human consumption, in particular heat-treated or debittered full fat soy flour. We were actively involved with the first commercial crops of soybeans grown in Australia in the early 1950s at Kingaroy; we even had a plot of several varieties of soyabeans growing in our own backyard for several years from about 1953-55. Though the bushes grow, the soybeans never mature properly. We also did some interesting work in canning beans in tomato sauce or purée and in manufacturing soy meat substitutes. In addition to our conventional bakery and small goods outlets, our own specialty products and breakfast cereals, we are now supplying several small manufacturers of tofu, soymilk with soybeans, soy flour (raw), and soy grits (raw) and have recently become involved in tempeh manufacture. The trend here in Australia is definitely following that in the USA and interest seems to have grown dramatically in the last year or so. Soyfoods seem to have taken off... Unless you can afford shiploads, freight to Australia is a killer, so we do our best to avoid importing soybeans.

"I am enclosing a recent newspaper article about a tofu producer. We supply him with soy flour for making his tofu and soymilk."

Concerning soyabean production in Australia: "Soyabeans are widely grown in Australia from just north of Shepparton in Victoria (120 miles north of Melbourne), through the Riverina district of southern New South Wales (NSW), through central, north, and northeastern NSW; the Darling Downs area (around Toowoomba) and Kingaroy districts of Queensland. More recently soyabeans have been grown in Western Australia, near Perth.

"A great deal of work has gone into developing suitable varieties of soyabeans for Australian conditions; much of this has been built on American research and experience. U.S., Chinese and Australian beans, while generally similar, are very different to handle and process, in our experience.

"Initially, soyabeans were grown under natural rainfall but this is now rare as bean size tends to be small and yield poor. Soyabeans are definitely not suited to dryland farming techniques. Nearly all soya beans now grown in Australia are grown under irrigation."

Update (March 1995): Paul Smith joined this family-run company in April 1980. In 1981 he was just starting to learn about its history. By 1986 he had done extensive research and writing (which see) on the company history, which showed that it had much earlier and very interesting origins. Address: Soy Products of Australia Pty. Ltd., 69 Power Road, Bayswater, VIC 3153, Australia. Phone: (03) 729-1738 or 729-3611.

3555. *Soyanews* (*Sri Lanka*). 1981. Letters: Milk plant. 3(11):2. June.

• ***Summary:*** The writer is "planning to introduce soya milk and its by-products to South India and we would like to know more about soyabeans and how to run a small soya milk plant on a commercial scale."

Ans: Get "in touch first with the Head of the Department of Food Technology of the Pantnagar University, Pantnagar, India. They have helped to set up a 50,000 bottles a day soyamilk plant [that make Sipso brand soyamilk] in Delhi."

3556. Vaidehi, M.P. 1981. A few soyabean products requiring better attention. *Lal-Baugh Journal* (*The*) 26(2). April/June. [Eng]

• ***Summary:*** "Soyabean should be considered not primarily as a meat substitute, but rather as a food ranking with meat, eggs, milk, and cheese, in protein content and supplementing these foods in the diet."

"The most popular south Indian fermented breakfast foods are 'idli' and 'dose'" [dosai]. Their batters are naturally

fermented with wild yeasts present in the atmosphere. Soya dhal could be used as a partial replacement for black gram dhal in making either of these popular foods. A recipe is given.

Recipes are also given for making tempeh, tempeh chips, tempeh curry, soy milk, soy curd and butter milk, tofu (like paneer). Cow's milk paneer retails for over Rs. 25/- per kg. whereas tofu retails for Rs. 8-10 per kg–less than half the price.

Note. This is the earliest English-language document seen (Oct. 2012) that suggests the use of the soya dhal or soya bean in preparing "dose" [dosai]. Address: Univ. of Agricultural Sciences, Bangalore, India.

3557. *Nation's Restaurant News.* 1981. Healthy tofu winning converts. Food of the future? July 6. p. 25.
• ***Summary:*** About Dik Rose, owner of Soyfoods Cafe in Redwood Valley, California. He serves sandwiches, soups, burgers, desserts and dips–all made with tofu. "His tiny restaurant, which has 10 seats, has been in operation three years and does about $2,000 a week in sales." Rose is not alone. Tofu is "becoming a mainstay at small nutrition-oriented restaurants across the country." Rose also owns a tofu company, which makes about 1,500 lb/week plus 40 gallons of soymilk. None of the foods served in the cafe contain any animal products. Items on the menu are described.

3558. Watanabe, Hidekazu. 1981. Re: Early work by San-iku Foods in Japan with tofu and soymilk. Letter to William Shurtleff at Soyfoods Center, July 19. 2 p. Handwritten. [Jap]
• ***Summary:*** Discusses the early history of this product. "The Ueda Tofu Shop in Hachioji helped with the development of our first soymilk in 1957; I was there at the time. In those days our name was *San-iku Gakuin Shokuhin-bu,* not San-iku Foods. The purpose was to provide a place of labor for the students and opportunities to learn food processing. It was not a business. Dr. Perry Webber was the principal of our school at the time. I think that our company did not make commercial soymilk before 1957. The food company is said to have been founded in 1928 in connection with the school, but legally it did not become an independent company until December 1970."

Note: In 1969 the food company, named College Health Foods (later renamed San-iku Foods), introduced Soyalac soymilk. Address: San-iku Foods, Sodegaura-machi, Chiba-ken 299-02, Japan.

3559. *Toyo Shinpo* (*Soyfoods News*). 1981. [Japanese soymilk companies and their products]. July 21. p. 25. [Jap]
• ***Summary:*** A large and very interesting table shows that 14 companies are now selling soymilk in Japan, and 7 companies are making it. For each company is given: Soymilk product name in Japanese [and English]. Volume (all are 200 ml). Retail price in yen: Either 70 or 80 yen. Package type (all are Tetra Brik Aseptic; each has a straw attached to the back). Shelf life: All are 60 days.

The manufacturers are: (1) Kibun Foods: Plain Soymilk (Tonyu Sutoreeto [Straight]). Vegetable Soymilk (Tonyu Yasai). Fruit Soymilk (Tonyu Kaju). Barley Malt Soymilk (Tonyu Bakuga).

(2) Okazaki Marusan: Marusan Soymilk (Marusan Tonyu). Marusan Orange (Marusan Orenji). Marusan Barley Malt (Marusan Bakuga).

(3) Mitsubishi Kasei: Maburon. Maburon Orange (Maburon Orenji). Maburon Coffee (Maburon Koohii). Maburon Honey (Maburon Hachimitsu).

(4) Meiji Nyugyo: Sunglow Soymilk (Sanguroo Tonyu).

(5) Midori Shokuhin. Midori Soymilk Plain (Midori Tonyu Sutoreeto). Midori Soymilk Soft (Midori Tonyu Sofuto).

(6) Asahi Shokuhin: Soymilk (Soimiruku). Soymilk Orange (Soimiruku Orenji). Soymilk Coffee (Soimiruku Koohii).

(7) Saniku Foods: Soya Neo Cocoa (Soia Neo Kokoa).

Note: A large black-and-white photo in this issue or a nearby issue this year shows 25 different soymilk packages, including 3 Soyalac cans.

3560. Leviton, Richard. comp. 1981. Soyfoods in America. The Fourth Annual Soycrafters Association Conference on Producing and Marketing Soyfoods: Schedule, abstracts, expo information, the menu, registration list, and directory of instructors. Colrain, Massachusetts: Soycrafters Assoc. 150 p. Held 8-12 July 1981 at Colorado State Univ., Ft. Collins, CO. No index. 28 cm.
• ***Summary:*** These proceedings were given to the registrants when they arrived. Schedule: Wed., July 8. Lectures: Directions for the soyfoods industry, by Richard Leviton. Soyfoods: Protein source of the future, by William Shurtleff.

Thurs., July 9. Class period 1: Review of tofu-making equipment, by Larry Needleman. International soyfoods cooking class, by Melodie Phipps. Small business management, by Dr. Harry Kreuckeberg. Tofu plant tour. Seminars: Sensory evaluation, part I, by Adrian Pearson. Soyfoods & human nutrition, part I, by Dr. Joseph Rackis, chairman. Home soymilk preparation, by Linda Gilbert. Tempeh production laboratory, by Dr. Clifford Hesseltine [NRRC, Peoria, Illinois], chairman. Class period 2: Soyfoods master chef cooking class, by Akiko Aoyagi. The Real Food Tofu Cafe, by Dik Rose. Soyfoods marketing strategies, by Dr. Harry Krueckeberg. Tofu plant tour. Tempeh production laboratory II, by Dr. Clifford Hesseltine, chairman. Lecture: Low cost extrusion cooking, by Dr. Judson Harper. Expo opens. Class period 3: Cooking soyfoods, macrobiotic style, by Rebecca Greenwood. Effective advertising and promotion, by Dr. Harry Krueckeberg. Seminars: Levels of tofu production, Luke Lukoskie, chairman. Introduction

to nutrition and dietary analysis, by Jennifer Andersen & Suzy Pelican. Lectures: The view from tofu towers, by Thelma Dalman. The history of soybeans in the West, by Dr. Theodore Hymowitz. The year in review: Progress, problems & challenges, by William Shurtleff.

Fri., July 10. Class period 4: Tofu in Ecuador cooking class, by Ricardo Jennings. Quality control of soy products, by Dr. Joseph Maga. Labor / management relations, by Dr. Ron Wiggins. Demonstrations: Tofu making, at White Wave, Boulder, Colorado. Soymilk ice cream, by Jamie Stunkard & Al Jacobson. Extrusion cooking, by Dr. Ron Tribelhorn. Seminars: Soyfoods & human nutrition, by Dr. J. Rackis, chairman. Sensory evaluation, part 2, by Adrian Pearson. Business management, by William Scott. Class period 5: Soyfoods master chef cooking class, part 2, by Akiko Aoyagi. The small tofu shop, by Dik Rose. Tempeh making demonstration, at White Wave. Lecture: The nutritional value of extruded foods, by Dr. Richard Jansen. Expo open. Class period 6: How to open a tofu or tempeh plant, by William Shurtleff. Infant and child nutrition, by Dr. Barbara Smith. Soyfoods desserts cooking class, by Darrilyn Jackson. Seminar: Recall programs for soyfoods, by Dr. Joseph Rakosky. Lecture: Soyfoods & the natural foods industry, by Gil Johnson. Tofu cheesecake bake-off awards. Live music & refreshments.

Sat., July 11. How to open a tofu business on nothing down, by Al Jacobson. Soyfoods & the kosher market, by Chananyah Kronenberg. Government taxes and small business, by Dr. Terry Lantry. Demonstrations: Design and maintenance of the soy plant, by Steve Fiering (at White Wave). Soysage production, by Jamie Stunkard & Bob Davis (at White Wave). Seminars: Quality assurance programs, by Dr. Joseph Rakosky. Tofu and institutional feeding, by Thelma Dalman and Maxine Prairie. Class period 8: Sweden's first tofu plant, by Dr. Ted Nordquist. Quick home tempeh method, by Linda Gilbert. Frozen tofu cooking class, by Robin Clute. Expo open. Lecture: Tofu from cottonseeds, by Dr. Khee Choon Rhee. Class period 9: Tempeh microbiology and technology, by Chananyah Kronenberg. Financial management, by Dr. Oscar Varela. Tofu production cost control and analysis, by John Baldwin. Mexican village soya cooking class, by Blanca Dominguez. Seminar: Principles of tofu production, by Dr. Hwa Wang, Dr. C. Hesseltine, Dr. K.C. Rhee. Dinner. Square dance.

Sunday, July 12. Class period 10: Soyfoods in the North Woods cooking class, by Demetria Nanos Hamdorf. Workers & management / conflict resolution. What are organic soybeans, by Ardell Andersen. Open technical seminar on soyfoods, by William Shurtleff. Tempeh producers roundtable: Dr. Clifford Hesseltine, chairman. Lectures: The woman's role in promoting soya in Mexico, by Blanca Dominguez. Morinaga aseptically packaged tofu, by Kunisuke Kuwahara. Closing remarks, by Richard Leviton.

A SANA business meeting was held on Sat. July 11, starting at 7:00 p.m., moderated by Luke Lukoskie of Island Spring (president) and Richard Leviton (Executive Director). Format: President's report, by Luke Lukoskie. Financial report, by Richard Leviton. Proposals, by Richard Leviton. Open discussion. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

3561. Londin, Louise. 1981. Soy delis & Mintz's Buffet. *Soyfoods* No. 5. p. 6-7. Summer.
• ***Summary:*** Discusses the Good Nature Deli in Oak Park, Illinois, started on 14 December 1980 by Kevin O'Brien and Mary Ellen Sackett; The Soyateria in Toronto, Canada, situated in front of Soy City Foods and started in 1980 by Jon Cloud; and Mintz's Buffet (Glatt Kosher Cookery and Catering) in New York City. "David Mintz's popular recent contribution to tofu cookery is his creamy, delicious Tofu Ice Kream, which has been attracting large numbers of people into the shop. It is an original blend of tofu, soymilk, fresh fruits, natural essences of apples, figs and raisins, pure wildflower honey, egg whites, and soy oil. It comes in such tempting flavors as country vanilla, old fashioned chocolate, strawberries n' kream, peaches n' kream, apples n' kream, dutch nut chocolate, and apricot rum. At the Buffet, they call him Mintz, the Prince of Tofu." Photos show: David Mintz at his Tofu Time ice cream machine. The deli case at Mintz's Buffet.

Address: 1. Dietition, Kasturba Hospital, Sevagram, Warda (Maharashtra).

3563. McBride, Gordon; Stechmeyer, Betty. 1981. Soy viilia: New soymilk yogurt culture. *Soyfoods* No. 5. p. 7-8. Summer.
• ***Summary:*** "At Gem Cultures we have essentially 'discovered' a soy product that is new, easy to make, and represents a distinct flavor and texture improvement over the other soymilk products we have tasted. The product is so new that we don't have a catchy name for it yet. We will call it soy viilia in honor of its historical heritage as a cultured milk product.

"But what is viilia? Traditionally it has been a cultured cow's milk product popular in the Finnish community in Northern California. It was made with raw milk and a 'starter' in a dish at cool, room temperature (often as low as 65ºF, 17ºC) and at times in an air-cooled pantry. Viilia was made with nonhomogenized milk; the cream layer rose and separated from the lower skim milk layer, making the final product also layered. In Northern California it was eaten as a dessert or snack, often with a Finnish rye bread, *riiska.* Relatives of ours who have visited Finland report that

viilia is consumed in much the same way there, and that it is readily available in food stores, restaurants, and coffee shops. We have never seen viilia commercially available in the U.S. The 'starter' is simply a teaspoon or so of viilia taken from a mature dish. If someone loses their starter, there is no problem; simply wander over to a neighbor, ask for a spoonful, and start another batch.

"From the mixing of warmed milk and the starter, the culture takes 24 hours to mature. It can be stored several days in a pantry or up to a week in the refrigerator. The flavor is subtly sweeter than plain yogurt but by no means sugary. The texture is smooth. Once in a while a starter 'goes bad' usually from disuse, and produces an off-flavored product. It should be discarded and a good starter procured.

"Once raw milk became unavailable in California people began to make viilia from homogenized, pasteurized milk from the store. The only difference was that the cream-skim milk layering was absent. To simulate the quality of old-fashioned raw milk viilia, it is possible to put starter in a dish, pour in milk, then carefully pour a layer of whipping cream over the surface. Viilia was almost always consumed directly from the dish. Occasionally, sugar and cinnamon were sprinkled on, especially for the youngsters. It is surprising that viilia has not been used in many other ways, as sour cream has, but we believe such uses will be discovered in time.

"Now, why is this bit of Scandinavian foodlore in *Soyfoods?* In a nutshell: we have recently discovered that when viilia is mixed with fresh soymilk and sweetened with a little honey, it makes a custardlike product with excellent texture and virtually no 'beany' flavor. Fruit or flavorings may be added, but are not necessary. We were visited by a customer and her three-year-old daughter and offered them a sample of plain soy viilia. The youngster happily consumed the majority of it leaving only a taste for her mother. We felt soy-viilia passed an important test.

"Moreover soy-viilia can be used as a starter for three or four generations of batches. However, since this is a preliminary report, we recommend for the present that starter be carried on cow's milk since we know that on milk it is stable and dependable for hundreds of generations. The more often it is used, the more stable and dependable is the product, much as with sourdough or yogurt.

"As soon as we realized that our little amalgam of Scandinavian cuisine and the 'cow of the orient' offered what many in the soyfoods industry were looking for (a new soymilk yogurt culture) we sent samples to the Northern Regional Research Laboratory in Peoria, Illinois. Dr. Hwa Wang of the NRRL reported soy viilia to be quite palatable and she began a research project to isolate the responsible microorganisms.

"Although the final taxonomic identification is not complete, preliminary indications suggest that the several organisms involved are different from the University of Illinois patented soymilk yogurt (*Streptococcus thermophilis* and *Lactobacillus bulgaricus*) or the other Finnish cultured milk product piima (*Streptococcus diaceticus, Streptococcus cremoris, Leuconostoc citrovorum,* and the fungus *Oospora lactis*). Later reports will furnish this information in detail. Neither do we at this point have information regarding the fat, protein, carbohydrate, vitamin, calorie, or mineral content of either cow's milk or soymilk viilia. This will come in time.

"Therefore, at this point, we simply want to report on this new dimension in fermented soyfoods. Viilia can be made easily at home within the range of normal room temperatures, using standard household utensils and no special incubators. We don't claim it will restore vitality, falling hair, or cure any human ailments. We do claim Viilia is an interesting food made from either milk or soymilk. We claim it's a treat. We have starters available at GEM Cultures and anyone interested should write for prices." Address: GEM Cultures, 30301 Sherwood Rd., Ft. Bragg, California 95437.

3564. Needleman, Larry. 1981. Tofu plant profiles: Swan Gardens, Miami. *Soyfoods* No. 5. p. 26-27. Summer.
• ***Summary:*** Swan Gardens, located in Industrial Miami, is a family-run business which was started by and is now owned by Jocelyn and Dick McIntyre. It has 6 employees, including the McIntyre's daughter and, earlier, Jocelyn's mother. "The company began in St. Ignatius, Montana in 1978 where they produced 500 pounds of tofu weekly from a small shop situated on an organic vegetable farm, Jocelyn McIntyre had been making tofu at home for 8 years previously and finally yielded to her friends' encouragement to produce tofu commercially. In August 1979 they sold their company and farm and used the proceeds to launch Swan Gardens in Miami, which they opened in January 1980. They wanted to get into tofu in a big way and Miami seemed like a promising, wide-open market. Today they manufacture 2,100 lb of firm, vacuum packaged tofu, 5 to 6 days weekly, and distribute over 50% of it outside of Florida, often as far as Illinois and Ohio." A detailed description of the tofu production process and equipment is given. "What I find most impressive about Swan Gardens is their excellent application of American equipment to fashion a smooth production flow in a very clean and well maintained plant. They are among a few innovative companies that are trying vacuum-packing tofu as a way to extend shelf life and attract customers. Jocelyn McIntyre describes the company as 'a stable, solid business with a good work crew.' They are preparing an okara tempeh for the market and plan to release soysage and baked tofu in the future." Photos show: (1) Dick McIntyre and his daughter, Cecilia/Ceci, standing behind a 200 gallon tank of soymilk (p. 26). Ceci and her grandmother (Joci's mom) preparing tofu for vacuum packaging (p. 27). Address: Bean Machines Inc., Bodega, California.

3565. Needleman, Larry. 1981. Tofu plant profiles: Sunshine Soy, Miami. *Soyfoods* No. 5. p. 29-30. Summer.
• ***Summary:*** Sunshine Soy is owned and operated by Danny Paolucci in Coral Gables, a suburb of Miami. "Starting in 1970 when he became acquainted with the vegetarian diet and the food uses of soybeans, Mr. Paolucci has been 'screaming soybeans,' as he remarks. In the mid-1970s he was cook at the Mt. Baldy Zen Center in California where he experimented with soybean dishes and made community scale miso. In 1974 he wanted to open a soy plant but there was no technology or information available; existing Oriental plants were unwilling to help him. In December 1977 he linked up as manager with the meteoric Swan Foods of Miami, an early multiproducts soy company that in its one intense year of business lost some $140,000. Mr. Paolucci emerged from the experience with considerable insight and some manufacturing equipment so that in June 1980 he was able to launch his own soy venture"–Sunshine Soy.

The company now makes 500-750 lb of tofu a day, plus tempeh, baked tofu, soymilk, miso salad dressing, and soysage. Photos show: Danny Paolucci. A hydraulic forming box press. A clamshell sealer. A Chisholm-Ryder screw extractor; unfortunately it is no longer manufactured. Address: Bean Machines Inc., Bodega, California.

3566. Rakosky, Joseph, Jr. 1981. Tempeh today: Report from Indonesia. *Soyfoods* No. 5. p. 34-35. Summer.
• ***Summary:*** This year Rakosky traveled to Southeast Asia on behalf of the American Soybean Association (ASA), the Foreign Agricultural Service (FAS), and the USDA. He visited five countries: Philippines, Singapore, Malaysia, Thailand, and Indonesia. The purpose of his trip was to encourage people to use soy protein products in their foods and the report his impressions on the market potential.

In Indonesia he found that soymilk was being made in villages by licensed businesses for use in schools; it was flavored with ginger and contained 8% added sugar and 0.03% salt. Plans were underway to start a special soymilk project in which the beverage would be retorted, then distributed in shelf-stable cans and bottles.

Dr. F.G. Winarno, head of Nutritional Research and Development at the Agricultural Institute of Bogor in Jakarta, is involved in a program to improve the nutritional level of Indonesians living in villages. His group is concerned with the design and construction of equipment suitable for village level food processing.

Dr. Winarno said the biggest change in tempe processing occurred in 1976 when the university showed tempe makers that they could get a better product, faster, by incubating their inoculated soybeans in plastic bags rather than in the traditional banana leaves. "'Twenty years ago the people of Java ate tempe and the Chinese ate tofu,' Dr. Winarno explained. 'Today they are both considered national dishes for the Indonesian people.'" About 70% of the soybeans in Indonesia are used to make tempe, with 20% used to make tofu. The biggest tofu maker in Indonesia uses a little less than 10 metric tons per day.

There follows a detailed description of how tempe and tempe starter are made commercially in a traditional Indonesian shop. "The government requires tempe shops to offer small preparation areas for villagers to use to make their own tempe."

"While the Chinese make up about 4% of the total population, they control about 80% of the wealth; obviously they are the country's businessmen, an imbalance the government is trying to correct."

KOPTI is an cooperative organization of independent tempe and tofu makers, mostly small companies, with a current membership of 2,035. To become a member, a company pays a one-time fee (depending on the size of the company) then a monthly fee of $1.62. Members buy their soybeans from KOPTI, which presently handles 4,800 metric tons a month and uses its large volume to get low prices. KOPTI also helps its members upgrade their products and schools them in sanitary practices.

"Since tempe is so popular in Indonesia, one would expect to find it in local supermarkets, but it cannot be found there." A photo shows a small tempe shop in Jakarta, with soybeans being soaked in metal barrels. Address: Morton Grove, Illinois.

Illust. by Akiko Aoyagi Shurtleff. Index. July. 23 x 21 cm. Translated from the English by Rainer Bosch and Gudrun Klein. [43 ref. Ger]
• ***Summary:*** Contains 500 recipes. Contents: How to use this book. Preface. Acknowledgements. 1. Protein East and West. 2. Tofu as a food. 3. Getting started. 4. Soybeans. 5. Fresh soybean puree (*Frisches Sojapüree*). 6. Okara. 7. Soymilk curds and soymilk (*Sojaquark und Sojamolke*). 8. Tofu (History, how to make at home, basic preparatory techniques). 9. Recipes for regular and firm tofu. 10. Deep-fried tofu: tofu cutlets, burgers, and pouches (*Vorfritierter Tofu: Tofuschnitzel, Tofuburger, Tofutaschen*). 11. Grilled tofu (*Gegrillter Tofu*). 12. Frozen and dried-frozen tofu (*Gefrorener Tofu und gefriergetrockneter Tofu*). 13. Fermented tofu (*Fermentierter Tofu*). 14. Soymilk (*Sojamilch*). 15. Silken tofu (*Seidentofu*). 16. Yuba. 15. Tofu and yuba in China, Taiwan, and Korea. 17. Farmhouse tofu for large families. 19. The ethos and tradition of handmade tofu production. 20. Making tofu in a traditional shop. Appendices: A. Tofu restaurants in Japan. B. Varieties of tofu in East Asia. C. People and institutions connected with tofu worldwide (Incl. directory of tofu manufacturers). D. Sources of supply for tofu production. Bibliography.

Glossary. Favorite tofu recipes. About the authors and their work (autobiographical). Tofu–An opportunity for poor and rich lands. The tofu kit (from Sojaquelle in West Germany and Oekullus in Switzerland).

Note 1. This is the earliest publication seen (April 2013) that uses term "Tofurei" to refer to tofu shops / manufacturers. The term was coined by Gabriele Furth-Kuby of Ahorn Verlag.

Note 2. "Sojaquark" is used to refer to soymilk curds rather than to tofu. Published in a hardcover edition only. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

3568. Shurtleff, William. 1981. William Morse: The father of soybeans in America (Continued–Part II). *Soyfoods* No. 5. p. 56-60. Summer.

• ***Summary:*** Continued: "It is truly remarkable that the authors were able to write such a complete and detailed book when neither of them had been to East Asia. (Morse would later spend two years there; 1929-1931.) Most of the book was actually written by Morse who, nevertheless, kindly listed Piper as the senior author. He gathered his information and photographs by extensive correspondence with researchers throughout East Asia and apparently drew heavily on a large collection of books on Chinese agriculture called the Swingle Collection, named after Walter T. Swingle of the Office of Crop Physiology, who spoke Chinese, had traveled extensively in the Orient collecting plants and the books, and had housed them at the USDA library, where Morse did much of his research. Decades ahead of its time, *The Soybean* soon became the standard work on the subject and was referred to by many as 'the soybean bible.' Dr. Piper died in February 1926 at the age of 69.

"Morse's fine work was already starting to give real substance to Piper's dream. In 1920, Morse helped to found the American Soybean Association (ASA) and thereafter helped to unify and direct an ongoing program of research and experimentation. Morse distributed seed from new introductions to anyone interested in soybeans. Among his closest contacts at the State Agricultural Experiment Stations were W.L. Burlison in Illinois and C.B. Williams in North Carolina. As late as 1927, most soybean agronomy research was still done on plots in Washington, D.C. outside the USDA south building. Morse sent out seeds to the states but farmers had problems; they shattered at maturity, were hard to harvest, and were abrasive on the binder canvas in those days before combines. Thus in the early years the tide of interest in soybeans ebbed and flowed. Doubters were always ready to laugh at anyone who talked of the soybean becoming a major U.S. farm crop. But this only served to spur Morse on to greater efforts. He was a very effective extension worker with many contacts, a deep knowledge of his subject, and good intuition. His desk at the USDA soon became the clearing house for information about the soybean. In 1927 he wrote: 'We may keep this work going and place the soybean where it belongs–in the King row with King Corn and King Cotton.'

"The Dorsett-Morse Expedition to East Asia (1929-1931): In the late 1920s it became evident to the USDA that the soybean had definite promise as a crop in America and it was decided to send W.J. Morse and P.H. Dorsett to East Asia for two years on what was officially known as the Oriental Agricultural Exploration Expedition (but which people interested in soy usually call the Morse Expedition) to 'make investigations regarding the utilization of the soybean in Oriental countries and the securing of varieties that might be of value to widespread American conditions' (Morse, 1929). In 1929 when the expedition left, Morse was age 45 and had worked on soybeans with the USDA for 22 years. Dorsett (1862-1943), now age 67, was a plant explorer from the USDA Office of Plant Introduction; he was described by a fellow agricultural explorer, David Fairchild, as one of the most ingenious and indefatigable workers he had ever known. Whereas Morse was a specialist, interested in soybeans, Dorsett was a generalist, interested mainly in persimmons, but also in grasses, forages, and other plants.

"During the expedition, Morse and Dorsett kept detailed daily journal notebooks, which were typewritten after the trip and bound in 17 hardback volumes. These volumes, primarily the work of Dorsett, also contain correspondence plus thousands of black-and-white photographs taken by both men. In the bound volumes there are several references to a 'special report on the soybean and its products' that Morse intended to write. Apparently he never completed it, although he did complete detailed chapters on tofu and soymilk. The only original copy of the documents described above is in the archives of the American Soybean Association in St. Louis, Missouri. [Note: As of 2011, it is in Rare and Special Collections, at the National Agricultural Library, Beltsville, Maryland].

"The group arrived in Tokyo on March 18, 1929, and set up headquarters. In August they traveled to Hokkaido, the northernmost island of Japan and center of soybean production, where they studied both soybean cultivation and food uses. In December 1929 they returned to Tokyo and spent full time until March 1930 collecting soyfoods and studying their production and use. On April 1, 1930, they arrived in Dairen, Manchuria, to study soybean cultivation and oil extraction. Dorsett left Morse in the summer of 1930 and went to Peking. He did not rejoin Morse on the trip, although he wrote regularly. Morse went to Korea on August 22, to Mukden in Manchuria on September 29, back to Dairen, the oil-processing capital of East Asia, and then to Peking on October 20; Morse apparently spent only 20 days in China on the entire trip. In late December they took a ship from Dairen back to Kyoto and then Tokyo. On February 17, after several more months of soyfoods research in Tokyo, they sailed for America, arriving in San Francisco

on March 4, 1931. Morse's collection efforts–months of tramping through the fields of East Asia–were a bonanza. He discovered that almost every village in the Orient had its own distinctive soybean varieties, developed during thousands of years of close cultivation and inbreeding. Unlike their Western counterparts, Chinese farmers didn't think of looking for improved varieties in nearby villages and then growing these in their own village. They loyally grew the varieties that had been handed down by their honorable ancestors, and wouldn't dream of growing a variety handed down by someone else's ancestors. Morse's major accomplishments on the expedition were: (1) he collected approximately 4,600 distinct soybean seed samples representing roughly 2,000 soybean varieties and including 150 large-seeded vegetable type varieties collected mostly in Korea and Japan; all of these were introduced into the U.S. germplasm collection; (2) he realized for the first time the superiority and potential of the vegetable-type soybeans for food use and later played the leading role in propagating them and teaching others of their value; (3) he developed a much better understanding of soybean growing methods and technology; and (4) he collected more than [commercial] 250 food products made from soybeans, which he took back to America, and did by far the most extensive studies on soyfood production of any Westerner up to that time.

"In his journals and letters, Morse wrote more than once that he was 'amazed at the extent to which the soybean was used for food in Japan.' He was intrigued by the techniques for making tofu, miso, shoyu, natto, and other soyfoods, spent many days in small shops with producers, and described their processes in great detail, taking hundreds of pages of typed text with hundreds of photographs.

"The two-year trip was a tremendous adventure for both Morse and Dorsett. Morse later remarked that he considered it the highlight of his career. He was finally able to fully grasp the great potential of the soybean, which he had only been able to glimpse through his years of reading and work in America." Continued. Address: Soyfoods Center, P.O. Box 234, Lafayette, California.

3569. Shurtleff, William. 1981. William Morse: The father of soybeans in America (Continued–Part III). *Soyfoods* No. 5. p. 56-60. Summer.

• ***Summary:*** Continued: "Later years in America (1931-1959): Morse returned to America in March 1931 with great enthusiasm and interest in transmitting to America all that he had learned in East Asia. He was now a principal agronomist at the USDA Bureau of Plant Industry. With the stage set for the fruition of years of work and research that would transform the place of the soybean in the Western world, let us pause for a minute to ask, 'What kind of a man was Bill Morse?'

"In appearance, he was tall and lean, with a kind face and soft features. Farmers all over America, with whom he had met and talked in their fields, might remember his baggy suspendered pants, loose tie, and slouched hat, his great interest in their problems and successes.

"George Strayer, editor for 27 years of the American Soybean Association's *Soybean Digest,* who had known Morse since 1927, said of him: 'He was a quiet, unassuming, yet brilliant fellow, not particularly dynamic as a speechmaker, but intensely interested in seeing soybeans progress. He would sit up half the night talking with people about soybeans and soyfoods.'

"An article by Mary Burr Pieters in the September 1944 *Soybean Digest* described Morse as 'modest and retiring but sure and right as rain... He studied, he traveled, he toiled, he experimented–he exhorted–and the result of all of this singleness of purpose and devotion surely borders on fantastic.'

"Edward J. Dies, his close colleague, described him in Gold from the Soil as 'heedless of material gain or personal honor, shy, modest, agreeable, and easy going, but with the repressed intensity of a crusader.' Martin G. Weiss, who worked under Morse for many years and succeeded him when Morse retired, said of him: 'He was a kindly man, always willing to encourage and give moral support to his subordinates. He was loved by all, and his employees worked hard–they never wished to disappoint him.' His daughter Margaret described him in 1980 by saying: 'He was a gentle, soft-spoken person, who liked others and they liked him. He liked to tease, and the secretaries at his office all loved it. He was a very easy person to get along with; he was slow to anger and never cursed. He wasn't aggressive; where some might push, he would give in. He was intelligent. His work came first. He was not financially ambitious.'

"After returning from East Asia, Morse was more interested than ever in soyfoods, and much of the subsequent increasing interest in America derives from his efforts. He expanded his work with the USDA Office of Home Economics in Washington, D.C. and interested researchers in the Department of Home Economics at the University of Illinois to get involved with research on soyfoods, especially on use of the large-seeded, vegetable-type soybeans he had brought back from East Asia. He encouraged development of soyfoods recipes suited to American tastes and talked a lot about soyfoods at American Soybean Association meetings and many other gatherings. Working with others, he was largely responsible for the development of soy flour and grits. One entire wall of Morse's Washington office was covered with floor-to-ceiling shelves, filled with soyfood samples from Asia.

Except for Dr. Harry Miller, Morse was probably the first soy researcher in America to make soyfoods a regular part of his diet. While in East Asia, he and his family had become very fond of Oriental cooking, and especially of soyfoods, and they enjoyed them often after returning to America. Of the many recipes they brought back from

the Orient, Morse's favorite was sukiyaki. He built a low sukiyaki table with a hot plate on top and cushions around it on the floor in his home and at every opportunity would invite over guests to serve them his specialty which of course featured tofu and sprouts. He also liked to take family and friends out to a good Chinese or Japanese restaurant. The family enjoyed using soy flour when making breads, muffins, or waffles. Morse's mother [Edna] liked to cook him fresh green soybeans and his wife regularly fixed him her favorite Boston Baked Soybeans. Morse loved soymilk ice cream; one magazine ran a full-page photo of him happily eating it. He also regularly enjoyed tofu, soymilk (plain and acidophilus), and soymilk yogurt, and these foods became increasingly important in his largely meatless diet after he found he had an ulcer. In fact he once told George Strayer that, with his ulcer, he felt these soyfoods had greatly extended his life and good health.

"Morse also actively continued his soybean selection and propagation work at the Arlington Farm. He realized more than ever that if the soybean was to become a national crop that hundreds of different varieties, adaptable to different latitudes, soils, and climates, would have to be found and developed by breeding. He was especially interested in working with farmers and the USDA to stimulate research and development on the vegetable-type soybeans, which had been little more than a curiosity prior to his trip to East Asia. While Morse was the first to popularize the vegetable-type soybeans, he was not the first to introduce them. The variety Easycook (which took less than half as long as most field-type soybeans to become tender after boiling) was introduced to the U.S. in 1894 and the Hahto was introduced in 1915. Morse mentioned both of these in *The Soybean* in 1923 but did not mention the term 'vegetable-type soybeans,' and was apparently unaware of their significance. Many of the vegetable-type soybeans that Morse brought back from East Asia were grown out and starting in 1934, distributed to various state agricultural experiment stations for trial.

"Up until 1928, Morse, in charge of soybean research, had been the only USDA employee working full time in this field. In 1928 the USDA hired a second full-time soybean researcher, Jackson L. Cartter, who had just graduated with a master's degree from Iowa State College. From 1928 to 1933 Cartter did soybean research on a farm in Holgate, Ohio that was managed by the Ohio Experiment Station. From 1933 to 1936 Cartter worked directly under Morse at the USDA Experiment Station, Arlington Farm, Virginia; he tested, grew out, and classified many of the soybeans from Morse's trip to East Asia. In 1936 Cartter helped to organize the U.S. Regional Soybean Laboratory at the University of Illinois. He became the first director of its agronomic division and was placed in charge of the soybean breeding program for the 12 Midwestern states; he studied the soybean's oil and protein composition, and served as director of the laboratory until his retirement in 1965.

"Unfortunately the long-term results of Morse's collection efforts in East Asia are not what they might have been. It was estimated in 1980 that only 25,000 acres of the 70.1-million-acre U.S. soybean crop were planted in vegetable-type soybeans, a mere 0.04 percent of the total. They have never become popular here for various reasons; they give 20 to 30 percent lower per-acre yields than field-type soybeans, tend to shatter easily at maturity and are thus hard to harvest, and consequently sell for 12 to 18 percent more than other soybeans. If they were less expensive, large amounts would probably be used in East Asia to make tofu, soymilk, tempeh, and miso by producers who already buy their beans from America." Continued. Address: Soyfoods Center, P.O. Box 234, Lafayette, California.

3570. Shurtleff, William. 1981. William Morse: The father of soybeans in America (Continued–Part IV). *Soyfoods* No. 5. p. 56-60. Summer.

• ***Summary:*** Continued: "Moreover, in the U.S. only about 11,350 tons of soybeans (a mere 0.02 percent of the total U.S. crop) are used directly as food in a lightly processed form that allows the virtues of the vegetable-type bean (better flavor and texture, higher protein, larger seeds) to shine through. About half of the U.S. vegetable-type soybeans are exported to soyfoods producers in Japan and Europe and half are used for American soyfoods. The major uses, in order of importance, are for tofu, soynuts, soymilk, whole canned (mature) soybeans, and tempeh.

"Bill Morse was a strong supporter of the American Soybean Association. He was at the founding meeting in 1920 and was elected president three times (1924, 1925, and 1932). Pioneer soybean grower, E.F. 'Soybean' Johnson later said that 'for many years the ASA existed mainly through Morse's untiring efforts.' He was the mainspring that kept the clock ticking year after year through good times and bad. In 1944 George Strayer said: 'Morse might be called the 'daddy' of the American Soybean Association as well as of the soybean in America, since our organization has probably leaned on him more than any other man through the years. He has always been a guiding light and missed few if any meetings (except 1929-31 when he was in Asia). It is doubtful if anyone can equal his record.'

"Morse was a highly competent researcher and a prolific writer. Between 1910 and 1950 he wrote some 87 articles and bulletins on soybeans and soyfoods, including The Soybean–in addition to making hundreds of speeches. Many of his articles appeared in publications of the American Soybean Association. He was editor of the Association's first publication in 1928 entitled *Proceedings of the American Soybean Association,* which contained 192 pages of papers given at the annual ASA conferences between 1925 and 1927. He contributed several papers to this volume, including 'The Distribution of Soybeans in the U.S.' (1927).

He was also a frequent contributor to the *Soybean Digest,* which the ASA started in November 1940.

"The first article on soyfoods run by *Soybean Digest* was an article by Morse about vegetable-type fresh green soybeans entitled 'Shanghied... A Super Food' (July 1941). His second article was also on vegetable-type soybeans, 'Soys in Food: Future of Vegetable Varieties' (September 1945). In 1951 he wrote 'What's in a Name,' describing the significance of the poetic names given to varieties of soybeans in East Asia.

"In November 1949, when Morse retired after 42 years of service, he was known throughout the world, but especially in the U.S. and East Asia, for his work on soybeans and soyfoods. In 1907, when he started work, the soybean was such a small crop that no records of its production were kept. One measure of the success of his work is the amazing expansion of the crop from about two million bushels in 1919 to 9.4 million in 1929, 91 million in 1939, and 200 million in 1949.

"On retirement, Morse turned his work over to Martin G. Weiss, a professor of plant breeding and genetics from Iowa State University. From his home in Takoma Park, Maryland, where he had lived since 1917, Morse moved to Eastchester, New York, next door to his daughter, Margaret, who had accompanied him on the trip to East Asia. During the last ten years of his life he worked from time to time on his book on soyfoods (which, unfortunately, he never finished), did a lot of reading and gardening (he planted his own vegetable-type soybeans and enjoyed them each spring as fresh green soybeans, or later in the season, as mature cooked soybeans), and kept in active touch with the world of soybeans and soyfoods through many visitors and an extensive correspondence. He continued to enjoy soyfoods in his home meals.

"On the morning of July 30, 1959, at age 75, William J. Morse died of a cerebral hemorrhage at his home in Eastchester, New York.

"The work of Bill Morse runs like a bright thread through the whole tapestry of soybean and soyfood development in the Western world. We can pay no greater tribute to the man than to carry on his work and help fulfill his dream.

"For their help in providing information related to this article, the author would like to thank Mrs. Walter Thalman (Morse's daughter), George Strayer, Martin G. Weiss, Theodore Hymowitz, Jackson Cartter, R.W. Howell, and Verna Donavan." Address: Soyfoods Center, P.O. Box 234, Lafayette, California.

3571. **Product Name:** No Cow Soy Drink (Soymilk).
Manufacturer's Name: Soy Shop.
Manufacturer's Address: 1081 Memorial Dr. S.E., Atlanta, GA 30317.
Date of Introduction: 1981. July.
Wt/Vol., Packaging, Price: 1 quart plastic bottle.
New Product–Documentation: Leaflet. 1981. July. Soyfoods: Tempeh, Soysage, & No Cow Soy Drink. Label shown in STS "Containers for Soymilk." Brown on yellow.

3572. *Soyfoods.* 1981. Mini-Mite Bean Mill. No. 5. p. 55. Summer.
• ***Summary:*** "The need by the small-scale, traditional-style tofu shop for an inexpensive, all stainless steel, sanitary soybean mill prompted Bean Machines, Inc. to develop their new 'Mini-Mite.' This economy model uses the same heavy rotor, screen, and control disc as their huskier models, but utilizes standard food service industry stainless steel containers for its housing. The result is a powerful, but lighter, machine, powered by a two-horsepower motor with a capacity of 100 pounds of dry soybeans per hour, compared with capacities of 300 and 600 pounds for the heavier-duty models. The Model M6C combines simplicity and efficiency and uses a 'butterfly' rotor rotating at 3600 rpm (driven by a two horsepower, 115/230 volt single-phase motor, painted with sanitary white enamel) within a 360 degree stainless steel screen. The control flow disc meters the beans for an even, steady feed. The M6C is constructed from lightweight 304 stainless steel with sanitary surface finish inside and outside. The Mini-Mite has a 3¼-inch diameter inlet, a 2 x 3 inch outlet, a two-blade removable hammer with one full circle perforated screen (inside dimension 6 inches x 2 7/16 inch high). The Mini-Mite comes with a one-year warranty against mechanical defects and sells for $1485 with a four-week delivery time. For more information, write: Bean Machines, Inc., P.O. Box 76, Bodega, CA 94922; tel. (707) 876-3341." Address: Bean Machines, Inc., P.O. Box 76, Bodega, California 94922.

3573. Sass, Lorna J. 1981. Soy foods: Versatile, cheap and on the rise. *New York Times.* Aug. 12. p. C1, C6. Widely syndicated.
• ***Summary:*** The article begins: "Soy foods have come west and, apparently, are here to stay. No longer restricted exclusively to the world of woks and cleavers, soybeans in America are now patted into soyburgers, and tofu (soybean curd) is puréed into soy mayonnaise, baked into 'cheesecake' and fried as 'cutlets,' while soy milk emerges from the blender as a frothy carob shake or from the freezer as cantaloupe 'ice cream.'

"Because soy foods are an inexpensive source of protein, low in fat and completely cholesterol-free, they have been attracting more and more attention among the growing number of weight-conscious, health-conscious and dollar-conscious Americans. Until recently, soy sauce was the only soy product familiar to most Americans.

Contains a long discussion of David Mintz (owner of Mintz's Buffet, a kosher delicatessen at 1040 Third Avenue at 62nd Street). He makes a tofu ice cream, and a tofu-

spinach quiche. "A large Japanese company wants to buy exclusive rights to distribute Mintz's tofutti 'ice cream' in Japan. 'The more dishes I make with tofu, the better my business is,' said Mr. Mintz." He is frequently called upon to cater "tofu weddings."

Also discusses Light Foods in St. Louis (Missouri), and the Rochester Soy Deli (in New York). "Two of the people most responsible for introducing soy foods to Americans are William Shurtleff and his wife, Akiko Aoyagi, who in 1975 wrote 'The Book of Tofu,' a comprehensive cookbook and introduction to the untapped potential of soy foods as an alternate source of protein."

There follow seven recipes featuring tofu and tempeh: Mintz's tofu herb dip. Breaded tofu cutlets (with frozen tofu. Might also be called "Fillet of tofu," plus a note on how to freeze tofu at home). Tofu tartare sauce. Tempeh salad. Carob-tofu-mint pie. Whole wheat pastry crust (with soy milk and soy oil). Lotus Cafe not-dogs (meatless hot dogs).

Next comes a section titled "Learning more about soy: A listing of useful books." For example: "There is no more thorough book on the history and myriad Oriental forms of tofu than the profusely illustrated *"Book of Tofu,"* by William Shurtleff and Akiko Aoyagi (Autumn Press / Random House; 334 pages; $8.95). First published in 1975, it is credited by most tofu cookbooks as the one that 'spread the light.' The hundreds of recipes, mostly Oriental in style, will fascinate adventurous cooks. Beginners may prefer the condensed, somewhat more Americanized version (Ballantine, 433 pages, $2.95)."

The long article ends with a helpful sidebar titled "How to buy and store tofu." "A four-ounce piece of tofu (bean curd) sells for about 30 cents..." One main difference "between the tofu sold in health food stores and the Oriental-style tofu sold by many greengrocers is the type of coagulant used. Tofu from health food stores is almost always made with nigari (primarily magnesium chloride and trace mineral elements derived from evaporated seawater), while Oriental tofu makers generally use calcium sulphate."

A photo shows Katherine Iselin with some of the special sandwiches at the Tofu Shop, a fast-food soy deli in Rochester, New York. She is wearing a Soyboy Tofu T-shirt. On the wall behind her is the restaurant menu.

Note: A similar article titled "Out of the wok and into the frying pan" appeared in *The Durham Sun* (9 Sept. 1981, Section B).

Another similar article titled "More budget-conscious Americans are hitting the soy–its not just sauce" appeared in the *Chicago Tribune* (29 Oct. 1981, p. W_A21).

3574. Spencer, Colin. 1981. Food: Bean feast. *Guardian* (*Manchester*). Aug. 14. p. 7.
• ***Summary:*** A recent cartoon in the *New Yorker* showed a wife serving a suckling pig, as her husband sourly remarked, "Not tofu disguised again." "Tofu is a soybean curd" that has been made in China more 2,000 years. In the 6th century, Buddhist monks made elaborate imitations of fish and poultry out of tofu. "In the United States, thanks to the moral health movement, tofu has become an 'in' food."

Although Americans constitute only 6% of the world's population, they consume 30% of its meat and dairy products. "The vegetarian minority–estimated at 10 million–are blazingly articulate in their diatribes against this injustice.

"William Shurtleff and Akiko Aoyagi have again written the definitive work, *The Book of Tofu* [Autumn Press] £4.50, available at Cranks and all health stores which stock a wide range of publications."

In England, Granose Foods Ltd. makes soya milk; it is delicious and such a book for vegans and children allergic to dairy milk. A new brand of tofu is now available. Sunwheel Foods, whose products are always impeccable in quality, are selling a tofu made by Morinaga and imported from Japan. It retails for 60 pence for 297 gm. Contains 4 recipes using Morinaga [silken] tofu: Stir-fried tofu. Sesame tofu. Tofu salad dressing. Tofu-stuffed pancakes. Address: [England].

• ***Summary:*** In the United States, more than 20% of the dairy cows are infected with leukemia viruses, especially Bovine leukemia virus (BLV). When these viruses are fed to chimpanzees, the experimental animals develop leukemia. Address: Univ. of Pennsylvania School of Veterinary Medicine, New Bolton Center, Kennett Square, Philadelphia, Pennsylvania 19348.

3576. Krieger, Verena. 1981. Gestern Steak, Morgen Tofu: Oder was man mit einer Bohne so alles machen kann [Yesterday steak, tomorrow tofu: Or all the things that can be made with one bean]. *Tages Anzeiger Magazin* No. 34. p. 6-12. Aug. 22. Also translated in English, French, and Italian. [4 ref. Ger; Eng; Ita; Fre]
• ***Summary:*** A lengthy, pioneering account of the virtues of tofu, and its development in the USA and Switzerland by the Sunday supplement to Switzerland's biggest daily newspaper. Contains numerous color photos of soyfoods from around the world. Also defines and discusses soymilk, miso, tamari, shoyu, and soy sauce, tempeh, and soy sprouts. Discusses the work of Edgar W. Schweizer (underway by 1977) in attempting to grow soybean varieties suited to Switzerland.

The Geneva restaurant "La Moisson" has had tofu on the menu for 5 years. In Bern, in the beginning of July, the restaurant "Sesam" was acquired by the first Swiss organic food store (*Bioladen*), the "Lotusbluemli" (Little Lotus Blossom). Since Sesam opened, the people of Bern have been able to get to know a rich treasure of dishes from tofu made at Sesam, as well as many applications of miso

and shoyu or tamari. The vegetarian restaurant "Bristol" in Lucerne is launching tofu as its summer hit this year, in the form of Tofu Schnitzels and Burgers... In organic food shops, Reform Houses and Oriental specialty shops, miso and soy sauce are available. The following places in Switzerland sell fresh tofu, which they make on the spot: (1) Centre macrobiotique de Lausanne, ruelle de Bourg 7, 1003 Lausanne. (2) S. Gänterli, Vonmattsrr. 50, 6003 Lucern. (3) Le Grain d'Or, rue Voltair 27, 1201 Geneva. (4) De Lade, Oberaltstadt 8, 6300 Zug. (5) S. Lotusbluemli, Gerechtigkeitsgasse 17, 3011 Bern. (6) Madal Bal, Kreuzplatz 10, 8032 Zurich. On the last page of the article is an ad for Soyana in Zurich.

Note: The Italian-language edition of this article is titled "Ieri bistecca, domani il tofu." It is the earliest Italian-language document seen (Sept. 2011) that mentions tempeh, which it calls "tempeh." Address: Lucerne, Switzerland.

3579. **Product Name:** [Soymilk (Dairylike, or with Barley Malt Syrup)].
Foreign Name: Tônyû (Shiro, Bakuga-iri).
Manufacturer's Name: Nagano Tomato.
Manufacturer's Address: Japan.
Date of Introduction: 1981. August.
Wt/Vol., Packaging, Price: 195 gm can.
New Product–Documentation: Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that Nagano Tomato first made commercial soymilk in Japan in 1981.

K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. These products were introduced in Aug. 1981 in 195 gm cans and distributed nationwide.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64.

3580. *Nutrition Reviews.* 1981. Exploring cow's milk and soy protein sensitivity in human infants. 39(8):305-07. Aug. [11 ref]
• ***Summary:*** "Soy proteins are not 'hypoallergenic.' They offer the same potential for damage to the intestinal mucosa as cow's milk protein. Soy protein isolate, the primary protein in all soy milk formulas, can cause a violent gastrointestinal reaction in susceptible infants. Clinical features are non-specific and include fever, leukocytosis, vomiting, blood-tinged mucoid diarrhea, carbohydrate intolerance, dehydration and metabolic acidosis. Soy and cow's milk protein-induced colitis are clinically and pathologically similar."

"In 1953, P. György [Gyorgy] reported a growth factor for *Lactobacillus bifidus* in human milk that was not found in cow's milk. He noted that infants fed human milk in sufficient quantities displayed a generally higher resistance to respiratory and intestinal infections when compared to infants receiving cow's milk. György's laboratory and clinical work paved the way for other investigations of the biochemical, cytologic and microbiologic characteristics of human milk that make it a unique food for human infants."

3581. Shurtleff, William; Aoyagi, Akiko. 1981. History of Butler Food Products (Document part). In: William Shurtleff and A. Aoyagi. 1981. History of Small Seventh-day Adventist Food Companies and Sanitariums. 8 p. See p. 4-6. Unpublished manuscript. Available online at www.soyinfocenter.com. [1 ref]
• ***Summary:*** In operation from 1939 to 1946, this was a private company in Cedar Lake, Michigan. "This creative company was founded in 1939 by Howard O. Butler and run primarily as a family enterprise. Butler got interested in soyfoods from people he knew at Madison Foods in Tennessee. He hired people with prior experience in soyfoods production; Howard Hoover (who made soymilk with Dr. Miller in East Asia) and a Mr. Roose. An initial aim of the business was to offer jobs for Adventist youth to pay their tuition at nearby Cedar Lake Academy, although the business was not formally connected with the Academy. The company's primary product, first produced in 1942, was 'Soya Butter,' actually what we would now call soy margarine; it contained 79% lightly hydrogenated soy oil, soymilk (18% by weight), salt, vitamin A carotene (as a natural coloring), and butter flavor. The melting point was 110ºF (43ºC). Butler advertised the product as being nonfattening.

"He soon ran into problems with the government concerning his soya butter. In August 1944 the *Soybean Digest* reported that 'H.L. Hoover, manager of the firm, claims that he is the victim of conflicting federal and state regulations, and that he cannot comply with one set of regulations without violating others. Hoover points out that while the Food & Drug Administration prohibits his company from labeling the product oleomargarine without the addition of dairy products to it, the Bureau of Internal

Revenue classifies it as oleomargarine for taxing purposes.' Margarine was then defined as vegetable oils churned with dairy milk; Butler used soymilk in place of dairy milk to give a completely vegetarian product. Furthermore, it was claimed by the Bureau of Dairying in Lansing, Michigan, that the product had been illegally colored in imitation of butter, and in several instances had been sold as butter. In August 1944 cases were pending in circuit and U.S. courts, awaiting trial. In May 1945 a federal judge in Cleveland, Ohio ruled that Butler's Soya Butter was not taxable as margarine and should not be labeled as margarine, but shortly thereafter the Ohio Department of Agriculture, in variance with the federal ruling, classified soya butter as colored margarine, which could not be sold legally in Ohio. In June 1945 the American Soybean Association came out in favor of a congressional bill to define soya butter as being distinct from margarine. Finally in December 1945, at which time the company was manufacturing 100,000 units of soya butter a month, a federal judge in Detroit ruled that the product was oleomargarine as defined by the internal revenue code, and therefore subject to back taxes of 10 cents a pound on every pound made to date. The three-year battle and the ruling assessing an estimated $150,000 in back taxes drove the company out of business in 1946. In about 1950, while typing out an appeal to the government to reconsider his case, Butler suffered a fatal heart attack. Shortly after his death, the margarine law was changed and the tax (on other companies) removed.

"During the early 1940s, Butler Foods was a thriving operation. In early 1942 they were making a nice line of nine soyfoods including ready to eat Soy-Fruit & Nut Cereal (with figs, dates, and bran), ViM-eat Soy-Nut-Loaf, ViM Soy-Nut Cheese, Soy-Kawfee, Entire Soybean Flour (i.e. full-fat), Entire Soybean Wheat Flour Mix (70:30), Soybeans with Tomato Sauce, ViM-ilk (soymilk) and Soy-Nuts. An attractive brochure, which described the company's products and gave recipes, noted that some of the soybeans were 'grown on Butler's own mineralized farm.' In mid-1942 Soya Butter was added to the line. The company also made bulk soymilk for use in its Soya Butter. In September 1943 Butler Foods ran a full-page ad in the *Soybean Digest* headlined 'New Foods from the Wonder Bean' showing pictures of cans of Butler's Soynut Cheese, Vegeburger, Soya Nut-Loaf, Soya Butter, and Vegetarian Chops. The chops, his most popular meat analog, were a blend of wheat gluten and soy flour, sliced, pre-cooked, then canned in a broth made of soy sauce and other savory seasonings. A September 1945 ad showed that Butler's Meatlike had been added to the line.

"After the government tax ruling of 1946, Cedar Lake Academy leased Butler's property and tried to operate the food business for 2 years, but the plant was too big and the company had now lost its vital income from sales of soya butter. The Academy food business ceased operation in 1949. The supervisor at that time, Vesper Sias, who had worked at Butler Foods since 1942, then left and started his own company, Cedar Lake, in November 1949." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

3582. *Soyanews* (*Sri Lanka*). 1981. How to do it–Making soya milk: for hotels, restaurants and hostels. 3(12-1):4-5. Aug.
• ***Summary:*** Contents: Introduction. Equipment (incl. a commercial Waring blender). Procedure. Ingredient requirements for 1.5 kg of soyabean. Cost estimate for 100 litres or 178 pints of soya milk (Rs. 189.50, or Rs. 0.88 per litre for ingredients to make plain soya milk or Rs. 1.50 to make sweetened chocolate soya milk). Illustrations (line drawings) show a heavy duty Waring blender and a pot.

3583. Leviton, Richard; Shurtleff, William. 1981. U.S. per capita consumption of soyfoods grows to nearly 9 pounds per year (News release). Soyfoods Assoc., Sunrise Farm, Heath Rd., Colrain, MA 01340; and Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 4 p. Sept. 4. Published in Soyfoods, winter 1982, p. 6. [2 ref]
• ***Summary:*** Compiled largely by Shurtleff, circulated by Leviton. "In 1981 Americans spent $4.57 per capita on soyfoods [not including soy oil] while consuming 4.9% of the U.S. soybean crop–possibly an all-time high." Address: 1. Colrain, Massachusetts; Lafayette, California.

3584. *Nation's Restaurant News.* 1981. Tofu triggers big boom for Mintz's. Sept. 14. p. 48.
• ***Summary:*** "Since David Mintz [the owner of Mintz's Buffet], introduced tofu into his food store, 14-seat restaurant and catering business, sales have grown to $1 million and he now expects to develop other tofu restaurants in the city."

Mintz says of tofu: "It's the food of the future." "Mintz offers tofu in noodle charlotte, spinach quiche, egg rolls, cheesecake, bran muffins in blueberry, carrot apple, strawberry rhubarb, banana, pineapple and dutch apple, to name just a few items. His most popular item is an imitation ice cream made with tofu and called 'tofu ice kream.' This nondairy frozen dessert is made with tofu, soy milk, fresh fruits, natural essences of apples, figs, raisins, wildflower honey, egg whites and soy oil. It comes in flavors such as country vanilla, old fashioned chocolate, strawberries and 'kream,' dutch nut chocolate, and apricot rum... Mintz also operates a catering business which accounts for about half his sales."

Note: This is the earliest English-language document seen (March 2007) that uses the term "nondairy frozen dessert" to refer to soy ice cream.

"Mintz developed an interest in tofu about four years ago [1977] and many of the recipes are his own concoctions. Because tofu is pareve (neither meat nor dairy), Mintz was able to develop kosher dishes previously off limits in a kosher diet since meat and dairy can not be mixed." Products

made with tofu now account for two-third of Mintz's sales. A large photo shows the front exterior of Mintz's buffet. The signs over the windows read: "Take home foods. Party catering. Strictly kosher. Glatt kosher buffet catering."

3585. Shurtleff, William; Aoyagi, Akiko. 1981. Li Yu-ying and Usine de la Caseo-Sojaine, Paris: History of work with soyfoods. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 13 p. Sept. 15. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. Contents: Introduction: Contribution. Early life and work: Birth date and place, 1905 soymilk paper at Second International Dairy Congress in Paris, 1908 establishment of laboratory for soymilk studies in Paris. Early soyfoods patents: Description of five British patents applied for in 1910 and granted by 1912, U.S. patent for "Method of Manufacturing Products from Soja" applied for in 1911 and granted in 1913. Major books and articles: First book *Dadou* in 1910 written in Chinese, 1911-1912 article series, published 1912 as book *La Soja,* basic concept and contents. Introduction of soyfoods in Paris: Start of Usine de la Caséo-Sojaine northwest of Paris, products made, serving products to distinguished groups, presentation of food at 3 international expositions, trip to Nanking Exposition 1911, decline in popularity by 1916. 3588. Alfa-Laval. 1981. Steritherm: The most economical UHT system on the market. Lund, Sweden. 12 p. Manufacturer's catalog. Color. [Eng]
• ***Summary:*** "Why Alfa-Laval sells more UHT plants than all other suppliers put together. By the end of 1980 Alfa-Laval had delivered more than 350 UHT sterilizers to 55 countries.

"More than half of all new UHT plants delivered in recent years have come from Alfa-Laval, most of them the indirect *Steritherm* type." The capacity ranges from 1,000 to 30,000 liters/hour (265- 7 950 U.S. gallons/hour).

"Up to around 1960 it was impossible to mistake sterilized milk for pasteurized milk. The former, heated in an autoclave for a quarter of an hour or more at temperatures above 100ºC (212ºF), was easily recognizable by its cooked flavor and slightly brownish color. The coming of UHT changed all that. UHT is a much less brutal form of treatment."

Alfa-Laval based its Steritherm design on the plate heat exchanger (PHE). Address: Lund, Sweden.

3589. **Product Name:** [Soymilk Dessert].
Foreign Name: Tônyû Dezaato.
Manufacturer's Name: Asahi Foods (Asahi Fuuzu).
Manufacturer's Address: Japan.
Date of Introduction: 1981. September.
Wt/Vol., Packaging, Price: 60 gm plastic cup.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Tônyû Dezaato was introduced in Sept. 1981 by Asahi Fuuzu in a 60 gm plastic cup and distributed nationwide.

3590. Hymowitz, T.; Newell, C.A. 1981. Taxonomy of the genus *Glycine*, domestication and uses of soybeans. *Economic Botany* 35(3):272-88. Sept. [100 ref]
• ***Summary:*** Contents: Taxonomic history of *Glycine.* Domestication [and dissemination of the soybean]. Uses [of the soybean] (The four most important foods developed from the soybean in East Asia are miso, shoyu (soy sauce), tempeh, and tofu). "These traditional foods have little physical or flavor identity with the original bean. Hence it is not too surprising that Marco Polo, who raveled from Venice

to Cathay and throughout the Orient between 1271 and 1295, makes no mention of the soybean (Rugoff, 1961)."

The earliest accurate description by a European seen for the use of soybeans as food was by Friar Domingo Navarrete. He wrote about them in 1665.

East Asian nonfermented soy foods: Tofu, soy milk, yuba, kinako, sprouts, green soybeans.

East Asian fermented soy foods: Miso, soy sauce, tempeh. Soy uses in the West: Oil, protein (from defatted soybean meal). A brief history of each of these foods is given.

Tables: (1) The species of *Glycine* according to Linnaeus, 1753, and their subsequent classification. (2) The genus *Glycine* L. according to Bentham (1864, 1865). (3) The genus *Glycine* L. according to Hermann (1962). (4) The genus *Glycine* Willd. as revised by Verdcourt (1966, 1970). (5) The genus *Glycine* Willd. as accurately delimited.

Figures: (1) *Shu,* the archaic character for soybeans (five stages in the character's development; Hu {1963} believes that the shu pictograph can be traced back to approximately the 11th century B.C.). Address: Dep. of Agronomy, Univ. of Illinois, Urbana.

3591. Inkson, Ms.; Mann, E.J. comp. 1981. Thesaurus: Food Science and Technology Abstracts. 2nd ed. Shinfield, Reading, England: IFIS (International Food Information Service). 238 p. No index. 30 cm. First edition, 1977. [Eng]
• ***Summary:*** The Introduction states: "The original IFIS word list, issued in 1970, did not attempt to give more than the barest outline of the relations between the terms encountered. In 1977, therefore, an FSTA Thesaurus was published, in which the basic structuring of the material found in FSTA was set out. The Thesaurus was designed to give maximum compatibility with the EEC Multilingual (English / French / German / Italian) Food Thesaurus, published in 1979 (and itself based largely on the FSTA system for the English version), and to take into account the needs of on-line users."

The terms are divided into headings (main terms or descriptors), which are printed in capital letters, and lead-in terms (non-descriptors) printed in lower case. Additional information is included in square brackets. The following abbreviations show the types of relationship between terms: BT = broader terms. NT = narrower terms. RT = related terms. UF = used for. lead-in term followed by "see" heading (e.g. bean curd see TOFU).

Soy-related terms: Beverages: UF soy milk. Lecithins: BT Emulsifiers, Phospholipids. UF phosphatidylcholine. Legumes: NT Soybeans. Miso: BT Soy Products. natto: see Soy Products. Sauces: NT Soy Sauces. soy flour: see Soy Products. soy milk: see Beverages; Soy Products.

Soy Products: BT Soybeans, Vegetable Products, Fermented Products. NT Miso, Soy Proteins, Soy Sauces, Soybean Oils. UF natto, nyufu, soy flour, soy milk, sufu, tempeh, tofu, tsukudani, vital.

Soy Proteins: BT Protein Products, Soy Products, Proteins Vegetable. RT Textured Vegetable Proteins. UF okara protein, Promine [Central Soya Co.], Supro 620, yuba.

Soy Sauces: BT Fermented Products, Sauces, Soy Products. UF moromi, shoyu.

Soybean Oils: BT Oils Vegetable, Soy Products. Soybeans (*Glycine max*)*:* BT Legumes, Oilseeds. NT Soy Products.

Note: This is the earliest document seen (Sept. 2003) that is a thesaurus containing terms related to soybeans and soy products. Address: IFIS (International Food Information Service), Lane End House, Shinfield, Reading RG2 9BB, England.

3592. Mintz's Buffet. 1981. Mintz's tofu buffet menu. 1040 Third Ave. (between 61st & 62nd Streets, near Bloomingdale's), New York, NY 10021. 1 p. Undated.
• ***Summary:*** This handwritten, undated menu (which includes prices) was probably printed in about Sept. 1981. It could have originated as early as August 1980–by which time Mintz's was serving quiches and tofu muffins. By Feb. 1981 they were serving egg rolls. Soy-related menu items include: Vegetable salads: Steamed broccoli with tofu-mustard sauce ($3.99/lb). Tofu-vegetable quiches: Broccoli, spinach, zuccini [sic, zucchini], mixed vegetable, cauliflower ($4.95). Vegetable tofu pies: Spinach, broccoli, cauliflower, zuccini ($2.75). Tofu-bran muffins: Strawberry-rhubarb, apple-walnut, blueberry-bran, carrot-apple, pecan, lemon-granola, pineapple-coconut, cherry-granola. Tofu-eggrolls: Spinach, Chinese vegetable, tabouli, tofu blintzes. Hot tofu items: Soy burgers, with tempeh & soy milk. Soy pizza, with nutritional yeast ($1.50). Eggplant Parmesan, with soy milk topping ($6.99/lb). At the bottom right is a floral design above the words: "An affair to remember."

Note: No ice cream of any kind is on the menu. Address: New York City. Phone: 212-751-9367.

3593. Mintz's Buffet. 1981. Tofu Time menu. 1040 Third Ave. (between 61st & 62nd Streets), New York, NY 10021. 1 p. Undated. 28 cm.
• ***Summary:*** This printed, undated menu (which includes prices) was probably printed in about Sept. 1981. Tofu is included in every item on the menu.

Tofu bran muffins ($0.95 each): Strawberry rhubarb, blueberry, carrot apple, pineapple, dutch apple, banana. Tofu vegetable salads ($3.99): Cauliflower, eggplant, steamed broccoli with mustard sauce, spinach, broccoli, zuccini [sic, zucchini]. Tofu vegetable pies ($2.75): Cauliflower, zuccini, spinach, broccoli. Tofu Ice Kream (Country vanilla, old fashioned chocolate, strawberries n'kream, peaches n'kream, apples n'kream, Dutch nut chocolate, apricot rum).

"All tofu dishes are completely natural and free of preservatives." Glatt Kosher. Louise Londin / Design. Address: New York City. Phone: 212-751-9367.

3594. Souza, Genevaldo de; Shirose, I.; do Valle, J.L.E.; Ferriera, V.L.P.; de Figueiredo, I.B. 1981. Aceitabilidade do doce de leite pastoso misto de leite de vaca e extracto proteico líquido de soja [Acceptability of a confection made of condensed milk mixed with cow's milk and soymilk]. *Boletim do Instituto de Tecnologia de Alimentos* (*Campinas, Sao Paulo, Brazil*) 18(3):395-411. July/Sept. [22 ref. Por] Address: Campinas, Sao Paulo, Brazil.

3595. *Soyanews* (*Sri Lanka*). 1981. Snack foods sales up at fair. 4(1):1, 8. Sept.
• ***Summary:*** The Soya Sales Centre conducted by the Department of Agriculture during the Kandy Esala Fair last month had, once again, a successful run with a turnover reaching record levels. This was the fourth year in succession" that the Centre was open at the fair.

"The Sales Centre opened for the first time in 1978 with only a soya milk bar run by the Milk Board which produced the milk from its Pallekele factory. A cup of chilled soya milk was sold at -/25 cents. It was an instant success with 30,000 cups of milk sold during the first ten days.

"In 1979 more soya foods were put out for sale at the Esala Fair Soya Sales Centre which was taken charge of by the Department of Agriculture for the first time."

"On sale at the 1979 exhibition were soya nuts [oil roasted soyabeans], murukku [a deep-fried snack, popular in southern India and Sri Lanka], and cutlets which were all turned out at the home level kitchen of the Soyabean Foods Research Centre in Gannoruwa.

In 1980 "Soya ice cream which was on sale for the first time was the most popular item and along with the rising demand each night of the fair for fried [soya] nuts, cutlets and [soya] milk it was clear that soyafoods had come to stay."

This year soya ice cream was popular again; the new soyafood on sale was tempeh. "Both tempeh and tofu had satisfactory sales considering that they were not items that could be consumed on the spot."

3596. Soyfoods Center; Soycrafters Assoc. of North America. 1981. Soyfoods production in America and the West (Report). Lafayette, California. 1 p. Sept.
• ***Summary:*** This full-page table (see next page) contains statistics for the following soyfoods and soy ingredients: Low technology, traditional. Tofu & tofu products. Tempeh. Soymilk & soymilk products. Soy sauce, shoyu & tamari. Soynuts & soynut butter. Miso. Soy sprouts. Whole dry or mature soybeans. Whole soy flour & grits, full fat. Fermented soymilk. Fermented tofu. Fresh green soybeans. Roasted soy flour & soy coffee. Natto, thua nao & kinema. Yuba. Soy nuggets (Hamanatto, tou-ch'ih [Fermented black soybeans]). Soy delis and restaurants. Secondary soyfoods prod-distributors. Soyfoods marketer-distributors. Subtotal.

High technology, modern [soy ingredients]: Soy flour & grits, defatted. TSP / TVP (extruded soy flour). Soy protein concentrates. Soy protein isolates. Meat analogs (secondary products), Soy oil.

Subtotal: High tech. Total: Low tech & high tech.

This table has 12 columns with information about each soyfood. (1) Type of soyfood. (2-5) Number of manufacturers: USA, Canada, Other West, Total. (6-7) Raw soybeans used (tons / year): USA, % of total used. (8) Yield (lbs of food from 1 lb of soybeans). USA only–(9) Tons produced. (10) Wholesale value (million $). (11) Retail value (million $). (12) Number of employees.

Note: Total retail value in USA is $998 million. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

3597. Travaglini, Décio Antonio; Aguirre, J.M. de; Travaglini, M.M.E.; Sales, A.M.; Angelucci, E.; Arima, H.K. 1981. Composicao química e característica nutricional do extrato de soja em pó [Chemical composition and nutritional characteristics of a spray dried soymilk]. *Boletim do Instituto de Tecnologia de Alimentos* (*Campinas, Sao Paulo, Brazil*) 18(3):385-93. July/Sept. [22 ref. Por]
• ***Summary:*** This powdered soymilk was made on a pilot plant scale according to a processign technique developed at the Instituto de Tecnologia de Alimentos–ITAL. Address: Campinas, Sao Paulo, Brazil.

3598. **Product Name:** Yo Soy [Plain, or Honey-Vanilla]. Later renamed Yo Soy!
Manufacturer's Name: Wildwood Natural Foods.
Manufacturer's Address: 31 Bolinas Rd., Fairfax, CA 94930. Phone: 415-459-3919.
Date of Introduction: 1981. September.
Ingredients: Honey-Vanilla: Filtered water, organic soybean grown in accordance with Sec. 2659.11 of the Cal. health and safety code, honey, vanilla extract, and a trace of sea salt.
Wt/Vol., Packaging, Price: Pint or quart plastic bottle.
How Stored: Refrigerated.
New Product–Documentation: Aug. 15–Bill Shurtleff saw this new brand of soymilk at Living Foods, University Ave., Berkeley.

Label for Plain flavor (see page after next) sent by Claire and Jim Wickens of Lafayette. 1993. Sept. 1.75 by 3.75 inches. Self adhesive. Blue and green on white.

Talk with and Label sent by Bill Bramblett, part owner of Wildwood Natural Foods. 1998. Aug. 8. Yo Soy! is a palindrome. He thinks this product was introduced in about the fall of 1981 at Fairfax. It replaced an identical product that had formerly been called "Soymilk."

• ***Summary:*** A comprehensive history of the subject. Contents: Introduction. University of Illinois and INTSOY: Home Economics Department's work (in the 1930's, 1940-1961, and 1974-1981), Food Science Department (1955-1981), International Soybean Program (INTSOY) founded July 1973, large number of talented faculty made the Univ. of Illinois one of the world's top soy research centers. Iowa State University. Cornell University: First work with soy 1883, first soyfoods work in 1927 (soymilk thesis by Y.T. Chiu), one of leading centers of U.S. soyfoods research during World War II (see chapter on Clive and Jeanette McCay), rebirth of interest in soyfoods in late 1950's, 1960 paper on tempeh, soymilk work 1963-1980, other soyfoods studied, arrival of Dr. Van Veen in 1962 (had studied tempeh since 1932, had lived in Indonesia, and had a lifelong interest in tempeh), renewed program of soybean development and production initiated in New York state in 1964. USDA Northern Regional Research Center (NRRC): Originated with 1929 USDA soybean lab in Ohio, 1936 soybean lab in Urbana, IL, transferred to Peoria, IL, 1942, expanded research on food uses of soybeans and soy oil, fermentation division headed by Langlykke, work on soy sauce, life of Dr. A.K. Smith, at NRRC from 1942-1964, arrival of Drs. Watanabe and Shibasaki, Smith one of first American researchers to realize the potential of tofu, work with miso, 1960 arrival of respected Indonesian microbiologist Ko Swan Djien, work on tempeh, NRRC hosted 2 of first major conferences on soy protein foods in 1961 and 1966, sponsorship of overseas contract work, expansion of research in 1960's, soy flour extrusion, Rackis' work with oligosaccharides (flatulence-causing factor in soybeans), life of Dr. C.W. Hesseltine, 1962 arrival of Dr. H.L. Wang at fermentation lab, Mustakas' studies on soymilk, NRRC's interest in soyfoods steadily growing, legitimizes soyfoods to people in U.S. and around the world. INTSOY: Founding, 5 basic objectives, main accomplishments with soybeans, main accomplishments with soyfoods. Address: Lafayette, California. Phone: 415-283-2991.

3603. Weerasooria, W.S. 1981. Re: Soyabean project for prisons. Letter to Mr. John Westborg, Redd Barna Representative in Sri Lanka, 54 Davidson Rd., Colombo 3, Sri Lanka, Oct. 16. 1 p. Typed, without signature.
• ***Summary:*** First discusses Mrs. Y.Y. Kim's project proposal to use soya milk as a substitute for coconut milk in the

Welikade / Welikada Prison Hospital. The project is now underway.

The writer has been told that a processing unit is to be established in the Prisons for making soya flour for distributions. The project will cost an estimated Rs. 50,0000. The writer would be grateful if Redd Barna would kindly consider providing this Rs. 50,000 to the Commissioner of Prisons, Mr. Delgoda.

Copies of this letter are sent to: (1) Dr. Raja Amarasekara, Director, Food & Nutrition Policy Planning Div. (2) Commissioner of Prisons, Mr. Delgoda. (3) Mr. Y.Y. Kim, UNDP Office, Colombo. Address: Secretary, Ministry of Plan Implementation, Sri Lanka.

3604. Shurtleff, William; Aoyagi, Akiko. 1981. Mildred Lager: History of work with soyfoods. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 9 p. Oct. 19. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. The full history is available on our website at www.soyinfocenter.com. Just search for Lager in the search box. Or, in the left navigation bar, click "A Comprehensive History of Soy," then scroll down to Chapter 76, "Mildred Lager..."

Contents: Introduction. Early years (1908-32): Birth, arthritis from 1925, self-cure with diet, arrival in Los Angeles, center of interest in health foods and a perfect place to study and influence soyfoods. The House of Better Living and early work with soy (1933-1939): House established 1933, its aims, Jan. 1934 radio program on K.F.A.C., 1935 monthly newsletter, free classes (one on soy flour in 1936), unclear how interest in soyfoods developed, diet research, 3 early books and booklets, influence of Ed Jones and Dorothea Van Gundy, "Food Facts" column in *California Health News* from 1936, one of the first to distinguish between natural and health foods. Two early catalogs: March 1936 catalog with listing of the 27 soyfoods marketed in Los Angeles, 1938 enlarged catalog with 26 new soyfoods listed. Mildred and her books about soyfoods: What kind of person she was, 1942 booklet *Soy Bean Recipes: 150 Ways to use Soy Beans as Meat, Milk, Cheese and Bread,* 1945 major work, *The Useful Soybean: A Plus Factor in Modern Nutrition,* president of National Dietary Association and vice president of Health Food Dealers of Southern California, married Ed Jones 1946, stopped health work, self-published *How to Use the Soybean: A Plus Factor in Modern Nutrition* in 1955, new edition of her diabetic diets booklet, death in 1960 from cortisone treatments for arthritis, marriage of Ed Jones to Dorothea Van Gundy in 1960, their revision of her book, conclusion.

As of Sept. 2009, this history is available on the Soyinfo Center website, www.soyinfocenter.com. Address: Lafayette, California. Phone: 415-283-2991.

3605. Cohen, Richard L. 1981. Local tofu makers and sellers trying to stir up interest within food market. *San Francisco Business Journal.* Oct. 20. p. 18-19.
• ***Summary:*** This interview with Jim Miller begins with the early history of Quong Hop & Co. The characters "Quong Hop" can be translated as "expanding oneness" or "immense unity." The company is one of the largest tofu makers on the West Coast, and, so far as the company knows, "it is the oldest in the country having been started shortly before the 1906 earthquake and fire in San Francisco.

Founded by Lee Sing How on Wentworth Street in [San Francisco's] Chinatown, the company spent the year after the earthquake in Oakland, and then returned to San Francisco to a new location on Waverly Place.

"During those early years, tofu was manufactured daily on the premises and sold."

"It was customary for many in San Francisco's Chinese community to get up at dawn and go to their local tofu shop–which had been open since 2 a.m.–and buy their daily needs."

Quong Hop did well as a business until the start of World War II when a shortage of soybeans occurred, since almost all of the company's soybeans used at that time were imported from China. So Quong Hop "stopped making regular tofu and restricted its product line to regular tofu, a product used as a condiment."

In the early 1960s the company moved to a new location on Folsom Street, maintaining its factory but eliminating its retail store.

Then the natural foods movement arrived and Quong Hop was swept up in it. In 1971 the company decided "to expand its product line back to what it had once been, several varieties of tofu and soymilk." But Quong Hop's main customers remained basically the same; Chinese Americans. In 1976 Quong Hop began using completely natural ingredients–including natural nigari.

Today Quong Hop's products are distributed to three main types of markets: (1) Oriental groceries and restaurants. (2) health and natural food stores. (3) supermarkets and other restaurants.

Photos show: (1) Jim Miller. (2) Some of Quong Hop's many soyfood products.

3606. Selliers, Francois de. 1981. Soymilk around the world (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 21. 1 p. transcript. [Eng]
• ***Summary:*** In Belgium, Van der Moortele makes soymilk near Ghent–3,000 liters/hour. Ralston Purina also makes soymilk somewhere. John Wilson is Alfa-Laval's soymilk specialist. Suspended vs. clarified soymilk is Alfa-Laval's terminology for whole-bean vs. traditional filtered. Alfa-Laval, which has a patent on suspended soymilk, built a new soymilk plant in Malaysia. Kikapoo is a soymilk company in Thailand. De Selliers has the names and addresses (which he will send) of 3-4 soymilk makers in Thailand, 2 in Belgium,

and 1 in Malaysia.

Mr. de Selliers, who knows many people at the World Bank, believes it would cost less than $800 million to provide soymilk to all the children in the 60 poorest countries–those with annual per capita income of less than $1,000. In those countries, 70% of the population is in pre-primary school and 11.25% is in primary school; there are 81.7 million children in those two categories. One would need 21.8 liters per child to feed it 250 cc for 195 days a year. The capital cost is about $1,000 million. The World Bank would pay for 30% of the milk initially; the local government would be the basic buyer. The World Bank could pay $50 million easily. Samuel Basta is in the Food and Nutrition Dept. of the World Bank.

The first step for de Selliers is to have the World Bank fund a $1.2 million feasibility study, which would use many consultants. Then he would raise $250 million and establish a soymilk committee. Like so many others he asks "Why has the soy bean and soymilk been so slow to catch on in the West?"

In certain regions of Africa, the soybean has been cultivated for more than 150 years. Soy dishes such as Sumbala, Faros, To, etc. have been introduced.

Thimonnier makes thick plastic packs (named Doy-n-pack pouches) like Tetra Pack. Other companies whose equipment could be used to package soymilk are DRV and PrePac. Get information on co-extrusion of polyethylene film. In East Asia the enzyme lactase is mixed with cow's milk to get rid of the lactose; they let it stand for 7 days. Address: Chairman, IIDC (International Investment & Development Corp.) Belgium, Belgium S.A., Rond-Point de l'Etoile 3, Boite 8, B-1050 Brussels, Belgium. Phone: (02) 640-68 00.

3607. Tsuchiya, Kanji. 1981. Yuyô shujitsu kara naru nyûjô mata wa funjô no shokuhin seizô-hô [Method of making milklike food or powdered food from oilseeds]. *Japanese Patent* 44,701. Oct. 21. [Jap]
• ***Summary:*** This is the author's key patent for a machine used to inactivate enzymes in soybeans for soymilk. Marusan and Kibun now use this machine, a diagram of which is given on the last page.

3608. Miller, Harry Willis, Jr. 1981. Work with soymilk in the United States and China (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 25. 2 p. transcript.
• ***Summary:*** "Willis" Miller was born in 1912. In 1921 he did the first tests with soymilk at the Washington Sanitarium in Maryland. Discusses the work in Shanghai, with soymilk of T.A. Van Gundy, at the Van Gundy plant after T.A. died, with Loma Linda Foods, and with Madison Foods. Address: 450 Neeleys Bend Rd., Madison, Tennessee 37115. Phone: 615-868-2483.

3609. Sass, Lorna J. 1981. More budget-conscious Americans are hitting the soy–its not just sauce. *Chicago Tribune.* Oct. 29. p. N_B19.

3610. Storup, Bernard; Ruel, Françoise. 1981. Re: Studying tofu in America and starting work with tofu in France. Letter to William Shurtleff at Soyfoods Center, Oct. 31. 6 p. Typed, with signature. [2 ref. Eng]
• ***Summary:*** Bernard and Françoise enjoyed the 8 months they spent studying soyfoods in the USA, and have now been back in France for nearly 10 weeks. "During the time we were in the U.S., we had a rather good survey of the small and medium scale tofu industry, and I think we learned a lot from all the people we met, and very often what not to do.

"I have been really surprised by the quality of the welcome we had all along our way, as well as the spirit prevailing among most of the people involved with soyfoods (we did not visit the big factories). This too has been a good lesson. Another small surprise has been the general lack of technical experience of most of the people working with tofu... They could learn a great deal from the dairy industry–chiefly the small and medium scale cheese-making industry–by using the techniques and the equipment (very often not expensive) employed when curding, putting in pressing boxes by gravity, pressing, etc."

Concerning Li Yu-ying, "we went with Jean de Preneuf to the location of 'La Société Française pour l'exploitation du soja et de ses dérivés,' located at 48 Rue Denis Papin, Les Vallées, Colombes (west of Paris). The buildings had been pulled down about 20 years ago, but were used for other manufacture since at least the beginning of the thirties. We met an old man who has always lived in the neighborhood and remembers that 'some Chinese people were making cakes there before the first world war.' So, it is certain that this address was the one of Li's plant in 1912. We have been to the town hall of Colombes, but nobody was able to help us. We have to come back there at the end of November...

"Since our return to France, we had have, with Jean de Preneuf, a lot of contacts with different people to introduce, at least, the idea of soyfoods. We met people of the medical corps, all having an important role in scientific research (Dr. Sautier, INSERM, Hôpital Bichat, Paris; Dr. Mirouse, Dean of the Faculty of Medicine in Montpellier–the most important in France) working on plant proteins for years (as Dr. Cheftel, Universite de Montpellier, who has been to Japan several times and has worked on soymilk with experimental equipment made by Alfa-Laval) and people from INRA (Institut National de la Recherche Scientifique). All these people knew or at least had heard about tofu, and are ready to help us in their own field (analysis or sometimes

technical assistance).

"We also met people from large industry (researchers for Nestlé, and an executive of Prolait) to ask if they had worked on soy products other than T.V.P. and soymilk formulas for infants. They all knew tofu and other soyfoods very well but said that 'the market in Europe is not ready yet for this.' Finally, we met organic soybean producers (and non-organic too); we wanted to know more about the future policy of the Economic European Community on soybeans...

"Actually, 9000 hectares of soya (22,500 acres) are cultivated in France, mostly in the south of France. Soya represents in value the second largest (after oil) national import for the French budget.

"In France, we can find tofu only in very few places, most of the time at a prohibitive price, between $4 and $7 a kilo. Vietnamese shops in all big cities have tofu, but their tofu is rather special with a sandy texture and a strong (sour) taste. We found only one (bad) tempeh producer in Paris. For these reasons, we have thought more and more that it would be a good thing to open a tofu shop and to work at the same time on the informational level. We are now working on a small recipe book (adapted to the French habits) as well as on a technical flyer, a pamphlet and other things...

"We are thinking of starting a Soyfood Center in France but we will tell you about this in the future as soon as we have found a new place to settle (it should be near Paris). We have already made an application.

"Jean de Preneuf contacted different (good) publishers, and one said *The Book of Tofu* has been found to be very interesting by a committee of readers. We are now waiting for a definitive answer from this publisher (Editions Denoel, one of the best in France, by quality and volume)."

Accompanying the letter are photocopies of books by Li Yu-ying and Grandvoinnet (1912) and Rouest (1921) which Shurtleff had been unable to find in America. Key portions were highlighted in yellow and translated into English.

Note: This is the earliest document seen (Feb. 2013) concerning Société Soy or its founders, Bernard and Françoise Storup. The company's first soy product was launched in June 1982. Address: 48 Rue Bouffard, 33000 Bordeaux, France.

3611. Alfa-Laval Export. 1981. Boisson protéïque au soja: Spécialement étudié pour les pays tropicaux [Soy protein beverage: Special study for tropical countries]. B.P. 57, 78340 Les Clayes-sous-Bois, France. 16 p. 30 cm. [Fre; Eng]
• ***Summary:*** On the color cover of this booklet is an orange map of Africa, behind a green soybean plant with pods and flowers. Contents: Comparison of soya and other protein sources. Soya. General information on soya drinks. Description of the process, with diagram. Technical features of the module (with 6 color photos of equipment). Nutrition, production, and cost. Composition of soymilk made using the Alfa-Laval process. Storage. Nutritional value. Guarantees. Organization and after-sales service worldwide: The company has affiliates or representatives in 125 countries.

Alfa-Laval also has a full English-language translation of this booklet, dated 19 Oct. 1981. The company developed this booklet especially for Africa, to market their automated soymilk equipment there. Their small-scale plant has a capacity of 2,000 liters/day. They use the "whole bean method" to make "suspended soymilk," in which no okara is discarded; it is finely pulverized and homogenized into the soymilk to form a suspension. Alfa-Laval's head office is in Sweden; the African soymilk group is headquartered in France. "In Africa, in certain regions where the soybean has been cultivated for more than 150 years, methods of making and consuming soymilk have been acquired. Traditional foods are enriched or completed with dishes based on soya such as 'Sumbala,' 'Faros,' or 'To.'" Address: Les Clayes-sous-Bois, France.

3612. Dharmadasa, H.G. 1981. Re: Introduction of soya bean as a substitute for coconuts in Welikada Prison. Letter to The Commissioner of Prisons (L.P. Delgoda), Prison Head Quarters, Colombo, Sri Lanka, undated. 2 p. Typed, with signature.
• ***Summary:*** The writer wishes to report on further progress made since his earlier report of 31 Aug. 1981. Soya was first used in the Welikada Kitchen on 28 Aug. 1981 on an experimental basis, and it continues to be used up to the present.

The kitchen feeds, on average, about 2,000 prisoners daily. During the past 2½ months, 40% of the coconuts used in the preparation of curries have been replaced by soya. Initially the prisoners did not know that any soya was being used in their diet and none of them felt any difference. Now the prisoners have come to know that soya is being so used and they have been told the dietary value of soya. "The inmates have now come to accept it as a part of their diet. During this experimental stage none of the prisoners complained about the use of soya in their diet.

"Normally the soya paste is dissolved with coconut milk in preparing the curries." But on some occasions the curries have been made with soya and no coconut milk; this resulted in a thicker gravy which the prisoners appreciated.

The use of soya results in a large financial saving. During the month of September about 10,200 fewer coconuts were used, being replaced by soya. This resulted in a saving of about Rs. 7,880 for that one month. The prison presently buys its soya paste from a private firm. But if it had its own grinding and liquidising machine, the saving would have been about Rs. 15,000 or more.

The experiment carried out at the Prison Hospital, initiated by Mrs. Kim of the U.N.D.P., showed that in small institutions a modified version of *karahan gala* could be used to make soya paste.

"I have also introduced soya meat [textured soy protein] in lieu of beef in the prisoners diet." It is served only one a week at present. This saves at least 12 cattle a year from the national herd, although little financial saving is realized.

If one liquidiser were bought for the Colombo prisons it could supply the requirements of all three prisons in Colombo, and would enable the system to double its savings.

Note: The name of this prison in Colombo is spelled both "Welikada" and "Welikade." As of Nov. 2010 it is generally spelled "Welikada" on the Web. In late July 1983 it was the scene of a massacre of 53 Tamil prisoners. Address: Superintendent Welikada Prison, Colombo, Sri Lanka.

3613. Donnelly, L.S.; Busta, F.F. 1981. Alternative procedures for enumeration of *Desulfotomaculum nigrificans* spores in raw ingredients of soy protein-based products. *J. of Food Science* 46(5):1527-31. Sept/Oct. [11 ref]
• ***Summary:*** This bacterium, formerly named *Clostridium nigrificans,* is a thermophilic, anaerobic sporeformer. It was first identified in 1927 as the cause of "sulphur stinker" spoilage in canned sweet corn; it creates hydrogen sulfide, which causes this odor in low-acid foods. It grows better in a modified infant soy formula broth than in other media tested. Address: 1. Dep. of Food Science, Clemson Univ., Clemson, South Carolina 29631; 2. Dep. of Food Science and Nutrition, Univ. of Minnesota, 1334 Eckles Ave., St. Paul, Minnesota 55108.

3614. Lima N.V. 1981. Lima natural foods pricelist. Lima Foods, Edgar Gevaertdreef 10, B-9830 Sint-Martens-Latem, Belgium. 12 p. Catalog. 30 cm. [Eng]
• ***Summary:*** Lima has been making organic, unrefined foods, without additives, for 20 years. Organic quality is guaranteed. Contents: Whole cereal grains. Stone-ground whole flours (incl. soya flour, 500 gm). Whole pulses (incl. soya, and azuki, each 500 gm). Coffee substitutes (incl. Yannoh with azuki, Dandelio [dandelion root], roasted barley, and chicory). Lima specialties (incl. Kokoh with azuki flour, Seitanpast [Vegetable spread with seitan]). Oriental specialties: Tamari-shoyu (from soya and wheat), Tamari, Hatcho miso, Barley miso, rice miso, instant miso soup (with dried vegetables), Kozou (kuzu), Mebosi (umeboshi), Tekka (natural seasoning with miso). Seaweeds. Unrefined oils. Sea salt. Vegetable protein products: Seitan (vegetable protein concentrate, 150 gm jar), Seitan goulash (seitan with vegetables), Soya filtrate (soyamilk), Tofu (curdled soya filtrate). Concentrated soups (incl. azuki soup). Books (incl. 2 cookbooks by Anette Gevaert). Address: Lima Foods, Edgar Gevaertdreef 10, Sint-Martens-Latem 9830, Belgium.

3615. **Product Name:** Soymilk [Honey-Vanilla, Plain, or Carob].
Manufacturer's Name: San Diego Soy Dairy.
Manufacturer's Address: 2965 5th Ave., San Diego, CA 92103.
Date of Introduction: 1981. October.
Ingredients: Organically grown soybeans, filtered water, honey and vanilla or unsulphured molasses and vanilla.
Wt/Vol., Packaging, Price: 16 fluid oz plastic bottle.
How Stored: Refrigerated.

New Product–Documentation: Label. 1981. 1.75 by 2.75. Self adhesive. Honey-Vanilla: Blue on white. Plain: Red on tan. Talk with Gary Stein. 1989. Feb. 17. He recalls that these products were introduced in about Oct. 1981. Product with Label purchased at Open Sesame in Lafayette. 1991. Feb. 16. 2 by 4.12 inches. Black, red, and grey on beige. Color illustration of a stream flowing down from snow-capped mountains, through a forest, into a meadow with flowers. "100% non-dairy" 1 pint plastic bottle. Plain and vanilla flavors. San Diego Soy Dairy, San Diego, California 92103.

3618. DeMaeyer, E.M. 1981. Re: Establishing small plants for making soy milk in developing countries. Letter to Mr. F. de Selliers de Moranville, Chairman, International Investment & Development Corporation, Rind-Point de l'Etoile 3, Bte. 8, 1050 Brussels, Belgium, Nov. 16. 2 p. Typed, with signature on letterhead.
• ***Summary:*** "I refer to your letter of 5 November, 1981, and to the meeting which took place in my Office on 13 November, 1981. I found the documentation you sent me in advance of our meeting and your explanations during the meeting most interesting and I wish to congratulate you for the initiative you have taken.

"The establishment of small plants for the production of soy milk at the local level will certainly provide the population of developing countries with a nutritious drink that would definitely benefit them. Pre-school and school age children should be the main targets of such projects because their protein requirements are relatively larger than those of other individuals and they are therefore usually in need of protein supplementation. Energy intake in these groups may also be deficient and for this reason the production of a full-fat soy milk would definitely be better because of its higher energy concentration.

"WHO, FAO and UNICEF, have been involved in the establishment of small plants (capacity; 1,0OO-2,000 tons per year) for the production of protein-rich weaning foods in developing countries during the last 15 years. Some of these projects have more or less failed for various reasons, including poor management, lack of local technical skills, unsanitary environmental conditions, interruptions in the supply of raw materials, and many other reasons. On the other hand, some projects have survived and are slowly progressing, although they cannot be considered as unmitigated successes. This is to say that you should be prepared for some difficulties and even some failures in some countries. Finally, I should like to add that the product you envisage is by no means a cheap one and that its marketing will therefore be reserved to the middle-class, unless the government decides to subsidize it or to buy part of the production for free distribution to the lower classes of the society or to school children.

"Your project is therefore of great interest to WHO. We very much regret that we cannot participate in it or support it because of our present financial constraints. We shall, nevertheless, be pleased to receive any information that you may wish to share with us concerning the progress made in its development." Address: World Health Organization, 1211 Geneva, Switzerland.

3619. Selliers, Francois de. 1981. Re: A program to address malnutrition in India. History of soyfoods in Africa. Letter to William Shurtleff at Soyfoods Center, Nov. 20–in reply to inquiry of Oct. 21. 2 p. Typed, with signature. [Eng]
• ***Summary:*** The committee has been formed. "I have learned much about malnutrition problems since I have visited with you and agree that the short analysis which we present in the proposal document would be insufficient if we were to write a thesis about the subject. However the message passes easily despite that weakness as every person which I have met is very conscious of the problem."

People are suffering, so he will devote his energy to get the country survey going and assemble the financing needed for its implementation.

India must be studied as soon as possible, but the extent of the study already frightens some potential financiers. Moreover, "India is successfully producing soya foods in two states."

In Zaire, it appears that soybeans foods have been consumed for a very long time. They were introduced by Catholic missionaries such as the "Pères Blancs d'Afrique" and the "Pères de Scheut." "One of my assistants is researching the matter in more depth at the libraries of these religious orders. These food products were made on a community scale and little factual data seems to be available."

"An anecdote told to me by telephone by Father Rosman from the order of the Pères Blancs": "In the early 1930s, Monseigneur Mathysse, Bishop of Bunia in the Ituri region [in northeastern Zaire] organized the production of soya milk for distribution by one or several dispensaries under his rule and the children which would come to receive the milk would ask if they could have some 'Monseigneur milk.'"

"Sumbala, Faros and To are a sort of porridge produced in Upper Volta [later Burkina Faso] with crushed soybeans, water and flavors. I am also investigating further the origin." Address: Chairman, IIDC (International Investment & Development Corp.) Belgium, Belgium S.A., Rond-Point de l'Etoile 3, Boite 8, B-1050 Brussels, Belgium. Phone: (02) 640-68 00.

3620. Caloussis, Mr. 1981. Nestle's work with soymilk (Interview). *SoyaScan Notes.* Nov. 27. Conducted by William Shurtleff of Soyfoods Center. [Eng]
• ***Summary:*** Nestle is now making and marketing soymilk in Malaysia and Singapore. The Singapore venture started in 1979; it is doing well. Nestle owns the controlling interest, with minority local ownership. They are now test marketing their soymilk in Thailand. Nestle is also test marketing a powdered soymilk to health food markets in the Philippines. Named "Vita," it is made at a pilot plant in Japan. Nutrend is a weaning food product made in the Philippines from locally grown soybeans and wheat.

Thimonnier in Lyons, France, makes Flexi-pouch, but it is more expensive [than aseptic packaging] when you take into consideration the cost to deliver one unit.

Maggi is owned by Nestle; seasonings are their main

products. Maggi really grew on its dehydrated soups–an instant food at the start of the industrial revolution. Kempthal is near Zurich, and Maggi is still located there. The original owner was Julius Maggi in Switzerland. This story is told in a book on the history of Nestle, which Mr. Caloussis will send. The man in charge of Nestle public relations is Mr. Edward Fasel in Vevey, Switzerland.

Concerning Nestle and infant formulas: In the late 1900s Mr. Nestle started making infant weaning foods out of cow's milk and cereal. Today each country has its own independent marketing program. The problem for Nestle started in England with a book titled *The Baby Killers.* Then another group in Nestle spoke out against Nestle, and Nestle sued them. This got big, negative press coverage. Infant formulas are only 3-4% of Nestle's business. The company's best-selling products are Nescafe (coffee) and various milk products.

3621. McBride, Gordon; Stechmeyer, Betty. 1981. Re: Making viilia in the traditional way. Letter to William Shurtleff at Soyfoods Center, Nov. 28. 2 p. Handwritten.
• ***Summary:*** "The traditional one bowl per person method produces a viilia with the creamy layer undisturbed, which is the sine qua non for a viiliaphili Finn." "We try to emphasize regular use to keep the culture vigorous. Our Living Viilia Starter is about a tablespoon in a small screw-capped vial." Address: GEM Cultures, 30301 Sherwood Rd., Ft. Bragg, California 95437.

3622. Andres, Cal. 1981. Prototype products include higher protein, lower calorie, lower cost frozen desserts, milk based drinks. *Food Processing* (*Chicago*) 42(12):60-61. Nov.
• ***Summary:*** ADM Foods has used high fructose corn syrup (HFCS) and isolated soy protein to develop a new family of "dairy compatible" products that "will permit dairy managers to expand product lines and to improve equipment utilization and operating costs. All products can be made under normal process conditions on existing equipment." The two main product types are non-dairy frozen desserts and drinks. Ingredients, formulas, nutritional information, and cost savings are discussed.

Note: This is the earliest document seen that mentions either "high fructose corn syrup" or "HFCS" in connection with soy. Address: Senior Associate Editor.

3623. *Plenty Canada News* (*Lanark, Ontario, Canada*). 1981. Integrated rural development program [Lesotho, Africa]. Fall. p. 2.
• ***Summary:*** "At the Motsemocha Village Technology Centre four sleeping huts have now been completed and others are being built... and the masons have begun building the sandstone walls of the soy dairy."

"Soy demonstrations instructing local Basotho people about the home preparation of soy foods continue. Local response and requests for further training has encouraged expansion of this program. One half litre of soy milk per day for children and one litre of soy milk for adults or its equivalent from other soy foods provides approximately 3/4 of the minimum daily requirement of protein."

A photo shows two round huts, one with a conical thatched roof and the other with no roof yet. Address: R.R. 3, Lanark, Ontario K0G 1K0, Canada.

3624. Selliers, Francois de. 1981. A solution to malnutrition. Committee for the Promotion of Soya Milk Manufacturing in Low Income Countries, Comsoy. 45 p. Nov. Unpublished manuscript. [200+ ref]
Address: Chairman, IIDC (International Investment & Development Corp.) Belgium, Belgium S.A., Rond-Point de l'Etoile 3, Boite 8, B-1050 Brussels, Belgium. Phone: (02) 640-68 00.

3625. Selliers, Francois de. 1981. Proposal for the financing of a systematic implementation of soya milk plants in the world. Brussels, Belgium: International Investment and Development Corp. 20 p. Nov. Unpublished manuscript.
• ***Summary:*** This study, which is also said to be authored by the "Committee for the Promotion of Soya Milk Manufacturing in Low Income Countries 'Comsoy,'" consists of several parts. (1) Proposal–11 pages, dated Oct. 1981. (2) Soja bean milk: Presentation for the state of Kenya–2 pages, dated 14 Dec. 1981. (3) Members of the Committee: Eleven who have formally accepted membership, one who has accepted membership in principle, and six who are being invited–1 page, dated 4 Nov. 1981. (4) Memorandum to members of Comsoy: Meetings of Mr. Deselliers; trips to the United States, October 4 to 8 and Oct. 17 to 29, 1981. Discusses persons met on the trip incl. at the IFC (International Finance Corporation), the World Bank, A.I.D., U.S. Department of Agriculture, UNICEF, Bristol-Myers Company, Archer Daniels Midland Co., Appropriate Technology–6 pages, dated 5 Nov. 1981. Address: Chairman, IIDC (International Investment & Development Corp.) Belgium, Belgium S.A., Rond-Point de l'Etoile 3, Boite 8, B-1050 Brussels, Belgium. Phone: (02) 640-68 00.

3626. **Product Name:** Furama Soy Drink [Unsweetened, or Sweetened].
Manufacturer's Name: Soyfoods of America.
Manufacturer's Address: 1091 E. Hamilton Rd., Duarte, CA 91010. Phone: 213-681-5393.
Date of Introduction: 1981. November.
Ingredients: Sweetened: Water, soybeans, sugar.
Wt/Vol., Packaging, Price: 12 oz polyethylene bottles.
How Stored: Refrigerated.
Nutrition: Per 8 oz. unsweetened: Calories 70, protein 7 gm, carbohydrates 5 gm, fat 3 gm.
New Product–Documentation: Leviton. 1982. Soyfoods.

Summer. p. 30-31. "About 20,000 bottles of plain and sweetened soymilk are produced weekly." Ad in Soyfoods. 1984. Summer. p. 3. "Sold in pint, quart, or half-gallon polyethylene bottles. Pasteurized 4-week shelf life." Talk with Ken Lee. 1988. Aug. 29. This product was launched in Nov. 1981. It is now his best-selling, accounting for almost half of his company's sales. Mrs. Lee recalls the introduction date to be June 1982. Labels. 1988. Self adhesive. 1.5 by 4 inches. Red, black, and white (sweetened) or yellow, brown and white (unsweetened).

3627. *Parade* (*Washington Post, Sunday ed.*). 1981. Henry Ford's Soybean fixation. Dec. 13. p. 24.
• ***Summary:*** Henry Ford "worshipped the soybean with a feeling akin to reverence. To him it was the cure for all of mankind's woes, as rich in manufacturing applications as in dietary value... At the peak of Ford's soybean mania, his company was growing more than 300 varieties of the plant on 8,000 acres and buying an additional 500,000 bushels yearly from Michigan farmers... No meal was served in his home without soybeans or their derivatives on the table, and a pitcher of cold soybean milk was always in the refrigerator for parched guests. Once Ford appeared at a convention dressed in a suit and matching tie woven of soy-derived fabric. At the 1934 Century of Progress Fair in Chicago, his company served a 16-course soybean dinner." Address: Washington, DC.

3628. Jootla, Susan Elbaum. 1981. Re: Making miso and tofu at home in India. Letter to William Shurtleff at Soyfoods Center, Dec. 15. 2 p. Typed, with signature.
• ***Summary:*** She and her husband have used up their first batch of homemade white miso and are now consuming a great pot of modified red miso. She thanks William and Akiko Shurtleff for the guidance their Book of Miso and Book of Tofu have given them in making these soybean products over the past few years.

She gives details of their experiments making tofu and miso 7,000 feet up in India's western Himalayas. Her husband had been trying unsuccessfully ever since he worked in Indonesia in the 1950s. Finally a friend who worked in a Florida health food store sent them The Book of Tofu. Using Epsom salts and an electric blender they succeeded in making good tofu. Susan then wrote an article on making tofu in India for an Indian woman's magazine, which was published in the spring of 1979. She is working on another longer article.

Having conquered tofu, she turned to miso. The big problem was getting koji starter, which she eventually obtained from Kikkoman in Tokyo.

Susan is now thinking of making tofu commercially on a small scale to cater to the interest evinced by several boarding houses in town. There are already a few soyamilk producers in India. In India, Susan uses tofu as "a substitute for paneer, which is the fresh cheese from milk, drained and pressed briefly to a compact solid texture. Tofu can be used in curries and pakoras (a very common snack, spicy fritters) in almost the same way as paneer is traditionally prepared, thus decreasing the problem of tofu's novel taste.

"We have also found that okara can be incorporated into dough for chapaties [chapatis], in equal proportions to the wholewheat flour. When the dough is seasoned with salt and ground cumin and coriander seeds, and baked as a chapati on a cast iron griddle, the resultant thick bread should be attractive for Indian cooks who begin to make tofu but are reluctant to waste the residue.

"As you can see, we are tofu enthusiasts and are trying to spread an appreciation of soyfoods in this country in a small way. So far, texturized soy protein is the only product that seems to have caught on here." Doubtless, this is because it does not require refrigeration, is not affected by heat or moisture, and is a useful and inexpensive meal stretcher.

Note: As of April 2008, Susan has long practiced Buddhist meditation and is the author of many related books. Google "Susan Elbaum Jootle" and you will see. Address: Jeet Villa, Dalhousie, H.P. [Himchal Pradesh], India.

3629. Flinders, Carol. 1981. Problems are immediately encountered when considering 'dry milk alternates': Notes from Laurel's Kitchen. *Hartford Courant* (*Connecticut*). Dec. 26. p. E13.
• ***Summary:*** Begins by discussing (and criticizing) such a product based on "sweet dairy whey." "Now let's be perfectly clear. I don't at all agree that 'Every Body Needs Milk.' Perfectly adequate diets can be devised without dairy products, particularly if soy foods are used."

3630. Lyon, Alexander. 1981. Early history of tempeh, soy ice cream, and other soyfoods at The Farm in Tennessee (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 26. 1 p. transcript. Includes follow-up interview of 18 Feb. 1985.
• ***Summary:*** The first cake of tempeh (just one cake) was made from whole soybeans, then the rest were all made with okara. They did not make whole soy tempeh since they had no way to dehull the soybeans. They only started making tempeh from whole soybeans after the splits were available for use in tempeh kits. Now most of the tempeh is made from whole soybeans rather than okara. Cynthia Bates was one of the first to work with tempeh and to stay with it. They used a food dehydrator as an incubator.

Members of The Farm Soy Dairy crew (Alexander, Marlene Pantos, Joanne Elfe, Myra Traugot) first started making soymilk ice cream during the summer of 1972 or 1973, using homemade soymilk, a hand-crank machine provided by Melvin Stiriff, and fresh blackberries gathered at a patch behind the soy dairy. Needless to say, the product

was a hit, since no dairy products were consumed in the community and soymilk was still rationed among community members. The crew made this non-dairy ice cream 6-12 times during the first summer. A year or two later The Farm invested $100 in four tiny table-top Glacier ice cream machines that made 1-2 quarts at a time. Production grew, but it was all consumed within the community.

In 1974 The Farm's publications "Hey Beatnik" and "Yay Soybeans!" both mentioned soymilk ice cream.

After production of Ice Bean was moved from San Francisco, California, to Tennessee, Steve Meyers and Michael Moorman became the two key soy ice cream people. Address: Summertown, Tennessee.

3631. *SoyaScan Notes.* 1981. Chronology of soybeans, soyfoods and natural foods in the United States 1981 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jan. *Soyfoods* magazine issue No. 4 published. Silver cover. 10,000 copies published. Steve Fiering loans SANA money for mailing it and agrees to make a loan for a test mailing.

Jan. Union activity begins at New England Soy Dairy.

Jan. Boxed tofu (1 lb. vacuum packed in a box with a window) first made by Zakhi Soyfoods in Fort Wayne, Indiana. This important innovation of packaging tofu in a box was later employed by New England Soy Dairy (1982), Quong Hop & Co. (1983), Swan Gardens (1983), and White Wave (1985).

Jan. Hain Food Co. starts nationwide color ads for Natural Onion and Jalapeno (Soy) Bean Dips.

Jan. Travis Burgeson of Pacific Tempeh near San Francisco, CA, introduces the world's first commercial tempeh burger.

Jan. Paul's Tofu & Tempeh, the first European tempeh company in Europe outside of the Netherlands, opens in England.

Jan 20. Ronald Reagan inaugurated as president of the United States. His Secretary of Agriculture is John R. Block. The regulatory climate in Washington begins to shift toward less federal regulation and more encouragement for industries to regulate themselves. The Republican administration favors free-market policies with less government regulation and involvement.

Jan. 23. Legume, run by Gary and Chandri Barat, is incorporated in New York, then that month moves to Verona, New Jersey.

Feb. 2. Island Spring in Washington becomes America's first unionized tofu plant.

Feb. San-Jirushi International starts its first major American ad campaign using the slogan "San-J is the real tamari." The full-color, full-page national ads aim to clarify the confusion between tamari and shoyu created by the macrobiotic movement.

Feb. Soyfoods Unlimited tempeh plant starts operation in San Francisco area. It is the most modern U.S. tempeh plant, although output is small.

Feb. Vitasoy soymilk and Morinaga tofu start to be imported and sold in the USA from Hong Kong and Japan respectively, immediately after the FDA lifts its ban on aseptic Tetra Pak type cartons. Morinaga tofu was sold by Beech Nut California Corporation, a joint venture with Beech Nuts Food Corp., established in 1977 in San Jose, California.

Feb. "Soyfoods Catching On" by Judith Brown published in *USDA National Food Review.* About tofu and tempeh.

Feb. Many tempeh plants switch to using GEM cultures tempeh starter.

March 1. Svadesha Pflanzen-Feinkost, West Germany's first commercial tofu company, starts production. Founded by Swami Anand Svadesha (Rudiger Urban) in Fuerth im Wald.

March. Institute of Food Technologists meeting at New England Soy Dairy. Tour, dinner, and speeches.

March. Richard Leviton on National Public Radio's "All Things Considered" talks for 10 minutes about soyfoods to 2 million people.

March. *The Book of Miso,* by Shurtleff and Aoyagi published by Ballantine Books in a mass market paperback edition.

April. USDA decides to establish tofu standards, then announce them in the Federal Register, but this plan is dropped in September, amid controversy over changes in the School Lunch Program.

April. Dr. Cook at Kansas State University publishes a paper on the possible inhibitory effects of soy proteins on nonheme iron absorption in humans. USDA becomes concerned.

April. *Tofu at Center Stage,* by Gary Landgrebe published by Fresh Press. First tofu cookbook containing many recipes calling for use of meat.

April. Bean Machines introduces new sanitary disintegrators/ grinders for tofu and soymilk production.

April. "The Miso-Master's Apprentice," by John Belleme published in *East West Journal.*

May. "The Amazing Tofumobile," by Janice Fillip, about Wildwood Natural Foods, published in *East West Journal.* Revival of interest in small tofu shops in areas where there is a high density of interest and high food consciousness, and rediscovery of soyfoods craftsmanship.

May. *Tofu Boken* by Ted Nordquist and Tim Ohlund published by Aros Sojaprodukter in Sweden. Europe's first book on tofu.

June. *Tofu Fever in New York,* by Megan B. Murray notes that David Mintz is making 275 gallons of tofu ice cream a week. This is the earliest known publication on his work with soy ice cream. He had been making it for 3-4

months.

June. "Surprise, It's Soy" by Barbara Bassett published in *Bestways.*

June. FIND/SVP survey of the U.S. tofu industry and tofu consumer survey published. 33% of respondents in major metropolitan areas were aware of tofu and 10% had purchased it. Predicts market will grow 32% a year for the next 6 years... an over-optimistic prediction.

June 29. "Trader Vic Bergeron Offers Timely Tips for Tofu" by Rose Dosti published in *Los Angeles Times.*

July. *Soyfoods* magazine is incorporated by Richard Leviton, and offers stock.

July 8-12. Fourth Annual Soycrafters Convention at Colorado State University. 240 people from 18 nations attend, 210 pay. First National Tofu Cheesecake Bakeoff and Soyfoods Equipment/Supplies Expo in the western world.

July. Mary Tolan selected Registered Young Dietitian of the Year by the American Dietetic Association. Invited to present speech on "Tofu–Food of the Future" at ADA convention in Philadelphia.

July. *Tofu Cookbook,* by Sally Sheppard published by Jack's Beanstalk.

July. "Soybean Ice Creams: Getting your Licks In" by Richard Leviton published in *Vegetarian Times.*

July. Soyfoods Center is working to build the world's largest library of documents on soyfoods, each with a bibliographic card, filed by author. Also building a large library of color slides on soyfoods.

Aug. "Tofu, Tofu Everywhere," by Karen Dukess published in *The New York Times'* Business section.

Aug. "Soyfoods: The Future Is Here but Are You Ready" by Alan Richman published by *Health Foods Business* as a cover story.

Aug. 12. "Soy Foods: Versatile, Cheap and on the Rise" by Lorna Sass, and "A Source of Quality Protein" by Jane Brody published in *The New York Times,* and syndicated nationwide.

Aug. "My Favorite Tempeh Recipes" by Aveline Kushi published in *East West Journal.*

Aug. *Delights of Tofu,* by Fox, O'Connor and Timmins published by New England Soy Dairy.

Aug. *Das Tofu Book,* by Shurtleff and Aoyagi published in Germany by Ahorn Verlag.

Sept. "Soyfoods Report" published by *Natural Food Merchandiser.*

Sept. *Home Soyfood Equipment,* by Ray Wolf published by Rodale Press.

Sept. 13. At SANA Board of Directors Meeting held near San Francisco, the Soycrafters Association of North America has its name changed to Soyfoods Association of North America to broaden scope and support base.

Sept. SANA and The Soyfoods Center do a major press release on soyfoods production and consumption in America to 250 key media. Many magazines publish this report and conduct radio interviews.

Sept. Okita Enterprises takes 22 tofu and bean sprout makers to Japan for a 10-day tour. SANA executives Richard Leviton and Luke Lukoskie make important contacts with Japanese tofu trade officials and publications.

Sept. USDA publishes tofu regulations in the Federal Register, then withdraws entire school lunch revisions and revokes permission given to the Santa Cruz (Calif.) school system to use tofu in school lunches.

Sept. Dr. Hirayama of the National Cancer Center in Japan announces that miso soup is effective in combating stomach cancer and stroke.

Oct. "Things Go Better With Soyburgers: The New All-American Food" by Richard Leviton published in *East West Journal* as a cover story.

Oct. *Cook with Tofu,* by Christina Clarke published by Avon Books in mass market edition.

Oct. John Belleme's American Miso Corp. begins miso production in North Carolina.

Oct. Workers at Hinode Tofu Co. in Los Angeles go on strike for 2 weeks.

Oct. *Nasoya Tofu Cookbook,* published by Nasoya Foods.

Oct. *O Livro da Soja,* by Jane Cadwell published in Brazil by Editora Ground. One of the country's first books on soyfoods.

Nov. 10. Erewhon, America's natural foods pioneer, files for Chapter 11 reorganization under the U.S. bankruptcy laws. On 2 April 1982 Erewhon is sold to Nature Food Centers.

Nov. Autumn Press, publisher of *The Book of Tofu,* original edition, files for Chapter 11 bankruptcy.

Nov. New England Soy Dairy announces 28-Day Self Life Advantage Pasteurized Tofu in a 2/3 page ad in *Natural Foods Merchandiser.*

Nov. Soyfoods Unlimited advertises tempeh burgers in *Natural Foods Merchandiser.*

Nov. The Ministry of Agriculture and Forestry in Japan announces a Japanese Agricultural Standard (JAS) for soymilk. The soymilk boom in Japan starts.

Dec. *Juel Andersen's Tofu Kitchen* published by Bantam Books in mass- market paperback.

Dec. "World's Best Tofu Cheesecake" by Richard Leviton published in *Vegetarian Times.*

Dec. Food Protein Council, a trade association, changes its name to Soy Protein Council, since all of its members make only soy protein products.

Dec. *La Soya y Sus Derivados* (*Tofu, Tempeh, Miso*), by Shurtleff and Aoyagi published by Quadernos de Natura in Mexico.

Dec. *The Tofu-Miso High Efficiency Diet,* by Yoshiaki Omura M.D. published by Arco Publ.

Dec. *Cooking with Tofu.* by Mary Anna DuSablon published by Garden Way.

Dec. There are now 158 tofu manufacturers and 41 tempeh manufactures in the USA.

Dec. The Farm Vegetarian Cookbook published as *Soja Total* in German.

* Global economic activity is shifting from the Atlantic to the Pacific. In 1981 Asia passed Europe to become the largest market for U.S. agricultural products. In fiscal 1981 Japan bought $6,700 million worth of U.S. farm products.

* Soybean breeders, which have formerly focused their research efforts on increasing quantity (yield) of soybeans, now start to give more attention to quality (composition). Increasing total protein, methionine, and oil, and decreasing linolenic acid and antinutritional factors are priorities.

* U.S. soybean exports reach their peak this year of 25 million metric tons (tonnes). By 1987 they have fallen to 18 million tonnes, a 28% drop, due largely to competition from Brazil and Argentina, and to foreign subsidies. The market changes from a seller's to a buyer's market.

3632. Andersen, Juel. 1981. Juel Andersen's tofu kitchen. New York, NY: Bantam Books. x + 211 p. Illust. by Juel Andersen. Index. Dec. 18 cm.
• ***Summary:*** Contents: An introduction. Tofu is... Making tofu and soymilk. Recipes–Salad dressings, dips, appetizers, and sauces. Salads and sandwiches. The tofu burger. Soups. Tofu for dinner. Tofu for breakfast and brunch. Baking with tofu. Desserts: Pies, puddings, and pastries. Beverages. Afterword. Appendix 1: Protein and protein complementarity, including a table showing the RDA for grams of protein for children, males, females, and pregnant and lactating women of different ages, weights and heights. Appendix 2: Substitutions and equivalents. Appendix 3: Nutrients in selected foods (mostly protein sources). Address: California.

3633. Bushman, Don H. 1981. Re: Soymilk manufacturers in Southeast Asia. Letter to William Shurtleff at New-Age Foods Study Center, Dec.–in reply to inquiry of Dec. 10. 1 p. Typed, with signature.
• ***Summary:*** Gives the name, address, and phone number of the following companies in Singapore: Carnation Co. (S) Pte Ltd. Fraser & Neave (S) Pte. Food Specialties Singapore (Pte) Ltd. (Affiliate of Nestle). Also Rama Food Products Co. of Bangkok, Thailand. Address: Director, South-East Asia, Room 1501, 15th floor, Liat Towers Orchard Rd., Singapore 0923. Phone: 737-6233.

3634. **Product Name:** Soy Ice Bean (3 fl. oz. single serving size) [Vanilla, or Carob].
Manufacturer's Name: Farm Foods.
Manufacturer's Address: 156 Drakes Lane, Summertown, TN 38483.
Date of Introduction: 1981. December.
Ingredients: Vanilla: Water, soy powder [powdered soymilk], honey, soy oil, vanilla extract, soy lecithin, locust bean gum, guar gum, Irish moss.
Wt/Vol., Packaging, Price: 3 fl. oz. cup.
How Stored: Frozen.
New Product–Documentation: Spot in *Whole Foods.* 1981. Dec. p. 47. "Soy Ice Bean." Soy Ice Bean from Farm Foods is now available in a new 3 ounce single serving size. A photo shows the product and label.

3635. Java Murni. 1981. Reserve now for Java Murni's Vegetarian X-mas dinner. 4509 Adams St., Carlsbad, California.
• ***Summary:*** The dinner will we held on Dec. 26 and 27 from 5-7 or 7:15 to 10 p.m. The menu is given: Soup: Soto (mild) or Laksa (spicy). Appetizers: Gulung rebung (bamboo shoots wrapped in crispy tofu). Tofu kembang (tofu flowers). Salad: Gado-gado (with peanut dressing). Urap (with coconut dressing).

Entree: Tempeh treat (tempeh braised in Indonesian soy and safflower oil). Tofu-saus-richa (tofu in sweet-and-sour spicy sauce). Sambal goreng boontjis (green beans in savoury sauce). Sayur lodeh (vegetables in coconut milk). Chah tempeh (mixed tempeh & vegetables). Keringan tempeh (sweet-piquant tempeh). Satay tempeh (barbecue tempeh). Beehun goreng (rice noodles). Soyex malakka (soy cubes in malakka sauce). Nasi kuning (yellow rice).

Dessert: Onde-onde (mung beans wrapped in glutinous rice and sesame). Pisang goreng (coated fried banana).

Dinner includes all the above: Per person $12.95.

A map shows the way to the restaurant. Illustrations: A bamboo border. A large Javanese shadow puppet on the left border, looking right. Address: Carlsbad, California. Phone: 434-4131.

3636. **Product Name:** Soynog (Soymilk-based Eggless Eggnog. Renamed Lite Nog in 1982 and Tofu Nog in 1985).
Manufacturer's Name: Redwood Valley Soyfoods Unlimited.
Manufacturer's Address: P.O. Box 371, Redwood Valley, CA 94570.
Date of Introduction: 1981. December.
Ingredients: Brightsong soymilk and tofu, honey, maple syrup, spices, lecithin.
Wt/Vol., Packaging, Price: Pint bottles.
How Stored: Refrigerated.
New Product–Documentation: Spot in Whole Foods. 1983. Jan. p. 39. "Winter dairy-free treats." Brightsong Light Foods has introduced two new special products for the winter season. SoyNog is an egg and dairy-free blend of Brightsong Soymilk and Tofu, honey, maple syrup from Shady Maple Farms, vanilla, spices and lecithin. SoyNog is a cholesterol-free alternative to egg nog, packed in pint bottles.

Spot in Soyfoods. 1983. Winter. p. 48. "For a Soyful Christmas... Soynog." Shurtleff & Aoyagi. 1984. Soymilk

Industry & Market. p. 60.

Note: This is the earliest known commercial soy-based eggless eggnog.

3637. Selliers, Francois de. 1981. Report concerning his activity with soya milk, some correspondence, and a revised Comsoy file. Brussels, Belgium: International Investment and Development Corp. 15 p. Nov. Unpublished manuscript. • ***Summary:*** Dr. de Selliers is working at the highest levels to try to raise interest in and funds for establishing a network of soymilk factories in developing countries. Contents: Letter to Sheikh Ahmed Zaki Yamani, Minister of Petroleum and Mineral Resources, Riyadh, Saudi Arabia (Nov. 12, 2 p.). Letter to Dr. A.W. Clausen, President, The World Bank, 1818 H Street N.W., Washington, DC 20433 USA (Nov. 10, 3 p.). Reply from Clausen (Dec. 8, 1 p.). Letter from Dr. Vernon R. Young, Ph.D., Prof. of Nutritional Biochemistry, Massachusetts Institute of Technology, Laboratory of Human Nutrition, 18 Vasser St., Cambridge, Massachusetts 02139 (Dec. 4, 1 p.). Reply to Young (Dec. 18, 4 p.). Letter to His Excellency Mr. W.E. Mwangale, Minister of Tourism, Nairobi, Kenya (Dec. 14, 1 p.).

Activity Report of Dr. de Selliers' international travels (Dec. 18, 2 p.). Address: Chairman, IIDC (International Investment & Development Corp.) Belgium, Belgium S.A., Rond-Point de l'Etoile 3, Boite 8, B-1050 Brussels, Belgium. Phone: (02) 640-68 00.

3638. **Product Name:** Tempeh (Soy & Okara), Tofu, Soysage, Egg-less Salad, Flavored Soymilk (Carob & Honey, or Maple).
Manufacturer's Name: Soy Beings.
Manufacturer's Address: 13-C Railroad Square, Waterville, ME 04901. Phone: 207-872-8790.
Date of Introduction: 1981. December.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1981. Dec. 8. Owner: Richard Tory. Shurtleff & Aoyagi. 1982. Soyfoods Industry: Directory & Databook. p. 1. Form filled out by Richard Tory. ca. 1982. This is a 5-person collective. "We have a small, light catering business and wholesale sandwich business selling locally to natural food stores, etc. Potato salad, tofu dips, tempeh sandwiches, whole wheat tofu pizza, and natural pastries." The tofu contains nigari and organically grown soybeans. Soysage is made with nutritional yeast, safflower oil, honey and spices in an okara base. Egg-less salad made with tofu and eggless mayonnaise.

3639. Soyfoods Center; Soycrafters Assn. of North America. 1981. Per capita use of soyfoods grows to nearly 9 lbs. in U.S. *Vegetarian Times* No. 52. Dec. p. 6.
• ***Summary:*** Based on a Sept. 1981 news release copyrighted by the Soyfoods Center and the Soycrafters Assoc. of North America, this summary of a market study gives for each major soyfood product the number of manufacturers in the USA, Canada, and worldwide. The tons/year of raw soybeans used. And (in the USA only) the tons of food produced, wholesale value, retail value, and number of employees.

In the USA, the number of manufacturers, tons of product produced, and retail value in million dollars are as follows for low technology, traditional: Tofu and tofu products (154, 22,700, $50.4), tempeh (32, 494, $1.78), soymilk and soymilk products (14, 148,000, $118.0), soy sauce, shoyu & tamari (15, 54,837, $203.0), soynuts and soynut butter (12, 2,750, $4.6), miso (10, 2,000, $4.8), soy sprouts (5, 360, $0.25), etc. Subtotals for low-tech (284 manufacturers, 231,305 tons produced, $392.25 retail value).

For high-technology, modern: Soy flour & grits, defatted (12, 400,000, $190.4), textured, extruded soy flour (TSP/TVP) (2, 200,000, $179.2), soy protein concentrates (3, 45,000, $56.7), soy protein isolates (3, 45,000, $126.0), meat analogs (secondary products) (6, 20,000, $55,000). Subtotals for high-tech (26 manufacturers, 710,000 tons produced, $615.6 retail value). Total low and high tech: 310 manufacturers, 941,305 tons produced, and $1,007.85 million dollars.

The news release reads: "Americans are consuming an average of nearly nine pounds of foods made from soybeans per year, according to the Soycrafters Association of North America and the Soyfoods Center. The largest growth is occurring in the consumption of tofu (or beancurd) and tempeh (fermented patties).

"Traditional soyfoods, which include tofu, tempeh, soymilk, miso, soy sprouts, soynuts and soy sauce, account for $390.7 million in annual retail sales. High technology, modern soy protein foods, which include soy flour and grits, soy protein isolates and concentrates, extruded soy flour and meat analogs, account for $615.6 million in annual sales. This amounts to nearly $1 billion worth of soy products consumed by Americans per year.

"Per capita consumption of the low technology foods is now at 2.13 lbs. per year, while consumption of the high technology foods, which are generally used as ingredients in other products, is now at 6.45 lbs. These figures represent a steady growth in consumption of the large soybean crop produced annually; the greatest part of the crop goes to feed livestock. In 1980, for example, only 2.1% of the 60 million ton crop was used in America for food, which is believed to be the highest percentage ever; 57% of that crop, however, was exported.

"The director of the Soycrafters Association, Richard Leviton, and William Shurtleff of the Soyfoods Center have forecast the following trends for soyfoods use in the United States over the next five years:

"A steady growth in the use of tofu and tempeh by non-vegetarians.

"Growth in the use of convenient, prepared foods made

from soyfoods.

"The Big Tempeh Boom" an upsurge in the use of fermented soy patties.

"Large corporations will start marketing secondary soyfoods (such as dips and dressings) via national advertising.

Also published in *New Age* (Jan. 1982, p. 17) under the title "Tofu Takes Over."

3640. Tsuchiya, Kanji. 1981. Processing equipment for soy milk. English translation of a Japanese article in Beverage Japan (31 Dec. 1981, p. 18-23). 13 p. Unpublished manuscript.
• ***Summary:*** An excellent technical work by one of Japan's leading authorities on soymilk product and equipment, who is also Marusan's chief soymilk technician. Contents: 1. Worldwide interest in health foods and the soymilk boom. 2. The basic way of thinking about processing soymilk. 3. Processing and equipment. Flowcharts, ingredients, dehulling and enzyme inactivation (dry heating, soaking in hot water, grinding in hot water, grinding in water without oxygen, intercepting air with nitrogen, steaming), grinding and separation, formulation and sterilization, deodorization and homogenization. Address: Seikensha Co., Midori 4-18-2, Sumida-ku, Tokyo. Phone: 03-634-2061.

3641. Wolf, Walter J. 1981. Foreign travel report. Peoria, Illinois. 4 p. Dec. 18. Typed, with signature.
• ***Summary:*** "Country visited: Japan, Oct. 10-21, 1981. Purpose of trip: (a) Participate in the U.S./Japan Cooperative Program in Natural Resources (UJNR), Protein Resources Panel Meeting; (b) participate in UJNR panel study tour; (c) visit research institutes and industrial laboratories working on soybean proteins; and (d) participate in symposium on soy protein foods. Summary: The UJNR meeting in Tsukuba included 10 presentations by seven Japanese research workers from six different research institutes and three U.S. scientists from three USDA regional research centers. Topics discussed included... (f) single cell protein production from soybean cooking waste waters; (g) soybean storage; (h) food uses of soy protein; and (i) nutritional evaluation of soy proteins. The study tour included a visit to a miso and soy milk factory which was impressive and confirms earlier reports that soy milk has become very popular in Japan in the past 5 years. Visits to industrial laboratories revealed that soy proteins are now used in a large variety of foods. Flavor is one of the last problems holding back development of soy protein-based foods."

The UJNR program, initiated in 1964, plays an important role in implementing the policy of scientific cooperation between the United States and Japan. The protein panel was organized in 1968, and there are now 17 different panels in UJNR.

Dr. Ebine reported that about 790,000 metric tons (29 million bushels) of soybeans are used in traditional Japanese foods–miso, natto, tofu. Organizations visited included Okazaki Marusan Co. Ltd (makes miso, soy milk, and soy yogurt), Research Institute for Food Science of Kyoto University at Uji, Nisshin Oil Mills Ltd., Ajinomoto Co., Inc., Fujipurina Protein Ltd. (Fuji Oil Co. has a joint venture with Ralston Purina Co.). Address: Leader, Meal Products Research, Oilseed Crops Lab., Northern Regional Research Center, Peoria, Illinois 61604.

3642. White, Arthur L. 1981-1986. Biography of Ellen G. White. 6 vols. Washington, DC, and Hagerstown, Maryland: Review and Herald Publishing Assoc. Illust. 23 cm. *
• ***Summary:*** This biography, considered the best to date of Ellen G. White, was written by her grandson, Arthur. The titles of the individual volumes are:

(1) "The Early Years, 1827-1862."
(2) "The Progressive Years, 1862-1876."
(3) "The Lonely Years, 1876-1891."
(4) "The Australian Years, 1891-1900."
(5) "The Early Elmshaven Years, 1900-1905."
(6) "The Later Elmshaven Years, 1905-1915."

Each of these volumes has an index, which helps locate materials. The Health Reform visions are mentioned in volume 2 on pages 11, 16-22 (3rd. vision), 71, 73, 80-81,83, and 111.

Ellen apparently never used the word "gluten" in her own writings. This word "gluten" appears in connection with her, in her biography, Vol. 4, p. 433. Her biographer quotes an article from the *Union Conference Record* (a Seventh-day Adventist publication in Australia) of 1 Dec. 1899, to show what products are being made by the Sanitarium Food Co. in Australia. "They are now manufacturing granose biscuits, granose flakes, bromose, nuttose, antiseptic tablets [charcoal tablets], granola, caramel cereal [grain coffee], nut butter, wheatmeal biscuits, gluten biscuits, and gluten meal."

3643. **Product Name:** Dixon (Bottled Soymilk).
Manufacturer's Name: Amoy Canning Corp. (Singapore) Ltd.
Manufacturer's Address: 254 Bukit Timah Rd, 13 km, Singapore.
Date of Introduction: 1981.
Wt/Vol., Packaging, Price: Bottle.
New Product–Documentation: Soya Bluebook. 1981. p. 61. "Soy beverage." Color photo sent by Anders Lindner of STS. 1987. Nov. 14. 285 ml bottle. Red letters on white background.

3644. **Product Name:** Bonsoy (Soymilk).
Manufacturer's Name: Bean Supreme (Importer). Made in Japan by Marusan. Imported via Muso Shokuhin.
Manufacturer's Address: New Zealand.
Date of Introduction: 1981.

Ingredients: Water, soybeans, pearl barley, kombu (sea vegetable), barley malt.
New Product–Documentation: Talk with Yuko Okada. 1992. July 16. Muso first exported Bonsoy soymilk to Bean Supreme in about 1981. This soymilk was packaged in a foil retort pouch.

April 2010. There was a national food recall of Bonsoy because of its high iodine content, which was believed to cause thyroid problems.

3645. **Product Name:** Soy Beverages [Raspberry, Banana, Strawberry].
Manufacturer's Name: British Arkady Co. Ltd.
Manufacturer's Address: Old Trafford, Manchester, M16 0NJ, England.
Date of Introduction: 1981.
Ingredients: Incl. soy protein isolates.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1981. March 4. Soya Bluebook. 1982. p. 63; 1986. p. 102. Now a subsidiary of Archer Daniels Midland Co.

Richard Leviton. 1983. Nov. p. 22. At Anuga, British Arkady received lots of interest in their isolate soymilk. It was sold in Tetra Pak in raspberry, banana, and strawberry flavors.

3646. **Product Name:** Soy Beverage.
Manufacturer's Name: Carnation Company (M) Sdn. Berhad.
Manufacturer's Address: 27, Jalan Telawi Tiga, Bungsar Baru, Kuala Lumpur, Malaysia.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 61.

3647. **Product Name:** Soy Beverage.
Manufacturer's Name: Carnation Company (Singapore) Pte Ltd. Subsidiary of Carnation International, Los Angeles.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 61.

3648. **Product Name:** Soy Beverage.
Manufacturer's Name: Food Specialties Singapore (Pte) Ltd. Affiliate of Nestlé Companies.
Manufacturer's Address: Singapore.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 61.

3649. **Product Name:** F&N (Soymilk).
Manufacturer's Name: Fraser & Neave (Singapore) Pte, Ltd., Food Div.
Manufacturer's Address: 253, Pandan Loop, Singapore 0512, Singapore.
Date of Introduction: 1981.
Wt/Vol., Packaging, Price: Glass bottle.
New Product–Documentation: Soya Bluebook. 1981. p. 61. No brand name given. Address: Singapore 1024. Color Photo from STS. 1987. 285 ml glass bottle with red lettering on white circles.

3650. **Product Name:** [Naga-Sonda (Liquid Soy Beverage in Tetra Pak)].
Foreign Name: Naga-Sonda.
Manufacturer's Name: Galactina Ltd.
Manufacturer's Address: Birkenwej 1-6, CH-3123 Belp, Switzerland. Phone: 031-81-1111.
Date of Introduction: 1981.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter from Peter Speck. 1988. March 11. Gives introduction date. This product does not contain soy protein isolates.

3651. **Product Name:** Granose Soya Dessert (Vanilla, Chocolate, Strawberry, or Banana).
Manufacturer's Name: Granose Foods Ltd. (Marketer). Made in Germany by DE-VAU-GE.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1981.
New Product–Documentation: Lindner. 1987. The World Soymilk Market.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by DE-VAU-GE, was introduced in 1981 in Vanilla, Chocolate, Strawberry, and Banana flavors. The desserts were made by Alpro in Feb. 1984.

Form filled out by Philippe Vandemoortele of Alpro. 1991. Sept. 4. The desserts were first made for Granose by Alpro in Feb. 1984 in Vanilla and Chocolate flavors.

3652. **Product Name:** Golden Archer Soya Plantmilk Custard (Non-Dairy Eggless Custard Made from Soya Flour).
Manufacturer's Name: Itona Products Ltd.
Manufacturer's Address: Leyland Mill Lane, Wigan WN1 2SB, England.
Date of Introduction: 1981.
Ingredients: Unrefined brown sugar, food starch, soya flour, vegetable oil, sodium phosphate, natural flavour and colour.
Wt/Vol., Packaging, Price: 14.5 fluid oz (412 cc). Can.
How Stored: Shelf stable.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Label. 1981,

undated. "Itona Health Food. Made with 'Beanmilk.' A non animal Plantmilk made into a custard. All the goodness of soya plus the wholesome food value of starch. For use instead of milk custard by vegans, vegetarians, as a health food and by people who are opposed to animal cruelty. Also suitable for people who are allergic to cow's milk." Itona Products Ltd. retail price list. 1980-81. Soya Bluebook. 1985. p. 102. Note: This flour was probably made by British Arkady Co.

3653. **Product Name:** Granny Ann Noot Bar.
Manufacturer's Name: Itona Products Ltd.
Manufacturer's Address: Leyland Mill Lane, Wigan WN1 2SB, England.
Date of Introduction: 1981.
Ingredients: Raw sugar, vegetable fat, roasted soya beans, soya flour [used to make beanmilk], cocoa, lecithin, natural flavour.
Wt/Vol., Packaging, Price: 80 gm.
How Stored: Shelf stable.
New Product–Documentation: Itona Products Ltd. retail price list. 1980-81. Manufacturer's catalog. 1980. "Itona Health Foods take the biscuit." A black-and-white photo shows the label and ingredients. "With Beanmilk. Completely Natural. A tasty and nutritious snack free from animal or synthetic additives. Roasted soya beans in a raw sugar, cocoa, plant milk, and vegetable fat base."

3654. **Product Name:** Granny Ann Beanmilk Chunky Bar.
Manufacturer's Name: Itona Products Ltd.
Manufacturer's Address: Leyland Mill Lane, Wigan WN1 2SB, England.
Date of Introduction: 1981.
Ingredients: Raw sugar, vegetable fat, soya flour, cocoa, lecithin, natural flavour.
Wt/Vol., Packaging, Price: 80 gm.
How Stored: Shelf stable.
New Product–Documentation: Manufacturer's catalog. 1980. "Itona Health Foods take the biscuit." A black-and-white photo shows the label and ingredients. "Completely Natural. A tasty and nutritious snack free from animal or synthetic additives–made from a blend of raw sugar, cocoa, plantmilk in a vegetable fat base."

3656. **Product Name:** Mrs. Cheng's Soy Beverages.
Manufacturer's Name: Mrs. Cheng's Soybean Products Inc.
Manufacturer's Address: 1829 E. Palolo Ave., Honolulu, Oahu, HI 96816.
Date of Introduction: 1981.
New Product–Documentation: Honolulu City Directory. 1981. p. 275. Mrs. Cheng's Soy Bean Products. 1829 E. Palolo Ave., Honolulu. Soya Bluebook. 1983. p. 62. 1987. Listed in Honolulu City Directories up to present.

3657. **Product Name:** [Nikko-Mame Defatted Soybean Flakes for Shoyu and Miso, Sakae-Mame Soy Flour for Tofu, ProtFlour Soy Flour for Food and Milk Replacer, Nikoprotein High Protein for Food].
Manufacturer's Name: Nihon Koyu Co. Ltd.
Manufacturer's Address: No. 32 Bungocho, Higashi-ku, Osaka, Japan.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 63.

3658. **Product Name:** [Violeta Powdered Soymilk].
Manufacturer's Name: Olvebra SA–Industria e Comercio de Oleos Vegetais.
Manufacturer's Address: Praca Osvaldo Cruz, No. 15-16*, Andar, Porto Alegre, RGS, Brazil.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 60.

3659. **Product Name:** Plamil Soya Plantmilk (Concentrated).
Manufacturer's Name: Plamil Foods Ltd.
Manufacturer's Address: Plamil House, Bowles Well Gardens, Folkestone, Kent CT19 6PQ, England.
Date of Introduction: 1981.
Ingredients: Soya protein [isolate], sunflower oil, raw sugar, calcium phosphate, sea salt, soya lecithin, carrageen extract [carrageenan].
Wt/Vol., Packaging, Price: 410 ml (14.4 fluid oz) can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Label 1981. 9.5 by 4 inches (see next page). Paper on can. Red, blue, yellow and white on green. Picture of table with pouring can and pitcher of Soya Plantmilk into glass, cake, cereal, cup and teapot. "Suitable for those allergic to cows milk. High in polyunsaturates. Free from animal fats. Simply dilute with equal volume of water." Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. "Suitable for those allergic to cows milk."

Color photo on cover of Journal of the American Oil Chemists' Society. Dec. 1984. The product name is now Plamil Soya Milk: Concentrated. Red, white, blue, and green. On the left side of the front panel is an illustration (line drawing) showing the contents of a Tetra Brik Aseptic carton of the product being poured over strawberries. The text reads: "Use concentrated as a dessert dressing." The

right side shows the same contents plus a measuring cup of water being poured into a glass. The text reads: "Dilute with equal volume of water to replace cow's milk."

Ad in The Vegan. 1987. p. 6. "Sugar free. Concentrated. Excellent source of protein. 100% non-dairy. Salt free." Its counterpart is "Ready to Use."

Ad (half page, black ad white) in The Vegan. 1989. Spring. p. 28. "Did you know that vitamin B-12 is far more easily assimilated from Plamil Soya Milk than from a tablet... and that a survey taken from medical reports by our half-marathon contestants as many consume Plamil Soya Milk because of its vitamin D-2 content than for any other nutrient." Note: This was the earliest known liquid soymilk made in Europe for adults that was fortified with calcium.

3660. **Product Name:** Mum's Soybean Drink (Soymilk).
Manufacturer's Name: Sam Ward Co. (Importer). Nishimoto Trading Co. (Distributor). Made in Japan.
Manufacturer's Address: Los Angeles, California (Both).
Date of Introduction: 1981.
Ingredients: Water, soy beans, maltose, corn oil, salt.
Wt/Vol., Packaging, Price: 6.7 fluid oz (200 ml).
How Stored: Refrigerated.
New Product–Documentation: Label. 1981, dated. 2.5 by 3.25 inches by 1.5 wide. Paper carton. Red, blue, green and white. Drawing of glass with drink and straw. Information on label written in both English and Japanese.

3661. Schwandt, P.; Richter, W.O.; Weisweiler, P. 1981. Soybean protein and serum cholesterol. *Atherosclerosis* 40:371-72. *

3662. **Product Name:** [Soymilk].
Manufacturer's Name: Seventh-day Adventist Food Company in Colombia.
Manufacturer's Address: Colombia.
Date of Introduction: 1981.
New Product–Documentation: Shurtleff. 1981. Overseas Adventist Food Companies. p. 8.

3663. Shurtleff, William. 1981. Tofu: Eating healthy in community [How to make tofu and/or soymilk on a community scale]. *Communities–A Journal of Cooperative Living* (*Oroville, California*) p. 17-23.
• ***Summary:*** Gives details of and illustrations show: Processes and equipment used for making tofu and/or soymilk on a community scale at the Farallones Institute (Dillon Beach, California), Ramagiri–Blue Mountain Center of Meditation (Petaluma, California), Sunbow Farm (Corvallis, Oregon), and The Farm (Summertown, Tennessee). Address: Soyfoods Center, P.O. Box 234, Lafayette, California.

3664. **Product Name:** Tempeh Salad.
Manufacturer's Name: Soy Plant (The).
Manufacturer's Address: 711 Airport Blvd., Suite #1, Ann Arbor, Michigan 48104. Phone: 313-663-8638.
Date of Introduction: 1981.
Ingredients: Tempeh (organic soybeans, Rhizopus culture, vinegar), simmered in shoyu & water, Soynaise (soymilk, oil, vinegar, spices), carrots, celery, green onions, parsley, basil.
Wt/Vol., Packaging, Price: 12 oz. plastic tub.
How Stored: Refrigerated.
New Product–Documentation: Label in Soy Plant scrapbook. 1980. 2.75 by 2.5 inches. Black on white.

3665. **Product Name:** Soy Compound.
Manufacturer's Name: Soy Products of Australia Pty. Ltd.
Manufacturer's Address: 69 Power Road, Bayswater, VIC 3153, Australia. Phone: (03) 729-1738.
Date of Introduction: 1981.
Ingredients: 1995: Soy, lactose, malt.
Wt/Vol., Packaging, Price: 1 kg plastic bag.
How Stored: Store in a cool, dry, dark place.
New Product–Documentation: Letter from Paul Smith of Soy Products of Australia Pty. Ltd. 1981. This company makes Soy Compound (containing dry soymilk, whole soy flour, malt, and lactose). Letter from Paul Smith. 1995 April 1. p. 5. It appears that Soy Compound, as it is now known, evolved out of Malto-Soy Drink and Soy Milk Compound, both of which were launched in Sept. 1939; their lack of popularity was partly die to the poor quality and flavour of some of the imported soy used and there being no chocolate or roasted chicory added to mask the flavour.

3666. Tsuchiya, Kanji. 1981. Tônyû seizô no shin gijutsu to sôchi kara hôsô made [New technology and equipment for soymilk production, including packaging]. *Beverage Japan* 4(2):18-24. Translated as "Processing equipment for soy milk". [Jap; eng]
Address: Director, Malsan Food Co., Ltd., Tokyo, Japan.

• ***Summary:*** Contents: Introduction. History (of soy milk). Preparation and nature of traditional soy-milk and tofu. Practical aspects of soy milk and tofu. Products derived from tofu (salted tofu, smoked tofu, spiced and flavored tofu, tofu burgers, Sufu {resembling Camembert cheese}). Economic considerations. Address: 1. Dep. of Applied Microbiology; 2. Centre for Industrial Innovation. Both: Univ. of Strathclyde, Glasgow, Scotland.

3668. **Product Name:** [Yakult Soymilk (Dairylike)].
Foreign Name: Yakuruto Rakkumii.
Manufacturer's Name: Yakult (Yakuruto Honsha).
Manufacturer's Address: Japan.
Date of Introduction: 1981.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Toyo Shinpo (Soyfoods News). 1982. July 21. "The soymilk industry and market in Japan." States that Yakuruto first made commercial soymilk in Japan in 1981.

Label, Tetra Brik carton (see next page), 200 ml. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center; Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64.

Note: In 1971 in Japan more than 17 million bottles a day of a beverage containing live lactobacilli were consumed. Most of these were made by Yakuruto [Yakult] (Yakult Institute for Microbiological Research, Kunitachi-shi, Tokyo, Japan).

3669. **Product Name:** Yeo's Soy Beverage.
Manufacturer's Name: Yeo Hiap Seng (Malaysia) Berhad. Affiliate of Yeo Hiap Seng, Singapore.
Manufacturer's Address: No. 7, Jalan Tandang, P.O. Box 229, Petaling Jaya, Selangor, Malaysia.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 61.

Letter from Consulate General of Malaysia. (Los

Angeles, California). 1982. Aug. 3. One of the three soymilk manufacturers in Malaysia is: Yeo Hiap Seng (M) Bhd., 7, Jalan Tandang, P.O. Box 229, Petaling Jaya, Selangor, Malaysia. Phone: 03-573733. Fax: +60 03 791-3509.

3670. Altman, Nathaniel. 1981. Nathaniel Altman's total vegetarian cooking. New Canaan, Connecticut: Keats Publishing, Inc. 229 p. Index. 18 cm. Series: A Pivot Original Health Book. [180 ref]

• ***Summary:*** The author was born in 1948. The first page of the book begins: "It's not just spinach. The vegetarian way of eating is incredibly varied, employing such exotic, appealing foods as calcium-rich hijiki, tempeh from Indonesia, and tofu."

The glossary (p. 139-44) describes: Lecithin, milk (soy), miso, soybeans, soy grits, sprouts (incl. soy), tamari, tempeh, tofu, and textured vegetable protein (TVP).

Chapter 11, titled "A vegetarian diet can save you money" (p. 146-51) mentions soybeans and soyfoods (incl. soy milk powder, dry tofu [probably dried-frozen tofu], soy sprouts, soy flour, soy sauce, tofu) repeatedly as low-cost sources of protein.

The book has several very interesting appendixes: C. The vegetarian bookshelf (p. 208-10). D. Vegetarian contacts–Some vegetarian societies and publications (p. 211-12). Bibliography by chapter (p. 213-20).

3671. Aoki, Hiroshi. 1981. Misoshiru sanbai kenkô-hô [Three bowls of miso soup daily for good health]. Tokyo: Goma Books. 220 p. Illust. 20 cm. [Jap]

• ***Summary:*** Miso soups and health recipes. He worked for food companies, including Ajinomoto, for 30 years on development of new soy protein foods. A popularizing book. Discusses Hirayama.

Contents: Preface. Why are miso soups and soyfoods appreciated again now? 1. The many benefits from eating miso soups and soyfoods every day. 2. The Japanese people have forgotten the goodness of miso soups and soyfoods. 3. Healthy soyfoods: From miso to soymilk (miso, natto, shoyu, tofu, deep-fried tofu pouches, dried-frozen tofu, yuba, okara, kinako {roasted whole soy flour}, soymilk, soy oil). 4. Miso soups and soybean cooking make a healthy body. Soybean recipes which are suited to people in the younger generation. Mother's favorite recipes are good for health, too. Appendix. Maps of Japan showing areas of miso soups and natto.

3672. Bragg, Paul C.; Bragg, Patricia. 1981. Hi protein vegetarian health recipes: With history and reasons. Santa Barbara, California: Health Science. 184 p. Illust. No index. 21 cm.

• ***Summary:*** This book is quite similar to the 1975 edition, however one word in the title has been changed (to vegetarian meatless from meatless), and small changes have been made on several pages following Paul Bragg's death in Dec. 1976. Nevertheless, the book gives the strong impression that Paul Bragg is still alive. Whereas he used to advocate moderate amounts of meat and fish in the diet, he now advocates a vegetarian diet [which is becoming increasingly popular, especially among young people, in the USA]. On the book's cover these words appear in large bold letters: "Vegetarian. Salt free. Sugar free."

We will discuss here only the changes that have been made in the 1980 edition. The copyright page states that this is the fifth printing. The address of Health Science, the

publisher, has changed to Box 7, Santa Barbara, California 93102–from Hot Springs, California.

At the bottom of the next page a message has been added, which starts: "Our sincere blessings to you dear friends, who make out lives so worthwhile and fulfilled by reading our teachings on natural living as our Creator laid down for all of us to follow... Our prayers reach out to you for the best in health and happiness..." Signed Paul C. Bragg and Patricia Bragg.

On the page facing page 1, under the large photo of Bragg, is a different caption: "Paul C. Bragg in Hawaii, where he spends much of his time during the latter years of his vigorous, long life (almost a century!)." Describes how he writes, teaches, and exercise each day. Below that is "An old English Prayer," which begins: "Give us, Lord, a bit of sun, / A bit of work and a bit of fun. / "... Our daily whole grain bread and a bit of nut butter."

On page 66, at the bottom of the full-page ad for Bragg Liquid Aminos, readers are directed to order from a new address: Live Food Products, Box 7, Santa Barbara, CA 93102. "For 8 ounces of Bragg New Super Concentrated Liquid Aminos send $3.50 which covers postage and handling." Note: In 1975 the price was $2.99 for 16 ounces of "Bragg Liquid Aminos."

On page 81, an illustration of a pot and vegetables has been replaced by an illustration of Ponce de Leon, with a message about how he searched for the fountain of youth. "If he had only known–it's within us." There is also a new quotation from Patricia Bragg which states: "The more natural food you eat, the more radiant health you will enjoy and you will be better able to promote the higher life of love and brotherhood."

On page 157, the section titled "Sickness is expensive," has been updated (new statistics) and slightly expanded.

On page 160, a new photo, titled "When you are healthy–You are happy! shows the members of the "Longer Life, Health and Happiness Club" at Fort DeRussy on Waikiki Beach, Honolulu, Hawaii.

The end of the book (after a blank page titled "My favorite recipes") contains: Advertisements: (1) Send for important free health bulletins. (2) Bragg live longer, live stronger self-improvement library (list of 25 books by Bragg, with prices). From the authors. Brief biography of Patricia Bragg, Ph.D., Nutritionist, beauty and health consultant. Advisor to world leaders, glamorous Hollywood stars, singers, dancers, athletes. Lecturer and author (She says she is the daughter of Paul C. Bragg. An accomplished musician, dancer, tennis player, swimmer, and mountain climber. The youngest woman to ever have been granted a U.S. patent. Graduate of the University of California. Lists her famous clients). Biography of Paul C. Bragg. Address: 1. N.D., Ph.D., Life Extension Specialist; 2. Beauty and diet expert. Both: Santa Barbara, California, and Honolulu, Hawaii.

3673. Cadwell, Jane. 1981. O Livro da Soja [The book of soya]. Sao Paulo, Brazil: Editora Ground Ltda. 79 p. Illust. Index. 21 cm. [Por]

• ***Summary:*** Contents: Preface. Introduction. The soybean. Soybeans and health (nutritional composition). Our daily foods and our health. Auxiliary foods and ingredients (incl. miso). Kitchen utensils. Recipes: Whole soybeans (incl. cooked ground soybeans, green vegetable soybeans {*Soja fresca* (*verde*)}, soynuts {*castanhas de soja*}) Soymilk (incl. homemade using the Cornell method, soymilk yogurt), okara, tofu (incl. homemade, tofu miso soup, cakes, pies, baby foods).

Jane writes in a letter dated 5 July 1982 of her book: "My book is the first one [published in Brazil] exclusively on soyfoods. The intent was to show people all the varieties of things that they could make starting principally from whole dry soybeans. Consequently I did not include the topics of miso, soyflour, and textured proteins. I began writing the book as a result of a government campaign last year to get people to use soybeans in place of regular beans. As you probably know, rice and beans is really the principal dish at the noon and evening meals. There was a shortage of the regular beans and the price was very high... Consequently the government campaign to introduce soybeans. They were ridiculously cheap, yet there was hardly any information on how to use them. Thus–my book... Soybeans are now available in many supermarkets and well as health food stores and oriental shops." Address: Brazil.

3674. Clement, Jean-Michel. 1981. Larousse agricole [Larousse agricole]. Paris: Larousse. [viii + 1208 p. See p. 1045-48. [Fre]

• ***Summary:*** Contents of the section titled "Soja, soya:" Introduction. Botany. Biology. Cultivation: Crop rotation, fertilizer, varieties, planting, chemical weed control, harvest, chlorosis and plant diseases. Utilization: Soymilk, soy oil and meal. Economics.

An very interesting map (p. 1047) shows France with an outline of each department. Superimposed in 3 different shades are three zones (from north to south): (1) Where commercial soybean cultivation is not possible. (2) Where soybean cultivation is problematic at present. (3) When soybean cultivation is normally possible–in the southern one-third of France between about 42 and 46 degrees north latitude, which is about the latitude of Michigan, Wisconsin, and Minnesota in the USA. Address: France.

3675. Cottrell, Edyth Young. 1981. Mrs. Cottrell's stretching-the-food-dollar cookbook. Santa Barbara, California: Woodbridge Press. 127 p. Recipe index. 22 cm.

• ***Summary:*** A natural foods, vegetarian cookbook. Incorporates *Stretching the Food Dollar* and *Supplement to Stretching the Food Dollar.* A color photo on the cover shows the author.

Page 15 discusses soy milk, soy milk powder, soy flour, and nut milk. Many recipes (especially recipes for breads and other baked goods) call for the use of these products. Soy-related recipes include: Basic wheat-soy bread I & II (with soy flour, p. 21-22). Golden triple-rich bread (with soy flour and soy milk, p. 23). Rice-soy bread (with soy flour p. 27). Soy-nut bread (with soy flour and ground cooked soy beans, p. 30). Soy mayonnaise (with soy milk powder, p. 71). Savory soy loaf or patties (with soy sprouts, p. 80). How to sprout soybeans (p. 89). Soy sauce (p. 90). Address: Formerly, Research Nutritionist, Loma Linda Univ., Loma Linda, California; As of March 1993, living in Spokane, Washington.

3676. Duthie, Iain F. 1981. Protein utilisation in feeds and milk replacers. In: D.W. Stanley, E.D. Murray, and D.H. Lees, eds. 1981. Utilization of Protein Resources. Westport, CT: Food & Nutrition Press, Inc. 403 p. See p. 303-27. Chap. 16. [53* ref]
• ***Summary:*** Page 316 notes under Milk Replacers: "During the first few weeks of life, amylolytic enzyme activity in the calf's digestive system is low and it develops slowly, and so the calf is unable to digest and tolerate natural starches, or only small quantities of starch in the diet, until ruminant function takes over from monogastric digestive function at about 6 to 8 weeks of age... It was only comparatively recently, in the mid-1950's, that it was found possible to rear calves on milk substitutes based on dried milk products, except for access to colostrum for the first few days of life."

Soy protein concentrates give considerably better results than soybean flour in calf feeding. Toasted concentrates work better than untoasted ones. "Reports from the field suggest that users are not particularly happy with the performance of soybean products when substituting for all or a major part of dried skim milk, tending to restrict levels of incorporation according to the type of product employed." Address: Consultant, Cobham, Surrey, KT11 2QW, England.

3677. Fomon, S.J.; Ziegler, E.E.; Nelson, S.E.; Edwards, B.B. 1981. Cow milk feeding in infancy: Gastro-intestinal blood loss and iron nutritional status. *J. of Pediatrics* 98:540-45. *

3678. Forster, Dorothy. 1981. Cooking with Tvp: Exciting, nutritious and economic dishes using textured soya protein. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. 96 p. Recipe index. 18 cm.
• ***Summary:*** Contents: Introduction. 1. Soups. 2. Sea food favorites [vegetarian, with dulse often used as a seasoning]. 3. Main meals with mince. 4. Main meals with chiplets. 5. Main meals with chunks. 6. Main meals with slices (or chunks). 7. Some dishes with soya grits.

Tvp is made from de-fatted soya flour which is extruded through a die, under pressure, to make the different sizes of particles. "There are several varieties and we suggest you experiment until you find the type you are happy with... When reconstituted, Tvp can absorb twice its own weight in liquid. Thus 150g (5 oz) will be equal 450g (1 lb) of meat, when soaked."

Soya grits (with 2 recipes) and soya milk are also discussed. "There are several makes of soya milk on the market in either liquid or powder form as a useful alternative to milk." Miso is mentioned as a seasoning for TVP.

Suppliers of Tvp in the UK are: Lotus Foods Ltd. in London (formed by the author, Dorothy Foster), Direct Foods Limited in Petersfield, Hampshire (Proto-veg Tvp), Itona Products Ltd. in Wigan, Lancs., Life and Health Foods in Norwich, and Marigold Health Foods Ltd. in London (Vitpro Tvp). Address: England.

3679. Hoshijo, Kathy. 1981. Kathy cooks... naturally. The Self Sufficiency Assoc., P.O. Box 1122, Glendale, CA 91209. 497 p. Illust. Index. 28 cm.
• ***Summary:*** This excellent natural-foods, vegetarian cookbook, written with a nice balance of heart and mind, contains over 1,000 recipes–many written from an Hawaiian viewpoint. The lovely and talented author is the hostess of a popular TV series "Kathy's Kitchen." In the long chapter titled "Soybeans" (p. 349-92) is an introduction to the nutritional value of soybeans and soyfoods, plus many recipes for using and making the following at home: Whole dry soybeans (often cooked and mashed; 13 recipes), soy nuts (deep-fried or dry roasted), kinako (roasted soybean flour; homemade + 1 recipe), soy milk (homemade + 19 recipes), yuba (homemade + 11 recipes), okara (15 recipes), tofu (homemade + 50 recipes), frozen tofu ("Homemade TVP" + 7 recipes), miso (18 recipes). Address: Self-Sufficiency Assoc., 2525 South King St., Honolulu, Hawaii 96826, or P.O. Box 1122, Glendale, California 91209.

3680. Jaffrey, Madhur. 1981. Madhur Jaffrey's World-of-the-East vegetarian cookery. New York, NY: Alfred A. Knopf, Inc. 461 p. Illust. by Susan Gaber. Index. 20 x 20 cm. A second edition was published in 1983 in London by J. Cape.
• ***Summary:*** The Indian woman author of this creative book presents 21 recipes for bean curd (tofu), 7 for tempeh, and some for yuba and miso. Green soy beans with sauce (p. 7). Cabbage with miso (p. 15). Eggplant slices with white miso (p. 22-23). Fresh soy beans, steamed (p. 57). Spinach with fermented bean curd (p. 59). Stuffed yellow squash (with yuba, p. 62-64). Pecel (Vegetable salad with spicy peanut sauce, plus tofu and tempeh; p. 73-74). Tempura (with tofu; p. 75-77). Soy bean sprouts (how to grow; p. 100). Soy-bean and mung-bean sprouts seasoned with sesame oil (p. 105). Tempeh, Fried tempeh, Fried, preseasoned tempeh, Sambal goreng tempeh kering (Sweet and sour tempeh), Tempeh cooked in coconut milk (p. 108-110). Thai fried rice (with Red Bean Curd or Nam Yee [red fermented tofu]; p. 150-51).

One chapter (p. 160-89) is titled "Soy milk, bean curd, and wheat gluten." Making your own soy milk. Making your own bean curd. Udofu (*Yudofu,* simmering bean curd with seasonings). Bean curd with watercress. Korean-style bean curd in a hot water bath. *Hiya-yakko* (Chilled bean curd). Bean curd with Chinese parsley. Bean curd with broccoli. Cabbage cooked with bean curd. Bean curd with a deliciously spicy sauce. Carrots and beans with bean curd dressing. Bean curd, mushrooms, and peanuts in hoisin sauce. Sautéed bean curd. Tofu dengaku (Toasted bean curd with a miso topping). Fried bean curd cubes, soy-bean sprouts sautéed with fried bean curd. Fried bean curd with a sweet-and-sour sauce. Fried bean curd cakes with a mustard surprise. Inari-zushi ("Bags" of fried bean curd stuffed with sushi rice). Pressed bean curd with cabbage. Salad of pressed bean curd, mung-bean sprouts, and agar-agar. How to make fried and baked wheat gluten balls (plus 5 gluten recipes). Buddha's delight (with yuba and fried bean curd).

Chawanmushi (Steamed savory custards, with tofu; p. 192-94). Omelette with bean curd (p. 198-99). Soy sauce eggs (p. 209). Paneer (milk cheese; p. 237-40). Hot or cold noodles with a soy-sauce dressing (p. 248). Noodles with a hot-and-sour bean sauce (p. 250). Vegetarian mee krob (Crisp noodles with pressed bean curd and eggs, from Thailand, p. 255-56). Noodles with quail eggs, mushrooms, spinach, and yuba (Japan; p. 256-57). Hoppers (yeast pancakes from Sri Lanka). Roti (Flat whole-wheat bread). Delicious stock made with soy-bean sprouts. Clear soup with enok mushrooms, bean curd skins [yuba], and spinach (p. 297). Clear soup with soft bean curd and celery cabbage (p. 298). Miso soup with bean curd (p. 307). Miso soup with carrots and mushrooms (p. 308). Fried, munchable soy beans [soynuts] (p. 321-22). Potato and tempeh patties (p. 339). Dipping sauces (with soy sauce; p. 357-59). Kombu relish (with soy sauce, p. 374). Shoyu daikon (White radish pickled in soy sauce). Ginger quick-pickled soy sauce (p. 375). Aomidaikon (Quick pickled small white radishes, with slightly sweet yellow miso; p. 377-78). Chinese-style jellied bean-curd sweetmeat with a peanut topping (p. 399-400).

General information (p. 418-36; lots on soyfoods, see: bean curd [regular, fried, fermented (Nam Yee), pressed, pressed seasoned], kochu chang [jang], miso, soy-, tempeh, yuba). Sources (of ingredients; p. 437-40). Address: New York City, NY.

3681. Jansen, G. Richard. 1981. Amino acid fortification. In: A.M. Altschul and H.L. Wilcke, eds. 1981. New Protein Foods. Vol. 4. Animal Protein Supplies, Part B. New York: Academic Press. xix + 378 p. See p. 161-204 Chap. VII. [259* ref]

• ***Summary:*** Contents: Introduction. Significance of protein quality. Measurement of protein quality. Protein-energy interactions: Animal studies, human studies–adults, human studies–pregnancy and lactation, human studies–children, protein quality–energy interactions, comment. Amino acid fortification: Supporting data: Methionine fortification, lysine fortification. Applications in animal nutrition: methionine fortification, lysine fortification. Applications in human nutrition: methionine fortification, lysine fortification. Discussion. Summary.

Fortification of soy-based infant formulas with methionine is now widely practiced in the United States. Although the published data suggests that this is not necessary (since excellent growth has been demonstrated with unfortified formulas), methionine does increase the protein quality of soy for the human infant, and therefore, is currently considered desirable. Address: Dep. of Food Science and Nutrition, Colorado State Univ., Fort Collins, Colorado 80523.

3682. Khair, Abul. 1981. Irrigated soybean production in Bangladesh. *INTSOY Series* No. 20. p. 151-54. W.H. Judy and J.A. Jackobs, eds. Irrigated Soybean Production in Arid and Semi-Arid Regions (College of Agric., Univ. of Illinois at Urbana-Champaign).

• ***Summary:*** "Because soybeans are so important as a food crop and as an oil crop, the government has launched a comprehensive program to promote the large-scale production of soybeans. The Bangladesh Coordinated Soybean Research Project was established in 1975 to conduct research on the introduction, cultivation, and use of soybeans in Bangladesh.

"Agricultural conditions in Bangladesh are ideal for producing soybeans throughout the year. Soybean yields compare well with the yields of other oil-producing crops. Not only soybean oil, but soybean cake, bread, and milk are very popular.

"Only a few hundred hectares of land are now under irrigated soybean cultivation. The Bangladesh Coordinated Soybean Research Project and the Mennonite Central Committee are trying to popularize soybeans in Bangladesh. It is expected that a large portion of cultivable land will be planted to soybeans by the Bangladesh Agricultural Development Corporation, the Directorate of Agriculture (Extension and Management), the Mennonite Central Committee, and the Bangladesh Coordinated Soybean Research Project. From the record of the last few years, the observation can be made that the average yield of soybeans in Bangladesh is very encouraging, ranging from two to three tons per hectare, depending on the management practices used and the season of production." Address: Asst. Prof., Dep. of Irrigation and Water Management, Bangladesh Agricultural Univ., Mymensingh, Bangladesh.

3683. Kloss, Jethro. 1981. Back to Eden: A human interest story of health and restoration to be found in herb, root, and bark. Loma Linda, California: Back to Eden Books. xxxii + 684 p. Illust. Index. 18 cm. Kloss Family Heirloom Edition.

• ***Summary:*** One of the most creative and original sources of early soyfoods recipes, which include "Soybean Cream" and "Soybean Ice Cream." This revised edition contains the complete original text of this classic work on healing herbs, home remedies, diet, and health–plus 16 pages of new family recollections by Jethro Kloss' daughter, son, and granddaughter at the beginning of the book, and 16 pages of previously unpublished photographs in the middle of the book. This edition was first copyrighted in 1972. The book has been published continuously by the Kloss family since 1946. A blurb on the cover of the 1981 printing (which retails for $2.95) states: "Two million copy bestseller. The complete original text [with the same page numbers]. New family additions!" A color illustration by Harry Anderson shows a man and woman seated by an idyllic river, surrounded by birds and animals, in the Garden of Eden. The rear cover states that this is "The heirloom authorized Kloss family edition."

The contents of the book, except for the new sections mentioned above, are identical to the original 1939 edition. But the recollections of Jethro Kloss by his children and granddaughter contain a wealth of new and interesting information. The recollections by his daughter Promise Kloss Moffett note: "My father was born on a large farm near Manitowac, Wisconsin, on April 27, 1863. The ninth of eleven children born to his pioneering parents lived a healthy and happy life in that primitive Indian country...

"When he was about twenty, he went to Florida and worked in the orange groves, finally owning a large grove at Deland. Later he attended school in Nebraska and then in Battle Creek, Michigan. While in Battle Creek he worked closely with the then revolutionary medical leadership of the world-renowned Battle Creek Sanitarium. He saw clearly the disastrous results of the use of dangerous drugs then prevalent in caring for the sick. He developed further his own philosophy and understanding of the laws of nature...

"He was married March 5, 1900 to Miss Carrie Stilson, who had trained as a Bible worker and teacher and had labored in a mission in Madison, Wisconsin and taught several terms of grade school. At that time he was a licensed minister in Wisconsin and they established their home at Rose Lawn. Two children were born to this union, Promise Joy and Paul, who died when only four weeks old of whooping cough. During these years, besides my father's ministerial work, my parent's operated a branch of the Battle Creek Sanitarium and also sold Battle Creek Sanitarium health foods. My mother died in July of 1905.

"In March, 1907, my father married Mrs. Amy Ponwith, a widow with a small daughter, Mabel. My father and step-mother owned and operated an attractive sanitarium in pleasant surroundings in St. Peter, Minnesota, which they named *The Home Sanitarium...* Their daughter Lucile was born here in St. Peter in 1908 and their son, Eden, in 1910.

"Next the Kloss's became interested in the self-supporting work being conducted in the south and visited some of the schools in North Carolina and Tennessee. About 1911 they sold the sanitarium in Minnesota and moved to Fountain Head, Tennessee, where their youngest daughter, Naomi, was born in 1913. Here they bought a 250 acre farm, built a large house and barn, and raised many kinds of fruits and vegetables...

"A later development in good health was his creation of a significant health food manufacturing operation in Amqui, Tennessee after receiving a call from them to take charge of their food factory...

"Before this factory was sold to the Nashville Agricultural Normal Institute he was shipping health foods all over the United States and Canada. It was during this time at this place that he originated many new health food recipes. This establishment later became a part of what has since become the well-known Madison College near Nashville, Tennessee.

"Our next move was to Brooke, Virginia where [in 1921] papa established a health food factory and retail market. Each of us children was pressed into service in one way or another with this family enterprise. At times we would be helping with some food experiment, or perhaps in typing and retyping the material that later became *Back to Eden,* which was many years in preparation. Jethro Kloss's son Eden was for many years his right hand helper. Whatever my father did in spreading the gospel of health and natural living, he did with all his might and trained his children in that same pattern of living...

"One of my favorite memories as a family is the daily worship hour when Father would gather his family of seven about him and we would sing hymns, read Bible verses around the circle, and pray together. He was a gentle but firm family leader.

"Although a strict disciplinarian, my father was warm-hearted and affectionate–devoted to his family. When he was away from home, we invariably received a letter from 'papa' every day...

"Eventually this health food factory at Brooke, Virginia was taken over by my step-sister, Mabel and her husband.

"The Kloss's then moved to Washington, D.C. and carried on his work of treating the sick, lecturing on health and a more intensive study of herbs and preparation of his book, *Back to Eden.* I still have in my possession an attractive menu... for a Demonstration Dinner he gave March 27, 1933, at the Dodge Hotel in Washington, D.C. The menu was completely vegetarian and included 'Sweetbreads a la Kloss.' The pumpkin pie and strawberry sundae were made with soy milk...

"*Back to Eden* was at last published in 1939, the fruition of much toil and sacrifice for many years by the entire Kloss family... [Jethro's] wife Amy [Pettis] Kloss died in 1944 at Fredericksburg, Virginia...

"In 1945 papa became acquainted with Mr. and Mrs.

Deloe Robert Hiatt on a trip to Madison, Tennessee. Together they found a property at Coalmont, Tennessee, where the Hiatts took over the promotion and publication of *Back to Eden...* [Jethro] peacefully went to sleep in June of 1946, his eighty-fourth year [but he was age 83], and today rests in a little cemetery in Tennessee."

The recollections by his son, Eden, note: "I was born in St. Peter, Minnesota, on February 10, 1910, to Jethro and Amy Kloss... After the move to Tennessee, my parents developed a plant for the manufacture of a line of vegetarian meat substitutes, cereals, crackers, and other items, at Amqui, near Nashville. (Our business was called the Nashville Sanitarium Food Factory.) Many of my early memories center on that large two-story factory, where raw materials were transformed into good-tasting, healthful food products...

"My father was an untiring worker. He would be up hours before the rest of the family–building fires, starting cracker dough, and making everything ready so that the work could go full speed ahead when the workers arrived in the morning... One day when Eden was burned while canning tomatoes, Jethro rushed him to the Madison Sanitarium for treatment. Kloss also made gluten there.

"When I was nine or ten years old, the factory was sold to the private school at Madison and transferred to that campus, and our family traveled in our pickup truck, camping en route, from Tennessee to Virginia. Here, at a town named Brooke, we found an ideal location–a plot of ground with a building in which we could make and sell health foods and teach people about healthful living...

"It was here at Brooke, Virginia, that Papa started to put in uncounted hours working on the beginnings of his book, *Back to Eden.*

"After some years, my oldest sister and her husband took over the food factory, and my parents moved to Takoma Park (on the outskirts of Washington, D.C.)...

"Papa's travels to give lectures and food demonstrations took him to places like Miami, Florida, and Houston, Texas."

There are also recollections by his granddaughter, Doris Joyce Kloss Gardiner. In about 1939-40 she used to be with her grandparents when they visited relatives in Falmouth, Virginia, just north of Fredericksburg. There she helped make soymilk: "Nor was I happy to stand at the stove stirring and stirring large kettles of soybean milk (so the milk wouldn't stick and be scorched)–a laborious and time-consuming process. But Grandpa's soybean milk was delicious, and so were the twenty or so other soy products that he originated and produced–including meat substitutes and soybean bread, butter, cheese, and ice cream...

"Often Grandpa would prepare soybean ice cream to serve at the close of his lectures or cooking demonstrations. One of my favorite treats was to lick the paddle from the ice-cream freezer before we left home to go to the lecture...

"Grandpa and Grandma Kloss died when I was in my mid-teens." The frontispiece (facing the title page) is a portrait photo of Jethro Kloss. An original of this photo was sent to Soyfoods Center in 1985 by Doris Kloss Gardiner of Loma Linda, California. On the 4th page of photos in the center section is an ad by "Kethro Kloss Health Food Company, Brooke, Virginia." Photos show two hand grinders, a large-scale gas-fired pressure cooker, a large stove-top pressure cooker, and a hand scaler. The text begins: "We manufacture a large line of health foods." In 1921 Kloss opened this health food factory in Brooke, VA, and it as on this site that he began writing *Back to Eden.* Address: P.O. Box 1439, Loma Linda, California 92354.

3684. Kloss, Jethro. 1981. The Back to Eden cookbook. Loma Linda, California: Back to Eden Books. 159 p. Illust. by Daniel Guild. Index. 22 cm.

• ***Summary:*** The yellow cover of this 1981 edition ($2.95) features a color illustration (by Harry Anderson) showing a man and woman seated by an idyllic river, surrounded by birds and animals, in the Garden of Eden. The cover text states: "From the renowned author of Back to Eden. This is a golden treasury of recipes and priceless information on natural foods for health and healing. Based on the work of the late Jethro Kloss. Published under the supervision of Promise Kloss Moffett and Doris Kloss Gardiner. The copyright page of the 1981 printing states that the book is published and distributed by Back to Eden Books, P.O. Box 1439, Loma Linda, California 92354. The book is copyrighted by Doris Kloss Gardiner, Promise Kloss Moffett, and Eden P. Kloss. The book was previously published by Woodbridge Press under ISBN 0-912800-05-4.

Contents: Jethro Kloss... Pioneer nutritionist. Return to Eden... Return to happiness. Soy milk, cheese, butter, and cream. Nut milk, cheese, butter, and cream. Main dishes. Using sprouted seeds (including soybean sprouts). Bread... A health food. Life-giving breads. Natural breakfast foods. Soups... Total nutrition. Salads and dressings. Vegetables. Sauces, seasonings, and spreads. Desserts for health. Coffees, teas, and broths (including a recipe for making soybean coffee at home, p. 151).

The chapter titled "Nut milk, cheese, butter and cream" has recipes for: Nut milk (made from raw peanut butter). Nut cheese (from raw peanut butter and soy butter). Dieters nut cheese (from raw peanut butter). Malted nut cream (from raw peanut butter and malt powder). Superb peanut butter. Blanched peanut butter (add water to make into milk or cream). Simple peanut butter. To blanch peanuts. Nut meal. Nut butter cream (add warm water to nut butter).

Photos (p. 6 and 9) show: daughter Promise Kloss Moffett, son Eden Kloss, and granddaughter Doris Kloss Gardiner. Address: P.O. Box 1439, Loma Linda, California 92354.

3685. Ko Swan Djien. 1981. Fermented foods of Indonesia

except those based on soybeans. *Advances in Biotechnology* 2:525-30. [37 ref]
• ***Summary:*** Foods discussed include oncom [ontjom, onchom] (chiefly made of peanut presscake fermented with Neurospora species of molds), tempe bongkrek (made from coconut presscake obtained from coconut-oil factories where oil is pressed from copra, or from partly defatted coconut residue which is left when shredded coconut meat is extracted with water to obtain coconut milk for preparing dishes for family consumption; also discusses bongkrek poisoning and its history in Indonesia), tapé, and dagé. Address: Dep. of Food Science, Agricultural Univ., Wageningen, The Netherlands.

3687. McMurry, Linda O. 1981. George Washington Carver: Scientist and symbol. Oxford (England), New York, Toronto, Melbourne: Oxford University Press. x + 367 p. Index. 20 cm. [697* footnotes]
• ***Summary:*** An excellent, scholarly biography that separates the man from his myth. Carver emerges as "a gifted teacher, a gentle spirit, a keen intelligence and loving friend." His work with peanuts and his friendship with Henry Ford are discussed. In the index (which is poorly done), no mention is made of Carver's work with soybeans. However p. 91 states: "Soybeans and alfalfa were only two of several crops tested by Carver, often in cooperation with the USDA. Strangely, he failed in his attempt to cultivate kudzu, but he was especially delighted with the soybean results because the crop provided abundant forage 'of the nicest possible kind.' His interest was increased by the visit of a northern agriculturist to inspect Tuskegee's soybean work, and he was intrigued by the growing interest in soybeans as a source of vegetable oil. In 1914 he expanded his soybean experiments in cooperation with a New Jersey paint company and tested five varieties to determine the tonnage of forage, number of bushels of beans, quantity of oil, and fertilization properties each variety yielded." Of the 3 footnotes, one relates only to kudzu, and the others two are only in the Booker T. Washington Papers (edited by Louis R. Harlan); they are not on the microfilm of the George Washington Carver papers owned by the Library of Congress.

Booker T. Washington died on 14 Nov. 1914. "His death marked the end of an era both in race relations and in the career of George Washington Carver. During the next year a series of events brought Carver out of the shadows and into a place of national prominence that rivaled Washington's." After giving half a year's salary to the Booker T. Washington Memorial Fund, Carver dejectedly wrote Washington's secretary, Emmett Scott, "I am sure Mr. Washington never knew how much I loved him and the cause for which he gave his life." Robert Russa Mouton, who took Washington's place as principal of Tuskegee brought brighter days for Carver. In the fall of 1915 Carver received two remarkable invitations and honors: One to serve on the advisory board of the National Agricultural Society, followed by one to become a fellow of the Royal Society for the Arts in Britain. In 1919 Moton gave Carver (now addressed with the prestigious title of "professor") an unsolicited increase in salary, Carver's first in 20 years. After 1916 Craver, now very busy and often traveling, gradually discontinued his classroom teaching, and by 1925 finished his plot work at the experiment station. He was becoming a "creative chemist." In Dec. 1916, in his continued quest for commercial success, Carver submitted to Emmett J. Scott a list of 15 products "now ready for the market." A rubber substitute derived from sweet potato and various wood stains seemed promising; soybeans were also on the list. But by 1919 he wished to remain unentangled in the "business end" of his discoveries.

Prior to 1919 Carver focused his research attention on sweet potatoes and seemed well on his way to becoming the "Sweet Potato Man." But in Sept. 1919 he discovered peanut milk–"a discovery that ultimately shaped the course of his career... The creation of the Peanut Man began with the discovery of peanut milk, and Carver had great hopes for its commercial success. He envisioned it not as a substitute for cow's milk, but as a 'distinct product in the diet of the human family" with unique qualities and uses... Carver also believed that peanut milk provided a cheap source of protein, for a pint could be made from only a '3 ounce glassful of peanuts.' Indeed he claimed his method of making milk was more efficient than that of a cow... Others seemed to agree that peanut milk was a viable commercial item, but Carver's dreams of finally providing a practical product were dashed when he learned that an Englishman had already patented a process for making peanut milk in 1917... In 1921 Carver considered taking 'out a patent over his by proving my process is superior in many ways,' but he never did, and the Englishman was unable to exploit the patent profitably, possibly because he demanded $150,000 and a 3 percent royalty."

In June 1923 Carver won the prestigious Spingarn Medal of the NAACP. (The NAACP had been organized in 1909 during the heyday of Jim Crow legislation as an alternative to Booker T. Washington's accomodationist program; by 1923 the NAACP was winning the battle for leadership.) In 1928 Carver received an honorary doctor of science degree from Simpson College in Iowa, which he had attended from Sept. 1890 to 1891 mainly to study art. This honorary degree was especially appreciated, since questions

about the title "Doctor" had previously embarrassed Carver.

In 1933 Henry A. Wallace became Secretary of Agriculture under Franklin D. Roosevelt and served from 1933-1945, later becoming Vice President of the United States. A renowned plant breeder from Iowa State College, he had been a boy there when Carver was a student and he later credited Carver with giving him his first and lifelong interest in plants. He called Carver the "kindliest, most patient teacher I ever knew." An innovative leader, Wallace sought ways to help hard-hit farmers out of the Depression. He shifted USDA's policy away from increasing agricultural production toward decreasing production and increasing demand by finding new uses for crops. "Although utilization research had never been completely ignored by the USDA, the Depression marked a turning point, with more emphasis on the kind of research that Carver had focused on for forty years. But when the USDA turned serious attention to this field, it did so with a level of funding that quickly made Carver's work obsolete. Section 202 of the Agricultural Adjustment Act of 1938 provided for four regional research laboratories 'devoted primarily to those farm commodities in which there are regular or seasonal surpluses, and their products and by products.' Its enactment was a major victory for the chemurgic movement, which recognized Carver as a patron saint... Thus 1938 marked the end of one phase of Carver's career. His [declining] health and limited funds prevented any significant new research. More and more he came to see himself as a trailblazer who had shown the way and was now ready to step aside and let others follow his path."

In 1935 Austin W. Curtis, Jr. had come to Tuskegee and soon been accepted by Carver as his assistant. The year 1937 marked the beginning of what became a deluge of awards–thanks in part to help from Tuskegee and Curtis. That year Carver was invited to speak at a chemurgic conference hosted by Henry Ford in Dearborn, Michigan. His speech was well received. He was invited to the main banquet but, because of his feels concerning segregation, he made a point of sitting outside the hall until everyone had eaten, "even though Henry Ford considered him one of the most honored guests." "Ford's interest in the chemurgic movement drew him to Carver, and after they finally met at the Dearborn conference they corresponded and visited each other regularly. They shared eccentric genius and an enormous mutual respect." Carver admired Ford's policy of hiring blacks for both skilled and unskilled jobs in his automobile plants.

On 10 Feb. 1940 the George Washington Carver Foundation was officially incorporated–again with key help from Austin Curtis. As early as July 1937 a flyer soliciting contributions had been distributed, but it was mostly funded by Carver's life savings of $32,374. A museum became one of the foundation's main activities.

A photo (p. 288) shows Carver and Ford standing together. Carver was also a close friend of Henry A. Wallace.

In 1939 Carver, though his health had begun to decline rapidly, traveled to Ways, Georgia, for the dedication of the George Washington Carver School, established by Henry Ford on his Ways plantation. Carver spent the entire day with Ford. In 1942 extensive press coverage attended a "tribute by Henry Ford, who erected a Carver memorial cabin at Greenfield Village and established a nutritional laboratory in Carver's honor at Dearborn. Carver went to Michigan for several weeks..." Address: Assoc. Prof. of History, North Carolina State Univ.

3688. Paige, David M.; Bayless, Theodore M. eds. 1981. Lactose digestion: Clinical and nutritional implications. Baltimore, Maryland: The Johns Hopkins University Press. xix + 280 p. Illust. 24 cm. *
• ***Summary:*** This highly recommended, scholarly work explores the subject in detail, listing numerous references including many of the more than 1,700 research and clinical papers dealing with this and related subjects.

3689. *Quadernos de Natura* (*Editorial Posada, Mexico*). 1981. Alimentacion natural balanceada [Balanced natural nutrition]. No. 12. 96 p. [10 ref. Spa]
• ***Summary:*** Contains information on: How to make soymilk at home (p. 70-71). Homemade soy flour (p. 71-72). Homemade soy yogurt (p. 72-73).

3690. Shandler, Michael; Shandler, Nina. 1981. The complete guide and cookbook for raising your child as a vegetarian. New York, NY: Schocken Books. xiv + 337 p. Index. 24 cm. [65 ref]
• ***Summary:*** On p. 22 soybeans and rice are used to illustrate protein complementarity. Fats survival plan (p. 70-71): Describes how to make clarified butter (ghee); it is superior to other fats for frying purposes and is not subject to the same polymerization as vegetable oils. "Eggs do not constitute a cholesterol risk," but "soy milk and tofu are... excellent high-protein substitutes for eggs if your children are allergic." Good sources of protein during pregnancy include beans, grains, tofu, gluten, dairy products, and soy products. Use complementary proteins together. Tofu can be blended into creamy salad dressings.

"Homemade soy milk is deficient in vitamin B-12, vitamin D, and calcium. Commercial soy drinks for infants [infant formulas] are fortified with these and other nutrients but often contain sugar and other detrimental additives" (p. 110).

"After approximately 1 month of eating solid foods, a second series of foods can be introduced to your infant." These may include puréed tofu or light miso soups (p. 116-17).

Soy-related recipes include: Whole wheat soy flakes (p. 206). Tamari broth with dumplings (and soy flour, p.

216). Nondairy cream of vegetable soup (with tofu, p. 216). Summer cucumber tofu soup (p. 218). Soyburgers (with whole soybeans, p. 222-23). Barbecued tofu sandwiches (p. 226). Tofu cheesie macaroni (p. 232). Tofu noodle casserole. Fried tofu over rice. Tomato tofu lo mien (p. 233-34). Tofu and rice seaweed rolls (p. 236). Pizza (with soy flour and gluten flour, p. 236-37). Creamed spinach with tofu (p. 254). Tamari-glazed "trees" (Broccoli, p. 255). Vegan dips (p. 264-65): Avocado tofu dip. Cucumber tofu dip. Nondairy dressings (p. 271-72): Tofu dressing. Nut and soy milks (p. 311-13): Fortified soy milk. Carob soy milk. Spiced soy milk. Almond milk. Cashew milk. Coconut milk. Tahini milk. Nondairy sandwich fillers (p. 320-21): Soy sandwich "meat" (with whole soybeans and tamari soy sauce). Tofu sandwich spread.

3691. Stobart, Tom; Owen, Millie. 1981. The cook's encyclopedia: Ingredients and processes. New York, NY: Harper & Row, Publishers, Inc. xii + 547 p. Illust. 25 cm. [20 ref]

• ***Summary:*** Soy related entries include: Bean curd (incl. tofu). Bean-curd cheese [fermented tofu]. Bean paste and bean sauce (incl. Red bean paste) is sweet and made from adzuki beans. Yellow bean paste is made from soybeans and is salty and pungent. "Fermented salted black beans" is made from a black variety of soybeans; these salted black beans can be used to make "black bean sauce" which can be used as a flavoring in fish, lobster, chicken, and pork dishes.

Soybean (incl. soya bean, soja bean, flour {"pork soya links" used in Britain during World War II}, sprouts, soy oil, soy sauce, soymilk, vegetable yogurt [soy yogurt], vegetable cheese [soy cheese], tempeh, bean curd skin [yuba], miso, tamari, soy sauce, soy protein isolate, soy granules or grits, textured plant protein [textured soy protein]). The name in four European languages is given.

Soy sauce or shoyu (It "is said to be one of the ingredients of Worcestershire sauce." Incl. the "very heavy Indonesian *ketjap* {*ketjap manis or ketjap benteng*}, which is a type of soy sauce,..."). The name in four European languages is given.

Textured plant protein (a high-protein foodstuff manufactured from plants (soybeans, peanuts, wheat, cottonseed, etc.). "Originally it was aimed at the vegetarian market." Also called "textured vegetable protein" in the USA. Incl. textured soy flour, textured soy protein gel and fibers).

Worcestershire sauce: Begins with a history (starting in 1837) based on the fanciful story so widely known. "Thus was born what is probably the world's best-known and most ubiquitous bottled sauce, one which has become a standard ingredient." Note: How about soy sauce? "The exact formula is secret. Although it is much imitated, nobody seems to be able to get quite the taste of the original."

Also contains entries for adzuki, ketchup ("Javanese katjap [ketjap], for example, is a very sweet soy sauce"), peanut (groundut or monkey nut), pulses, seaweed, sesame seed, tahini.

Note: Millie Owen prepared the American edition of this book. Address: 1. Hassocks, Sussex, England; 2. Northfield, Vermont.

3692. Tranggono, -. 1981. Studies on the stability of dried soybean curds. PhD thesis, Michigan State University. 161 p. Page 2294 in volume 42/06-B Dissertation Abstracts International. *

• ***Summary:*** Tofu was prepared by conventional methods and modified by addition of either sesame milk or ground sesame and air dried, frozen, aged, thawed and then air dried, dried frozen or freeze dried. Stability of the dried products with respect to lipid oxidation and non-enzymic browning were studied. Accelerated storage studies were conducted at 37ºC and 50ºC. Peroxide values, diene conjugated and thiobarbituric acid tests were used to follow oxidative changes in lipids. Results are discussed in detail. It is concluded that oxygen appears to be the primary cause of product deterioration. Optimum water activity for storage with respect to lipid oxidation and browning was 0.22. Loss of available lysine was correlated with browning (increased at high temperatures and in products with ground sesame). Address: Michigan State Univ.

and use of high-protein, low-calorie tofu, tempeh, and soymilk. Emmaus, Pennsylvania: Rodale Press. 84 p. Illust. No index. 22 x 29 cm.
• ***Summary:*** For production and use of high-protein, low-calorie tofu, tempeh, and soymilk. Contents: Section I. Introduction. 1. What soyfoods are. 2. Using soyfoods (recipes). Section II. Introduction. 3. Tofu box. 4. Pot-mount press. 5. Table-mount press. 6. Tempeh incubator. Section III. Blueprints. Address: Rodale Press, 33 East Minor St., Emmaus, Pennsylvania 18049.

3696. World of God. 1981. The cookbook for people who love animals. 2nd ed. Route 2, Box 98E, Brooksville, Florida 33512. 176 p. Edited by Butterflies. Illust. and cover design by Flowers. Recipe index. 26 cm. Spiral bound. The 4th edition was copyright in 1987. [31 ref]
• ***Summary:*** The top of the title page reads: "Over 300 totally vegetarian recipes. From beginner to gourmet. No meat. No eggs. No dairy. No honey." At the bottom of the title page is a field of red and orange flowers, with butterflies around them, and a rayed sun overhead against a light yellow background. This is a good, spiral-bound collection of vegan recipes, which are straightforward, appetizing, and nutritious. Special section includes recipes for cat and dog food.

The book is interspersed with nice quotations about vegetarianism, veganism, and animal rights from great thinkers such as Longfellow, Emerson, Schopenhauer, John Gallsworthy, Jeremy Bentham, Cicero, Herbert M. Shelton, John Ruskin, John Stuart Mill, Tagore, Plutarch, Tolstoy, Cardinal Newman, George Bernard Shaw, Thoreau, St. Francis, Leonardo da Vinci, Harriet Beecher Stowe, Romain Rolland, and Friedrich W. Nietzsche.

The glossary of ingredients lists okara, soy powder, tamari, tofu. "Soy powder [whole soy flour]–Made from cooked soybeans, it contains all the natural oil of the soybean. Used in casseroles, sweets, and for making soy milk. It can also be used as an egg substitute. Use 1 heaping tablespoon soy powder and 2 tablespoons water in place of 1 egg."

Recipes with soyfood terms in the title include: Quick instant soy milk (p. 12). Soy milk. Soy yogurt (p. 13, made from tofu, frozen and non-frozen bananas, etc; not fermented). Soy margarine (p. 13). Soy tofu. Scrambled tofu. Tofu cottage cheese (p. 14). Tofu cream cheese (p. 15). Bran muffins (with soymilk, p. 22). Most baked goods include soymilk in place of dairy milk. Miso soup (p. 37). Tofu eggless salad. Okara salad (p. 54). Tofu potato salad (p. 56). Tomato tofu salad (p. 57). Tofu tahini dressing. Blond miso dressing (p. 67). Orange tamari dressing. Soy mayonnaise (p. 68). Miso spread (p. 69). Hot miso dressing (p. 73). Tahini-tamari sauce (p. 75). Stuffed tomato with soybeans (p. 92). Tofu saute (p. 104). Potatoes with tofu. Noodle tofu (p. 105). Tofu bean-thread saute (p. 106). Matzoh tofu bake (p. 124). Soy burgers (p. 131). Okara cylinders (p. 132). Tofu cheesecake (p. 141). Carob tofu cream pie (p. 143). Recipes for dogs and cats: Okara delight (p. 163). Soybean mash (p. 164). Instant soybean-meal dinner (p. 165).

At the back is a 6-page section titled "The Spirit of Ahimsa" by H. Jay Dinshah, president of the American Vegan Society. It is excerpted from his books "Out of the Jungle" and "Here's Harmlessness."

Note: This is the earliest document seen (Sept. 2012) that mentions (or gives a recipe for) a nonfermented soy yogurt. Address: Brooksville, Florida.

3697. Yeo Hiap Seng Ltd. 1981. Annual report. Singapore. 32 p. [Eng]
• ***Summary:*** The cover is black on silver with the Yeo's logo embossed on it. Yeo Hiap Seng Ltd. is actually a group of companies including: Yeo Hiap Seng (Hong Kong) Ltd., Yeo Hiap Seng (International) Ltd., YHS (USA) Inc., YHS Trading (Canada) Ltd.

Notice is given that the 26th Annual General Meeting of the company is to be held in Singapore.

The Five-year statistical record (p. 32) shows that Group Sales have increased from $39.478 million in 1977 to $98.777 million in 1981.

After-tax profit before extraordinary items has increased from $4.314 million in 1977 to $6.396 million in 1981. Address: Singapore.

3698. Yepson, Roger B. ed. 1981. Home food systems. Emmaus, Pennsylvania: Rodale Press, Inc. 475 p. Illust. Index. 29 cm. [15 ref]
• ***Summary:*** Extensive, positive information on soyfoods is contained in the chapters on Grains (and bread, see p. 35), Beans (p. 94-95, 99-115; tofu, tempeh), Sprouting (p. 120, 125, 127), Canning (p. 203), and The Home Dairy (p. 298; soymilk, soy yogurt). Reviews and photos of many soyfoods books are given, with a sample recipe from most.

Pages 298 notes: "Soymilk is low in riboflavin (vitamin B-2), totally lacking in vitamin B-12, and has drastically less calcium than dairy milk. On the other hand, soymilk is lower in carbohydrates, has 12% fewer calories, 25% less fat, no cholesterol, and contains 15 times more iron than cow's milk." Address: Emmaus, Pennsylvania.

3699. Bhatia, Darshan S. 1981? Development and marketing of protein-containing beverages. Atlanta, Georgia: The Coca-Cola Co. 15 p. Undated. Unpublished manuscript.
• ***Summary:*** "In the mid 1960's nutritionists and public health authorities in some developing countries started advocating the fortification of some soft drinks with proteins and other nutrients. The rationale behind this was that soft drinks, being ubiquitous and popular with children, could be suitable vehicles for increasing their nutrient intake.

"In response to this situation and with good intentions, The Coca-Cola Company decided to develop protein-

containing beverages and to market them by utilizing its extensive distribution network in several developing countries... Brazil, having an abundant availability of soybean, was chosen as the first market. Further, it was decided to develop initially a non-carbonated milk-like bottled beverage, using soybean as the sole source of protein.

"The first such product was given the brand name "Saci"–a mythical character in Brazilian folklore. Saci was a sterilized beverage containing 3.0% protein and seven vitamins. Sterilization was necessary because of the non-acid character of the beverage (pH 6.8).

"Several prototypes in various flavors were consumer tested to ascertain preference and the two flavors–chocolate and caramel–were selected for commercialization. The beverage was launched in early 1968 in Rio de Janeiro, Brazil and marketed [in glass bottles] for about 3 years. The product was withdrawn as the marketing objectives in terms of volume and profitability were not achieved." Four observations made concerning Saci are then given.

Next a product named Samson, based on casein (a milk protein) was launched in Paramaribo, Surinam [Suriname], in June 1970 in a 200 ml glass bottle. Samson Power Bar, a non-dairy frozen dessert, was also launched at that time. The marketing was discontinued after about 7 years.

Next, a protein-containing soft drink product named Tai was launched in Brazil. The generic name "Samson" was given to beverage powders. A liquid version of Samson called "Sanson" was launched in Mexico in 1978 and sold in bottles like a soft drink.

In 1976, when the Brazilian government announced its ambitious program to food school children, pregnant and nursing women, the Cocoa-Cola Co. developed powdered Saci according to specifications set by the government. Since then, the company has supplied beverage powders based on soya and milk proteins, and fortified with vitamins and minerals. Two types of Saci were developed, each obtaining 60% of its protein from soya and 40% from dairy sources. Saci 200 contained 200 calories per bottle, and Saci 300 contained 300 calories. The nutritional composition of each product is given. "Initially, only a chocolate-flavored product was made available to the schools but now mocha, strawberry and coconut flavors have been added to the line."

Whey-based Samson is now available in cans and Tetra-Brik cartons. The soya + milk or soy-based beverage has a satisfactory shelf life in Tetra Brik. UHT Saci contains 6.0 gm of protein and 4.0 gm of fat per 200 ml pack. The protein source is either soya or and 80:20 soya:dairy milk blend. The availability of fairly bland soy protein hydrolysate may make new types of products available. Address: Director, Corporate Research and Development Department, The Coca-Cola Co., Atlanta, Georgia.

3700. **Product Name:** [GranoVita Sojagen Instant].
Foreign Name: GranoVita Sojagen Instant.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: 04 13 11 89 41.
Date of Introduction: 1981?
Ingredients: Soybeans.
Wt/Vol., Packaging, Price: 450 gm. Wholesales for DM 11.60.
How Stored: Shelf stable.
New Product–Documentation: Manufacturer's catalog. 1981. May 1. DE-VAU-GE Sortiments-Preisliste. 4 p.

Soyfoods Center Computerized Mailing List. 1982. July 23.

Manufacturer's catalog. 1983. GranoVita. Health-food & natural food from Germany. 6 p. plus 3-page price list. With color photos and ingredients for all products. Rein pflanzliche Soja-Nahrung. Retail price is DM 10.24 for 450 gm.

Manufacturer's brochure. 1989? "GranoVita Soja-Drinks und -Desserts... ein erfrischender Genuss [a refreshing enjoyment]. 6 pages, with many color photos. Contains a brief description of Sojagen and Sojagen Plus, with a color photo of both packages/boxes. The Sojagen box is red, dark green, light green and white. A color illustration shows a glass of milk in front of soybean leaves and pods. "A soya food made purely from plants. Milk free. Lactose free. Gluten free. Weight: 350 gm. Neuform certification symbol.

3701. *EUVEPRO Newsletter.* 1981?--. Serial/periodical. European Vegetable Protein Federation, Rue de l'Orme 19, B-1040, Brussels.
• ***Summary:*** Euvepro was founded in 1978, with some support from the American Soybean Association. In 1983 it had about 60 members, both industrial consumers and manufacturers. Leviton (nov. 1983) reported that at that time one of Euvepro's principal efforts was to change the tariff classification on soymilk, thereby permitting increased trading through lower taxes. Claudio Rochietta of Cargill is chairman of the upcoming Euvepro Conference. Address: Europe.

3702. *Nitto-Kyo News* (*Japan Soymilk Association News*). 1981? Serial/periodical. Tokyo, Japan: Nihon Tonyu Kyokai (Japan Soymilk Association). Frequency: Monthly. [Jap]
• ***Summary:*** Soyinfo Center owns: No. 25 (10 Jan. 1983) to No. 44 (10 Nov. 1984). Plus a cover letter. Address: Ogura-Biru, Shimbashi 2-11-8, Minato-ku, Tokyo 105, Japan.

3703. **Product Name:** [Soymilk].
Manufacturer's Name: Produtos Alimenticios Superbom.
Manufacturer's Address: Caixa Postal 8633, 01051 Sao Paulo, Brazil.
Date of Introduction: 1981?

New Product–Documentation: Shurtleff. 1981. Overseas Adventist Food Companies. p. 8.

3704. *Tetra News.* 1981? Soymilk becomes new mainstay of product lines at Okazaki Marusan Co. Undated.
• ***Summary:*** Okazaki Marusan Co. was established in 1952 and has grown rapidly in the past 3 decades to become one of Japan's five major miso manufacturers. Miso presently accounts for over 80% of the company's total sales revenues. Mr. Michinobu Nabeta, Managing Director, says the company's short-term objective is "to become a health foods manufacturer."

"The first product resulting from Marusan's R&D program for soymilk launched a decade ago was 'Doujan' (Chinese for soymilk) which was commercialized eight years ago. 'Doujan contains the essence extracted from pearl barley and kelp and is a health food that is marketed through a health-conscious consumer organization that has a good reputation,' Mr. Nabeta comments.

"It's Marusan Tonyu (soymilk) in a 250 ml gable-top carton went on sale 2 years ago, and last year Tonyu in a Tetra Brik Aseptic 200 ml carton was introduced... The company's 'Tonyu,' 'Orange Tonyu' and 'Malt & Tonyu,' all in Tetra AB cartons [and on the market by 21 July 1981 in 200 ml cartons] are distributed nationwide to supermarkets; thus, the sale of these products is growing.

"In recent years the soymilk market [in Japan] has expanded steadily, and it is estimated that the market will grow from ¥3,100 million in 1980 to ¥5,000 to ¥6,000 million this year. 'The market will reach ¥6,000 million or thereabouts this year; many believe the market will grow by 30% in 1983, though part of the industry predicts a ¥10,000 million market. In the future we expect the market to grow to a ¥50,000 million to ¥60,000 million market, or comparable to the tomato juice market. Our company and other soymilk suppliers hope that the soymilk market will eventually share 10% of the cow's milk market,' Mr. Nabeta says."

"The company has been tapped by some U.S. companies [including Eden Foods] for soymilk manufacturing ventures in the U.S., but Mr. Nabeta believes the company should concentrate on the domestic market, at least for the time being."

3705. **Product Name:** [Soy fortified instant formula].
Manufacturer's Name: Venezuelan School Lunch Program.
Manufacturer's Address: Venezuela.
Date of Introduction: 1981?
Ingredients: Rice flour, nonfat dry milk solids, soya flour, flavors, and vitamin/mineral mix.
How Stored: Shelf stable.
New Product–Documentation: Aguilera and Lusas. 1981. *Journal of the American Oil Chemists' Society.* March. p. 519. The Venezuelan School Lunch program has replaced pasteurized milk with an instant formula that costs 25% less. Ingredients are listed (W. Jaffe, personal communication).

3706. Anuradha Industries. 1982. Classified ad: Requires result oriented sales representative... *Times of India* (*The*) (*Bombay*). Jan. 2. p. 3.

3713. Dominguez de Diez Gutiérrez, Blanca. 1982. Re: Introducing soyfoods to Mexico. Letter to William Shurtleff at Soyfoods Center, Jan.–in reply to inquiry. 5 p. Typed. [Eng]
• ***Summary:*** The following is Blanca's response to and editing of a history of her work with soyfoods in Mexico, written by William Shurtleff and sent to her, requesting that she check it for accuracy. Shurtleff's history is a based largely on letters from Blanca to Shurtleff in the early 1980s.

An independent soyfoods pioneer in Mexico who deserves special mention is Blanca Domínguez de Diez Gutiérrez, a small, sparkling-eyed woman who, initially alone and unfunded, has taught the many uses of soyfoods to people (especially women in poor villages) throughout Mexico. She became interested in soyfoods after reading *The Book of Tofu* in 1976. In 1977 she founded a Yoga Center in the village of Tepoztlan, Morelos, but after seeing poverty and malnutrition all around her, she gave up her position as president of the Center to devote herself entirely to teaching others about soyfoods and better nutrition. She developed a low-cost, tasty, and easy-to-practice system of nutrition based on protein complementarity from soyfoods and grains (including underutilized grains widely used only for livestock feed) plus the use of sprouts [including soy sprouts]. Using this nutritious model, which was a great success wherever it was introduced, she began to develop soyfoods recipes and preparatory techniques that were suited to local tastes and would help lower income people to help themselves and provide their families with better nutrition. In 1977 Dominguez's booklet 'Los Mil Usos de la Soya' (The Thousand Uses of Soy) was published as an entire issue of the popular magazine *Quadernos de Natura* by Editorial Posada. Shortly thereafter the magazine published two articles about Dominguez's work ('The Soy Cooperative' [1980] and 'The Woman who is Taking Soy to the Countryside' [April 1978]) and then in 1978 a major book on soyfoods and Dominguez's system of nutrition featuring soyfoods and whole grains: *Alimentacion Integral Para Una Vida Plena: Los Mil Usos de la Soya.* Focusing on low-technology soyfoods such as fresh soy puree, soymilk, tofu, okara, roasted soy flour, and soy sprouts, plus many original recipes, this was the first book of its type in Latin America. A second printing was out within a year.

"Dominguez was one of the first people in Latin America to grasp the spirit of the soyfoods movement in the U.S. and to see the great potential for working directly with the people to introduce soyfoods 'from the bottom up.' Her fine publications were accompanied by lots of hard work with local people. In the 1970s in Tepoztlan she founded the Soya Cooperative Padma Xochitl, with the help of three teachers there whose students regularly fell asleep in class from lack of a proper breakfast–or any breakfast at all. A number of people joined with Dominguez, working with a most creative and generous spirit, to make the Cooperative into a very active and extremely effective center of soyfoods information: Victor Ariel Barcenas, Albino Quiroz, Marisela Penaloza de Quiroz, and Coti Nava deserve special mention. The fine work started here first reached the people of Morelos, then quickly spread throughout Mexico. It proved that soyfoods in conjunction with the new yet traditional diet were well received wherever they were tried.

"Dominguez was a creative and inspiring teacher and the people with whom she worked felt her love and care. She developed Tofu Chorizo (like a garlic sausage), enchiladas, and tamales, pozole (stew) soy-flour enriched masa, and many soymilk recipes. Women understood quickly when she showed that from 16 pesos of soybeans they could get 10 liters of soymilk (worth 130 pesos) and 1.5 kg of okara (worth 150 pesos). She asked that women pay for their classes by teaching 10 other women what they had learned. Deploring that food had fallen into the hands of men, who thought only of its monetary and rarely of its nutritional value, she never failed to teach of the dangers of junk foods (like proliferating soft drinks) and the ease with which traditional diets could be improved with soy.

"Dominguez worked closely with a host of other people, who in turn became soyfoods teachers. Maria Esther Rosete of IMSS did pioneering work with Dominguez introducing soyfoods into her area and to the workers and their wives at a big sugar mill in Zacatepec. They gave many demonstrations and trained volunteers who introduced the healthful diet in many places in the state of Morelos. In 1980 Maria Esther was transferred to Xalapa, Veracruz, where she continued her work with soyfoods with great effectiveness. In 1981, Dominguez was invited to train a group of social workers, nutritionists, and cooking teachers there to take the diet to villagers, schools, and the poorest sections of the city. In 1979 Dominguez was invited by the Teachers College in the state of Durango to train a group of teachers in using soybeans. Today this college has a one-semester course in the theory and practice of soyfoods use, directed particularly

at rural teachers. Señora Elvia de Jesus Hidalgo de Sanchez, one of Dominguez's former students from Tepoztlan, who initiated he program, has also trained one hundred volunteers from the DIF (Family Integral Development) in Durango and given many soyfoods courses throughout the state of Durango, including at the Agricultural Experiment Center. Starting in 1979 Laura Mendez, earlier from the Tepoztlan Cooperative, worked with Dominguez and many others to introduce soyfoods to the state of Mexico. Obdulia Herrera Bazan, Dr. and Mrs. Arturo Aldama, Arcadia Ramirez, and many others also did fine work with soyfoods.

"In late 1981 Dominguez, who had previously worked entirely without outside financial support, was invited by DIF in the state of Veracruz to work for one year as an employee teaching about soyfoods. She developed a nutritional program for the state and trained a group of young nutritionists, who taught soyfoods to housewives, jails, orphanages, etc. throughout the state, emphasizing home preparation of low-cost substitutes for meat and milk. The program was a great success, and many of these and other workers gave generously of their time, energy and money with almost missionary zeal in the strong belief that soyfoods could play a key role in uplifting the poor and improving their diet. Throughout this ongoing work, Dominguez viewed her efforts as a part of their spiritual practice of Yoga, to serve others selflessly and lovingly, to help relieve suffering." Address: Mexico City.

The 1970's: Changing U.S. diet, interest in soyfoods, reappraisal of the value of animal and plant proteins, world hunger (protein vs. calories debate), critiques of protein quality measurement, human protein studies, coronary heart disease and diet, soyfoods and cholesterol, cancer and diet, antinutritional factors in soybeans, mineral bioavailability, breeding soybeans to upgrade nutritional quality. The 1980's: Future and outlook. Address: Lafayette, California. Phone: 415-283-2991.

3719. Dominguez de Diez Gutiérrez, Blanca. 1982. Re: Current work with soyfoods in Mexico. Letter to William Shurtleff at Soyfoods Center, Feb. 16. 4 p. Typed, with signature. [Eng]
• ***Summary:*** "We are making the most incredible tamales." Blanca's maiden name is Dominguez. Her husband's double surname is Diez Gutierrez. She has decided to use only her maiden name–otherwise it is too long. She regrets that she does not know her husband's address.

"I have gone to three good agricultural libraries. When I enquire about the history of soya in Mexico, the librarian looks at me wide-eyed. So they bring out all they have on soya, plenty of information, but no history. I know Manuel Gamio wrote about it and was a great promoter." But Blanca has been unable to find any of his books.

"Soya flour was widely used by the Social Security in Mexico for many years; they began in the 1960s, and only recently gave it up. It was distributed freely among the

people. It was never very successful and was not accepted permanently, because only the Social Security distributed it. I have been told that many years ago, even as early as the 1940s, the soya bean was sold or introduced in some shops; but it later was removed because people rejected it. They tried cooking it like Mexican beans, which are much softer and cook into a nice gravy sort of sauce. This soya bean never cooked, was hard as a rock, so it did not succeed. Now many people realize you must learn how to use it, and are willing to learn.

"I am sure there was some very goos stuff around in the 1930s. I have this clue from an old teacher, who told me she had some notes, which sounded terrific." But she has not yet been able to find them.

"You must write to Dr. Nuren Banfunzi (Apdo. Postal #6, Iguala, Guerrero). He has made many important contributions to Mexico in the field of Soya, among them creating the variety BM2, with no odor or beany taste, so that people do not reject the milk for human consumption. He might have all the information you need. He is now working in *el tecnológico* of Monterrey; also in Queretaro and also in Michoacan. He has been in contact with many fine people (incl. one lady in Michoacan) who are doing a lot to take the soya to the common folk. I am sure he can help you. He is a scientist. We are very good friends, and he has done a lot to introduce the soya to the ordinary housewife, even creating some recipes himself.

"Soya is almost like a conversion. When people adopt it, they turn inside out." Blanca encloses a sheet of the names she uses for basic soyfoods in Spanish. "Soyafoods = *alimentos de soya.* Fresh green soybeans = *frijol de soya tierno* (no special name). Soya nuts = I call them *soya-nuez* and so do my students, but this is only amongst us. Soya sprouts = *germinados de soya.* Roasted soya flour = *harina de soya tostada.* Coffee = I call it *soyafee* but this is only known among my students and at the cooperative I founded in Tepoztlán. Soya-choc = I call it *soyalate,* same as above. Tofu = *tofu o queso de soya o cuajada* (curd) *de soya.* Okara = *Okara o pasta de soya.* Soya oil = *aceite de soya.* Soy flour = *harina de soya.* Textured soya protein products = *productos de soya texturizada.* Soya grits: are not known here. Roasted soya beans with salt = like peanuts, I call them *soya-huates,* but my names are not well known yet, only among those who study with me. Gô = *masa de soya* which looks very much like the corn dough with which we make tortillas." Note: This is the earliest English-language document seen (Nov. 2012) that contains the term "roasted soya flour."

"In Mexico there are some commercial products: *Chocosoya,* like chocolate soya to drink with water or milk. *Soyavena,* a soya powder for children, soya and oats. *Pinole de soya,* is soya powder with cinnamon and sugar. *Horchata de soya,* invented by me but very well known, soya milk with plenty of ice, cinnamon, vanilla and sugar (I made it in Denver [Colorado, at the annual Soyfoods Conference])." Address: Apdo. Postal 226, Jalapa, Veracruz, Mexico.

3720. O'Brien, Jane M. 1982. Re: Re-thinking starting a tofu and soymilk factory in Ireland. Letter to William Shurtleff at Soyfoods Center, Feb. 17. 1 p. Typed, with signature.
• ***Summary:*** "We have had to backpedal a bit on any plans for a tofu and soymilk factory for many reasons–there is just not presently enough demand to warrant such a venture, but the time will come eventually.

"My book is coming along midst all the other things that are happening which have to do with family life, Baha'i life, and my interest in the many aspects of health and healing." Address: 7 Woodside Drive, Rathfarnham, Dublin 14, Ireland. Phone: 909-769.

3721. Brody, Jane E. 1982. Winged bean hailed as a potent weapon against malnutrition. *New York Times.* Feb. 23. p. C1, C4. [1 ref]
• ***Summary:*** "The winged bean, a plant virtually unknown six years ago, has definitely taken off." Prof. Theodore Hymowitz says, "it's like an ice cream cone–you eat the whole thing." "The winged bean seed rivals the soybean in the quantity and quality of its protein."

Like the soybean, the winged bean can be pressed to obtain an edible oil. It can also be sprouted, or made into tofu, tempeh ("an Indonesian fermented bean cake") or a nutritious milk-like drink. Address: New York.

3722. Alfa-Laval. 1982. Douru [Soymilk]. Lund, Sweden. 12 p. Feb. [Chi]
• ***Summary:*** Note: This is the earliest Chinese-language document seen (Aug. 2013) that uses the term "douru" ("bean milk") to refer to soymilk. The word is rarely used in Chinese. Address: Sweden.

3723. **Product Name:** [Soymilk Mousse with Barley Malt Syrup].
Foreign Name: Bakuga-iri Tônyû Muusu.
Manufacturer's Name: Asahi Foods (Asahi Fuuzu).
Manufacturer's Address: Japan.
Date of Introduction: 1982. February.
Wt/Vol., Packaging, Price: 2 x 100 gm plastic cup.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Bakuga-iri Tônyû Muusu was introduced in Feb. 1982 by Asahi Fuuzu in 2 x 100 gm plastic cups and distributed nationwide.

3724. *Brik Pak-Age.* 1982. Brik Pak Inc. breaks ground for first U.S. plant. 1(2):1. Winter.
• ***Summary:*** "On Friday December 19, Brik Pak Inc. broke ground for Phase I of a $40 million packaging material plant in Denton, Texas. The plant will supply packaging material for aseptic Brik Pak filling machines used by U.S. customers.

The plant is scheduled to begin operation in Spring, 1984, and to be fully staffed and in full production by late 1984.

"Worldwide, Tetra Pak presently has 23 production factories.

"According to H.F. Kirchdorfen President and CEO, 'Denton was selected because of its central Texas location, its proximity to excellent air and ground transportation, and the availability of a professional work force.'

"The 52.6 acre site was purchased from Barworth Corporation. Construction will begin immediately on Phase I, which will consist of 210,000 sq. ft."

An illustration shows an aerial view of the plant–the first Brik Pak Inc. plant in the United States.

3725. **Product Name:** [Soymilk].
Foreign Name: Leche de Soya.
Manufacturer's Name: Centro de Soya, Soy Dairy.
Manufacturer's Address: Barrio San Bartolo, Molino Belen, Solola, Guatemala; Apartado Postal 118, 07091 Solola.
Date of Introduction: 1982. February.
Ingredients: Water, soybeans.
Wt/Vol., Packaging, Price: Sold in 1 gallon plastic containers brought by the people who buy the soymilk. Retails for Q. 1.25 per gallon.
How Stored: Refrigerated.
New Product–Documentation: Jenkins, Praskin, and Praskin. 1982. Plenty Integrated Soy Program, Guatemala. p. 21, 33. Letter from Amado del Valle. 1987. July 22. From January-July 1987 the soy dairy produced 3,777 gallons of soymilk. Interview with Laurie Praskin. 1987. Nov. 30. This soymilk was only sold, as such, to people in the community who brought a container to the soy dairy. It was not packaged for sale elsewhere. Letter from Amado del Valle. 1988. March 16.

3726. Chow, Edward T.S.; Wei, L.S.; Steinberg, M.P.; DeVor, R.E. 1982. Application of two-level fractional factorial designs in development of a soybean whipped topping. *J. of Food Science* 48(1):230-34. Jan/Feb. [23 ref]
Address: Dep. of Food Science, Univ. of Illinois, Urbana.

3727. Leviton, Richard. 1982. Soy delis: Fast, natural, and growing. *Soyfoods.* Winter. p. 35-37.
• ***Summary:*** Discusses the Well Bean Deli in Santa Cruz (with a photo of Kevin Van Slooten); Real Food Tofu Cafe in Redwood Valley; and The Tofu Shop in Arcata. All in California. 2-3 photos show each location.

Concerning The Tofu Shop (768 18th St., Arcata, CA 95521): It "combines retail take-out with small scale tofu production and bakery products in a wood-lined airy storefront. Owner Matthew Schmit (who earlier managed a soy deli in Telluride, Colorado) has filled his 1,000 square feet with a small commercial cauldron-style tofu shop, small bakery, and 200 square foot retail front, all of which he launched on $11,000 investment on December 15, 1980. The cozy retail space features racks of soy cookbooks and crackers, teas, packaged miso, tofu and tempeh kits, noodles, seaweed, and a handsome reach-in cooler where the tofu herb burgers, tofu spinach pies, vegetable tofu sushi rolls, tofu tahini salad, tofu herb dip, tofu cream pies, and bottled soymilk are displayed. Monthly sales average $3,500 with some outside distribution of tofu, soymilk, and burgers. The deli attracts walk-in customers from the nearby Humboldt branch of the University of California while tofu burgers and tofu spinach turnovers are probably the most popular products at the deli." Photos show: (1) Matthew Schmit standing at the wood-lined counter. (2) Matthew and Susan [Suzanne] Schmit with their shop's specialties.

Concerning the Real Food Tofu Cafe (8473 East Rd., Redwood Valley, California): The Tofu Cafe is "in the tiny inland town of Redwood Valley (population: 400). Real Food (billed as 'Vegetarian whole foods, specializing in delights from the humble soybean') opened its 900 square foot facility (which includes in-house tofu production and secondary tofu products) in November 1980. The cafe is open for leisurely lunches, from noon until four and the customer often feels as if he is dining in someone's large, lovely living room. The deli is outfitted with wall-to-wall carpeting, an authentic rock wall, hefty wooden tables, plants. The decor, in fact, in most soy delis is typically tasteful, low key, earthy, and exudes a subdued sense of quality. 'Anyone who runs a soy deli,' Dik Rose remarks 'should make secondaries because of their promotional value for the deli name.' Rose's cafe, which is the retail branch of his Brightsong Tofu Company, produces Missing Egg Tofu Salad, Tofummus, Almond Tofu Creamie, and Strawberry Tofu Creamie, packaged in 8 ounce plastic tubs, and shipped frozen (with a 17 day refrigerated shelf life) around the San Francisco market. Missing Egg Tofu Salad sandwich and banana carob soymilk shakes are the deli best sellers, the average ticket is $3.50, and take-out and sit-down each draw 50 percent." Photos show: (3) The inside of the deli. (2) Dik and Sharon Rose behind the counter, with their large menu on the wall behind them. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

3728. Ontario Soya-Bean Growers' Marketing Board. 1982. "Canadian soyabean mission, South East Asia, Feb. 12th–27th, 1982: Mission member reports." 1982. Canadian soyabean mission, South East Asia, Feb. 12th–27th, 1982: Mission member reports. Chatham, Ontario: Ontario Soya-Bean Growers' Marketing Board. 12 p. Feb. 12 p. Feb. 24 x 11 cm. [Eng]
• ***Summary:*** Contents: Comments, by Peter H. Epp, Chairman. Japan: Home Shokuhin Tofu Manufacturing Co., Komatsuya Shokuhin (natto mfg. plant), Nihon Miso (manufacturing plant), Japan Miso Assoc., Japan Tofu

Assoc., Federation of Japan Natto Manufacturers' Cooperative Society, Wako Shokuryo Co. (makes natto; Jacob Hartz in Arkansas supplies them with "936X" variety small-sized natto soybeans; Wako also supplies Nihon Miso Mfg. Plant), X-Can Far East Ltd. Korea: Seoul meeting at embassy, Chung's Food Ltd., Agriculture and Fisheries Development Corp., Korean Soybean Curd Cooperative Manufacturing Assoc. Singapore: Okura & Company Ltd., Eng Huat Pte. Ltd., Intraco. Malaysia: Yeo Hiap Seng Co. Ltd. (the largest manufacturer of soymilk in Malaysia and Singapore). Follow-up. Conclusion.

Each of the following members of the mission wrote a chapter in this book, discussing each visit mentioned in the contents: Peter H. Epp, Bernard Calhoun, Otis McGregor, Richard I. Buzzell, M.D. Pennell (General Manager, R&D, H.J. Heinz Company of Canada Ltd.), Michael Loh (Export Development Specialist, Ontario Ministry of Agriculture and Food).

Details are given on the soybean characteristics desired for each type of soyfood product, especially in the chapter by Dr. Buzzell. Popular soybean varieties include: For Miso: Enlei [Enrei], Fujimejiro, Harcor.

For natto: The main natto specifications are: 1. Seed size–small but fully developed, less than 5.0 mm diameter if possible. 2. Round seed. 3. Total sugar content < 22%. 4. Oil content > 19%. 5. White / yellow hilum. Best natto varieties: Jizuka (the smallest, from Ibaraki prefecture) and Suzuhime (small, from Hokkaido), "two domestic [Japanese] varieties used for superior quality natto, were priced at $100 U.S. for 60 kg. The U.S. varieties which have been, and are being used presently, are not satisfactory. Both Nattawa and Pioneer 1677 varieties should adapt well to the natto product." Jennett (H24) from the USA is good. (p. 5, "Natto specifications Japan, unnumbered page near rear).

For tofu: Amsoy, Coles, Harcor.

Letter from Fred Brandenburg of OSGMB. 1994. Nov. 9. "Regarding export promotion before 1982, any activities would have been part of larger government sponsored trade missions. For example, in 1979 Otis McGregor participated in a mission to Asia which was co-ordinated by Michael Loh. It included a number of marketing boards and associations from Canada."

Note: This is the earliest document seen (Dec. 1998) that (apparently) mentions the soybean variety Enrei. Address: P.O. Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

3729. **Product Name:** Soymilk [Honey-Vanilla, Carob, or Plain].
Manufacturer's Name: Palomar Mountain Soyfoods.
Manufacturer's Address: 31405 N. Highway 395, Escondido, CA 92025. Phone: 714-749-2476.
Date of Introduction: 1982. February.
New Product–Documentation: Talk with Alex Press. 1990. Feb. 28. He started selling this product in about Feb. 1983.

3730. **Product Name:** [Haimaru / Haimiru Soyalac {Soymilk} (Plain, or Cocoa)].
Foreign Name: Haimaru Kokoa, Haimaru Soiyarakku.
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1982. February.
Wt/Vol., Packaging, Price: 180 gm foil retort pouch (standing pouch).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Haimaru Kokoa, and Haimaru Soiyarakku were introduced in Feb. 1982 by Saniku Fuuzu in a 180 gm standing pouch and distributed nationwide.

3731. Shurtleff, William. 1982. Viili is heavenly. *Soyfoods.* Winter. p. 10.
• ***Summary:*** "In *Soyfoods* No. 5 (Summer 1981) there appeared one of the first articles in English about the

delectable Finnish cultured food *viili* (It was mistakenly called *viilia* in the article). For the past nine months we have prepared soymilk viili at home once a week using a starter obtained from GEM Cultures. We've enjoyed it almost daily, drizzled over applesauce, blueberries, or strawberries, or topped with granola. We have shared our culture with many of our friends who, like us, enjoy the mild, creamy-rich flavor and the unique thick, honeylike yet slightly 'stretchy' consistency, plus the convenience. Unlike yogurt, soymilk viili can be made at room temperature without an incubator and without having to boil the cups or jar it's made in to sterilize it.

"Finland has two favorite fermented milk products: viili and piima. Viili is eaten and piima is drunk. Viili comes in two varieties: 'long' which is stretchier and incubated at a lower temperature and 'short' which is less stretchy. Long viili, when at its best (or so the Finns claim) is so elastic you have to cut it with scissors! A number of scientific journal articles have been published about viili in Europe; they report that the main fermentation organism is the bacterium *Streptococcus cremoris.* In Swedish, viili is called *fil.*

"We have found one trick that greatly improves our soymilk viili; to each quart of soymilk, add 2 teaspoons of honey and 4 to 8 drops of vanilla extract. Otherwise follow the instructions that come with the culture.

"A good source of viili culture in America is GEM Cultures, 30301 Sherwood Rd., Ft. Bragg, CA 95437. (Tel. 707-964-2922). Send $4.00 for fresh viili culture." Address: Soyfoods Center, P.O. Box 234, Lafayette, California.

3732. Shurtleff, William; Aoyagi, Akiko. 1982. Tofu & soymilk production: A craft and technical manual. Lafayette, California: Soyfoods Center. 336 p. Illust. by Akiko Aoyagi Shurtleff. Index. Feb. 28 cm. [223 ref]
• ***Summary:*** The contents is identical to that of the original Aug. 1979 edition, but the publisher's name has changed to Soyfoods Center from New-Age Foods Study Center. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

3733. **Product Name:** Tofu, and Soymilk.
Manufacturer's Name: Soyfoods Australia (Renamed Nutrisoy. Pty Ltd. by 1987).
Manufacturer's Address: Rear 355 Parramatta Rd., Leichhardt, NSW 2040, Australia. Phone: 560 0792.
Date of Introduction: 1982. February.
New Product–Documentation: Letter from T. [Tony] Wondal. 1982. Dec. 17 (only stamp-dated envelope survives); Soyfoods Center Computerized Mailing List. 1983. June 20. Owners: Marcea Newman Weber and John Fenwick. Phone: 025-600-792. They make tofu and soymilk.

Letter from Marcea Newman Weber. 1995. Feb. 12. The company moved to 14/2 Paton Place, Manly Vale, NSW 2093 in about 1983, and Pty. Ltd. was added to the company name in about 1984.

Letter from Marcea Newman Weber. 1995. March 3. "We started making tofu in Leichhardt in 1982–first part of the year."

3734. *Soyfoods.* 1982. Soyfoods marketer. Winter. p. 57.
• ***Summary:*** "Mark Brawerman's Pacific Trading Co. distributes a diverse line of frozen and refrigerated soyfoods around the greater San Francisco area. Besides his stock of yogurt, cheeses, juices, eggless honey dairy ice cream, and middle eastern specialty foods, Brawerman distributes soyfoods from three West coast producers including Island Spring (Smoked Soyloaf, Steamed Tofu), Redwood Valley (Almond Creamie, Berry Creamie, Soysage, Tofumous, Missing Egg), and Soyfoods Unlimited (Tempeh, Tempeh Burger). Brawerman also handles two brand name lines of his own, Jolly Licks Non-Dairy Frozen Desserts and Living Lightly. The Jolly Licks line of soymilk ice creams was introduced in July 1980 and includes these flavors: Toasted Almond, Strawberry, Coffee, Carob, Orange, Carob Mint, Vanilla, Chocolate, (in pints and 5 oz cups). The Living Lightly line includes soft and firm tofu (water-packed and vacuum packed), tofu cutlets, SoyMoo beverage (plain, vanilla-cinnamon, in pints and quarts), two flavors of Tofu No-Cheese Cake (Hawaiian, Strawberry, at 12 oz), and six frozen tofu entrees, (Tofu Tamale, 7 and 12 oz; Tofu Enchilada, 12 oz; Tofu Lasagna, 18 oz; Tofu Ravioli, 14 oz; Tofu Italian Salad, 8 oz; and Tofu No Egg Salad, 8 oz)."

3735. Yavelow, Jonathan; Gidlund, M.; Troll, W. 1982. Protease inhibitors from processed legumes effectively inhibit superoxide generation in response to TPA. *Carcinogenesis* 3(2):135-38. Feb. [32 ref]
• ***Summary:*** Protease inhibitors in soybeans and tofu block cancerous tumors. The significance of protease inhibitors in edible legumes and the possible role of free oxygen radicals in tumor promotion are discussed. TPA is the tumor promoter 12-O-tetradecanoyl-phorbol-13-acetate. The tests were done in vitro using human enzymes. Address: Dep. of Environmental Medicine, New York Univ. Medical Center, 550 First Ave., New York, NY 10016.

3736. Yeh, S.W.; Wei, L.S.; Nelson, A.I.; Steinberg, M.P. 1982. Freeze-thaw stability of Illinois soybean beverage. *J. of Food Science* 47(1):299-302. Jan/Feb. [20 ref]
Address: Dep. of Food Science, Univ. of Illinois, Urbana.

3737. Funcación Tao-Fu. 1982. Proyecto piloto para la produccion e introduccion de los productos derivados de la soya en Quito, Ecuador [Pilot project for the production and introduction of soyfoods to Quito, Ecuador]. Quito, Ecuador. iii + 21 p. March 1. Unpublished manuscript. [Spa]
• ***Summary:*** Proposal submitted by Richard Jennings and Ismael Janisch. In Feb. 1980 la Fundacion Tao-Fu began

its work to introduce soy protein foods to Ecuador. To date, they have developed tofu (seasoned and natural), tempeh, soy yogurt, and soymilk. Address: Casilla 252-A, Quito, Ecuador.

3738. Lo Kwee Seong: Speech conferring degree of Doctor of Laws, *honoris causa.* 1982. Hong Kong. 5 p. Unpublished typescript. March 4.
• ***Summary:*** This speech, which begins "Mr. Chancellor [of the University of Hong Kong], I have the honour to present..." contains a biography of K.S. Lo, a history of his work in establishing the Hong Kong Soya Bean Products Co., Ltd. and a history of his community service and personal interests.

"Mr. Chancellor, for his public service Lo Kwee Seong has been honoured by Her Majesty [the queen of England] with the O.B.E. in 1971 and the C.B.E. in 1978." Address: Hong Kong.

3739. Lopez, Alejandro. 1982. El trabajo del maestro Ejo Takata con la soya en Mexico [Re: The work of Zen master Ejo Takata with soya in Mexico]. Letter to William Shurtleff at Soyfoods Center, March 19. 3 p. Typed, with signature. [Spa; eng]
• ***Summary:*** In 1969 Rev. Ejo Takata, a Japanese Zen monk and later Zen master who first arrived in Mexico in 1967, began his work with soyfoods. That year, while traveling in the mountains of Oaxaca state, he became aware of the malnutrition among the Mixes and Mazatecos Indians. With the help of the Japanese agronomist Toshihiko Onuki and of a group of Mexicans from the School of Agriculture of Chapingo and of his Zen A.C. community, he established an experimental soybean farm in Oaxaca and promoted the cultivation of soybeans and the use of soyfoods among the Indian communities. He taught the Indians how to make soymilk and how to use the okara (soy pulp) in making corn tortillas. He gave demonstrations in more than 100 communities and in almost all of these the soyfoods were received with such enthusiasm that they became and remain a part of the daily diet. They are made from soybeans now grown locally by the Indians. In 1971 Takata and co-workers opened a dining room at the Universidad Nacional Autonomo de Mexico. During the next 6 months they gave demonstrations and prepared 200 meals a day based on soyfoods including soymilk, okara with green vegetables, tortas with fresh soy puree, tofu in various recipes, crackers (*galletas*), breads, etc. In 1972 they began to give soyfoods demonstrations to the National Workers Syndicate of the ISSSTE, and to peasants and farm workers' organizations. They traveled widely into the countryside and their presentations and food were always well received. This work played a significant role in paving the way for soyfoods in Mexico. In 1973 the President of Mexico, Lic. Luis Echeverria, at a reception, recognized Rev. Takata for the work he had done with soybeans and soyfoods, then inaugurated a national soy program. In 1976 Takata and colleagues established an organization to teach appropriate technology (for food and energy), including soyfoods production. This work expanded in 1981 to the application of Japanese low-cost soyfoods equipment to small businesses, and participation in a national food program called Sistema Alimentario Mexicano (SAM). Takata and his co-workers have demonstrated vividly what individuals can do to help bring soybeans and soyfoods to the people in a country where they are not known. Address: Lic. Alejandro Lopez, Zen A.C., Ave. Revolucion #2036, San Angel, Mexico, DF, Mexico.

3740. Lo, Yvonne. 1982. Work with Vitasoy (Interview). *SoyaScan Notes.* March 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Yvonne has been involved with the company since 1978. Her father, K.S. Lo is now writing a book on pottery and trying to get in published in England.

Wai-ta means "vitality" in Chinese and Waita Ming is the word for "vitamin(s)."

The drop in Vitasoy's during 1974 and 1975 was due to a combination of recession and terrible inflation in soybean and sugar prices, which essentially tripled production costs. Shurtleff would like year by year statistics for sales of Vitasoy during the 1970s if possible.

Vitasoy in malt flavor was introduced in the mid-1960s.

Tetra Pak is more expensive than bottles; at one time that Pak was 45% of total costs. Recent prices in HK$ (Hong Kong dollars) for Vitasoy plain and malt were: Bottles: For plain–7 oz $0.60 and 10 oz $0.80. For malt–8 oz $0.80. Tetra Pak (8 oz / 250 ml) was $0.90 for plain and $1.00 for malt.

As of 1981 the company sells more bottles than Tetra Pak cartons, however Tetra Pak sales have increased by 50% a year for the past 3 years. Why does HKSBP but Tetra Pak cartons if they are more expensive? They are safer, more modern, and more stylish.

The company is now in the process of changing its name. Shurtleff suggests "Vitasoy." The original name was the Hong Kong Soyabean Co. Later that was changed to Hong Kong Soya Bean Products Co., Ltd. Yvonne does not know when that change was made.

The company is not yet publicly held; it is owned by the Lo family. Yet the family is thinking about going public.

In Hong Kong, Young and Rubicon, designers, have the HKSB account. Address: Vitasoy USA, San Francisco, California.

3741. Kojima, Yoshiko. 1982. Re: The soymilk industry in Japan. Letter to William Shurtleff at Soyfoods Center, March 25–in reply to inquiry. 4 p. Typed, with signature on letterhead.
• ***Summary:*** In Japan, at present the four largest soy milk

makers are given below in descending order of production [largest first]:

1. Kibun Health Foods K.K., 1-11-8, Shin-Sayama, Sayama-shi, Saitama pref. 350-13. Tel. No. 0429-53-7001.

2. Okazaki Marusan K.K., 1, Aza Arashita, Niki-cho, Okazaki-shi, Aichi-pref. 444-21. Tel. No. 0564-45-3111.

3. Mitsubishi Chemical Foods Co., Ltd., 5-13-12, Ginza, Chuo-ku, Tokyo 104. Tel. No. 03-542-6499.

4. Kyushu Milk Co., Ltd., 4311 Moto-machi, Oita-shi, Oita-pref. 870. Tel. No. 0975-43-4135.

About 40 companies are producing soy milk in Japan. Those who are the members of Soy Milk Association are shown on the attached sheets.

The first commercial soy milk in Japan was made in 1959 by Saniku Foods–Food Div. of Seventh Day Adventist group in Japan under the instruction of Dr. Harry Miller.

With best regards, Sincerely,...

The attached sheets are titled "List of soy milk producing companies in Japan who belong to the Japan Soymilk Association." The name, address, and phone number of 17 companies are given. These include the four largest soymilk makers given on page 1. Address: Associate Country Director for Human Nutrition, American Soybean Association, 11th Floor, Akasaka Tokyu Building, 2-14-3 Nagata-cho, Chiyoda-ku, Tokyo 100, Japan.

3742. Ponce Aguirre, Joaquín. 1982. Re: Soyaven, soy based infant formula. Letter to William Shurtleff at New-Age Foods Study Center, March 27. 1 p. Typed, with signature.
• ***Summary:*** His company produces Soyaven in Mexico. Address: General Manager, Productos Alimenticios Delicias, S.A., Apartado Postal #376. 33000 Dc. Delicias, Chih México.

3743. Bhatnagar, Prem Swaroop; Ram, Harihar. 1982. [Soybeans in] India. *INTSOY Series* No. 22. p. 143-48. J.B. Sinclair and J.A. Jackobs, eds. Soybean Seed Quality and Stand Establishment (College of Agric., Univ. of Illinois at Urbana-Champaign). [10 ref]
• ***Summary:*** Contents: Introduction. Soybean research. Varietal improvement. Production technology. Plant protection. Soybean development. Food uses and utilization pattern. Feed uses of soybean in livestock and poultry industry. Acknowledgment.

"The crop (mainly black-seeded) has long been grown in India in the northern hills and other scattered pockets under various names, such as Bhatmas, Kalitur, and Bhat... Mahatma Gandhi advocated the popularization of soybeans among the masses... They produce roughly 2.5 times greater yield than other pulse crops and have about double the quantity of protein...

"Encouraged by the promising results of systematic studies at Pantnagar and Jabalpur in 1963 using soybean cultivars from the U.S.A., in 1967 the Indian Council of Agricultural Research launched an interdisciplinary, multilocational, coordinated research project on soybeans. The headquarters of the All-Indian Coordinated Research Project on Soybeans, at Pantnagar, initially had three main centers and six subcenters. However, during the Fifth Five-Year Plan, the project was expanded to five main centers and twelve subcenters to cover different agroclimatic regions of the country. In addition, soybean research is voluntarily conducted at various locations...

"The cultivar development program started in 1963... With our meager beginning of about 300 ha of soybeans in 1968, the coverage in soybeans has steadily increased to about 600,000 ha in Kharif in 1980-81...

"In India, various soybean products similar to conventional dishes have been standardized at G.B. Pant University of Agriculture and Technology, Pantnagar; J. Nehru Krishi Vishwa Vidyalaya, Jabalpur; University of Agricultural Sciences, Bangalore; CFTRI, Mysore; and other places. Products of oriental origin as well as those similar to western products like bread, biscuits, cake, pastry, and soy milk have become very popular, and various kinds of manufactured products, namely, Nutri-nuggett, Protein-plus, Protesnoc, Shakti-ahar, and Soya-stattu are available. Commercial organizations have been making extrusion products, using the Wenger X-25 Extrusion Cooker and full-fat and defatted soy flour. A considerable quantity of soybeans is being solvent-extracted; the cake is exported for animal feed, and the oil is used for hydrogenated fat production.

"The pattern of soybean utilization in India is based on both Japanese and American types... The main problems in expanding the area under soybeans in India are the limited market and the uncertainty of the financial return." Address: 1. Project Coordinator, All-India Coordinated Research Project on Soybean (ICAR); 2. Soybean Breeder. Both: G.B. Pant Univ. of Agriculture and Technology, Pantnagar, Nainital, U.P., India.

3744. **Product Name:** Tofu Burger.
Manufacturer's Name: Bud, Inc.
Manufacturer's Address: 1100 Wicomico St., Baltimore, MD 21230.
Date of Introduction: 1982. March.
Ingredients: Natural nigari tofu, carrots, cabbage, onion, celery, okara, soymilk, sesame seeds, sunflower seeds, soybean oil, sea salt, spices.
Wt/Vol., Packaging, Price: 7 oz vacuum pack.
How Stored: Refrigerated or frozen.
Nutrition: Per 3.5 oz.: Calories 190, calories 12 gm, carbohydrates 11 gm, fat 12 gm, sodium 250 mg (250 mg/100 gm).
New Product–Documentation: Label. 1982. March (dated). 4.5 inches square. Black and white on yellow. "Keep frozen. Completely vegetarian. All natural. No

preservatives." Logo reads: "Soyfoods for a healthy world"; This company is run by a Taiwanese family.

This product is still being sold with the same label in July 1992.

3745. Gupta, S.K.; Arora, Anil. 1982. Development of jowar-soybean-skim milk based weaning food. *Indian J. of Dairy Science* 35(1):62-67. March. Based on the junior author's MSc thesis. [13 ref]
• ***Summary:*** "Although India is the [world's] third largest producer of milk, because of its burgeoning population, the per capita consumption of milk amounts to only 136 gm. Milk is quite expensive and thus not within the reach of a large majority of our population."

"A process was standardized for the manufacture of roller dried cereal based weaning food by combining jowar, soybean and skim milk... The formulation 60:30:10 had the highest PER [Protein Efficiency Ratio] (2.6, compared to 2.5 of casein). All the formulations were acceptable as powder, as gruel containing 15% sugar (on dry matter basis) and without or with strawberry flavour. The powder could be stored for more than 120 days at room temperature (37ºC) in polyethylene bags. The JSM [jowar-soybean-skim milk] weaning food could be manufactured at an estimated cost of only Rs 8.00/kg." Address: Div. of Dairy Technology, National Dairy Research Inst., Karnal-132 001, India.

3746. Herath, H.M.E. 1982. [Soybeans in] Sri Lanka. *INTSOY Series* No. 22. p. 172-75. J.B. Sinclair and J.A. Jackobs, eds. Soybean Seed Quality and Stand Establishment (College of Agric., Univ. of Illinois at Urbana-Champaign).
• ***Summary:*** Contents: Introduction. Liquid soymilk. Dried soymilk. Full fat soy flour. Soy-fortified bakery and other products. Low cost weaning food. Tofu. Tempeh. Soy dhal. Home level training and demonstrations.

"At the present time, the government has included soybeans with a few other field crops into a floor price system. During the last 12 months, the demand for soybeans has increased tremendously, with their use by some agencies in fortification programs... There is an immediate demand for 30,000 ha of soybeans. This target will be achieved by 1982.

"The bulk of the area under soybeans is presently confined to the rainfed highland... The primary objective of the Sri Lanka program is to develop a balanced soybean industry including production, marketing, processing and utilization...

"Accomplishments of the Soybean Food Research Centre (SFRC) include: Liquid soymilk. Dried soymilk: Nearly 5,000 lbs of dried soymilk (DSM) was manufactured... as a coconut milk extender/substitute. DSM has been found acceptable as a coconut milk extender by General Hospital in Kandy and Teaching Hospital in Peradeniya. The Rajarata Food Grain Processing Co., Ltd., a joint venture of the GSL and the private sector, is putting up a 4-ton FFSF/DSM plant in Maha Illuppallama, under the technical guidance of the staff at the SFRC.

"Full fat soy flour:... Nearly 70,000 lbs of FFSF has been produced at the pilot plant and sold through various sales outlets for fortifying wheat/rice flour at 5-10 percent levels... Soy-fortified noodles are being successfully marketed by Forbes and Walker...

"Tofu: Regular production of about 20 lbs of tofu per day has been done with a view to testing its acceptance for use in various curry preparations... Tempeh: Processing parameters for the production of tempeh at the cottage scale have been standardized... Soy dhal.

"By May, 1981, 1,077 trainees had followed the one- to two-week regular course, and 483 had completed the 'Sandwich Course.' More than one hundred demonstrations have involved about 6,000 participants, both from governmental and voluntary organizations." Address: Coordinator, Sri Lanka Soyabean Production Project, Deputy Director of Horticulture, Ministry of Agricultural R&D, Sri Lanka.

3747. **Product Name:** [Koshin Soymilk Pudding].
Foreign Name: Kôshin Tônyû Purin.
Manufacturer's Name: Koshin Nyugyo (Koshin Milk Co.).
Manufacturer's Address: Japan.
Date of Introduction: 1982. March.
Wt/Vol., Packaging, Price: 100 gm Styrofoam cup with legs.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. This product was introduced in March 1982 in a 100-gm cup with Styrofoam legs, and distributed in many parts of Japan. Company name with diacritics is: Kôshin Nyûgyô.

3748. **Product Name:** [Koshin Soymilk (Orange, Strawberry, With Blueberry Sauce)].
Foreign Name: Kôshin (Orenji, Sutoroberii, Buruuberri Soosu-iri).
Manufacturer's Name: Koshin Nyugyo (Koshin Milk Co.).
Manufacturer's Address: Japan.
Date of Introduction: 1982. March.
Wt/Vol., Packaging, Price: 100 gm Styrofoam cup with legs.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. These products were introduced in March 1982, each in a 100-gm cup with Styrofoam legs, and distributed in many parts of Japan. Company name with diacritics is: Kôshin Nyûgyô.

3749. **Product Name:** [Sujaata Original Soymilk].
Foreign Name: Sujaata no Gen Tônyû.
Manufacturer's Name: Nagoya Seiraku.

Manufacturer's Address: Japan.
Date of Introduction: 1982. March.
Wt/Vol., Packaging, Price: 500 ml long-life Pure Pak carton.
How Stored: Refrigerated.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that this product was introduced in March 1982 in a long-life Pure Pak and distributed nationwide.

3750. Quebral, Florenco C. 1982. [Soybeans in] The Philippines. *INTSOY Series* No. 22. p. 166-71. J.B. Sinclair and J.A. Jackobs, eds. Soybean Seed Quality and Stand Establishment (College of Agric., Univ. of Illinois at Urbana-Champaign).
• ***Summary:*** Contents: Introduction. Cultivar improvement. Planting. Inoculation and fertilization. Pests and diseases. Intensive cropping. Utilization. Costs and returns. Marketing. Marketing program. Areas that need attention. Cooperating agencies.

"The domestic supply of soybeans has never been sufficient to meet national demands for food, feed, and industrial uses. Total domestic soybean production in 1978 was reported to be 7,099 metric tons. Approximately 176,000 metric tons of soybeans, costing $30.8 million, were imported.

"To boost domestic production, the government has launched projects like Masaganang Maisan, the white corn and feed grains program, and the National Soybean Development Program...

"Researchers at the University of the Philippines at Los Baños have produced bottled soymilk (Philsoy) using the hot water grind technique... Fermented soybean products, such as soy sauce, soy cheese (tokwa [tofu]), soy paste (miso), soy curds (tahuri [tofu in brine]), and canned salted beans (tausi [fermented black soybeans]) are the most common soybean products used as ingredients in traditional Filipino dishes. A cheese-like product served with sugar syrup (taho) is sold by ambulant peddlers in urban centers." Address: Prof. of Plant Pathology, College of Agriculture, the Univ. of the Philippines at Los Baños.

3751. Saio, Kyoko; Nikkuni, Ikumi; Ando, Yoko; Otsuru, Masaru; Takeuchi, Yutaka; Kito, Makoto. 1982. Soybean quality changes during model storage studies. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 40. p. 189-95. March. [14 ref. Eng; jap]
• ***Summary:*** Reprinted from *Cereal Chemistry* 57:77-82 (1980). Address: 1-2. National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan.

3752. Senanayake, E.L. 1982. Soybeans as food through the ages. *INTSOY Series* No. 22. p. 3-4. J.B. Sinclair and J.A. Jackobs, eds. Soybean Seed Quality and Stand Improvement (College of Agric., Univ. of Illinois at Urbana-Champaign).
• ***Summary:*** "It is true that my country [Sri Lanka] goes back 2,523 years and has not suffered a great deal from famine. But in the recent past, in 1973, '74, and '75, there was an unprecedented drought, and I saw people eating things that normally the people of our country do not eat.

"The soybean, which is called a miracle bean, is fairly new to us. Prior to the Second World War, the late Mr. Walter Moragoda, Chief Propaganda Officer in the Agriculture Department, encouraged the growing of soybeans. But the crop was adopted only in the village home gardens. We owe a great debt of gratitude to the late Mr. Bill Golden, who, with his untiring efforts, interested the Agriculture Department and the people of Sri Lanka in the soybean. His efforts got us into INTSOY, which has benefited us greatly. Since 1975, through UNDP and FAO assistance, we have had the assistance of Dr. Carl Hittle and his team, who have developed soybeans to a great extent in this country. We must thank UNICEF and CARE for having sponsored the pilot factory at Gannoruwa...

"I am happy to see Mrs. Y.Y. Kim here in this hall. [Note: She is the wife of Gai W. Kim, of UNDP, Sri Lanka]. She, in her own silent way, has been propagating the use of soybeans at the village level... Mrs. Kim has taught housewives to use the ordinary grinding stone to reduce soybean seed to a powder that is edible... I think CARE, by introducing Thriposha, has introduced an infant milk food that I hope will catch on in the future and not only stop the drain of our foreign exchange in importing infant milk foods but also give our children a wholesome protein diet...

"We are experimenting with the possibility of using 10 percent soybean flour in baking our bread, which will save a tremendous amount of money spent in foreign exchange. Soya milk for infants is also being promoted by the new Soy Foods Research Centre (SFRC)." Address: Minister, Ministry of Agricultural Development and Research, Government of Sri Lanka.

3753. Soy Plant Co-op Inc. (The). 1982. Price list effective 3/22/82 [22 March 1982]. Ann Arbor, Michigan. 1 p. 28 cm.
• ***Summary:*** This typewritten sheet contains three columns: Supplier, product, and price. The Soy Plant is supplier of (packaged or in bulk): Tofu (1 lb tub), plain soy milk and flavored soy milk (quarts), tempeh (8 oz), soysage (8 oz), miso garlic dressing (16 oz), Soyanaise (soy mayo, 16 oz), carob tofu pies, missing egg salad, tofu spinach quiche, gomaseao [gomashio]. Other suppliers are Micro Farms (alfalfa- or mung bean sprouts), Westbrae Foods (miso–3 types), The Grocery (The Tofu Cookbooklet), and Learning Tree (tofu kit, $13.50 each).

New products available soon: Tempeh salad. Tofu tahini spread. Address: 711 Airport Blvd., Suite #1, Ann Arbor,

Michigan 48104. Phone: (313) 663-8638.

3754. *SoyaScan Notes.* 1982. Chronology of Great Eastern Sun Trading Company in North Carolina. 26 Jan. 1994. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1982 March–The company is founded by Barry Evans. Martin Roth is the first manager. The original purpose is to be a distributor for the miso made by American Miso Company. But the company soon decides to import Japanese macrobiotic products from Mitoku (the first order was placed in Jan. 1982) and later to become a manufacturer.

1984 July–Great Eastern Sun starts to import Ah Soy (soymilk, in chocolate, vanilla, and original flavors). Made in Japan by San-iku Foods, and sold in a stand-up foil retort pouch, it soon becomes very popular. Don DeBona is the first product manager. Address: 92 Macintosh Rd., Asheville, North Carolina 28806.

3755. Vijayalakshmi, K.; Vaidehi, M.P. 1982. Nutritional quality of tofu from soymilk and blends of soymilk, sunflower seed milk and skim milk. *Nutrition Reports International* 25(3):519-24. March. [7 ref]
• ***Summary:*** Tofu made from Soy and Skim Milk (60+40) contains the highest total protein (52.28% dry weight basis) when compared to Soy Tofu (47.38%) or Soy + Sunflower seed milk (44.27%) or Soy + Sunflower seed milk + Skim milk (49.17%).

Note. This is the earliest English-language document seen (Aug. 2013) that contains the term "Sunflower seed milk." Address: Dep. of Rural Home Science, Univ. of Agricultural Sciences, Bangalore 560024, India.

3756. Yeo, Alan. 1982. Re: Brief history of Yeo Hiap Seng's work with soymilk. Letter to William Shurtleff at Soyfoods Center, April 1–in reply to March 24 inquiry. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "1. Our Company first introduced commercial soybean milk in bottle in Singapore in the year 1954.

"2. The name of the product was 'Beanvit.' Subsequently we changed it to "Yeo's Soybean Drink.

"3. It started as a sterilized bottle product.

"4. In 1967 we packed it in tetra pak tetrahedron shape (285 ml) aseptically. This was changed to tetra brik (250 ml) in 1974.

"Please note that we were the first Company in the world to use this form of aseptic packaging for soybean milk.

"5. The product is very well accepted in Singapore and Malaysia.

"6. We are not certain which year Vitasoy started commercial production in Hongkong. We believe they started after 1954.

"7. We do not have any articles on soybean milk.

"8. Soon after the introduction of soy milk in tetrahedron, we produce another product called 'Vitabean' in the same packaging. Vitabean is soybean milk fortified with multi vitamins which contain half the minimum daily requirements of most of the essential vitamins. The ultra high temperature treatment made this addition of vitamins possible. The sterilization process would have destroyed most of the added vitamins."

"Yours sincerely,..." Address: Managing Director, Yeo Hiap Seng Ltd., 950, Dunearn Road, Singapore 21. Phone: 662266.

3757. Tally, Gene. 1982. The Coca-Cola Company's work with soymilk in Brazil (Saci) and Mexico (Samson) (Interview). Conducted by William Shurtleff of Soyfoods Center, April 2. 2 p. transcript.
• ***Summary:*** The Coca-Cola Co.'s (CCC) first protein drink was a whey product in Surinam–the forerunner of Sansom in Mexico. Gene is quite sure that none of the early Samson products contained soy. The trademarks say that the protein source can be whey or soy but all have been whey.

CCC has never marketed a soy based beverage outside of Brazil–where they marketed Saci. Coke's first financial success with a protein fortified beverage was with whey Samson in Mexico. In Brazil, soy Saci was a financial disaster. After inflation gets under control in Brazil, CCC will try a joint venture there with mass market retail soymilk. They will steer clear of government programs such as the school feeding program.

In Japan, Fuji Purina does not like to produce soy protein isolate because the effluent causes environmental problems and expenses. They do make some but they buy most of what they use or sell from Ralston Purina in the USA. Address: Coca-Cola Co., Atlanta, Georgia.

3758. Shurtleff, William; Aoyagi, Akiko. 1982. History of soymilk and dairylike soymilk products. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 53 p. April 4. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. Contents: Introduction. Etymology. Four stages of growth. Part I: History in Chinese-speaking Asia. Origin and early development. Roots of East Asia's soymilk renaissance. Hong Kong and Vitasoy. Singapore. Taiwan. Part II: History in non-Chinese speaking Asia. Japan. India. Philippines. Vietnam. Indonesia. Thailand. Malaysia. Korea. Sri Lanka. Part III: History in Europe. The early years (1739-1919). 1920-1939. 1940-1959. 1960-1980. Part IV: History in the United States. The early years (1898-1919). 1920-1939. 1940-1959. 1960-1980. Part V: History in Latin America and Africa. Part VI: Soymilk overview and future. Part VII: Dairylike soymilk products (nonfermented). Soymilk ice cream, 1918. Soymilk cream and whipped cream, 1932. Soymilk custards and puddings, 1935. Soymilk mayonnaise, 1936. Soymilk shakes, 1944. Soy nog, 1944. Nonfermented

soymilk cheese, 1973. Other.

Note: This is the earliest English-language document seen (Dec. 2003) that contains the term "soymilk shakes" (or "soymilk shake"). Address: Lafayette, California. Phone: 415-283-2991.

3759. Welters, Sjon. 1982. Re: Recent developments with soyfoods in Europe, and ties with macrobiotics. Letter to William Shurtleff at Soyfoods Center, April 16. 6 p. Typed, with signature on letterhead (photocopy).

• ***Summary:*** This letter, whose letterhead reads "Manna Natuurlijke Levensmiddelen," contains names and addresses of many new soyfoods companies, many of them started by people interested in macrobiotics. Names and addresses of the following companies are given: Tofu Denmark (in Valby, run by Per Fruergaard, a macrobiotic), Bernard Storup, Ab & Paulien Schaft (Dutch, setting up a small shop in Baillestavy, France, to make miso, shoyu, natto, and koji), Traditions du Grain (Jean Luc Alonso is setting up a macrobiotic tempeh shop in Ivry France; they will start this summer), Paul Jones (Tofu shop in London), Saskia de Jong (may make miso in Ireland), de Brandnetel (tofu shop in Antwerp, Belgium), Jonathan (makes tofu, ganmo, seitan, mochi in Ekeren, Belgium. Run by J. v. Ponseele), Seven Arrows (Leuven, Belgium; making tofu), Lima Foods (now sell miso made at their plant and farm in France), Witte Wonder (Den Haag, Netherlands), De Morgenstond (Bakkeveen, Netherlands), Jakso (Heerewaarden, Netherlands. Run by Peter Dekker. The first and only shop making tempeh from organic soybeans), Firma Lembekker (Amsterdam), Unimave (Lisbon, Portugal), Jose Parracho (Setubal, Portugal), Swame [sic, Swami] Anand Svadesha (Furth im Wald, West Germany), Bittersuess (Cologne, West Germany. Attn: Thomas Kasas/Karas). Three distributors of soyfoods and natural foods in Germany are YinYang (Berlin), Rapunzel (Heimraadshofe), and Mutter Erde (Werbelen). In Finland: Luonnonruokakauppa AUMA (Helsinki). In Switzerland: Verena Krieger of Sojalade (Engelberg, tofu shop), Hans Rudolph Opplinger (Cham, tofu shop), Marty Halsley (Nyon, tofu & tempeh), Restaurant Sesam (Bern). P. Ton van Oers is a Dutch priest who works in Kananga, Zaire. The natives have grown soya for 10 years and he is thinking of making tofu and soymilk from them.

"In Great Britain the East West Centre is very active in promoting soyfoods. As a part of the Kushi Institute program they have home-scale processing, in which tofu, tempeh, and miso-making are taught by Jon Sandler [Sandifer?]. He is the tempehmaker of the EWC too at Community Health Foundation, 188 Old St., London EC1. In the Netherlands, a great deal of soyfoods promotion is done by the East West Center and Manna. As you probably know, Manna was the first to introduce miso, tamari, shoyu, tempeh, tofu and koji to the larger public and we are still the main promoters of soyfoods as part of a more natural, vegetarian, and economic diet. Manna has been followed by a lot of other distributors of natural and health foods. We have two competitors in the tofu business: Witte Wonder and De Morgenstond.

"At the moment I'm the only teacher giving lectures on homescale miso-, tofu-, tempeh-, shoyu-, tamari-, natto-, and koji-making in the Netherlands. Mainly at the East West Centre and sometimes at different places in the country. People are starting to get interested."

Note: This is the earliest document seen (Jan. 2003) concerning the work of Swami Anand Svadesha of West Germany, and of Thomas Karas of Bittersuess (Cologne, West Germany). Address: Stichting Natuurvoeding Amsterdam, Meeuwenlaan 70, 1021 JK Amsterdam-N, Netherlands. Phone: 020-323977.

3760. Kim, Gai W. 1982. Re: Details of introducing tofu [Boncheese] to Sri Lanka. More on replacing coconut milk with soymilk. Letter to William Shurtleff at Soyfoods Center, April 23–in reply to inquiry of April 13. 2 p. Typed, with signature.

• ***Summary:*** "Thank you for your letter dated 13 April 1982 asking me for information about Sri Lanka's first tofu shop."

The name of the show was Boncheese, 128 Kitulwatte Rd., Colombo, Sri Lanka. Phone: 596-992. Owner: Mr. U.N. Gunasekera; he is one of the few big contractors in Sri Lanka.

Work on the factory was completed by March 1980. The product, Boncheese, was publicly retailed at a stall in Kolpetty Market, the largest market in Colombo. The factory had to be closed from December, 1980 to March, 1981 due to a shortage of soybeans in the local market. At the moment, Cornel's Super Market, which opened in early August, the only Super Market in Colombo, is the sole sales outlet for Boncheese; 60 lb per day is supplied.

Sri Lankans usually cut tofu into ½-inch cubes and deep fry them before adding them to curry in place of whole boiled eggs or beef. Foreigners and Sri Lankans who have lived abroad are the best customers. "I have already given quite a few demonstrations on how to use tofu but, I think, more efforts should be made.

"I named tofu as 'Boncheese' in order to give Sri Lankans a name that was more familiar to them. Locally any bean is called 'Bonchi.' I added 'Cheese' to make it 'Boncheese' because of its similarity in texture and in the way it is made like *farmer's cheese* which I used to replace with tofu when it as not available.

Sri Lankans use coconut milk to make their curries; it is not only very expensive but also very rich in cholesterol [high in saturated fats]. So far I succeeded in replacing coconut milk with diluted soya paste at the kitchens of Colombo General Hospital and Welikade Prison. The Boncheese factory delivers about 30 kg (dry weight) of soybeans wet ground every morning to those institutions 365 days a year. Since 500 gm of soybean replaces 10 coconuts,

600 coconuts are not used and that means 100% saving in cost to the institutions.

At my urging, the Nutrition section of the Ministry of Plan Implementation already ordered two grinding machines from Bean Machines, Inc. One machine will be given to the Welikade Prison kitchen so that it will not only be self-sufficient in making its own soy paste (at the moment only 30% of the coconut milk is replaced by soy paste) but will also be able to make tofu and soy bread. The prison farms are already growing their own soybeans! Address: c/o UNDP in Sri Lanka, P.O. Box 1505, Colombo, Sri Lanka.

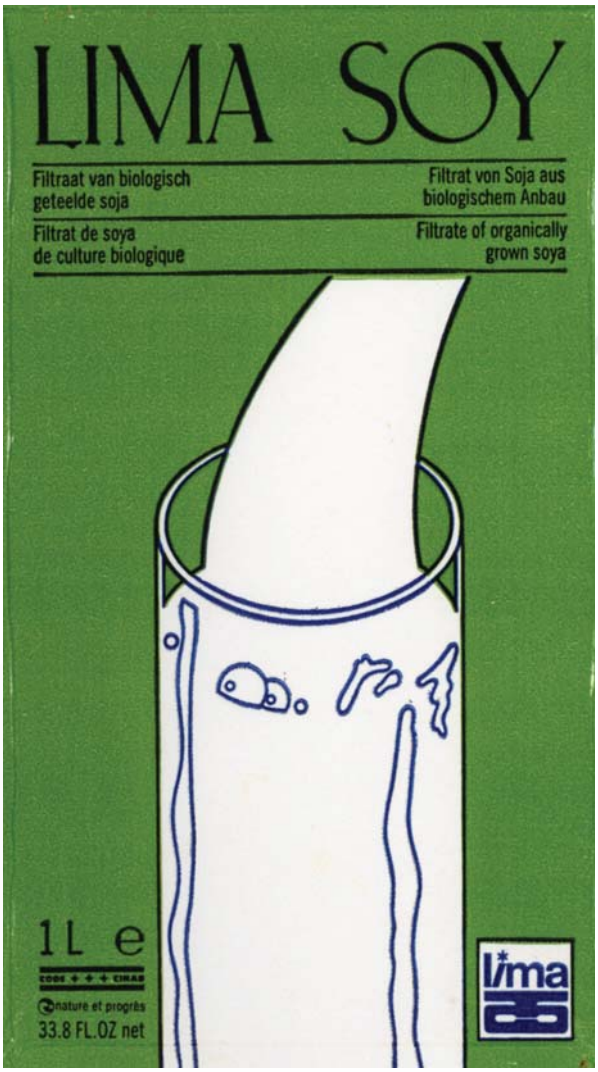
3761. **Product Name:** Soybean Curd, and Soy Milk.
Manufacturer's Name: Dae Han and Company.
Manufacturer's Address: 18300 S.W. Boones Ferry Rd., Durham, OR 97223. Phone: 503-620-8983.
Date of Introduction: 1982. April.
New Product–Documentation: Form filled out by Yeun Mo Koo (Korean). The company started on 1 April 1982.

Talk with Paul Moss, who has worked with Dae Han for 7 years. 1990. May 28. The company name is now Dae Han, Inc., 737 S.E. Alder St., Portland, Oregon 97214. Phone: 503-233-8638. Paul plans to use their plant to make tempeh. Labels sent by Paul Moss. 1990. May 10. The soymilk is now called Fresh Wonder Soy (Plain Soy Beverage). The two types of tofu are Organic Regular Tofu (Japanese Style), and Organic Firm Tofu (Chinese Style). Both are certified kosher by Rabbi Yonah H. Geller.

3762. Everybody's Vegetarian Restaurant. 1982. Menu. Nashville, Tennessee. 1 p.
• ***Summary:*** Contains many recipes using tofu, tempeh, cooked whole soybeans, plus soymilk ice cream ("The original soy milk Ice Bean" in cones, cups, milk shakes, or sundaes), soy sour cream or mayo, soy milk shakes, tofu cheesecake, and apple crisp a la mode. Address: 120 21st Ave. North, Nashville, Tennessee. Phone: 329-2000.

3763. **Product Name:** [Organic Soya Drink].
Foreign Name: Boisson de Soya Organique.
Manufacturer's Name: Les Aliments Horium Foods Inc.
Manufacturer's Address: 1050 rue Lacasse Street, C1-18, Montreal, QUE, H4C 2Z3, Canada. Phone: 514-933-4605.
Date of Introduction: 1982. April.
Ingredients: Extract of Soyabean, water.
How Stored: Refrigerated.
Nutrition: Per 100 gm.: Calories 25, protein 4.4 gm, carbohydrate 3.4 gm, fat 2.5 gm, water 88.6 gm.
New Product–Documentation: Label. 1988, received. 5.5 by 2.5 inches. Red and blue on white. In French and English.

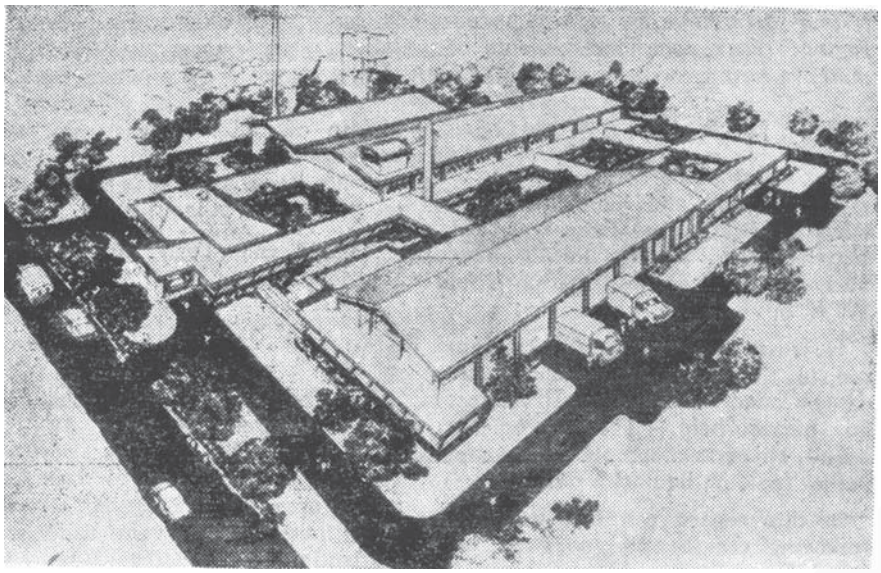
3764. **Product Name:** [Lima Soy (Soymilk)].
Foreign Name: Lima Soy.
Manufacturer's Name: Lima Foods. Made in Belgium by



Jonathan.
Manufacturer's Address: Edgar Gevaertdreef 10, B-9830 Sint-Martens-Latem, Belgium.
Date of Introduction: 1982. April.
Ingredients: Water, organically grown soybeans.
Wt/Vol., Packaging, Price: 0.5 liter or 1 liter Tetra Brik Aseptic carton. Retails for DM 4.40 in Germany (1/90).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 gm.: Protein 3.6 gm, fat 2.6 gm, carbohydrates 1.0 gm, minerals 0.2 gm.
New Product–Documentation: Letter from Sjon Welters. 1982. April 16. "Jonathan is a macrobiotic food company. They make the tofu and soymilk for Lima Foods in Belgium which is sold all over Europe. It is sterilized, so it keeps a long time.

Labels sent 1986 are white, black and blue on green. Soymilk is being poured into a tall glass.

Soyfoods Center Computerized Mailing List. 1982. July 23. Address is Moulin d'Andiran, 47170 Mezin, France. Phone: 58 65 10 02.



Note: This is the earliest French-language document seen (Aug. 2013) that uses the term *soy* to refer to soymilk.

3765. *Soyanews* (*Sri Lanka*). 1982. Soya milk factory comes up. 4(8):1. April.
• ***Summary:*** "A plant to produce dried soya milk at the rate of 4 tons per day is being set up at Maha Illuppallama in the Anuradhapura district. Dried soya milk powder (DSM) in half pound packs is expected to reach the market by the end of the year.

"Nearly all the equipment needed for the processing of dried soya milk powder has arrived. At present, the foundations are being laid and the building, which is pre-fabricated, is expected to be ready by June."

"The Rs. 27 million project to manufacture DSM is the result of a move to overcome the rising price of coconuts, a prime ingredient in the Sri Lankan meal. The Rajarata Food Grain Processing Co. Ltd., which was floated for this purpose, is a limited liability company backed by both the public and private sectors." It was incorporated in Oct. 1980. The company's chairman is Mr. R.S. Wijesekara who is also Chairman of Messrs. Forbes and Walker Ltd."

An illustration (architect's rendering) shows an aerial view of the plant.

3766. *Soybean Digest.* 1982. Chinese feeding trials: "Mo-o-o-ove over Bossie." April. p. 74.
• ***Summary:*** "Chinese dairymen learned firsthand soy-based milk replacers are a cost effective substitute for whole milk. An ASA [American Soybean Assoc.] feeding trial shows calves fed soy-based milk replacer gain more weight and have fewer digestive problems than calves fed whole milk. 'Competition for milk between humans and animals is severe in China,' says ASA animal nutritionist Ken Lepley. 'There isn't enough milk so the Chinese kill male calves at birth to save milk for heifers.' Feeding trials were set up in June at Shanghai Dairy Farm Number Two. Since then China has invited ASA to establish a joint trade office in Peking."

3767. **Product Name:** [Agricultural Cooperative Mirusoy Soymilk {Some varieties contain dairy milk}].
Foreign Name: Nôkyô Mirusooi {Shuruibetsu wa nyû-iri}.
Manufacturer's Name: Zenkoku Nokyo Chokuhan (National Agricultural Cooperative Direct Sale).
Manufacturer's Address: Japan.
Date of Introduction: 1982. April.
Wt/Vol., Packaging, Price: 500 ml paper pack.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. These products were introduced in April 1982 in 500 ml paper packs and distributed Tokyo, Osaka, and Nagoya. Some varieties contained dairy milk. Name of organization with diacritics is: Zenkoku Nôkyô Chokuhan.

3768. Holt, John. 1982. Re: New developments at The Regular Tofu Co. Letter to William Shurtleff at Soyfoods Center, May 1. 1 p. Handwritten, with signature on letterhead.
• ***Summary:*** "Having used your book to learn how to make tofu, we now have a small business here making about 700 lb/week of tofu and about 2,500 tofu burgers per week. We give our okara to a pig farmer... We sell the tofu vacuum packaged. As yet we don't have a means of packaging soya milk. It is sold over here in Tetra Briks and is very expensive. We want to expand the business to make larger quantities of tofu (regular and silken if possible) and to sell soymilk more cheaply... At present, our equipment is very similar, I should imagine, to a small Japanese tofu shop. We use nigari.

An accompanying form states that this company started business in Dec. 1981 and now uses 50-100 lb/day of dry soybeans. Address: 75 Chandos St., Leicestershire LE2 1BU, England. Phone: (0533) 549839.

3769. Ponce Aguirre, Joaquín. 1982. Historia de los alimentos de soya en Mexico [Re: History of soyfoods in Mexico]. Letter to William Shurtleff at Soyfoods Center, May 10. 2 p. Typed, with initials on letterhead. [1 ref. Spa; eng+]
• ***Summary:*** The archives of the Federal Institutions have collected descriptions of the various efforts to cultivate soybeans in our area. The earliest document seen that mentions attempts to grow soybeans in Mexico dates from 1911, when the country was in the throes of revolution. Perhaps for this reason, the project did not prosper. In 1932

experimental plantings were carried out in Veracruz, but were discontinued in 1935. In 1942 seeds were imported from the USA but again the experiments ended in failure. Finally soybeans came to be adapted to Mexican conditions and in 1959 an area of 1,600 ha was planted in the Yaqui Valley in the state of Sonora. The first commercial soyfood in Mexico was Mead Johnson's Sobee, introduced in 1955, for infants and nursing mothers who could not tolerate milk. It is still on the market.

Note: This document contains the earliest date seen for the cultivation of soybeans in Mexico (1911) (one of three documents). The source of these soybeans is unknown. Address: General Manager, PADSA, Productos Alimenticios Delicias, S.A., Apartado Postal 376, Cd. Delicias, Chihuahua 33000, Mexico. Phone: 2-30-93.

3770. Lo, K.S. 1982. Re: Draft copy and questions concerning history of Hong Kong Soya Bean Products Co. Ltd. Letter to William Shurtleff at Soyfoods Center, May 26– in reply to inquiry. 3 p. Typed, with signature on letterhead.
• ***Summary:*** Includes answers to 8 questions asked by Shurtleff: "(3B) I see the greatest opportunity for the growth of Vitasoy in future lies in China where it has the world's largest population and therefore the greatest need for a supplementary food such as vita soy.

"(3C) The sales figures from 1970 to 1981 are as follows: Sales decreased from 4.2 million cases of 24 bottles each in 1970 to 2.5 million in 1975, to 4.4 million in 1980, and 5.6 million in 1981.

"(3D) There is a lot of truth in your statement that most carbonated drinks are harmful to health. But, there is very little that one can do about it until the future generation are better educated as far as selection of food and drinks are concerned.

"(3I) To the best of my knowledge, there is no western company making Soybean milk in the People's Republic of China at the moment.

"(3J) With regard to Puma in British Guiana, Monsanto sold the entire outfit to the local bottler back in 1969. Whatever was marketed after that date was carried out by the local bottler and certainly not by Monsanto." Address: Chairman [and founder], HKSBP Co., Ltd., 41, Heung Yip Rd., Aberdeen, Hong Kong. Phone: 5-528211.

3771. Questions relating to [history of] Vitasoy. 1982. Questions answered on Soyfoods Center letterhead by K.S. Lo and returned on May 26 to SC. 2 p. Unpublished typescript. March 4.
• ***Summary:*** Questions: (1) Concerns many dates. (2) Requires only a very short and simple answer. For (3) See #81197. Address: Hong Kong.

3772. Pautz, Jane Abe Cadwell. 1982. Re: Directory of soyfoods manufacturers in Sao Paulo, Brazil, and comments on the availability of these foods. Letter to William Shurtleff at Soyfoods Center, May 29. 3 p. Typed.
• ***Summary:*** List all known companies in Sao Paulo that make soyfood products. A separate listing is given for each product with the full company name and address. The product categories include: Tofu and tofu products (2 companies). Soymilk (4). Shoyu (3). Sellers of whole dry soybeans (1). Lecithin (1). Soyflour (1; soyflour is available in many stores without a brand name). TSP / TVP (2).

"As you know we have a large Japanese colony here in the country. I am only aware of what is here in Sao Paulo."

"Soynuts are available in health food stores in small unlabeled packages. I have not seen soynut butter. Misso (miso) is plentiful. Soy sprouts are sometimes available in open-air markets along with other Japanese products. They aren't common. Fresh green soybeans [edamamé] are also available at certain times of the year in these markets. Of course there is lots of soyoil. I think that Sanbra is one of the big producers or sales company of the beans [soybeans]. In some of the healthfood stores there is a product available called 'carne de soja' (literally "soy meat [textured soy flour]). There is no brand name and I have not experimented with it."

"I will be working on a book of tofu recipes during this vacation. The publisher wants to publish it yet this year.

"Last year I gave 3 lessons in working with soyfoods at the Nestlé experimental kitchen here in Sao Paulo, and may be working with a new health foods store / restaurant in developing foods. I would like to see them try some typical soy-deli kinds of things. There is a lot of interest here, new stores of 'produtos naturais' [natural food products] and vegetarian restaurants are quite popular." Address: Rua Spinagés 1974 Apto. 61, 01258 Sao Paulo, Brazil.

3773. **Product Name:** [Powdered Soymilk, Soy Coffee, Whole Soybeans, Dehulled Soybeans].
Manufacturer's Name: Casa da Soja.
Manufacturer's Address: Sao Joao, 1436, Centro, Sao Paulo, Brazil.
Date of Introduction: 1982. May.
New Product–Documentation: Letter from Jane Cadwell Pautz. 1982. May 29. "Also this is the only soy restaurant that I know of, but they don't do much with tofu."

3774. Danish Turnkey Dairies Ltd. 1982. Annual report 1981/82. 2 Europaplads, P.O. Box 146, DK-8100 Aarhus C, Denmark. 8 p. 30 cm.
• ***Summary:*** The section titled "The DTD group of companies" (inside front cover) shows that "Foreign subsidiaries" include Integrated Processing Technologies in the USA and Soya Technology Systems Ltd. in Hong Kong [Singapore?]. A diagram shows that "STS" is a "non-milk" company. No further details concerning STS are given.

Note: This is the earliest document seen (July 2013)

concerning Soya Technology Systems (STS). Address: Aarhus, Denmark. Phone: +45 6 12 4155.

3775. Fitzpatrick, Brian. 1982. Soya milk in Asia. In: Theng Chye Yam, W-L Kwik, and C-Y Fong, eds. 1982. Proceedings of Food Conference 1982. viii + 382 p. See p. 261-62. Held 16-20 May 1982 in Singapore. Publ: Singapore Inst. of Food Science & Technology.
• ***Summary:*** Contents: History. Consumption of soymilk. Nutrition. Soymilk- the product. Unprocessed raw materials suitability. Clarified and suspended products. Packaging. Yields for clarified and suspended. Product mix (yogurt, tofu, ice cream). Present market.

Recent introductions of commercial soymilk products include: Green Spot Bangkok (1960), Coca Cola test market of SACI in Brazil (1969), Singapore Cold Storage (1969), Kibun, Japan (1976), and Ace Canning (1980). Address: Alfa-Laval South East Asia, Singapore.

3776. Krieger, Verena. 1982. Die tausend Talente von Tofu [The thousand talents of tofu]. *Natuerlich* 2(5):69-73. May. [Ger]
• ***Summary:*** An excellent overview, with numerous color photos of recipes, products, and plants. "Tofu found its way to Europe not over the steppes of Asia but through the kitchens of North America, starting with *The Book of Tofu* by Shurtleff and Aoyagi."

Contents: What is tofu? Why tofu? Soya–king of the beans (Switzerland imports 100,000 tonnes of soybeans each year to feed to animals). Tofu and its brothers. Is soy an exotic plant? The most important traditional soyfoods of East Asia: Tofu, miso, soymilk, tamari, shoyu and soy sauce (*sojasauce*), tempeh, soy sprouts (*sojakeime*).

3777. **Product Name:** [Supermil Soymilk].
Foreign Name: Supermil.
Manufacturer's Name: Kwang Ju.
Manufacturer's Address: South Korea.
Date of Introduction: 1982. May.
New Product–Documentation: Letter from Kyung Lee, ASA country director, Korea, to William Shurtleff at Soyfoods Center. 1983. Nov. 23. Gives history and production statistics.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 81-83. They produced an estimated 1,272 tonnes in 1983.

3778. Leviton, Richard. 1982. Discovering Japanese soyfoods. *Vegetarian Times* No. 57. May. p. 60-62, 65. [1 ref]
• ***Summary:*** Recently Richard Leviton traveled to Japan with a group of Americans to get a firsthand look at the Japanese soyfoods industry. There he got his first look at the fabled neighborhood corner tofu shop. He discusses tofu (the Japanese consume 10 million cakes a day) and tofu manufacturers (large and small), types of tofu include silken tofu (called kinugoshi), fresh soft tofu called momen. "In the typical supermarket we counted as many as 60 different soyfood items (often several brands or product sizes), ranging from fresh miso and tofu to packaged soymilk and shoyu, natto, dried frozen tofu, yuba rolls and kinako powder."

Also: Takatsuka Marugo (a large tofu maker that churns out 100,000 lb/day of tofu), Yuba Han (a traditional yuba shop in Kyoto), Asahimatsu Kori-dofu Co., natto, Hamanatto, soymilk, cooked soybeans with wakame, soy sprouts, kinako powder, packaged green soybeans in the pods, miso (fresh and freeze-dried), Linda Barber (an American home economist who is teaching at Kobe Girl's College in Nishinomiya, and also teaching American-style tofu recipes to Japanese housewives via television and the print media), and Sasa-no-Yuki, a 279-year old restaurant that specializes in tofu cookery.

Photos show: (1) Eleven different tofu dishes in bowls as served at Sasa-no-Yuki restaurant in Tokyo. (2) A man hanging up fresh yuba at Yuba Han. (3) Members of the group seated on tatami mats on the floor around a huge table enjoying dishes served at Sasa-no-Yuki. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

3779. **Product Name:** [Macrozen {Powdered Soymilk}].
Manufacturer's Name: Macrozen.
Manufacturer's Address: Consulheiro Furtado 704, Liberdade, Sao Paulo, Brazil.
Date of Introduction: 1982. May.
How Stored: Shelf stable.
New Product–Documentation: Letter from Jane Cadwell Pautz. 1982. May 29. "Soymilk in powder form, also whole beans."

3780. Mason, Robert M.; Carden, John L. 1982. Controlled ecological life support system: Research and development guidelines. Moffett Field, California: National Aeronautics and Space Administration (NASA). 99 p. May. 28 cm. Report No. NASA CP-2232–NASA Conference Publication 2232. Proceedings of a NASA workshop held 9-12 Jan. 1979 at Ames Research Center, Moffett Field, California.
• ***Summary:*** Contents: Preface. List of figures and tables. 1. Introduction: Background, approach, overview of report, references (5 refs). 2. Evaluation of a ground based manned demonstration as a milestone in CELSS development: Introduction, summary of workshop findings (Group 1), food production (Group 2), waste processing (Group 3), systems engineering and modeling (Group 4), ecology-systems safety (Group 5). 3. Development requirements for a successful ground based CELSS demonstration (Introduction plus comments from the five groups). 4. Research recommendations (Introduction plus comments from the five groups). Appendixes: A. Individual research recommendations (Group 2). B. Interactions of waste

processing group with other groups. C. Group membership. D. Names and addresses of workshop participants.

"Preface: The purpose of this workshop was to consider research and development guidelines for Controlled Ecological Life Support Systems. (CELSS)" and to "Identify considerations critical to a successful ground-based manned CELSS demonstration (GBCD)." "The workshop was supported by NASA as a part of the work under Grant No. NSG-2323."

In Chap. 3 (p. 21) the Nutrition and Food Processing Group (Group 1) states: "Some conventional sources are advanced (i.e. soy milk, oriental 'cheeses' [such as tofu], fabricated meats, textured vegetable protein, sausages, and candy),..." Much recycling is involved, including "food regeneration from wastes" (incl. higher plants grown in urine). Higher plants have many valuable functions in addition to food production for humans: air revitalization including addition of oxygen and removal of carbon dioxide and certain gaseous contaminants, conversion of wastes into food, aesthetic value, etc. Vegetarian diets, and use of algae (single cell proteins) are considered important.

The first paper in Appendix A is titled "Quantitative analysis of biomass production and compatibility studies of early maturing soybean cultivars for GBCD, by Jagmohan Joshi, Univ. of Maryland (Eastern Shore at Princess Ann). It begins: Justification: Soybean is one of the recommended plants to be grown in GBCD This has been clearly shown by various investigators in the earlier studies conducted for NASA. In CELSS it is very important to know the total amount of biomass produced by each crop." Six early maturing soybean will be grown under hydroponic conditions. Note: This is the earliest document seen (July 1999) concerning space travel and soy. Address: 1. METRICS, Inc.; 2. Georgia Inst. of Technology. Both: Atlanta, Georgia.

3781. **Product Name:** [Nisshin Soymilk (Plain, Coffee, of Mixed Fruits)].
Foreign Name: Sutoreeto, Koohii, Furuutsu Mikksu.
Manufacturer's Name: Nisshin Oil Mills, Ltd. (Nisshin Seiyu K.K.).
Manufacturer's Address: Shinkawa 1-23-1, Chuo-ku, Tokyo, Japan.
Date of Introduction: 1982. May.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. These products were introduced in May 1982 in 200 ml Tetra Brik cartons, and distributed only in the Kantô, Tôkai, Chubu, and Kinki regions, which is most of central Japan from Tokyo to Osaka.

3782. Shurtleff, William; Aoyagi, Akiko. 1982. Soyfoods directory and databook. 1st ed. Lafayette, California: Soyfoods Center. 21 p. May. 28 cm. 2nd ed. published in June as Soyfoods Industry: Directory and Databook. 56 p. [24 ref]
• ***Summary:*** A detailed study of the rapidly emerging soyfoods industry and market. Contains original statistics compiled by the Soyfoods Center through interviews with companies. Contents: 1. Names and addresses of soyfoods manufacturers in the Western world, plus major soymilk, miso, shoyu, and yuba manufacturers in East Asia. 2. Analysis of the soyfoods industry in the U.S. 3. Soyfoods production statistics for America and the West. 4. America's prime soyfoods market regions. 5. The tofu industry in the West: Three-year analysis of the tofu industry in the West. The U.S. Tofu market: overview and outlook. Graph of number of tempeh and tofu manufacturers in the West. North America's twenty largest tofu manufacturers. 6. Analysis of the soymilk industry in the United States. 7. Key institutions working with soyfoods in the West.

Note: This is the first market study published by Shurtleff and Aoyagi. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

3783. Soyplant Co-op Inc. (The). 1982. Price list: Effective 5/21/82 (Leaflet). Ann Arbor, Michigan. 1 p. 28 cm.
• ***Summary:*** This is a photocopy sheet, black on white. At the top center is the company logo, two soybean plants growing out of a round Planet Earth. Office hours: 9:00–4:00 M-F. These are wholesale prices, with suggested retail prices listed in parentheses. "A minimum order of $25.00 is required for all deliveries."

Tofu–1# tub. $0.85 per lb ($1.10).

Tofu–Bulk. $0.70 per lb plus 5¢/lb outside Ann Arbor.

Plain soy milk. $0.80 per quart ($1.04).

Flavored soy milk. $0.88 per quart ($1.14).

Plain soy milk–Bulk. $2.10 per gallon (5–gallon minimum).

Flavored soy milk–Bulk. $2.50 per gallon (5–gallon minimum).

Tempeh. $0.90 per half lb ($1.25).

Tempeh–Bulk. $12.00 per 8 lb sheet. Address: 771 Airport Blvd. Suite 1, Ann Arbor, Michigan 48104. Phone: (313) 663-8638.

3784. **Product Name:** [Yakult Soymilk (Plain, Coffee, Orange, With Corn)].
Foreign Name: Yakuruto Rakkumii (Tônyû Pureen, Koohii, Orenji, Koon).
Manufacturer's Name: Yakult (Yakuruto Honsha).
Manufacturer's Address: Japan.
Date of Introduction: 1982. May.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: Toyo Shinpo (Soyfoods News). 1982. May 1. Yakuruto has started selling four flavors of soymilk (Plain, Orange, Corn, Coffee) in Tetra Brik cartons for about 80 yen per pack, They are buying the soymilk from Mitsubishi Kasei, but they are planning to develop their own fermented soymilk later.

K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. States that Yakult (a famous Japanese maker of fermented dairy milk products) introduced these 4 products in May 1982, in 200 ml long-life packs, and distributed them in Tokyo, Nagoya, and Osaka.

Product with Label (200 ml Tetra Brik carton) purchased in Tokyo in June 1983. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center; Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64.

3785. **Product Name:** [Soymilk (Plain, Coffee, or Banana)].
Foreign Name: Pureen, Koohii, Banana.
Manufacturer's Name: Yamato Shokuhin (Yamato Foods).
Manufacturer's Address: Japan.
Date of Introduction: 1982. May.
Wt/Vol., Packaging, Price: 200 ml blow-molded polyethylene pack (*buro yôki*).
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. These products were introduced in May 1982 in 200 ml buro packs.

3786. **Product Name:** [Zazen {Powdered Soymilk}].
Manufacturer's Name: Zazen.
Manufacturer's Address: Rua Sao Paulo, Liberdade, Sao Paulo, Brazil.
Date of Introduction: 1982. May.
New Product–Documentation: Letter from Jane Cadwell Pautz. 1982. May 29.

3787. Nave, Robert W. 1982. Re: History of work with soyfoods and soybeans at SPRA in India. Letter to William Shurtleff at Soyfoods Center, June 5. 7 p. Typed (single spaced), with signature on letterhead.
• ***Summary:*** Gives details of his pioneering work, starting in 1968 when he was working at the Nave Technical Institute, Shahjahanpur, UP, India. In March 1970 Nave visited Joe Wenger and his plant in Sabetha, Kansas. He was impressed and the Wenger company then offered to give him the machinery (a Wenger X-25 extruder) necessary to set up a pilot project making extruded soy flour in India. During 1970 USAID in Delhi and the G.B. Pant University joined the proposed project. "From 1970 to late 1971 or early 1972 the project operated as NTI Soya Products. It was set up as a Part of Nave Technical Institute. After the University became a partner, the name was changed to Soya Production & Research Association. The association has been set up as a charitable company...

"SPRA produced Nutri Nugget (TVP), Protesnac (a soya-rice spiced snack), Protein Plus (a corn-soya weaning food), Nutriahar (a wheat-soya–fullfat [full-fat]–weaning food) and extruded fullfat soya flour. SPRA has not produced soymilk, tofu, etc. except on an experimental basis."

SPRA started building a factory in March 1971 at Bereilly. In July 1972 SPRA produced 40 tons of corn-soy weaning food for some feeding trials to be conducted by USAID in Madras state. Nutri Nugget (TVP) was the company's first product; the defatted soybean meal was originally purchased from Prag Ice & Oil Mills, and then from General Foods of Indore (owned by the Sahara brothers). In 1978 the company began having problems with its factory manager (George Grundy) and with production. Grundy and an electrical contractor, Kalim, had been approached by the Sahara brothers to build an extruder for them and set up a competing factory. "Grundy and Kalim then took our machinery apart on the pretext of maintenance and copied it, mostly at SPRA expense."

"Nutrela is produced by Ruchi. Ruchi is the name of one of Kailash Shahra's daughters after whom the company is named. The first extruder they used in this plant is the one made by Grundy as explained above. Unfortunately and in spite of their large media campaign their impact has been negative. They have gone so far as to provide retailers with new packages into which to fill the contents of the outdated packages which did not sell. Because they have little or no quality control, neither Meal Maker nor Nutrela sell well in the markets where Nutri Nugget is available. Both took the wordings used on their boxes and in their ads almost verbatim from the Nutri Nugget boxes and ads...

"Dr. Al Nelson was the key figure in setting up the soybean utilization lab at Pantnagar. Dr. Surjan Singh was head of the department of Food Science and Technology and in charge of the utilization lab. Both were key people in the University's roll in working with us when we were setting up the SPRA–although it had already existed for almost a year at NTI Soya Products.

"As far as I know, no one is extracting soy oil by expellers. All is being extracted by solvent. In Nagpur, someone who had been in the states for some time set up a soy milk project which has local distribution and was a private commercial effort...

"The government figures on soybean cultivation are not accurate. It is less than they say–largely because certain agricultural officers pad figures in order to make their efforts look better. However, cultivation is on the increase and will increase even faster when the market becomes adequately developed to assure sale of the crop.

"Almost as long as I can remember, it has been possible to get tofu in various foods in Chinese restaurants in India. I assume the Chinese were making this for their own limited use but did not try to market it outside.

"I have heard of soy flour being used in idli but think it is very limited if at all. Defatted soy flour and soybeans just

aren't available in most places. I have never seen defatted soya flour on sale in retail stores anywhere. If it is now available, it has come very recently...

"TVP is the major soy food product in India. I imagine the total production of this is not much more than 200 tons per month at present but that this is more restricted by ability to produce than lack of market.

"I think the first solvent extraction of soy oil was in about 1969 or 1970.

"When I was in India last April 1982, the milk production at Pantnagar was closed and Sipso was not doing well. In both cases it seemed to be more because of management problems than anything else. The product was good. I have no knowledge of the Jabalpur plant.

"Possibly 50% of the people in India would eat eggs, meat, fish or poultry if they could afford them. Perhaps 20% eat these regularly. There is a great market for soy foods in India and it will grow at an increasingly rapid rate until India is one of the biggest users of soy foods in the world. It is a natural for soya foods if they are produced in a way that suits Indian tastes and conditions."

Attached is a 3-page news release (undated) about: (1) Dr. Vivian Erasmus, a native of India and general manager of SPRA in Bareilly, Uttar Pradesh, who will be in Minnesota from June 24 to July 13. A full-page biography is given. (2) SPRA in India; it is an association of the Methodist Church in India through the Nave Technical Institute (80% shares) and the G.B. Pant University of Agriculture (20% shares). The Methodist Church in India is affiliated to the United Methodist Church of the U.S. "All surplus earnings of the association are use to support charitable projects." The "main impact of SPRA has been in private homes through distribution and sales of its products in retail outlets. It now has nation-wide distribution. Its products include textured soy protein under the name of Nutri Nugget, a soy rice snack, a wheat soy weaning food and full-fat soy flour. Due to the pioneering work of SPRA, soybean based foods are now well established in India." Address: Compatible Technology, Inc, 7600 Harold Ave., Minneapolis, Minnesota 55427. Phone: (612) 545-0378.

3788. *Medical World News.* 1982. Subbing soy drinks for milk cuts high lipids. 23(12):61. June 7. [1 ref]
• ***Summary:*** High cholesterol levels can be lowered by substituting a soy protein extract for some dietary source of animal protein–according to study director Kenneth K. Carroll (Dep. of Biochemistry, Univ. of Western Ontario, London, ONT, N6A 5C1, Canada). Replacing cow's milk with a soy-protein preparation for 6 weeks reduced plasma cholesterol levels in 5 of 33 subjects with abnormally high initial cholesterol levels. The drinks each contained the same amount of butterfat and calories. Similar replacement of meat or eggs would be possible.

3789. Alfa-Laval. 1982. Standard clarified soy milk plant, 4,500 liter/hour: Budget quotation to the Department of Agriculture, Mozambique. Lund, Sweden. 40 p. June 14. Unpublished typescript.
• ***Summary:*** This is budget quotation no. U2-G/HD/2/2135. The total price FOB is 10,361,500 Swedish crowns, or US$1,360,000, not including packaging equipment or material. The most expensive components are installation and commissioning (2.5 million crowns) and UHT treatment (1,572,300 crowns). Mozambique did not buy this plant. They bought one from Alpro in Belgium.

Equipment terminology: Centrifugal pump–"Application: Pumping soy concentrate through cooler... to buffer tanks" (p. 17). Plate heat exchanger–"Application: Cooling of soy concentrate" (p. 21). Centrifugal pump–"Application: Pumping soy concentrate to the blending tanks" (p. 23).

Note: This is the earliest English-language document seen (Aug. 2013) that uses the word "soy concentrate" to refer to soymilk concentrate. Address: Lund, Sweden.

3790. Bernard, Alain. 1982. Re: Work with soyfoods at Auroville, India. Letter to William Shurtleff at Soyfoods Center, June 24–in reply to inquiry of March 17. 1 p. Handwritten, with signature on aerogramme.
• ***Summary:*** "We would like, in addition to the toffu [tofu] making, to start more developing the consumption of Soya Milk." He asks: (1) How can make it so it keeps for more than a few hours in tropical climates. (2) What other ingredients can be added to the milk to make it more palatable, in order for people to accept it more quickly. Address: "Pour Tous" Food Processing Unit, Aspiration–Auroville, Kottakuppam 605104, South India.

3791. Lee, Bill. 1982. History of Wy Ky and its struggle to enter the Los Angeles tofu market (Interview). Conducted by William Shurtleff of Soyfoods Center, June 29. 1 p. transcript.
• ***Summary:*** Wy Ky started in July 1970. Bill was the first Chinese-American tofu manufacturer in Los Angeles Chinatown. Matsuda-Hinode, which then controlled 100% of the Los Angeles Chinese tofu market, used every trick in the book to try to keep Bill out of the market, but to no avail. Eventually Wy Ky captured 90% of the Los Angeles Chinese tofu market, but now has 60-65% after other Chinese tofu makers came in.

Note: In 1984 Bill sold his to Yuk-Ming Man and Mrs. Ho, who is the mother of David and Elaine Ho. The latter two people run the company.

Talk with Raymond Lea. 1993. Oct. 13. His father, William Lee, founded this business. He was the first Chinese-American tofu maker in Los Angeles Chinatown. In about 1988 Wy Ky stopped manufacturing tofu, tofu products, and soymilk, but they continue to distribute and

sell these products which are made by other companies; Hinoichi makes the basic tofu, Furama makes the soymilk, and Visoy makes a pudding. At the Wy Ky plant there are two walk-in refrigerators where the soyfoods products are stored. All the equipment is in the basement. Bill Lee, the founder, died in Jan. 1993 while on a trip to the Philippines. He had been divorced in about 1980 and sold the business in 1984. Raymond is assembling a team to try to buy back the company. Address: Owner, Wy Ky Food Products Inc., 237 San Fernando Rd., Los Angeles, California 90031.

3792. **Product Name:** No Cow Soymilk [Plain, Cinnamon-Honey, or Carob Honey].
Manufacturer's Name: Appropriate Foods, Inc.
Manufacturer's Address: P.O. Box 57, Sea Cliff, NY 11579. Phone: 718-342-7222.
Date of Introduction: 1982. June.
Ingredients: Carob-honey: Organic soybeans, honey, carob.
Wt/Vol., Packaging, Price: Pint or quart.
How Stored: Refrigerated.
New Product–Documentation: Labels. 1982. June 15. 2 by 3.5 inches. One color on white. "Better than any udder." Whole Life. 1986. April. p. 63-64. They make 150 gallons/week of soymilk. Interview with Robert Werz. 1987. Sept. 9. Soya Bluebook. 1986. p. 101.

3793. **Product Name:** Soy Milk.
Manufacturer's Name: Ashland Soy Works.
Manufacturer's Address: 280 Helman St., Ashland, OR 97520. Phone: 503-482-1865.
Date of Introduction: 1982. June.
Ingredients: Water, organically grown soybeans.
How Stored: Refrigerated.
New Product–Documentation: Label. 1982. June. 2 by 3 inches. Brown on tan with white border. "Non-Dairy Product. High protein. No cholesterol. No artificial ingredients. Keep refrigerated." Talk with Diana Muhs. 1988. Feb. 10. The company started making soyfoods in October 1981. Their first product was tofu, followed by soymilk about a year later.

3794. Check, William A. 1982. Switch to soy protein for boring but healthful diet. *J. of the American Medical Association* 247(22):3045-46. June. 11. [3 ref]

3795. **Product Name:** Hi-C Soya Bean Milk.
Manufacturer's Name: Coca-Cola Company.
Manufacturer's Address: Swire Bottlers HK Ltd., GPO Box 1, Hong Kong.
Date of Introduction: 1982. June.
Wt/Vol., Packaging, Price: 250 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: "Enriched with soya bean protein and Vitamins A, B1, B2, B3, B6, B12, C, D, and E."
New Product–Documentation: Label. Tetra Brik carton,

250 ml, 3 color. Packaged by Swire Bottlers Ltd. under the authority of The Coca-Cola Company. Soya Bluebook. 1983. p. 62. Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 100. The product introduced to the Hong Kong market in June 1982 was made from soybeans, not soy protein isolates. It was withdrawn in late 1982 and reintroduced in May 1983.

Letter from K.S. Lo of Vitasoy. 1984. March 2. "The first launch of this product was a flop. They had to withdraw all the products from the market and re-launched it in the second half of last year." They now have about 5% of the Hong Kong soymilk market.

3796. **Product Name:** Hi-C Soya Milk.
Manufacturer's Name: Coca-Cola Company.
Manufacturer's Address: 310 North Ave., P.O. Drawer 1734, Atlanta, GA 30301.
Date of Introduction: 1982. June.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 100. Soya Bluebook. 1986. p. 102.

3797. DeGregorio, R.M.; Barr, G.W.; Stahel, N.; Crane, F.M. 1982. Modified soy protein as a protein source in calf milk replacer (Abstract). *J. of Dairy Science* 65(Supplement 1):123 (Abst. #P91).
• ***Summary:*** Three different isonitrogenous milk replacers (all with the same protein content) were used to feed 226 Holstein bull calves: 1. All milk, 2. heated soy flour (66% milk protein replacement), and 3. modified soy protein (66% milk protein replacement). The use of modified soy protein or all milk gave better calf weight gains and gain / feed ratios than when heated soy flour was used. Consumption of milk replacement was greatest when modified soy protein was used.

Note: This is in the Program–Seventy-seventh Annual Meeting of the American Dairy Science Association, The Pennsylvania State University, University Park, Pennsylvania, June 27-30, 1982. Address: Land O'Lakes, Minneapolis, Minnesota.

3798. Fernando, L.H.; Asghar, M.; Chase, R.G.; Fitzgerald, J.; McDonnell, M.R. 1982. Field experiments with cereals and grain legumes in W. Samoa. *Alafua Agricultural Bulletin* (*Apia, Western Samoa*) 7(2):40-46. April/June. [9 ref]
• ***Summary:*** In the section on "Grain legumes or pulses," the first plant discussed is the "Soya bean (*Glycine Max* L): This is the most important of the pulses, because of its oil and protein contents. However, in the islands of the South Pacific this is not yet regarded as a useful crop. Small extents of soya bean have however been grown. The varieties Bragg, PB-1 and Improved Pelican introduced from Sri Lanka in 1979 were grown very successfully in small plots at Alafua in 1981. In these varieties high yield was found to be dependent on the number of pods per plant (Singh 1980) and both seed number and seed size (Taufa 1981).

"The variety Davis from Hawaii was used at Nu'u in 1981 in legume inoculation experiments in association with the Project for Nitrogen Fixation by Tropical Agricultural Legumes (NifTAL). In all the efforts made so far from 1979, growth and pod production have been very impressive even with little or no fertilizer... In an experiment at Nu'u in 1981, sponsored by NifTAL, plots which were sown with inoculated seed yielded 3458 kg/ha of seed...

"Sixteen elite varieties of soya bean were received in 1982 from the Intsoy International Soybean Program conducted by the University of Illinois, and these are now ready for sowing in a replicated field experiment at Alafua.

"The critical factor in soya bean production is to bring the plants into maturity in the dry weather of June and July; sowing is therefore best done in April.

"If soya bean is grown for the unripe seed, for use as a vegetable, it does not need to be harvested in dry weather. The green pod is harvested and the immature seed is eaten [after boiling]... Soya milk is a substitute for cow's milk..." Address: 1,4-5. Dep. of Crop Production; 2-3. Dep. of Soils Science. All: School of Agriculture, Univ. of the South Pacific, Apia, Western Samoa.

3799. Garner, R.W.; Martin, D.L.; Weber, D.J. 1982. Allergenicity of soybean milk replacers fed to calves (Abstract). *J. of Dairy Science* 65:122. (Abst. #P89). June 27-30.
• ***Summary:*** Aromatic compounds have recently been implicated as prominent factors in causation of human allergies. Benzyl isothiocyanate has been identified as a prominent allergen in soybeans. When calves were fed whole cow's milk to which benzyl isothiocyanate was added to duplicate the levels found in soy-based calf milk replacers, their growth rates and gastrointestinal functions were identical to those fed the milk replacer. Address: Brigham Young Univ., Provo, Utah.

3800. Howe, J.M.; Hoff, J.E. 1982. Plant diversity to support humans in a CELSS ground-based demonstrator. Moffett Field, California: National Aeronautics and Space Administration (NASA). 51 p. June. 28 cm. Report No. NASA CR-166357. [49 ref]
• ***Summary:*** Prepared under NASA Grant NSG-2401. CELSS stands for "controlled ecological life support systems." Contents: Introduction. Human nutritional requirements in CELSS-GD: Nutrient composition of total plant [vegan] diets (energy, protein, vitamins, minerals), interaction of dietary components, stress. Bioavailability studies of minerals: Rationale (calcium, iron, zinc), experimental procedure (planning of diet, experimental animals), results, experiment IV. Summary. Bibliography of CELSS reports.

Appendix A is a 14-day total vegetarian [vegan] cycle

menu. Soy products appear as follows (B = Breakfast, L = Lunch, D = Dinner): Day 1–Sandwich of soy pate (L), soy milk (L&D, 1 cup each). Day 2–Tofu (L, ¼ cup), soy milk (L). Day 3–Soy milk (D). Day 4–Soy milk (B&L). Day 5–Soy milk (B&L), soy burgers (L, 2). Days 6 and 7 = none. Day 8–Soybeans (D, 1 cup). Day 9–Soy milk (B&D), soy bean and winter squash (L, ½ cup each), soy sauce with cooked veggies & brown rice. Day 10–Soy milk (B). Day 11–Soy milk (L). Day 12–Soy meat analogue (D, 3 oz). Address: 1. Dep. of Food and Nutrition; 2. Dep. of Horticulture. Both: Purdue Univ., West Lafayette, Indiana 47907.

3801. **Product Name:** Vege-Pro (Soymilk) [Coffee & Malt, Blended Juices, Plain (Dairylike), or Lactic Fermented].
Manufacturer's Name: Kibun Health Foods Co.
Manufacturer's Address: Saitama-ken, Japan.
Date of Introduction: 1982. June.
Ingredients: Coffee: Water, soybean, corn syrup, malt extract, corn oil, coffee extract, caramel (color), calcium lactate, sucrose fatty acid ester, salt, artificial flavor, carrageenan. Blended Juices: Water, soybean, corn syrup, orange, apple and pineapple juice from concentrate, propylene glycol, citric acid, calcium lactate, carotene, paprika, artificial flavor.
Wt/Vol., Packaging, Price: 6.75 fluid oz, 200 ml Tetra Brik Aseptic carton.
How Stored: Refrigerated.
Nutrition: Per 6.75 fl oz.: Coffee: Calories 140, protein 4 gm, carbohydrate 20 gm, fat 5 gm. Blended Juices: Calories 110, protein 3 gm, carbohydrate 22 gm, fat 2 gm.
New Product–Documentation: Labels. 1984. 2.5 by 3.25 inches by 1.5 wide. Paper carton. Coffee: Red, black, yellow, white on brown. Bird flying over coffee beans illustration. Blended Juices: Red, green, black, white on yellow. Bird flying over fruit illustration. Vegetable: Red, yellow, black, white on green. Bird flying over trees illustration. "Vege-Pro tastes so much richer than ordinary vegetable juice. Enjoy this extra-refreshing blended vegetable drink that supplies protein and vitamins. What a delicious way to treat yourself to good nutrition everyday." Tetra Brick packages, 3 color, 200 ml. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. "Vegetable protein drink." Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 33, 46.

3802. **Product Name:** [Meito Soymilk (Plain, Coffee, Grapefruit, or Fruit Mix)].
Foreign Name: Meitô Tônyû (Pureen, Koohii, Gureepu Furuutsu, Furuutsu Mikksu).
Manufacturer's Name: Kyôdo Nyûgyô (Kyodo Nyugyo Cooperative Milk Co.).
Manufacturer's Address: Japan.
Date of Introduction: 1982. June.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. States that these products were introduced in June 1982 and distributed nationwide. Name of company with diacritics is: Kyôdo Nyûgyô.

3803. Lotus Cafe (The). 1982. Menu. Rochester, New York. June.
• ***Summary:*** This original menu, dated June 1982 and typed on beige paper, is divided into: Soups. Salads (incl. Hummus, Devilled tofu, Tempeh salad). Sandwiches (all with the Lotus Cafe's original tofu mayonnaise): Tofuburger, Tempehburger, Not dog, Tempeh Reuben, Pita sandwiches in Syrian pocket bread (incl. Tofulafel, Temptation). Entrees: Incl. Tofu spinach pie, Tofu ravioli, Tofu and sauce with brown rice and marinated tofu. Side dishes. Beverages: Incl. Shakes with fresh soymilk (Banilla, Carobanana, Banana

colada), freshly made juices, sparklings, glass of soymilk or carob soymilk. Desserts: Incl. Almond cream cheese tart, Maple walnut pudding, carob brownie, ice cream (Ice Bean). Address: 686 Monroe Ave., Rochester, New York 14607.

3804. **Product Name:** [Mapron Soymilk (Dairylike with Honey)].
Foreign Name: Mapuron Tônyû (Hachimitsu-iri).
Manufacturer's Name: Mitsubishi Chemical Foods Co., Ltd. (Mitsubishi Kasei Shokuhin).
Manufacturer's Address: Ginza 5-13-12, Chuo-ku, Tokyo 104, Japan.
Date of Introduction: 1982. June.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. Tonyu [Soymilk. 2nd ed.]. p. 72. In June 1982 Mitsubishi Kasei Shokuhin launched Tonyu Mapuron (in Hachimitsu-iri flavor) in 200 ml aseptic cartons.

3805. **Product Name:** [Marusan Soymilk (Dairylike or with Barley Malt Syrup)].
Foreign Name: Marusan Tônyû, Bakuga Tônyû.
Manufacturer's Name: Okazaki Marusan K.K. (Marusan-Ai Co., Ltd.).
Manufacturer's Address: 1 Aza Arashita, Niki-cho, Okazaki-shi, Aichi-ken 444-21 Japan.
Date of Introduction: 1982. June.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. Tonyu [Soymilk. 2nd ed.]. p. 72. In June 1982 Okazaki Marusan introduced 2 soymilk products, each in 500 ml long-life cartons: Marusan Tonyu, and Bakuga Tonyu. These products are distributed mostly in central Japan (in the Chûbu Chiho), in the area around Okazaki.

3806. Shurtleff, William; Aoyagi, Akiko. 1982. Soyfoods industry: directory and databook. 2nd ed. Lafayette, California: Soyfoods Center. 56 p. June. 28 cm. [24 ref]
• ***Summary:*** A detailed study of the rapidly emerging soyfoods industry and market. Contains original statistics compiled by the Soyfoods Center through interviews with companies. Contents: 1. Terminology: The many types of soyfoods. I. Traditional low-technology soyfoods. 1A–Nonfermented soyfoods: Fresh green soybeans, whole dry soybeans, soynuts and soynut butter, soy sprouts, whole soy flour & grits, roasted soy flour [kinako] & soy coffee, soymilk and dairylike soymilk products, tofu (eight types), okara or soy pulp, yuba.

1B–Fermented soyfoods: Tempeh, miso, soy sauce, shoyu & tamari, natto & thua-nao, fermented tofu & soymilk, soy nuggets [fermented black soybeans] (Hamanatto & tou-ch'ih).

II. Modern soy protein foods: Defatted soy flour, grits & flakes, soy protein concentrates, textured soy protein products, soy protein isolates.

III. Soy oil products: Soy salad oil & cooking oil, soy oil margarine & shortening, soy lecithin.

2. Soyfoods industry directory: Names and addresses of over 850 soyfoods manufacturers in the Western world, plus major soymilk, miso, shoyu, and yuba manufacturers in East Asia. 3. Analysis of the soyfoods industry in the U.S.

4. Trends in U.S. and world soybean production: Graph

of world soybean production (1922-1979) including graphs for the world total, USA, Asia total, and Latin America. Graph of U.S. soybean production, yields, and exports (1924-1979).

5. Analysis of the tofu industry in the West: The U.S. tofu market: overview and outlook. Graph of the number of tofu (and tempeh) manufacturers in the West from 1975 to 1982. Four-year analysis of the tofu industry in the West. Listing of North America's largest tofu manufacturers and their weekly tofu output. Japan's largest tofu manufacturers and their daily output. Favorite tofu, soymilk, and tempeh recipes as served at U.S. soyfoods, delis, cafes, and restaurants, or marketed as ready-to-serve products. Books on tofu published in America.

6. Analysis of the tempeh industry in the West: Graph of number of tempeh manufacturers. Recipes. Listing of North America's largest tempeh manufacturers and their weekly output.

7. Analysis of the worldwide soymilk industry: Analysis of the soymilk industry in the United States. Analysis of the soymilk industry in Japan. Major Japanese soymilk companies and their products.

8. Analysis of the soy sauce / shoyu and miso industries worldwide. Statistics on fermented soyfoods in East Asia. The soy sauce market in the United States (1981). U.S. imports of soy sauce. Graph (1947-1981. Source: U.S. General Imports, Schedule A. Commodity by Country. U.S. Dept. of Commerce, Bureau of Census). U.S. imports of soy sauce. Table (1947-1981. Source: U.S. General Imports, etc. See above). The shoyu / soy sauce market in Japan. Graph. (1886-1980. Includes: Number of manufacturers. Per capita consumption. Shoyu production. Kikkoman's market share (%)). The miso market in Japan. Graph. (1930-1980. Includes: Per capita consumption. Total miso production. Factory production. Number of manufacturers. Home production. Amount of soybeans used). Overview of the miso market in the United States. Miso exports from Japan (1981). Japan's ten largest miso manufacturers and their output.

9. Other: Analysis of the soynuts industry in the U.S. North America's larger soyfoods delis, cafes & restaurants. The soybean crushing industry; overview.

10. Soyfoods terminology and standards (Glossary of soyfoods terms): I. Traditional nonfermented soyfoods: Fresh green soybeans, okara, roasted soy flour (soy coffee, soy chocolate), soybeans, soymilk (soymilk ice cream, soymilk soft serve, frozen soymilk yogurt, soymilk mayonnaise, soy shakes, soy nog, soymilk whipped cream), soynuts, soy sprouts, tofu (regular tofu, deep-fried tofu {deep-fried tofu cutlets called nama-age or atsu-age in Japan, deep-fried tofu burgers or burger balls, called ganmodoki or hiryozu in Japan, deep fried tofu pouches (called aburage in Japan; the words "deep-fried" may be dropped from the names after the initial usage, and in recipes or on package labels, if desired}), silken tofu {made without separation of curds and whey, called kinugoshi in Japan; modern types, all made with glucono delta-lactone as coagulant, and all known in Japanese as juten-dofu, are packaged lactone silken tofu, bagged lactone silken tofu (fukuro-dofu), sealed lactone silken tofu (buro-dofu), and Ever-Fresh Lactone Silken Tofu (in Tetra-Pak}), grilled tofu, frozen and dried-frozen tofu. (Note 1. It is illegal to describe the latter product as "freeze-dried tofu," since freeze-drying is a completely different process), terms associated with making tofu {fresh soy puree, a coagulant or curding agent, forming box, filter bag or pressing sack, tofu comes in cakes, not blocks}), whole soy flour, flakes and grits, yuba.

II. Traditional fermented soyfoods: Fermented soymilk products (soymilk yogurt {Soy Yogurt, Soyogurt, Soygurt}, acidophilus soymilk, soymilk kefir, viili, piima, buttermilk {Soy Kefir, etc.}), fermented tofu (wine-fermented tofu, brine-fermented tofu), miso (rice miso, barley miso, soybean miso, Chinese soybean chiang), natto (thua-nao from Thailand and kinema from Nepal; all are non-salted), fermented black soybeans [fermented black soybeans] (Chinese fermented black soybeans know as shih, tou-ch'ih, tou-shih, or dow-si; savory fermented black soybeans called Hamanatto in Japan, Daitokuji fermented black soybeans called Daitokuji natto in Japan, Philippine fermented black soybeans called tausi or tao-si in the Philippines, Indonesian soy nugget paste called tauco, formerly spelled tao-tjo, Malaysian soy nugget sauce called tao-si), soy sauce (shoyu. The five basic types of Japanese shoyu are: regular shoyu called koikuchi shoyu in Japanese, light-colored shoyu called usukuchi shoyu, tamari shoyu, clear shoyu called shiro shoyu, and rich shoyu called saishikomi shoyu), tempeh, other fermented soyfoods.

Note 2. This is the earliest document seen (Sept. 2012) that uses the word "Soygurt" to refer to soy yogurt.

III. Soy oil and modern soy protein foods: soy oil, defatted soy flour, flakes and grits, soy protein concentrate, soy protein isolate, textured soy protein products (TSP, TVP is a registered trademark of the Archer Daniels Midland Company and cannot be used as a generic name for this product), meat analogs (foods typically made from spun soy protein fibers to resemble meat, fish, or poultry products).

11. Names of soyfoods around the world: Names of 40 products. Brazilian / Portuguese names. British English names. Chinese names (fermented tofu is Toufu-ju or Sufu). French names, German names. Japanese names. Spanish names.

12. Key institutions working with soyfoods in the West: The Soyfoods Center, Soyfoods Association of North America, INTSOY, American Soybean Association, Bean Machines, Inc., Soycrafters Apprenticeship Program, USDA Northern Regional Research Center, Sojaquelle.

About The Soyfoods Center.

Note 3. This is the 2nd market study published by

Shurtleff. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

3807. Stutts, J.A.; Morrill, J.L.; Dayton, A.D. 1982. Effect of dietary extruded soybeans and type of housing on calf performance (Abstract). *J. of Dairy Science* 65(Supplement 1):123 (Abst. #P92). *
• ***Summary:*** Note: This is in the Program–Seventy-seventh Annual Meeting of the American Dairy Science Association, The Pennsylvania State University, University Park, Pennsylvania, June 27-30, 1982. Address: Kansas State Univ., Manhattan, Kansas.

3808. **Product Name:** [Soymilk (Barley Malt Syrup, Orange, or Dairylike)].
Foreign Name: Tônyû (Bakuga, Orenji, Chôsei).
Manufacturer's Name: Sugiyo.
Manufacturer's Address: Japan.
Date of Introduction: 1982. June.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. These products were introduced in June 1982 in 200 ml Tetra Pak and paper pack cartons, and distributed nationwide.

3809. Tofu Shop (The). 1982. Take-out deli (Menu). 768 18th St., Arcata, CA 95521. 3 panels each side. Each panel: 22 x 9 cm. Undated.
• ***Summary:*** This 6-panel leaflet and menu is mostly hand-written but partly printed. On the front cover is the logo of a dragon in a circle. "9-6 Monday–Saturday. Hot food served 12-6 daily. In a hurry? Call ahead: 822-7409. Your local soyfoods producer." One panel, titled "Welcome to the tofu shop," states that this is "one of only a handful of traditional-style tofu shops in the Western Hemisphere."

Another titled "Inside our sandwiches" lists the ingredients in each sandwich. Soy-related menu items include: Sandwiches: Tofuburger. Dragonburger. Tofucadoburger. Spinach turnover (with tofu filling). Sesame tofu pocket. Mexican pastry (a mini-burrito filled with spicy tofu). Fuji roll (with rice, [mung] bean sprouts, tofu, and miso). Sushi roll (with nattoh miso filling). Tofu burrito. Salads: Potato-tofu. Tahini-tofu. Desserts. Beverages: Soymilk. Sides: Tamari, olive and lemon. Sesame tofu dressing. Miso onion sauce. Tofu vegie patty. Baked tofu cutlet. Specialty groceries: Tofu, miso, condiments, crackers, recipes, supplies for tofu and miso making. Address: Arcata, California. Phone: 707-822-7409.

3810. Urbanski, G.E.; Wei, L.S.; Steinberg, M.P.; Nelson, A.I. 1982. Effect of solutes on rheology of soy flour and its components. *J. of Food Science* 47(3):792-95, 799. May/June. [19 ref]
Address: Dep. of Food Science, Univ. of Illinois, Urbana.

3811. Urbanski, G.E.; Wei, L.S.; Nelson, A.I.; Steinberg, M.P. 1982. Rheology and water imbibing of major fractions of soybean beverage. *J. of Food Science* 47(3):1021-22. May/June.
Address: Dep. of Food Science, Univ. of Illinois, Urbana. Urbanski is now with Quaker Oat Co.

3812. Vitasoy (USA) Inc. 1982. Try Vitasoy: Soya bean and malted soya bean drinks, anytime, anywhere! (Poster). San Francisco, California. 1 p. 31 x 61 cm. Reprinted in Soyfoods magazine, Winter 1983, p. 64.
• ***Summary:*** Displayed during the summer of 1982 in selected buses in San Francisco. Also reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Address: San Francisco, California.

3813. Dominguez de Diez Gutiérrez, Blanca. 1982. Re: Names of soyfoods around the world: Spanish. Form filled out and returned to William Shurtleff at Soyfoods Center, July 9. 1 p. Handwritten. [Eng; Spa]
• ***Summary:*** Gives the names of all the various soyfoods in Spanish. Note: A typed list of these names is published in *Soyfoods Industry and Market: Directory and Databook,* 1985. 5th ed. p. 164.

"Fresh green soybeans–Frijol de soya tierno o ejote de soya. Whole dry soybeans–La soya, Frijol de soya. Black soybeans–Frijol de soya negro. Fresh soy puree–Pure de frijol de soya. Soy sprouts–Germinados de soya. Soynuts–Soya-nuez (nuez means walnuts or pecans), Soya-huate (means peanuts from cacahuate). Oil roasted soynuts–Soya nuez tostada (meaning nut). Dry roasted soynuts–Soya-huate tostado (meaning peanuts). Soynut butter–Mantequilla de soya. Roasted soy flour–Harina de soya tostada (kinako). Soy coffee–Soyafee. Soy chocolate–Soyalate. Soymilk–Leche de soya. Soymilk ice cream–Helado de leche de soya. Soymilk curds–Cuajada de soya, Jocoque de leche de soya. Tofu–Tofu, Queso de soya, Cuajada de soya. Soft tofu–Tofu blando. (Regular) Tofu–Tofu comun. Firm Tofu–Tofu firme. Extra firm tofu–Tofu extra firme. (Deep fried) Tofu cutlets–chuletas de tofu. (Deep fried) Tofu burgers–Hamburguesas o tortitas de tofu. (Deep fried) Tofu pouches–Saquitos de tofu. Silken tofu–Tofu sedoso. Pressed silken tofu–Tofu sedoso prensado. Grilled tofu–Tofu a la parrilla. Dried frozen tofu–Tofu seco congelado. Okara or soy pulp–Okara, pasta de soya, pulpa de soya. Yuba–Yuba. Fermented black soybeans–Palanquetas de soya. Miso or soybean jian–Miso (el). Soy sauce–Salsa de soya. Shoyu–Shoyu (el). Tamari–Tamari. HVP soy sauce–Have not found it. Tempeh–Tempeh (el). Fermented tofu–tofu fermentado. Fermented / cultured soymilk–Leche de soya fermentada. Natto, thua-nao, kinema–Natto (el). Soy oil–aceite de soya. Soy lecithin–

Lecitina de soya. Soy flour–Harina de soya. Whole (full fat) soy flour–Harina de soya entera. Defatted soy flour–Harina de soya degrasada. Soy grits and flakes–Soya martajada y hojuelas de soya. Cereal-soy blends (CSM, WSB, etc.)–Soyavena (with oatmeal). Soy protein concentrate–Concentrado de proteina de soya. Soy protein isolate–Aislado de soya. Textured soy protein products–Productos de soya texturizada. Textured soy flour, TSF, or TSP–Harina de soya texturizada. Textured soy concentrates–Concentrados de soya texturizada. Textured soy isolate–Aislados de soya texturizada. Spun soy protein fibers–Fibra de proteía hilada de soya. Soy casmar, Soya Cocoa, Coco soya–Beverages made with chocolate or cocoa. Pastisoya–Like spaghetti or noodles of different kinds made with soy flour–commercial products. Vegesoya–Commercial products for soups. Soya mex and Chocosoya–for beverages. Soya pac–Textured soya like meat, also a commercial product." Address: Apdo. Postal 226, Jalapa, Veracruz, Mexico.

3814. *Toyo Shinpo* (*Soyfoods News*). 1982. Tônyû no peeji: 2-3 baizô no urigae o tassei. Sudeni 150 oku shijô keisei no koemo [The soymilk industry and market in Japan: Sales have increased 2-3 fold to an estimated 15,000 million yen per year]. July 21. p. 26. [Jap; eng+]

• ***Summary:*** Industry sources say that the Japanese soymilk market has already reached about 15,000 million yen. The order in which companies started making or marketing soymilk is: 1959 San-iku Foods. 1969 House Shokuhin. 1972 Ishihara Food Center. 1974 Tokyo Soymeal, Kenbi-Sha, Okazaki Marusan. 1976 Asahi Shokuhin, Soken-sha, Kyushu Nyugyo. 1977 Kibun, Natural Foods. 1979 Mitsubishi Kasei Shokuhin. 1980 Chiba Seisen Shokuhin Kogyo, Meiji Nyugyo. 1981 Yakuruto, Nagano Tomato, Morinaga Nyugyo. 1982. Seven-Up Inryo. Among these, House Shokuhin and Tokyo Soymeal have discontinued.

Major Japanese brands of soymilk, aseptically packaged in Tetra Brik cartons are (percentages indicate market share): Kibun Foods (Plain, Yogurt flavored, Fruit, Barley Malt & Coffee), 41.7%; Okazaki Marusan (Plain, Orange, Barley malt), 23.3%; Mitsubishi Kasei (Maburon plain, Orange, Coffee, Honey), 10.0%; San-iku Foods (Soya Neo Cocoa), 8.0%; Kyushu Nyugyo, 6.0%; Meiji Nyugyo (Sun-Glow), 5.8%; Kenbisha, 2.5%; Asahi Shokuhin (Plain, Orange, Coffee), 2.5%; Soken-sha, 1.3%; and Natural Foods, 1.3%. Most sizes are 200 ml, which retail for 75 yen with a 60 day shelf life.

Companies with the largest number of different soymilk products are: (1) Okazaki Marusan has 15 products including soymilk in a Pure-Pak carton (500 ml for 150 yen) and in a can (195 gm); (2) Kyushu Nyugyo has 13 products incl. Midori Tonyu; (3) San-Iku Foods has 10 products, including canned soymilk; (4) Kibun has 8 products. Mitsubishi Kasei is taking a different approach; they have only 5 items (honey, coffee, fruits, sour, and plain) but are aiming at large production.

Kibun's sales have been very good, especially after they switched to the Brik Pak-type carton. Last year they had sales of 2,500 million yen and they are aiming to double that this year. Industry analysts believe that Kibun will be the industry leader for a while.

Mitsubishi Kasei established Mitsubishi Kasei Shokuhin in January of this year, and transferred all soymilk sales to that new department. They are hoping this year's sales will be three times as large as last years, hopefully 1,800 to 2,000 million yen. They are now constructing a new soymilk plant in Okayama, and when it is done they hope sales will reach 8,000 million yen.

Okazaki Marusan has grown 20-fold in the past 5 years. They predict this year's soymilk sales to be 2,000 million yen.

A photo shows 24 soymilk products. Most are in Brik Pak Aseptic cartons. Three Soyalac products are in cans. One product is in a retort pouch.

3815. *Toyo Shinpo* (*Soyfoods News*). 1982. [Quick soymilk cooling machine, manufactured by Toritsu Reiki Seizo K.K.]. July 21.

• ***Summary:*** The counter-top machine is for keeping retail soymilk cool. The company is located at 4-26-6 Ueno, Taito-ku, Tokyo 110, Japan. Phone: 03-841-0330.

3816. Tally, Gene. 1982. The Coca-Cola Company's work with soymilk in Asia (Interview). Conducted by William Shurtleff of Soyfoods Center, July 29. 1 p. transcript.

• ***Summary:*** Coca-Cola Co. (CCC) does not have a soymilk on the market in Thailand; they are still at the talking stage.

CCC has introduced soymilk, named H-C, in Hong Kong. They use their franchise Coca-Cola bottler there. They just bottle soymilk like any other soft drink by using soy proten isolates. So no need for a soymilk plant or buying soybeans etc. This is the way soft drink companies can easily get into soymilk.

In the Philippines, CCC is not presently involved with soymilk. The Magnolia Dairy Co. is owned by the same group that owns the Coke business in the Philippines. They have made it in the past, are not doing it now, but will resume soon, after they develop a new formulation. In the future they will probably not use Coke's soymilk formulations. Get from Dong Bang in Korea, or a group in Belgium, which has technology. Not the same as the Singapore company. This is a split-off of the Singapore company.

CCC has not yet introduced soymilk in USA, but they are looking at it. They are now in a feasibility study. They have Tetra Brik lines in the U.S. making Hi-C juices. The company's decision to go or no-go is imminent. We'll be the first to know.

Lots of talk with Vitasoy in the past about a joint venture

in Hong Kong.

Thailand. CCC would probably contract with one of the local dairy companies there to co-pack for them. Probably Siam Foods. Its a bit early; only in the talk stage. Originally did a lot of exploratory work concerning Thailand with Vitasoy but it took a long time and the Los wanted to use their own formula, so they went different ways. CCC may not get a product on the market for Thailand in less than 1-1½% years.

Talley would like to be marketing manager for Morinaga's tofu products in the US. Address: Coca-Cola Co., Atlanta, Georgia.

3817. **Product Name:** Ardex (Soy Protein Isolates) [DHV, D, F, SP-6, or R].
Manufacturer's Name: Archer Daniels Midland Co.
Manufacturer's Address: 4666 Faries Parkway, Decatur, IL 62526.
Date of Introduction: 1982. July.
How Stored: Shelf stable.
New Product–Documentation: Manufacturer's catalog, ADM Foods/Protein Specialties. 1981. *ADM edible products/81.* The section titled "Proteins" (p. 19) describes these four types of "Ardex isolated soy proteins: Isolated Soy Proteins have the specific functions of imparting to products the added value of nutrition and replacing costly ingredients that are either diminishing in availability or expanding in cost. Many times both.

"An isolate also functions to control the quality in the production process. It allows for production variables, where the ingredients it replaces probably won't.

"The result is a more quality consistent product. Consequently, many food producers use isolates in combination with their present formulations to increase product consistency as well as reduce ingredient costs."

Manufacturer's catalog. 1982. Feb. "Soy beverage concepts using Ardex isolated soy proteins." Ardex F and Ardex SP-6 are recommended for making milk-like beverages. Ardex R with pH properly adjusted can also be used. The ingredient cost of 8 oz. of whole milk is 8.6 cents, compared with 3.2 cents for unflavored soy beverage, 3.7 cents for chocolate soy beverage, and 8.3 cents for soy fortified milk. Ingredients in the unflavored soy beverage are Ardex F 3.62% (dry weight basis), ADM 468 partially hydrogenated soy oil 2%, Cornsweet 42 (fructose) 8%, emulsifier 0.25%, salt 0.08%, and stabilizer 0.02%. Total solids are 13.97%, protein 3.47%, fat 2%, and calories 67.7 per 100 gm.

Soyfoods. 1982. Summer. p. 7-8. Ardex F is a highly dispersible isolate that can replace nonfat milk solids.

Soya Bluebook. 1982. p. 64. No brand names given. Note: This is the first time that ADM has appeared in the Soya Bluebook as a maker of edible soy protein isolates.
Soya Bluebook. 1983. p. 64. No brand names given.

Manufacturer's catalog. 1987. DHV is salt tolerant, non-dusting, highly dispersible. D is adhesive, emulsifier & emulsion stabilizing. F and SP-6 are non-gelling, readily dispersible. RH is isoelectric pH isolate.

3818. **Product Name:** [Asashoku Soymilk (Plain, or Dairylike)].
Foreign Name: Gen Tônyû, Asashoku Soimiruku.
Manufacturer's Name: Asahi Shokuhin.
Manufacturer's Address: San Shain 60 40F, 3-1-1, Higashi-Ikeburo, Toshima-ku, Tokyo 170, Japan.
Date of Introduction: 1982. July.
Wt/Vol., Packaging, Price: 1 liter Pure Pak cartons.
How Stored: Refrigerated.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. States that these 2 products, in "L packs" (1 liter Pure Pak cartons), were introduced in July (Gen) and August (Soimiruku) of 1982, and distributed to most of central Japan.

3819. Campos, O.F.; Huber, J.T.; Bergen, W.G. 1982. Partial substitution of milk protein with spray-dried fish solubles or soy protein concentrates in calf milk replacers. *J. of Dairy Science* 65(7):1240-46. July. [24 ref]
Address: Dep. of Animal Science, Michigan State Univ., East Lansing, Michigan 48824.

3820. *Energy Bulletin.* 1982. Thai pedal-powered soy grinder produces milk. July. p. 13.

3821. Itona Products Ltd. 1982. Dairy replacement foods (Ad). *Here's Health.* July. p. 94.
• ***Summary:*** This full-page black-and-white ad also appeared in *The Vegetarian.* 1984. May. p. 2. "These are important and very special health foods. Foods sold under the Granny Ann and Golden Archer brands all have one thing in common–they don't contain cow's milk or any other animal ingredient. This is important for a variety of reasons. Many people are allergic to dairy milk whilst others are rightly concerned about the ethical, medical, and social considerations.

"The 'Milk' and 'Milk-Base' ingredients in Granny Ann and Golden Archer foods are derived from the soya bean. Not from cows.

"These Dairy Replacement Foods also have further, decided advantages. The flavours are quite excellent and the nutritional values are very high. They are exceptionally good foods which you really should try–whatever reason you may have."

Photos show 11 of the company's products: Itona TVP (chunks, ham flavor). Itona TVP food mix: Itonaburga (burger style). Itona Tonabana: Sausage Style. Granny Ann Noots. Granny Ann Grannymels: Caramels. Granny Ann Noot Bar (with "Roasted, salted beans. Handy packets"). Granny Ann Beanmilk Chunky Bar ("A thick Beanmilk bar

but without the Noots"). Golden Archer Soya Beanmilk ("From soya not cows"). Golden Archer Brown Rice Pudding ("Whole brown rice with Beanmilk and unrefined sugar"). Golden Archer Custard ("Made entirely from non-animal ingredients"). Golden Archer Beancream ("A wonderfully rich cream made from Beanmilk"). Granny Ann High Fibre Biscuits ("A convenient and tasty way to take your daily fibre. Made with soya fibre–better than bran").

Note: It is unclear whether this "soya fibre" is okara or soy bran (ground soybean hulls). Since Itona is also selling soymilk, of which okara is a byproduct, okara seems more likely.

"'Granny Ann,' 'Golden Archer' and 'Itona' foods are made by Itona Products Limited, Leyland Mill Lane, Wigan. Send large SASE for leaflet."

3822. **Product Name:** [Soymilk (Plain, With Vegetable Juice, Fruit, Barley Malt Syrup)].
Foreign Name: Tônyû (Sutoreeto, Yasai, Kajû, Bakuga).
Manufacturer's Name: Kibun Health Foods Co.
Manufacturer's Address: Saitama-ken, Japan.
Date of Introduction: 1982. July.
Wt/Vol., Packaging, Price: 200 ml Brik Pak Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Toyo Shimpo. 1982. July 21. Product with Label purchased at department store in Japan. 1983. June. For a detailed analysis of this and many other Japanese soymilk products collected in Tokyo in June 1983 see: Shurtleff, William; Aoyagi, Akiko. 1984. *Soymilk Industry and Market: Worldwide and Country-by-Country Analysis.* 2 vols. Lafayette, California: Soyfoods Center. Feb. 28 cm. See Vol. 1, p. 162-66.

3823. Leviton, Richard. 1982. Touring for soyfoods. *Soyfoods.* Summer. p. 32-37, 41.
• ***Summary:*** At The Farm in Tennessee, the soy dairy, managed by Chuck Haren, "operates 3 days a week, turning out 7,500 lb/week of calcium sulfate tofu for immediate consumption by the Farm's 1,300 soyfood lovers." They use a Sweco-Brown filtration system. The okara is composted. They make 600 gallons per week of fresh soymilk. Their tempeh shop makes 700 lb/week of fresh tempeh–the 7th largest in the UA. Both the tofu and tempeh plants have been used as training grounds for apprentices from Europe, South America, and Africa, who come to The Farm to stay for 6 month sessions. A ice cream manufacturer in Memphis makes their Ice Bean. Plenty is active in Haiti, where they are providing soymilk for malnourished children, and in Lesotho, South Africa, where they are aiding in the construction of a village soy dairy and demo site as part of the Motsemocha Village Technology Center. They recently conducted a Caribbean cruise with 8 soy technicians.

Legume: "Gary and Chandri Barat and Robert Shapiro have a booming company on their hands after 1 year of business with an impressive line of prepared frozen tofu entrees and desserts. Jan. 1981 rented facility in Verona, New Jersey. May 1981 Celantano started co-packing. Photos show: Chandri Barat, Gary Barat, and Robert Shapiro of Legume (see also photo on p. 3).

The following people and their companies are also discussed, with photos: Tim Nusser of Rising Sun Soy Farms (Columbus, Ohio). Jim Saunders of Real Foods (tofu shop in a supermarket in Allentown, Pennsylvania). Renate and Karl Krummenoehl of Cricklewood Soyfoods. Jamie and Nancy Stunkard of Nature's Grace. Joel Dee of Edward & Sons in Saluda, North Carolina (marketers of Miso-Cup). Henry Salazar of Sam Sung Tofu Co. Eileen Foote and Eileen Judge of Kingdom Foods. Bob Hunt of Blue Ridge Soyfoods. Soya Food Products in Cincinnati (Ben & Nina Yamaguchi). Rising Sun Soy Farms. Bill Lutz of Hip Pocket Tofu Deli (Columbus, Ohio). Robert Marrochessi and Bill Spear of The Bridge (Middletown, Connecticut, macrobiotic, run by Roberto Marrocchesi and Bill Spear. Began tofu production in March 1981). Suzy Jenkins and Laurie Praskin of Plenty (Summertown, Tennessee). Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

3824. Leviton, Richard. 1982. Everybody's Restaurant. The Farm brings soyfoods to Nashville. *Soyfoods.* Summer. p. 38-39.
• ***Summary:*** Everybody's Vegetarian Restaurant, founded and owned by Judd and Diane Hoffman, opened in July 1980 in the university district of Nashville, Tennessee, and now seats 45. Many of the items on the meatless and dairyless [vegan] menu feature soyfoods–especially tofu, soymilk, and tempeh. The facility has 2,700 square feet, with 1,500 for retail and 1,200 for kitchen. The 12 restaurant workers, who are all members of The Farm (Summertown, Tennessee), live together communally in a large house outside Nashville.

Photos show: (1) Judd and Diane Hoffman. (2) A view of the front of the restaurant from outside. (3) Inside the kitchen. Address: Colrain, Massachusetts.

3825. Leviton, Richard. 1982. Soyfoods of America. High volume Duarte company takes on California market. *Soyfoods.* Summer. p. 30-31.
• ***Summary:*** America's first yuba plant opened in September 1981, requiring nearly one million dollars of startup capital. They move 18,000 lb/week of tofu in the very competitive Los Angeles market. Their lines are Furama and Nature's Touch.

Photos show: 1. The company's line of yuba, tofu, and soymilk products; 2. Ken Lee with his innovative semiautomatic yuba machine and freshly packaged sheets; 3. The part of the plant that makes tofu and soymilk; 4. Ken Lee and sales manager Doug Fiske holding water-packed and vacuum-packed tofu. Address: Colrain, Massachusetts.

3826. **Product Name:** [PHAG Carob Drink].
Foreign Name: PHAG Caroba-Drink.
Manufacturer's Name: PHAG Sàrl (Produits Hygièniques Alimentaires Gland) (Marketer-Distributor). Made in Belgium by Alpro.
Manufacturer's Address: La Ligniere, CH-1196 Gland, Switzerland. Phone: 022/64 11 18.
Date of Introduction: 1982. July.
Wt/Vol., Packaging, Price: 0.5 liter Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter from Remy Mayer of PHAG. 1990. Oct. 2. This product was introduced in July 1982. His company distributed the product, which was made by a manufacturer in Belgium [probably Alpro].

3827. **Product Name:** [Cheerio Soymilk].
Foreign Name: Cherio Tônyû.
Manufacturer's Name: Seven-Up Inryo (Sebun Appu Inryo).
Manufacturer's Address: Japan.
Date of Introduction: 1982. July.
Wt/Vol., Packaging, Price: 250 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that Seven-up Inryo first sold commercial soymilk in Japan in 1982.

K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Cherio Tônyû was introduced before Dec. 1982 by Sebun Appu Inryô in a 250 gm can.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64.

3828. *Soyfoods.* 1982. Soy isolates: New tofu ingredient? [ADM Foods]. Summer. p. 7-8.
• ***Summary:*** "ADM Food's search for new applications for its high protein soy isolates have led them to frozen soymilk dessert, a flavored soymilk beverage, imitation cheeses, and, most recently, silken tofu.

"ADM, one of the nation's largest soy isolate producers, located in Decatur, Illinois, has been devoting considerable research effort to find new product applications for its basic soy ingredient, isolated soy protein. Initial commercial interest in isolates (which contain 90% protein, as most of the carbohydrates have been removed) began in the 1930s when they had industrial uses such as paper coatings. But by 1967, at least 22 million pounds were produced, and by 1981, annual production was estimated at 90 million pounds as isolates were used in numerous foods.

"Soy isolate production begins with defatted soybean flakes, from which protein is extracted, in an aqueous solution, from the insoluble residue with the aid of screens or centrifuges. The 'soy curd' is precipitated at the isoelectric point (pH 4.5, where the solubility of the protein is at a minimum) using a food grade acid such as acetic or phosphoric. The curds and whey are separated by centrifuging, the curds are washed, then neutralized with food grade alkali. Finally the isolate is spray-dried for storage.

"Recently ADM Foods announced the development of a 'wet' curd isolated soy protein" that has maximum functional properties. The curd is suitable for interaction with milk, whey, and egg proteins in foods. The wet curd can be used as a partial replacement (up to 50%) for casein (a milk-derived protein) in imitation mozzarella cheeses, and as a coffee whitener that will not coagulate after immersion in the hot liquid. The soy isolate slurry is not heat denatured, has a pH of 4.5, solids content of 23%, is easily pumped, can be delivered in stainless steel tanks of 45,000 pounds capacity, and is stable for two days at room temperature.

"At first glance, soy isolates may seem a world away from everyday tofumaking, yet this year ADM researchers began experimenting with their Ardex isolated soy protein for a silken tofulike product and even custom designed yogurt type desserts. A soy beverage base, made from soy isolate, is heated to 80ºC; then 1% (by weight) glucono-delta-lactone (GDL) is added. After 20 minutes the milk has set to a yogurt-style smooth consistency. To make a 'firmer' silken tofu, ADM scientists added (5% by weight) kappa-carrageenan and 0.5% tetrapotassium phosphate to the beverage before heating.

"This method, ADM researchers suggest, greatly simplifies the tofumaking process while providing significant cost reductions. 'These products can be formulated to achieve up to 80% ingredient cost reductions compared to conventional tofu,' their report states. The use of soy isolates also allows for the extension of several dairy systems using soy such as puddings, sour cream, yogurt, baby food, and frozen desserts.

"ADM Foods has experimented with three processing methods for preparing a soymilk beverage including batch pasteurization, high temperature, short time pasteurization, and ultra high temperature (UHT) for aseptic packaging.

"For the batch method, water at 50-55ºC is agitated while the soy isolate powder is mixed in, followed by corn sweetener (fructose) and vegetable oil. The mix is heated to 60ºC and held for 30 minutes with constant agitation.

"Next comes a two stage hot homogenization (at 2500 psi, then 500 psi) followed by immediate cooling to 5ºC. Flavorings are added and the product is packaged for storage. The ingredient cost per 8 fluid ounce serving for unflavored soy beverage is $0.032 compared to $0.086 for whole milk. The cost per pound of protein served is $1.701 compared to milk's $4.938. The soy beverage's nutritional profile includes 3.47% protein, 2.00% fat, total solids l3.97%, and 67.70 calories per 100 grams.

"The soy isolate has been applied in making frozen

soymilk ice creams that yield protein contents twice the level of those in standard ice creams. With the isolate-based desserts, as the fat content is reduced, the caloric density is also reduced, so that a 4% fat soy dessert has about 20% less calories than standard ice cream, while a 2% fat dessert has nearly 30% fewer calories. The ingredients include Ardex soy isolate, sucrose, CornSweet (corn sweetener), corn syrup, stabilizer, emulsifier, while the ingredient cost is $0.017 compared to $0.048 for standard ice cream–a savings of 64.6%. Nutritionally, the product is comparable to standard ice creams, with 1.8% protein, 2.00% fat, 142.50 calories per 100 grams, and 117 calories per 4 fluid ounce serving.

"ADM representatives provided samples of their strawberry soymilk dessert along with chocolate and unflavored (but sweetened) soymilk beverage at the recent U.S. International Food Show in New York City."

3829. **Product Name:** Mild Italian Soysage (Meatless Okara-based Sausage).
Manufacturer's Name: Swan Gardens.
Manufacturer's Address: 940 17th St., Miami Beach, FL 33139. Phone: 305-324-8910.
Date of Introduction: 1982. July.
Ingredients: Soy press cake, whole wheat flour, nutritional yeast, soy oil, soy milk, salt, seasonings, spices.
Wt/Vol., Packaging, Price: 8 oz. Retails for $1.79.
How Stored: Refrigerated.
New Product–Documentation: Find/SVP. 1981. May. The Tofu Market. Gives Miami Beach address. Spot in Soyfoods. 1982. Summer. p. 55. "Vacuum Packed Soysage." 250 lb are produced weekly.

Soyfoods. 1983. Summer. p. 43. They make a "spicy Soysage."

Label. 1985, undated. 3.25 inch diameter. Self adhesive. Blue and red on shiny gold. An illustration shows a swan on lotus. "Ready to eat!" Made by Swan Gardens, Inc. Miami, Florida 33127.

3830. Gardiner, Doris Kloss. 1982. Re: Jethro Kloss' work with soyfoods. Letter to William Shurtleff at Soyfoods Center, Aug. 3. 1 p. Answers handwritten after typewritten questions on Soyfoods Center stationery.
• ***Summary:*** Doris is Jethro Kloss' only grandchild. She was born on 28 Feb. 1929 in Miami, Florida. Concerning her grandfather's work with soy ice cream she recalls: "My mother and I, my uncle Eden, and my grandfather spent the winter of 1935-36 in Miami, Florida. I know he was preparing soy ice cream to serve at the close of his lectures and food demonstrations at that time. I used to get to lick the freezer paddles before he left for the lectures.

"I have no idea where and when and why Jethro Kloss became interested in soybeans. The soy foods that I remember that he made and that I ate as a child were the soy ice cream (of course!), delicious soy bean bread, soy bean butter, soy milk, soy cheese, pie crust, soy coffee, broth, soy mayonnaise, and soy bean roast.

"I just talked with my aunt (Promise Kloss Moffett), who lives in Hagerstown, Maryland, and who turned 79 today, and she does not recall if Jethro used any soy in the commercial health foods he made at the Nashville Sanitarium Food Company (which was sold in 1919-1920). She said that she does recall his experimenting with soy beans when they lived in Brooke, Virginia (in about 1924)." Address: Back to Eden Books, P.O. Box 1439, Loma Linda, California 92354. Phone: (714) 796-9615.

3831. Parker, Joyce. 1982. Re: Soyfoods and soybeans in Nepal. Letter to William Shurtleff at Soyfoods Center, Aug. 28. 3 p. Handwritten with signature on letterhead of the Britain Nepal Medical Trust (Koshi Anchal).
• ***Summary:*** She is a Peace Corps volunteer living in the eastern middle hills of Nepal, eating the local food, and going crazy. Nepal is extremely diverse culturally, so what is done in one part of the country may not be true of other parts. Tofu is made in Kathmandu, the capital of Nepal, but only on a very small scale. In the eastern middle hills, soybeans are used mostly for a snack (*khaajaa*) in the early afternoon, often with tea–to sustain people until the evening meal. "The snack I'm familiar with is called *Bhatmas ani chiuraa*... and is made with soybeans and beaten rice. The mature soybeans are roasted over an open hearth, usually in a heavy cast iron wok–stirred with a stick continuously (the pan is dry but well seasoned) for 5-10 minutes. Remove from heat–put into a *jato* (primitive grinding stone) only to split the soybeans in half. A small amount of *mattitel* (mustard oil) is heated until the smoke rises (otherwise the taste is foul)–pyaaj (green onion–chopped fine) and jursaani (chili pepper also chopped fine) and fresh ginger are added, and next the bhaatmas–stir until they are covered with the oil mixture–salt is also added. It is then served hot or cold over the beaten rice. Its delicious–a real favorite with me–puts a bit of crunch into your diet.

"Soybeans are usually grown in a companion planting system with the *makai* (corn) or along the borders of the rice *khets* (irrigated fields). I have never seen the soybean grown in a *bari* (dry field) as a main crop. Main crops include rice, wheat and corn. Soybeans are always an afterthought. There is a British Aid Agricultural Farm at Pakhribas (in the Kosi Zone of eastern Nepal, 3 hours from Dhankuta) working on soybean trials." They came up with 3 varieties of soybeans which will grow in different terrains. More technical information can be gathered from them.

The Limbu live in the high hills and are "junglely types." "One of my co-workers is of Limbu origin and was the only one that knew about kinema or kenima (couldn't get the correct spelling but will keep trying). It seems it is a good trekking food. They make a soup of it and pour it over rice–keeps well–easy to cook. Lentils, a much preferred

food, take too long to make on the trail. After my trip to Ilam–investigating the Limbu land–I'll write more specific details. From what I could gather:" Boil soybeans until they are soft. Grind to a mush with a local mortar and pestle. Add ashes (*kharain*) from the cooking stove (*chulo*) and mix with the soybeans. Place in a bamboo basket (*dhahi*), cover, and leave for 24 hours. Remove from basket, place on a bamboo mat, and dry in the sun. Recipes vary. "I have never tasted any but it sounds awful. More research is required. I'll keep you informed."

Newsflash–the SCF clinic is looking into using soymilk as a substitute food for babies–only when the mother is unable to breast-feed. We have also discussed possible weaning foods. One problem–soymilk is not high in calories; both calories and protein are rare commodities. "The value of the soybean's body building protein would be lost and just burned off as energy." The biggest problem here is just a lack of food. The Nepali diet is healthy but too many mouths to feed. Address: c/o U.S. Peace Corps, P.O. Box 613, Kathmandu, Nepal.

3832. Brown, Judy A. 1982. Soyfoods are catching on. The soyfoods industry has shown astonishing growth. Who created the boom and why? *Whole Life Times* No. 20. p. 34-36. July/Aug.
• ***Summary:*** Contents: Introduction. Idealism guides many soycrafters. Soybean goldmine. Tofu. Tempeh. Miso. Soymilk. Soy inhibitions. Wave of the future. Photos show: William Shurtleff and Akiko Aoyagi. Richard Leviton. Michael Cohen.

3833. **Product Name:** Ceres Natural Soy Milk.
Manufacturer's Name: Ceres Natural Foods Pty. Ltd. (Importer & Distributor). Made in Japan.
Manufacturer's Address: East Bentleigh, Victoria, Australia.
Date of Introduction: 1982. August.
Wt/Vol., Packaging, Price: 180 ml pouch.
How Stored: Shelf stable.
New Product–Documentation: Talk with Don Lazzaro of Ceres Natural Foods. 1995. June 6. Their first imported product was named Ceres Natural Soy Milk. The label was an "oversticker" on a narrow plastic (not foil) stand up pouch in those days. It was made by either Marusan or Saniku.

Letter (fax) from Don Lazzaro of Ceres Natural Foods. 1995. June 15. In Aug. 1982 they introduced a soymilk product in a 180 ml pouch with a Ceres label, made by and imported from Saniku Foods in Japan. In Oct. 1983 this pouch was redesigned and became available in four flavours [probably natural, vanilla, barley malt, and one other]. During the mid-1980s, Ceres also imported and sold the Westbrae Westsoy and Ah Soy brands from the USA.

3834. **Product Name:** [Eggmil Soymilk].
Foreign Name: Eggmil.
Manufacturer's Name: Dae Won.
Manufacturer's Address: South Korea.
Date of Introduction: 1982. August.
New Product–Documentation: Letter from Kyung Lee, ASA country director, Korea, to William Shurtleff at Soyfoods Center. 1983. Nov. 23. Gives history and production statistics.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 81-83. They produced an estimated 1,400 tonnes in 1983.

3835. **Product Name:** [Thick Soymilk Coffee].
Foreign Name: Tônyû Pururu Koohii.
Manufacturer's Name: Furuta Shokuhin Kogyo (Furata Foods Co.).
Manufacturer's Address: Japan.
Date of Introduction: 1982. August.
Wt/Vol., Packaging, Price: 60 gm poly cup.
How Stored: Refrigerated.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. This product was introduced in August 1982 in a 60 gm poly cup, and distributed nationwide. Name of company with diacritics is: Furuta Shokuhin Kôgyô.

3836. Gruskay, Frank L. 1982. Comparison of breast, cow, and soy feedings in the prevention of onset of allergic disease: A 15-year prospective study. *Clinical Pediatrics* 21(8):486-91. Aug. [28 ref]
• ***Summary:*** Soy feeding from birth in high-risk infants does not have a beneficial effect. Address: Dep. of Pediatrics, Yale Univ. School of Medicine; Pediatric Allergy Clinic, Hospital of St. Raphael, New Haven, Connecticut.

3837. **Product Name:** [Meiji Sunglow Soymilk (With Barley Malt Syrup)].
Foreign Name: Meiji San-guroo Tônyû (Bakuga).
Manufacturer's Name: Meiji Milk Products Co. Ltd. (Meiji Nyugyo).
Manufacturer's Address: Kyobashi 2-3-6, Chuo-ku, Tokyo 104, Japan.
Date of Introduction: 1982. August.
Wt/Vol., Packaging, Price: 200 ml aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. Tonyu [Soymilk. 2nd ed.]. p. 72. Meiji Nyugyo launched Meiji San-guroo Tonyu (Pureen) in a 200 ml long-life (aseptic) carton in March 1981.

Soya Bluebook. 1983. p. 63. "Sungrow Soy Beverage." Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64. Note that Meiji started to market Sunglow soymilk, made and private labeled for them by Marusan, in April, 1979.

3838. Moorman, Michael. 1982. Ice cream: Another soy surprise. *Bestways*. Aug. p. 78, 81. [2 ref]
• ***Summary:*** Describes The Farm's work with soy ice cream in the USA, Guatemala, and Haiti, and their soy dairy in Lesotho. "Plenty, the relief organization of the Farm community based in Summertown, Tennessee, built a village soy dairy and tofu shop in Solola, Guatemala, with the help of local Indians and funding from the Canadian International Development Agency, UNICEF, and Plenty donations. In February, 1980, the Solola soy dairy began production and started selling soy ice cream and tofu from the dairy and in the local market place. The soy dairy is currently operated by local people trained by Plenty technicians. Free soy ice cream is distributed to poor and undernourished children through the nearby schools...

"Plenty technicians also went to Haiti and worked with Mother Teresa's Sisters of Charity. They made soy milk ice cream there for malnourished children. After training some of the people in how to use soybeans, they left equipment for them–including an ice cream machine–so they could continue on their own...

"Another arm of Plenty is reaching out to Lesotho, South Africa, where technicians are building a Village Technology Center. One of the stone huts of the Center will be used as a soy demonstration kitchen, where local villagers will be taught how to process soybeans at home. Plenty's projects are just one example of how soyfoods can be introduced into a foreign culture."

Four recipes are given for homemade soy ice cream, each based on soymilk. Note: This is an early document concerning soybean products (soy ice cream) in Lesotho. Address: Production Manager, Farm Foods, Summertown, Tennessee.

3839. **Product Name:** [Safflower Soymilk (Plain, or Cocoa)].
Foreign Name: Benibana Tônyû (Pureen, Kokoa).
Manufacturer's Name: Soken-sha K.K.
Manufacturer's Address: 724 Katakura-cho, Kanagawa-ku, Yokohama-shi 221, Japan.
Date of Introduction: 1982. August.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. Sôken-sha introduced Benibana Tônyû (in plain and cocoa flavors) in Aug. 1982 in 200 ml long-life packs and distributed it nationwide.

3840. **Product Name:** Tempeh, Tofu Tart (Tofu Pudding) [Chofu with Carob, Vanillafu with Vanilla, Lemonfu with Lemon, and Bananafu with Banana], Cottage Tofu.
Manufacturer's Name: Star Soyfoods.
Manufacturer's Address: Route 2, Box 337, Sandpoint, ID 83864. Phone: 208-265-4720.
Date of Introduction: 1982. August.
Ingredients: Tofu Tart: Crust: Vegan graham crackers, soy margarine. Soy Whip: Soy oil, soy milk, honey, vanilla. Fillings: Tofu, honey, vanilla for Vanillafu; plus lemon juice, soy oil and lemon rind for Lemonfu; carob powder and soy milk for Chofu; bananas, soy oil and lemon juice for Bananafu.
Wt/Vol., Packaging, Price: Tempeh: 8 oz. perforated poly bag sealed in a printed outer bag. Tart and Cottage Tofu: 2-4 oz small clear plastic cup with snap-on lid.
How Stored: Refrigerated.
New Product–Documentation: Order from Penny Billiter of Rt. 2, Box 337, Sandpoint, Idaho. 1981. Oct. 23. She orders 100 "What is Tempeh" pamphlets. On Dec. 8 she writes: "I have found your books very helpful and full of information. Thanks."

Form filled out by Penny A. Billiter. ca. 1981. Label with a smiling orange star is enclosed. "I am making tempeh, mock happy chicken, and baked tofu for the three health food outlets here in Sandpoint. I am only using 3-4 lb dry beans/week." Second form states the company started officially on 3 August 1982. Makes Tempeh and Tofu Tarts. Label. 1982, undated. 3.5 by 4 inches. Blue and orange on white. Label. 1983. 2 by 2 inches. Self adhesive. Blue on white with orange smiling star. Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Penny Billiter.

Talk with Penny Billiter Miller. 1993. Feb. 23. She still lives in Sandpoint and is still interested in soyfoods. She called the tarts "puddings" and she made several flavors: carob, vanilla, and banana. Sometimes she omitted the graham-cracker crust and just sold the product as a pudding. The Cottage Tofu, introduced at about the same time as the tempeh and tarts, was on the market for only a short time; she did it through the local food co-op. She still has records.

3841. Stickler, Gunnar B. 1982. A reevaluation of the case against cow's milk. *Clinical Pediatrics* 21(8):492-93. Aug. [6 ref]
• ***Summary:*** Some 70% of African-Americans may be lactose intolerant. Address: Dep. of Pediatrics, Mayo Clinic, Rochester, Minnesota 55905.

3842. Vijayalakshmi, K.; Vaidehi, M.P. 1982. Evaluation of tofu and its products prepared from soymilk and combination with sunflower seed milk and skimmilk [skim milk]. *J. of Food Science and Technology* (*Mysore, India*) 19(4):139-42. July/Aug. [8 ref]
• ***Summary:*** "Tofus from soymilk and combinations with sunflower seed milk and skimmilk were developed as a ready-to-use and prepare base for various Indian dishes." A sensory panel decided that tofu made from soymilk or from 60% soymilk and 40% skimmilk was acceptable, whereas tofu made from 60% soy and 40% sunflower seed milk or from 60% soymilk + 20% sunflower seed milk + 20% skimmilk were not acceptable.

Two snack foods, Burfi and Pakoda [Pakora], prepared

from the acceptable tofu were both acceptable with no significant difference ($P < 0.05$) among the products.

Note: A pakora is a fritter–any kind of food coated in batter and deep fried. Address: Dep. of Rural Home Science, Univ. of Agricultural Sciences, Hebbal, Bangalore 560 024, India.

3843. Wagner, Martha. 1982. Dairyless cooking. *Vegetarian Times.* Aug. p. 46-48.
• ***Summary:*** It's easy when you learn how to use soy milk, tofu, and nut milks as dairy substitutes. Contains recipes for: Soy milk (homemade). Tofu sour cream. Tofu creme (like whipped cream). Cashew nut cream. Nut milk (using almonds, cashews, or brazil nuts). Cashew milk gravy. Address: White Crane Publications, P.O. Box 3081, Eugene, Oregon 97403.

3847. **Product Name:** Soymilk (Unflavored).
Manufacturer's Name: American Soyfood Industries.
Manufacturer's Address: 419 Frankford Ave., Baltimore, MD 21206.
Date of Introduction: 1982. September.
Wt/Vol., Packaging, Price: Quarts, half gallon, and gallon.
How Stored: Refrigerated.
New Product–Documentation: Talk with Larry C. Betzler of American Soyfood Industries. 1988. April 1. The product has nothing added. Just plain basic soymilk.

3848. **Product Name:** Firm Tofu: Soybean Curd Cake, Soymilk, Soy Sprouts.
Manufacturer's Name: Chunco Foods Inc.
Manufacturer's Address: P.O. Box 883, Kansas City, MO 64141. Phone: 913-362-8097.
Date of Introduction: 1982. September.
Ingredients: Tofu: Soy beans, water, nigari (calcium sulphate).
Wt/Vol., Packaging, Price: 16 oz packed in water in molded plastic tray with heat-sealed, peel-off plastic film lid.
How Stored: Refrigerated.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1982. Sept. 17. President: Peter Chun. Talk with and business card from Peter Chun at Soyfoods Conference in Seattle, Washington. 1982. He is a Korean-American, who presently makes tofu, soymilk, and soy sprouts. Label. 1983, undated. 5.5 by 4.25 inches. Plastic film. Blue, black, and orange on clear film. "No preservatives. Keep refrigerated." Contains serving suggestions. In March 1990 his tofu retailed for $1.29 for 18 oz. It was very low priced and probably not pasteurized.

3852. **Product Name:** Tofu, Tofu Cakes, Tofu Sandwiches, and Soymilk.
Manufacturer's Name: Tofu Shop.
Manufacturer's Address: 78 Bridge Rd., Richmond, Melbourne, VIC, Australia. Phone: 03-429-6024 or 6204.
Date of Introduction: 1982. September.
New Product–Documentation: Form filled out by Malcolm Green. 1983. They also operate a deli serving soyburgers, sushi rolls, kanten (agar) sweets, tofu rice sandwiches, various soy drinks, and health foods. They use 10-15 lb/day of dry soybeans.

Soyfoods Center Computerized Mailing List. 1983. June 20. Owner: Malcolm Green.

Newspaper article by Jeni Port. 1983. "The tofu is here!" (Title of newspaper and exact date unknown). A photo shows Malcolm and Guna Green and their baby, Georgia, in their Richmond home, the first tofu shop in Melbourne. At "The Tofu Shop" (78 Bridge Road, Richmond) Malcolm and Guna make and sell a variety of soy foods, "specialising in tofu and tempting tofu cakes and sandwiches for the take away trade. It seems incongruous that the former butcher shop now contains Melbourne's first retail outlet for tofu, a food so strongly associated with vegetarianism." Making tofu is an art "that has taken Malcolm many years to master." They also sell soy milk for 90 cents a litre.

Letter from Darren Fletcher of Darkville, Melbourne. 1984. Sept. 4. "I've decided I don't want to commit myself to the tofu business. Too much long and hard work and I really think Melbourne has enough tofu shops. I also work with Malcolm Green's Tofu Shop."

3853. *Vegetarian Times.* 1982. Lowering cholesterol with soy milk. Sept.
• ***Summary:*** This good news comes from a series of investigations by scientists at the University of Western Ontario, London, Canada. Researchers Dr. Nina Mercer, Bernard Wolfe, Ken Carroll, and Patricia Giovanetti have found that the addition of soy protein to one's diet will reduce serum cholesterol levels regardless of dietary considerations.

This research was published in the *Journal of the American Medical Association* (11 June 1982).

3854. *Toyo Shinpo* (*Soyfoods News*). 1982. Tônyû ôte meekaa. Zokuzoku to setsubi zôkyô. Gosanke no shea arasoi shiretsu. Shijô 40% nerau Kibun. Kôchô no Nisshin wa jisha seisan e [Japan's biggest soymilk manufacturers: They have greatly improved their capabilities. The 3 big makers (Kibun, Marusan, Mitsubishi) are competing vigorously for market share. Kibun is aiming at 40%. Nisshin plans to produce its own soymilk]. Oct. 1. p. 1. [Jap]
• ***Summary:*** Sales of soymilk in Japan have doubled every year. By August of 1982 soymilk sales had already reached 5,000 million yen, which is double that of last year. Kibun is constructing two new soymilk plants; one each in Gifu prefecture and Hiroshima prefecture. They are expected to open in April 1983 and each plant will be able to produce 300,000 cartons per day. After these two plants open, Kibun will have a total production capacity of 1,200,000 cartons/day which is 40% of Japan's total soymilk industry capacity.

In June Okazaki Marusan completed the equipment to produce soymilk in large cartons (500 ml each). They now produce 300,000 cartons/day of 200 ml each, and 4,000 cartons/day of 500 ml. So far this year, up to September, Marusan has sold about 3,000 million yen of soymilk. They are hoping to expand their market share to 30% from their former 10%.

Mitsubishi Kasei Shokuhin was founded in February of this year; it became an independent company from Mitsubishi Kasei Kogyo. Their production at Kashima in Ibaraki prefecture is 270,000 cartons/day, each 200 ml. Mitsubishi is constructing a new plant at Kurashiki (Mizushima), in which they can produce 300,000 cartons/day (200 ml each). After these two new plants open Mitsubishi will have a capacity of 600,000 cartons/day. After the spring of 1983 they expect to be Japan's second largest soymilk manufacturer, with a capacity of 600,000 cartons/day and sales of 5,000 million yen/year. They are planning to open two more plants in the Chukin and Kyushu areas next year.

Meiji Nyugyo started to sell soymilk in March 1981 with a brand made by another company and private-labeled for them. In July 1982 they opened a new plant of their own. By March 1983 they hope to have soymilk sales of 1,500 to 2,000 million yen. Their former sales were 500 million yen. They have plans to expand production and hope to become the industry's second largest producer as soon as possible.

3855. Appropriate Foods, Inc. 1982. Eat Appropriately! [Catalog and price list]. P.O. Box 57, Sea Cliff, NY 11579.
• ***Summary:*** The following lines are carried and distributed: Tempeh Brothers, No Cow (Soymilk), Nasoya, The Bridge (Amazake, Seitan, Tofu Salad), Grainaissance (mochi), Island Sprouts (alfalfa), Sunshine Soyfoods (soysage), Sister Shorter (tofu spinach pie).

Note: This is the earliest document seen (Sept. 2011) that mentions Tempeh Brothers or Appropriate Foods. Address: Sea Cliff, New York.

3858. Jaffe, Werner G.; Guerra, Marisa. 1982. Soya para uso

humano [Soya for human use]. In: Seminario Internacional sobre el Majoramiento de la Soya en Areas Tropicales. Caracas, Venezuela: Fundacion Polar. 8 p. Held in Oct. 1982 in Caracas, Venezuela. [Spa]
• ***Summary:*** Contents: Nutritional and alimentary characteristics (*Caracteristicas alimentarias*)*:* One can distinguish at least 3 main motives for the use of soy products in human nutrition: (1) For their functional characteristics; for example the ability of soy protein isolates to absorb considerable quantities of water when injected into ham. (2) To reduce the cost of animal products, such as milk, eggs, etc. which they replace or extend; for example soy protein isolates can replace non-fat dry milk in mayonnaise, or textured soy protein can replace up to 30% of ground beef, or soymilk can be carbonated to make a nutritious soft drink. (3) Soy has a great potential in the fight against malnutrition because of its low cost and high nutritional value; many liquid formulas for infants and children have been developed. In our country, maize flour enriched with soy flour has been used for 6 years in the programs of the National Institute of Nutrition (*Instituto Nacional de Nutricion*) with considerable excitement.

Products that can be obtained from soya: whole soy flours and defatted soy flours (*harinas integrales y desengrasadas*), soy milks, soy protein concentrates, isolates (*aisolados*) and textured soy proteins. Soybeans are crushed in oil and cake (*torta;* meal). The oil is refined to obtain oils for food or industrial use, and lecithin–which is an emulsifier with multiple uses. The cake is used as a feed for animals, or it can be processed to make defatted soy flour, or soy proteins for food or industrial use. Soy flours made this way in Venezuela are called soyarinas. Soymilk is made from the whole soybean; it has the same protein content as cows milk but its flavor is different. The simplest protein products are the flour and grits / semolina (*semola*), which have a protein content of 40% if the oil is not extracted, or 50% if it is extracted. The grits must be larger than 100 mesh (*mallas*).

The use of soya: Soya as innumerable uses from industrial uses (from adhesives {*pegamentos*}, soaps, etc.) to human food and animal feeds. The greatest potential is in the utilization of the proteins in the area of nutritional improvement. Also as functional ingredients in food products.

At the present time there are many foods in which soy proteins are used: biscuits, breads, crackers, pastas, sausages, salami (*salchichones;* a cured sausage, fermented and air dried), meat balls / fish cakes, soups, puddings, cereals for infant feeding, infant formulas, dietetic foods, anti-allergenic foods, drinks, etc.

In Venezuela, soya is used mainly as an ingredient in animal feeds and as an edible oil. However, in recent years, some soy products have been introduced in different foods. The national Institute of Nutrition, in its programs of supplementary foods, has included soy crackers, corn griddle cakes (*arepas*), and instant, pasteurized *chicha.* Moreover, in popular and school foods, soy flours are used in cakes (*tortas*), and textured soy flour in meat balls and soups.

In Venezuela, in 1979 the Soy Council (*El Consejo de Soya*) was established and in 1980 a working group on the Use of Soya for Human Consumption (*Uso de la Soya para el Consumo Humano*). Address: 1. Dr., Profesor titular y coordinacion del curso Postgrado de Planificacion Alimentaria y Nutricion, Facultad de Ciencias de la Universidad Central de Venezuela; 2. Lic., Docente e Investigadora de la Universidad Simon Bolivar, Division de Ciencias Biologicas, Departamento de Tecnologia de Procesos Biologicos y Bioquimicos, Sartenejas, Estado Miranda [Venezuela].

3859. **Product Name:** [Seo Ju Mill Soymilk].
Foreign Name: Seo Ju Mill.
Manufacturer's Name: Seo Ju Industry.
Manufacturer's Address: South Korea.
Date of Introduction: 1982. October.
New Product–Documentation: Letter from Kyung Lee, ASA country director, Korea, to William Shurtleff at Soyfoods Center. 1983. Nov. 23. Gives history and production statistics.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 16, 81-83. They produced an estimated 4,800 tonnes in 1983.

3860. Shinwell, Eric D.; Gorodischer, R. 1982. Totally vegetarian diets and infant nutrition. *Pediatrics* 70(4):582-86. Oct. [24 ref]
• ***Summary:*** Observations on the deleterious effects of a totally vegetarian diet in infancy are reported, and the difficulties encountered in the prevention of nutritional deficiencies in a vegan religious community are discussed. Twenty-five infants of this community seen at a hospital showed evidence of protein-calorie malnutrition, iron- and vitamin B-12-deficient anemia, rickets, zinc deficiency, and multiple recurrent infections. Evidence of growth retardation also was found in 47 infants seen at a local mother-child health (well-baby) clinic. The main constituent of the infants' diet after the age of 3 months (a prepared "soya milk") was extremely dilute, with a very low caloric value (13.7 kcal/100ml). Persistent attempts to find dietary modifications that would satisfy both the vegan philosophy and also the recommended dietary allowances failed. Address: Ben-Gurion Univ. of the Negev, Beer-Sheba, Israel.

3861. **Product Name:** Tofu, Soymilk, Soysage, Seasoned Tofu, Falafel Made with Okara, Granola with Okara.
Manufacturer's Name: Springfield Community Foods.
Manufacturer's Address: 300 N. Waverly, Springfield, MO 65802. Phone: 417-866-1337.
Date of Introduction: 1982. October.

New Product–Documentation: Letter from Jim Hawkins. 1982. Oct. 12. Nice letterhead. "Home Town Tempeh is one of several businesses operating under one roof as Springfield Community Foods. The tofu shop in association with Springfield Community Foods makes tofu, soymilk, soysage & seasoned tofu. Other products available at the store include falafel made with okara, granola with okara, tempeh & tofu sandwiches (in pocket bread made by our in-house baker). The deli section is evolving, and other soy products are in the works, including a tofu dressing/dip and tempeh salad."

Soyfoods Center Computerized Mailing List. 1983. June 20. Muckfoot Farms and Springfield Community Tofu are both listed as tofu manufacturers at 300 N. Waverly, Springfield, Missouri 65802. Phone: 417-866-1337. Owner of Muckfield is Paul Day.

3862. Nelson, A.I. 1982. History of work with soyfoods in India and at the University of Illinois (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 28. 2 p. transcript.

• ***Summary:*** He went to India for the first time in 1969, for 3 months. At that time very little work was done in the USA on low-tech soyfoods except soymilk at Cornell and the NRRC (Peoria, Illinois). He visited Cornell but they were not really doing anything with soymilk at the time; however they had worked out plans for a soymilk processing plant. They didn't have many food products in mind except soymilk. That lack is what encouraged researchers at the University of Illinois (Nelson, Wei, and Steinberg) to start working on developing a soymilk process, shortly after he returned from India in 1969. Their first soymilk prototype was ready in Jan. 1970. Then they began to develop weaning foods, breakfast foods, etc.

Prof. Nelson went to India again from the 1971 (fall) to 1973, almost two full years. He was one of the last to leave since G.B. Pant University wanted him to continue helping them. Address: Prof., Dep. of Food Science, Univ. of Illinois.

3863. **Product Name:** [Marusan Soymilk Soup (Potage Style)].
Foreign Name: Marusan Tônyû Suupu.
Manufacturer's Name: Okazaki Marusan K.K. (Marusan-Ai Co., Ltd.).
Manufacturer's Address: 1 Aza Arashita, Niki-cho, Okazaki-shi, Aichi-ken 444-21 Japan.
Date of Introduction: 1982. November.
Wt/Vol., Packaging, Price: 180 ml pack. Retails for ¥130 per pack.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Article in Toyo Shinpo (Soyfoods News). 1982. Nov. 1. Marusan's 6 new products. Soymilk Soup (potage style). Shelf life: 70 days at regular room temperature. 180 gm per pack; 30 packs per case. 1 pack costs 130 yen. Heat a pack in boiling water for 5 minutes, then serve.

3864. *Soyanews* (*Sri Lanka*). 1982. Soya saves the coconut. 5(3):1. Nov.

• ***Summary:*** By mixing two parts coconut milk with one part soya milk, the Welikada Prison has saved 108,000 coconuts in one year. The also relieved the pressure on the kitchen budget. "At present soya milk is supplied to the prison in the form of a paste [soy base]... This paste is then added to curries. Now the Welikada Prison will be able to make it own paste because, with the saving it has made, it has bought two grinding machines from Bean Machines, U.S.A.

"One of these machines will be installed at the Bogambara Prison, Kandy. There are also plans to install more of these machines at the Anuradhapura, Jaffna, and Mahara prisons." Soymilk is considered more healthful than coconut milk. "There have been no complaints from the prisoners regarding any changes of taste.

"The commissioner of prisons also said that with these new machines it will be possible to begin a new prison's industry–making soyafoods. Already he was planning to use the residue left after making soya milk by incorporating it in the bread made in the prison bakery. Tofu also could be made and put on sale.

"There are other soyafoods that can be made and they are now looking into the possibilities of making soya sauce, soya ice cream and soya yogurt.

"The Commissioner of Prisons, Mr. Delgoda, thanked Mrs. Gai Kim, wife of the Resident Representative of the UNDP, Mr. Y.Y. Kim, for suggesting the introduction of soya into the diet of prisoners."

A photo shows a man standing next to "the grinding machine installed at the Welikade Prison. The machine grinds 100 pounds in an hour."

3865. Taitz, L.S. 1982. Soy feeding in infancy. *Archives of Disease in Childhood* 57(11):814-15. Nov. [20 ref]

• ***Summary:*** "Growing concern over intolerance of cows' milk protein is leading to more frequent diagnosis of the condition... Intolerance of cows' milk can be divided into 2 major types. The first is gastrointestinal intolerance associated with diarrhoea [diarrhea]... The second comprises the more common forms of atopy. In infancy eczema is the usual manifestation... Estimates of the incidence range widely, varying from 0.1% to 8%. A reasonable working figure would be that of the order of 0.5%."

"The basic assumption underlying the use of soy as a substitute for cows' milk is that it is less allergenic. There are 2 main reasons for its use: (1) as a replacement for milk feeds where proved or putative milk protein intolerance or allergy exists; (2) used prophylactically in infants who are considered to be at high risk of allergy, particularly those with a family history of atopy."

"Conclusions: (1) There is conflicting evidence on whether soy formula feeding will lead to a lower incidence of allergy in infants predisposed to atopy. It may benefit some infants with atopic eczema. (2) The occurrence of soy intolerance in at least some infants with milk protein-induced gastro-intestinal damage, calls into question its use in this disease. Proved cows' milk protein intolerance should be treated with formulae consisting of protein hydrolysates. The diagnosis of this condition should not be made without careful evaluation by an expert in the field. (3) The indiscriminate use of soy formula for vague symptoms and signs not proved to be due to cows' milk intolerance is to be avoided. (4) Soy feeds should not be freely available without prescription and should only occasionally need to be prescribed." Address: Dep. of Paediatrics, The Children's Hospital, Western Bank, Sheffield S10 2TH, England.

3866. *Toyo Shinpo* (*Soyfoods News*). 1982. [Mitsubishi Kasei expands their soymilk production]. Dec. 1.
• ***Summary:*** Mitsubishi is building soymilk plants in Kurashiki-shi (city) and Ibaragi-ken (prefecture). The plants are expected to be completed sometime in the spring of 1983.

At that time Mitsubishi will become the 2nd largest soymilk maker in Japan, after Kibun. They are also planning to develop and sell yogurt-type soymilks. Their goal is 1.6 million packs per day (50,000 metric tons/year).

3867. *Toyo Shinpo* (*Soyfoods News*). 1982. [Daie, large supermarket and department store company, has launched their own brand of soymilk]. Dec. 1.
• ***Summary:*** Daie is pronounced dai-EH. The brand will be Captain Cook Cut & Balance. They have four flavors: Plain soymilk (200 ml). Coffee soymilk (200 ml). Mixed fruits soymilk (200 ml). Soymilk ice (ice cream?) (500 ml).

3868. Angove, Ruth. 1982. Re: Soya in Nepal. Letter to William Shurtleff at Soyfoods Center, Dec. 6–in reply to inquiry of Nov. 20. 1 p. Typed, with signature.
• ***Summary:*** In Nepal, "Soya is mainly grown and utilized on the spot. We think it is a valuable resource for the subsistence farmer in inaccessible hilly areas of Nepal where food trading is minimal.

"Soya beans can be roasted and used with beaten rice, or just eaten roasted alone. My own impression is that 'Makai Bhatmaas' [Bhatmas] (popped corn and roasted soya beans) are more popular, when available.

"My colleague, Miriam Krantz [CDAP, Lalitpur] has developed a simple formula which is tailored to the needs of nursing mothers and children in the Kathmandu Valley. It is made from 1 part (by volume) each wheat and corn, and 2 parts soybeans. Each is cleaned and roasted separately, then finely ground, either on the domestic grindstone which is in every home, or in larger quantities at a mill. The resulting flours should be sifted through a coarse cloth then mixed together. Mix with boiling water to the desired consistency; it is like "Lito," "Diro," or "Tsampa" and can be used by any ethnic group.

A nutritional analysis of this mixture is given. "We have called the original mixture 'Sarbottham Pito' or Super Flour.

"Commercial utilization and elaborate soya preparation seem unlikely to benefit those in most need, as the price of soya and soya preparations would be too high. At one time we thought of promoting soya milk but have found it impractical... Out main concern is production of soya itself..." Address: Nutrition Advisor, United Mission to Nepal, G.P.O. Box 126, Kathmandu, Nepal. Phone: 12179.

3869. Folkenberg, Robert. 1982. The Seventh-Day Adventist Inter-American Food Company, and Dr. Steven Youngberg's soymilk plant in Honduras (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 10. 1 p. transcript.
• ***Summary:*** Dr. Steven Youngberg arrived in Honduras in about 1959-61. He is a self-supporting SDA medical missionary. He operates an orphanage and a small clinic, and has done quite a bit of work with foods, including soyfoods. Folkenberg lived there from 1970-74 and knew him well. Youngberg began making soymilk at an early date. He had a large plant as well as a portable plant. He set up the portable one at a fairground in San Pedro Sula. He had a fine product and it was well accepted, but it was not well marketed or distributed. Address: Inter-American Food Co., P.O. Box 340760 (760 Ponce de Leon Blvd.), Coral Gables, Florida 33134. Phone: 305-443-7471.

3870. Shurtleff, William; Aoyagi, Akiko. 1982. History of soybeans and soyfoods in Latin America. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 39 p. Dec. 10. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. Contents: Historical overview. Brazil. Mexico. Argentina. Paraguay and Uruguay. Central America: Costa Rica, Guatemala. Caribbean and Guianas (including Suriname). Andean countries. Address: Lafayette, California. Phone: 415-283-2991.

3871. Rose, Richard. 1982. Re: Enclosing new labels using new logo. Letter to William Shurtleff at Soyfoods Center, Dec. 28. 1 p. Typed, with signature on letterhead (photocopy).
• ***Summary:*** "Dear Bill: Enclosed are some samples of our current labels using the new logo Bear in mind that these are still just interim labels, until the new 3-color ones are completed. We are also working on a radical new package for the vacuum-packed tofu.

"Carol Flinders is writing an article on Brightsong–it should be out in early January. It's for her column.

"Due to popular demand we've dropped the Sonoma Natural Foods bit. Just good ol' Brightsong Light Foods now. We are working on a shake now. Probably a Cocacarob Shake.

"Any ideas on how to get soy products certified for the Women, Infants and Children (WIC) program?

"Glad to hear your hip is healing well. Hope you and Akiko had & good holiday season. Sincerely, Dik Rose." Address: Brightsong Light Foods, P.O. Box 603, Petaluma, California 94953. Phone: 1-707-778-8638.

3872. *SoyaScan Notes.* 1982. Chronology of soybeans, soyfoods and natural foods in the United States 1982 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jan. White Wave in Colorado is the first company to get its tofu placed in the yogurt / dairy case in supermarkets.

Jan. Legume, Inc. launches Tofu Lasagna, frozen in a box. It is soon followed by Tofu Ravioli.

Jan. *The Incredible Tofu Cookbook, California Style,* by Immegart and Dansby self published.

Jan. New England Soy Dairy launches "Year of the Dog" Chinese New Year tofu promotion and nets 47% immediate sales increase.

Jan. Island Spring survives industry's first publicized tofu recall and the discovery of new tofu spoilage microorganism, *Yersinia enterolitica.*

Jan. ADM becomes sponsor of "This Week with David Brinkley" on Sunday ABC TV, with 4.4 million viewers.

Jan. Soyfoods Unlimited in California introduces tempeh burgers and ships them air freight to East Coast markets; Pacific Tempeh in California follows suit.

Feb. Yuba is first produced and sold commercially in the Western world by Ken Lee of Soyfoods of America, in Duarte, southern California. Trial production had begun in Nov. 1981.

Feb. *Soyfoods* magazine No. 6 (yellow cover) published.

Feb. Many large ads run by San-J (tamari), New England Soy Dairy, and Legume in major national trade journals.

Feb. Unicorn Restaurant in Miami has $15,000 gourmet, soy / natural foods banquet to welcome chef Ron Pikarski, who makes elegant tofu dishes and carves a swan from soy butter.

Feb. Nasoya buys $50,000 Kutter vacuum-packaging machine, which helps to popularize this packaging style for tofu.

March. *Tofu Fantasies,* by Juel Andersen published by Creative Arts.

March. USDA issues new school lunch regulations, fails to approve tofu for use.

March. Inaccurate, damaging article on iron binding by soy proteins appears in San Francisco Chronicle and Los Angeles Times.

March. Fifteen soyfoods companies exhibit at Natural Foods Expo, Anaheim, CA. Richard Leviton gives key speech. 5,000 visitors see expo. Pacific Tempeh unveils new full-color tempeh burger poster.

March. Big increase in European soyfoods companies; there are now 11.

March. Name of *The Beanfield* newsletter changed to *Soyfoods Monthly.*

March. Great Eastern Sun trading company founded in North Carolina by Barry Evans.

April. At New York's International Food Show, Quong Hop, Yeo's, and President brand soymilks, and Veda's Bayou Delights (tofu / tempeh pot pies) exhibit. ADM serves soy isolate ice cream and soymilk.

April. Quong Hop unveils its new Soy Deli marketing concept for retail using posters and tofu entrees sold frozen.

April. Jack's Beanstalk in Utah does creative work at introducing tofu to institutions. Develops 30 bulk recipe cards scaled to 100 servings.

April. ADM unveils work with glucono delta-lactone (GDL) and soy isolates in making tofu.

April. *Toyo Shimpo,* Japan's tofu newspaper, gives extensive coverage to upcoming Soyfoods Come West conference in Seattle.

May. Island Spring releases two 5-minute color video tapes demonstrating tofu cooking for showing in supermarkets.

May. Public schools in Hawaii granted permission to use tofu in meals.

May. *Soyfoods Directory and Databook.* by Shurtleff and Aoyagi published by Soyfoods Center, the first book of its type listing all soyfoods companies and industry and market statistics, 21 pages. Second edition published in June as *Soyfoods Industry: Directory and Databook,* 52 p.

May. William Shurtleff and Mark Fruin receive a grant from Kikkoman to write a book on soy sauce.

May. *Cook with Tofu,* by Christina Clarke is 2nd runner-up in R.T. French's Tastemaker awards for cookbooks.

May. Clearway Tofu sponsors the first Mother's Day Tofu Fair in Santa Cruz, California, with tofu recipe competition, music, and prizes.

June. Vitasoy USA runs color display ads for soymilk on San Francisco buses.

June. Kibun of Japan exhibits four flavors of soymilk in Tetra Pak cartons at National Restaurant Show in Chicago.

June 16. *The New York Times* runs an article on Dieter Hannig, Director of Food Research for Hilton Hotels. His many tofu recipes on microfiche are sent to 86 Hiltons worldwide.

June. Bestways magazine begins 3-part series on soyfoods by Bonnie Mandoe.

June. *The Soy Dairy: A Way to Save the Small Farm,* by MacCormack published by Sunbow Farm.

June. *The Book of Nigari Technique* (in English) published by Yoshikawa Kagaku in Japan.

June. Metta Tofu Products in Denman Island, B.C., Canada, introduces Frozen Buddha soymilk ice cream.

June. Haarmann & Reimer debuts flavors for tofu and okara at IFT convention in Las Vegas.

June. Royal American Foods is launched in Kansas City with $1 million startup capital to sell TVP entrees, tofu-like products via multi-level marketing system.

June. Granny Goose Potato Chips does extensive radio advertising in California for a new potato chip. Ad makes frequent, positive reference to tofu. First national radio ads mentioning tofu.

June. Farm Foods presents Ice Bean at American Booksellers Convention at Anaheim, California, along with previews of their new tofu cookbook.

July. "Discover Tofu" published by *Cosmopolitan* magazine.

July. Farm Foods receives a U.S. trademark for "Ice Bean" as a soy ice cream.

July. Light Foods excites NNFA convention in New Orleans with debut of Light Links, the world's first tofu hot dogs.

July. Eden's Orchard tofu / soymilk ice cream introduced in New York by Heller Enterprises.

July. Richard Jennings announces a new formula for okara / barley tempeh; later purchases Southwest Soyfoods, relocates company in Santa Fe, New Mexico. Continued.

3873. **Product Name:** Provamel Soya Drink [Choco {Chocolate}, or Plain {With Sugar}].
Manufacturer's Name: Alpro.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1982. December.
Wt/Vol., Packaging, Price: 250 ml, 500 ml, 1000 ml.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Form filled out by Alpro. 1990. May 30. Alpro began making this product (2 flavors) in Dec. 1982 in 500 ml cartons. The Provamel line is sold in health food stores in Europe, whereas the Alpro line is sold in supermarkets.

3874. **Product Name:** Provamel Soya Dessert [Chocolate].
Manufacturer's Name: Alpro.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1982. December.
Wt/Vol., Packaging, Price: 250 ml, 500 ml, 1000 ml.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Form filled out by Alpro. 1990. May 30. Alpro began making this product in Dec. 1982 in 500 ml cartons.

Form filled out by Philippe Vandemoortele of Alpro.

1991. Sept. 4. The first soya dessert made by Alpro under the Provamel label was launched in Dec. 1982. It was originally sold in choco and plain (with sugar) flavors.

3875. Hitzman, J.W.; Nelson, A.I.; Wei, L.S. 1982. Effect of added oil on soy beverage quality. *J. of Food Science* 47(6):2064-65. Nov/Dec. [12 ref]
Address: Dep. of Food Science, Univ. of Illinois, Urbana.

3876. **Product Name:** Amazake Pudding (Apple-Raisin, Almond, Banana Coconut, or Banana).
Manufacturer's Name: Infinite Foods.
Manufacturer's Address: 1872 East Schiller St., Philadelphia, PA 19134. Phone: 215-739-8578.
Date of Introduction: 1982. December.
New Product–Documentation: Bob Schiering. 1988. Jan. 18. U.S. Amazake Manufacturers Update. Based on interviews with 8 companies. The company was founded in 1982 and James Budnicki started to make amazake that June. He makes both Amazake Drink and Amazake Puddings. His main source of influence was macrobiotics.

3877. Patil, G.R.; Gupta, S.K. 1982. High-protein beverage from cheese whey and soybean. I. Manufacturing process. *Indian J. of Dairy Science* 35(4):492-96. Dec. Based on Patil's 1980 PhD thesis, Kurukshetra Univ., Kurukshetra. [19 ref]
• ***Summary:*** Soybean cotyledon slurry or soy protein-lipid concentrate (SPLC) was mixed with condensed whey (CW) or lactose reduced condensed whey (LRCW) to give 5 different soy protein to whey protein ratios. The mixture was then processed to give a soy whey beverage. The optimum ratio was 3:1, with a protein concentration of 4% and a sugar concentration of 7%. Strawberry flavor increased

the acceptability. The beverage could be spray-dried satisfactorily by adding the sugar along with water soluble vitamins and methionine after drying. Address: Div. of Dairy Technology, National Dairy Research Inst., Karnal 132001.

3878. Patil, G.R.; Gupta, S.K. 1982. High protein beverage from cheese whey and soybean. II. Storage stability. *Indian J. of Dairy Science* 35(4):418-21. Dec. Based on Patil's 1980 PhD thesis, Kurukshetra Univ., Kurukshetra. [5 ref]
• ***Summary:*** Spray-dried soy-whey beverage was packaged in polyethylene bags or lacquered tin cans and stored for 6 months at 5ºC and 30ºC at about 80% relative humidity. Sensory evaluation of reconstituted samples showed that the dried product could be stored at 5ºC for 6 months in the cans and 5 months in the bags, and at 37ºC for 4 months in the cans and 2 months in the bags. Address: Div. of Dairy Technology, National Dairy Research Inst., Karnal 132001.

3879. Rajor, R.B.; Gupta, S.K. 1982. Soft-serve ice cream from soybean and buttermilk. II. Drying and storage studies. *Indian J. of Dairy Science* 35(4):410-17. Dec. Based on Rajor's PhD thesis, Panjab Univ., Chandigarh. [14 ref. Eng]
• ***Summary:*** A soft serve ice cream mix with ratio of 1.3 soybean solids-non-fat (SNF) to 1 buttermilk SNF, and containing 12% SNF, 9% fat, and 15% sugar, was successfully spray dried. To prevent caramelization, the mix was prepared with 7.5% sugar and the remaining sugar was added by dry-blending before packaging. The mix could be stored for 12 months refrigerated at 5ºC in polyethylene bags or lacquered tin cans (LTC), or in LTC with nitrogen at 30ºC for 8 months. Without nitrogen at 30ºC it could be stored for 4 months in LTC or 32 months in polyethylene bags. Sensory scores of the ice cream prepared from the mix decreased with increasing storage time. Address: Div. of Dairy Technology, National Dairy Research Inst., Karnal 132001.

3880. Tsuchiya, Kanji. 1982. Tônyû. Shinban [Soymilk. 2nd ed.]. Tokyo: Shoku no Joho-sha. 223 p. First edition was published in 1980. Illust. 17 cm. [Jap]
• ***Summary:*** This is the best book seen to date on soymilk in Japanese. A detailed chronology of tofu and soymilk is given on pages 173-76. Over 20 years ago, when Mr. Tsuchiya was plant manager of the Kyôdo Nyûgyo dairy milk plant at Matsumoto, he became interested in using soy protein to replace dairy protein. Although soybean crushers had investigated the use of defatted soybean meal, the techniques for removing the beany flavor and smell were not yet good enough to allow substitution of soy protein for milk solids. At that time there was a shortage of imported nonfat milk for use in ice cream bars. It was said that a small numbers of manufacturers of the inexpensive ice cream products were already using some soy protein to increase their over-run. "Discovering this, Nisshin Seiyu, after some research, found a method of removing the beany smell by fermentation with a yeast; they asked if Kyodo Nyugyo could make a test run of 10 kg of spray-dried soymilk in our plant. So they dissolved soy powder (*daizu-ko;* which had been defatted at a low temperature) in water, added yeast, waited until the reaction was finished, diluted it with some water, and put it in a spray dryer. Yet the spray drying caused some protein denaturation and an increase in the viscosity of the soy powder, which made it difficult to pump the solution to the top of the spray dryer. Glucose was used to replace half the soy powder. The spray-dried powder would not dissolve in water and the resulting mixture had a muddy brown color, a flavor that was too sweet, and a beany flavor. It was useless. They had discovered that defatted soybean meal and nonfat dried milk behave differently. Defatted soybean meal contains about 20% sugars, but less than 1/3 of these are water soluble and many have a very complicated structure and high viscosity."

Therefore they started to study the basic nature of defatted soybean powder (*dasshi daizu-ko*) and after much trial and error, in 1961 they applied for a Japanese patent on "The method of refining defatted soybean powder" (*Dasshi daizu-ko no seisei hôhô*). They were issued the patent (#16,658) in 1962. The key to the success of this patent was the use of meta potassium bisulfite (*meta jûaryusan karium*), which lowers the viscosity, bleaches it and increases the amount of soluble nitrogen. Not enough of the beany flavor had been removed, yet at that time it was an excellent product, which could be used in place up to 30% of nonfat dried milk to make an ice cream product without a beany flavor. Mr. Masaharu Sato (who is presently head of the soybean department of Kyodo Nyugyo's central research lab) was the person who contributed most to the discovery. He is now conducting research on tofu and soymilk. "I still see him often since we are both members of Soyfoods Development Study Group (*Daizu Shokuhin Kaihatsu Kenkyû-kai*). He recently told me, 'After that incident, I became captivated by soy protein.'"

"After about 2 years of research, during the summer we received an order from Nisshin Seiyu for 200 tons of soy protein. Our plant had been losing money for a long time, and this discovery helped to make some profit during my time of work there. I will never forget it. I feel real gratitude to Nisshin Seiyu for helping us to become captivated by soybeans."

At about that time dairy farmers throughout Japan began to compete with one another in a price war which lowered milk prices. The battle between them and the owners of dairy milk companies got worse and worse. Among the leaders of this struggle were progressive dairy farmers in Matsumoto. "Although we made soy powder very secretly, one of the plant workers, who was the son of a dairy farmer, leaked the secret. This caused an uproar (we were using soy powder instead of dairy milk) and the local farmers asked us to stop immediately. However we decided to continue making soy

powder for various reasons: (1) We had to fulfill the order that we had accepted; (2) Since we simply processed soy and sold it to another company, this had no effect on our plant's use of unprocessed dairy milk; (3) The soy business allowed out plant to operate profitably and this allowed us to return some money on the dairy farmers' investment." For a variety of complex reasons related to this conflict, Mr. Tsuchiya was fired as plant manager for Kyodo Nyugyo's Matsumoto dairy milk plant. Though his retirement was very near, he left the dairy industry without regret to continue his research on soy powder (p. 14-19).

"Meeting with Dr. Miller: During the period 1965-1969 I was involved in the founding of Taiwan Ryokusô Kogyô Kôshi, and I took a leadership role in constructing modern plants to make powdered soymilk and chlorella. One of the leaders in the chlorella industry, the late Dr. Yoshio Takechi, was in charge of the chlorella cultivation department and I was in charge of chlorella product development and of powdered soymilk production. In 1966 Dr. W.A. [sic, Harry W.] Miller (who was a founder of Loma Linda Foods) and his son visited our company, under the guidance of Dr. Taisei of Taikei University. At that time Dr. Miller stood on the platform atop our spray dryer, which was 20 meters tall and had 500 liters/hour capacity. Admiring it, he said: 'I've never seen a soymilk plant which has this much facilities!' He also tasted the soymilk (from which the beany flavor had been removed) and said 'I wonder if you have to refine soymilk to this degree for Chinese people.' His words left a strong impression in my memory. Sure enough, when the factory was completed and we launched our canned soymilk powder, we heard Chinese saying, 'This is not real soymilk. It's an imitation.' But we did a good marketing campaign and soon the soymilk started selling. When my 2-year contract ended, I returned to Japan. After that, the products produced in this plant were used as food for the Taiwanese army and were not sold to the public. Moreover, because of the chlorella boom in Japan, the spray dryer was used for chlorella and soymilk production stopped. Since I had great expectations for this plant, I was greatly disappointed.

"Right after I returned to Japan in 1970, I was asked to provide technical assistance to Keijô Shison Shokuhin Kenkyusho, a research lab in Korea headed by pediatrician Son Zaien. I visited there several times and even drafted a floor plan, then suddenly the Japanese government told me that the money which had been available for helping Koreans was no longer available, so I could do no more" (p. 18-21; see p. 53 for more on soymilk in Korea). Continued. Address: Technical consultant, Okazaki Marusan, Japan.

3881. Tsuchiya, Kanji. 1982. Tônyû. Shinban [Soymilk. 2nd ed.] (Continued–Document part II). Tokyo: Shoku no Joho-sha. 223 p. First edition was published in 1980. Illust. 17 cm. [Jap]

• ***Summary:*** Continued. Pages 31-32. In the literature of Japan's Muromachi period it is written that after eating confections (*tenshin* such as okashi, oyatsu) they ate light and simple food (*tanpaku na tabemono*). One of the latter was called *tofu no uwamono,* which means yuba.

A flow diagram (p. 35-36) gives Chinese names of soymilk, yuba, fermented tofu, etc.

Part III (p. 39-64) titled "Soymilk around the world," has chapters on the USA, Korea, Hong Kong, China, Taiwan, Southeast Asia, and Europe. Soymilk in America (p. 47-52) includes a 1975 table showing major manufacturers of soymilk and soy-based infant formula, their location, and the names of their products. Soymilk in Korea (p. 53-54): In 1968 the Keijo Shison Shokuhin Kenkyujo made soymilk using the regular tofu making equipment adjusted to make a product as similar as possible to dairy milk, then bottled it in cider bottles, pasteurized it, and sold it. They made 500 to 800 bottles a day and sold it nationwide. It was brownish in color and tasted like soybean cooking liquid; there was no comparison between that and today's soymilk in quality. The head of this research lab was Dr. Son Zaien, who also ran the children's hospital and was a professor of pediatrics at Seoul Medical University. As a pediatrician his concern was that the soymilk promote the growth and health of children; he was not concerned about its acceptance among adults. The children accepted it within 2-3 days. Later, in May 1982, Tsuchiya visited Korea again. They had developed their own method of making soymilk and the soymilk plant had been expanded. Now they produced 500,000 bottles a day (180 cc each, retort sterilized); they call it Vegemil / Vegemeal. It contains added fat and sugar to make it closer to dairy milk., but the sugar content is 10%, which is sweeter than Japanese soymilk. The plant is built on a lot of 4-5,000 tsubo and has 24 retort sterilizers; each machine has 2,500 bottles capacity. Tôhô Yuryô, as part of a Korean technical joint venture with Kibun in Japan, is going to make 120-130,000 Tetra Brik cartons (each 200 cc). Also other dairy milk makers (Sojû and Sangan) are going to have some sort of equipment to start making soymilk. Also, I head that Tôa Shokuhin (K.K.), a pharmaceutical company, is planning a joint venture with Meiji in Japan to make soymilk.

Also, Lotte Chilsung Beverage Co. is planning to use Marusan's (Japan) technology to make soymilk. They are constructing a plant to start to making soymilk in Feb. 1983.–The population of Korea is about 40 million and the GNP 24,000 million won (unit of currency) a year; it is the largest in Asia. But it is a tough war for market share among these fine companies.

Soymilk in Taiwan (p. 57-61): People who were born in Taiwan [the former Japanese colony of Formosa (1895-1945)] have Japanese food habits and don't like soymilk as much as the Chinese. Also, Taiwanese young people don't like soymilk much. In mainland China people only drink water that has been boiled and cooled–just as they do with tea. The same with soymilk. They boil soymilk in a flat

pan (*hira-nabe*) for 20-30 minutes before selling it. The buyers don't buy it without seeing that it has been properly boiled. If you cook soymilk in a flat pan for a long time, you can eliminate much of the beany smell and flavor, the antidigestion substances, and harmful bacteria. They don't care about a little burned flavor, bitterness, or beany flavor. But this is ancient wisdom. There they continue to drink soymilk up to this day and it is still very popular. It is said that the annual sale of soymilk in Taiwan is about 5,000 million yen.

In China, sellers of ice candy (like ice Popsicles) call out loudly *kaishui bingo. Kaishui* means boiled and cooled water. *Bingo* means Popsicle.

In the Philippines, about 10 years ago, the University of the Philippines developed soymilk and a blend of soymilk and coconut milk for American children. It was test marketed among the students and teachers of elementary schools, junior and senior high schools, and universities. It was acceptable only to comparatively well educated people. A 200 ml bottle (about 7 ounces) sold for 15 cents, making it more expensive than most other drinks. The taste was plain but the bean smell was not completely removed. In October 1982 Dr. William G. Padorina and other economically influential people came to Japan at the request of President Ferdinand Marcos and studied Marusan's soymilk plant. They are planning a Food Development Symposium in Feb. 1983 and they would like to have nutritious soy products that contain coconut oil (they account for 70% of the world's production). They have asked Marusan to cooperate in the effort.

In Denmark, a company named Starna [Nutana?] makes various soyfoods such as textured soy flour (*daizu nikku*), defatted soymilk, and soymilk. They are selling these products in Denmark and neighboring countries. *The Book of Tofu* by Shurtleff and Aoyagi is mentioned on pages 46 and 117.

Okazaki Marusan makes a soy yogurt named *Tôgurt / Tôguruto* in Japanese. The character *tô,* which means bean, is also the first character in the word *tôfu* (p. 71). Address: Technical consultant, Okazaki Marusan, Japan.

3882. Tsuchiya, Kanji. 1982. [Soymilk in Japan, and its history (Document part)]. In: Kanji Tsuchiya. 1982. Tônyû. Shinban [Soymilk. 2nd ed.]. Tokyo: Shoku no Joho-sha. 223 p. First edition was published in 1980. [Jap]

• ***Summary:*** Building a plant specialized in making soymilk (p. 21-24): After my two overseas attempts ended in failure, I returned to studying the basics. With the help of a friend, I had a soymilk test plant (55 liters/hour) built on the outskirts of Sendai, in the Tohoku region. There I worked on making soymilk with less beany flavor and better digestibility. Over a period of about 2½ years I completed development of a new heating system (Japanese Patent No. 19,928 issued in 1973), and also completed a report on digestibility of soymilk with my co-worker Kazuhiro Ootomo. In order to test the results of my research, I went to Tokyo in 1974. I found an investor, taught my techniques to Tokyo Soymeal K.K., spent 9,000,000 yen, and started to build a soymilk plant in the Tokyo area. At about this time other early soymilk manufacturers like House Luppy, Soyalac, etc. were building the market slowly but steadily, making about 10,000 to 20,000 packs/day. Our company, Tokyo Soymeal, cut into this market share, and spent 3 very tough years. But finally we were producing 6,000 packs/day and we first started to break even financially. Our soymilk product, named Soymeal, marketed as a soft drink, had a good flavor and was accepted as a new type of soymilk by consumers.

"However I realized at that time that soymilk was being sold only in the health food market. Because of that, no regular mainstream consumers bought our soymilk since distributors placed it only in Diet- and Health food stores, and in the drug section of other stores. Thus our share of the milk or beverage markets was extremely small, and expansion was difficult. Our next step was to change consumers preconceptions about soymilk.

"I want to make a tasty soymilk: Rather than placing emphasis on health or medical care, beauty care, changing one's constitution, etc. I wanted to make a soymilk product that was simply delicious and nutritious. But unfortunately our Soymeal company had to close its plant in December 1978 because the landlord sold the land on which the plant was located. This land was located next to the Tachikawa U.S. military base, and when the U.S. army gave the land back to the Japanese government, the price of land in the whole area rose. Thus our landlord wanted to sell his land too.

"In order to use my past effort and experience to make a new start, I was planning to build a plant in the Chûbu area. I did not have the means to do this by myself, but by good fortune, in 1979 Okazaki Marusan K.K. decided to help this enterprise and I was accepted as a member of their company. And furthermore it is planned to build a plant that can produce 4 times as much soymilk as plants that existed in May 1980. I would like to produce the best soymilk in Japan. The Japanese Department of Food, Agriculture, and Forestry is now studying soymilk with the intent of establishing a JAS standard in 1980."

Pages 50-52 show a chart of different brands of soymilk and soy-based infant formulas sold in the USA, with the name of the manufacturer, ingredients, and/or composition. These include: Loma Linda Food Co. of Arlington, California (Soyagen [liquid or powder], Soyalac); Mead Johnson & Co. of Evansville, Indiana (Metrecal, Sobee); Dietetic Food Co. Inc. of Brooklyn, New York (Diamel no Sorina); Ovaltine Food Products of Villa Park, Illinois (Ovaltine, 2 types which contain soy protein); Gerber Food Products of Fremont, Michigan; Plus Products of Los Angeles, California; Borden Co. of New York (Mullsoy, 2

types); Pavo Co. Ice of Minneapolis, Minnesota.

Early history of soymilk: In the *Teikun Orai,* written during the Muromachi (Ashikaga) period in Japan, the word *tofu-kan* appears in the section titled *Shojin Ryori* (Buddhist Vegetarian Cookery). That word used to mean "tofu soup" but it actually refers to what Japanese today call soymilk (*tônyû*). In the book *Sôgo Daisô-shi,* written in about 1417-1473 by Ise no Jôshin, there is a section on cooking okara (*unohana*). Mr. Tsuchiya thinks this soup was similar to today's soymilk except that the okara had not been removed. The author was the ancestor of Ise no Teijô, who lived during the Tokugawa (Edo) period and wrote that the word *Tofu-kan* should actually be pronounced *Tofu-ko,* and means "soup" (*shiru*). When the last character is pronounced "kan" it means "yokan." Note: Could Mr. Tsuchiya be confusing Manpukuji's tofukan (hard tofu) with the word tofukan that means soymilk?

A table (p. 72-75) lists all Japanese soymilk products made to date, including the name of the manufacturer, the exact date of introduction, range of distribution, package size and type, and retail price. Products sold by the following companies are listed: Kibun, Okazaki Marusan, Mitsubishi Kasei Shokuhin, Meiji Nyugyo, Kyushu Nyugyo, Nisshi Seiyu, Asahi Shokuhin, Kyodo Nyugyo, Yakuruto Honsha, Furuta Shokuhin Kogyo, Morinaga Nyugyo, Sugiyo, Koshin Nyugyo, Kenbi-Sha, Saniku Foods / Fuuzu, Nagoya Seiraku, Nagano Tomato, Zenkoku Nokyo Chokuhan (Nokyo), Yamato Shokuhin, Sokensha, Ishihara Fuudo Senta, Chiba Seisen Shokuhin Kogyo, Asahi Fuuzum Sebun-Irebun (7-11), Fukushima-ken Rakuren, Nacuraru Fuuzu (Natural Foods), Sebun Appu Inryo (7-Up). This entire table has been translated by Soyfoods Center; printed copies are filed with the book. The word processing filename is d:\w\hss\MilkJap1.doc. In addition, most of these soymilk products have a commercial soy products (CSP) record in the SoyaScan database. Address: Technical consultant, Okazaki Marusan, Japan.

Address: Seccion de Cereales, Lab. de Tecnologia de Alimentos, Apartado 189, Mangua, Nicaragua.

3885. **Product Name:** Soyannaize or Soyanaise [Garlic, Mint, or Parsley].
Manufacturer's Name: Bean Machine.
Manufacturer's Address: 45 Maes Ingli, Newport, Pembrokeshire Coast National Park, Wales, UK. Phone: 820-896.
Date of Introduction: 1982.
Ingredients: Incl. soya milk, soy flour, flavorings.
How Stored: Refrigerated, 10 day shelf life.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1983. June 20. Owner: Zorah Groom.

Jon and Zorah Groom. 1985. La Lettre de L'ARTS. No. 3. p. 8. "Bean Machine story."

Carolyn Rees. 1987. April. Soyfoods (ESFA). "The Bean Machine story." Soyanaise is a vegan mayonnaise. It comes in 3 flavors: garlic, mint, and parsley. "The only real problem we are finding is separation during sterilization. We hope to bring it to the market as soon as we perfect it. We had to take it off the market due to short shelf life."

Letter from Simon Bailey. 1988. Oct. 10. Ceased trading.

3886. Bulungu Ngandu, -. 1982. Effet de la technologie de fabrication sur la composition physico-chimique du lait de soja stable [Effect of technology on the physico-chemical composition of stable soymilk]. *TFE, Polytechnique, UNILU* 1981-1982. [Fre]*

3887. Canto, W.; et al. 1982. Leite de soja líquido: Uma opcao alimentar. Estudos economicos–Alimentos Processados [Liquid soymilk: A food choice. Economic studies on processed foods]. *Boletim do Instituto de Tecnologia de Alimentos* (*Campinas, Sao Paulo, Brazil*) No. 13. [Por]*
Address: Brazil.

3888. **Product Name:** Soycow (Soymilk).
Manufacturer's Name: Dayspring Soyacraft Corporation.
Manufacturer's Address: 626 Esquimalt Rd., No. 5., P.O. Box 7285, Station D., Victoria, BC, V9A 3L4, Canada. Phone: 604-382-2144.
Date of Introduction: 1982.
New Product–Documentation: Form filled out by Michael and Paul Hsieh. ca. 1982. Soya Bluebook. 1986. p. 102.

3889. **Product Name:** [Lactovisoy {Soy Beverage Based on Isolated Soy Protein}].
Manufacturer's Name: Especialidades Alimenticias S.A. (ESPALSA).
Manufacturer's Address: Ave. Principal, Urbaniz, Edf. Oficentro, El Cafetal, Aptdo. 3367, Caracas, Venezuela.
Date of Introduction: 1982.
New Product–Documentation: Soya Bluebook. 1985. p. 90. Lactovisoy is called a soy flour. Letter from Gil Harrison of American Soybean Assoc. 1989. April 11. "We have a new office in Caracas, Venezuela, and the director is Dr.

Jose Felix Chavez who worked with the National Nutrition Institute there and was responsible for the introduction of a soy protein based beverage for children called Lactovisoy, which is distributed under a state sponsored nutrition program for children." Talk with Gil Harrison. 1989. April 17. Every year the government buys tons of Lactovisoy, which they distribute to needy people. There are 2-3 manufacturers, who bid on it every year. It is a mixture of milk powder and soy protein isolate, plus vitamins, minerals, and flavors. It was introduced in about 1981-82 by the National Nutrition Institute. Jose Felix came to the Soy Protein Conference in Acapulco, paid by ASA. He was on the program. At the time he was still working for the National Nutrition Inst., and developing the formula. It came out the next year. Before that he was working for Gerber.

3890. Far Pavilions. 1982. Menu. 116 N. Oak Street (Box 69), Telluride, CO 81435.
• ***Summary:*** The front panel of this 8-panel menu (Green on tan paper) states: "International vegetarian cuisine. Welcome hospitality. Located below the opera house." The menu (which gives no prices) begins: "Our recipes are traditional as well as our own creations, all using pure and natural foods." Gives a definition of tofu and how it is made, then notes: "We make tofu in this traditional way regularly at Far Pavilions. In our kitchens, tofu is prepared in a wide variety of ways to show how this new high-protein, non-dairy food can be included in your menu. We also make regular use of the nutritious by-products of tofu-making: the soymilk and the soy fiber (okara)."

Soy-related menu items include: Soup of the day. Salad (dressings include "tamari sauce"): Mixed vegetable and sprouts with guacamole, full (or half) plate salad with tofu and guacamole. Salad specialties: Tofu and vegetable, okara salad, hummus, tabouli. Daily specials from the wok: Stir-fried tofu, rice, and vegetables, tofu and vegetables, stir-fried okara and vegetables. Stuffed pitas: Grilled tofu and vegetables, guacamole and tofu, falafels. Burgers: Soy burger, tofu burger, okara burger. Burritos: Spicy tofu and rice filling with guacamole. Extras: Fresh tofu, grilled tofu. Smoothies: Carob shake (with banana and sesame). Carob-honey soymilk. Nutritional yeast–20 cents extra. Other refreshments: Hot miso broth (cup). Soy milk. Desserts: Ask us! "For reservations, catering, or take out, call 728-4441." Address: Telluride, Colorado. Phone: 728-4441.

3891. **Product Name:** Tofu, and Soymilk.
Manufacturer's Name: Green Valley Farms Tofu.
Manufacturer's Address: Box 56, Avondale, PA 19311. Phone: 215-268-2456.
Date of Introduction: 1982.
New Product–Documentation: Card labeled "New Tofu Shops." Owner is Warren Reynolds. Debbie Wygent. 1986. Local News (West Chester, Pennsylvania). Sept. 14. P. C-2, C-6. "Old farm produces a new protein [Warren Reynolds at Green Valley Farms]."

3892. Lothe, L.; Lindberg, T.; Jakobsson, I. 1982. Cow's milk formula as a cause of infantile colic: A double-blind study. *Pediatrics* 70:7. [7 ref]*

3893. **Product Name:** [Soymilk].
Manufacturer's Name: Meito Milk Co.
Manufacturer's Address: Japan.
Date of Introduction: 1982.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64.

3894. **Product Name:** Tofu, and Soymilk.
Manufacturer's Name: Michigan Soy Products Co., Inc.
Manufacturer's Address: 1213 N. Main St., Royal Oak, MI 48067. Phone: 313-544-7742.
Date of Introduction: 1982.
New Product–Documentation: Blair. 1987. Detroit News. Nov. 4. p. 1E, 2E. Tofu. Talk with Dorothy Hwang. 1988. Feb. 18. She presently makes 2,000 lb/week of tofu.

3895. **Product Name:** Soymilk. Renamed Soydrink by 1984.
Manufacturer's Name: MU Tofu Shop.
Manufacturer's Address: 1735 W. Greenleaf, Chicago, IL 60626. Phone: 312-743-1339.
Date of Introduction: 1982.
How Stored: Refrigerated.
New Product–Documentation: Talk with Rebecca Uchida. 1990. May 14. They have been making tofu and soymilk since 1979. Note: See 1998 talk with Yoshi.

Label for "Soydrink" sent by MU Tofu Shop. 1998. July 2. They still make this soymilk. 2¼ by 4¼ inches. Orange on white. "16 fl. oz. Keep refrigerated. Ingredients: Organic soybeans and water. 1735 Greenleaf, Chicago, Illinois 60626." On the label are the Japanese characters for soymilk. A note says they have been making this soymilk since 1984. Talk with Terri Sangrash, office manager at Mu Tofu. 1998. July 13. Terri started working at MU in 1983, and they first really started selling soymilk with a label to various customers in 1984; they may have sold it to one customer as early as 1979 without a label. They had a labeling problem, so they had to change the name to Soydrink. Talk with Yoshi Uchida. 1998. July 13. He thinks they first made and sold soymilk in about 1982, in bulk to a restaurant named Blind Faith in Evanston, Illinois. It was in a half gallon container with no label. He is quite sure they were not making soymilk in 1979–but all his records for that period have been destroyed.

3896. **Product Name:** Noble Bean Tempeh Soysage (Using Tempeh in Place of the Typical Okara).

Manufacturer's Name: North Coast Tempeh Co.
Manufacturer's Address: 18320 Euclid Ave., Cleveland, OH 44112.
Date of Introduction: 1982.
Ingredients: Tempeh with wheat flour, soymilk, oil, tamari, garlic, barley malt, mustard, seasonings.
Wt/Vol., Packaging, Price: 8 oz.
How Stored: Refrigerated or frozen.
New Product–Documentation: Label. 1982. 4.25 inch diameter. Blue, green, yellow and red on white. Logo of Jack and the Beanstalk. "No cholesterol." Jeff Narten. 1987. "History of North Coast Tempeh and its Products." 4 p. Dec. 7.

3897. **Product Name:** [Marusan Soy and Azuki Milk].
Manufacturer's Name: Okazaki Marusan K.K. (Marusan-Ai Co., Ltd.).
Manufacturer's Address: 1 Aza Arashita, Niki-cho, Okazaki-shi, Aichi-ken 444-21 Japan.
Date of Introduction: 1982.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Ron Roller of American Soy Products. 1992. Feb. 26. One interesting product is a soy & azuki milk, which Marusan launched in about 1982; Ron is not sure if it is still on the market.

3898. Okubo, K.; Furubayashi, Y.; Takahashi, K. 1982. [Flavor of glycosides contained in soymilk]. *Shokuhin to Kaihatsu* (*Food Processing*) 18(6):16-21. [Jap]*
• ***Summary:*** Saponins and their aglycones/aglicons, sapogenols, in soybeans contain bitter flavors. Saponin A has the greatest intensity of bitter flavor, about 3 times that of saponin B and sapogenol A. Therefore saponin is very important as a compound responsible for the bitter flavor in soymilk. 73% of Saponin A resides in the soybean cotyledon, 8% in the hypocotyl, and 19% in the hull. Though the hypocotyl and hull account for only 7.2% of the weight of a typical soybean, they contain 27% of the Saponin A. Therefore the first step in the most modern soymilk processes is the removal of the hull and cotyledon by dehulling to remove about one-third of the beany flavor.

3899. **Product Name:** Living Lightly Soy Moo (Soymilk) [Vanilla].
Manufacturer's Name: Pacific Trading Co.
Manufacturer's Address: San Francisco, California.
Date of Introduction: 1982.
Ingredients: Soymilk (water, organically grown soybeans), honey, vanilla, cinnamon.
Wt/Vol., Packaging, Price: 16 fl. oz. (1 pint).
How Stored: Refrigerated.
New Product–Documentation: Label sent by Mark Brawerman. 1982. Brown, blue and black on white. Round, 3-inchs diameter. Illustration shows two seagulls flying above waves and below the sun.

3900. Real Food Tofu Cafe (The). 1982. Brightsong–Menu. 8473 East Rd., Redwood Valley, CA 95470.
• ***Summary:*** The circular logo shows a soybean plant. The hand-written menu begins: "Vegetarian whole foods, specializing in delights from the humble soybean. Free tastes and recipes too. Low-cal, high protein, cholesterol-free, grease-less complete foods! Air conditioned. Smoke free. Tuesday-Friday 12:00–4:00.

Sandwiches $2.00: Tofunofish, baked-spice tofu, missing egg salad, happy-chicken salad, hummous, tofummus, stuffed mochi, not dogs. Desserts: Creamies, cheesecake, cookies, fruit bars, Ice Bean, banana split, frozen joy. Burgers $2.50: Tempeh, tofu, soysage. Drinks: Pure-fruit smoothies, fresh carrot juice, soy shake, apple juice, mineral water, Rush sodas, spirulina smoothies, soymilk, herb tea. Plus! Daily specials. To-go orders Fresh Brightsong tofu and other packaged soyfoods for your convenience. Address: Redwood Valley, California. Phone: (707) 485-7050.

3901. *Revista del Instituto de Investigaciones Technologicas* (*Colombia*). 1982. [Two important studies]. 23(138):23-28. [Spa]*
• ***Summary:*** Conclusions and recommendations are presented from 2 joint studies of the Colombian and Netherlands government (via IIT and TNO).

1. Utilization of soy proteins for human consumption (p. 23-33). Experimental and technical studies, nutritive value, consumer acceptance, marketing trials, and preference tests were carried out on a soymilk beverage, soy cheese, soy yoghurt, toasted soybeans, full-fat soy flour, and soy-enriched arepas.

Mixed flours (p. 34-38). This project concerned commercial production and utilization of a flour containing 80% wheat, 17% rice, and 3% soy flour. Address: Colombia.

3902. **Product Name:** Soymilk [Honey-Almond, or Coconut].
Manufacturer's Name: San Diego Soy Dairy.
Manufacturer's Address: 2965 5th Ave., San Diego, CA 92103.
Date of Introduction: 1982.
Wt/Vol., Packaging, Price: Plastic bottle.
New Product–Documentation: Talk with Gary Stein. 1989. Feb. 17. He recalls that these products were introduced in 1982.

Product with Label purchased at Open Sesame in Lafayette. 1991. Feb. 16. 2 by 4.12 inches. Black, red, and grey on beige. Color illustration of a stream flowing down from snow-capped mountains, through a forest, into a meadow with flowers. "100% non-dairy" 1 pint plastic bottle. $1.29. Almond flavor. Ingredients: Organically grown soy beans, filtered water, honey, pure almond extract. San

Diego Soy Dairy, San Diego, California 92103. This brand has been sold at the store for about 1 month.

3903. **Product Name:** [Semper Oral Supplement {Liquid, Partly Based on Soy Protein Isolate}].
Foreign Name: Kosttillägg.
Manufacturer's Name: Semper AB.
Manufacturer's Address: Sektor Industri, Sveavagen 166, Box 231 42, S-104 35 Stockholm, Sweden. Phone: 08-7299700.
Date of Introduction: 1982.
Ingredients: Incl. soy protein isolate.
Wt/Vol., Packaging, Price: 425 ml cans.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter (fax) from Leif Christensen of Semper. 1990. July 10. In 1982 Semper introduced 4 varieties of Kosttillägg liquid, partly based on soy isolate, UHT-sterilized, packed in 425 ml cans under aseptic conditions. In 1987 the very same products were introduced in 225 ml Tetra Brik cartons.

3904. Soyateria (The). 1982. Soyfoods specialty shop: Menu. 2847 Dundas St. West, Toronto, ONT, M6P 1Y6, Canada. 1 p.
• ***Summary:*** The menu includes the following soy-related dishes: Hot sandwiches: Tofu not dog. Tofu okara superwich. Soyball submarines. Tofuna submarine. Soysalad submarine. Soy reuben. Tofu delight. Specials: Agé. Side orders: Tofu macaroni salad. Tofu dip–for chips or vegetables. Salad-sandwich spreads: Tofuna. Soya. Tofu macaroni. Beverages: Cashew nut milk. Soymilk shakes (Banilla, Carobana). Desserts: Cheese cake. Puddings. Address: Toronto, ONT, Canada. Phone: 416-762-1257.

3905. **Product Name:** Soya Milk.
Manufacturer's Name: Superior (Tofu) Soy Products Co.
Manufacturer's Address: 1752 Commercial Dr., Vancouver, BC, V5N 4A3, Canada. Phone: 604-253-1050.
Date of Introduction: 1982.
New Product–Documentation: Business card from Percy Chan. Received 1987. Sept. Chinese characters read: Douchiang.

Talk with Rita Chan, owner. 1997. June 23. She and her husband started this company in 1982 at 1752 Commercial Dr., Vancouver. They made soymilk from day one.

3906. **Product Name:** [Soymilk].
Manufacturer's Name: Takeda Yakuhin.
Manufacturer's Address: Japan.
Date of Introduction: 1982.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64.

3907. Tosovic, T. 1982. [Use of soybean products in the milk processing industry]. *Hrana i Ishrana* (*Food and Nutrition*) 23(1/2):43-49. [27 ref. Ser; eng]*
• ***Summary:*** This review, referring mainly to developments in the USA, compares the composition of soymilk and cow's milk, and discusses the production of dairy-type products made from soymilk or soy protein isolate (including soy curd [tofu], yoghurt, cheese, and non-dairy creamers) and the use of soy products with milk or caseinates to produce fatty spreads, filled milks, cultured milk products, etc. Address: Visa Pedagoska Skola za Ekonomiku Domacinstva, Yugoslavia.

3908. **Product Name:** Jack 'n Jill Soybean Milk [Regular, or Almond].
Manufacturer's Name: Universal Robina Corporation (CFC).
Manufacturer's Address: E. Rodriguez Ave., Bagong Ilog Pasig, Metro Manila, Philippines.
Date of Introduction: 1982.
Ingredients: Extracts from soybean, milk solids, cane sugar, vegetable fat, approved emulsifier & stabilizer, and flavour. Enriched with vitamins A, B-1, B-2, B-6, C, D, and Niacin.
New Product–Documentation: Soya Bluebook. 1982. p. 63. Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 107. Soya Bluebook. 1986. p. 104. Color photo says "Manufactured for HK Peggy Foods Co. Ltd. by CFC Corporation, Philippines." Anders Lindner writes, "Made by Peggy Foods Philippines for sale in Hong Kong." Photocopy of Label sent by Anders Lindner. 1989. Illustration on the front panel shows a single almond. "Almond flavour soybean milk." Product name and ingredients also written in Chinese.

3909. Well Bean Deli (The). 1982. Menu. Santa Cruz, California. 1 p.
• ***Summary:*** Hot sandwiches: Tofu burger. Tofu Santa Cruz. Tempeh burger. TLT. Falafel burger. Mochi burrito. Bean taco.

Cold sandwiches: Missing egg sandwich. Tempeh salad sandwich. Sushi rolls.

Soups with Ak Mak crackers: Miso. Cream of mushroom (changed daily).

Spreads: Tossed. Tofu salad. Tempeh salad. Salad of the day.

Special entree: Tofu quiche. Tofu eggplant Parmesan (changed daily).

From the deli: Tempeh salad. Missing egg salad. Tempeh chips. Garlic onion dip. Tahini dip. Burger mix. Soy yogurt. Fresh fruit salad.

Desserts: Carob mint pie. Tofu cheesecake. Fresh fruit salad.

Drinks: Carobanana shake. Shake-a-leg hi protein drink. Strawbanana shake. Soymilk–plain, carob. Herb teas (assorted). Fruit smoothie–apple plus choice of orange plus two fruits.

Note: This deli was previously located at 349 Soquel Avenue, Santa Cruz. Address: 594 Redwood Dr., Santa Cruz, California 95060. Phone: (408) 427-2586.

3910. **Product Name:** [Soymilk].
Manufacturer's Name: Zenno.
Manufacturer's Address: Japan.
Date of Introduction: 1982.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64, 74. Zenno is Japan's biggest co-op.

3911. **Product Name:** [Soymilk and Dairy Milk Blend].
Manufacturer's Name: Zenno.
Manufacturer's Address: Japan.
Date of Introduction: 1982.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64, 74. Zenno, Japan's biggest co-op, introduced a soy-dairy blend in 1982 but dropped it after 6 months.

3912. Alfa-Laval. 1982. Soy milk. Product and process. Lund, Sweden. 10 p.
Address: Lund, Sweden.

3913. American Soybean Assoc. 1982. Soymilk helps Taiwan bridge the nutrition gap. *Checkoff Successfile.* Taiwan #302. 2 p.
• ***Summary:*** Soymilk, a nutritious and refreshing drink, has been made and consumed in Taiwan for centuries. But traditionally soymilk has been produced fresh daily by small roadside hawkers. "The soymilk production was very inefficient, small scale, and unsanitary.

"A major roadblock to effectively increase soymilk consumption in Taiwan has been that several major food companies which are interested in soymilk production are already involved in producing cows milk. They are concerned that the production and successful marketing of soymilk would cut into the existing market for cows milk."

"ASA/Taiwan contacted major food companies to encourage them to engage in the large scale commercial production of soymilk... ASA/Taiwan assisted manufacturers in developing production of flavored soymilk. Today soymilk consumers can select from several flavors including plain, strawberry, peanut, egg, milk, chocolate, coffee, and apple."

"The first commercial soymilk production in aseptic packages was started in 1976 by President Enterprises Corp. The corporation, which also operates a dairy plant producing cow's milk, has been extremely successful in the soymilk market. Their sales of flavored soymilk have grown rapidly in recent years, reaching a summer peak of 300,000 packs per day.

"The experience of President Enterprises Corp. has shown that there is little competition for cows milk from increased sale of soymilk." As a result of President's success, three other major food companies–Wei-chuan Foods, Tsin-Tsin Foods, and Wei-kan Co.–have initiated their own soymilk production in the last two years. "Today it is estimated that over one million bushels of U.S. soybeans... valued at over $8 million are used in soymilk production in Taiwan. Soybean use for soymilk has more than doubled in the last 10 years."

A photo shows four aseptic Brik Pak cartons of soymilk made in Taiwan. Address: ASA.

3914. Aykroyd, Wallace R.; Doughty, Joyce. 1982. Legumes in human nutrition. 2nd ed. Revised by Joyce Doughty and Ann Walker. Rome, Italy: Food and Agriculture Organization of the United Nations (FAO). viii + 152 p. Illust. 28 cm. The original edition was 1964. [293* ref. Eng]
• ***Summary:*** Contents: Preface. Introduction. History of legumes. Production and consumption. Composition and nutritive value. Methods of processing and cooking. Effects of processing on nutritive value. Toxic substances. Legume proteins. Observations on the value of legumes in human feeding. The place of legumes in human diets. Appendixes. References.

On pages 49-51 are sub-sections on: Traditional fermented soybean products (methods of home preparation are detailed in Appendix 5, p. 120-22): Soy sauce (shoyu), soy paste (miso), tempeh, natto, Hammanatto. Protein separation and other extraction techniques. Soy-milk. Soybean curd (tofu). Modern products from soybeans. Soy flour and grits. Soy protein concentrates. Isolated soy protein.

Under tofu (p. 50): "The curd may also be fermented to make soy-cheeses, which resemble the more highly flavoured European cheeses. These are known in China as *chou tofu,* which means stinking bean curd." See also p. 120, where yuba is mentioned.

Note: This 1982 edition was made by revising the original 1964 edition. Ann Walker is from the Dep. of Food Science, University of Reading. Dr. Wallace Aykroyd died in Feb. 1979 just as he was taking the first steps toward this revision. Address: 1. Dep. of Human Nutrition, London School of Hygiene and Tropical Medicine; Former Director, Nutrition Div., FAO, Rome, Italy.

3915. Bio-data of Mr. K.S. Lo, C.B.E., J.P. 1982. Hong Kong. 3 p. Unpublished typescript. Undated.
• ***Summary:*** This could also be called a resumé or CV. (1) Date of birth: 2 Feb. 1910. (2) Place of birth: Kwang Tung Province, China. (3) Education: B.A. (Commerce), University of Hong Kong. Member of Institute of Food Technologists.

(4) Honors and decorations: Honorary Doctorate Degree of Law–4 March 1982. Commander of the British Empire (C.B.E.). Justice of Peace (J.P.). Civil Defence Long

Service Medal. (5) Community service (Past and present): 26 positions [very impressive]. (6) Wife's name: Maggie, CHU Tsuk Ping. (7) Her date of birth: 27 July 1914. (8) Her education: Lingnam University. (9) Number of children: Six. Address: Hong Kong.

3916. Blair Island. 1982. Menu. Eugene, Oegon. 1 p. both sides. 24 x 11 cm. Black on yellow.
• ***Summary:*** This soy deli serves breakfast and lunch. Soy-related products in the breakfast menu include: Tofu pocket (sauteed tofu in a pita pocket). Tofu scrambles (Blair Island style tofu, sauteed onions and cheddar cheese). Tofu breakfasts: "Blair Island style tofu is pressed, then sauteed with seven herbs, spices, and shoyu. Served with sprouts, fresh-baked toast or muffin and a side of sweet and sour tomato sauce. Regular (tofu, sprouts and sauce), or Special (tofu smothered with mushrooms and onions)." Side orders: Cup of tofu. Cashew milk.

Lunch. Tofu tia (tofu with sprouts and sauce wrapped in a corn tortilla). Tofu pocket sandwich. Tempeh tia. Tia special. Buddah burger (tofu-mushroom burger). Temptation (tempeh burger). Tempeh burrito. Bean burrito with tofu sour cream. Salads with tofu sour cream dressing. Tofu cheesecake desserts with different toppings.

Note: This company was in business in Aug. 1979, located on an island between two branches of the road. Address: 325 Blair Blvd., Eugene, Oregon 97402. Phone: 683-5117.

3917. Canto, Wilson Leite do; Moretti, Vasco Antonio; Filho, José Gasparino; Almeida, Laura A.S. Brochado de; Santos, Luis Carlos dos. 1982. "Leite" de Soja Liquido: Uma opçao alimentar [Liquid soymilk: A food option]. *Estudos Economicos–Alimentos Processados* (*Campinas, SP, Brazil*) No. 13. 135 p. [Por]
• ***Summary:*** Presents the different industrial steps used to obtain liquid soybean milk both in the pasteurized and sterilized forms. Both are packaged in one liter bags or packs.

An economic analysis was developed indicating the fixed investment and the working capital required to establish and run a processing plant producing a total volume of 50,000 liters of soybean milk/day. The cost/liter of the product was calculated, as well as the yearly total net revenue and the break-even point of the industrial unit. Address: Instituto de Technologia de Alimentos–ITAL, Campinas, Sao Paulo, Brazil.

3918. Chen, Jiying. 1982. Yi dai zhen qi ren: Li Shizeng zhuan [Legend of a generation: Biography of Li Shizeng (Li Yu-ying)]. Taipei, Taiwan: Jin dai Zhongguo chu ban she: Zong jing xiao Zhong yang wen wu gong ying she, min guo 71 [1982]. 4 + 4 + 4 + 350 p. + [8] p. of plates. Illust. 22 cm. Series: Xian lie xian xian zhuan ji cong kan, Jin dai Zhongguo cong shu. [5 ref. Cht]
• ***Summary:*** Li Shizeng is the "courtesy name" of Li Yu-ying. Li's courtesy name was used mostly in his political and public life. This book is written using the Taiwanese form of Chinese characters, which most Chinese from mainland China have great difficulty reading. The author of this book is a woman.

Contents: 1. Ancestry. 2. Birth and childhood. 3. Life as a young adult. 4. From Yi He Tuan to founding of Republic of China. 5. Political life while studying abroad. 6. Cruise on Xin Ming and others. 7. Jin De Club and the Work-Study Club. 8. World Club. 9. Li Huang-works while studying abroad. 10. Summary of the life of work-study students in France. 11. Club of Chinese in France and Communist Party in France. 12. Li Shuhua–works while studying abroad. 13. End of the Ch'ing Dynasty and the National Palace Museum. 14. Revolutionary Army and University of China-France. 15. The meaning of Revolution and Social Movement of Saving the Republic Party and the Country. 16. Start and end of Beijing University. 17. Founding of Federal Beijing Research Institute and Development, and the Result. 18. Transformation of Pan Yang and Government movement to Taiwan. 19. Late life of Li Shizeng and Mung Do. 20. Li's legacy.

Li's work with soybeans: Page 41. Li attended a university in France, where he majored in biochemistry. He discovered that, not only could many kinds of nutritious food be made with soybeans, but soybeans could also be used to make fake ivory, which no one had ever discovered before. He wrote his first book, *The Soybean,* which was published in France. Note: There is no mention that Li did any work with soybeans when he returned to China.

Pages 42-43: After staying in France for 6 years, Li Yu-ying went back to China in order to raise funds for his tofu company. Six months later, he returned to France with 5 workers. They bought machines and set up the tofu company at a place near Paris, called Colombes. The name of the company is *Usine Caseo-Sojaine,* and it produces foods made from soybeans.

Page 44. In 1909, Sun Zhong-shan [Sun Yat-sen] (founder of the Republic of China) visited the company and wrote, "My friend Li Shizeng has conducted research on soybeans, and advocates eating soybean foods instead of meat." That is the principle of the tofu company.

Pages 110-11: Mr. Li was a biochemistry major while he was studying in France. The company only made sweet soy bean cake for Chinese workers and dried bean curd. He tested the nutritional composition of soybeans. The result: Soy beans contain more oil and protein than milk. He founded a tofu company in Paris and a vegetarian restaurant. Unfortunately the French didn't like to eat tofu; they didn't even like soy milk. So the business of the tofu company was not so good towards that end.

Li Shizeng's genealogy: Father: Li Hong-Zao (1819-

1897), who had 2 wives. The 2nd wife (Yang Shao-Ji) was the mother of Li Shizeng (Li Yu-Ying). Li Yu-Ying had 5 brothers and 4 sisters. Li was the 5th boy in the family. Brothers (Birth and death dates not given): (1) Li Zhao-Ying. 2nd and 3rd brothers died at early age. (4) Li Kuan-Ying. (5) Li Yu-Ying (Li Shizeng). Sisters (Birth and Death dates not given): (2nd sister) Li Shu-Yi; died at early age. (4th sister) Li Shu Lian; died at early age.

There were four women involved in Li Shizeng's life. He was married 3 times, and lived with one other woman. First wife: Yao Tong-Yi. Married in 1897 when Li was 17. Yao, who was Li's cousin, died in 1940. They had two children, a boy (Li Zongwei) (1899-1976) who married Ji Xieng-Zhan, and a girl (Li Yamei) (birth and death dates not given) who married Zhu Guangyi. Li Shizeng had two grandsons and one granddaughter from this marriage: Grandsons: Li Da-Yang. Li Er-Yang. Granddaughter: Li Ai-Lian.

After Yao died, Li Shizeng was in a relationship with an American woman called Mrs. Vegetarian (Ru Su). They met in New York and were involved with each other there from 1943-1947. Li's second wife: Lin Su Shan. Married in 1947. Lin died in 1954. Li's third wife: Tian Baotian. Married in 1957 when Li was 77. Tian was 42. Tian later moved to the USA and stayed there for the rest of her life.

On page 349 is Li's biography.

Note: Li Yu-ying, a soyfoods pioneer in Paris, France, lived 29 May 1881 to 3 Sept. 1973. Of the 8 glossy pages of plates, there are 7 photos of Li, including one portrait and three in considerable detail. These photos show:

(1) Li Shizeng in about 1961. (2, top): Li Shizeng and classmates in 1900; Li is in the top row, far right. (3, bottom): Founders of World Club (right to left): Li Shizeng, Zheng Jing-Jiang, Wu Zhu-Hui.

(4) Li Shizeng and the president of Republic Party [in Taiwan] in 1953.

(5) Li Shizeng and his third wife Tian Baotian in 1958. (6, top): Li Shizeng in 1972.

(7, bottom): Li Shizeng giving a speech in Taiwan in 1973. Address: Big Lake Road, Inner Lake, Taipei, Taiwan (ROC).

3919. Chow, Edward T.S. 1982. Performance of ingredients in a soybean whipped topping. PhD thesis, University of Illinois at Urbana-Champaign. 142 p. Page 2845 in volume 43/09-B Dissertation Abstracts International. *

3920. Coyle, L. Patrick, Jr. 1982. The world encyclopedia of food. New York, NY: Facts on File, Inc. xv + 790 p. Illust. Index. 28 cm.
• ***Summary:*** Contains basic information (sometimes interesting, often superficial, with quite a few errors) about some 4,000 foods and beverages, including worldwide staples (potatoes, soybeans, apples), local specialties, delicacies, major brand-name products (Coca-Cola) and oddities (penguin eggs, grasshoppers). With 200 line drawings, 150 black-and-white photos, and 50 color plates.

See entries for soybean (incl. black soybeans, fermented tofu, miso, soybean flour, soybean milk, soybean oil, soy sauce, tempeh; tofu, "white soybeans"), and Worcestershire sauce (which "is said to contain more than 100 ingredients, including soy sauce, vinegar, molasses, chili, anchovies, garlic, shallots, tamarinds, limes and many spices").

Tofu: "A fermented form of this, called stinking tofu, is a favorite snack of the Chinese. It has a pungent smell and is usually deepfried [deep fried] and seasoned with soy sauce, vinegar, mashed garlic or chili paste. The food value is high..." (p. 643).

Note: This is the earliest English-language document seen (Oct. 2011) that contains the term "stinking tofu."

Also has entries for: Almond, chufa, peanut, peanut butter, peanut oil, seaweed (incl. algae, dulse, laver, rock weed / sea wrack, agar-agar, carrageen, kelp), sesame (with illustration of leaves, flower, and pods). Address: Freelance writer, Oceanside, California.

3921. Daenzer, A. Walter. 1982. Tofu, die Einladung ins Schlaraffenland [Tofu, invitation to the land of plenty]. Zurich, Switzerland: Verlag Bewusstes Dasein. 97 p. Illust. 21 cm. [Ger]
• ***Summary:*** Contains 100 recipes. Contents: 1. Soy protein–Food of the future. 2. What is tofu? 3. How is tofu produced. 3. A visit to the Soyana tofu shop (Tofurei; includes a discussion of Sri Chinmoy and 8 photos of the Soyana tofu-making process). 4. The value of organic tofu for nutrition and the diet. 6. Tofu and soymilk in developing countries. 7. 100 tofu recipes from the land of milk and honey.

The author talks a lot about purines, antibiotics, hormones, and cholesterol in meat. Also emphasizes organically grown (biologisch) soybeans and tofu (made at Tofurei), and Reform Houses. Living Farms, one source of organic soybeans, was founded on 6 Jan. 1975. Address: Soyana, Zurich, Switzerland.

• ***Summary:*** This interesting vegan cookbook book is loaded with creative recipes, illustrations (line drawings), and black-and-white photos. Contents: Beans. Soyameat (TVP). Italian dishes. Chili rellenos, nixatamal and masa. Nutritional

yeast. Knishes. Soups. Uncle Bill's recipes. Gluten. Tempeh. Miso. Soymilk. Ice Bean (Soymilk ice cream, p. 4, 96-98). Soy yogurt. Tofu. Pureed tofu. Yuba. Soy coffee. Soynuts. Soya pulp (okara). Soy flour. Vegetables. Bread. Cereal grain recipes. Breakfast breads and pancakes. Desserts. Nutritional advice.

Note: This is the earliest German-language document seen (March 2007) that mentions soy ice cream, which it calls *Soja-Eiskrem, Eis-Bohnen,* or *Schokoladen-Bohnen-Eiskrem.* Address: Summertown, Tennessee.

3924. Henderson, Bruce R. 1982. Oakland organic: A vegan primer. Albany, New York: Caboose Press. 200 p. Illust. 23 cm. [24 ref]

• ***Summary:*** This is a book about veganism which contains a few vegan recipes near the back. It focuses on the San Francisco Bay Area and urban areas, and contains extensive information about soybeans and soyfoods, much of it inspired by *Yay Soybeans,* from The Farm in Summertown, Tennessee. As follows: Miso, and Soya-Mineral Bouillon (Dr. Bronner's) (p. 19). Soy as an alternative protein source (p. 37-43). Soymilk (p. 53-56; Jethro Kloss). More soy (p. 57-61; soy pulp [okara] pudding, soysage, Garden of Eatin' Soy Jerky (illustration of package), Brightsong Missing Egg Tofu Salad (illustration), soy yogurt (fermented), soy tofu–hard, baked, or fried). Sprouting (p. 67-70; incl. soybeans). Fermented foods (p. 71-74; incl. tempeh, raw tofu). Snacks & quick foods (p. 88-96; incl. Ice Bean–soy ice cream, Ice-C-Bean). Miso and soy sauce (p. 120-21). Soy-related recipes: Baked apples with miso (p. 185-86). Tofu cheesecake (p. 188-89). Soysage (p. 193). Soy ice bean (p. 195). Note: Bruce Henderson was born in 1946. Address: Oakland, California.

3925. H.K.S.B.P. [Hong Kong Soya Bean Products Co.] growth pattern from 1941-1980. 1982. Hong Kong. 1 p. Unpublished typescript. Undated.

• ***Summary:*** Gives statistics for the years 1941, 1955, 1960, 1965, 1970, 1975 and 1980. For each of these years gives: Paid up capital ($HK): Grew from $25,000 in 1941 to $26.5 million in 1980. Sales in bottles/backs: Grew from 8.4 million in 1955 to 129.6 million packs of Vitasoy and 136.8 million packs of all other Vita products in 1980. Sales in HK$: Grew from 87,000 in 1941 to $210 million in 1980. Address: Hong Kong.

3927. Jenkins, Suzy; Praskin, L.; Praskin, A. 1982. Plenty integrated soy program, Guatemala. Summertown, Tennessee: The Book Publishing Co. 48 p. Illust. 28 cm.

• ***Summary:*** This remarkable, inspirational, creative booklet contains the best summary of Plenty's Solola Soy Program, with 71 excellent black-and-white photos, many of them taken by Jenny Banks Bryant and others. "Plenty Canada" (founded in 1976 by a group of Canadians) provided the funding for this project and Plenty International provided the volunteers. It was a very successful and innovative project, that unfortunately was suspended in 1980 when the political situation became too dangerous for Americans to stay in the area. Happily, it was restarted by Plenty Canada in mid-1985 and as of early 1988 is active and growing.

Contents: Plenty. Preface. Soy agricultural program. Soy demonstration program. Soy extension program. Step-by-step demonstration process (how to make soymilk and tofu in a Guatemalan village). Plenty Solola soy dairy. Soy dairy floor plan and flow sheet. Step-by-step production procedures. Marketing soy products. Poor people and nutrition. Training apprentices. Appendix.

The Preface, by Plenty director David Purviance, notes that Plenty went to Guatemala in 1976 to help with reconstruction following a severe earthquake. Plenty set up a primary health care program and an orphanage. "In these programs, we fed soymilk to the children who were brought to us for care. The beneficial effects on these malnourished kids were unmistakable. Many of the Indian mothers observed that our own children remained healthy on a soy-based diet. Living in the village and learning the language and lifestyle of the people, Plenty volunteers remained accessible to our Indian neighbors.

"In 1978, agronomist Daryl Jordan began testing the feasibility of growing soybeans in the highland area. The results were good, and Suzy Jenkins started demonstrating how to make soymilk and tofu in some of the local homes. As interest and support for the soybeans grew, they were joined by Laurie and Alan Praskin to help expand the project. During the next two years, their efforts produced a three-phase program of soy introduction that improved the lives of several thousand Guatemalan Indians. What follows is their account of a program that included the cultivation of soybeans by village farmers, home demonstration of soy preparation techniques and the creation of a village-scale soy dairy which produces soy ice cream and tofu for sale in the local market and for free distribution to hungry kids."

Page 15 states: "The Extension Program was implemented by one soy technician and the 18 trained cooperative extensionists. In six months over 1,000 men and women were taught how to make soymilk and tofu through this program. One hundred ten classes were held in 74 different areas." Photos show tofu and soymilk being made. Thirteen photos (p. 12-17) show the step-by-step process for making tofu in a Guatemalan village, including:

(1) San Martin soy extensionists preparing tofu at a nutrition class.

Twenty-four photos (p. 18-32) show the Solola Soy Dairy, including its construction, inside, outside, floor plan, and the step-by-step process for making tofu and soy ice cream. Page 21 states: "The soy dairy started operation in February of 1980. It produces approximately 90 to 100 gallons of soy ice cream and 60 to 75 pounds of tofu a week. Its maximum production capacity with the present equipment is 200 gallons of ice cream and 450 pounds of tofu a week. It was stocked with a year and a half supply of soybeans and has since been supporting itself by selling soy ice cream and tofu from the dairy in the local marketplace."

(2) "The soy dairy is open for selling tofu and soy ice cream seven days a week. Suzy Jenkins hands soft-serve soy ice cream in cones from a soy dairy window (p. 32).

(3) Little Mayan girl eating seasoned tofu from a bowl. "A one-half pound serving of tofu sells for 25 cents [U.S.] and contains: 163 calories (10% of the Recommended Dietary Allowance for a child age 4-6 years), and 17.7 grams of protein (59% of RDA) (p. 37).

(4) Little Mayan girl licking a big soy ice cream cone as she runs. "Our soy ice cream contains soymilk, tofu, sugar and oil, which make it abundant in calories and protein. A half-cup serving of our soy ice cream sells for 10 cents and contains 183.4 calories" (11% of the Recommended Dietary Allowance for a child age 4-6 years) and 3.1 grams of protein (10% of RDA) (p. 38).

In the chapter titled "Marketing soy products," a photo (p. 33) shows the Soy dairy booth in the Solola market. The sign over the window reads: "Helados y Queso–Hecho de frijoles de soya" ["Ice cream and cheese–Made from soybeans"]. Photos on the next two pages show: Mayan women preparing tofu to be sold on tortillas at the Solola State Annual Fair. The booth at the fair with a sign advertising soy ice cream and tofu. Guatemalan soldiers enjoying soy ice cream cones. Many happy kids holding up soy ice cream cones. A Plenty volunteer "giving away soy ice cream to 180 children at a school in a rural village."

Note: This is the earliest document seen (Jan. 2003) that mentions "Plenty Canada" (see p. 4). Address: The Farm, Summertown, Tennessee.

3928. Kushi, Micho; Kushi, Aveline. 1982. Macrobiotic dietary recommendations. East West Foundation, P.O. Box 850, Brookline Village, MA 02147. 48 p. 22 cm. [15 ref]
• ***Summary:*** Contents: Introduction. Standard dietary recommendations. Recommended daily proportions. Foods to reduce or avoid for better health. Way of life suggestions. Daily reflections. Suggestions for patients with cancer or other serious illnesses. Special dishes. Home remedies. Baby food suggestions. Kitchen utensils. Nutritional considerations. East West Foundation information. Glossary. Bibliography.

• ***Summary:*** The advantages and disadvantages of soy protein instead of milk are considered. Based on seminar proceedings held in Luxembourg in May 1981. Address: Dairy Research Lab., CSIRO Div. of Food Research, P.O. Box 20, Highett, Victoria 3190, Australia.

3934. Nakano, Eisha; Stephan, Barbara B. 1982. Japanese stencil dyeing: Paste-resist techniques. New York and Tokyo: Weatherhill. ix + 143 p. Index. 27 cm. [46* ref]
• ***Summary:*** Both authors are women living in America. Eisha Nakano, a graduate of the junior division of the Women's University of Fine Arts, Tokyo, is a stencil artist with long experience teaching katazome (stencil dyeing) to Westerners. The katazome process consists of cutting a paper stencil, preparing the resist paste (made of glutinous rice flour [*mochiko*] and rice bran [nuka]), choosing and preparing the fabric or paper which will be dyed, applying the paste to the fabric or paper using the stencil, letting the paste dry, preparing and applying sizing to the fabric or paper, dyeing the fabric by applying the dye or pigment with a brush, sometimes steaming the fabric, then washing off the paste to reveal the design, and finishing the fabric. The cloth is not dyed in the areas where paste was applied; thus katazome is the direct opposite of the silk-screen technique. Soybeans have traditionally been used in the katazome process in two ways: As sizing and as pigment-binding agents.

Chapter 6, "Sizing the fabric," states (p. 69-73). "The sizing most widely used for katazome, however, is *gojiru* [actually uncooked diluted soybean liquid, or soymilk], a liquid extracted from soaked and ground soybeans. The reason that soybeans are such a good sizing agent is not just that they are cheap and plentiful but also that they are rich in protein, which has adhesive-like qualities. Once the liquid is brushed onto the cloth, the protein begins to undergo a structural change, known as denaturation, whereby it is rendered insoluble. This not only makes the sizing permanent; it also helps reinforce the bond between the fiber and the subsequently applied dye, ensuring good colorfastness... As sizing, the soybean liquid is highly diluted, so the effect is little more than a light starching."

To prepare the soybean sizing for 5-6 meters (16-20 feet) of narrow-width cotton fabric, choose a dry warm day. Soak about ¼ cup (50 gm) whole soybeans in ample water for 5-6 hours in summer or overnight in winter. Drain off the water and have ready an equivalent volume of fresh water. Crush the softened soybeans in a blender or suribachi, adding the fresh water as necessary. Pour the liquified [liquefied] soybeans into a cloth filter bag made of organdy or coarse muslin then squeeze over a bowl to extract the concentrated uncooked soymilk, whose volume should be about equal to that of the swollen beans. Now dilute the concentrated soymilk with 8 to 10 parts water, or until it has the translucence of nonfat milk. Now apply the soybean liquid sizing to the fabric using a wide brush following the details given. Stretch the fabric tight and allow it to dry. The soybean liquid must be used fairly quickly, lest it spoil.

Concentrated soybean liquid is also used in traditional Japanese pigment dyeing as a thinner and binder for many pigments. "Pigments differ from dyes in that they are opaque, are insoluble in water, and have little or no affinity for textile fibers. Instead of penetrating the fabric, the finely ground particles lie on the surface, held by any number of film-forming binders. In traditional Japanese dyeing, this binder has generally been derived from soybeans... In traditional pigment dyeing, the color is bound to the fabric through a change in molecular structure that occurs when the protein found in the soybeans dries and turns into an insoluble compound. For the color to be fast, the soybean liquid with which the pigment is mixed must be fairly concentrated, much more so than when used as sizing." Whereas the volume of water added to concentrated soybean liquid for sizing is 8-10 parts, for mixing pigments it should be 1 part for detail or accent color, or 3 parts for background color. After dyeing, the color is fixed with alum solution.

Talk with John Marshall (24 July 1991), a Berkeley artist who was apprenticed to a natural dyer in Japan from 1971-1976 and who uses natural plant dyes: Protein is used in a number of ways in ethnic textile dying. The Japanese and Chinese use soymilk as their source of protein. The people in Pompei used egg white / albumin, while those in Okinawa use dairy milk. The purpose is to coat the fabric and to serve as a primer or *gesso* on which the natural dyes are applied. Real gesso is powdered marble and a binder. In Japan, a dyer would stretch a piece of fabric made from any natural fiber, then apply the soymilk to it using a brush; 1 coat is usually enough but some artists use 2-3 coats. John makes his own soymilk from whole soybeans; he learned how in Japan as part of the dye process. In traditional Japanese dyeing the cloth was not immersed or dipped in the soymilk. Let the cloth dry until it is no longer wet, then it is ready to be dyed, for example using tie-dye (dunked), paste-resist (made from powdered glutinous rice and bran; leave it stretched, as with katazome), batik (with wax resist), or a solid color. Address: 1. Cincinnati, Ohio; 2. USA.

3935. Nippon Shokuryo Shinbun-sha. 1982. Shokuhin sangyô jiten [Encyclopedia of the Japanese food industry. 3rd ed. 2 vols.]. Tokyo: NSS. 528 p. [Jap]
• ***Summary:*** Contains substantial entries for the following soy-related foods: Tofu and tofu products (p. 81-87), frozen and dried-frozen tofu (p. 96-97), natto (p. 98-101), and vegetable oils (p. 107-13). Address: Japan.

3936. Plenty International. 1982. Soy Demonstration Program: Introducing soyfoods to the Third World. A step by step guide for demonstrating soymilk and tofu preparation. Summertown, Tennessee. 16 p. Undated. Illust. 21 cm.

• ***Summary:*** Actually written by Suzy Jenkins and Laurie Praskin, this booklet is a summary of two larger works published in 1980 (written by Darryl Jordan and Suzie Jenkins) and earlier in 1982 (by Suzy, Laurie and Alan Praskin).

As interesting as it is innovative, this summary focuses on Plenty International's Soy Demonstration Project in Guatemala, showing how soybeans are being grown in local villages and women are making soymilk and tofu using traditional equipment. All Guatemalans are shown in traditional Mayan clothing (*traje*).

Contents: Introduction. Soy extension program. A soy demonstration in photographs: Soaking the beans, grinding, cooking, straining, soymilk, curding tofu, straining the curds, storing the products. Helpful hints. Recipes. A nutritional comparison. Soybean agricultural impact statement.

Black and white photos show soyfoods and people in Guatemala. These include: (1) A little Guatemalan girl, kneeling, licking her fingers as she eats seasoned tofu from a bowl. (2) Women smiling and laughing as they grind soybeans on traditional stone *metate.* (3) Women's nutrition group (with children) from San Jose Poaquil standing behind their soybean patch. (4) Simple tools needed for making tofu. (5) Close-up of a woman grinding soybeans on a *metate.* (6-8) Cooking ground soy slurry and filtering the soymilk from the pulp. (9) A little girl drinking a big cup of soymilk. (10-14) Curding the tofu, straining the curds, and pressing the tofu. (15) Girl eating tofu on a bun. (16) A happy group of Guatemalans and Americans standing around a stove, enjoying soymilk and tofu. (17) Soybean variety trials in Solola, Guatemala. Elevation: 7,200 feet (2,195 meters). (18) A little bustling along as she licks a cone of soymilk ice cream.

On the rear cover: "The Soy Demonstration Project was funded by Plenty International, UNICEF (United National International Children's Educational Fund) and CIDA (Canadian International Development Agency), and donations from supporters." For further information write: "Suzy Jenkins or Laurie Praskin, Plenty Soy Technicians, 156 Drakes Lane, Summertown, Tennessee 38483 USA." Address: Summertown, Tennessee.

3937. Re: Names of soyfoods around the world: French. 1982. Form filled out by William Shurtleff based on sources given below. 1 p. [Eng; Fre]

• ***Summary:*** Gives the names of the main soyfoods in French. Sources: Bernard Storup; Bau & Debry, of France.

"Soyfoods–Aliments à base de soja.

Fresh green soybeans (edamamé)–Edamamé. Soja frais.

Whole dry soybeans–(haricots de) Soja sec / secs.

Black soybeans -

Fresh soy puree–Purée de soja.

Soy sprouts–Pousses de soja. Soja germe.

Soynuts–Soja grillé. Graines de soja grillées.

Oil roasted soynuts–Graines de soja grillées (à l'huile). Soja grillé, revenu dans l'huile.

Dry roasted soynuts–Soja grillé à sec. Graines de soja grillées à sec (or sans huile). Haricots de soja, grillés à sec.

Soynut butter–Buerre de soja grillé.

Roasted soy flour–Farine de soja grillé.

Soy coffee–Cafe de soja.

Soy chocolate–Chocolat de soja.

Soymilk–As of Feb. 2012 only the terms "boisson au soja" or "jus de soja" or "tonyu" (the Japanese word for "soymilk") can be used legally on commercial soymilk products in France–because of dairy lobby protests. The term "lait de soja" is generally used in cookbooks, books, articles, etc.

Soymilk ice cream -

Soymilk curds -

Tofu (regular)–Tofu or Tofou (le). Note: Many French speakers, who are also soyfoods experts, prefer "Tofou."

Soft tofu–Tofu mou.

Firm Tofu–Tofu ferme. Extra firm tofu–Tofu très ferme.

(Deep fried) Tofu cutlets–Tranches de tofu frites.

(Deep fried) Tofu burgers–Tofuburgers frits. Burgers de tofu (frits).

(Deep fried) Tofu pouches–Poches de tofu (frites).

Silken tofu–Tofu soyeux.

Pressed silken tofu–Tofu soyeux.

Grilled tofu–Tofu grillé.

Dried frozen tofu–Tofu séché. Tofu déshydraté.

Okara or soy pulp–Okara (l').

Yuba–Yuba (le).

Dried yuba sticks -

Sweet dried yuba -

Fermented black soybeans -

Miso or soybean jiang–Miso (le).

Soy sauce–Sauce de soja. Sauce soja. Shoyou (le).

Chinese sauces -

Tamari–Tamari (le).

Tempeh–Tempeh (le).

Fermented tofu–Tofu fermenté (au vin).

Fermented soymilk–Lait de soja fermenté.

Natto, thua-nao, kinema–Natto (le).

Soy oil–Huile de soja.

Soy lecithin–Lecithine de soja.

Soy flour–Farine de soja.

Whole (full fat) soy flour–Farine de soja entière.

Defatted soy flour–Farine de soja dégraissée.

Soy grits and flakes–Flocons et granule de soja.

Cereal-soy blends (CSM, WSB, etc.) -

Soy protein concentrate–Proteine de soja concentrée.

Soy protein isolate / Isolated soy protein–Isolat de proteines de soja. Proteine de soja isolée.

Textured soy protein products–Protéines de soja texturées (Produits à base de proteines de soja texturée).

Textured soy flour, TSF, or TSP–Farine de soja texturé.

Textured soy concentrates–Concentrat de soja texturé.

Textured soy isolate–Isolate de soja texturé.

Spun soy protein fibers. Address: Soyinfo Center, Lafayette, California 94549.

3939. Seventh-day Adventist Dietetic Assoc. 1982. Diet manual, including a vegetarian meal plan. 6th ed. Seventh-day Adventist Dietetic Assoc., P.O. Box 75, Loma Linda, California 92354. 537 p. In a 3-ring binder with tabbed dividers. Index. 30 x 29 cm.

• ***Summary:*** This comprehensive guide to planning, selection, and coordination of vegetarian diets was edited by Georgia Hodgkin, M.S., R.D.; Susan Maloney, M.S., R.D., was the managing editor. Previous editions were published in 1960, 1965, 1970, 1975, 1978, and 1982. Each chapter has an author and a reviewer. References are found at the end of each chapter.

Contents: Introduction. Normal nutrient needs. Nutrition for pregnancy and lactation. Pediatric diets. Gastrointestinal diets. Renal diets. Cardiac diets. Diabetic and related diets. Mineral modified diets. Diet for acute care. Nutrition and immunity. Nutritional support and enteric feedings. Geriatric and rehabilitation diets. Test diets. Nutrition and drugs. Nutrition for exercise and weight control. Appendixes (11) including: Ingredients of selected vegetable protein foods (108 products, mostly made by Seventh-day Adventist companies). Nutrient composition of selected vegetable protein foods (the same 108 products whose ingredients are given above). Addresses of selected Seventh-day Adventist hospitals (16 hospitals). Selected vegetarian cookbooks (15 citations). Selected books concerning a vegetarian diet (7 citations). Tables (79 tables). List of figures (10 figures). Address: Loma Linda, California.

3940. Shufu-no-tomo-sha. 1982. Tônyû wa konnani kiku [Soymilk works this well]. Tokyo: Shufu-no-tomo-sha. 184 p. [Jap]*

3941. Simonds, Nina. 1982. Classic Chinese cuisine. Boston, Massachusetts: Houghton Mifflin. xi + 353 p. Illust. Map. Index. 23 cm.

• ***Summary:*** This is a remarkable book by one who is part "of a new generation of American chefs and food writers." The Pinyin system of romanization, "which was officially adopted by the People's Republic of China in 1979, has been used for most of the Chinese words in this book" (p. vi).

A map of China (facing page 1) shows the individual provinces and the four main culinary schools: northern, western, eastern, and southern–as explained on pages 1-4. Taiwan is considered part of the eastern school. The southern school is comprised of only two provinces: Guangdong (which includes the city of Guangzhou–formerly named Canton) and Guangxi.

Soyfoods are used and discussed liberally throughout this book. The section titled "Condiments, seasonings, and special ingredients" (p. 5-11) gives detailed discussions of hoisin sauce, oyster sauce, soy sauce (the three grades are light, medium and heavy, with light having a delicate and slightly more subtle flavor than the other varieties), sweet bean sauce (and bean pastes including brown bean paste and yellow bean paste), fermented black beans (and black bean sauce).

The next section, "Selected fresh and pickled vegetables" (p. 11-14) has an entry for bean sprouts (the two main types are sprouted from mung beans {which are green} and soybeans {which are yellow}; soybean sprouts have a stronger flavor and require longer cooking).

Soy related recipes: Beef with noodles in a pot (with "2 cakes bean curd," p. 76). Cold spicy noodles (with "2 cakes bean curd, about 3 inches square and 1 inch thick," p. 80).

One chapter, titled "Soybeans and bean curd" (p. 113-29) begins with a charming introduction to "stinky bean curd" (fermented tofu). As evening fell after dinner, luscious scents and fragrances filled the air. Yet there was "a putrid smell that defied classification. What was that baffling, pungent odor, present in every part of the city." After a bit of research she soon discovered that it came from "stinky bean curd (*chou dou fu*), a favorite snack of the Chinese." Vendors of this unusual "delicacy ran rampant all over the city with their portable deep deep-fryers. My Chinese surrogate sister and brothers, who were great fans of the stuff, used to race outside, armed with empty bowls and chopsticks, at the sound of the stinky bean curd man's call. (The smell usually preceded him by two blocks, giving everyone plenty of notice.)" It is "made by fermenting fresh bean curd squares in a brine with assorted spices and pickled vegetables." The resulting cakes are deep-fried... until golden and eaten with soy sauce, vinegar, mashed garlic, or chili paste."

The soybean is used to make various Chinese seasonings including soy sauce, hoisin sauce, sweet bean sauce or paste, and hot bean paste. Fresh green soybeans are cooked and served with soy sauce and sesame oil. Whole dry soybeans are fried and eaten as a snack.

"The nutritious properties of the soybean further explain why it is so popular with the health-conscious Chinese."

Heating soybean milk gives "bean milk sheets (*fu pi*)" [yuba]. Also mentions "bean curd sticks (*fu zu*)" [dried yuba sticks], bean curd sheets (*bai ye*)," and "bean curd noodles (*gan si*)." In terms of consistency, the three basic types of bean curd are soft, medium, and hard (*dou fu gan*)." "Bean curd is also fermented in rice wine and spices to make a popular seasoning (*dou fu ru*), which has a "slightly cheeselike flavor."

Nina concludes the introduction: "As most nutritionists will agree, the soybean and its many by-products are the

foods of the future." Line drawings show: soybeans, bean curd, bean milk sheets, bean curd sheets, bean curd sticks, and bean curd noodles. Recipes in this soy chapter: Meatball and soybean casserole (with "4 cups dry soybeans, p. 116). Sweet soybean milk (How to make at home; the Chinese equivalent of America's cup of coffee for breakfast, with 2 cups dry soybeans and 1 cup sugar. Typically accompanied by a sesame flat bread {*shao bing*} and a fried cruller {*you tiao*}). Stir-fried soybean sprouts with red-in-snow. Stuffed bean curd rolls (with "8 dried bean curd sheets or bean milk sheets"). Sweet-and-sour fish slices (with "10 dried bean milk sheets"). Eggplant rolls (with "6 dried bean milk sheets"). Buddha's delight (a well-known vegetarian dish, with "2 ounces bean curd sticks"). Cold tossed bean curd and celery shreds (from Sichuan, with "8 cakes bean curd, about 3 inches square and 1 inch thick"). Red-cooked bean curd. Braised bean curd with black mushrooms in oyster sauce (from Sichuan). Stuffed bean curd (from Canton). Ma po bean curd (from Sichuan). Eight-treasure stir-fried vegetables with meat (with "3 cakes bean curd, about 3 inches square and 1 inch thick"). Northern-style bean curd (p. 129).

More soy related recipes: Steamed fish fillets in black bean sauce (with "1 tablespoon fermented black beans, rinsed, drained, and minced," p. 183). Double-cooked pork slices (with "3 cakes bean curd," p. 230). Steamed spareribs in black bean sauce (with "2 tablespoons fermented black beans, rinsed, drained, and coarsely chopped," p. 234). Stuffed peppers in black bean sauce (with "1 tablespoon fermented black beans, rinsed, drained, and minced," p. 272).

One entire chapter is titled "Vegetarian dishes" (p. 279-94). The introduction discusses the Kuantu Temple (a Buddhist-Taoist sanctuary about 1 hour drive from Taipei), and the origin of vegetarian cuisine in China in early Buddhist and Taoist monastery kitchens. Wheat gluten (*mian jin*) and related preparations such as deep-fried wheat gluten balls (*mian jin pao*) steamed wheat gluten chunks (*kao fu*), plus seasonings such as "pickled bean curd (*dou fu ru*)" are often used. Soy related: Broccoli in mock crabmeat sauce (with "1 cake bean curd," p. 285). Vegetarian lion's head (with "4 cakes bean curd," p. 287). Mock goose (with "20 bean milk sheets" [yuba], p. 290-91). Vegetarian eight treasures (with "2 cakes bean curd," p. 291). Wheat gluten (how to make at home from wheat flour, p. 292).

More soy related: Eight-treasure mixed soup pot (with 2 cakes bean curd," p. 310-11). Hot and sour soup (with "2 cakes bean curd," p. 316).

About the author: A photo of Nina Simonds (in Chinese clothing) appears on the inside rear dust jacket. She studied Chinese food and cooking, language and culture, in Taiwan for more than three years (she arrived there at age 19) with Chinese master chefs at the Wei-Chuan school in Taipei, while living with a Chinese family. She subsequently received the Grand Diplôme from La Varenne École de Cuisine in Paris, where she also taught Chinese cooking. "For the past eight years (prior to 1982) she has taught in cooking schools all over the United States and Canada and her articles have appeared in *Gourmet* and *Cuisine* magazines and the *Boston Globe"* (from the inside rear dust jacket). Address: Salem, Massachusetts.

3944. STS–Soya Technology Systems Ltd. 1982. Dounai [Soymilk]. 11 Dhoby Ghaut #12-05, Cathay Building, Singapore 0922. 29 p. Illust. 21 cm. [10 ref. Eng; chi]
• ***Summary:*** Contents: Soybeans, a few basic facts. Soybeans, a historical background. Soymilk. Soymilk Flavor. The word soy. Principles of soymilk production. Dairylike soymilk. Basic soymilk production methods. Soymilk nutritional aspects. References.

Note: This is the earliest [and only] Chinese-language document seen (Aug. 2013) that uses the term "dounai" ("bean milk") to refer to soymilk. The word is rarely used in Chinese. Address: Singapore.

3945. Thrash, Agatha Moody; Thrash, Calvin L., Jr. 1982. Nutrition for vegetarians. Seale, Alabama: NewLifestyle Books. 155 p. Illust. Index. 28 cm. [249* ref]
• ***Summary:*** Both authors are physicians (MDs) and Seventh-day Adventists. A well-documented and thoroughly researched study. One important section of the book is devoted to the bodily functions of digestion, thirst, appetite, metabolism, and the endocrine system. For 11 years the authors had the rare privilege of directly observing and serving the medical needs, if any, of up to 150 pure vegetarians (vegans) at a medical missionary training center in Alabama. Soymilk is discussed on pages 111, 113. Address: Route 1, Box 441, Seale, Alabama 36875-9127.

3946. Unicorn Village. 1982. Tofu comes West. A remarkably versatile healthful food. Protein for less (Poster). Tucson, Arizona. 1 p. 27 x 34 cm.

• ***Summary:*** Near the top of this large color poster is a unicorn galloping across the top of a globe. In the center is a place to attach recipes, with an arrow pointing to it: "Take one." Color photos to the left and right show: (1) Fried tofu, sprouts, and tomato sandwich, with a glass of soy milk in the background. (2) Two stemmed parfait glasses filled with strawberry tofu pudding and Banana tofu pudding. Address: 332 E. Seventh Street, Tucson, Arizona 85705.

3947. Vandemoortele NV. 1982. Vandemoortele, your European partner. Vandemoortele NV, Prins Albertlaan 12, B-8700 Izegem, Belgium. 26 p. Color. [Eng]
• ***Summary:*** A photo on the cover of this glossy booklet shows the globe, focusing on Europe. The company has numerous subsidiaries and plants. In Belgium: Safinco NV [the holding company for the other companies], Vandemoortele NV, Vamo Mills NV, Vamix NV, Samo NV, Alpro NV, Edo NV, Metro NV, Befico NV. In France: Vamo sarl. In the Netherlands: Vandemoortele NV. In West Germany: Meylip GmbH. In England: Vandemoortele U.K. Ltd. Note: NV is an abbreviation for *Naamloze Vennootschap* [a limited liability company; literally a nameless or anonymous partnership or company]. Photos in this booklet show color aerial views of many of these plants. There is a color illustration of "The NV Vamo Mills new soya bean processing plant at Ghent (operational December 1980)."

"The fundamental changes in the balance of world power have resulted in a re-think in our company's overall commercial strategy. An important aspect of this strategy focuses attention on the supply of raw materials, since the majority of these have to be imported. European industry will soon have to realize that it will only be able to continue acquiring raw materials if it turns to providing high technology products at competitive prices for both home and export markets. As a result, our group has decided to make a concerted effort to encourage the development of high technology products and thereby safeguard supplies of raw materials from abroad."

"What Vandemoortele means in figures: processing of oilseeds: 1,540,000 tons. Refining of fats and oils: 300,000 tons. Production of margarines and edible fats: 130,000 tons. Total industrial production area: 101 acres. Number of employees: 1,850. Growth of the Vandemoortele Group: 1977: 12,436,000,000 BF (Belgian francs). 1981 (estimated): 20,000,000,000 BF. Vegetable oil brands include 3 x Gold, Roda, and Reddy. Margarine brands include Fama, Reddy, Roda, and Vitelma. And there is Reddy mayonnaise, Reddy Vinaigrette, Samo snacks (chips and curls), Gold Cup industrial margarines and doughs, Vam-O-Mix and Whip Jumbo bread improvers, Risso catering supplies, Fama exported oils, margarines and energy drinks (incl. Fama Soya Oil and Fama Sojabean Oil).

"Vandemoortele: Leading 'crusher' in Europe." NV Vamo Mills has a total production capacity of 1,540,000 tons per year, with daily production reaching 5 million kg. From soybeans, Vamo Mills also makes Soya Oil "degummed," Soya Lecithin Vamoline, and Soya Tourteaux-Schroot (Meal). One page discusses NV Alpro and Soyamel. Two photos show the Vandemoortele R&D department.

Note: This is the earliest English-language document seen (Sept. 2006) that uses the term "Sojabean Oil" to refer to soybean oil.

3948. Vitasoy (USA) Inc. 1982. Vitasoy. Anytime, anywhere (Poster). San Francisco, California. 1 p. 28 x 36 cm. Color. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.
• ***Summary:*** "Vitasoy. Fresh and naturally good. High in protein and low in calories. Take Vitasoy along anytime, anywhere."

A color photo shows a carton of Vitasoy Soya Bean Drink against a tan background. Partly behind it and to its right is a glass, into which another carton is pouring this soymilk. Address: San Francisco, California.

3949. Vitasoy (USA) Inc. 1982. Vitasoy. It's different. It's delicious. It's healthy (Leaflet). San Francisco, California. 4 panels. Front and back. 17.6 x 17.6 cm.
• ***Summary:*** Glossy color, cardstock (see next page). On the front are three cartons of Vitasoy UHT soya bean milk with both English letters and Chinese characters equally prominent. The left and right cartons are unflavored, printed with blue, turquoise and red on white. The middle carton is Malt flavored, printed with dark brown and white on lighter brown. The background is orange-brown at the bottom shading up to black at the top.

The left inside panel shows Vitasoy teas and the right inside panel and the rear show Vita juices. Address: San Francisco, California.

3950. Wondafrash, Teshome. 1982. Physical and chemical characteristics of cow's milk extended with soymilk. PhD thesis, University of Illinois at Urbana-Champaign. 327 p. Page 2846 in volume 43/09-B Dissertation Abstracts International. *
Address: Univ. of Illinois at Urbana-Champaign.

3951. Yoshikawa-Shoji Co. Ltd. 1982. The book of nigari tofu & nama-age tofu technique. Honmachi Wako Building, 2-50 Kita-Kyuhoji-machi, Higashi-ku, Osaka, Japan. 18 p. 26 cm. [Eng]
• ***Summary:*** This company, founded in 1861, is the oldest maker of nigari in Japan today. They make two three types: Maruzen Micro Neoekis (in fine granular, and an older flake style), and traditional solid nigari in cans. Micro Neoekis, introduced 20 years ago, is purified magnesium chloride.

Contents: Characteristics of nigari tofu. Micro-Neoekis. Real nigari and delicious tofu. Which nigari is best for tofu?

It's different... it's delicious... it's healthy.

Vitasoy is a refreshing, well-established, non-carbonated drink made from soya beans. It has a smooth, creamy taste that appeals to people of all ages.

It's available in both malt and regular flavours, and now comes in a big ½-litre (500 ml) size in addition to the popular ¼-litre (250 ml) size.

Vitasoy is enriched with the natural goodness of soya beans, so it's packed with Vitamins A, B and B_2. Plus Vitasoy contians no preservatives.

Vitasoy is manufactured under the strictest hygenic conditions and quality control, and is sterilized under the UHT process before packaging in Tetra Briks.

Basic characteristics of nigari. Storage of nigari. General method of making tofu. Varieties of tofu. How to make high quality products. Characteristics of high quality soymilk for tofu. How to judge the quality of soymilk. How to make soymilk. Other comments. How to make regular tofu. When is more coagulant needed? When is less coagulant needed? Methods for coagulation with nigari. How to add Micro-Neoekis. How to make silken tofu. Reasons for failure. How to make packaged tofu. Reasons whey appears. How to make tofu for deep-frying. Major points to observe in coagulation. How to coagulate. Magnesium chloride 1,2 method. How to make egg tofu. Address: Osaka, Japan. Phone: 06-261-6767.

3953. Desert Gardens. 1982? New soyfoods restaurant or deli. 702 Main St., Safford, AZ 85546.
• ***Summary:*** Menu sent by owner Katerina Lewis about 1982. "One of our main staples is tofu..." Soy-related recipes include–Appetizers: Eggless salad (with tofu), Brazilian bean dip (with tofu), French onion dip (with tofu & miso), California guacamole (with tofu). Side dishes: Potato tofu knish, Chili beans & tofu, Baked potatoes (with tofu sour cream), Tofu pizza. Deli: Tofu cottage cheese, Soy sour cream, Tofu cream cheese. Entrees: Sicilian eggplant Parmesan (with tofu), Tofu & fresh vegetable saute, The combo (featuring breaded tofu cutlets). Sandwiches: Tofuburger with millet, Sizzling tofu, Guacamole, Tofagel (tofu, sprouts, and tomato on a toasted bagel). Beverages: Soy milk, Soy shakes. Desserts: Tofu cheesecake. Soybean ice cream. Address: Safford, Arizona. Phone: 428-5132.

3954. **Product Name:** Coconut Soymilk.
Manufacturer's Name: Earth Angel Soyfoods.
Manufacturer's Address: 53 Stanley Ave., Mt. Waverley (E. Oakleigh), VIC 3149, Australia. Phone: 544-8020.
Date of Introduction: 1982?
Ingredients: Soymilk made from organically grown soybeans, coconut milk, and honey.
How Stored: Refrigerated.
New Product–Documentation: Letter and Label sent by Debbie Schmetzer of Earth Angel Soyfoods. 1983. Feb. 19. "I am interested in improving our soymilk. At present we are making coconut soymilk sweetened with honey... Do you have any information on how the Japanese (Bonsoy) soymilk is made, using pearl barley and barley malt as sweeteners?"
Label. 8.5 by 2.5 inches. Paper. Dark blue on beige. Coconut trees with sun peeping out from between them. Shurtleff & Aoyagi. 1986. Soymilk Industry and Market, Update.

3955. **Product Name:** Soy Pate.
Manufacturer's Name: Earth Angel Soyfoods.
Manufacturer's Address: 53 Stanley Ave., Mt. Waverley (E. Oakleigh), VIC 3149, Australia. Phone: 544-8020.
Date of Introduction: 1982?
Ingredients: Okara, soymilk, brewer's yeast, tamari, oil, herbs and spices.
Wt/Vol., Packaging, Price: 250 gm.
How Stored: Refrigerated.
New Product–Documentation: Label. 3.5 inches diameter. Paper. Green on white. Illustration of winged pixie between two groups of leaves. "Great on sandwiches, toast, or appetizers. No additives or preservatives. No additives or preservatives. Keep refrigerated."

3956. **Product Name:** [Rakuo Soymilk].
Foreign Name: Rakuô Tônyû.
Manufacturer's Name: Fukushima-ken Rakuren.
Manufacturer's Address: Japan.
Date of Introduction: 1982?
Wt/Vol., Packaging, Price: 200 ml long-life pack.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Rakuô Tônyû was introduced before Dec. 1982 by Fukushima-ken Rakuren in a

200 ml long-life pack.

3957. **Product Name:** [Soymilk].
Manufacturer's Name: Industrias Covac.
Manufacturer's Address: Alajuela, Costa Rica.
Date of Introduction: 1982?
New Product–Documentation: Letter from Robert Folkenberg. 1983. Feb. 15. "This company, organized in 1967, is presently producing about 1,000 liters/week of soy milk."

3958. **Product Name:** [Soymilk (Plain, or with Barley Malt Syrup)].
Foreign Name: Tônyû, Tônyû Bakuga-iri.
Manufacturer's Name: Natural Foods (Nachuraru Fuuzu).
Manufacturer's Address: Japan.
Date of Introduction: 1982?
Wt/Vol., Packaging, Price: 195 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Tônyû and Bakuga-iri Tônyû were introduced before Dec. 1982 by Nachuraru Fuuzu in a 195 gm can.

3959. **Product Name:** [Soymilk].
Foreign Name: Tônyû.
Manufacturer's Name: Seven-Eleven (Sebun Irebun).
Manufacturer's Address: Japan.
Date of Introduction: 1982?
Wt/Vol., Packaging, Price: 200 ml long-life pack.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Tônyû was introduced before Dec. 1982 by Sebun Irebun (7-11) in a 200 ml long-life pack. Note: 7-11 is a U.S. based convenience food store chain.

• ***Summary:*** The first 5 pages are the report of activities. The last 5 pages are the names and addresses to whom the report should be sent. Address: Chairman, IIDC (International Investment & Development Corp.) Belgium, Belgium S.A., Rond-Point de l'Etoile 3, Boite 8, B-1050 Brussels, Belgium. Phone: (02) 640-68 00.

3964. Uchi, Osamu; Hatanaka, Chiaki. Assignors to Mitsubishi Chemical Industries Limited (Tokyo, Japan). 1983. Method for extracting ingredients of oil-containing seeds. *U.S. Patent* 4,369,198. Jan. 18. 8 p. Application filed 15 Aug. 1978. [9 ref]
• ***Summary:*** This patent concerns soymilk. "A method for extracting ingredients of oil-containing seeds comprising triturating [crushing] uncrushed seeds, which have not been soaked in water, in deoxygenated hot water of from 70ºC to the boiling point under the anaerobic condition is disclosed. By this method, the ingredients of oil-containing seeds can be extracted with higher extraction rate, lower viscosity, lower peroxide value and reduced odor." Address: 1. Fujisawa, Japan; 2. Tokyo, Japan.

3965. Flinders, Carol. 1983. Tofu industry prepared for boom times in '80s. *Hartford Courant* (*Connecticut*). Jan. 19. p. E2.
• ***Summary:*** "That faint rumble that you hear just offstage is the tofu industry, tooling up for its Great Leap Forward in the 1980s." Yearly production are expected to grow to 200 million pounds by 1986, from 50 million pounds now.

Carol met with Dik and Sharon Rose, co-owners of Brightsong Light Foods of Petaluma, California. They operate out of what used to be a poultry processing plant; Petaluma used to be the "chicken capital of the West."

Brightsong makes 400 lb/day of tofu, as well as "soy milk, soyshakes, and a number of tofu-based salads, spreads, and desserts.

"Brightsong is an example of the first phase of the soyfoods industry–low profit margin, relatively low volume and very labor intensive."

An illustration shows the Brightsong logo. There is a recipe for Hot and sour tofu soup.

3966. Khalili, Mehrdad. 1983. Re: Planning to design soymilk plant in Iran. Letter to Soycrafters Association of North America, 305 Wells St., Greenfield, MA 01301, Jan. 29. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Sangvan Co. is planning to design the first Iranian soymilk plant (Capacity 25 to 50 tons/day).

He would be very glad to receive any information in this respect and a sample copy of *Soycraft* magazine. Thanking

you in anticipation. Sincerely yours,... Address: Director, Sangvan Co., Industrial & Engineering Services, P.O. Box 54/274, Tehran, Iran. Phone: 235600, 649100.

3967. **Product Name:** Vegie Burger.
Manufacturer's Name: Bud, Inc.
Manufacturer's Address: 1100 Wicomico St., Baltimore, MD 21230.
Date of Introduction: 1983. January.
Ingredients: Natural nigari tofu, carrots, cabbage, onion, celery, potato, yam, okara, soymilk, sesame seeds, sunflower seeds, soybean oil, sea salt, spices.
Wt/Vol., Packaging, Price: 7 oz vacuum pack.
How Stored: Frozen.
Nutrition: Per 3.5 oz.: Calories 210, calories 12 gm, carbohydrates 13 gm, fat 13 gm, sodium 235 mg (235 mg/100 gm).
New Product–Documentation: Label. 1983. Jan. (dated). 4.5 inches square. Black and white on reddish-purple. "Keep frozen. Completely vegetarian. All natural. No preservatives." Logo reads: "Soyfoods for a healthy world"; East West. 1987. June. p. 65.

3968. Gabr, M.; Maraghi, S.; Morsi, S. 1983. Management of lactose intolerance secondary to protein calorie malnutrition with soy-based, lactose-free formula. *Nutrition Reports International* 27(1):51-58. Jan. [10 ref]
• ***Summary:*** An isolated soy protein formula containing a mixture of sucrose and corn syrup was found more effective in infants recovering from kwashiorkor than a standard lactose-containing formula. Address: Depts. of Pediatrics and Clinical Pathology, Cairo Univ., Faculty of Medicine, Cairo, Egypt.

3969. Ornish, Dean. 1983. Stress, diet, and your heart. New York, NY: Holt, Rinehart and Winston. xxi + 392 p. Foreword by Alexander Leaf, M.D., Illust. Printed in 1983 by New American Library (Signet Books). 24 cm. [224+ ref]
• ***Summary:*** The title page states: "With a Foreword by Alexander Leaf, MD. Original recipes by Martha Rose Shulman." This is Dean Ornish's first book on the benefits of diet, stress reduction, and exercise in reducing heart disease. Grains, legumes and vegetables are the staples in this low-fat, vegetarian diet. Dairy products (such as milk and yogurt) are used sparingly.

In the section on the "Five Food Groups," the subsection titled "Legumes" includes azuki beans, miso, soybeans, soy flour, soy milk, tempeh, and tofu.

The recipes–which are innovative, tasty and nutritious–were developed by Martha Rose Shulman and she wrote most of Chapters 14-20.

The word "tofu" appears on 46 pages in this book, soy flakes appears on 10 pages, and soy milk appears on 5 pages, soy flour on 2 pages and tempeh on 1 page. Soy-related recipes and information include: Soy flakes, tofu (p. 161-63). Modified sautéed eggplant (p. 164-65). Brief descriptions of azuki beans, soybeans, soy flakes, and soy grits (p. 175-76). Instant soy milk (such as Fearn or Jolly Joan), Tofu–description and uses (p. 181). Recipe for Brown rice, barley, soy grits (p. 182). General cooking directions for legumes (p. 184-87). Very simple cooked soybeans ("The size of the pot is especially important with soybeans, which bubble up dramatically," p. 185). Cooked soy flakes (p. 188). Herbed tofu spread (p. 207-08). Apple spice tofu morning spread (nice on toasted morning bread or muffins, p. 208, 279, 290). Peanut butter banana tofu spread (209). Nutty tofu cheese substitute (p. 236-37). Roasted soybeans (dry roasted = baked, p. 239-40). Homemade granola (with "½ cup soy flour," p. 241-42). Deep-dish vegetable pie (with cooked soy flakes, p. 252-54). Eggplant and rice casserole (with soy grits, p. 257-58). Sprouts, tomato, and white bean spread sandwich (with dry roasted soybeans cracked in a blender, p. 260). Tofu banana cream pie (p. 266-67). Gazpacho (p. 269-70). Pizza (homemade, with Tofu cream sauce, p. 271-73). Brown rice salad (with dry roasted soybeans, p. 279). Buckwheat noodle salad with hot and sour dressing (and dry roasted soybeans, p. 282-83). Bulgur-spinach salad with poppy seed dressing (p. 285). Curried tofu and vegetables (p. 287). Mushroom and barley soup (with soy flakes, p. 291). Pasta with vegetables (and dry roasted soybeans, p. 296). Pasta with vegetables (and dry roasted soybeans, p. 296). Millet raisin pudding (with "¼ cup instant soy milk {such as Fearn}," p. 298). Spaghetti sauce with tofu tomato sauce (p. 298-99). Grated zucchini casserole with eggplant sauce (and dry roasted soybeans, p. 301-02). Couscous casserole (with "½ pound {2 cakes"} tofu, p. 321). Soybean-grains casserole (with "2 cups cooked soybeans or soy flakes, p. 325-26).

For information on a vegetarian diet, see p. 3, 144-50.

The excellent Foreword by Dr. Alexander Leaf, M.D. (Chairman, Dep. of Preventive Medicine and Clinical Epidemiology, Harvard Medical School) notes that coronary heart disease is now the leading cause of death in our western industrialized world. Medicine has been grappling with this modern killer largely by trying to cure coronary artery disease–angina and nonfatal heart attacks–rather than to prevent it. "With heart attacks accounting for as many deaths annually in the United States as all other causes of death combined, we are dealing with a modern epidemic still taking a toll of 600,000 lives per year... Many of these deaths are sudden..." The major risk factors for future heart attacks are cigarette smoking, arterial hypertension, elevated serum cholesterol, Type A personality, etc. "What is still lacking in the logical chain is evidence that reducing the risk factors in a given individual will prevent the occurrence of coronary artery disease in that person." Dr. Ornish, through his research and preventive approach, is seeking the evidence for that missing link. Nevertheless "the prudent person will benefit his or her well-being, and very possibly his or her

heart as well, by adopting and adhering to the dietary and stress modification programs Dr. Ornish has presented" in this important book. Address: M.D., Sausalito, California.

3973. Panchal, Chinu. 1983. Soyamilk proves 'elixir' to sick baby. *Times of India* (*The*) (*Bombay*). Feb. 12. p. 13.
• ***Summary:*** Nagpur–The parents of a four-day-old baby girl found that she could not digest breast milk or infant formulas based on cow's milk. Doctors finally diagnosed the problem as "lactose intolerance."

"Dr. S.W. Chorgude, a child specialist, then suggested that the child be given soyamilk," which was available locally thanks to a factory established in Nagpur by Dr. Shantilal Kothari, a former professor at Pantnagar agricultural university. It worked wonders. Within 1½ months the child became as healthy as any normal baby.

An estimated 2% of the children in India suffer from lactose intolerance; they lack the enzyme lactase which digests the lactose, the natural sugar in milk. When they are fed milk, this lack causes flatulence, diarrhoea, and other stomach problems. Soyamilk [infant formula] contains all the ingredients required for infants to grow, without the lactose sugar.

Dr. Kothari uses a process developed in India to make the soyamilk. He told the *Times of India* that he has been carrying on a long and (so far) fruitless correspondence with the state [Maharashtra] food and drugs administration to have soyamilk officially recognised as a food.

Since the baby's remarkable recovery, all three of the hospitals in Nagpur have begun substituting soyamilk for regular milk in the diets of their patients.

According to the superintendent of the Mayo hospital, the soyamilk has worked very well and it has saved the hospital a lot of money–since soyamilk costs Rs. 2.46 compared with 3.50 for the same quantity of dairy milk.

A photo shows the healthy baby lying on her back. Behind her is a carton of soyamilk in bottles and a sign that reads "Soyamilk." Address: M.D., New Delhi.

• ***Summary:*** The first SDA food factory in South America was Granix in Buenos Aires, Argentina, in 1938. Today Superbom of Brazil is the largest producer, making an estimated 30 tons/month of textured soy flour (TVP). In the Caribbean region, Industrias Covac in Alajuela, Costa Rica, was the first organized in 1967, followed by Alimentos Colpac of Mexico in 1969 and Westico foods in Jamaica in 1970. Today Alimentos Colpac makes about 10 tons/week of TVP and 3,000 liters/week of soymilk. Westico Foods makes 2 tons/week of TVP, which is expected to increase dramatically in the near future. Industrias Covac makes about 3 tons/week of TVP and 1,000 liters/week of soymilk. Alimentos Integronaturales in Montemorelos, Mexico makes about 3,000 liters/week of soymilk. They and Productos Icolpan in Colombia will soon start producing TVP. Address: Field Secretary, Inter-American Div., P.O. Box 340760 (760 Ponce de Leon Blvd.), Coral Gables, Florida 33134. Phone: 305-443-7471.

3975. Marbach, William D.; Ukai, Nancy. 1983. Tokyo's soybean blockade. *Newsweek*. Feb. 28. p. 63.
• ***Summary:*** "Archer-Daniels-Midland of Decatur, Illinois would like to export soy isolate to Japan so that it can cash in on the latest Japanese health-food craze–soybean milk. (Making soybean milk, or *tonyu*, from soy isolate is simple: just add water, flavors and heat). The trouble is that ADM's soy isolate is a threat to an industry the Japanese would like to develop to replace the old-fashioned way of making tonyu by crushing and boiling the beans.

"When ADM applied to the Japanese Ministry of Agriculture for a 'Japan Agricultural Seal' (JAS)–without which Japan's quality-conscious consumer would resists the product–the request was denied. 'According to the Japanese Agricultural Standard, whole soybeans must be the main ingredient of soy milk,' the ministry ruled...

"'The product must already be on the Japanese market before we consider it a candidate for the JAS mark,' said one ministry official. A Japanese Catch-22...

"Fuji Oil Co., a big soybean processor, already makes lower-grade isolate for other products and is reportedly getting ready to enter the booming $100 million tonyu [soymilk] market." Address: Tokyo, Japan.

Address: Inst. of Health, Chinese Academy of Medical Sciences, Beijing, China.

3977. Chou, Chi-yuan. 1983. Studies on the use of soybean food in infant feeding in China and the development of formula 5410. *Food and Nutrition Bulletin* (*United Nations Univ.*) 5(1):45-52. Feb. [10 ref]
• ***Summary:*** Historical background: In China, since ancient times, the soybean and soybean foods have been considered nutritious and delicious. Even soybean milk has long been consumed by Chinese adults. Today, soybean milk "is a popular breakfast food item sold in many small restaurants in the morning in almost every large and small city, but it had never been used to feed infants before 1927.

"In the vast agricultural areas of China, animal milk is not a regular daily food item. When infants cannot obtain sufficient mother's milk, it is only natural to use cereal flours such as wheat or rice and wheat plus a little cane sugar as milk substitutes. This traditional method of feeding has been practiced over hundreds or even thousands of years.

"In the light of modern knowledge of nutrition, it was realized that such cereal preparations are not adequate to meet the requirements of a growing child. To modern medical and health scientists, it has become an urgent and interesting problem to search for an inexpensive but nutritious infant food to substitute for animal milk and the traditional cereal flour products when mother's milk is inadequate.

"Dr. Ernest Tso, Professor of Pediatrics of the former Peking Union Medical College in 1928, was the first in China to use fresh soybean milk to feed an infant (Tso 1928). Fresh soybean milk was supplemented with calcium lactate, common salt, and cane sugar. During the eight months of feeding with this basic diet, the infant received other foods such as egg yolk, fish liver oil, orange juice, and green vegetable puree, with soybean milk, protein furnishing about 20 per cent of the total dietary energy.

Following this successful attempt, Tso, Yee, and Chen (1928), Tso and Chu (1931), Tso and Chang (1931), and Fan, Wu, and Chu (1940) continued to work with fresh soybean milk, spray-dried soybean milk powder, or roasted soybean flour diets for a number of infants in the hospital. Guy and Yeh (1938), working at the Peking First Health Station, fed 15 infants fresh soybean milk and 49 infants roasted soybean flour preparations at the babies' own homes and reported that all of the infants had normal weight and height gains. Research along this line was then interrupted for 12 years [during World War II and the Chinese Communist revolution].

The remainder of this article is about the development of soybean infant formula 5410, which began in 1953 "with a team in the Department of Nutrition of the then National Institute of Health, now the Department of Nutrition and Food Hygiene of the Institute of Health of the Chinese Academy of Medical Sciences. On the basis of the findings of previous workers and newer knowledge of nutrition, the aim was to construct a milk substitute with easily obtainable raw materials and a simple method of preparation, nutritionally comparable to human milk or cow's milk formula, palatable and acceptable to young infants, and to be sold at a reasonably low price to meet the financial status of most families, especially those in the rural areas." The formula consists of (by weight): Soybean flour 28.0%. Rice flour 45.0%. Cane sugar 16.5%. Egg yolk powder 5.0%. Soybean oil 3.0%. Bone powder 1.5%. Millets 0.5%. Common salt 0.5%. Potassium iodine (later supplemented) 0.25 mg per kg of mixture. A detailed method for preparing the formula is given. Address: Inst. of Health, Chinese Academy of Medical Sciences, Beijing, People's Republic of China.

3978. **Product Name:** Light Soysage (Meatless Okara-based Sausage).
Manufacturer's Name: Light Foods Inc.
Manufacturer's Address: 6144 Bartmer, St. Louis, MO 63133. Phone: 314-721-3960.
Date of Introduction: 1983. February.
Ingredients: Okara (soy pulp), whole wheat flour, soymilk, nutritional yeast, wheat germ, soy oil, bulgar wheat, shoyu, honey, sesame seeds, herbs & spices.
Wt/Vol., Packaging, Price: 12 oz sausage-like dark reddish brown paperboard tube.
Nutrition: Per 2 oz.: Calories 147, protein 6.3 gm, carbohydrate 16.5 gm, fat 6.1 gm, sodium 292 mg.
New Product–Documentation: Spot in Whole Foods. 1983. Jan. p. 39. "New Tofu Line. Light Foods, Inc. presents a new dimension to soyfoods: Light Links, Light Tofulogna and Light Soysage.

Label. 1988 received. Chub-packed in a pre-printed sausage-style casing. 10 by 3 inches. Orange, yellow, and reddish brown. With label printed directly on tube. "Pre-cooked. Meatless. 100% cholesterol free."

Talk with Bob Davis, founder of Light Foods. 1994. May 7. This product was similar to his first Soysage except that the packaging was different; the Light Soysage was chub packed. Other products in this line that were chub packed were Light Tofulona and Light Loaf. The latter product was never commercialized.

3979. Light Foods Inc. 1983. Light Foods Inc. is proud to present tomorrow, today: A light line of distinction (Leaflet). St. Louis, Missouri. 1 p. Feb. Front and back.
• ***Summary:*** This 4-panel leaflet is printed with brown ink on beige paper. On the front panel is a stylized smiling sun. On the two inner panels are descriptions of the following

meatless products, each with ingredients and nutrition facts. Right page: Light Links (tofu hot dog) [launched July 1982], Light Soysage (sausage featuring okara, whole wheat flour, and soymilk), Light Tofulogna (featuring tofu and okara).

Right page (the label of each product is shown): Crusts (frozen): Golden Crusts (featuring whole wheat flour and soy margarine), Amazing Crusts (featuring cornmeal, okara, whole wheat flour). Pie in the Sky (Tofu Spinach Pie, Tofu Tamale Pie [launched June 1983], Tofu Apple Pie).

Back panel: "Thank you for your attention. In the spirit of light. In Joy."

Talk with Robert Davis. 2007. June 5. He recently underwent a personal transformation of spiritual death, dying to the Self and opening of the heart. The illustration of the sun was probably drawn by Martha Johnson. He will soon be moving to Nelson, BC, in the Kootenays (mountains) near Kootenay Lake to create the Shunya Institute, a safe space. Address: 6144 Bartmer, St. Louis, Missouri 63133. Phone: (314) 721-3960.

3980. Liu, Shengjie; Chang, Ying; Zhou, Qhi-yuan. 1983. [Studies on milk-substitutes. VI. Absorption and retention of nitrogen, calcium, and phosphorus of soybean milk-substitute by infants]. *Ying Yang Hsueh Pao* (*Acta Nutrimenta Sinica*) 5(1):39-49. Feb. [15 ref. Chi; eng]
• ***Summary:*** Nine male infants, age 37-77 days, fed soymilk and a control for 8-16 weeks. Address: Inst. of Health, Chinese Academy of Medical Sciences, Beijing.

3981. Shurtleff, William; Aoyagi, Akiko. 1983. The soyfoods industry and market: Directory and databook 1983. 3rd ed. Lafayette, California: Soyfoods Center. 112 p. Feb. No 28 cm. [191 ref]
• ***Summary:*** As of May 1982, America's four largest tempeh makers (in lb/week) are Pacific Tempeh (5,000, California, started 1980), Tempeh Works (4,250, Massachusetts, started 1979), Soyfoods Unlimited (3,000, California, started 1981), White Wave (1,900, Colorado, started 1979). About 17,455 lb/week of tempeh are sold by 15 companies in the USA.

3983. *Soybean Digest.* 1983. Asians thirst for soydrink. Feb. p. 80.

3984. *Soyfoods.* 1983. Soyfoods mini-boom underway in Europe. Winter. p. 8-9.
• ***Summary:*** "'This year we became aware that the kind of developments that took place in the U.S. in 1977-78 are now taking place in Europe with the sudden increase in the number of soyfoods companies,' reports Bill Shurtleff of The Soyfoods Center. 'Historically speaking, this will probably be the most important event for the soyfoods industry in 1982. Europe is coming on strong and it's a tradition of soyfoods that goes back 130 years that is now being revived.'

"Most of the impetus for soyfoods in Europe apparently stems from the vigor of the macrobiotic community. Per Fruergaard started Tofu Denmark in Valby and has encountered legal problems regarding the use of nigari. In Paris, France, Bernard Storup purchased a Takai tofu system; Ab and Paulien Schaft are setting up a small plant in Baillestavy to make miso, shoyu, natto, and koji; in Ivry, Jean Luc Alonso's macrobiotic center, Traditions du Grain, prepares for tempeh production.

"In the British Isles, Paul Jones' Tofu Shop in London, England, has been active since 1981 while Community Health Foundation, also in London, promotes homescale tofu, tempeh, and misomaking. In Dublin, Ireland, Jane O'Brien gives tofu cooking classes, has published a tofu cookbook and is considering commercial production.

"The macrobiotic movement is strong in Belgium where de Brandnetel, a large Antwerp-based distributor of natural foods, operates a tofu shop in the rear of their retail store. Jonathan Company in Ekeren makes 3000 pounds of tofu weekly, along with seitan, mochi, soups, canned foods, and soymilk. Seven Arrows in Leuven is another small tofu shop in operation in Belgium.

"In the Netherlands Manna was the first company to introduce soyfoods to the public and is now an important promoter. Manna's John Welters (who provided much of this information) lectures on homescale soy processing and reports interest and sales are rising as are the number of magazine articles on soyfoods. Manna itself markets tofu spreads and distributes a joint equipment price list with Takai Company of Japan. Witte Wonder in The Hague makes tofu, as does De Morgenstond in Bakkeveen, while Peter Dekker's Jakso produces tempeh. In Portugal, Unimave promotes soy as part of the macrobiotic diet and makes small amounts of tofu and soymilk; Jose Parracho in Setubal is starting a self-sufficient center involving tofu and tempeh production.

"In Soyen, West Germany, Wolfgang Furth-Kuby, who

published *Das Tofu Buch* (by William Shurtleff) in German, is interested in tofu production at his Sojaquelle. Tofu producers are Swame [sic, Swami] Anand Svadesha in Furth-im-Wald, Thomas Kasas [sic, Karas] who installed a tofu system last summer at his Bittersuess [later Soyastern] in Cologne, and Alexander Nabben in Munich.

"In Sweden Tim Ohlund and Ted Nordquist have been operating Aros Sojaprodukter since early 1981 in Örsundsbro using a Takai pressure cooker system and vacuum packaging. In Rimini, Italy, Gilberto Bianchini makes tofu at Community Foods. And Switzerland is the home of four soy companies including Restaurant Sesam in Bern, an active macrobiotic center with homescale tofu and seitan production; Marty Halsey makes tofu in Nyon; Hans Opplinger produces tofu in Chan; and Verena Krieger operates Sojalade in Luzern (Lucerne).

"Sojalade, whose tofu output at mid-summer 1982 was 1000 pounds weekly, is a company launched mainly on the results of an article Ms. Krieger published ('Yesterday Steak, Tomorrow Tofu') in a Swiss Sunday magazine. Krieger then established her shop to meet the expected tofu demand stirred up by her article. Swiss national television ran a 30 minute feature on soybeans this year in which Krieger made a brief demonstration of 5 tofu dishes. 'Since then tofu has been a favorite child of the media,' she says, adding that tofu appeared in the pages of *Blick,* a mass market newspaper."

Photos show: (1) European representatives at the international Soyfoods Come West conference in Seattle, Washington: Gilberto Bianchini, Marina Casazza (Italy); Joanna White (Switzerland); Kym Olsen (England); Wolfgang Furth-Kuby (W. Germany); Tim Ohlund (Sweden); Roger Kayes (England). (2) Ted Nordquist and Tim Ohlund of Aros Sojaprodukter, Sweden's first tofu company.

Futsû hatake to suiden tenkan saibai daizu shijitsu no kagaku seibun sosei oyobi kakô tekisei no sai [Quality of soybean seeds grown in Japan. II. Differences in the chemical composition and suitability for food processing between upland and drained paddy field cultures / crops]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 41. p. 14-33. Feb. [33 ref. Jap; eng]

• ***Summary:*** The chemical composition and suitability for making tofu, miso, natto and cooked whole soybeans were investigated with 78 seed samples of 31 varieties which were grown in upland and drained paddy fields at five Agricultural Experiment Stations in 1980.

The qualities tested were chemical composition (moisture, protein, and oil content) and suitability for food processing as measured by weight of 100 seeds, weight increase ratio of soaked seed, germination ratio, solid matter content of soaking water, solid matter extractability, pH, color of soybean milk, weight increase ratio by steaming, moisture content, softness, and color of steamed seeds. Drained paddy field cultivation, as compared with upland cultivation, gave high moisture and heavy weight of 100 seeds, and low *x* color value of soybean milk and steamed soybean seeds.

From the results of contribution ratios, it was shown that the moisture content of soybean seeds was influenced by cultural conditions, whereas the chemical composition of protein and oil, and all the suitabilities for food processing were influenced by variety. 3986. Weingartner, Karl E.; Nelson, A.I.; Erdman, J.W., Jr. 1983. Effects of calcium addition on stability and sensory properties of soy beverage. *J. of Food Science* 48(1):256-57, 263. Jan/Feb. [11 ref]

• ***Summary:*** Pasteurized or thermally processed soy beverages (6% soy solids) were fortified to a comparable level of cow's milk with calcium using mixtures of calcium citrate and tricalcium phosphate to soy beverage. These fortified pasteurized products had acceptable sensory properties. Addition of these calcium salts did not adversely affect protein stability of the beverage. Calcium citrate addition caused a decrease in beverage pH and viscosity. Thermally processed (still retort and agitort) canned beverages containing calcium salts were stable for 6 months when stored at 1º C or at room temperature.

Although the authors made a soy protein beverage containing a heterogeneous suspension of calcium citrate and calcium phosphate, they found it difficult to make a homogeneous and stable soy protein solution containing more than 100 mg/100 gm of free calcium ion. Address: Dep. of Food Science, Univ. of Illinois.

3987. Bisalski, Ed. 1983. More on Madison Foods (Interview). Conducted by William Shurtleff of Soyfoods Center, March 1. 1 p. transcript.

• ***Summary:*** Miller [was it Dr. Miller or his son, Willis?] invited Bisalski to he manager of his soymilk factory. Miller is a fine man but he always wants to be in control. Ed went there in about 1948. Before that he was at Madison. After studying at Madison he went to Peabody for graduate work in nutrition. He worked with Dr. Miller for 6 weeks, then he realized he couldn't work with him any longer. Dr. Miller was always changing schedules. Miller couldn't develop an organisation, didn't stick with budgets, bought equipment he

couldn't pay for.

Note: My observation: few good saints are good businessmen.

Neither Kellogg nor Sutherland were good businessmen. Kellogg was a tyrant, always in control. Sutherland was more amenable. No one could work with Kellogg; it was either obey or be fired. That was with the food businesses. In medicine he commanded the respect of everyone. One of the greatest surgeons in the world. Bisalski is now age 80, a vegetarian. Vegetarian diet really shows up as one ages. He does 40 push ups every morning, plus lots of exercises. Ed was born on 1 Feb. 1903. "The Lord bless you as you prepare this book"–he says. He is now writing a book on nutrition and lifestyle. Doctors were the last to find out about nutrition, diet, and health. Address: 3123 E. Miller Rd., Bancroft, Michigan 48414. Phone: 517-634-5203.

3988. Oka, Tadashi. 1983. [History of the soymilk industry in Japan]. *Toyo Shinpo* (*Soyfoods News*). March 1. [Jap]
• ***Summary:*** In 1957 (Showa 32) one tofu maker in Hachiôji, Tokyo, was making several hundred 180 cc bottles of soymilk and selling it. This tofu maker was a Seventh-day Adventist and it is said that he received Dr. Harry W. Miller's guidance when learning how to make soymilk.

It is said that after visiting this tofu shop, in 1959 Saniku Gakuin [a Seventh-day Adventist school] decided to serve soymilk in their school lunch program.

So Seventh-day Adventists pioneered modern soymilk in Japan.

Around 1962 Nihon Tanpaku Kôgyô [Kogyo, K.K.] ordered Japan's self-defense forces (*jieitai*) to do taste tests of their soymilk. This company was making soymilk powder and selling it, so they were looking for a market for their product. But there were some problems with its heavy smell, so that flavored soymilks (such as orange) were popular, but their plain soymilk was not well accepted.

Mr. Kanji Tsuchiya, who had been working for Kyôdô Nyûgyô (Kyodyo Nyugyo, a dairy milk company) for more than 10 years, got very interested in developing soymilk. In 1965-69 he helped to set up a soymilk plant in Taiwan (capacity 500 liters/hour). But the soymilk made in his plant didn't have its natural beany flavor, so Taiwanese consumers thought it was fake. Dr. Harry W. Miller, who visited his plant at that time, told him that he didn't have to refine soymilk that much for Chinese customers.

Mr. Teisuke Yabuki, of Japan's Ministry of Agriculture (Monbu-sho, Gakumu, kyoku-cho) started soymilk research because of Ryukichi Sekiya, who was interested in soymilk and used lactic acid bacteria to remove the beany flavor when making soymilk. He conducted taste tests and a kindergarten and an elementary school, but the taste was unacceptable and nobody was interested. He asked other people to do this research but didn't get good results. Mr. Yabuki asked if he could do his research and development on soymilk and asked Onihara (Shinnojo?) at Tokyo Agricultural University (*Tokyo Nôgyô Daigaku*) to do the research. At that time Mr. Yabuki was the president of Yakult (Jôtô Yakuruto Hanbai K.K.). He continued Mr. R. Sekiya, spent 9 years and a lot of money, and at last in 1968 he was able to start a small scale soymilk pilot plant. He bottled his soymilk and gave it away to his friends, to test the product and the process; his energy went into his product No. 1.

In Oct. 1969 Mr. Yabuki named his soymilk Luppy and started selling it. This was exactly 10 years after Nihon Saniku Gakuin started to provide soymilk in their own way.

But Mr. Yabuki was the president of Yakult at that time; he was selling about 13,000 bottles per day of Yakult [a small probiotic beverage] and had about 500 workers. He had to build a soymilk plant in Sept. 1968, found Luppy Tanpaku Kagaku Kenkyûsho and chose the package (Tetra Pak Aseptic) for his soymilk. Finally he was asked to choose between Yakult and Luppy. He suffered a lot but finally chose Luppy, resigning as president of Yakult. Mr. Yabuki had been using the Yakult sales and distribution network to sell his soymilk. On 31 Dec. 1972 he severed his relationship with Yakult.

It happened this way. When Mr. Yabuki was talking to Yakult's main office (*honsha*) House Shokuhin Kôgyô K.K. got interested in soymilk and started trying to persuade Mr. Yabuki into working for them. House Shokuhin Kôgyô K.K. made powdered tofu and had been selling it and were interested in soyfoods.

In April 1973 House Luppy (K.K.) was founded. Mr. Yabuki became its president and took responsibility for making the company's soymilk; House Shokuhin took charge of marketing and selling the soymilk.

A large food manufacturing company like House entering the soymilk was expected to have a big effect on expanding that market.

In 1973, soymilk brands in Japan were: (1) Soyalac (canned) made by Saniku Foods. (2) Shinko White made by Shinkô Shôbai. (3) Bonlact made by Wakôdo (Wakodo). (4) Luppy made by House Luppy. Because of expensive packaging and the use of fructose and honey, Luppy was quite a bit more expensive than the others (45 yen per 180 cc at that time).

In Nov. 1974 Tokyo Soymeal started. The technician Kanji Tsuchiya, who was from Kyôdo Nyûgyo, helped to make this soymilk plant. Mr. Tsuchiya's main idea was to make good-tasting soymilk in a clean, modern plant, resembling a dairy milk plant.

A chronology looks like this:

1959–Nihon Saniku Gakuin.

1969 Oct.–Luppy Tanpaku Kagaku Kenkyusho (Yakult / Yakuruto).

1971–Saniku Foods.

1972 April–House Luppy (New company from Luppy Tanpaku Kagaku Kenkyusho). They closed in 1979.

1973 Nov.–Tokyo Soymeal. They closed in Dec. 1978.
1975 July–Asahi Shokuhin.
1976–Kyodo Nyugyo.
1976–Marusan.
1977–Kibun / Kibon.
1981–Mitsubishi. But Mitsubishi had started testing soymilk in about 1972.

3989. *Toyo Shinpo* (*Soyfoods News*). 1983. [Yukijirushi Milk Co., one of Japan's largest milk companies, started selling soymilk on 10 March 1983]. March 1. [Jap]
• ***Summary:*** Their brand name is Yukijirushi Soymilk (*Yukijirushi no Tonyu*). They are selling three flavors: (1) Plain–90 yen retail. (2) Barley Malt Coffee–100 yen retail. (3) Yogurt flavor–100 yen retail.

Each is sold in 250 cc Tetra Brik cartons with 90 days shelf life. From one pack you can get all your vitamin E requirement for one day (a man needs about 10 mg, and each pack contains 15 mg). Yukijirushi is buying raw soymilk material from Nisshin and making it into their soymilk now. A photo shows the front of each of the 3 packages.

3990. Tepper, Robert. 1983. Farm Foods and Ice Bean (Interview). *SoyaScan Notes*. March 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Farm Foods presently has 37 distributors nationwide for Ice Bean. More than 10 of those are in California. The "soy powder" in the product is spray dried soymilk. Ice Bean is made at an ice cream plant in Memphis. People from Farm Foods make it there 2 days a week with the help of a plant technician. In 1982 sales of Ice Bean were almost $500,000. There are now 1,200 people living on The Farm, and almost half are children. Farm Foods started as a name under which The Farm sold its surplus produce to local food stores in Tennessee. Farm Foods in now mostly Ice Bean plus some tempeh starter sales. Ice Bean's future is to expand into supermarkets. Address: Summertown, Tennessee.

3991. Welters, Sjon. 1983. Re: Brief history of Stichting Natuurvoeding Amsterdam and Manna Natuurvoeding B.V. (Manna Natural Foods) in the Netherlands. Letter to William Shurtleff at Soyfoods Center, March 2. 2 p. Typed, with signature on letterhead.
• ***Summary:*** "Manna was started in 1971 by Adelbert and Wieke Nelissen with a few hundred guilders in a small garage where some natural food products were sold. One year later they gave it an official status by founding the Natural Foods Foundation Amsterdam [Stichting Natuurvoeding Amsterdam; this Manna started as a foundation, and Manna was their brand]. Their first store was on Rozenstraat in Amsterdam. Two years later a second store was opened and the first sourdough bakery in Holland opened. The name of the bread became 'Manna.' Soon after this a third and fourth store opened in other parts of Amsterdam while at the end of 1975 the distribution of bread, nutbutters, cereals and miso, tamari, shoyu, and seaweeds began all over the Netherlands. In 1976 it became clear that a warehouse should be rented. Meanwhile production grew and more and more stores carried Manna products. Again a new Manna store started. In 1977 the warehouse was moved to a bigger place. Another new store opened its doors. We began making tofu and were the first to do so with organic beans and nigari. Also soymilk and seitan were produced. In 1978 sales went steadily up. In 1979 two new stores were opened.

"Meanwhile the East West Center was founded by Adelbert and Wieke, promoting natural foods as part of a healthy and natural way of living. This was a great help for Manna. Two more stores opened in 1980 and 1981. In the beginning of 1982, Manna suffered from bankruptcy and was started one day later as Manna Natural Foods, a holding company mainly owned by the Foundation 'Manna Natural Foods' [Manna Natuurvoeding B.V.; B.V., pronounced Bay Fay, is an abbreviation for Besloten Vennootschap, which means a private company with limited liability]. A reorganization was necessary but the promotion and sales of quality natural foods went on.

"In 1983 Manna is going steady and probably will cooperate with other natural foods distributors to form one strong network of farmers, producers, distributors and retailers. The purpose will be to eliminate competition and put more energy into publications and promoting by cooking classes, radio and television programs and education.

"Soyfoods played quite an important role in the history of Manna because it was the soyfoods Manna promoted that made it different from the other health and natural food businesses. Because Manna is based on the macrobiotic view of life, miso, tamari, tofu and so forth were an essential part of the diet of the Manna people.

"Instead of the cheese, milk, yogurt (of which consumption is one of the highest in the Netherlands) we advise soyfoods as a healthy alternative. We did no business in dairy foods. Soyfoods are the number one product to introduce in Netherlands. A great deal of sickness in the Netherlands is caused by the overconsumption of dairy foods, meet and eggs (and other animal products). From this point of view Manna is a unique company in Holland, even in the alternative natural foods business. This difference is a reason of conflict with them. Only by eating a diet which is based mainly on vegetable products such as grains, legumes, soyfoods, seaweeds, fruits and nuts, etc., can a healthy and peaceful world be created. No animals can be mistreated and no land wasted, or misused or destroyed." Address: Manna, Meeuwenlaan 70, 1021 JK Amsterdam-N, Netherlands.

3992. Plamil Foods Ltd. 1983. Re: Pioneering soymilk in England. Letter to William Shurtleff at Soyfoods Center,

March 3. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "We were pioneers in England of liquid soya milk in 1965 and at that time the labelling authorities in the country would not permit us to use the definition of 'soya milk' or 'soy milk' and insisted that we used the terminology 'plantmilk'. We have taken this matter up from time to time with the Trading Standards Office (responsible for carrying out the labelling laws) and understand that the matter is at long last being centrally reviewed, so that we hope we may be able before long to use the terminology 'soya milk'.

"We obtain our soya protein isolate from Arkady ADM, Skerton Road, Old Trafford, Manchester M16 ONJ. We shall be obtaining from them shortly some TVP for a Goulash we propose marketing and also some de-fatted soya for a non-dairy chocolate bar we shall be producing i.e. with soya in place of milk." Address: Plamil House, Bowles Well Gardens, Dover Road, Folkestone, Kent, England CT19 6PQ. Phone: Folkestone (0303) 58588.

3993. Tally, Gene. 1983. The Coca-Cola Company and soymilk (Interview). Conducted by William Shurtleff of Soyfoods Center, March 20. 1 p. transcript.
• ***Summary:*** Coca-Cola Co. (CCC) has basically pulled out of the soft drink business, except for Hong Kong, where their Hi-C competes with Vitasoy. They are doing well in Hong Kong but they have no intention of pursuing soymilk in Japan, Brazil, etc.

He worked for CCC for 4 years and traveled worldwide. Nobody took Gene's place when he left CCC. He is back into marketing soft drinks for Sunkist, and is no longer involved with soymilk.

He thinks Morinaga will eventually be No. 1 in soymilk in Japan. Address: Sunkist soft drinks.

3994. **Product Name:** [Sun-Dew Soymilk].
Foreign Name: Sun Dew.
Manufacturer's Name: Dong-A Foods Co. Ltd.
Manufacturer's Address: 450-1 Suksoo-Dong, Anyang City, Kyung Ki-Do, South Korea.
Date of Introduction: 1983. March.
New Product–Documentation: Letter from Kyung Lee, ASA country director, Korea, to William Shurtleff at Soyfoods Center. 1983. Nov. 23. Gives history and production statistics.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 81-83. They produced an estimated 4,067 tonnes in 1983. Soya Bluebook. 1984. p. 79. Interview with Mr. Chung's nephew. 1986. Feb. 9. This product is Korea's second best selling soymilk after Vegemil, a distant second.

Photocopy of Label sent by Anders Lindner. 1989. An illustration on the front panel shows a pastoral house surrounded by trees, with a rainbow and sun overhead. In the lower left corner is written "tonyu inryo" (soymilk beverage) in Japanese characters.

3995. Hankin, Lester; Hanna, J. Gordon. 1983. Quality of tofu and other soy products. *Connecticut Agricultural Experiment Station, Bulletin* No. 810. 4 p. March. [8 ref]
• ***Summary:*** This cooperative study by the Connecticut Agric. Exp. Station and the Connecticut Department of Consumer Protection analyzed the microbial and nutrient content of 17 soy products: 5 tofu products made by New England Soy Dairy (Greenfield, Massachusetts), Firm Organic Tofu, and Tofu Slices (Marinated and Broiled) made by Nasoya Foods (Leominster, MA), Soy-Moo soymilk sold by Health Valley Natural Foods (Montebello, California), Tempeh Burgers made by Soyfoods Unlimited (San Leandro, CA), Tempeh Burger made by Pacific Tempeh (Emeryville, CA), Tofu Lasagna with Sauce marketed by Legume, Inc. (Bloomfield, New Jersey), Tempeh made by Tempeh Works (Cambridge, MA), Genmai Miso distributed by Erewhon, Inc. (Cambridge, MA), Kome Miso distributed by Tree of Life (St. Augustine, Florida), and 3 tofu products made by The Bridge (Middletown, Connecticut). Ingredients of each product are given.

The study showed high levels of bacterial contamination in many of the products, much higher than for dairy products. Only 41% met the coliform bacteria standard of less than 10 per gram of product, 29% met yeast standard of less than 10/gm, 41% met the 10 mold standard of less than 10/gm, and only 12% met the standard for total aerobic bacterial count (less than 25,000/gm). In addition, soyfoods generally contained more fat than claimed.

This report had widespread repercussions for the soyfoods industry, which (in the short term) were negative. The authors had previously published studies on the microbiological quality of numerous dairy products. Address: P.O. Box 1106, New Haven, CT 06504. Phone: 203-789-7272.

3996. Ling, C.A. 1983. Re: Plamil Foods Ltd. Letter to William Shurtleff at Soyfoods Center, March 3–in reply to inquiry. 1 p.
• ***Summary:*** 1. Your company name? Plamil Foods Ltd. (formerly Plantmilk Ltd.).

2. In what year did your company start doing business? 1965.

3. In what year did your company make its first food product using soy as a major ingredient? 1965.

4. What type of product was this first product and what was its brand name? Plamil soya milk (The word "Plamil"–from Plant Milk–was initially registered as a trade mark).

5. What products contains soy does your company now make? Could you send us your present price list and product brochure? Please list below, in order of importance, your three most popular / bestselling soyfoods:

Plamil soya plantmilk in both canned and tetrapak carton versions.

Plamil Rice Pudding with Sultanas.

Plamil Delice [Cream Alternative].

Plamil Carob-ean [a "chocolate" type drink].

Plamil Carob Fruit and Nut Bar

6. If not proprietary information, how many people are employed by your company, and what are your approximate sales of soyfoods?

Seven staff. £100,000 [$139,000].

7. Any additional information, articles, flyers, statistics, etc. that you could send us about your work with soyfoods would be greatly appreciated. Also samples!

Labels herewith

Thank you very much for your help. Address: Managing director, Plamil Foods, England.

3997. Ling, C.A. 1983. Re: Plamil Foods Ltd. Letter to William Shurtleff at Soyfoods Center, March 3. 1 p. Typed, with signature on letterhead.

• ***Summary:*** "You will gather from the attached completed questionnaire that we were the pioneers of a liquid soya milk in this country in 1965 and the enclosed labels and literature will give you further background information.

In answer to your questions... may we say that we obtain our soya protein isolate from Arkady ADM, Skerton Road, Old Trafford, Manchester M16 ONJ. We shall be obtaining from them shortly some TVP for a Goulash we propose marketing and also some de-fatted soya for a non-dairy chocolate bar we shall be producing i.e., with soya in place of milk. Regretfully we cannot say in answer to 55 and 56 whether the British Soya Products Ltd. or Soy Foods Ltd. are still in business as we have no connection with either company;

"We have already stated that we were pioneers in this country of liquid soya milk in 1965 and at that time the labeling authorities in the country would not permit us to use the definition of 'soya milk' or 'soy milk' and insisted that we used the terminology 'plantmilk'. We have taken this matter up from time to time with the Trading Standards Office (responsible for carrying out the labelling laws) and understand that the matter is at long last being centrally reviewed, so that we hope we may be able before long to use the terminology "soya milk". When you re-write your summary in numerical order relating to the UK, perhaps you would be good enough to make mention that we were the pioneers of a liquid soya milk here in 1965. After it being the sole one on the market for a number of years in the country, Itona decided to bring out one approximately five years ago and Granose also entered the market with one a couple of years ago. So we appear to have stimulated their interest!

"Yours faithfully, Plamil Foods Ltd." Address: Managing Director, Plamil Foods, Plamil House, Bowles Well Gardens, Dover Road, Folkestone, Kent CT19 6PQ, England. Phone: Folkestone (0303) 58588.

3998. *Nutrition Reviews.* 1983. Antibody formation to cow's milk protein or soya protein. 41(3):80-82. March. [4 ref]

• ***Summary:*** Antibodies to 5 cow's milk proteins and soya protein were measured in 64 babies at 112 days of age. The subjects were fed, from birth, soya preparations (37 babies), cow's milk preparations (19 babies), or cow's milk-soya preparation combinations. Cow's milk protein antibody formation is not modified by early feeding with soya protein.

3999. Shurtleff, William; Greenslade, David. 1983. Mahatma Gandhi: Soyfoods pioneer in India. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549 USA. 2 p. March. Published in part in Vegetarian Times, June 1983, p. 4. Unpublished manuscript. [5 ref]

• ***Summary:*** Although it is well known that Mahatma Gandhi revitalized the vegetarian movement in India, it is less well known that he was one of India's first pioneers to introduce soybeans and soyfoods. His work during the 1930s still serves as an inspiration to many Indians, who are today transforming India into one of the world's leading soybean growing and soyfoods using countries.

Gandhi's earliest known mention of soybeans or soyfoods was in the July 1935 issue of *Harijan,* his popular magazine for village uplift. There he referred to a book by Dr. H.V. Tilak called *Balanced Diets.* Dr. Tilak's book was based in an orphanage of over a hundred children, whose diet was made richer in protein and more balanced by the addition of soybeans.

In September 1935, Gandhi reprinted a report on soybeans by the Bombay Health Association. This article listed the nutritional and medicinal values of soybeans and also explained how to make soymilk, soy flour, and soy coffee. The October issue of *Harijan* reported that the kitchens at Gandhi's ashram has introduced experimental rations of soybeans into the communal diet. The same article compared soybeans with eggs, wheat, and ghee. Since the more economical soybeans were rich in protein and oil, Gandhi later ordered reductions in the portions of wheat and ghee and suggested that all beans, other than soy, be omitted altogether.

November's *Harijan* reported that soybeans were being boiled, steamed, and used in soups. The ration of ghee had been stopped and soybean portions increased. Gandhi pointed out that everyone seemed to thrive on the new diet. in the same issue, Gandhi reprinted a leaflet by the Baroda State Food Office describing soybean crop cultivation. By December 1935, *Harijan* reports that soybeans had become a substantial part of the diet at Gandhi's ashram.

The December 1935 and January 1936 issues printed a dozen soyfood recipes, including the techniques for making, "TO-FU," "shoyu-sauce," and "soya bean sprouts," Gandhi said he was particularly fond of the sprouts.

By September 1936 *Harijan* was recommending an exhaustive book on soybeans written by F.S. Kale, an

Englishman in charge of the Baroda State Food Service Department. Entitled, *The Soya Bean: Its Value in Dietetics; Cultivation and Uses,* this was the first book on soyfoods published in India. *Harijan* also carried a report on soybean cultivation experiments in the USA and the Soviet Union in the same issue.

By 1936, after careful consideration of economic, nutritional and medicinal evidence, Gandhi wholeheartedly favored the cultivation and widespread use of soybean in India and his magazine ran lists of prices and of the places where soybeans could be obtained.

We lose track of Gandhi's interest in soyfoods in late 1936. However in 1949 his ideas were republished in *Diet and Diet Reform,* a book which sold thousands of copies. The fact that Gandhi took such an interest in soybeans and soyfoods is a major source of encouragement to the many Indians working in this burgeoning field today. In 1982 India produced 500,000 metric tons of soybeans, making it the world's ninth largest producer, and soyfoods (such as TVP, soymilk, and soy oil) were catching on rapidly in this country where an estimated 50 percent of the population is vegetarian, and another 30 percent eats only a very small amount of meat. Address: Lafayette, California.

4000. *Soyanews* (*Sri Lanka*). 1983. Raja Rata Food Grain introduces DSM [Dried Soya Milk]. 5(7):1, 3. March.
• ***Summary:*** Raja Rata Food Grain Processing Company introduced its main product, Dried Soya Milk powder, at a soya cookery exhibition / demonstration held last month at the YWCA, Rotunda Gardens, Colombo."

This event was also held to say farewell to Mrs. Kai Kim who, in her spare time and working independently, has helped to make soyafoods popular among Sri Lankans. Mrs. Kim is the wife of the Resident Representative of the UNDP, Mr. Y.Y. Kim.

"Mrs. Kim brought her Korean knowledge and experience in helping to introduce soyafoods to the public. She was instrumental in introducing soya milk to the Colombo Hospital and Prisons, for use in the form of a slurry, as a substitute for coconut milk." The Chairman of Raja Rata, Mr. R.S. Wijesekara, "thanked Mrs. Kim for her tireless and dedicated services to helping to add a highly nutritive food to the diet of the Sri Lankans."

A large photo shows Mrs. Gai Kim, Mr. R.S. Wijesekara, and others at the event.

Note: Dried Soya Milk powder will be on sale by about the middle of this year (p. 3).

4001. *Soyanews* (*Sri Lanka*). 1983. Prisons expand use of soya. 5(7):7-8. March.
• ***Summary:*** "After the new machine [disintegrator / grinder] was installed in Welikada Prison last September, there has been a further saving of nearly Rs. 65,000 during a period of three months from September 1982 to December 1982."

"In addition, the work camps and open prisons have also cultivated soya this maha [rainy season]."

"The Department of Prisons which has shown that large savings are possible by using soya in institutional feeding has now branched into the production of other soyafoods like soya fortified bread and yogurt.

"Exhibition: Independence day celebrations held in Kandy this year featured an Agricultural and Technical Exhibition..." At the soyafoods stall, ice cream sold for Rs. 2/-, soyamilk for Rs. 1/- and 100 grams of fried tempeh was 1/-.

"In the eight days that the exhibition ran many more thousands came to know and understand the immense potential of the bean that is at present the cheapest pulse in the market" where it retails for Rs. 4.00 to 4.50 per 500 gm.

A photo shows a field of soyabeans at the open prison camp, Anuradhapura.

4004. Rose, Richard. 1983. Re: The great soymilk wars and strict labeling regulations. Letter to William Shurtleff at Soyfoods Center, April 18. 2 p. Typed, with signature on letterhead (photocopy).
• ***Summary:*** "Dear Bill: Hope all is well with you and Akiko. I see you will be at the Whole Life Expo. Please stop by our booth #158. We'll have a few very new products there.

"At some point in May I would like to stop by and show you what our expansion plans are. I think you will be interested. We've put together a financing proposal and business / marketing plan and projections We have gotten very positive rejections, which is to say they thought the presentation and plan were well done but they had no capital, were too far away, it was too small... We are currently in discussions with a few others tho. Looks promising. It took about two years to prepare and research the plan.

"The latest in the great soymilk wars is that the state food & ag dept. has told us to stop using the word soymilk. After researching it this is what it boils down to: in 1982 laws were passed relative to non-dairy products in California. It defines non-dairy frozen dessert and a few others, as well as banning the sale of a soymilk with other than a trade or suggestive name. Even the generic or common name *cannot* be listed on the label. A first in food packaging laws. Thus we must call it Vitasoy, Fresh&Light (the one we chose), etc. but we can't also call it soybean beverage, etc. A company challenged it on the grounds that it was in conflict with

federal laws requiring the common name, but the company lost in court. The law also states that to even make "products resembling milk products (PRMP)," the definition of which is provided and could be construed to include tofu, soymilk, salads, desserts, etc., the plant must be a registered PRMP plant and be regulated by the state Food and Ag and each PRMP product must be registered with them at a cost of S25/ year. The plant certification costs $1OO/year. The law also states that the standards for the product that your product resembles are applicable to your PRMP, i.e., milk standards for soymilk, cheese standards for tofu etc.

"To the best of my knowledge no one has had the Food and Ag come down hard on them in the soy industry, but that possibility certainly exists. We decided to be as low-profile as possible and change our labels, copies of which I'll send to you when we receive them. We feel it opens up new possibilities for the re-positioning and marketing of soymilk. We also intend to become a PRMP plant as very little work is needed to bring our facility to PRMP code, which is essentially dairy code.

"What is desperately needed in California are new laws written by the soy industry reflecting the unique needs and products we have. This must be done right away before other states follow suit, our industry gets big enough to alarm the dairy lobby, and while we are still a low profile industry. The soy industry is in need of standards relating to purity, identity, additives, labeling, etc. and if we don't initiate them, a bureaucrat will.

"Also re: sufu [fermented tofu]. State law states that no food may have more than ½ of 1 percent alcohol by volume in it, otherwise it is an alcoholic product. This would seem to indicate that sufu is not legal to sell in California.

"An over-zealous young health officer in Sonoma County is trying to outlaw the self-service sale of bulk tofu. He is citing the law that says "potentially hazardous foods may not be sold in bulk". The store personnel must dispense the tofu. He is trying to enforce this in Sonoma County only, and meeting great resistance. Dr. York sent a letter stating that the sale of properly refrigerated bulk tofu presents no public health hazard. It is ironic because the retailers in this county are very careful about how they handle tofu and other foods, but in Marin tofu and dairy sandwiches are displayed for hours at room temperature, the tofu is presented in a very sloppy and hap-hazard fashion (bulk that is), with no care taken with sanitation, etc.

"I hope to see you at the Whole Life Expo. Take care. Dik Rose"

"P.S. We followed your suggestion and dropped the Sonoma Natural Foods. We are now officially known as Brightsong Light Foods. Our P.O. Box has been changed from 603 to 2536, same town and zip." Address: Brightsong Light Foods, P.O. Box 603, Petaluma, California 94953. Phone: 707-778-8638.

4005. Rose, Richard. 1983. Re: Enclosing new soymilk label. Letter to William Shurtleff at Soyfoods Center, April 26. 1 p. Typed, with signature on letterhead (photocopy).
• ***Summary:*** "Dear Bill: Enclosed is our new plain soymilk label, conforming to Food and Ag laws.

"Another point I forgot to mention is that the law forbids depiction of agricultural or dairy activities by symbol or word on the labels. So tradenames such as Soy Juice, Soy Moo or NuMu are not acceptable in California. Also if one adds fat or oil to the soymilk it becomes an imitation milk instead of a product resembling milk product, and is subject to more stringent regulations.

"We are in the process of re-doing our labels, and cleaning them up.

"Will send you new ones.

"See you Saturday.

"Yours truly, Dik." Address: Brightsong Light Foods, P.O. Box 603, Petaluma, California 94953. Phone: 707-778-8638.

4006. Akinyele, Isaac Olaolu; Harshbarger, K.E. 1983. Performance of young calves fed soybean protein replacers. *J. of Dairy Science* 66(4):825-32. April. [20 ref]
• ***Summary:*** The authors evaluated soybean protein in calf replacers in two 12-week trials. In trial 1, twelve 5-day-old Holstein calves were given 3 milk replacers: milk protein, soy protein concentrate, and full-fat soy flour. The diets contained 26% crude protein. In trial 2, 18 calves were used and the diet contained 30% crude protein. Milk protein had the highest apparent digestibility and full fat soy flour had the lowest. Address: Dep. of Dairy Science, Univ. of Illinois, Urbana, Illinois 61801.

Address: 1. Formerly Univ. of Arkansas, now with Purdue Univ.; 2. Dep. of Food Science, Univ. of Arkansas, Fayetteville, AR 72701.

4008. Kitulwate Gardens. 1983. Products of soya (Ad). *Soyanews* (*Sri Lanka*) 5(8):7. April.
• ***Summary:*** "The low cost, high quality protein–Now available for supermarkets, hotels, hospitals, restaurants, etc.

"(1) Soya bean curd–For superb curries and various exotic dishes–substitute for meat. Price per pound Rs. 11/-.

"(2) Soya paste [apparently ground, soaked soyabeans]–A highly nutritious, economical and convenient substitute for coconut milk. Price per pound Rs. 10/-.

"(3) Soya residue [okara]–(From bean curd preparation) for deliciously light rotis, pitta, etc. Price per pound Rs. 2/-.

"All the above prepared very hygienically. Orders will be undertaken now." A map gives directions to Kitulwatte Gardens. Address: 128 Kitulwatte Rd., Off Elwitigala,

Mawatha, Colombo 8, Sri Lanka. Phone: 597759 or 596992.

4009. O'Brien, Jane. 1983. The magic of tofu and other soybean products. Wellingborough, England: Thorsons Publishers Ltd. 128 p. April. Illust. by Niall Morris and Clive Birch. Index. 20 cm. [6 ref]
• ***Summary:*** Written in large letters at the top of the cover: "The Best of Vegetarian Cooking." Contents. Foreword. Introduction (incl. tempeh, soy flour, miso, tamari). 1. Making your own tofu. 2. A word about the recipes. 3. Recipes. 4. Soymilk. 5. Other soybean products (Okara, gô, yuba, soynuts). 6. Soybeans as beans. 7. Food value of soyfoods. 8. History of the soybean. Further reading.

Jane was a soyfoods pioneer in Ireland. In the Introduction (p. 18-21) Jane explains that "I was frequently ill as a child, and on several occasions I was very near to death's door." Yet as she got older, she grew to enjoy gourmet food and gourmet cooking. The man who became her husband gave her the first book she read on natural foods. "As soon as I became aware that food contributed to the maintenance or destruction of health, I began a lifetime of experimentation. I changed from refined foods to whole foods, gave up eating red meat, studied macrobiotics, so much so that over ten years ago I went to Boston [Massachusetts] with two children under the age of four, and pregnant with a third, to study the subject, and I continued from there to develop my own system." Her husband, an actor, is now quite happy with her cooking, after "an austerity programme involving giving up meat, cutting down on and nearly eliminating dairy food, getting rid of sugar."

"I have been working on creating meals that are increasingly more healthful for over seventeen years now [since 1966], and I find it a fascinating study. It is wonderful to witness the vast improvement in my own health..." Her son Quinn is now 15 years old. Her religion is Baha'i. "In furthering my interest in natural foods, I have given cooking classes in Dublin [Ireland] for over ten years [since 1973], not steadily, but from time to time when there were people interested. In the early days of my cooking classes, I also imported the necessary foods: whole grains, beans, miso and natural soy sauce from suppliers in England as they were not available in shops here in Dublin. There was no other way of getting these foods for my family. During the cooking classes I sold much of the stock... That led to the beginning of Ireland's first natural food store which I started with my husband's patient assistance, but which we left to someone else for many reasons."

"Several years ago I began to use tofu and soyfoods and to include them in the cooking classes. Because I was so interested in learning more about them, I attended the soyfoods conference held in Illinois in 1980 and the one in Colorado in 1981... I think that I became so excited about tofu, soymilk and soyfoods really because I had long been a lover of puddings, custard, and creamy toppings, often made with dairy foods. However, because I needed to cut down on my use of dairy foods, I had nearly eliminated all of those things from my diet. When I discovered that it was possible, not only to make tofu and soymilk successfully in my own kitchen, but to use it for very accurate substitutions of my childhood favorites which were far more healthful than the things I had eaten as a child, I was thrilled."

Note: On 9 November 1979 Mrs. Jane M. O'Brien (7 Woodside Drive, Rathfarnham, Dublin 14, Ireland), ordered books on tofu, tofu & soymilk production, miso, and tempeh from Shurtleff & Aoyagi at Soyfoods Center in California.

Talk with Jane O'Brien. 1980. July 13. She developed the many recipes in this book using soybeans that she imported from England to Ireland, starting in about 1980.

Letter from Jane O'Brien. 1983. May 28. This book was published in April 1983. "It is presently on sale in England but not yet here in Ireland." Address: 7 Woodside Dr., Rathfarnham, Dublin 14, Ireland.

4010. Saio, Kyoko. 1983. Furukute atarashii shokuhin, tônyû [Old and new food, soymilk]. *Shoku no Kagaku* (*Food Science Journal*) No. 71. p. 58-71. April. [12 ref. Jap] Address: National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan: Tanpakushitsu Kenkyu Shitsu-cho.

4011. *Shokuhin Nippon* (*Japanese Foods*). 1983. [Special issue on soymilk in Japan]. 15(5):1-104. April. [Jap]
• ***Summary:*** On the cover is a photo of Kibun soymilk in a Tetra Brik package. Address: Japan.

4012. *Soyanews* (*Sri Lanka*). 1983. Book review: The art of selling soyafoods. 5(8):4-5, 8. April.
• ***Summary:*** A full page, positive review (by. S. Pathiravitana) of *Soyfoods Labels, Posters, and Other Graphics* (1982), compiled by Shurtleff and Aoyagi. On page 4 is a review of the book plus a photo of "Cheeseless cheesecake with peach glaze." On page 5 are black and white reproductions of five labels.

4013. *Soybean Digest.* 1983. Move over Cola (Letter to the editor). April. p. 4
• ***Summary:*** "On page 80 of the February 1983 issue of Soybean Digest, you reported the popularity of a soybean drink among the Japanese. As soybean producers, we were very interested and would like more information on this beverage.

"E.S. Reed, Elizabeth City, North Carolina. "'Soymilk is an inexpensive and easy way for protein-deficient people to upgrade their diets,' says Steve Chen, ASA director of Taiwan. That 's a major reason why the protein-rich drink is so popular in Eastern countries.

"Making soymilk is basically a three-step process: soaking soybeans and grinding them in water and straining

the mixture. The process is an old one-discovered by the Chinese about 2000 years ago. Later modifications have added new flavors: vanilla, strawberry, peanut, chocolate, milk, coffee and apple.

"Japanese soymilk industry sources predict that by 1985 the soymilk industry in Japan will use 3.6 million bushels of soybeans. So the popular drink also provides a good market for US. soybean exports.–Ed."

Note: ASA (American Soybean Association) is starting to get interested in soyfoods! But only overseas, so far.

4014. *Soyfoods Monthly* (*Colrain, Massachusetts*). 1983. Bureaucratic flak on terminology. 3(4):2. April.
• ***Summary:*** "According to Wildwood Natural Foods, Fair fax, CA, the California Food & Agriculture Dept. has told them to desist from labelling their soy beverage 'soymilk' unless they wish to be inspected as a dairy or else register as an imitation milk. The California State Health Dept. has instructed them to desist terming a product 'tempeh burger' because of labelling confusion with hamburgers. The company is planning to contest both lings."

4015. Sunset international vegetarian cook book. 1983. Menlo Park, California: Lane Publishing Co. 96 p. April. Illust. 28 cm. Retitled Vegetarian Favorites in 1987.
• ***Summary:*** This book is by the editors of Sunset books and Sunset magazine; the supervising editor is Maureen Williams Zimmerman. A table titled "Choosing nutritiously" (p. 5) shows that soybeans are a good source of thiamin (B-1), niacin, vitamin B-6, folic acid, calcium, and iron. Another table titled "Protein partnerships" (p. 7) states that soybeans and soyfoods (soybean curd/tofu, soy flour, soy milk, and tempeh), like dairy products and eggs, have no limiting amino acid. Soy-related recipes include: Miso grilled mushrooms (p. 14; Japan). Golden tofu cauliflower soup (p. 34; Thailand). Greens & tofu in peanut sauce (p. 48; Thailand). Stir-fried tofu & vegetables (p. 50; Vietnam). Whole wheat & soy pasta (p. 52). Mandarin pancakes with spicy tofu filling (p. 70; China). Address: Menlo Park. Phone: 415-321-3600.

4016. Dreyer, Lawrence. 1983. Re: Work with soya in Austria. Letter to William Shurtleff at Soyfoods Center, May 1. 3 p. Handwritten, with signature. [Eng]
• ***Summary:*** "Herr Anton Wolf was here yesterday and told me that only 100 hectares of soybeans were planted in Austria in 1982. The yield was about 2,500 kg/ha."

Dreyer's main work is as the architect of the additions they are making to their facilities in Wiener Neustadt. At present they have a small shop and restaurant. There will be a new area for producing tofu on a small scale, gluten, mochi, bread. "At present we produce a limited quantity of tofu with equipment bought in Japan... A group of people loosely related to us uses a small centrifuge to make soymilk. This group has also recently started making tempeh... I have given copies of your chapter on "History of Soya in Austria" to Anton Wolf." Address: Weg der Natur, Austria.

4017. *Toyo Shinpo* (*Soyfoods News*). 1983. [Kanazawa Tofu Association has developed a soymilk sold in gusseted plastic pouches]. May 1. [Jap]
• ***Summary:*** It is sold in tofu shops and at kiosks in or near train stations. A photo shows the front of the package.

4018. Giles, Wesley R. 1983. IPT, Vitasoy, and Shurtleff's trip to China as a consultant for STS (Interview). Conducted by William Shurtleff of Soyfoods Center, May 2. 3 p. transcript. Handwritten.
• ***Summary:*** IPT is an engineering and contracting company. They are specialists in designing and building manufacturing plants, and installing the equipment–especially plants that make dairy-type products. Vitasoy is talking with IPT about building a soymilk plant for them in America. IPT and STS could work as either competitors or cooperators. STS could be the major contractor and hire IPT.

There is a Kibun-Alfa Laval joint venture to sell soymilk plants worldwide.

STS was established by DTD and Dong Bang in Korea. Anders Lindner does not own any of it; he is just an employee of DTD.

DTD would like William Shurtleff to serve as a consultant for STS in China. He would go there with a team of two other STS men for 17 days and make presentations in numerous cities to groups and companies interested in starting soymilk plants. The rate would be about $6,000 plus expenses. Address: President, Intereps, P.O. Box 966, Orinda, California 94563-0956. Phone: (415) 253-1065.

4019. Loh, Eleanor. 1983. Re: Production of soya bean milk in Tetra Pak cartons in seven Asian countries, 1978-1982. Letter to Anders Lindner at STS in Singapore, May 9–in reply to inquiry. 1 p. Typed.
• ***Summary:*** These statistics refer only to the amount of soymilk (in million packages) packed in Tetra Pak Aseptic cartons.

(1) Taiwan increased from 15.9 in 1978 to 79.2 in 1982

(2) Hong Kong increased from 28.1 in 1978 to 55.0 in 1982.

(3) Malaysia increased from 28.1 in 1978 to 44.3 in 1982.

(4) Korea increased from 5.2 in 1979 to 33.0 in 1982.

(5) Thailand increased from 13.9 in 1981 to 16.7 in 1982.

(6) Singapore increased from 1.9 in 1978 to 9.6 in 1982.

(7) Philippines was 0.7 in 1982.

The total increased from 62.9 (15.7 million liters) in 1978 to a peak of 268.4 (67.2 million liters) in 1981, decreasing to 238.2 (59.6 million liters) in 1983. Address:

Brik Pak Inc., Singapore. Phone: 662266.

4020. Rose, Richard. 1983. Re: Enclosing redesigned soymilk label. Letter to William Shurtleff at Soyfoods Center, May 16. 1 p. Typed, with signature on letterhead (photocopy).
• ***Summary:*** "Dear Bill: Enclosed are our new, redesigned labels, including the now-legal soymilks. I stopped by your lecture at the Whole Life Expo, the tail end that is. Did you get a chance to try our Chocolate Mousse? It was the hit of the show. Its introduction has been very successful so far. I would like to come by your house soon and show you our plans. They are very exciting and I think you'd be interested in seeing it. If that is possible please let me know." Address: Brightsong Light Foods, P.O. Box 603, Petaluma, California 94953. Phone: 707-778-8638.

4021. *Yomiuri Shinbun* (*Yomiuri Daily News, Tokyo*). 1983. Niowanai nattô [Natto that doesn't smell: Tempeh]. May 20. Evening ed. p. 14. [Jap]
• ***Summary:*** Tempeh is very different from natto: it is fermented with a mold, whereas natto is fermented with a bacterium. Natto is indigenous to Japan, whereas tempeh is indigenous to Java, and neither is widely consumed in the country of the other. Yet both are fermented soyfoods.

Natto is growing more popular as a breakfast food in Japan–related to the growing interest in natural foods, vegetable protein, and riding the same wave of popularity as soymilk. Young people are eating less rice. In 1982 each family in Japan spent ¥1,531 on natto, up 12% from the previous year. Dr. Teruo Ohta says one reason Japanese have the greatest longevity is because they eat a lot of plant protein instead of animal protein. Representative of these plant protein foods are soyfoods. But miso and shoyu contain salt, and tofu and soymilk contain no dietary fiber. Natto (like tempeh) is doubly good in that it contains fiber but no salt.

But the rice Japanese usually eat with natto is steadily decreasing; will this eventually cause a decrease in natto consumption as well? Maybe only those older than middle age are the main natto consumers.

This article uses the term "tempeh natto" three times. Note: We think this is unfortunate and confusing. Last year Dr. Ohta visited natto plants in Indonesia. Medical research shows natto is good for health.

Did natto originate in China? Was that Chinese natto salted or not? Was it disseminated by Buddhist monks to Japan and Southeast Asia?

Next month the Japanese National Natto Association will send a delegation to Java (Indonesia) to study tempeh.

4022. *Toyo Shinpo* (*Soyfoods News*). 1983. [Tamura Yakuhin has created a new company, Tamura Kassei K.K. which is selling soymilk in a new type of Pure Pak carton]. May 21. [Jap]
• ***Summary:*** This carton is a five-layer laminate: Polyethylene, paper, polyethylene, aluminum, and polyethylene. The soymilk stays fresh at room temperature for 60 days. The brand is Tamura Tonyu, sold in 3 flavors: 1. Plain Soymilk (*Jun Tonyu*) in 200 and 300 ml. 2. Dairylike Soymilk (*Chosei Tonyu*) in 200 and 300 ml. 3. Soymilk Soup (*Tonyu Suupu*) in 80 and 300 ml.

The soymilk, made by a new natural method, has a good flavor.

4023. Hooten, Dan. 1983. Dawson Mills closing down their flour and grit operations. Estimate of soy protein isolate production capacities (Interview). *SoyaScan Notes.* May 24. Conducted by Walter J. Wolf of NRRC, Peoria, Illinois.
• ***Summary:*** Dawson Mills [as of June 1] will discontinue production of soy flour, soy grits, and textured soy flour, because the products are not selling well; the factory is located too far from the markets. They formerly shipped soy flour to the West Coast for PL-480 programs, but that market has dried up.

His estimate of total U.S. isolate production capacity (not including Kraft) is 104 to 110 million lb/year, as follows: ADM 20-25. GPC 14-15. Ralston Purina 70 as follows: Memphis, Tennessee 20; Pryor, Oklahoma 30; Louisville, Kentucky 20.

Wayne Pruitt of Griffith Laboratories (5 April 1983) does not know whether Land O'Lakes will continue production of their calf starter material (intermediate in properties between a flour and a concentrate). Address: Industrial Sales, Land O'Lakes, Eau Clair, Wisconsin.

4024. MacKay, I.B. (Mrs.). 1983. Re: History of Soya Foods Ltd. Letter to William Shurtleff at Soyfoods Center, May 24. 3 p. Typed, with signature on letterhead. Plus many photocopies of early ads. [5 ref]
• ***Summary:*** "Unfortunately, we could not find any evidence that Dr. Chas. E. Fearn was in any way connected with our company... Soya Foods Ltd. was formed on 6 Feb. 1933. The partners in the business at the time were the Ferree brothers, who were of Dutch extraction. Prior to that date, there are newspaper cuttings referring to 1929 and 1930 and mentioning that 'a company was formed for the production of Dr. Berczeller's soya flour in this country'–The Soya Flour Manufacturing Co. Ltd. of 7 Mincing Lane, London E.C.3–and 'a large and well-equipped factory has been erected where large scale production can be effected.' Thus, Dr. Berczeller's Soyolk, soya flour, was hailed as "The Great New National Food" and The Soya Flour Manufacturing Co. Ltd. was the first in this country to introduce soya and its benefits to the nation... In 1930 a book was published, by C.J. Ferree (later one of the Directors of Soya Foods Ltd.), 'The Soya Bean and the New Soya Flour.'

"In 1933, The Soya Flour Manufacturing Co. Ltd.

changed its name to Soya Foods Ltd... In September 1941 it moved to new offices at Boreham Holt, Elstree, with the mills at Rickmansworth, Hertfordshire. The mill was a small plant and during the war years beans were rationed and all supplies came from the then Oil and Fats Division of the Ministry of Foods. This control still existed up to 1952.

"Mr. J.C. Ferree was the Chairman and Managing Director of Soya Foods Ltd. for 19 years. He left the company in March 1952 to work on other projects. He was, in his Soya Foods days, a founder of the Soya Overseas Development Co. which was composed of practically all the soya manufacturers in Britain. He was also the originator of 'Soylac' and an author of many books and articles on the soya bean.

"Soya Foods Ltd. offered products like 'Soyolk'–the pioneer edible soya flour for all foods, 'Diasoy'–the special enzyme-active soya flour for bread and, 'Soypro'–the fat reduced soya flour... 'Soylac' was another product and it was a milk like powder for use in cakes and confectionery. 'Proton' appeared in advertising in 1946 as processed powder for foodstuffs, ice cream, etc. 'Soylac' was last produced in 1952.

"During the war soya became one of the most important foodstuffs, being used widely in bread and sausages as a substitute for meat. Soya also gained vast military importance both as a foodstuff... and as a component for explosives and other war chemicals which were manufactured from it...

"Soya Foods Ltd. was purchased by Spillers Ltd. in 1945 (and is still part of the Group) and moved to its new address at 40 St. Mary Axe, London EC3, with manufacturing works still at Rickmansworth, Herts.

"Products were being added to the range. 'Vitasoy'–mentioned in the advertising in 1948 was a dehydrated, pasteurised and vitaminised infant and vegetarian food. 'Colmiks'–ice cream powder, appeared in 1949, 'Soyzipan'–cake topping and ingredient for making macaroons etc., in 1950. Other products were 'Hot-Mix'–complete ice cream powder.

"In the 1950s, Soya Foods Ltd. expanded further with a new plant in Cardiff. Extracted soya bean meal, defatted soya flour and de-gummed soya bean oil were added to its products.

"Prior to 1952 the Board of Directors were J. Twomney, J.C. Ferree, Mr. Laycock and David James. Mr. Laycock was the Technical Director and assisted in the erection of the Cardiff plant.

"In January, 1956 the plant was relocated to Bermondsey, S.E. London. In 1968 the factory and soya mill were rebuilt and this modernised factory produces the current wide range of soya flours and food ingredients.

"Today, Soya Foods Ltd. is a company within the Dalgety-Spillers Group, and closely linked with Spillers Milling Ltd., with vast research and development back-up at the Group's laboratories in Cambridge.

"The Head Office is at New Malden House, 1 Blagdon Road, New Malden, Surrey, where the Directors and Sales Administration are situated. Production is located in Bermondsey and local depots are strategically placed around the UK to back up the National sales team.

"The Company specializes in the manufacture and sale of soya flours and baking improvers and believes in operating with a strong technical bias, and the strength and benefit of this can be seen in the quality and sophistication of the products. A major contributor to this is the RTC (The Research and Technology Centre), where all research and development is centered. The RTC occupies a three-acre site in Cambridge and employs 180 people with professional qualifications and experience in a wide range of skills and disciplines.

"Today, Soya Foods Ltd. sells sophisticated bread improvers which fulfill the requirements of the modern processes used in bread and morning goods production. The product range is vast, and it includes all purpose improvers, specialist improvers and now bakery concentrates, together with ingredients for flour confectionery.

"Ongoing product development ensures new ingredients being developed all the time. Soya Foods Ltd. now sells specialized ingredients, including Soyolk, to many parts of the food manufacturing industry."

Following this information are 6 pages of photocopies of early articles and advertisements (starting in Feb. 1929) about the Company. Address: Business Development Asst., Soya Foods Ltd., New Malden House, 1 Blagdon Road, New Malden, Surry KT3 4TB, England. Phone: 01-949-6100.

4025. Shurtleff, William. 1983. Fly from California to Hong Kong: First impressions, May 26 (Document part). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 1. Unpublished manuscript. • ***Summary:*** May 24. I leave by jet for China, from Lafayette, California, my trip paid for by Danish Turnkey Dairies (DTD/STS).

May 25. In Hong Kong with jet lag. Stay at Sheraton Kowloon, meet John Davies and Asger Somer Hansen of DTD.

Singapore soymilk regulations: The protein content must be greater than 2% to label / call it "soymilk"; if less, it must be labeled "soy drink."

When soymilk in a Tetra Pak carton stands for 6-8 months, there is: (1) Physical oil separation. (2) Graying of the color. (3) Some of the enzymes, which are not inactivated by UHT (Ultra-High Temperature) processing, can coagulate the soy protein.

I buy and taste Coca-Cola's soymilk in Hong Kong. The flavor is mediocre, a little watery and cereal-like, but not bad. A 250 ml carton retails for $HK 1.5, about US$0.22.

Ma Po Doufu (Japanese: Mabo-dofu) is a popular Chinese dish from Sichuan (W.-G. Szechuan) province. It is of fairly recent origin.

Note: It is a combination of tofu (bean curd) set in a spicy chili- and bean-based sauce, typically a thin, oily, and bright red suspension, and often cooked with minced meat, usually pork or beef. The character "ma" stands for "mazi," which refers to a person whose face is disfigured by pockmarks. "Po" translates as "old woman." Thus "Ma Po" is an old woman whose face is pockmarked. According to a Chinese legend, the pock-marked old woman lived in the Chinese city of Chengdu (Chengtu)–the capital of Sichuan province in southwest China.

Due to her condition, her home was placed on the outskirts of the city. By coincidence, it was near a road where traders often passed. Although the rich merchants could afford to stay within the numerous inns of the prosperous city while waiting for their goods to sell, poor farmers would stay in cheaper inns scattered along the sides of roads on the outskirts of the ancient city.

According to *Mrs. Chiang's Szechwan Cookbook:* "Eugene Wu, the Librarian of the Harvard Yenching Library, grew up in Chengtu and claims that as a schoolboy he used to eat Pock-Marked Ma's Bean Curd or mapo doufu, at a restaurant run by the original Pock-Marked Ma herself. You ordered by weight, so many grams of bean curd and so many grams of meat, and your serving would be weighed out and cooked as you watched. It arrived at the table fresh, fragrant, and so spicy hot, or la, that it actually caused sweat to break out."

Nowadays there are several Mapo Dofu restaurants in Chengdu. (Source: Wikipedia, at Mapo doufu, retrieved 26 June 2011).

"Dim Sum" literally means "dot heart." Lo Han Tsai ("Monk's Food") is a vegetarian recipe served at Chinese New Year. When tofu is a prominent ingredient it is called "Lo Han Tsai Doufu."

There are two words for deep-fried tofu: (1) *You doufu* (literally "Oil doufu"). (2) *Zha doufu* ("Deep-Fried Doufu"). The first has bigger holes in it.

Note: This is the earliest English-language document seen (April 2013) that contains the term *You doufu.*

Since the 1930s, affluent city people have consumed cow's milk in China.

The soymilk label of Dong Bang (from Korea) is similar to that of Kibun from Japan. An illustration (line drawing) shows the Dong Bang label. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

4026. Shurtleff, William. 1983. Talk with Louis Chiang about tofu plants he sold in China (Hong Kong, May 27) (Document part). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 2-3. Unpublished manuscript.

• ***Summary:*** Tofu plants he sold in China. He has sold two lines to Guangdong province, the province in which Guangzhou (formerly Canton) is located. One line can process 500 kg/hour of dry soybeans. Shurtleff asks: Why do they not go low-tech? Answer: Because they want to modernize; they want everything the best and the newest. Tofu is a monopoly in China; only one organization handles it. Louis feels that the large plant is rational. The key is to retrain those who were not educated during the cultural revolution,

Advice: Preparing a catalog and advertizing letters is a waste of time. Best to find a decision maker directly, via the right channel. You need personal connections, built up gradually, which takes time. Finding the right man may take 3-6 months. They must know your background and purpose. Many Westerners get frustrated if they have no orders after 1-2 years; they must be patient. He also feels it is important that old plants should be demolished.

The proper introduction is very important. Beware of making outside contacts. Stick with your invited group. Let them make contacts and allow contacts.

In Beijing there is a "Food Research Institute." They may be of help.

Ask key contacts for a letter from their organization, on letterhead. Don't discuss politics or economics–its to sensitive.

In China, tofu production may have increased, but quality may have decreased. Party leaders, not food technology experts, make decisions. They are now trying to change that. Scientists and intellectuals had a very low status, but now some are trying to put them in front. But the masses resist. They either use fast radical means or go slowly.

His tofu equipment was paid for by Chinese money–the equivalent of $500,000 for two lines.

Louis Chiang would like to work with Takai Tofu & Soymilk Equipment Co., especially if Takai developed a continuous process system. Takai sold a production line to Harbin but it is not working now.

Research people are hungry for knowledge; the bureaucrats are not.

With new private, personal freedoms, people are generally happier.

Hong Kong yuba: See the trade promotion council, a government organization on the 3rd floor of the Connaught Centre, an office tower in Hong Kong. They have a research library.

Mr. Wang says: Ask the trade promotion council to ring and introduce me as a researcher.

They want immediate gain, not long term research, so our soymilk seminars at various places in China may not work.

He likes Deng Xiaoping (who initiated the Four Modernizations, in December 1978 at the Third Plenum

of the 11th Central Committee); he is not so fond of Hua Guofeng.

China is now learning about tofu technology from Japan.

Adding almond to soymilk improves its flavor.

All his trade is with China. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

4027. Lo, K.S. 1983. Thoughts on Vitasoy, soymilk, cow's milk, and doing business in China (Hong Kong, May 28) (Interview). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to Hong Kong, China, Singapore, and Japan: May 29 to July 10, 1983. Lafayette, California: Soyfoods Center. 117 p. See p. 3-4. Unpublished manuscript.

• ***Summary:*** We drive in a nice car to the beautiful Clearwater Bay Country Club (he is a member), on the ocean, on the wild, verdant side of Hong Kong–which Shurtleff did know even existed.

If Mr. Lo were in charge of setting food policy in China, he would have the country produce 90% soymilk and 10% cow's milk. This is the way to optimize resource use and be sure a nutritious beverage is available to most Chinese.

In China, dairy milk has the image of being much more modern than soymilk. Mr. Lo thinks it is very important to give soymilk a modern name and image.

Roughly 80% of Chinese have no problem with lactose intolerance, especially if they start drinking cow's milk when young and keep drinking it in moderate amounts.

Chinese in Hong Kong like soymilk best when it has 60-65% of the beany flavor left in.

The first time the Coca-Cola Co. tried to introduce a soymilk in Hong Kong, it was a big flop. Then they re-introduced it in May 1983 (earlier this month); the results are not yet in.

Bahdin Singh is Coke's soy technologist in Atlanta, Georgia.

Vitasoy's biggest problem in doing business with China is how to get profits out of the country in a foreign currency.

The American Soybean Association (ASA) had planned to donate a soymilk pilot plant to China, but the deal broke down over textile export quotas, and also because China reduced its imports of U.S. soybeans.

Mr. Lo seems very wise, kind, extremely talented, and humble–a true gentleman with a very alert mind.

Concerning Hong Kong's future: Because China will control all factories, airports, water, etc. north of Boundary Road, they will, in effect, control southern Kowloon and Hong Kong Island after 1998.

The price of soymilk in Hong Kong supermarkets, for 250 ml. Note that HK$6.65 = US$1.00, so one Hong Kong dollar is US$0.15. Vitasoy HK$1.20. High-C HK$1.00.

Later that afternoon: I think it was here that I first heard and saw a CD-ROM. It was playing rock & roll music, very loud and beautiful, downstairs at a mall in Hong Kong. The room was packed with speakers–some as tall as a man–and young people. I remember the remarkable clarity of the sound, and the fact that you could choose a song or a track, as on a juke box. I learn that there is no needle (or any other mechanical device) that can touch or scratch the disk. The music is played entirely from coded numbers! Has a digital revolution begun? Address: Founder and President, Hong Kong Soya Bean Products Co. Ltd., Hong Kong.

4028. O'Brien, Jane M. 1983. Re: Recent history of soybeans and soyfoods in Ireland. Letter to William Shurtleff at Soyfoods Center, May 28–in reply to inquiry. 1 p. Typed, with signature.

• ***Summary:*** "I was in touch with Tony Walshe at the Golden Dawn Restaurant in Dublin who said that they have been selling tofu more or less regularly since 1979. They use it in the restaurant for various recipes, but at the moment, I believe they could use more than they are able to get.

"There is an oriental [tofu] shop in Dublin which must have been open for about a year now which supplies tofu regularly, I gather. I never seem to be in town when it is open because it opens at 11:00 a.m., and when I shop I am usually in town before 9:00 and ready to leave as early as possible...

"Philip Guiney has been wholesaling Morinaga tofu for about a year now, and it seems to be moving for him...

"Ken Kinsella of Kelkin Naturproducts Ltd. has been wholesaling Granose Soya Milk for about 18 months now, and it is selling quite well for him because of the numbers of people who suffer from lactose intolerance and because of the general interest in getting away from dairy [products]. Ken's daughter, Hillary Kinsella, with a friend of hers, did a project called "Soya–The Modern Food" for the Young Scientists Exhibition in January 1983, for which she won two awards, and she is planning to do it again with further information in 1984, also for the Young Scientists Exhibition.

"For my part, I have taught tofu making in some of my cooking classes a couple of years ago, but I haven't given any cooking classes for the last couple of years for various reasons. Roughly from September 1983 through May of 1983, I provided about 12 pounds of tofu per week which Kelkin Naturproducts delivered to the Golden Dawn restaurant as a kind of pilot project to try to determine the demand for tofu in this area. At the end of that period, we discontinued it for a number of reasons and we felt that the time was not yet right to consider tofu production an economic possibility in this country. In fact, in many ways, we feel that soy milk might be a better starting off point here, but we are still not ready to do anything about it at this time." Address: 7 Woodside Drive, Rathfarnham, Dublin 14, Ireland. Phone: 909-769.

4029. Shurtleff, William. 1983. Masterplan 2000. Marusan's soymilk (Hong Kong, May 28) (Document part). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods

Center. 117 p. See p. 4. Unpublished manuscript.
• ***Summary:*** Today, May 28, in Hong Kong I learned about and partially read "Master Plan 2000." In 1981 the 12th Party Congress in China decided to set a goal of supplying 250 mL of milk (cow and soy.) to each person by the year 2000. To implement this goal, the Danish government and Danish Turnkey Dairy (DTD) developed the master plan 2000, which related to all aspects of cow's milk and soymilk production, processing, and distribution in China. The first DTD cow's milk plant was in AnDa in Heilongjiang. Most people think the 250 mL/day goal is unrealistically high.

Seven Danish firms, including DTD, developed Masterplan 2000. It is not clear whether they were asked to by China or if they and the Danish Government initiated the idea.

Afterwards I tasted three types of Marusan soymilk sold in Hong Kong: (1) Mixed fruits (Delicious). Passion fruit and apple juice. (2) Lactic fermented–yogurt style. (3) Orange.

On Sunday, May 29, our group (John Davies and Asger Somer Hansen of Danish Turnkey Dairies {DTD}, and I) took an airplane from Hong Kong to Guangzhou (Canton.) My first day in China's Guangdong province, which is adjoining Hong Kong, is very different from the rest of China. It is more affluent, western, and capitalistic. They also speak Cantonese. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

4030. Shurtleff, William. 1983. Fly from Hong Kong to Guangzhou (Canton); Give seminar on soymilk (May 29-30) (Document part). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 5-6. Unpublished manuscript.
• ***Summary:*** On Sunday, May 29. Our group of three (John Davies and Asger Somer Hansen of Danish Turnkey Dairies {DTD}, and I) took an airplane from Hong Kong to Guangzhou, in the far southwest of China. Today is my first day in the People's Republic of China. Canton is very different from the rest of China, more affluent, western, capitalistic. The people speak Cantonese. Seminar rehearsal.

May 30, Monday. In our nice Chinese hotel, built around a big garden, I conduct my first of four seminars on soymilk for government officials China. I have prepared a 2-hour slide show with 60 color slides. The main topics: (1) Ten reasons soybeans will be the protein source of the future (2) The role of soymilk in China's modernization program (3) Various products a soy dairy can make from soymilk (ice cream, tofu, yogurt, yuba, etc.) (4) The advantages of a combined soy-cow dairy (5) Soymilk as a modern food.

Part II: DTD described its soymilk process and we served 3 samples: plain, sweetened, and chocolate. Out of the 35 participants, most liked the plain-unsweetened flavor best. They said it was free of grassy and burnt flavors and was not too thick or too thin. The second favorite was the sweetened. Only 1 person rated the chocolate as the best. The thickness was just right; the sweetness too. They would like to drink it hot in the winter. A general complaint regarding the sweetened and the chocolate was that they coated the mouth and were too thick, but I noted that they were not cold when served.

1. Soymilk could be used to make ice sticks. 2. *Mingun* = a type of firm, deep-fried tofu. 3. Bamboo yuba [dried yuba sticks]–*Fu Chuk* in Cantonese. 4. There is a lot of dried Yuba in Guangzhou. 5. Henan is a major soybean growing region in China.

Lawrence Yung-Lu Li.

1. Dr. Chow (initials = I.C. or En-Tsu) got a PhD on tofu in the USA in the 1930s from Cornell University (Ithaca, New York). See Cal (Berkeley) thesis list of dissertation abstracts. 2. Guangzhou dairy is planning to make soymilk. 3. There are no books on tofu in China, new or old.

May 31. I walk out in the early morning to watch thousands of people doing Tai-chi. I conduct Guangzhou seminar #2. Then drive out into the Guangdong countryside to see proposed DTD dairy site. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

4031. Bermudes, Fernando. 1983. Building a soy dairy [in Lesotho]. *Soyanews* (*Sri Lanka*) 5(9):4-5, 8. May.
• ***Summary:*** Plenty has "successfully introduced soya as a garden crop and a useful addition to local diets."

"Under the Soyabean Agricultural Project and the Village Soya Dairy Project, soyabean cooking demonstrations are being carried on in some of the villages of the project area. The women grind soaked soyabeans using a traditional "leloala" grinding stone. Then they make soya milk and tofu, using the leftover soya pulp [okara] to make "makoenya."

A pilot village soya dairy is now being built, at Motsemocha, designed to produce about 100 litres of soyamilk per day. Plenty's first experiment in planting soyabeans in Lesotho was in 1979/80 in the Sabapala area of Quthing district. This initial crop was badly damaged by frost and drought. This past season, Plenty planted 35 different soyabean varieties. Five varieties were from the Republic of South Africa; sixteen were from the INTSOY's ISVEX program, a 12 came from AVRDC (Taiwan).

Photos show: (1) Lesotho women preparing soya milk–but not at the soy dairy. (2) Soya ice cream being sold at the Solola Soya Dairy, Guatemala. Address: Soy Technician, Plenty International, Lesotho.

4032. **Product Name:** Orange Sunshine (Soymilk-Orange Juice Beverage).
Manufacturer's Name: Brightsong Light Foods.
Manufacturer's Address: 100-A Poultry St. (P.O. Box 2536), Petaluma, CA 94953.
Date of Introduction: 1983. May.

Ingredients: Soymilk, orange juice, honey, soy oil.
Wt/Vol., Packaging, Price: ½ pints.
How Stored: Refrigerated.
New Product–Documentation: Letter from Richard Rose. 1987. Aug. 29.

4033. **Product Name:** [Soyo Soymilk].
Foreign Name: Soyo.
Manufacturer's Name: Celnat S.A. Later made in Belgium by Alpro.
Manufacturer's Address: Z.I. de Blavozy-Saint-Germain, 43700 Blavozy (Brives Charensac), France. Phone: 71.03.04.14.
Date of Introduction: 1983. May.
Wt/Vol., Packaging, Price: 1 liter Tetra Pak Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1983. Jan. 17. Celnat Sarl, 38 Ave. Charles-Dupuy, 43700 Brives-Charensac, France. Phone: 71 09 23 84.

Richard Leviton. 1983. Oct. 16. Trip to Europe with American Soybean Assoc. Celnat began production of Soy, a soymilk in Tetra Pak liters, in May 1983. Z.I. Blavozy, St. Germain, 43700 Brives Charensac. Phone: 71-030414.

Letter from Bernard Storup. 1984. March 22. "A new type of soymilk is Soyo, made with organic soybeans, non sugary, Tetra packed, sold by Celnat S.A. at Z.I. de Blavozy-St. Germain, 43700, Brives Charensac." This company is also an organic bean grocer. Soyo is made with a small Takai W-30B system in a big French dairy plant: Prolait S.A. in Niort, 85000 France.

Letter from Mr. Noboru Sakaguchi in France. ca. 1984. "Natural soymilk maker: Celnat." Gives address, above. But phone is (71) 08.04.14. Ad in Le Compas. 1986. March-April. p. 36. Now listed as an importer.

Leaflet. 1989. "Soyo: Soymilk from organically grown soybeans. Soya: Food of health." This 6-panel, black and blue-green leaflet describes Soyo soymilk and desserts, shows how to use the soymilk to make tofu at home, and gives 4 recipes.

4034. **Product Name:** [Kibun Soymilk (With Coffee, With Fruit Juice, Tonyu, Yogurt-Type)].
Manufacturer's Name: Kibun Co. Ltd.
Manufacturer's Address: Tokyo, Japan.
Date of Introduction: 1983. May.
Ingredients: With Coffee: Soybeans, water, glucose, fructose, malt extract, coffee powder, corn oil, coffee flavor, salt.
Wt/Vol., Packaging, Price: HK$1.20 per 200 ml carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Imported by: Kibun Foods Singapore PTE, Ltd., 15, Fishery Port Road, Singapore 2261. When William Shurtleff was in Singapore in May 1983 he purchased these four products and saved the labels. The products are made in Japan.

4035. **Product Name:** [Lotte Doo Yoo {Soymilk}].
Foreign Name: Lotte Doo Yoo.
Manufacturer's Name: Lotte Chilsung Beverage Co. Ltd.
Manufacturer's Address: South Korea.
Date of Introduction: 1983. May.
New Product–Documentation: Letter from Kyung Lee, ASA country director, Korea, to William Shurtleff at Soyfoods Center. 1983. Nov. 23. Gives history and production statistics.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 81-83. This company produced an estimated 3,830 tonnes in 1983.

4036. **Product Name:** [Vitaleche].
Foreign Name: Vitaleche.
Manufacturer's Name: Productora Costarricense de Alimentos (PROCOA) (Distributor).
Manufacturer's Address: Apartado 8-5780, 1000 San Jose, Costa Rica.
Date of Introduction: 1983. May.
Ingredients: Nonfat dry milk (50%), sugar (34.5%), soy flour (10%), vanilla (5%), and cinnamon (0.5%).
New Product–Documentation: Letter from John McLeod of CARE-Honduras. 1984. July 10. During 1983 his company made 3,400 metric tons of Vitaleche, which contained 10% soya.

4037. Shurtleff, William. 1983. Fly from Guangzhou (Canton) via Changsha to Zhengzhou (June 1 to 3) (Document part). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 6-8. Unpublished manuscript.
• ***Summary:*** June 1. Take a long walk around the major market in Guangzhou. I don't see much tofu [*dow foo*]. It is always in 18 inch squares, 2 inches thick. Also saw *dow-gan* (pressed brown tofu squares) and *dow-pok* (small deep-fried tofu cubes).

11:00 Fly to Zhengzhou (capital of Henan province). Turbulent airplane ride; after a very long wait in a small airport, it is decided we must stay overnight at Changsha.

June 2, Thursday. Zhengzhou seminar #1 on ground floor of hotel lobby. Maotai banquet #1 in evening, with ten toasts and a 25-course meal.

Question: How does the cost of aseptic Tetra Pak cartons compare with the cost of other aseptic or sterile pouches, bottles or cans?

Ching-sha Fujook is Bamboo yuba [dried yuba sticks] in a medium-thick tan sauce at the Maotai banquet.

Question: Is China now a net importer or exporter of soybeans?

June 3, Friday. Zhengzhou. 6:00 a.m. walk with Eddie Siu to the big Zhengzhou market (largely indoors). See lots of soft tofu and soymilk. For each type of product you must stand in a different line, and each line is very long–sometimes requiring a wait of 20-30 minutes! I thought the Communist motto was "Serve the people." What a huge waste of everyone's time.

Types of tofu: Most is soft tofu (*Shui-doufu,* like Japanese Momen-dofu, made with the separation of curds and whey) 15 slabs on wood boards 18 x 18 x 4 to 5 inches thick. Pieces are cut with a knife, weighed in a scoop on a hand held lever arm, and put into customer's bag. (b) Dofu-gan, tan squares 1.5 x 1.5 x 3/8 inches. (c) "Thousand sheets" are very thin (like paper). 10-inch squares called *qian zhang.* (d) Tofu rolls (dou-fu? = maki) 3 inches in diameter and 8 inches long make of tofu wrapped in cloth and boiled (illustration). (e) Doufu-ru = fermented tofu in jars. (f) Doufu-fen = soy flour (full fat?) used to make tofu and soymilk. (g) A semi-firm tofu.

Buying: You must present a ration ticket an also pay money. 500 grams of *shui-dofu* costs 10 cents (i.e., ¥0.10). If you use up your tofu ration tickets, you may go to a separate place and use a grain ration ticket, but it costs more.

Soy sprouts: Saw 2 baskets (wicker 18 inch diameter, 14 inch deep) sold outdoors next to 5 baskets of mung beans. *Lu Dou-Ya* = mung sprouts. *Huang Dou-Ya* = soy sprouts.

Note: This is the earliest English-language document seen (Jan. 2013) that uses the term "Huang Dou-Ya" (regardless of capitalization or hyphenation) to refer to soy sprouts.

Flour: *Doufu-fen.* Probably whole soy flour? In a plastic bag containing 500 grams? Instructions read (in Chinese):

1. To make soymilk (*dou-jiang*)*:* Add 13-15 *jin* (6.5 to 7.5 kg or liters) of water (cold or hot) to contents of bag, adding a little at first to make a paste. Then, add the rest and mix/beat until contents of bag are smooth and bring to a boil.

2. To make *doufu-fa* (tofu curds): Proceed as for soymilk using any 3-4 kg of water per bag. Then, add coagulant (what coagulant? No pack of it in the bag) to 0.15 kg of water. Pour boiled milk into coagulant solution and let stand for 5-10 minutes.

3. To make doufu: Wrap tofu curds (#2) in a cloth and press for 20 minutes. (Made in Zhengzhou: Tel. 26644)

This product is widely sold. 1 bag cost ¥0.40?

Soymilk is now one of the hottest subjects in the food field in China. Interest has grown rapidly since 1982 because (1) Vitasoy's success in Hong Kong (yet Vitasoy still has no plant in China and no joint venture). (2) Japan and Southeast Asia's soymilk success. (3) Alfa-Laval-Kibun and DTD's competing efforts to sell soymilk plants to China. I predict that there will soon (in 3-10 years) be many modern soymilk plants in China, most run by the Ministry of Light Industry.

One of the new AB-9 Tetra Pak machines sells for about $665,000 in July 1983. It has a capacity of 3,000 liter/hr of milk.

Jiaozi = (Chiao-tsi) = meat dumplings.

Tetra Pak is a family-run business. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

4038. Leviton, Richard. 1983. Notes from a visit to Eden Foods of Michigan. 19 p. June 4. Unpublished typescript.
• ***Summary:*** These notes were condensed into an excellent article in *East West Journal* (April 1984) titled "The organic Garden of Eden: A Michigan-based natural foods company stresses quality and fidelity." Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

4039. Shurtleff, William. 1983. Fly from Zhengzhou to Beijing. Meet Danny Wang at EAC (East Asiatic Company) office (June 4) (Document part). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 8-10. Unpublished manuscript.
• ***Summary:*** We stay at the Beijing Airport Hotel. Soymilk territory: In China there is some clash/rivalry between agricultural people and light industry people for control of soymilk. So, we let the provincial government in Heilongjiang arrange our tour/program. The soybean research institute (SBRI) at Harbin is mainly soybean breeding. It recently achieved a breakthrough in making a new soy beverage. For this process and technology, it received an award.

To our Harbin seminar will come (1) SBRI (2) the Bureau of Light Industry (3) the Bureau of Agriculture (4) maybe Northeastern Agricultural College.

Cow's milk in China: Annual per capita consumption is 1 kg says Danny Wang. It is used mostly by and rationed for people up to 3 years old and those over 70. There is a big emphasis on recombined milk. The total dairy milk output is growing at 20% a year. But, more soybeans are grown near major population centers.

What percentage of China's soybean crop must be used to provide 1 billion Chinese with 250 mL/day of soymilk given 6 kg milk from 1 kg dry beans? Answer: 15.25 million metric tons (tonnes). But China's present soybean production is only 10 million metric tons per year. K.S. Lo (of Vitasoy) said that if he were setting policy in China, he would produce 90% soymilk and 10% cow's milk. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

4040. Shurtleff, William. 1983. In Harbin (June 6-7) (Document part). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 10-12. Unpublished manuscript.
• ***Summary:*** 6:00 a.m. I walk to the local market. See one stall (a mobile cart) selling gelled tofu curds (*doufu-fa*) over which is poured a sweet brown sauce then topped with some

diced red chilies and green herbs. Served with deep-fried breadsticks. One other place serves soymilk hot with deep-fried breadsticks. No tofu at all in the market. Some say it is sold only in winter. No other soyfoods seen.

Soymilk terminology: (1) Dou Nai–it sounds more modern than "Dou Jiang." Implies or connotes no beany flavor, is thicker and has a higher protein content. (2) Dou Ru–(Alfa-Laval used this) is harder to pronounce.

[Henan Area grows lots of soybeans]: more than Heilongjiang? The money to build soymilk plants in China is partially foreign capital. People and institutions are falling all over each other to help China develop "China Orient Leasing." 50% are Japanese.

Eaton [Eton], A consortium from Cleveland, Ohio, is planning to build a $50 million oil extraction and protein refining plant in Jiamusi. Oil = extract, refine, make margarine, shortening, etc. Protein = feed, isolate, concentrate, tofu and soymilk production.

Tuesday June 7, 1983 (Harbin): Min-Lite = the Ministry of Light Industry is interested in a soymilk plant. Also, the State Farm Bureau (Bean processing division) and the Soybean Institute is working in breeding (for both protein and oil), diseases, and physiology.

Soymilk Taste Tests in Harbin: Chocolate was vastly the first choice, second was sweetened, third was plain / dairy-like. They dislike added oil in soymilk and would like to try fruit-flavored soymilk (apple, pineapple). Added fat coats the mouth with a greasy / gummy film. Vitasoy has no added fat.

Dou Ru Fen: Niu Nai Mai Jing. 205 gm. This product consists of a white powder containing 10% cow's milk powder, 40% soymilk powder (spray-dried traditional soymilk, not soy flour), and 50% (!!) sugar. 1000 tonnes a year are made, starting in 1978 or 1979. Sold to housewives who use it to make breakfast soymilk. Costs RMB 0.78–0.80 = 70-80 cents. Cow's milk powder is stirred into hot soymilk. The mixture is concentrated and spray dried. Also made in Beijing, but this one is the best quality.

Pure: Soymilk powder is made in Beijing by Beijing Foodstuff Corp. since 1980. Called Doujiang-Fen (Soymilk powder) and also retailed to housewives for breakfast use. It is 50% powdered soymilk and 50% sugar. It is spray dried.

Fresh green soybeans (Maodou = Hairy bean): Mostly eaten by farmers. Also sold in markets. Not packaged or canned. Whole dried soybeans: some canned in China. It is sold in Beijing.

Tofu in Heilongjiang: None is sold during the summer because it spoils easily and people do not like to eat tofu in the summer. A lot is sold in winter.

Soybean use: Of China's 9 million tonnes produced, one man estimates that 80% of soybeans are crushed. The meal is used mainly for feed, but some for tofu, soy sauce, and textured vegetable protein (TVP).

Main uses for foods made with whole soybeans in approximate order: (1) Tofu and kan-dofu. (2) Soymilk. (3) Soy sauce. (4) Miso = Doujiang. (5) Yuba. (6) Fermented tofu.

Main uses for foods made with defatted soybean meal: (1) Tofu. (2) Soy Sauce. (3) Miso. (4) Soymilk.

Soy nuggets [fermented black soybeans] are made only in the south of China. This state farm bureau man estimates that there are 200,000 tofu shops in China, one in every village, but there are no statistics on tofu.

Big tofu factory in Harbin. Ministry of Light Industry people in charge. He does not think as many soybeans will ever be used for soymilk as for tofu.

Many government groups are doing research on soyfoods, such as tofu and soy sauce, but no single group. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

4041. Zhang, Furu. 1983. Soybeans and soyfoods in Heilongjiang (Interview; Document part). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 13-14. Unpublished manuscript.
• ***Summary:*** Heilongjiang is by far China's biggest soybean producing province. Main interest now is to process more of the province's soybeans before shipping them out. Most soybean production is under the direction of the State Farm Bureau, which has huge farms. 1.5 million mou = 250,000 acres. By 1990, they hope that 2/3 of the soybeans submitted to the federal government will be processed in the province. By 1985, they hope to process 1.25 million tonnes.

Processing means (1) oil extraction = crushing plants, and (2) soymilk plants starting from the whole bean. Most crushing is now done in Shanghai and Beijing. Now, 70% of the beans leave the province unprocessed.

For the crushing plants, they plan to use protein for feed, isolates, concentrates, and TSP. With Eton, they hope to build 3 plants, each with a capacity of 300,000 tonnes/year of beans. They hope that the first will be done by 1984-1985 and the last by 1988-89, but they are still in negotiations. Of the protein, 50% will be used for food, 50% for feed. Some will be exported. The isolates will be used in China in sausages, artificial meat.

They also want to build 6 plants to make soymilk powder (30 tons/day of milk). There already is a small soymilk plant in operation. They hope to build the last of the 6 by 1987. They also want to make fluid soymilk for local consumption. They want to start with pilot plant to (1) test market soymilk (2) train on the process (3) show it to others. DTD plant (costing $2 million) makes 4,000 liters/hr of milk. He wants to process 10 tons of dry beans/day.

Financing is the problem: (1) Joint venture. DTD provides equipment and China provides buildings and labor (2) Try to get loan from Danish government state loan (The problem is always "How will China pay for these projects?"). DTD's Anda Dairy plant was financed by Danish

state loan.

In total soybean production, China's big 3 are: (1) Heilongjiang. (2) Jilin. (3) Liaoning. Heilongjiang also exports soybeans to Japan and Southeast Asia. 500,000 tonnes of soybeans in 1982 from Heilongjiang. This is 2/3 of China's total exports. He has been told by the Ministry of Agriculture to help increase China's per capita protein consumption.

We met with 3 men from Heilongjiang Bureau of State Farm. Jiamusi, Heilongjiang.

(1) Zhang Furu, Deputy Director = Decision Maker (2) Ma Zhensheng. Engineer in soybean processing. Excellent man. Gave him 3 books (3) Yin Zhiwei. Chemical engineer.

In the afternoon, I walk along the Sungari river with John Davies, who is trying to quit smoking. This river flows northeast to join the Amur then enters the sea in Russia.

Harbin seminar #2 in hotel room. Address: Prof., Deputy Director, Heilongjiang Bureau of State Farm. Phone: 415-283-2991.

4042. Shurtleff, William. 1983. In Harbin (June 8). Interview with Zhang Guodong. Next morning in Harbin. Afternoon fly from Harbin to Beijing (June 9) (Document part). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 14-16. Unpublished manuscript.

• ***Summary:*** Hong Kong will revert to China on 30 June 1997 at midnight.

Mr. Li Weicheng is Director, Bureau of Light Industry, DTD says he is their most important man in China. We served him and others Hi-C, Vitasoy, and 3 types of soymilk made by DTD. Everyone present likes Hi-C better than Vitasoy. Mr. Li likes the 3 DTD soymilks better, but he likes them all the same. He says the plain has no beany flavor. Key point. Chinese (at least in Heilongjiang) do not like beany flavor in soymilk.

Interview with Zhang Guodong, Director, Soybean Research Institute, Heilongjiang.

China's six largest soybean producing provinces are: (1) Heilongjiang. (2) Hunan. (3) Shandong. (4) Anhui. (5) Jilin. (6) Liaoning.

Soybean production in China is increasing. In 1978 the Chinese government raised the price it pays farmers for soybeans. It was raised again in 1982 to 34.5 fen per chin (1 chin = 500 grams). This is the same as the price fro 3 chin (1,500 gm) of maize. Also, farmers growing soybeans get top priority fertilizer–especially phosphorus. Both programs are nationwide. It is believed that these new incentives will lead to increased soybean production.

Heilongjiang province now has 25 million mou = 4.25 million acres planted to soybeans. The main work now is to increase soybean yield. The present yield is 75-90 kg/mou, with a goal of 125 kg/mou by 1990. One problem here is the long, cold weather (there are only 80 frost-free days in northern Heilongjiang) and the northerly latitude. Also, expanding hectarage for all crops in the Three-River Plain area must be done near the eastern border.

The Soybean Research Institute in Heilongjiang was founded in 1975. It now employs 71 people with an annual budget of 200,000 yuan. Its main purpose is to breed better soybean varieties for Heilongjiang–for higher yield, and higher oil + protein. Also to develop new technology and management practices for farmers, improved chemical fertilizer use effectiveness, better understanding of diseases, physiology, etc.

Important developments: (1) Several good soybean species and ones with improved photosynthesis. (2) A package of practices that will enable farmers to get yields of 3,000 kg/ha. (3) Inexpensive harvester developed in Jilin province.

The FAO Project. Funding of $525,000. It will run from 7 Feb. 1982 to Aug. 1984. To import U.S. consultants, send students abroad for training (4 to USA, 2 to Italy). Import lab and farm equipment.

They are working with breeding wild soybeans for resistance to drought and to disease, plus high protein content.

In China there is no terminology to distinguish vegetable-type vs. field-type soybeans. But vegetable type are large, and grown mostly in southern China for use as green vegetable soybeans [edamame]. Soybeans for canning whole are not grown or sold in northern China.

More than 50% of China's soybeans are crushed, but this percentage is decreasing as the standard of living rises, since more people want soyfoods such as tofu.

China's leading soyfoods in order of importance: (1) Tofu, all types, including fermented tofu. (2) Chinese-style miso (doujiang). (3) Soy sauce (jiangyou). (4) Soymilk. (5) All others. Most of the fermented tofu, yuba, and fermented black soybeans are found in southern China.

Defatted soybean meal is used mostly in feeds. In Jilin there is a Soybean Research Institute with similar goals as the one in Heilongjiang. There is some cooperation between the two. Shao Rongchun is the Institute's director at Jilin.

Soyfood research and uses: Research on soyfoods is conducted at Heilongjiang Commercial College, which is under the Bureau of Commerce. An ASA representative will visit them in mid-June. They are working on soy protein isolates, artificial meat, etc. One good book is *Integrated Application of Soybeans* (*Dadou te zhung he liyun*), published in 1958 by the Shanghai Bureau of Cereals. It's about soyfoods. Many soy history books have been written since 1949.

A new soy beverage is made in Heilongjiang and sold in Harbin. He does not know who developed it. It is a refreshing nondairy summer drink named Jinbo Juice, but it is not like soymilk.

The future of soybeans in Heilongjiang and China looks very good. Production will grow since yields are low and the Ministry of Agriculture is interested in expanding production and protein from soybeans–not from meat. It is for the people of China.

At the end of July will be the Jilin Seminar, #2 USA-China Soybean Symposium. For a list of topics ask Intsoy.

June 9. Morning in Harbin. One company in Heilongjiang makes a powdered milk which is soy-dairy blend; they make their own soymilk by the traditional method. Address: Wan Da Shan Foodstuff Factory. Farm No. 8511, [Bureau of State Farm]. Heilongjiang province. Product name: Cow's Milk Malted Soymilk Powdered (*Instant Niunai Maijing*). Brand: WanDaShan. Label of ingredients: Added maltose, glucose, sucrose. Gives protein complementarity. Mix 3 tablespoons of the powder with hot water to make a paste, then add more hot water. Keep powder cool and dry after opening. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

4043. Shurtleff, William. 1983. In Beijing. Our guide. Meet Mr. Pan (June 9) (Document part). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 17-18. Unpublished manuscript.

• ***Summary:*** Morning: Ms. Chen Xihau is our guide. She says fear is everywhere in China. Everyone is a potential spy.

Fermented tofu (*doufu-ru*) and soy nuggets (*douchi*, [fermented black soybeans]) are sold in "salty vegetable" (*sien tsai*) shops.

Mr. Pan is the top man in the federal Ministry of Light Industry (MinLight). Super guy. He is director of the Food Industry Bureau. He is interested in developing a soymilk industry in China. Cow's milk cannot meet the demands of a large population. A new policy in China is to increase soybean production. Recently the American Soybean Association (ASA) sponsored 6 MinLight (Ministry of Light Industry) people (both federal and Beijing municipality) on a trip to study soymilk production in Hong Kong, Japan, and Thailand. They are now considering whether or not to use the "wet" or "dry" process. He says that Vitasoy uses the dry process.

The traditional Chinese method of making soymilk extracts / recovers only about 60% of the protein in the soybeans; the modern method and technology recovers 80-85%.

New products he would like to make from soymilk are ice cream (he saw it in Japan, tasted it and liked it), yogurt, and infant foods. He would like to use soybean protein in meat products (they are testing this now). He attended a recent meeting in Shanghai (not related to ASA) on the use of soy protein isolates. China seems unaware of the vast potential of soy flour.

He says that the government policy based on direct use of the soybean as food makes better use of the land than use in a feedlot or feeding soybeans to animals and then eating the animals. The policy is for plant protein to be the major source of protein and for animal protein to be secondary.

Vitasoy is Witanai (pronounced wi-TAH-nai). Hi-C is Yangwan.

For soymilk, Mr. Pan prefers the term *douru* to *dounai*.

Danny Wang says the World Bank is helping to finance reclamation of 2 million ha (hectares) of farmland in the three rivers area of Heilongjiang. One-third of this will be planted to soybeans. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

4044. Shurtleff, William. 1983. Meet Susan Scurlock, American Embassy Agricultural Attache (Attaché) in Beijing (June 9) (Document part). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 18-20. Unpublished manuscript.

• ***Summary:*** Sources of information on soybean production in China: The *China Review of Agriculture*. 1981 outlook for 1982 is my best source of overall summary of her data.

Her best sources, as U.S. Ag Attache, are (1) Statistical Yearbook of China. The best primary data, but 1½ years late. I got all relevant data in the 1981 edition. (2) Four Chinese researchers at the embassy read Chinese newspapers for all of Chinese's provinces, looking all over for clues. (3) Travel to the provinces for information from each province. (4) Meet with Beijing Ministry of Agriculture (its Foreign Affairs Bureau) but they usually have poor data. (5) Most Chinese trade statistics come from other countries.

My best channel for the latest statistics and summaries is to call the USDA Foreign Agricultural Service (FAS) or the USDA Economic Research Service (ERS) and to ask for the latest data in their computers on soybeans, foreign country production, imports and exports.

ERS has the best data on soybeans in China. They only do research and have commodity analysts, especially for the USA. In the USA, phone 202-447-8676. FAS promotes the exports of U.S. farm products. Susan works for FAS in their oilseeds division. Phone: 202-447-7037 or 8809. Jerry Harvey is the head of the FAS oilseeds division. Ralph Detro is an oilseeds analyst. Deborah Pumphrey is with FAS oilseeds.

Data on soybean production in Heilongjiang from a Heilongjiang newspaper dated 15 May 1983 stated that the province's soybean production in 1982 was 2.55 million metric tons. This was up 26.8% from 1981.

Total soybean production statistics in China:

In 1980 some 7.94 million metric tons were produced on 7.226 million hectares.

In 1981 some 9.33 million metric tons were produced on 8.024 million hectares.

In 1982 some 9.03 million metric tons were produced on

8.226 million hectares.

In 1980 the central government increased the soybean "procurement price."

But 1.25 million metric tons of soybeans in storage at the same time is not enough for the needs of food (tofu) and compound feeds–due to mismanagement.

China both exports and imports soybeans. They export since it is easier to export from Heilongjiang to Japan than to ship to south China. In 1982 China imported no soybeans from the USA–partly related to textile quotas. After a huge jump in textile imports from China, the U.S. limited the growth rate. But China is not really importing soybeans from anyone. In China today soybeans are mostly grown on the dykes around rice paddies. In 1981 Hunan and Anhui both doubled soybean production. Yet tofu is scarce.

The main activities of the American Soybean Association in China: They are in it for the long pull. (1) To promote compound feeds, which are seen as the wave of the future. (2) To promote the use of new technologies–for making soy protein isolates and concentrates, soymilk, etc. There will be a "Soybean Symposium" in Jilin. Susan does not foresee much growth of soybean production in China. However she does see much growth in rice, cotton, and tobacco production. And rapeseed production doubled in two years.

That evening we have a maotai banquet with Mr. Pan. We discuss the following:

Meiji makes soymilk ice cream in Japan.

Ice stick prices in China: Sugar and flavor–3 fen. Sugar, flavor and a little milk–5 fen. Sugar, flavor and much milk–15 fen.

Of four soy experts from southern China, none has heard of tou-cha-ping (Chinese tempeh).

Beijing soymilk flavor tests: 15 people prefer sweetened soymilk vs. 12 people prefer it unsweetened (plain). The majority like chocolate, yet they would like it better if it were less thick; the sweetness is just right. They also like sour orange which has the consistency of soy yogurt.

Pre-Pak: These are inexpensive plastic bags for milk or other beverages; widely used in Europe, and some in Japan. China is thinking of using these for packaging soymilk.

Alfa-Laval soymilk systems are promoted by ASA; they do not know DTD.

In China, dried yuba sticks are known as *fuzhu* (in pinyin). Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

4045. Singh, Surjan. 1983. Re: Coconut milk and soymilk in Sri Lanka. Letter to Mr. Anders Lindner, STS-Soya Technology Systems, 505 Cathay Building, Singapore 0922, June 9. 2 p. Typed, with signature on letterhead. Address: Project Advisor, Food Processing Specialist, Sri Lanka Soybean Project (Sep. of Agriculture), Soybean Foods Research Centre, Gannoruwa, Peradeniya, Sri Lanka. Phone: 08-8246.

4046. Shurtleff, William. 1983. In Beijing (June 10-11) (Document part). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 20-23. Unpublished manuscript.

• ***Summary:*** Soy sauce, miso, and fermented tofu (*doufu-ru*) are all sold at one type of store, a pickle shop that sells salted foods. I visited one of these named *Tien Yuan Jiang Yuen.* A color photo shows various types of soy sauce sold in Beijing.

In the market, the sign above the soyfoods section reads *Douzhi Shipin.* In this section they sell *fuzhu* (bamboo yuba [dried yuba sticks]), Doufu-fen (a type of soy flour made in Beijing), cubes of fried tofu (1 inch on a side, called *doubao*).

Note: This is the earliest English-language document seen (April 2013) that contains the term *doubao.*

In 1949 the East Asiatic Co. (which is owned by rich Danes) was the leading exporter of soybeans from China. They started exporting soybeans from China in the 1920s. When exporting, they had offices in Dalien (Dairen), Harbin, etc. The company now has about 80,000 employees worldwide. It is the biggest company in Denmark and the biggest foreign trading company in China, except for several Japanese companies such as Marubeni, Nissho Iwai, etc.

June 11, Saturday. Beijing seminar #1 in downstairs room. Talk with Mr. Chen of the Food and Fermentation Research Institute. Mr. Chen says the most popular vegetable oils in China are: 1. Peanut. 2. Soy (not generally refined). 3. Rapeseed.

Two organizations do research on soyfoods in Beijing: (1) His Food and Fermentation Research Institute (under MinLight, the Ministry of Light Industry); three people who work there are Mr. Chen, Mr. Dai Jiakun, and Mrs. Xu Lin. (2) Beijing Municipal Food Research Institute; contact Mr. Dai Xinjun (Dong [East] Zongbu Lane, Beijing).

Four acid tests for the buyer of any soymilk process and equipment: (1) Equipment cost (fixed). (2) Processing cost (including labor, energy, water, etc.). (3) Soymilk flavor. (4) Protein and solids recovery (percentage).

The Chinese name for thin pressed tofu sheets ("1,000 sheets / 1,000 folds) is Qianzhang or Baiyeh.

The best local markets (which have more variety of produce in the winter) are: Chongwen Vegetable Market and Xidan Vegetable Market (Chinese characters are given for both). The Chinese term for "soyfoods" is *dadou shipin* ("soybean products").

There is a new Chinese method (in Shanghai) for continuous pressed tofu sheets.

Commercial soy products made by Mr. Chen's institute: (1) Formulated soymilk for infant food. (2) Soy protein concentrate. (3) Later a modern soymilk plant will use this to make (1). Plain and sweetened soymilk in glass bottles,

plus fruit (citrus = orange flavor) and malt. There are some technical problems with using plastics bags as soymilk containers; they leak and are fairly expensive. Later he will work on a lactic soymilk drink.

Research on soy sauce: Improved method. Low salt, done in factories in Beijing and Shanghai.

Most soy oil in Beijing is not refined. People like the flavor OK, but they do not know the refined flavor. Rapeseed oil is used mostly in South China. In Beijing, mostly peanut and soy oil; peanut is more expensive and has a higher class image. Rapeseed is the cheapest but people don't like it.

The debate over more meat vs. more protein. Recently Chinese officials have come to understand the problem better. Send him *Diet for a Small Planet,* by Lappé.

In 3-4 months, Mr. Chen will send me an article about soyfoods in China–Tell Ira Leviton.

I visit a bookstore and buy a pinyin dictionary and a book (published last year in Chinese) about tofu. Visit the Forbidden City and a very famous square in central Beijing. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

4047. Foley, Terrence B. 1983. Work with soybeans and soyfoods in China (Interview). *SoyaScan Notes.* June 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This interview was conducted in the dining room of a major hotel for foreigners in Beijing. Mr. Foley has been the American Soybean Association's country director for China for about 2 years. A previous interview gives his background and credentials. Shurtleff had prepared a list of questions to ask him.

Terry wants to hire a human nutritionist (Beth Branthaver, married name Woon; her husband is in the military, and she is working on a PhD in nutrition).

Human nutrition is the first interest in China. In China, people live in little boxes; society is very secretive. Terry formerly taught Chinese language and history, and was in the military.

In China, knowledge is power. Therefore they don't like to publish statistics. Secrecy. The other reason for no statistics is "socialist methodology" and the fact that China is not yet used to the scientific viewpoint, and methodology. "There is obsessive, pervasive, perverse secrecy." They feel no need and make no effort to compile statistics, and even if they did, they wouldn't give them to foreigners. Tofu is too informal to track; its like asking how many tortillas are made in Mexico.

There is very little modern, mass production of any foods, except for export. They want modern soyfoods for export to get hard currency. Agriculture is now the top priority in China and the government is very interested in improving food production. They are making great strides in agriculture, for example exporting swine.

In Thailand Terry's soymilk group visited Greenspot. K.S. Lo (of Vitasoy) wants a joint venture but to sell the product under his brand. The Chinese basically want to steal Lo's technology, then sell the soymilk back to Hong Kong and put him out of business.

Ministries in China don't do what you'd think. There is no cross communication between Ministries. They are intensely competitive among one another. Now profit is no longer a dirty word in China. Tofu shops are under the jurisdiction of the Ministry of Commerce. The Ministry of Light Industry (MinLight) does canning and processing of some foods, esp. canned, jarred, and bottled foods. Commerce does sausages, grain handling, and setting prices. Terry is very fond of MinLight; they are open, competent, cooperative. Mr. Pan is Chairman of the National Taste Testing Board. He's very sharp and nice. Many bureaucrats are very dull; but not the plant managers. In the ministries, overlapping and diffusion of responsibilities is a big problem, as is inefficiency. China's soymilk expert is Chen Xihau. Three ministries are interested in soy. The Bureau of State Farms is under the Ministry of Agriculture. Communes are not under the Ministry of Agriculture. Commune is a new name for "town." A state farm is basically a new project, on reclaimed land, with a planned development. They all look like army bases, with dorms and all.

ASA is active in sending soy-related teams abroad, and bringing in soy technicians. Doing basic promotion on animal feeding and human foods. Big interest in improving the human diet. This is the most rudimentary of all the world's ASA programs. In July a team of six from the Harbin Commercial College under Prof. Wu Mung will go to USA to study soy protein foods (modern). The team makeup is strongly influenced by ideology and politics, i.e., who is chosen to go. ASA cannot pick the members. In Sept. a second team from Ministry of Commerce will go to USA, to study modern soy protein products. China is interested in self-sufficiency. Cut off from the rest of the world, they don't like to buy from abroad. Terry does not see much expansion in soybean production. Their "midwest" = main soybean belt (northeastern China) is on about the same latitude as America's New England / Maine.

The peak historical year for soybean production in China was 1955, with 10 million tonnes.

The Western view of history presently is that great new, impersonal forces are the main determining factor. China believes more in the effect of individuals, but also with some historical determinism.

The masses in China will demand more meats. Building a livestock industry is a very high priority of China's. Current trends. 1. Big beef industry in the prairies, on land that cannot be used for food. Chinese may destroy their grasslands. 2. Conflict between people's demand for meat and a rational food policy for maximizing food resource use. 3. Huge plans to promote milk as the perfect source of protein. It is now rationed, sold like a prescription item

(except the yogurt drinks) to people under 3 or over 70 years old. Not even pregnant mothers can get it. Cow's milk has much more prestige than soymilk. They plan to use soymilk as an interim product until their cow's milk industry is developed. 4. Fascination with modern technology, like all Third World countries. They have a hangup about being backward, maybe inferiority complex. 5. Tendency to look for shortcuts. 6. Soy protein isolates and other modern, high-tech soyfoods are attracting much more interested than other types of soyfoods; a some what childish attitude. They want only the most modern, the biggest, the one with the *most* protein (isolates). The *mystique* of isolates. They want to use them in baby foods, carbonated beverages, soymilk, etc.

Chinese foods are chopped into little chunks, then fried with sauces and spices. Textured soy protein (TSP) fits into this pattern perfectly. In addition, China is like one big military base or institutional feeding system. Thus it is easy to introduce modern soy protein products like TSP; they understand it like U.S. foodservice institutions. There is No popular resistance to it. There is an isolate plant in Manchuria. Which? They also want to make some TSP in the Nanyuan plant in southern suburbs of Beijing.

Extruders in the USA grew out of the process for extruding plastics. Chinese extraction plants do not adequately toast their soybean meal, which leads to bad flavor and poor nutritional quality. No one likes soy flour. This is not a basic lack of interest, just a reluctance to use a poor quality product.

Foley is part of a generation of Sinologists who couldn't get to China. US-China relations have deteriorated during the past 1½ yrs. Problems: 1. Textile quotas are symbolic of the problem. 2. Taiwan recognition. Terry wants to stay in China a long time so tries to be very careful not to offend anyone.

Transportation: Food doesn't move much by road. They use boats. There is a shortage of railcars. Port and dock facilities for imports are woefully inadequate for grains. This creates domestic "exports" problems. The 7-9 international ports incl. Shanghai, Tientsin, Dahlien.

Travelers don't get sick much in China. Foods are not eaten raw. Tea is boiled; all food is cooked. Continued. Address: Director, China Office, American Soybean Assoc.

4048. Foley, Terrence B. 1983. Work with soybeans and soyfoods in China (Continued–Part II) (Interview). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 27-28. Unpublished manuscript.

• ***Summary:*** Continued. Soy oil: 90% is degummed crude, packed in 55 gallon drums and distributed by trucks. Shanghai is the leading center of oil refining. Only 20% of China's internal is solvent extracted; the rest is expelled. Largest plant is 350 tonnes/day, solvent extracting. Most are 50-150 tones/day. Oil is rationed. In retail shops it's pumped out of 55-gallon drums into your personal bottle, about 1 liter/month. Only about 5-10% of all soy oil in China is refined, and much of that by commercial crushers.

People in Northeast China and Shanghai like soy oil especially. Canton only uses peanut oil. It's also a function of price. After refining, they make margarine, shortening, and dressings in Shanghai. In China, there is a problem with sickness from eating raw veggies in salads.

The Chinese are extremely conservative with food. They do not like foreign food. During his soymilk tour to Japan, the group ate no Japanese food at all on the trip. They found a Chinese restaurant for every meal!!!

Do the Chinese prefer refined soy oil to crude?

In 1997, the U.S. Wheat Association built a full-scale bakery in China. Ed Quinones and Dennis Blankenship were very excited about the potential of soymilk worldwide. Quinones is the regional manager for Asia and Latin America. He is Terry's boss. A 6 man team & the American Soybeans Association agreed to build China a soymilk pilot plant. Now, they want a big one, with one factory equaling 2,000 L/hr. Mr. Pan thinks 2,000 L/hr is the ideal plant size. The China soybean embargo also affects the ability to raise funds for the Chinese market. Everyone likes the idea but doesn't have the money beyond $30,000 for the demo plant.

Cyrus Eaton's company pioneered trade with the Communists. It got together with Farmland, the largest agricultural co-op in the USA. Gene Vickers and Bob Bergland of Farmland-Eaton (in Crystal City, Virginia) are working on the Manchuria plant project. He is concerned that they may not be up to it. He hears that it's off.

Question #8. No idea; total blank. Only 5% of the soybeans in China are used for feed. There is a lot of unease and soybean trips and inhibitors. A little soybean meal is still used for fertilizer. Most solvent extraction is done with variants of the Rotocel design, not the Desmet.

Question #13. Everyone fries everything, like doufu and soy sauce. There is a great need for milk. Soy flour won't succeed until the Ministry of Commerce does better toasting or does subsequent toasting in food plants. There is great potential in China for tofu and soymilk. The Chinese system "falls apart in the middle from bureaucratic sludge."

There are no trade associations in the Chinese soyfoods industry; this is one reason for the slowness to modernize.

The Chinese don't know much about soy protein isolates and concentrates, but they are convinced they can be used to advantage. They want to make them in China, not import them. They aren't sure which applications are best. There are lots of applications for tofu and soymilk production. USA uses concentrates and isolates in modern foods; China has no modern foods.

Alfa-Laval. The concept of offering soymilk to Beijing on a 1 year trial basis is still under discussion and isn't yet finalized. John Wilson will decide. It's probably about 500 liters/hr, not 2000 liters/hr. It's not yet in the bag, at all.

That project will not obviate the need for the American Soybean Association's $30,000 pilot plant. In Shenyang and Shanghai, he's not sure whether or not Alfa-Laval has contracts, but they have made some progress. These are autonomous municipalities, so they have their own funds.

The crux of the American Soybean Association's programs are teams and technical travel. Terry wants to draw more on East Asian trips. Countries are at various stages of development here, but the Chinese have no interest in low level technology. All third world countries must have the *best,* yet they espouse self-sufficiency, not small-is-beautiful. They eschew foreign or traditional things.

Soybean acreage in China: Heilongjiang. World Bank. Heilongjiang is reducing soybean acreage by 20%.

Exports from China: Exported meal. Low price, low quality. The cost of U.S. soybeans delivered to South China is probably less than the cost of soybeans "imported" from Heilongjiang.

The Chinese have never imported much U.S. soybeans, around 500,000 tonnes maximum. They cut this off after the textile quotas squabble, only because it wasn't important to them. This is a symbolic gesture. They could do without it. Terry expects they will be a *net* soybean importer over the next 5-10 years. Brazil has no export office in China, but does have a few traders.

Terry does not know how much soybeans are grown on the banks of rice paddies or about the Jilin seminar, as he was not invited. He's not interested in Chinese expansion of soybean production and, like Susan, does not think it will expand much.

American Soybean Association dispenses technology; China must receive and implement it.

In Beijing, the Chinese eat fermented black soybeans when they have a fever.

The word for "soybean" is *da dou,* not *huang dou. Da dou fen* refers to soy meal and cake. *Dou bing* is soybean cake.

The American Soybean Association (ASA) is like an agricultural extension office. They dispense publications and do translations.

Foley does not now get *Soyfoods* magazine. What a shame.

American Soybean Association is committed to upgrading Chinese soybeans and animal technology.

There is a 25% discount on books bought by Foley from us. Send him a list of all of our books and check history materials.

Foley would like Leviton to come to China when he visits East Asia but visas are nightmarish to get, as are hotel reservations.

The tofu and soymilk production plant in Tientsin (which is Peking's port) is under the Ministry of Commerce. Also, there are oil plants in the southern suburbs.

We talked for a long time about the need for a Soyfoods Industry Directory in China, giving names, addresses, phone numbers, and key contact people of major organizations or researchers involved actively with soyfoods. We made a sample table of contents. Terry will follow up on this. Perhaps give it to Beth as a project. I met Beth in the Beijing Hotel that night and we discussed it. Address: Director, China Office, American Soybean Assoc.

4049. Shurtleff, William. 1983. In Beijing (Monday, June 13) (Document part). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 32-33. Unpublished manuscript.

• ***Summary:*** Some reflections: China has not yet begun to modernize its tofu and miso industries like Japan has.

From Terrence Foley, try to get a list of key people involved with soy in China for our mailing list.

Morning in the Beijing market: A line of 15-20 people. No fresh tofu. Lots of (1) Deep-fried tofu cubes. (2) Tofu noodles/shreds. (3) Scraps of firm tofu that have been simmered in soy sauce (heat and salt extend the shelf life). (4) Deep-fried or simmered tofu "fingers"–1½ by 1½ by 5 inches. (5) Tofu roll made of pressed sheets. Most tofu in the market this morning uses soy sauce simmering or deep-frying to preserve it; there is no refrigeration and no fresh "white" tofu.

Vegetarian delicatessen named Quan Zu Zhai at Ba Mien Tsao near Wang Fujin: At 8:15 a van pulls up and unloads its total contents of buckets and trays of 18 types of meatless meat analogs, each with a name and price listed on a board. They are all either simmered in soy sauce, or made of deep-fried tofu and/or yuba. 30 foods are listed on the price list. The foods were put out on shelves. 25 people of all ages lined up early to wait for the foods, mostly (they say) for health reasons. All of the foods are dark brown and most are amorphous / without form. There are no forms of ducks, chicken, fish, etc. However there are many rolls, large and small. 8 workers are employed here in a big black room. The fresh, dark foods are stored in huge crockery vats.

Terrence Foley of ASA says: Dou p'o is half-processed soybean meal or "soy slop," after half of the oil has been pressed out.

Gunnar Lynum is the new head of ASA Japan.

He has seen green vegetable soybeans (*maodou*) for sale in big baskets in local outdoor markets.

There is no margarine or shortening sold at present in China, since there is no refining or hydrogenation.

Lecithin: After degumming soy oil in China, lots of lecithin remains, but the Chinese don't know what to do with it.

China is the most xenophobic country Foley has ever experienced. During the Qing (Manchu) dynasty in China (1644-1912), they created a foreign affairs bureau to deal with *fangui* (foreign devils, foreigners). Though they fear

and loathe foreigners, they are also fascinated by them. Foreigners live in hotels in a ghetto and dislike China intensely; they gripe all the time and are under constant surveillance. Most foreigners can stay / last in China only 1 year. They feel humiliated and frustrated.

Chinese are most fascinated by foreign technology. China allows foreigners in China largely in hopes of acquiring their technology and know-how. Chinese do not want bourgeois, capitalistic ways and culture contaminating their society. They reject and repudiate everything foreign except technology = the gimmick or black box.

The Chinese delegation that Foley took to Japan ate no food except Chinese food; they had no interest in and would not touch Japanese food. However they were very interested in learning as much as possible about Japanese technology– in this case soybean technology.

Southern China has a very different culture than northern China. Northerners are sodbusters, aggressive, and they fit in overseas.

A key man I should meet is Professor Wu Meng of Harbin Commercial College. He started the Heilongjiang Soybean Association, and is now studying soybean isolates and concentrates. He will soon visit the USA.

Mao Zedong underestimated the importance of science and technology in the modern world.

Most soybeans in northeast China are double cropped after wheat or corn: farmers must race to harvest the soybeans before the snows or killing cold.

John Deere is the #1 farm equipment manufacturer worldwide. International Harvester is #2 and Massey Ferguson is #3.

Dou tung (2 Chinese characters given = 2 Cc) are finger-sized pieces of pressed tofu that are deep-fried. They are from Fujian, China (on the mainland, opposite Taiwan).

A deep-fried cutlet net I have seen in Beijing is called Lan Hua Gan (3 Cc); Lan-Hua is a kind of flower. After seep frying it is simmered in a soy-based liquid.

Yen Lu (2 Cc) is nigari, used to make firm tofu. Shi Gao is calcium sulfate, used to make softer tofu. Lu Dou are mung beans, used in many ways.

ASA is run by Midwest farmers / farm boys who think of soybeans as sources of livestock feed and oil. They think the soyfoods movement is irrelevant. But by the late 1970s trends worldwide have forced ASA to take serious interest in soyfoods. Many offices have hired a human nutritionist (e.g., Ruth Orelenna in Mexico, Sabrine Lee in Singapore, Beth in Beijing). ASA tried to get Foley to focus on hogs, but he knows humans represent a much bigger market; 2 billion people vs. 200 million hogs. Foley says it is fine to mention his name and what he has told me repeatedly in the article I will write about this trip to China. Foley was a hippie in San Francisco. He is very supportive of soyfoods, and personally loves tofu and soymilk. I find him to be a very good man. We talk and I take notes for 6 hours. We are on the same wavelength.

Statistical (and other) information about soyfoods in China is in surprisingly short supply, and what does exist is hard to find. There are no private companies so individuals with a personal interest or historical sense. People are assigned to do the jobs they do. There is only a very superficial soy "culture."

Joe Rakosky has lots of fine color slides and charts on soy protein products.

I must meet Ed Quinones; we have similar interests. Quinones is the regional manager for Asia and Latin America. He is Terry's boss.

Big food markets in Beijing, in order of size / importance: (1) Ching Wen Sai Chua. (2) Dong Dan. (3) Chao Yan. They open at 7:30 or 8:00 each morning. Get there early before all foods are sold out. Sunday morning has the best selection of all foods.

The lack of fridges

refrigerators in China is a key factor in the limited availability of fresh tofu; people buy it shortly before they eat it. This factor is also important in all Third World countries.

Su jiang rou is meat or tofu pickled in jiang (Chinese miso).

The place I visited that makes meat analogs is Quan Su Zhai at Ba Mien near Wan Fu Jin.

In a salted foods shop I see La Jiang-you, a type of soy sauce. What is it? How is it made?

At the morning market, 80 people are waiting in line for fish, 40 for vegetables. What a huge waste of people's time. Why not have 2-3 lines instead of one. The retailers just stand there, almost dead-looking. There is no tofu left by 3:30 p.m. Bean threads are sold in the "bean products / foods shop."

KoKo = Ke Ke Doufu Fen, 250 gm. Made in Beijing. Soymilk powder with chocolate flavor.

Most yuba in Beijing is dried yuba sticks. It is tough, so it will not break during shipping.

Da Dou Tanpaku Shokuhin is a leathery looking type of extruded soy flour. Tan in color, sold in a 500 gm bag. Lots of these bags are seen in the market. Made in Beijing. It doesn't seem to be selling to well.

In Japan in the late 1950s and early 1960s, the advent of refrigeration in plants, distribution, retail and homes played a major role in the expansion of tofu into large factories and the gradual demise of small tofu shops. The lack of refrigeration has limited the modernization of the tofu industry in China, as has the switch decentralized to centralized state-controlled markets. Are there no traditional outdoor markets in Beijing? Are all markets in these huge uninviting warehouse-like buildings? Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

4050. Okada, Mrs. 1983. Kibun's interest in and involvement

with soymilk (Interview). Conducted by William Shurtleff of Soyfoods Center, June 21. 1 p. transcript.
• ***Summary:*** Kibun was founded in 1938 as a company selling foods from the sea (seafoods such as *kamaboko, tsukudani, Oden no zairyo*). In 1969 Mr. Nozaki of the R&D department started research on soymilk. In 1973 a laboratory for soymilk was set up in Saitama city, Saitama prefecture. and commercial soymilk production started there in 1977. The product, brand-named Soena, was sold in 200 ml wide-mouth cups. The first flavors, all introduced that year, included a lactic fermented product, pineapple, etc. (see slide).

In about 1973 Kibun started to diversify out of just foods. Today they are a conglomerate, with more than 50 companies, including companies doing advertising, food engineering, publicity, and selling computers.

Kibun does not use the traditional Illinois method, or any variation thereof. They couldn't use it since Mitsubishi bought the rights to the Illinois patent for the Japanese market and Kibun bought the rights for overseas. So Mr./Dr. Nozaki developed and patented a new method; there are many patents, including equipment patents (the food engineering company makes these machines).

Over the years they have launched many flavors including vegetable juices with soymilk (carrot) but in June 1983 they have just 4 flavors, of which plain is the best seller. Their lactic flavored product is new and has always been fermented. In May 1983 they opened two new soymilk plants, one in Hiroshima and one in Gifu, both bigger than the original Saitama plant.

Their working arrangement at present with Alfa-Laval is *not* a typical joint venture. Alfa-Laval is in the business of selling equipment. When they find a client they agree, according to a contract existing between Alfa-Laval and Kibun, to tell the potential client that their preferred soymilk process supplier is Kibun. Thus Alfa-Laval is like a matchmaker for Kibun. Kibun then signs a separate contract with the potential soymilk manufacturer. It could be a joint venture or a license of the Kibun patents and technology, including patented equipment, made by Kibun's food engineering company.

Kibun's soymilk operations are run by a separate company called Kibun Health Food Co., established in 19 (exact date unknown).

Mr./Dr. Nozaki would be willing to meet with me, but what would we discuss? Its all secret.

Does Alfa-Laval get a kickback from introducing a potential client to Kibun? Address: Home Economist for Kibun, Japan. Phone: 544-2781.

4051. Tsuchiya, Kanji. 1983. Soymilk industry and market in Japan (Interview). Conducted by William Shurtleff of Soyfoods Center in Japan, June 26. 2 p. transcript. [Eng]
• ***Summary:*** We saw this large sign (1 by 3 feet) in a local tofu shop window: *Mainichi Ippai. Tofuya no jun Tonyu*– which means: "A glassful every day! Pure / Plain soymilk from your local tofu shop."

All Tetra Brik Aseptic soymilk is much more expensive than cow's milk.

In the 2nd edition of Tsuchiya's book, only the production section has been changed; it contains a newer and more complete description of the soymilk production process.

Lord Liu An of Wainan who supposedly invented tofu was from the far south of China, near Vietnam. Tie this into the Java tofu discovery.

See p. 220 of Tsuchiya's book for a tofu and soymilk chronology.

Get used books in Japan at Kanda used bookstores.

Of the various books Tsuchiya owns on the history of Japanese foods, the best is the tattered old book, *Nihon Shokumotsu-shi,* by Adachi and Sakuria. 1934. See Kinako (p. 203). Okara (p. 291).

Cows milk came to Japan from China in the *Kotoku Tenno* era, in Choreki 3rd year.

Heian Period, first used the character for milk (in the word Raw / Fresh Milk) in the *Shinsen Seishiroku* (2 Chinese characters given).

In Tsuchiya's Soymilk book, p. 36. *Toju* = bean liquid, first appeared in the Kamakura period, in the book *Jidai Kamonjo.*

Kibun bought Alfa-Laval machines but they did not work; they had to be cleaned every 4 hours. So Kibun developed a steam infuser that injects steam into the plate heater. Kibun did not apply for a patent. Alfa-Laval now makes the machine Kibun invented, and also has no patent. With a patent you reveal a secret process. It's too risky.

Mr. Yamauchi of Hinode often visited with Marusan in Japan.

In Japan, Marusan is thought to be No. 1 in total soymilk production and sales–if you include bulk soymilk. Marusan has 3 soymilk factories in Okazaki, plus one each in Chiba and Aichi. Bulk soymilk is canned by other companies and used in bread, etc.

There was a big jump in soymilk production in Japan in 1982.

Companies that Marusan sells soymilk to resell it under their own brand.

Mitsubishi also sells a lot of bulk soymilk.

To date, 25 companies have been permitted to use the JAS mark.

Companies who buy Marusan's bulk soymilk include Sakura Shokuhin, Dai Tonyugyo, Nagano Tomato, and 2-3 others. Second largest soymilk maker in (total production) is Kibun. No 3 is Mitsubishi (which makes lots of bulk), Meiji and Asahi are tied for 4th.

Defoamer. Most soymilk makers use a defoamer. Silicon resin is popular but expensive. They also use monoglycerides

or sugar esters. Marusan uses a high temperature process that requires no chemical defoamer.

To make lactic fermented soymilk inoculate it with *L. Bulgaricus* and *L. thermophilus,* and hold at 37ºC for 18-20 hours to produce lactic acid. Some products are sold with lactic acid bacteria still alive. These are sold as dairy products and often have 3% added milk solids.

Marusan makes a firm soymilk yogurt sold only in Aichi Prefecture in plain, strawberry, and orange flavors, in a *happo styrol* package shaped like a Quonset hut. When was it introduced?

Many Japanese soymilks use calcium lactate to fortify the product with calcium. It coagulates the milk but the structure is later broken up with an homogenizer.

Tsuchiya prefers to use calcium carbonate, which does not dissolve or coagulate.

For emulsifiers, monoglycerides are outlawed. Sugar esters (*shoto no shibosan* ester) are okay. Some researchers believe that monoglycerides cause cancer = are carcinogenic.

Chakukoryo are artificial / synthetic flavors = chemically synthesized.

Marusan prefers to use maltose, a complex sugar, since it does not brown upon high temperature treatment or get caramelized or bitter.

Asahi no longer uses the defatted soymeal method. It is too expensive.

Since about 1981 all major manufacturers of soymilk in Japan have used roughly the same process. Tsuchiya published a key article on the basic process. Marusan was not upset, and within 6 months all had standardized their processes. This process is based on the 1967 Cornell discovery of the effect of heat on lipoxygenase enzymes.

Adding sodium bicarbonate improves the protein recovery, but its use is not allowed in pure (*jun*) soymilk except to neutralize old beans... and then one need not list it on the label.

The KEY is to crush the soybeans before adding boiling water, otherwise there is off flavor development at the center of the beans. Marusan has a patent; see page 131 of 1st edition of Tsuchiya's Soymilk book. #28385? Kibun has no patents.

Ask Tsuchiya all relevant DTD questions.

Tsuchiya has a 1932 Encyclopedia (*Hyakka Jiten*). Copy p. 1169 soymilk, p. 1184 tofu. See also Mame maki, kinako, moyashi, Okashi.

Kibun bought 50 copies of Tsuchiya's book on Soymilk.

Compare Marusan and Kibun flavors. Tsuchiya is a consultant for Marusan. Marusan has: 1. No additives. 2. High temperature processing.

Kibun makes no plain/pure soymilk.

Marusan is thinking of building a plant in Los Angeles, perhaps with Hinode / Mr. Yamauchi.

Does Kibun use any other artificial flavors besides milk flavor?

Which company (when) first used the present soymilk process in Japan? What are the key "know how" steps? Address: Tokyo [Technical consultant, Okazaki Marusan, Japan].

4052. *China Daily.* 1983. Baby formula plant now under construction. June 28.
• ***Summary:*** "China is building a plant with machinery donated by the United Nations Children's Fund [UNICEF] to produce 4,000 tons of baby formula a year Xinhua reported on Sunday.

"The plant in Shanghai will produce a formula developed by UN and Chinese nutrition experts made of rice and soybean powder, sugar, vegetable oil, various vitamins and inorganic salts.

"The formula is expected to be a nutritious milk substitute for children six months to three years old, it said. The plant is to start trial operation in September." Address: China.

4053. **Product Name:** [Soymilk Powder (Chocolate, or Cocoa)].
Foreign Name: Dourufen (Qiaokeli, or KeKe).
Manufacturer's Name: Beijing Shi Shi Pin Niang Zao Yan Jiu Suo (Beijing Brewing Research Center).
Manufacturer's Address: Beijing, China.
Date of Introduction: 1983. June.
How Stored: Shelf stable.
New Product–Documentation: Label. 1983, undated. 6 by 8 inches. Plastic. Qiaokeli: Red and white on clear. KeKe: Orange and white on clear. In 250 gm plastic bag. "Add 10 times hot water to drink."

4054. **Product Name:** Fresh&Light (Plain Soymilk).
Manufacturer's Name: Brightsong Light Foods.
Manufacturer's Address: 100-A Poultry St. (P.O. Box 2536), Petaluma, CA 94953.
Date of Introduction: 1983. June.
Ingredients: Water, soybeans.
Wt/Vol., Packaging, Price: Plastic pints, quarts, or ½ gallons.
How Stored: Refrigerated.
New Product–Documentation: Letter from Richard Rose. 1987. Aug. 29.

4055. *Dairi Fuudo* (*Daily Foods Science*). 1983. [Special issue on soymilk]. June. [Jap]
• ***Summary:*** The cover shows 4 different soymilk containers in a red, blue, and white photo. Address: Japan.

4056. Danish Turnkey Dairies. 1983. Soymilk seminars, People's Republic of China, and Report of DTD's future work with soymilk, May-June 1983. Aarhus, Denmark: DTD. 25 p. 31 cm.

• ***Summary:*** Contents: Introduction. Places visited and persons met. Report on observations and findings. Content of seminars.

"Mr. William Shurtleff was hired by DTD to accompany John Davies and Jens Peter Graverholt, together with Eddie Siu of EAC Hong Kong on a three week trip to China to present DTD's soymilk plants and program."

"Four seminars were given, each lasting approx. 1½ days: (1) Guangzhou, Guangdong Province, May 30-31. 26 participants.

"(2) Zhengzhou, Henan Province, June 2-3. 14 participants.

"(3) Harbin, Heilongjiang Province, June 6-7. 22 participants.

"(4) Beijing, Beijing Shi, June 10-11. 25 participants." Address: Aarhus, Denmark.

4057. Davis, William L. 1983. Japan: Surge in soy milk popularity could benefit U.S. *Foreign Agriculture.* June. p. 22.
• ***Summary:*** The growing popularity of soy milk in Japan is good news for U.S. soybean farmers. Current production is estimated at 70,000 tonnes/year, valued at $87.5 million. The industry expects the market to expand to over $260 million as several large firms are now starting production. Currently 11 major firms are producing soy milk. Tofu shops also market soy milk. Soy milk puddings are also now on the market. Address: Agricultural Counselor, Tokyo.

4058. **Product Name:** [Tofu, and Soymilk].
Manufacturer's Name: Ets. Co-Lu.
Manufacturer's Address: 38 Rue Chateaubriand, 13007 Marseilles, France. Phone: 913-144-14.
Date of Introduction: 1983. June.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1983. June 20. Owner: Andrew Moody. Leviton. 1988. Oct. 16. Trip to Europe with American Soybean Assoc. This traditional Vietnamese-run company makes about 700 kg/week of tofu for the local Asian market. Also makes soymilk.

4059. Gullo, Karen. 1983. Soyfoods consumption hits all-time high. *Vegetarian Times.* June. p. 12. [1 ref]
• ***Summary:*** This is a review and summary of *Soyfoods Industry Directory and Databook 1983* by Shurtleff and Aoyagi. 1982 USA production and retail sales figures are given for the following foods: Tofu (27,500 tons, $50 million in 1981), tempeh (450 tons, $2 million), and miso (750 tons). Four factors contributing to the growth of soyfoods are summarized. "Low-calorie convenience soyfoods products and frozen, meatless 'heat and serve' entrees will play and important role in soyfood's entrance into the mainstream American diet... Dairy-like soymilk and soymilk shakes, yogurt and ice cream, tofu cottage cheese and tofu burgers will soon be low-cost, low-calorie alternatives to mainstream supermarket fare."

4060. Herrmann, Karl. 1983. Ueber Sojabohnen und Sojaprodukte [On soybeans and soybean products]. *Ernaehrungs-Umschau* 30(6):175-79. June. [17 ref. Ger]
• ***Summary:*** Contents: Introduction, nutritional composition, amino acids in soy sauce. Unfermented soy products: Soymilk, tofu (*sojaquark*), aburage, kori-tofu, yuba, kinako. Fermented soy products: Soy sauce, miso (*sojapaste*), tempeh, sufu, natto. Address: Instutut fuer Lebensmittelchemie, Hannover Univ., Wunstorfer Str. 14, D-3000 Hannover 91 [West Germany].

4061. Island Spring Inc. 1983. Make a living making tofu! (Ad). *Soyfoods* Summer. p. 72.
• ***Summary:*** This quarter-page black-and-white ad is for the Soycrafters Apprenticeship Program, a professional 21-day intensive "hands-on" course in the commercial production and marketing of tempeh, tofu, soymilk, and related soyfoods. "Start your own soyfoods enterprise!... Join the soyfoods movement!." Address: P.O. Box 747, Vashon Island, Washington 98070. Phone: (206) 622-6448.

4062. Meyer, Nancy R.; Stuart, Mary A.; Weaver, Connie M. 1983. Bioavailability of zinc from defatted soy flour, soy hulls and whole eggs as determined by intrinsic and extrinsic labeling techniques. *J. of Nutrition* 113(6):1255-64. June. [29 ref]
• ***Summary:*** This study was conducted on male rats. Although soybeans contain significant quantities of zinc, the availability of this zinc from soy products are reported to be poor. Soybeans contain both phytic acid and fiber, which reduce mineral absorption. The zinc in soy flour and soy beverage is more available than that in soy protein isolates and concentrates. This is probably due to a decreased solubility of complexes formed between amino acid side chains, phytic acid, and minerals.

In part I of this study, retention of zinc from intrinsically labeled soybean flour (73%) was significantly less than from a zinc chloride isotope extrinsically added to a soy flour-based diet. Address: 1&5. Dep. of Food Science, Univ. of Illinois, Urbana, IL 61801; 2-3. Dep. of Foods & Nutrition, Purdue Univ., West Lafayette, Indiana 47907.

• ***Summary:*** Outline of a lecture accompanying a color slide show presented by Shurtleff in June 1983 to groups interested in purchasing modern soymilk plants in various provinces in China. Address: Lafayette, California.

4064. Shurtleff, William. comp. 1983. Main Japanese

soymilk manufacturers and their products–June 1983. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549 USA. 4 p. Unpublished typescript.
• ***Summary:*** This table contains six columns: Manufacturer, brand name, package size, type of packaging, launch date, and distribution (nationwide).

The manufacturers are: Kibun. Okazaki Marusan. Mitsubishi Kasei Shokuhin. Meiji Nyugyo. Kyushu Nyugyo. Nisshin Seiyu. Asahi Shokuhin. Kyodo Nyugyo. Yakuruto Honsha. Furuta Shokuhin Kogyo. Morinaga Nyugyo. Sugiyo. Koshin Nyugyo. Kenbi-sha. Saniku Foods (Saniku Fuuzu). Nagoya Seiraku. Nagano Tomato. Zenkoku Nokyo Chokuhan (Nôkyô). Yamato Shokuhin. Sokensha (Sôkensha). Ishihara Fuudo Sentaa. Chiba Seisen Shokuhin Kogyo (Kôkyô). Asahi Fuuzu. Sebun Irebun (7-11). Fukushima-ken Rakuren. Nacuraru Fuuzu (Natural Foods). Sebun Appu Inryo (Seven-Up). Address: Lafayette, California.

4065. Shurtleff, William. 1983. Soymilk seminars in China, May-June 1983, and proposals for future DTD work with soymilk. Singapore. 12 p. 28 cm.
• ***Summary:*** This report begins: "1.1 The Key Question DTD must face and study in depth is the potential for soymilk worldwide during the next 5-20 years in East Asia (especially China), the Third World in general, and in industrialized nations.

"Will soymilk be a minor part of DTD income (l-2%) or does it have the potential of being 20-30% of sales in 10 years? If the latter is true, then it is essential that DTD start now to develop stronger commitment to soymilk and greater expertise in this field.

"1.2 Evidence of Potential Growth

"1.2.1 Hong Kong–This was the first market for modern soymilk, pioneered by Vitasoy (soydrink made by Hong Kong Soya Bean Products Company Ltd.) from l945. Vitasoy's production grew from 50 million packs in l962 to 100 million in 1970, to 130 million in 198l. Yeo Hiap Seng and Coca-Cola Hi-C also have significant shares of the Hong Kong market.

"1.2.2 Japan–Production nationwide grew from 4 million litres in 1978 to 46 million litres in 1982, worth US$61 million.

"1.2.3 South East Asia–Since 1975 soymilk has taken off in all these nations except Indonesia. Competition is fierce.

"Major Untapped Markets–China is unquestionably the largest untapped market. It has a long tradition of using soymilk, is interested in modernization, is committed in 'Masterplan 2,000' to greatly expanding production of both soy and dairy milk, has a major need for the nutrients of soymilk (protein, calories, minerals), and could make many products from this milk such as ice cream, ice stick, yoghurt, tofu, yuba, etc. This China market is as big as all others combined." Address: Singapore.

4066. *Soyfoods.* 1983. Our first designed-for-America soymilk [Edensoy]. Summer. p. 6.

4067. *Soyfoods.* 1983. The Miami soyfoods scene [Heartsong Tofu, Sunshine Soy, Swan Foods, Swan Gardens, Unicorn Village, Oak Feed Store]. Summer. p. 38-39, 43.
• ***Summary:*** In Miami, three major tofu companies make about 25,000 pounds a week of vacuum packed tofu, prepared tofu products, and tempeh.

Brightsong Tofu: Bob and Toni Heartsong began making tofu in "1976 in a south Miami cottage style tofu shop which lasted until 1978. Making 900 pounds of hand-made tofu every week, the Heartsongs pioneered the Miami market, fully one year before the legendary and short-lived Swan Foods was opened in 1977. In January 1978 the Heartsongs moved to Redwood Valley, California, to help launch Brightsong Tofu. Meanwhile in 1977 they had written and Banyan Books had published, *The Heartsong Tofu Cookbook,* one of the first designed-for-tofu cooking guides. Bob Heartsong then worked in Hawaii for Mrs. Cheng's Soybean Products where he made 600 pounds of tofu daily."

Finally, the Heartsongs, peripatetic tofumakers, returned to Miami and in January 1982 opened Heartsong Tofu, a "1,200 square foot plant where today they produce 4,500 pounds of vacuum packed tofu each week (with an 18-day shelf life)." The company employs 6 full-time and 2 part-time workers. A list of their tofu products and equipment is given. The Grand Union supermarket chain sells $2,200/week of their tofu products.

"Sunshine Soy, owned and managed by Danny Paolucci, occupies 2,500 square feet, in suburban Coral Gables, of what once was a Borden's walk-in cooler... Paolucci opened Sunshine in June 1980, a company which today produces 4,000 pounds of tofu and various secondary products every week.

"Previously Paolucci served as production manager for Swan Foods until its closing in December 1978. [Note: Swan Foods opened in 1977.] Paolucci often measures his Sunshine Soy's sensible survival against Swan Foods exciting but disastrous history. Swan Foods was, unfortunately, a textbook example of uncontrolled growth marked by nonmanagement: no competition, distribution by the formidable Tree of Life, a wildly innovative product line, a quadrupling of sales in the first 18 months, $2,200 in weekly sales–ending in a disheartening crash. Their product line included baked, marinated, regular, and caraway tofus, soymilk (1,000 quarts weekly), tofu cashew pie, tofu dips and salads, soy yogurts, and soymilk shakes.

"Sunshine Soy, which employs four workers, has a privately labelled vacuum packed tofu (Golden Harvest brand) in most of Florida's 100 General Nutrition Centers; Tree of Life, out of St. Augustine, handles the distribution."

Swan Gardens: "Commanding the top tofu market position in Miami, Jocelyn and Richard McIntyre's Swan Gardens, which moved to south Florida in 1979 from Montana, produces 15,000 pounds each week of vacuum packed tofu. Their 10,000 square foot plant uses only 3 production workers, each working 10 hour days, 5 days weekly–a model of streamlining. In March 1982 Swan introduced their boxed tofu (see New Products, this issue) featuring their firm (16.6% protein) tofu which sells for $1.19 a pound in produce at Winn Dixie. A major Florida distributor moves an estimated 5,000 pounds of their dealer brand every week as far north as Washington, DC. Recently Swan introduced an okara tempeh with a two week refrigerated shelf life, and this product joins their Spicy Soysage and Baked Tofu, also vacuum packed. Swan Gardens tofu is pre-dated 4 weeks for the supermarkets but McIntyre claims it remains microbially sound for 6 weeks. The company is comfortably profitable."

Photos show: (1-2) Bob Heartsong, with tofu pressing in stainless steel forming boxes, and a close-up of his line of products. (3-4) Danny Paolucci and a close-up of his line of products. (5) A close-up of Swan Gardens' products.

"On the retail natural foods level, four major stores share the bulk of Miami soyfoods sales. The Unicorn Village in North Miami Beach is stocked with 25 soy products... The Unicorn itself prepares a Tofu Cottage Salad, Eggless Egg Tofu Salad, Baked Tofu, and Tofu Onion Dip in their restaurant for retail sale in their adjoining store." Also discusses: The Oak Feed Store, a macrobiotic retailer in Coconut Grove (carries 44 soy products). Sundance Natural Foods in downtown Miami (many tofu-based deli items prepared in their kitchen). Nature's Touch in Miami.

4068. *Soyfoods.* 1983. Wildwood's sandwich power [Tofu sandwiches from Wildwood Natural Foods in Fairfax, California]. Summer. p. 42.

• ***Summary:*** "Wildwood Natural Foods has carved out a successful market niche in the competitive Bay Area soyfoods scene with their daily delivery of fresh tofu sandwiches and tempeh salads. The three year old company has built its reputation and sales volume on same-day freshness as all products reach the stores by 12 noon on the same day as manufacture. Wildwood's concept, backed by their in-house tofu shop, is eminently worth imitating in other similarly strong retail marketplaces.

"The Wildwood shop begins bustling with sandwich-making activity at 5 a.m. six mornings a week as about a dozen (out of a 35 member staff) workers prepare the daily quota of 800 sandwiches completing them by 10 when the truckers take them down to San Francisco, about 60 minutes drive away. With their 340 square foot steam kettle tofu shop, Wildwood, located in Fairfax, California, produces 2200 pounds of nigari tofu every week of which one half is used for sandwiches, the other half for distribution as bulk tofu under the "UFO" brand name ("us feeding ourselves"). In the busy summer months, sandwich production can easily soar to 6000 a week; surprisingly the returns on day-old sandwiches is only 5%.

"Under the guidance of Paul Duchesne and Bill Bramblett, the company was launched in August 1980 [Note: Actually that was when Wildwood began manufacturing tofu, on 8 Aug. 1980; they had incorporated in April or May 1980]. Duchesne had been supplying Marin County with his brown rice and tofu sandwiches since 1975 [Note: Actually since late 1977] when Bramblett suggested they expand his concept, make tofu, and distribute a wider line of tofu sandwiches.

"Today in mid-1983 (with partners Bramblett, Frank Rosenmayr, and Paul Orbuch) Wildwood distributes an impressive line of sandwiches (which retail for $2.25 each) including Avo-Tofu, Brown Rice & Tofu, Mustard Brown Rice & Tofu, Curry Brown Rice and Tofu, Sushi, Tofu Steak, Supreme Bean Tempeh Burger, Hijiki Rice Pie, and Seventh Heaven Bread. They also make prepared salads, packaged in 12 ounce containers which retail for $2.25, including Curry Tofu, Tofu Vegetable, Temptation, Potato, Hummus, Tabooli, and Good Puddin', in addition to bottled plain and honey-vanilla soymilk. The salads are dated for 7 days and the sandwiches for 1 although they stay fresh for 2 days.

"To service their Bay Area accounts, Wildwood employs four drivers who ply four different routes, which often take them further north to Santa Rosa or south to Santa Cruz. The limit to fresh sandwich distribution, Paul Orbuch explains, is simply how far they can be transported after production and before 12 noon, the cut-off period as the lunch hour business is crucial to retail sandwich sales.

"Wildwood's distribution system also handles local natural foods products such as Grain Dance seitan, Evolutionary Bean's Not Cheesecakes, and Solar Tacos (with soy protein). Wildwood's line, states Orbuch, is now moving into supermarkets, their Brown rice and Tofu sandwich accounts for 30% of total sandwich sales, and their products are handled by at least two area college lunch concession stands. Wildwood has been noted for their novel pedal-powered Tofumobile which they use in the summertime to bicycle sandwiches around to stores in trendy Marin County."

4069. *Soyfoods.* 1983. The soyfoods industry on display [at Natural Foods Merchandiser Expo in Anaheim, California and Whole Life Times Expo in San Francisco]. Summer. p. 7.

• ***Summary:*** Sixteen soyfoods companies exhibited at Anaheim to 7,600 paying visitors. "Six soyfoods companies shared an official Soyfoods Association booth, where they retailed their own products and provided liberal tasting samples as well. Participants included Legume Inc. (tofu pizza, tofu lasagna), Farm Foods (Ice Bean, in cones), Quong

Hop (tofu burgers, tofu canolli, soymilk), Sonoma Specialty Foods (tofu salads, tofu cheesecakes), Laughing Moon (vegetable tofu turnovers), and San-Jirushi International (samples of San-J Real Tamari). The Association booth, one of 10 food catering booths at the Expo, was 'packed solid through the whole show,' reports Farm Foods' Robert Tepper."

"William Shurtleff gave a one hour speech and slide presentation on soyfoods to an enthusiastic audience."

Other interesting companies include: Pacific Tempeh, Light Foods, Essential Foods, Garden of Eatin', Living Lightly, Kibun, Westbrae Natural Foods, Edward & Sons, Cedarlane Foods, Morinaga, Worthington Foods.

Interesting products: Light Links tofu "hotdogs," Ravioli, Tofumale Tamale, Tempehroni Pizza, Chili Con Tempeh, Tempeh Enchilada.

Photos (without captions) show: (1) Danielle Lin of Laughing Moon. (2) Steve Snyder of Hinode. (3) The Morinaga booth, with Mr. Seishiro Ikegami.

4070. **Product Name:** Tofu, and Soymilk.
Manufacturer's Name: Stewart Batchelder Tofu.
Manufacturer's Address: 6 Tweed St., N. Lancaster, High Bentham, England.
Date of Introduction: 1983. June.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1983. June 20. Owner: Stewart Batchelder/Batcheldor. The company has a second address in addition to the one listed above: Wholefoods Shop, Singl St., 78-A Penny St., Lancaster, England. Neither location has a phone.

4071. **Product Name:** [Tofu Powder].
Foreign Name: Doufufen.
Manufacturer's Name: Zheng Zhou Shi Shu Cai Gong Si, Nan Guan Fu Shipin Chang (Zheng Zhou City Vegetable Company, South District Food Factory).
Manufacturer's Address: Zheng Zhou, China.
Date of Introduction: 1983. June.
New Product–Documentation: Label. 1983, undated. In plastic bag. Instructions for making soymilk, tofu curds, silken tofu, and firm tofu.

4072. Tsuchiya, Kanji. 1983. Gusseted foil retort pouches (Interview). Conducted by William Shurtleff of Soyfoods Center in Japan, July 6. 1 p. transcript. [Eng]
• ***Summary:*** In Japan this pack is called a "stand pack." The process patent and machines are owned by Robert Bosch GmbH in West Germany. The packaging and printing in Japan is done by Toppan Insatsu, a big printing company. There is very little problem with leakers outside the filling plant. The product can be stored at room temperature without problems, especially if it is hot packed (at 95ºC). The filling process resembles that for Tetra Pak, but no hydrogen peroxide (*kasanka suiso*) is used. If it is not hot packed, it is usually retorted, like a can. The laminated plastic material will withstand this. Marusan was the first in Japan to introduce this pack, in about 1981. They now have 2 machines, each putting out 6,000 packs an hour.

Tsuchiya thinks this is the *best* pack for China and other Third World countries. The hot pack product would have a storage life at room temperature of 1 month without refrigeration; only 1 in 10,000 would spoil. Address: Tokyo [Technical consultant, Okazaki Marusan, Japan].

4073. Ota, Mr. 1983. Mitsubishi Trading Company's interest in and involvement with soymilk (Interview). Conducted by William Shurtleff of Soyfoods Center, July 18. 2 p. transcript.
• ***Summary:*** Mr. Ota is in the USA trying to find a company to do a joint venture making soymilk in America, for two purposes. (1) To sell powdered soymilk in Japan, especially to the baking industry, and especially small bakers, who cannot buy liquid soymilk in bulk. (2) To sell soymilk in USA to help offset or underwrite the costs of (1).

In Japan, Marusan, Kibun, and Mitsubishi all have the same installed capacity for soymilk production.

Recently Kibun, a relatively small company, underwent a severe cash flow crisis by overdoing their expansion. So they had to turn to Kamogawa Kikai, a much larger company, and ask them to make most of their soymilk. Kamogawa is a Kibun associated company. I think Kibun makes only 30% of their own milk. Kamogawa can borrow money much more easily than Kibun. Marusan is also vulnerable for the same reason.

Mitsubishi Shoji (the Trading Co) thinks that Meiji will eventually be the strongest soymilk supplier in Japan. All soymilk makers can be divided into three major types: (1) Smaller companies making soymilk as one of various products (Marusan, Kibun), (2) Dairy Companies (Meiji, Morinaga, Yukijirushi), and (3) Soft Drink and Beer Companies (Kirin, etc.).

All soymilk makers in Japan are now making big profits. The ex-factory production and overhead costs for one 200-ml pack of soymilk, including the package itself is about 25 to 30 yen ($O.105 to $0.126). Of this, by far the biggest portion is the carton, and a Tetra Brik carton costs about 10 yen ($0.042); it costs slightly less for big manufacturers who have more bargaining power to negotiate with Tetra Pak. Mitsubishi says that in most cases there is no need to sell soymilk in Tetra Pak in Japan, and predicts that many companies will soon abandon it for less expensive packaging, such as Pure-Pak, which costs about half as much as Tetra Pak. Meiji will be strongest for three reasons: 1. They have very good dairy experience and dairy distribution routes. 2. They can easily use Pure-Pak or have big bargaining power to get lower Tetra Pak Prices. 3. The head of the company, Mr. Shimaura, wants to greatly expand

Meiji's soyfoods operations.

Japanese have three basic beliefs conducive to soymilk sales that Americans don't have. 1. Plant protein is better than animal protein. 2. Alkaline foods are good for health. 3. Soyfoods are good for you.

In the old days (pre-1960s), soymilk didn't taste good, but it was thought to be good for you. Samurai drank soymilk in Kyushu. The big improvement in soymilk flavor has bean one major reason for its recent rise in popularity.

Nowadays Kibun and Marusan are doing lots of TV advertising. There are even articles in porno magazines claiming that drinking soymilk will increase one's sexual energy and potency. The vitamin E in soymilk also is thought to help this and to slow the aging process.

Japanese consumers of soymilk tend to be those with an above average level of education. Many drink soymilk for rational reasons, which (says Mitsubishi) is why most prefer dairylike to plain. In Japan plain is called *Jun* (pure) and dairylike is called plain.

Soymilk was Mitsubishi Kasei's first food product–ever! Mitsubishi bought equipment and know how from House Shokuhin (when?). Mitsubishi sells lots of soymilk to other companies, who package it under their own brand.

Meiji's soymilk production process is almost entirely automated. Only 3 workers are required. One to discard defective packages, one to package cartons in crates, and one for general checkup and inspection.

IOM (Indiana, Ohio, Michigan) soybeans have high moisture content. Kibun uses IOM, which is why they do not make plain (*Jun*) soymilk. But IOM cost $295 a tonne (metric ton) whereas the better quality Beeson, an identity preserved soybean, cost $506 a tonne, or about 71% more. Yet from the farmer, both cost the same. The difference is mostly in the handling costs.

In Japan there is no formal/JAS distinction between whole soy flour and powdered soymilk. They are used interchangeably and both called "soymilk." Many companies in Japan now make one of these two products, as for use in breads, noodles, etc. The sales in 1982 were 3 billion yen ($1O.98 million), increasing to an expected 7 billion yen in 1983. Because of high energy costs for drying soymilk in Japan, Mitsubishi is considering producing powdered soymilk in America, using Beeson soybeans. Whole soy flour is called *zenshi daizu-fun* = full-fat soy flour. Virtually all of the Tetra Pak soymilk in Japan is sold refrigerated–even though it need not be. The canned soymilk may or may not be refrigerated. Address: Mitsubishi Shoji.

4074. Dominguez de Diez Gutiérrez, Blanca. 1983. Re: Work with soyfoods in Jalapa, Mexico. Letter to William Shurtleff at Soyfoods Center, July 20. 1 p. Handwritten.

• ***Summary:*** When your book on soya history "is published I would like very much to purchase several. Please tell me where it is available. It will be a great help for me spreading the use of soya, as now the government is really making an effort to have it planted and consumed, of course in some states more than others. It will serve me as an introduction, so I think it shall be God sent in many ways.

"Have thought a lot about your osteoporosis. How are you? I think it would be better for babies to have both cow & soya milk if their parents can afford it & pure soya milk in case they are very poor. Milk from cows has become a luxury, also meat, so soya more than ever will be a means of survival, although I still worry about the calcium. Have thought of including egg shell pulverized.

"Have not forgotten the newsletter. Am getting ready for it. What in particular would you like published. I think now we could include lots of information from your books, history book & soya news in Mexico. A lot of things are happening." Address: Apdo. Postal #226, Jalapa, Veracruz, Mexico.

4075. *Toyo Shinpo* (*Soyfoods News*). 1983. [Tofu shop soymilk: Many have a soymilk dispenser that is succeeding]. July 21. p. 36. [Jap]

• ***Summary:*** 90 tofu shops in Kobe have a soymilk dispenser. Customers can drink soymilk on the spot or buy 1 liter of soymilk for 380 yen, including the cost of the container (polyethylene).

In Aichi, soymilk is most popular among people in their 40s, Most like a paper pack rather than a can, plastic, etc.

4076. Snyder, Steve. 1983. Mr. Yamauchi and Hinode's interest in and involvement with soymilk (Interview). *SoyaScan Notes.* July 30.

• ***Summary:*** Steve called me to ask various questions. Then Shurtleff asked him if Hinode was still planning to make and market soymilk. He said "no." Shurtleff asked why?

1. The main reason was that it was getting too expensive to put together the whole project. Initially it was estimated to cost $500,000. Now it looked like $4.5 million.

2. The market: Steve did a lot of market research. It looked promising in that he could get a lot of distribution but not so promising for repeat purchases. He talked to a great many people and felt it would require spending a lot of money to convince people to buy the product again.

3. Placement of product in stores: This is the key point. Do you position soymilk as a children's juice, in the dairy section, in self standing end cases, in the adult section, with nutrition section, in the produce section with tofu?

4. The name is also a big problem. He tried to trademark "Tonyu"–the Japanese name for soymilk–but failed.

So finally they gave up, even though Marusan was actively pursuing a joint venture and wanted to invest and provide technical assistance. I think he said that Shoan had even ordered two Tetra Brik machines.

Steve is now working on development of a Tofu Parfait. Tofu is a big plus in the product. He has orders for 70,000

cases the first 6 weeks.

Steve says Shurtleff must visit Ms. Gooch's in Los Angeles. Super natural foods supermarket.

Steve thought the SANA [Soycrafters Association of North America] meeting was very positive. He was delighted that Jack Mizono was elected vice president. and that Tom Timmins is on the standards committee.

Steve is planning to do a program for 100 or more nutritionists and foodservice people on tofu; Thelma Dalman will speak. He will give away a packet of info, including a free copy of our books. Address: Marketing, Hinode, Los Angeles, California. Phone: 544-2781.

4077. Brightsong Light Foods. 1983. Handmakers of these fine light foods: Premium Tofu, Marinated Tofu, Cottage Salad, Missing Egg Salad... (Leaflet). Petaluma, California. 3 panels each side. Each panel: 22 x 9.5 cm.

• ***Summary:*** The front panel of this leaflet, printed blue on white, lists 14 soy products made by the company. They are: Premium Tofu, Marinated Tofu, Cottage Salad, Missing-Egg Salad, Bright-Burger, Soysage, Chocolate Lite Mousse, Amaretto-Almond Lite&Creamy, Almond Lite&Creamy, Strawberry Diet DeLite, Orange Sunshine protein drink, Fresh&Light soymilk, Honey-Nilla soymilk, Maple-Maple soymilk.

The logo is a flying bird with a white throat. The slogan: "Where good taste and nutrition come naturally." The inside three panels discuss: About Brightsong (since 1978). What makes Brightsong Tofu so special. About the other Brightsong products.

Note: This particular leaflet, which was sent to Steve Fiering, c/o The Soy Plant,... Ann Arbor, Michigan 48104, is postmarked 21 Jul 1983. Address: P.O. Box 2536, Petaluma, California 94953. Phone: 707-778-8638.

4078. **Product Name:** Edensoy (Soymilk) [Plain, or Carob].
Manufacturer's Name: Eden Foods, Inc. (Importer). Made in Japan by Marusan-Ai Co., Ltd.
Manufacturer's Address: 701 Tecumseh, Clinton, MI 49236.
Date of Introduction: 1983. July.
Ingredients: Plain: Water, soybeans, kombu seaweed, pearl barley. Carob: Water, soybeans, pearl barley, barley malt, carob, kombu.
Wt/Vol., Packaging, Price: 6 fluid oz (180 ml) free-standing retort pouch.
How Stored: Shelf stable.
Nutrition: Plain: 89.9% water, 1.9% protein, 1.5% fat, 7% carbohydrates, 48 calories/100 gm.
New Product–Documentation: Labels. 1983. 3.25 by 6 inches. Plastic. Carob: Brown, and yellow on silver package. Plain: Navy and light blue on silver. "Natural soy beverage. No cholesterol. Easy to digest. Made from whole soybeans. Edensoy has been known in the East since the earliest times as more than a drink, but a food. It may be served hot or cold and is suitable for a variety of diets and recipes." Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. "Cup of Health."

The use of kombu as an ingredient offers at least three benefits: (1) Natural thickener. (2) Adds salt without having to list salt on the label. (3) Adds various minerals.

Article in Soyfoods. 1983. Summer. p. 6. "Eden Foods imported the first 300,000 units of 6-ounce packages in June 1983 from Japan." The product was officially launched in July at a trade show.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 45-46.

East West Journal. 1984. June. p. 68. "Taking the moo out of milk." Shows a black-and-white photo of Edensoy plain and carob flavors in stand-up retort pouches. The package is made of a 5-layer coated aluminum foil film. The inside layer is a cellulose-based biodegradable film. The outermost layer is a gas-resistant plastic which ensures a 1-year unrefrigerated shelf-life for the product.

Dairy Record. 1985. Sept. p. 86. Cranberry Edensoy added in May 1985. Shurtleff & Aoyagi. 1986. Soymilk Industry and Market, Update. By March 1986 Edensoy was selling very well, at the rate of about 600,000 units (28,125 gallons) per month. But sales have not increased much recently.

Talk with Ron Roller of American Soy Products (formerly of Eden Foods) in Saline, Michigan. 1991. Nov. 27. At the time this product was introduced, the exchange rate with Japan was good, and Eden's imported Japanese foods, including soyfoods, entered a period of rapid growth. Erewhon had just gone out of business, and macrobiotics was very popular. Macrobiotic foods peaked during the years 1984-1986 in part because there were not many other quality [certified organic] prepared natural foods, nor were there many major companies in the natural foods industry (Westbrae, Arrowhead Mills, Eden, etc.). Since then, many good-quality prepared natural foods have become available, and many are easier to relate to and more convenient.

4079. Guo, Xiang-ao. 1983. Research on heat denaturation of soy protein after solvent extraction, and traditional Chinese soy foods. *INTSOY Series* No. 25. p. 64-66. B.J. Irwin, J.B. Sinclair, and Wang Jin-ling, eds. Soybean Research in China and the United States (College of Agric., Univ. of Illinois at Urbana-Champaign).

• ***Summary:*** Solvent extracted soybean flakes and meals (moisture content 9.6%) were subjected to 80ºC, 90ºC, and 100-105ºC temperatures for 15 or 20 minutes. The critical temperature for protein denaturation was 80ºC. At higher temperatures, solvent-extracted soybean meal was denatured more rapidly than soy flakes. Preparation of the following traditional Chinese soyfoods was described briefly: Soy sprouts (*dou ya*), soybean jiang (*dou jiang*), fermented black

soybeans (*dou chi*), soy sauce (*jiang you*), soy beverage (*dou jiang*), tofu (regular and soft, *doufu*), firm tofu (*doufu gan*), pressed tofu sheets (*doufu yi*), vegetarian chicken (*su ji*), fried tofu (*you-doufu*), fermented tofu (*doufu-lu*), and yuba (*doufu pi*).

Note: This is the earliest English-language document seen (Oct. 2012) that uses the term *doufu pi* (spelled in pinyin) to refer to yuba, which he describes as follows: "Soy beverage is poured into a shallow pan and heated slowly. A protein film forms on the surface. This film is rolled and dried until it resembles bamboo. The taste and composition are similar to textured soy protein. It is a very nourishing food." Address: Zhengzhou Grain College, China.

4080. Irwin, Bonnie J.; Sinclair, J.B.; Wang, Jinling. eds. 1983. Soybean research in China and the United States. *INTSOY Series* No. 25. viii + 194 p. July. 28 cm. Proceedings of the First China/USA Soybean Symposium and Working Group Meeting. Held 26-30 July 1982 at University of Illinois (College of Agric., Univ. of Illinois at Urbana-Champaign). [150+ ref]
• ***Summary:*** "A significant amount of soy flour and soy protein concentrate is used in milk replacers for feeding calves. Soy flour and grits, and more limited amounts of soy protein concentrate and soy protein isolates, are used in pet foods." In the U.S. the combined production of soy four, grits, and modern soy protein products "used for human and specialty animal feeds is probably in the range of 1 million metric tons per year.

In a subsequent discussion, D.W. Johnson stated that "a rough summary of U.S. annual soy products production would be: soyflour and grits 600 million kg, textured soy flour 70 million kg, soy protein concentrate 55 million kg, and soy protein isolate 55 million kg." Production of spun soy protein fiber is negligible. Address: 1-2. Univ. of Illinois, Urbana; 3. Northeast China Agricultural College, Harbin, Heilongjiang, China.

4081. **Product Name:** To-Neu Natural Soy Beverage.
Manufacturer's Name: San-J International, Inc. (Importer). Made in Japan by Kibun Foods.
Manufacturer's Address: Colonial Heights, Virginia.
Date of Introduction: 1983. July.
Ingredients: Water, soybean, corn oil, honey, lecithin, calcium lactate, carrageenan.
Wt/Vol., Packaging, Price: 6.76 fluid oz (200 ml). Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 6.76 fl oz.: Calories 117, protein 7 gm, carbohydrate 3 gm, fat 9 gm.
New Product–Documentation: Label. 1983. 2.5 by 3.25 inches by 1.5 wide. Paper carton. Orange, yellow, black, and white on green. "A refreshing new beverage made from whole soybeans! In the Orient, 'to-nyu' means 'soymilk.' Kibun TO-NEU is cholesterol free, and contains more protein than ordinary milk. TO-NEU is also rich in vitamin E." Ad in Whole Foods (see next page). 1983. July. "To-Neu soy drink is packaged to stay fresh and nutritious for months. The trick is keeping it around that long."

Talk with Michael Fountain of San-J. 1984. Feb. 15. San-J says they only test marketed Kibun To-Neu; it was not a true launch that failed. They were supposed to come out with at least one other flavor. The big problem was that they had only plain. They planned to get carob but were unable to. Fountain thinks that Eden Foods' carob outsells their plain by 10 or 15 to 1. San-J will re-launch later with 4 flavors, probably in early 1985.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 46-47. Front label reads: "San-J Kibun TO-NEU Natural Soy Beverage, Non-Dairy." Kibun specified that San-J could only sell the product to the natural and health food trades. Promoted for use as a refreshing drink, as a cereal topping, or in place of milk in sauces, soups, and desserts.

4082. *Toyo Shinpo* (*Soyfoods News*). 1983. [Mitsubishi this year will increase the number of its soymilk vending machines in Japan to 3,000]. Aug. 1. [Jap]
• ***Summary:*** They now have 2,000.

4083. Klatt, Craig. 1983. Update on Worthington Foods and other Seventh-day Adventist companies making soyfoods (Interview). *SoyaScan Notes*. Aug. 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Worthington Foods is going stronger than ever. They are expanding into new, more natural products, such as Tofu Garden Patties, as part of their Natural Touch line. They plan to develop more new products in this line. Worthington bought back their company from Miles Laboratories for less than they sold it for, and got a new factory and the Morningstar Farms line as part of the deal.

Payless and Longs drug stores in California sell Loma Linda infant formula.

Country Life, formerly Cedar Lake, now imports bottled soymilk (free of sugar) from Japan, and has a chain of vegetarian restaurants, including one on Wall Street. Address: Manager, Adventist Book Center, 2300 Nourse Rd., Pleasant Hill, California 94523. Phone: 415-685-4300.

4084. Davies, John. 1983. Re: Reflections on trip together to China. DTD masterplan. Letter to William Shurtleff at Soyfoods Center, Aug. 11–in reply to inquiry. 3 p. Typed, with signature on letterhead.
• ***Summary:*** The Masterplan began in 1979 when DTD's Managing Director, Joern B. Jensen, during a fact finding mission in the People's Republic of China, came to an agreement with the relevant governmental institutions that DTD would conduct an investigation on how to improve the Chinese Dairy Industry.

TO-NEU SOY DRINK IS PACKAGED TO STAY FRESH AND NUTRITIOUS FOR MONTHS. THE TRICK IS KEEPING IT AROUND THAT LONG.

TO-NEU (tow-new) Soy Drink is a healthy, natural beverage made from soybeans. Long a staple in the Japanese diet, soybeans are cholesterol-free, high in protein, and a rich source of important minerals plus vitamins B and E.

Serve TO-NEU chilled as a refreshing pick-me-up. Pour it over breakfast cereal. Pack it in school lunches, or use it in place of milk in sauces, soups, and desserts.

Tetra-Pak® containers keep TO-NEU first-day fresh for months without refrigeration. That makes it easy for you to keep plenty on hand without fear of spoilage. The difficult part will be keeping it in stock once your family's tried it.

San-J International, Colonial Heights, VA 23834 san-j

As a result, Sino-Danish joint committee meetings were held in Beijing in May 1980. Address: Danish Turnkey Dairies Ltd., 2 Europaplads, P.O. Box 146, DK-8100 Aarhus C., Denmark. Phone: +45-6 12 4155.

4085. *Toyo Shinpo* (*Soyfoods News*). 1983. [The main reasons for Japan's soymilk boom]. Aug. 11. [Jap]
• ***Summary:*** Japanese are getting more interested in health. Concept of the healthy elite; the elite must be healthy. Influence of U.S. vegetarians. Popularization of long-life [Aseptic / UHT] packaging [which has a long shelf life, even without refrigeration]. The flavor of soymilk has improved greatly. Mass communications in Japan took an interest in soymilk. Japan's dairy milk industry (Meiji Nyugyo, etc.) got interested in soymilk which gave a impetus to the new industry.

JAS [Japanese Agricultural Standards] were established for soymilk.

Note: The above are not in any particular order. They came out of a conference on soymilk.

4086. Smith, Robert Archer. 1983. Work with and recollections of Henry Ford (Interview). Conducted by Richard B. Folsom of Canton Township, Michigan. Aug. 15. 37 p. typed transcript.
• ***Summary:*** Robert A. Smith was born in Detroit, Michigan, on 1 April 1913. He spent much of his childhood in Detroit. In 1926 he entered the Ford Trade School and graduated as valedictorian of his class in 1930 at age 17. In 1931 he was placed in charge of the Greenfield Village Experimental Greenhouse, trying to find out how waste materials from farms could be used as plant fertilizers. Henry Ford would come in and chin himself on a beam in the Greenhouse. Bob Boyer, who was in charge of the chemical plant, was Smith's boss. Beginning in late 1933, Bob began to work under the personal direction and guidance of Henry Ford on many unique projects. Henry Ford was so impressed with Bob that in the spring of 1937, he invited Bob and his wife (Roberta) to move into the "Square House," which Ford had built himself in 1888. The Smiths moved into the house on Henry Ford's 74th birthday–July 30, 1937. Also in 1937, Henry Ford ordered a laboratory built for Bob in another former Ford residence, the "Moir House." Bob worked in the "Moir House" until 1942 when he was ordered by Henry Ford to move into the new Carver Laboratory, which was formerly the Dearborn Waterworks. In 1943 Bob co-founded Delsoy Products Corp. (with Henry Ford's complete approval) to develop, produce, and market soy-related foods. Bob ended his career with the Ford Motor Co. in Aug. 1945, when it became apparent to him that Henry Ford would soon retire. The two men had worked very closely together for 12 years. Bob chose not to continue to work without the guidance, inspiration, and genius of Henry Ford. Bob retired from Delsoy in 1963.

In early 1937 Henry Ford drove Smith over to Moir House and on the way told Smith about how he would like to get rid of cows. Ford asked Smith to work at Moir house to develop a milk that made no use of cows. The Moir House lab was very simple, with the only electricity generated by a windmill. Nearby, Dr. Edsel Ruddiman had a modern lab with fancy equipment and electricity. Nevertheless, Smith's approach was to isolate the various components of the soybean (protein, fats, etc.), then re-blend those that were desired. He blended isolated soy protein (from soybean meal) with hydrogenated soy bean oil and in a few months had a product that looked and tasted quite a bit like milk. Ford came by every day to see how things were going and to offer encouragement and suggestions. The day this new product was ready, Ford liked it a lot. He wrote in his little book: "First... Good Milk... No Cow!, then he showed Smith the notebook. This was in about mid-1938. Henry came to the Moir House lab to relax and get away from the pressures of work. He was a good teller of stories and jokes when only a few people were around.

After Henry's son, Edsel, died in about 1943, Henry's health began to decline. He never seemed to be the same again. The sparkle went out of his eyes and his energy declined.

Smith regrets that he never visited Henry Ford at Fair Lane during his last years when he was sick in bed. "I think he would have liked to have known what I was doing with the soybean milk project. You know we had made it a commercial success [through Delsoy Products]." Mr. Smith greatly enjoyed his association with Henry Ford. Next to his wife, Ford was the most important person in his life.

David L. Lewis (1976, p. 486) says of the square house: "In addition to Fair Lane, four dwellings in which the Fords lived remain. The 'square house' or 'honeymoon house,' which Clara designed and for which Henry cut the timber and helped build, was the couple's home from 1889-91. Ford always kept a watchful eye on the place, and in 1937 installed a young company chemist, Robert Smith, and his family in it. When the structure was threatened by highway expansion in 1952, the Smiths removed it a few miles west to 29835 Beechwood, Garden City." Address: Smith: 26351 Hollywood Ave., Roseville, Michigan 48066; Folsom: 46000 Geddes Rd., Canton Township, Michigan (near Dearborn). Phone: Smith: 313-777-5394. Folsom: 313-495-1379.

4087. Bryan, Ford R. 1983. Dearborn's Chemical Park. III. The Carver Food Laboratory. *Dearborn Historian* (*The*) No. 3. p. 90-97. Summer. [23 ref]
• ***Summary:*** A good overview of Henry Ford's work with soybeans starting in about 1930 when Robert Boyer was brought to Dearborn to work at Greenfield Village and put in charge of the Chemical Plant. Ford's stated objective was to "find industrial uses for farm products." "Mr. Boyer's summary of the first year accomplishments describes work

extracting oils from orange peels and furfural from garbage, as well as work on wheat, soybeans, and carrots. Boyer's 1931 summary report [i.e. report of work conducted during the year 1931, written in Jan. 1932] was sent to Mr. Ford at Fort Myers, Florida... In a separate building near the Engineering Laboratory in Dearborn, Dr. Edsel Ruddiman, Henry's boyhood schoolmate, was working with wheat, soybeans, carrots and tomatoes to 'make milk without a cow.'

"In 1932 [sic, Dec. 1931] Mr. Ford issued orders to concentrate on the soybean. His tractors began to plant and harvest thousands of acres. In a 25-acre field on Greenfield Village property some 500 experimental varieties of soybeans were grown. In Sept. 1932 Dr. Ruddiman and Mr. Boyer attended the American Soybean Association convention in Washington, DC. That year the Village Chemical Plant was extracting 6 tons per day of soybean oil. The Rouge plant started with 24 tons a day, followed by the Milan and Saline plants. These industries utilized the oil in making paints and plastics. The small Village Plant led the parade, however, with soybean milk, bread, ice cream, and an experimental plastic car (chassis excluded). The soybean foods became standard fare at the Ford plant cafeterias and at Ford Hospital. The ice cream–most delicious–was for years sold as Del(icious) Soy(bean) Topping" [i.e. Delsoy Topping; actually it was a soy-based whipped topping, not an ice cream].

Ford had known of the work of Dr. George Washington Carver since about 1910 but they probably first met in 1936 at the Second Dearborn Conference of the National Farm Chemurgic Council. Both were vegetarians with similar interests, and firm believers in natural foods. Dr. Carver's assistant, Mr. [Austin W.] Curtis, spent the summer (ca. 1940) working with Robert Boyer in The Soybean Laboratory.

In July 1942 Dr. Carver came to Dearborn and dedicated the "Nutritional Laboratory" of the Ford Motor Co. It was in the old Water Works building. Soon the laboratory, with its eventual 25 people under Mr. Robert A. Smith, went into volume production of soybean milk and ice cream. On 5 Jan. 1943 Dr. Carver died in Tuskegee, Alabama. The Nutritional Laboratory, soon better known as the Carver Laboratory, operated for at least a while after 1945, when Robert Smith left to go into business for himself, and Clem Glotzhober took charge. After Mr. Ford died on 7 April 1947, the building was again essentially abandoned. Address: Dearborn, Michigan.

4088. Bryan, Ford R. 1983. Dearborn's Chemical Park. III. The Carver Food Laboratory. *Dearborn Historian* (*The*) No. 3. p. 90-97. Summer. [23 ref]

• ***Summary:*** A good overview of Henry Ford's work with soybeans starting in about 1930 when Robert Boyer was brought to Dearborn to work at Greenfield Village and put in charge of the Chemical Plant. Ford's stated objective was to "find industrial uses for farm products." "Mr. Boyer's summary of the first year accomplishments describes work extracting oils from orange peels and furfural from garbage, as well as work on wheat, soybeans, and carrots. After Mr. Ford died on 7 April 1947, the building was again essentially abandoned. Address: Dearborn, Michigan.

4089. **Product Name:** [Biodelis {Soy Beverage}].
Foreign Name: Biodelis.
Manufacturer's Name: Galactina Ltd.

Manufacturer's Address: Birkenwej 1-6, CH-3123 Belp, Switzerland.
Date of Introduction: 1983. August.
New Product–Documentation: Soya Bluebook. 1985. p. 85; 1986. p. 104. Talk with Conrad Seewer of Galactina. 1990. May 21. This product is for clinical feeding. Made from whole soybeans, it is made for medical use and marketed only to clinics and hospital, not to the consumer. It is a liquid food in Tetra Pack. It is a complete meal for people on liquid or partially liquid diets.

Talk with Peter Speck. 1990. May 23. Vita Drink is sold in Switzerland. It is very similar to Biodelis, which is sold only in France. The base and flavors are the same but the vitamin and mineral content is slightly different to meet the different regulations in each country.

Letter from Conrad Seewer of Galactina. 1990. July 13. The first exports to France were in Aug. 1983. No labels are available.

4090. **Product Name:** [Lima Soy (Organic Soymilk)].
Foreign Name: Lima Soy.
Manufacturer's Name: Lima Foods. Made in Belgium by Alpro.
Manufacturer's Address: Edgar Gevaertdreef 10, B-9830 Sint-Martens-Latem, Belgium.
Date of Introduction: 1983. August.
New Product–Documentation: Richard Leviton. 1983. Nov. Alpro makes the soymilk for Lima using organically grown soybeans from France. These are twice as expensive as regular soybeans.

Letter from Bernard Storup. 1984. March 22. One new type of soymilk is Lima Soya Drink, sold by Société Lima-Andiran, made by Vandemoortele Co. [Alpro] in Belgium. It uses organic soybeans, is non-sugary and Tetra Packed.

Leaflet. 1986. Lima Natural Gourmet Recipes from Europe. Contains a color photo of all products. Label reads: "Filtrat de soya."

Lima catalogue, price list, and color product brochure. 1989. Shows the Label. Tetra Brik carton. Blue and white on light green. An illustration (line drawing) shows white soymilk being poured into a glass. "Lima Soy is a filtrate of yellow soybeans obtained without additives. The filtrate of soya is light and nourishing. It contains no cholesterol and few calories for its high protein value." Note the interesting name of this product. Traditionally, the term "soy" used in a product name such as this would refer to a type of soy sauce. Now, in part because of European dairy laws forbidding use of the term "soymilk," the term "soy" has come to refer to soymilk, rather than soy sauce.

Label sent by Anthony Marrese. 1990. Jan. Liter carton. Dark blue and white on green. "Filtrate of organically grown soya. Without addition of sugar. Best before 12-06-90." Written in Dutch, French, German, English, Italian, Spanish, Danish, Swedish, and 1 other language. Nature et Progres logo. CINAB logo.

Form filled out by Philippe Vandemoortele of Alpro. 1991. Sept. 4. Soymilk made with organically grown soybeans by Alpro for Lima Foods was introduced in Aug. 1983.

4091. Liu, Dong-sheng; Liu, Sheng-jie; Chou, Chi-yuan. 1983. [Studies on milk substitutes. XI. The nutritive value of Guang Ming soybean milk-substitute on rats]. *Ying Yang Hsueh Pao* (*Acta Nutrimenta Sinica*) 5(3):215-24. Aug. [17 ref. Chi; eng]
Address: Inst. of Health, Chinese Academy of Medical Sciences, Beijing, China.

4092. Mermelstein, Neil H. 1983. Soy-oats infant formula helps fight malnutrition in Mexico. *Food Technology* 37(8):64-72. Aug.
• ***Summary:*** Contents: Introduction. The benefits of Soyaven. The product (incl. the formula, nutrient analysis, and photo of the container). The process (totally dry; the soybeans are cooked at 320ºF for about 90 seconds in a low-cost extruder that generates heat by friction). The development (history of the concept and product from March 1978). Photos of key people involved in the development of the product (incl. Dr. Francisco R. del Valle, Dr. Hector Bourges, Joaquin Ponce Aguirre) and of the PADSA plant. Other products. "The development and commercialization of Soyavén, a nutritious, low-cost infant formula that is helping to alleviate malnutrition in Mexico, has earned the 1983 Food Technology Industrial Achievement Award... This year, the award is presented to Fundación de Estudios Alimentarios y Nutricionales, A.C. (Food and Nutrition Studies Foundation, hereinafter referred to as Fundación) and Productos Alimenticios Delicias, S.A. de C.V. (Delicias Food Products, hereinafter referred to as PADSA). Both organizations are located in Chihuahua, Mexico's largest state. Fundación is located in the city of Chihuahua, the state capital, and PADSA is located in the city of Delicias, 50 miles to the south, in one of the state's most important agricultural districts. Fundación was founded in October 1980... PADSA, established in 1977, manufactures and distributes Soyavén throughout Mexico... Soyavén is a powdered infant formula based on soy and oats (*soya* and *avena* in Spanish)."

Commercial production of Soyavén began in July 1979. In November 1981, Soyavén was presented the National Bank of Mexico's 1980 Science and Technology Award for its value in fighting malnutrition in Mexico. Soyaven sells for about half the price of the least expensive milk-based infant formulas in subsidized Conasuper stores. Currently 48,000 cans per month are being sold throughout Mexico, most in Mexico City. Address: Assoc. editor.

4093. **Product Name:** [Soy Harmony Powdered Soymilk {With Added Vitamins and Methionine} (Prune, or Royal)].

Manufacturer's Name: Nihon Harmony K.K.
Manufacturer's Address: Tokyo, Japan.
Date of Introduction: 1983. August.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Toyo Shinpo. 1984. Feb. 21. It can be added to hamburger, meatballs or other meat dishes to give more protein or made into a drink or dessert. 450 gm can costs 4,000 yen.

4094. Qi, Jin-ling; Qing, Ke-xian; Chang, Ying; Chou, Chi-yuan. 1983. [Studies on milk substitutes. XII. The nutritive value of a spray-dried soybean milk su-substitute as compared with those of whole cow's milk powder and human milk]. *Ying Yang Hsueh Pao* (*Acta Nutrimenta Sinica*) 5(3):225-36. Aug. [9 ref. Chi; eng]
Address: Inst. of Pediatrics and Inst. of Health, Chinese Academy of Medical Sciences, Beijing, China.

4095. Shurtleff, William. 1983. Log of soyfoods research trip to Hong Kong, China, Singapore, and Japan: May 29 to July 10, 1983 (Unpublished report). Soyfoods Center, P.O. Box 234, Lafayette, CA 94549 USA. 117 p. Aug. Unpublished manuscript.
• ***Summary:*** Contents: Hong Kong: K.S. Lo and Vitasoy. May 29 (Sunday)–Plane from Hong Kong to Guangzhou City (Canton) in Guangdong (Kwantung) province. China: Guangzhou (May 29-30), Zhengzhou, Beijing, Harbin, Beijing #2 (Scurlock, Chen Xi-Hau, Joe Rakosky, Terrence Foley, local markets, vegetarian deli). Singapore: STS and Anders Lindner, Alan Yeo, American Soybean Association (Don Bushman, Sabrine Lee, Lars Wiederman).

Japan: Seiyu department store, Kibun, ASA Tokyo (Ms. Kojima), Kanji Tsuchiya, Japan Soymilk Assoc., Sano Rinji, Kikori, Prasad and natural foods, Goro Kanasugi and tempeh, Tsuchiya soymilk #1, Kikkoman at Noda (Yokotsuka #1, Mizunuma, Plant #6 modern, Yokotsuka #2, Goyo Gura, Noda Museum, Noda Library, Mr. Ichiyama), Morinaga, Kikkoman Tokyo, Japan Packaged Tofu Assoc., Natto statistics, Asahimatsu, Natto-tempeh meeting, Mr. Katoh, Nakano Masahiro, Mr. Iitsuka of Kikkoman, Daizu Shokuhin Kaihatsu, Tsuchiya #2, Nagayama, soynuts, oil association, kinako, Ishige, Mr. Mori and soy sprouts, Katoh, Arai-san, Kodansha, Nagayama and kinako, Dr. Nakano #2, Arai shoyu, Tsuchiya #3, Tenmi. Address: Lafayette, California.

4096. Shurtleff, William; Aoyagi, Akiko. 1983. The book of tofu. 2nd ed. Berkeley, California: Ten Speed Press. 336 p. Illust. by Akiko Aoyagi Shurtleff. Index. Aug. 28 cm. [321 ref]
• ***Summary:*** Three parts of this new edition have been extensively revised and updated: (1) "Tofu Makers in the West" (p. 313-16) has been updated and now includes 310 tofu producers in the Western world (with the name, address, phone number, and contact person for each company), arranged by state or foreign country. This is the only tofu book containing such a directory.

(2) The "Bibliography" (p. 319-324) has been greatly expanded and updated. It now contains 321 publications on tofu, including all known scientific and nutritional journal articles, the 33 books about tofu written in North America since publication of the first edition of *The Book of Tofu* in 1975, and other key articles and books about tofu from East Asia and Europe, the earliest from Europe dating back to 1613!

(3) An updated listing of "People and Institutions Connected with Tofu" in the U.S. and around the world, including researchers, major tofu manufacturers in Japan, trade associations, publications, equipment dealers, and tofu apprenticeship programs.

The "Glossary" (p. 325-27) has been condensed to make space for the expanded bibliography and back matter. There is a new page about the Soyfoods Center (p. 333). The page "About the Authors" (autobiographical) has been expanded, and the photograph has been updated. "Sending Tofu to the Four Directions" (p. 335) and the inside rear cover have both been updated. Still contains 500 vegetarian recipes–both western and eastern style.

Note: A news release of 17 Aug. 1983 states: "The Book of Tofu, which introduced the Western world to tofu and inspired the founding of more than 200 tofu shops and soy dairies in North America, has sold 340,000 copies to date, making it the world's best-seller on this popular new 'protein source of the future.'" Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

4097. Shurtleff, William; Aoyagi, Akiko. 1983. History of soyfoods in China. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 19 p. Aug. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. Contents: Introduction: Soyfoods widely used in all parts of China. Overview of Chinese food and diet. Animal products and soyfoods as protein sources in China. China's great cuisines and soyfoods. General characteristics of Chinese soyfoods industry. Information on soyfoods. Soy trade associations. Attitudes toward technology, modernization, and traditional soyfoods. Private enterprise, bureaucracy, and competing ministries. Availability of soyfoods. Address: Lafayette, California. Phone: 415-283-2991.

4098. Anderson, Jack. 1983. Inquiry about infant formula heeded too late. *Washington Post.* Sept. 1. p. VAN21, or VAC21, or VAS19, or MDP15, or MDM17, or DC13.
• ***Summary:*** About Neo Mull Soy, an infant formula made by Syntex Laboratories, Inc., of Palo Alto. In March 1978 Syntex decided to stop adding sodium chloride (table salt) to Neo Mull Soy. Yet chloride is an essential nutrient for babies.

Unfortunately, Syntex had stopped testing for chloride a few months before it changed the formula. "No one knows how many babies who took Neo Mull Soy have experienced disorders in later years." One parent whose son was affected describes what happened. When Neo Mull Soy was recalled in Aug. 1979 it was to late to help her son.

Syntex added sodium chloride back into their infant formula and relaunched it in Sept. 1979. But because of poor sales, the company stopped making Neo Mull Soy in the fall of 1980.

4099. *Toyo Shinpo* (*Soyfoods News*). 1983. Tônyû paudaa [Soymilk powder; Kyushu Nyugyo {Kyushu Milk Co.} is developing it] Sept. 1. [Jap]
• ***Summary:*** It has no soy or "beany" flavor and dissolves well.

4100. *Toyo Shinpo* (*Soyfoods News*). 1983. Tônyû paudaa [Marusan changed its name to Marusan-Ai in Jan. 1983]. Sept. 1. [Jap]
• ***Summary:*** The word "Ai" is written with the character meaning "Love." Marusan has also launched a new Matcha (green tea) soymilk, but Nisshin came out with that flavor first.

4101. *Toyo Shinpo* (*Soyfoods News*). 1983. [Japan soymilk sales in 1982 were 12,500 million yen, up 56% over 1981]. Sept. 1. [Jap]

4102. K.S. Lo., Chairman, The Hong Kong Soya Bean Products Co., Ltd. (Photograph). 1983.
• ***Summary:*** K.S. Lo, founder and chairman of HKSBP, standing next to a case of Vitasoy soymilk at the company's main plant in Hong Kong.

4103. Shurtleff, William; Aoyagi, Akiko. 1983. Dr. Charles E. Fearn and Fearn Soya Foods: History of work with soyfoods. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 17 p. Sept. 2. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. Contents: Introduction: Summary, unfortunate lack of documentation. Early years in Europe: Birth in about 1869-71 in Cook County, England, he was married in England and became a physician, research showing that vitamin B was not a single vitamin but a group or complex of vitamins, not clear how introduced to soyfoods (though possibly through Solac, England's first soymilk), work during World War I as a physician in the English Royal Army Medical Corps in charge of a hospital in England. Early work in the USA (1917-1929): Called by President Wilson, quote from Paul Richard's history, interesting that a British physician

took such an interest in soyfoods and work with farmers, founded Soyex Co. in New York (1920) according to Richard 1955, moved to Chicago and started Fearn Labs (1923), founded Fearn Soya Foods Co. (1925), familiarity with Berczeller, analysis of coin collection for clues to travels, in Europe in 1929, first documentation of involvement with soy (1929), director of Soya Flour Mfg. Co. in London on the way to the U.S., treatment of infant allergies with soy as a substitute for milk. Soyex Co. and Fearn Soya Foods (1930-39): Horvath (1933) discusses Soyex Co. in Nutley, New Jersey, pamphlets written before 1934, strong opinions (whole soy flour far superior to defatted soy flour, too much carbohydrate in American diet, soy flour should be made from a blend of soybeans), sold Fearn Laboratories (1934) and turned Soya Food Products over to it, later history of Fearn Labs, establishment of Fearn Soya Foods Co. (1935), many new products, list of products with earliest date of mention, pamphlets by Fearn Soya Foods 1935-38, sales to health food market by trying to reach physicians, switch from making soy flour to buying from Shellabarger (1937) and Spencer Kellogg (1946), Los Angeles business with Thomas J.M. "Malcolm" McBride, Viana "scientific reducing diet" fiasco, McBride sets up own company and slanders Fearn, friendship with LeClerc of USDA. 1940-59: World War II helped Fearn's shrinking product line, establishment of Soy Food Mills with Richard Thomas, Golden Soy Griddle Cake Mix, encourages USDA to develop soy fortified foods for famine relief (1946), development of soup base seasonings with Harry Belleville in San Clemente, California, death in June 1949 at about age 79 at a (mental?) hospital in Elgin, Illinois (near Chicago), purchase of company in Sept. 1949 for $500 by Paul Richard, summary (good ideas, poor businessman), hardships for Paul Richard in 1950's (loss of formulas, 1955 flood). 1960-1980's: Death of Paul Richard in 1960, takeover of business by son Elwood, sale to brother Lou in 1970, real growth starting in 1973, 1982 name change to Fearn Natural Foods, same strong commitment to soy. Address: Lafayette, California. Phone: 415-283-2991.

4104. Tsuchiya, Kanji. 1983. Re: Soymilk in Japan. Letter to William Shurtleff at Soyfoods Center, Sept. 6. 1 p. Handwritten. [Eng]

• ***Summary:*** "Thank you for sending me your book with your letter. I am very glad you described the Tokyo Soy Meal-Nikkan soymilk process and my work."

Thank you also for telling other soymilk companies about me and my work. At the end of July I received a letter from Mr. Anders Lindner of Soya Technology Systems (STS) in Singapore. He asked if he could me meet here in Japan in September. I replied saying that would be fine. We have not yet decided a date. Sincerely,... Address: Tokyo [Technical consultant, Okazaki Marusan, Japan].

4105. Shurtleff, William. 1983. Re: Joint venture with K.S. Lo to have books by Shurtleff and Aoyagi translated into Chinese and sold in China. Letter to Mr. K.S. Lo, Hong Kong Soya Bean Products Co. Ltd., 41, Heung Yip Rd., Aberdeen, Hong Kong, Sept. 24. 2 p. Typed, with signature (carbon copy).

• ***Summary:*** "I was so pleased to see you again in San Francisco and to have found a way that our two companies can work together to mutual benefit. I am very excited about having our books translated into Chinese, starting with *Tofu & Soymilk Production.* If that is successful, I hope we can explore publication of our *Book of Tofu* in Chinese as well. This book also contains extensive information on soymilk.

"As I understand our agreement, we will proceed as follows: 1. You will find a quality translator and arrange to have the book translated at your expense." Three other basic ideas are listed.

Note: Mr. Lo took the book to various publishers in China and Hong Kong, but none were interested in publishing it. What could the Chinese possibly learn from a Westerner about making tofu or soymilk? So the project never got off the ground. Address: Director, Soyfoods Center, P.O. Box 234, Lafayette, California. Phone: 415-283-2991.

4106. Chen, Steve. 1983. Re: Per capita consumption of soyfoods, soybean curd (wet), and fresh milk in Taiwan, 1964-1981. Letter to Mr. and Mrs. Bill Shurtleff, Director and Associate Director, The Soyfoods Center, P.O. Box 234, Lafayette, CA 94549, Sept. 27. 4 p. Typed, with signature on letterhead.

• ***Summary:*** Steve recently visited Soyfoods Center and he thanks Akiko for the "delicious and nutritious lunch" she cooked.

A full-page table shows: "Taiwan: Per capita consumption of soyfoods, soybean curd (wet), and fresh cow's milk in Taiwan (in Kg). Soyfoods have increased from 1.08 kg in 1964 to 2.76 kg in 1981, Soybean curd [tofu] (wet) has increased from 18.75 kg in 1964 to 32.77 kg in 1981. Fresh [cow's] milk has increased from 0.93 kg in 1964 to 2.69 kg in 1981.

Total production of cow's milk (in metric tons) has increased from 13,650 in 1965 to 47,740 in 1980. Source (for the first 3 columns of statistics): (1) Food Balance Sheet, Council for Agricultural Planning and Development. Source (for the last column): *Taiwan Agricultural Yearbook.*

Dr. Chen then gives some names and addresses connected with soyfoods: (1) Official in charge of Farmers Association's soymi1k operations: Mr. S. Lee, Chief, Food Processing Dept. Council for Agric. Planning & Development (CAPD), No. 37, Nan Hai Road, Taipei, Taiwan ROC. Tel: 3317541.

(2) Agency involved in soyfood research: Dr. Paul Ma, Director, Food Industry Research & Development Inst., No. 233, Shih-Ping Road, Hsin-chu, Taiwan ROC. Tel: (035)-

223191-193.

Makers of instant soymilk powder and full-fat soy f1our: (1) Mr. C.K. Lin, Chairman. Milestone New Foods Co. Ltd., 86 Chung-Hsiao Road Taichung, Taiwan ROC. Tel: (042)-223451.

(2) Mr. C.S. Wang, Chairman, Way Cheien Industrial Co. Ltd., No 6, Kong 7 Road, You-shih Industria1 Dist., Ta-chia Cheng, Taichung County, Taiwan ROC. Tel: (046)-814462, -811390.

Taiwan Soysauce and Condiment Association, 4th floor, No. 24, Pei-Ping Road, Taipei, Taiwan ROC. Tel: 341-0739, 351-7726. Mr. S. C. Chow, President.

Makers of Packaged Tofu: (1) Heng-Yi Food Ind. Co. Ltd., 687, Chien-kong Road, Shan-Ming District, Kaohsiung, Taiwan ROC. Tel: (O7)-3843939, -3823041 C.C. Lu, Chairman.

(2) Chia Yun Food Co. Ltd., No. 1, Chien-Kong Road. Chia-Tai Industry District, Tai-pao Hsiang, Chia-yi, Taiwan ROC Tel: (052)-372386, -372387 M.S. Tsai, Chairman.

(3) Nan-Yang Tofu Plant, No. 55, Lane 301, Nan-Yang Road Feng-Yuan, Taichung, Taiwan ROC. Tel: (O45)-232988. J.H. Chang, Chairman.

(4) Huang-Ta-Mu Food Co. Ltd., 56, Ho-Ping Road, Ta-Hsi, Taoyuan, Taiwan, ROC. Tel: (033)-882055. P.H. Huang, Chairman.

(5) Wang-Li-Hsiang Tofu Co., 123, Chung-Yang Road, Ta-Hsi, Taoyuan, Taiwan, ROC. Tel: (033)-882262. C.W. Chiang, Chairman.

(6) Hsuan-Fu Enterprise Co. Ltd., 4, First Industry Road, Yung-Kuan Village, Ping-Cheng Hsiang, Taoyuan, Taiwan ROC. Tel: (033)-593172. S.H. Kou, Chairman. Address: PhD, Country Director/Taiwan, American Soybean Association, P.O. Box 3512 Taipei, Taiwan, R.O.C.

4107. American Academy of Pediatrics, Committee on Nutrition. 1983. Soy-protein formulas: Recommendations for use in infant feeding. *Pediatrics* 72(3):359-63. Sept. Summarized in American Family Physician, April 1984. [56 ref]

• ***Summary:*** Contents: Introduction. Composition of soy-protein formulas. Use in full-term infants. Use in lactose intolerance and galactosemia. Use in premature infants. Management of cow's milk allergy. Prophylaxis of allergic disease in newborn infants. Treatment of colic. Conclusions and recommendations.

Soy protein formulas account for 10-15% of infant formulas currently used in the USA. While less allergenic than cow's milk, they may still cause allergies in infants. Address: USA.

4108. Farm Foods. 1983. American Soybean Association samples soy milk and Ice Bean (News release). 156 Drakes Lane, Summertown, TN 39483. 1 p. Sept.

• ***Summary:*** 2,800 people attended the annual ASA meeting in Nashville, Tennessee. They sampled soymilk and Ice Bean. "The products we tasted were excellent," said Ed Quinones, division Manager from Asia and Latin America. Address: Summertown, Tennessee.

4109. Fruin, W. Mark; Shurtleff, William. 1983. A soyfoods training center network: Soyfoods technology transfer from the United States and Japan to East, Southeast, and South Asia. Palo Alto, California. 29 p. 28 cm.

• ***Summary:*** Contents: 1. Introduction. 2. Japan: Asia's leading source of soyfoods technology. 3. America: World's leading supplier of soybeans. 4. Soybeans in U.S.-Asian economic and trade relations. 5. The aims of this proposal. 6. Groups interested in expanding food uses of soybeans in Asia. 7. The Sri Lanka success story. 8. United States-Japan soyfoods technology transfer. 9. Project investigators, collaborators, advisors. 10. Conclusion.

Note: This Fulbright grant proposal was submitted on 28 Sept. 1983 to Ms. Jennifer Keefe, Program Officer, Council for International Exchange of Scholars, Eleven Dupont Circle, N.W., Washington, DC 20036. Accompanying it were CVs for Fruin and Shurtleff, plus letters supporting the project from the following collaborators: Kanji Tsuchiya (Japan), Gunnar Lynum (American Soybean Assoc. director for Japan), Tokuji Watanabe (Prof., Food Science Lab., Kyoritsu Women's Univ., Japan), Harold E. Kauffman (INTSOY Director, Urbana, Illinois), Michael A. Phillips (Director, Market Development, ASA, St. Louis, Missouri), and P.S. Bhatnagar (All India Coordinated Research Project on Soybean, G.B. Pant Univ. of Agriculture and Science, Pantnagar, UP, India). Address: 1. Prof., 4060 Amaranta Ave., Palo Alto, California 94306; 2. Director, Soyfoods Center, P.O. Box 234, Lafayette, CA 94549.

4110. **Product Name:** Green World Festive Frozen Dessert (Non-Dairy Tofu Ice Cream) [Carob, Carob Mint, Vanilla, Strawberry, Blueberry, Piña Colada, Raspberry, Banana-Coconut, Tofrutti].
Manufacturer's Name: Green World, Inc.
Manufacturer's Address: Mayfield Stage, Boise, ID 83706.
Date of Introduction: 1983. September.
Ingredients: Tofu, soymilk, honey, oil, carob, lecithin, vanilla.
Wt/Vol., Packaging, Price: 16 fluid oz (1 pint). Retails for $1.19 to $1.25.
How Stored: Frozen.
New Product–Documentation: Boise Statesman. 1984. June 6. Shurtleff & Aoyagi. 1985. Tofutti & Other Soy Ice Creams. p. 77. Interview with James Herrington. 1987. Dec. 30. The Tofrutti flavor, introduced in the fall of 1983, was before he had ever heard of Tofutti. It contained pineapple, orange, banana, and apricot. The first two flavors were carob and carob mint. This is their second most successful and

profitable product after tofu.

4111. Leviton, Richard. 1983. Report on soyfoods research trip across America, September 1983. Colrain, Massachusetts. 8 p. Unpublished typescript.
• ***Summary:*** Visited or discusses: Grainaissance (makes amazake and mochi), Brightsong (Dik / Richard Rose), Sonoma Specialty Foods (California), Northern Soy (Rochester, New York), Southwest Soyfoods (Richard Jennings), White Wave (Steve Demos, Boulder, Colorado), Quong Hop & Co. (South San Francisco, California), Modern Fare (Loveland, Ohio), Soyfoods Unlimited (Valerie, Gary and John Robertson, San Leandro, California). Soyfoods Center (Lafayette, California), Soyfoods of America (Doug Fiske and Ken Lee, Los Angeles), Real Foods (Polk St., San Francisco), Tumaros (Los Angeles), Unicorn (Terry Dalton, Florida), Japantown and Rainbow Grocery (San Francisco), Berkeley Natural Grocer and Berkeley Co-op (Bob Gerner, California), Hinode Tofu Co., Edensoy, Farm Foods, New England Soy Dairy, and Nasoya (Leominster, Massachusetts). Legume (Gary & Chandri Barat, New York City), Lotos / Lotus Cafe (Greg Weaver, Rochester, New York).

NRRL (Hesseltine and Wang, Peoria, Illinois): Their work is in mixed starter culture fermentation, vitamin B-12 work. Japanese man from Tokyo to work one year on natto at NRRL, paid by Japanese government. B-12 can withstand some heat during cooking and the percentage of B-12 lost depends on the initial percentage present. Natto research: examine all Japanese publications for review article. Experiment using U.S. soybeans to make natto since the Japanese buy Chinese beans for their thinner seed coat. See what happens to the oil to protein ratio during fermentation. Natto as such has no possibilities in the U.S. as it is a slimy food with a rotten smell; hard to tolerate. There might be vitamin B-12 in natto produced by *Bacillus subtilis.* Koreans have done lots of B-12 research with kimchee and other pickled vegetables. Earl Swain died this summer of a heart attack at age 36. Natto research will help U.S. soybean exports. USDA bureaucrats are making it difficult for Dr. Hesseltine to do natto research. They have 65 objectives, but Dr. Wang's projects don't fit any of them clearly, so they won't mention "food" in their research outlines, just fermentation methods. Secretary of Agriculture John Block [served 1981-86 under President Ronald Regan] says the U.S. needs more ag exports and more basic information about crops uses, so he is in support of this natto research.

Out of business: Michiana Soyfoods, St. Ignatius shop, Sunshine Soy, Heartsong, probably Joy of Soy and a Korean shop in Salt Lake City, Utah.

Concerning soymilk: 10. In Oak Park, Illinois, a natural foods retailer says Edensoy outsells San-J by two to one. (Note: San-J imports "To-Neu Natural Soy Beverage" made in Japan by Kibun). Teenagers buy the carob Edensoy along with popcorn in the store, and use it as a soft drink. But most retailers say the Eden package [stand-up foil retort pouch] is a disaster; it is impossible to open without scissors, then if you squeeze, it sometimes spills out. San-J [in a Tetra Brik carton] is convenient but the taste is poor and the front graphics are confusing–too many words and images. According to Shurtleff, both are inferior products compared to Japan's best.

22. Concerning Edensoy at the NNFA show in Denver, Colorado: Mike Potter says "it went over great." He sold two container loads right away. People liked the package and the taste. About 4,000 people sampled it and were "generally amazed." The results were as good as they could want; it generated interest and excitement. Now they are setting up the distribution system. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

4112. **Product Name:** Tofu, Soymilk, Soymilk Yogurt.
Manufacturer's Name: Merrickville Bakery & Tofu.
Manufacturer's Address: St. Lawrence Street, Merrickville, ONT, K0G 1N0, Canada. Phone: 613-269-3200.
Date of Introduction: 1983. September.
New Product–Documentation: Form filled out by Steven Rowat. He uses 2 lb/day of dry soybeans. The tofu shop does not have its own name. Started 15 Sept. 1983.

4113. **Product Name:** Tofu, and Soymilk.
Manufacturer's Name: Plenty Soyfoods.
Manufacturer's Address: P.O. Box 21, Mount Moorosi, Quthing District, Lesotho.
Date of Introduction: 1983. September
How Stored: Refrigerated.
New Product–Documentation: Talk with Peter Schweitzer of Plenty USA. 1994. June 7. Chuck Haren of Plenty helped to set up this soy dairy which had solar cells on the roof and was located inside a traditional, round Lesotho house with a thatched roof. Peter does not know whether or not it is still in operation.

Note: These are the earliest commercial soy products seen in Lesotho.

4114. Shurtleff, William. 1983. Notes from a phone talk with Richard Leviton concerning his trip across the USA in Sept. 1983 visiting soyfoods companies and giving talks. Lafayette, California. 3 p. Sept. Unpublished manuscript.
• ***Summary:*** Discusses: Nasoya, New England Soy Dairy (doing radio ads and videos in supers; making 45,000 lb/week of tofu), Hinode tofu, Lotus Cafe, Penguino's (chocolate is their favorite soy ice cream favorite), Northern Soy and Wegman's, Vegetarian Times, Emperor of Japan to give Dr. Clifford Hesseltine a high medal at the end of November, Bob Davis plans to move to Nevada City (California), Kraft bought 15 Okita packaging machines.

Richard Jennings, his marriage, Southwest Soyfoods, and chilled water as an alternative to pasteurization; his shop in Ecuador is now closed. Nasoya makes 22,000 lb/ week of tofu with no outside money. David Mintz was on Good Morning America talking about Tofutti. The Farm (Summertown, Tennessee) now makes only liquid soymilk, no powder. Tom Leonard and Jim Hemminger are selling tofu to Community Mercantile. Leonard was in Arkansas in 1977, first batch of miso in Dec. 1978. Now makes 500 lb/ week. Well Spring is a new miso maker in Colorado. White Wave (Boulder, Colorado) is making 12,000 lb/week of tofu and doing well financially, as new frozen entrees & nut butters, tofu lasagne. Edensoy is outselling SanJ soymilk by 2 to 1. Time magazine Sept. 19 insert. American Dietetic Assoc. will list tofu as a good protein source. Jim Cooley of Lawrence, Kansas. He started making tofu in 1977. Legume Inc.'s new product line out Oct. 5; lists names of each product. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

4115. Potter, Michael. 1983. Edensoy and Eden Foods (Interview). *SoyaScan Notes.* Oct. 3.
• ***Summary:*** Eden Foods has already sold 3 containers of Edensoy, imported from Japan. Each container holds 61,800 coil packs. People taste the carob first and they like it. But in both Australia and the UK, they switched to plain, making it the most popular there.

The Eden Foods warehouse was burned by arsonists outside the company. The principals took a lie detector test and passed with flying colors, then the insurance company refused to pay; so they had to settle out of court. Address: CEO, Eden Foods, Clinton, Michigan. Phone: 544-2781.

4116. Wilson, John C. 1983. Early work with soymilk and recent developments (Interview). *SoyaScan Notes.* Oct. 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Wilson has been involved with soymilk since 1967, when he was technical manager for Cold Storage Group (CSG) in Singapore and Malaysia. His background was in dairy technology. To help CSG launch a soymilk, he studied traditional tofu processes in Singapore, then mechanized the process. He set up CSG's first line in Kuala Lumpur in 1969, actually at Petaling Jaya, a satellite of Kuala Lumpur. The soymilk was sold under the Magnolia brand, but owned by CSG.

This was not the first soymilk in the area. Alfa-Laval sold Yeo Hiap Seng a UHT plant for soymilk operation in about 1967, and another in 1969.

Note: The 2nd plant in Singapore Shurtleff visited was owned by Cold Storage Group.

Wilson joined Alfa-Laval in 1971. Alfa-Laval was researching soymilk from a particular angle, with no success. By 1977 Wilson had been in Africa, Australia. He found a big demand for soymilk plants in Asia.

For Ace Canning, he designed the Lam Soon plant in Kuala Lumpur, Malaysia.

In 1978 sold a plant to Kickapoo, in Bangkok, Thailand, with reduced beany flavor soymilk, but strong cooked = burnt flavor. They copied the overcooked flavor of Greenspot, overcooked through sterilizing in the bottles.

Legislation in Bangkok says manufacturers must add 50% by weight of soybeans of nonfat dry milk (NFDM). This makes it a healthy product, if not it's a luxury product. Greenspot got this legislation passed after people developed a taste for Greenspot's product. Greenspot has been in business since the mid-1960s. That legislation has been in force from the mid-1970s until now. So it forces all soymilk to contain NFDM. There is a heavy tax on pure soymilk without NFDM.

Nestle started in about 1980 in Bangkok. They have not done well. But they had bad luck with Bonus in Singapore. The Department of Health banned its production claiming it was not properly sterilized.

The greatest successes: Vitasoy #1 in Southeast Asia. Kibun #1 in Japan. Kibun has now commissioned three new factories, which are now on stream. They use machinery from Alfa-Laval and from others. Alfa does the engineering, Kibun does the formulation

Alfa-Laval and Kibun have an agreement which was signed in late 1982. If a customer licenses the process from Kibun, Alfa-Laval will supply the plant. Kibun will supply technical know-how, formulation, and quality control, and receive the license fee direct. There are separate fees and no kickbacks between Alfa-Laval and Kibun. and Alfa-Laval can supply anyone else with plants. Kibun is expert in formulation and Alfa-Laval is strong in plant design.

The Japanese soymilk process is basically the Illinois process with a clarifier toward the end. He is surprised that the Illinois Patent office is not complaining. The basic concept is to inactivate the enzymes at the bean stage before grinding. However cooking prior to grinding dramatically lowers the protein yield to 40-45%. The key to a standardized way of comparing yields (of protein) is to specify an acceptable level of remaining fiber, which he suggests be l% or less by volume after a standard centrifugation test. If you have less fiber, you get much lower yields. We need an international standard for fiber.

Lawrence Johnson at the University of Texas claimed 82-85% protein yield with steam injection (*Journal of Food Science* 46(1): 239-43, 48) but Alfa-Laval's tests showed that it didn't work.

Wilson has a super set of color overhead projector slides on soymilk. Invite him back again to do a show for us.

Kibun uses its own process with Alfa-Laval equipment, not Alfa-Laval's process. Kibun licenses others to use its process then usually asks Alfa-Laval to supply the plant. Alfa-Laval buys grinders from Switzerland.

Alfa-Laval's most important contribution is not just the

equipment but the automated system and automatic cleanup = clean in place (CIP). Perhaps their main component is the Sterilizer. Two types = Steritherm or VTIS = Vacu therm. Japanese like this, but its expensive and expensive to run. And it strips out added fruit aromas.

Wilson (1983) said that US laws on UHT are ridiculous and antiquated. Makes it very expensive to build machines for the US market. The real problem is Not the hydrogen peroxide problem.

In killing = inactivating enzymes, the protein solidified in the fiber like hard-boiled eggs.

Alfa-Laval is in the lead in simplifying and automating tofu plants. They are now testing a plant that allows 1 man and a computer to make tofu from beans to packaging.

Cost effective soymilk: Absolute lowest output is 11OO liters/hr. Practical lowest is 1500 liters/hr. Local laws affect the price. They have many systems for different markets; China different from Japan. The really economical plant is 2,000 liters/hr.

The three key considerations in determining a plant are (1) The type of soymilk (beany or not) desired. (2) The type of packaging. (3) The output in liters per hour. Address: Soya Process Product Manager, Alfa-Laval, Box 1008, S-221 03, Lund, Sweden.

4117. Johnson, L.A.; Hoover, W.J.; Deyoe, C.W. 1983. Soymilk process. *U.S. Patent* 4,409,256. Oct. 11. 1 p. Application filed 13 March 1981. [7 ref]
• ***Summary:*** Based on direct infusion of steam into the soy slurry. Note: This is the earliest English-language patent seen with the term "Soymilk" in the title. Address: 1. College Station, Texas; 2-3. Manhattan, Kansas.

4118. Lindner, Anders. 1983. Soymilk worldwide and STS (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 20. 1 p. transcript.
• ***Summary:*** On Oct. 20 Anders Lindner, managing director of STS, visited Soyfoods Center, where this interview was conducted.

Seikensha built all the key Marusan soymilk equipment. Anders was shown through the Marusan plant in Okazaki.

Seikensha is a 55-year-old company. Ask for their catalog. They are now building small soymilk plants and dehulling equipment.

Deodorizer is the name for the vacuum stripper,

STS's best prospects for soymilk plants are in South Africa, Cameroon, Indonesia, India, Thailand, maybe Sinaloa, Mexico, China, and Taiwan. Taiwanese want to use soy protein isolates to keep investments low.

Tetra Pak's biggest competitor is Pure-Pak. Ex-Cell-O / Excello Corp. makes Pure Pak Machines. They make their money on the machines, and license the packaging to many local companies. Tetra's biggest competitor for aseptic packaging is Jagenberg Co. in Germany. Their packaging system is called Block Pack (sp?) Their aseptic system is called Combi Bloc. Get their address from the German consulate. Address: STS, Singapore.

4119. Owen, David. 1983. Freezer shock. *CalToday.* Oct. 23. p. 13-16.
• ***Summary:*** About Rich Products' Freeze Flo, which allows (for example) frozen strawberries to be soft and sweet and firm at temperatures far below freezing. "When Bob Rich graduated from the University of Buffalo, his father gave him $5,000. Bob used the money to make a down payment on a dairy. He disliked the milk business as intensely as his father did, but he wanted to assert his independence.

"During World War II, Rich worked for the War Production Board and was appointed milk administrator for the state of Michigan. His job was to divert excess milk supplies to thirsty American soldiers. One day he paid a visit to the George Washington Carver Laboratory, a research institution endowed by Henry Ford. The laboratory's principal activity was supplying Detroit's Ford Hospital with a product Rich had never seen before: milk made from soybeans.

"In a certain sense, Henry Ford's career can be viewed as a plot to eradicate large domestic animals. Having rendered the horse obsolete with his automobile, he had now set out to eliminate the cow. Carver scientists spent their days striving to realize their benefactor's vision of a cattle-free society. Periodically Ford threw parties for journalists at which he served nothing but milk, ice cream, hamburgers, cheese and other foods made from soybeans. He even built a soybean car.

"Ford's antagonism toward cows struck a chord in Robert E. Rich. Bob Rich, after all, was a second-generation hater of the dairy business.

"'I'd always said that the cow was the most inefficient manufacturing plant in America,' he explains. 'Its product is 87 percent water, and it's high in bacteria, and it has to be pasteurized...'

"In November 1944, he founded Rich Products Corp. to manufacture his invention, converting his dairy's garage into the production plant for the world's first non-dairy whipped topping. Its name: Whip Topping.

"At first, Rich distributed Whip Topping to the customers on his milk routes, billing it variously as 'the Miracle Cream from the soybean' and 'Gold from the Soil.' The early months were not a fabulous success. 'We were not chemists,' an employee later admitted. But gradually Rich refined his formula, and in 1946 he was invited to make a sales presentation to a refrigerated-food distributor on Long Island. He packed some samples in dry ice and newspaper and took the overnight train to New York.

"The following morning, while 50 salesmen looked on, Rich took out his samples and discovered with horror that they had frozen solid. He began to perspire. Cow's cream,

he knew, would not whip after freezing. 'I thought briefly about telling them I had brought them all together to unveil a great way to keep newspapers cold.' He stalled for as long as he could, then borrowed a knife and hacked nervously at his frozen soybean cream until he could fit the pieces into a mixing bowl. He held his breath. 'It whipped to perfection.'

"No one was more surprised than Bob Rich. But he had the presence of mind to realize that he had done more than escape from a potentially embarrassing situation: He had invented the world's first frozen non-dairy whipped topping. That meant that his market was no longer limited to Buffalo. Now he could sell Whip Topping anywhere in the world. Quite by accident, Rich Products Corp. had entered the age of frozen food."

4120. **Product Name:** Farm Soy Dairy Soymilk.
Manufacturer's Name: Farm Soy Dairy.
Manufacturer's Address: 156 Drakes Lane (P.O. Box 96), Summertown, TN 38483. Phone: 615-964-2529.
Date of Introduction: 1983. October.
Wt/Vol., Packaging, Price: ½ gallon plastic jugs.
How Stored: Refrigerated.
New Product–Documentation: Talk with Michael Lee, owner. 1988. Oct. 12. They make about 75 gallons a week.

4121. Isralow, Sharon. 1983. Beyond better nutrition: A close-up of potential multiplier effects of food aid, combined with other development resources, in Costa Rica. *Horizons.* Oct. p. 22-27.
• ***Summary:*** Discusses Costa Rica's first soybean processing plant, located on the outskirts of San Jose and run by CARE; it makes soy flour then processes it into Vitaleche (a soy & nonfat dry milk beverage), Frescorchata (a corn-soy-milk blend), Masarina (a corn-soy flour used to extend meat or make empanadas and tortillas), or, on a smaller scale, Nutrisoy (a beverage made from soy and milk). "Four years ago, CARE started operating the plant with $318,000 of its own money and a $500,000 AID grant. The Costa Rican Ministry of Health provided the land. Operating expenses, initially financed from the Costa Rican government treasury, now come from funds generated through P.L. 480 sales. Last year the plant broke even for the first time.

"Originally set up to supply a nationwide supplemental feeding program, the project has come a long way since its beginning in 1976... Meanwhile, as the plant's technology evolves, plans are being made to transfer the operation to a private Costa Rican company, probably by the end of fiscal 1984."

"The plant employs 25 Costa Ricans, trained in plant operations by Colorado Sate University (CSU)... Key CARE staff in Costa Rica–former Country Director Justin Jackson and John McLeod, deputy director of CARE's Costa Rica office, and George Menegay–all have experience setting up food processing plants in other developing nations."

4122. Leviton, Richard. 1983. The market boom for soyfoods in the United States. Paper presented before the Euvepro General Assembly, Parma, Italy. Oct. 11. 13 p. Unpublished typescript on Soyfoods magazine letterhead..
• ***Summary:*** An excellent overview of the subject, presented with color slides. Contents: Introduction. The U.S. soyfoods industry and market. Eight reasons for the soyfoods boom in America. New U.S. soyfoods products. Ten trends in the soyfoods market. The European soyfoods boom (what it is and 4 steps to expand it). Conclusions. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

4123. Leviton, Richard. 1983. The soy deli case. *Whole Foods* (*Berkeley, California*). Oct. p. 27-28.
• ***Summary:*** "The Hinode Tofu Company of Los Angeles recently propelled the industry years by running a series of full page, full color ads for their branded tofu in regional editions of *Good Housekeeping, Weight Watchers, Runner's World, Bon Appetit,* and the Los Angeles *Times* (circulation: one million). Their ad included a 15¢ discount coupon (eight million were printed in total). Edward & Sons has been advertising its Miso-Cup instant soups and Miso+Plus Chive and Jalapeno dry miso dips in national trade and consumer publications. And Farm Foods, with their expanding line of Ice Bean soy ice creams (hard packed and soft-serve) recently launched a cooperative advertising and discount program in cooperation with retailers..."

The Real Food Store on Polk Street in San Francisco has introduced what is probably the first distinctly labeled soy case. It consists of a self-standing reach-in cooler filled with about 34 different soyfood products, from bulk and packaged tofu to soymilk and tempeh burgers.

"At press time, Bread & Circus, a leading natural foods retailer in Boston, was planning a week-long soy promotion in cooperation with a half dozen Bay State producers... Elsewhere, Tree of Life, Florida's $35 million distributor and manufacturer, designated August as Soyfoods Month and ran promotions in their 60-page monthly newsletter sent to their 2,000 accounts. Soyfoods were presented as that month's 'Super Specials' with 'deep pocket discount' for retailers, reports Morris Shriftman, vice president." Address: Colrain, Massachusetts.

4124. Prescott, Helen. 1983. Okara: A meal for the asking. *Mother Earth News* No. 83. Sept/Oct. p. 36-38. [4 ref]
• ***Summary:*** Defines okara, tells how to use it and where to get it, and describes how to make 1 gallon of soymilk and ½ gallon of okara (with photos). Contains recipes for: Okara treats. Crunchy carobola. Apple anarchy. Soyburger supreme. Raisin-soy cookies. No-meat sausage rolls. Okara corn bread. Lists 3 books that contain additional information.

4125. **Product Name:** Rajasoya Multipurpose Nutritional

Soya Milk Powder. Renamed Raja Soya Dried Soya Milk Powder by 1986.
Manufacturer's Name: Rajarata Food Grain Processing Co., Ltd.
Manufacturer's Address: Plant: Maha Illuppallama, Anuradhapura, North Central Province, Sri Lanka. Office: 29 Braybrooke St., Colombo 2.
Date of Introduction: 1983. October.
Ingredients: Whole soy flour.
Wt/Vol., Packaging, Price: 250 gm plastic bag retails for Rs. 11/50 (3/88).
How Stored: Shelf stable.
Nutrition: "Not less than 45% protein. 20% polyunsaturated fat. Free of cholesterol." "Analysis done by Soya Foods Centre shows: Moisture 4.5%, protein 47.4%, fat 22.9%, ash 3.7%.

New Product–Documentation: *Soyanews* (Sri Lanka). 1983. Sept. p. 1. "Rajasoya enters the market." "The Rajarata Food Grains Processing Co, began a nationwide advertising campaign this month for its first product–Raja Soya, a multi-purpose soya flour that comes in two packs, 250 grams and 50 grams. The product is expected to be on sale in October when the formal opening of the factory [at Maha Illuppallama] is to be held. A large photo shows packets of Rajasoya being sealed at the plant. Photos on pages 4-5 show: (1) "The seed cleaning machine removes stone and other inert material before sending the seed to dehulling and blanching. (2) Blanching the seeds for 20 minutes in boiling water. (3) The blanched seed being delivered to bins. (4) "The blanched seeds are flaked in this [towering] machine and sent to the dryer and later for grinding into powder." Note: Is this soya flour or powdered soya milk (without the fiber removed)?

Label (photocopy). 1984. This is a whole soy flour that seems to be mislabeled as a powdered soymilk. Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 112. "The product was used as a coconut milk substitute." Production began in September 1983. Soyanews. 1986. Form filled out by Jane Gleason. 1988. March 25 she met with Mr. Upali Madawala, marketing manager. Rajarata is a largely government owned venture which distributes the product to the plantation sector in the island under a free feeding program. It was introduced as a coconut milk substitute and as a supplement to rice and wheat flours. Only small quantities are marketed retail in spite of a Rs. 1.2 million advertising campaign conducted several years ago. In 1986 the company used 30,000 kg/month of soybeans. In March 1988 15,000 kg/month. The decrease was because Estate Sector laborers were opting for cash, wheat, flour, or rice in preference to soy flour within the government free feeding program. The company buys soybeans for Rs 9/85 per kg from the Paddy Marketing Board. "There is no infrastructure to purchase from the private sector delivered." Label. 1988. 6.5 x 7.5 inches. Plastic bag. Orange, green, and tan on white. "Free of cholesterol."

4128. *Tetra News* (*Singapore*). 1983. Soya bean: The meat of the Orient. Oct. p. 6-7.
• ***Summary:*** For centuries, the soya bean has been the king of beans in East Asia. "Almost every Asian household eats

the bean in various guises–as soya milk, tofu, soya sauce or beancurd." It makes sense to eat the soya bean–it's one of the least expensive sources of high-quality protein.

"One leading soya bean drink producer in Malaysia and Singapore is Yeo Hiap Seng. For years, this company has been distributing soya bean drink in bottles besides marketing other traditional popular soft drinks like chrysanthemum and herb-tea.

"What Yeo Hiap Seng has developed is a set of soft drinks which are traditionally close to the people who have grown up with these drinks which they used to buy from street hawkers. 'What we have also done.' says Mr Francis Lim, Group Marketing Manager at Yeo's, 'is modernise production and pack them in bottles and packages.'

"Yeo Hiap Seng also distributes a vitaminised soya bean drink in Tetra Brik Aseptic cartons and sold under the brand name Vitabean. `What we are giving consumers is a soft drink with a plus–with vitamins added to make it a nutritious drink. And no preservatives are used,' Mr Lim stresses.

"While Yeo's bottled soya bean drink is produced for on-premise selling. Vitabean packages cater more to home consumers. 'Packages are lighter, disposable and very convenient for consumers living in highrises,' Mr Lim says. Yeo's Vitabean is exported to Hong Kong, UK, Australia, Canada and the USA.

"While companies like Yeo Hiap Seng market their soya bean beverage as a soft drink, others like Nestle market their product, Bonus, as soya milk. This is not purely a case of terminology. Legally, a soya beverage can only be marketed as soyamilk if it contains at least two per cent protein by weight of volume.

"And in their quests for product individuality, manufacturers have come up with a sweet list of flavours for their soya drinks. For example. President Enterprises Corporation in Taiwan produces soya drink in almond, peanut, coconut, egg, strawberry, chocolate, apple and orange flavours. One of the two flavours Nestle chose for their soya milk is fragrant pandan. There is also a sesame-flavoured soya drink marketed by Wei Chuan Foods Corporation in Taiwan.

"In whatever flavour, soya drink or milk makes a better soft drink in terms of value for money compared to the empty calories of conventional soft drinks."

4129. Chen, Steve. 1983. Re: Soymilk, soy sprouts, and tofu in Taiwan. Letter to William Shurtleff at Soyfoods Center, Nov. 16. 1 p. Typed, with signature.
• ***Summary:*** It is estimated that in 1982 Taiwan used 26,250 tonnes (metric tons) of soybeans to make 262,500 tonnes of soymilk. Thus 1 kg of soybeans yields 10 kg of soymilk. This amount of soymilk is 5.5 times as much as the amount of cow's milk produced in Taiwan (47,740 tonnes). Taiwan's population is 18.5 million. The per capita consumption of soymilk is estimated at 14.2 kg in 1982.

There is no large manufacturer of soy sprouts in Taiwan. Tai-yi is the brand name of the packaged tofu made by the Nan-Yang Tofu Plant.

"Thanks again for your kind and warm hospitality which you and Akiko extended me during my last visit to your Soyfoods Center." Address: Country Director, American Soybean Assoc., P.O. Box 3512, Taipei, Taiwan. Phone: 7815880.

4130. Shurtleff, William; Aoyagi, Akiko. 1983. Dr. D.W. Harrison and Africa Basic Foods: History of work with soyfoods. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 10 p. Nov. 22. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. D.W. Harrison is an African-American physician and a Seventh-day Adventist. Contents: Introduction. Early years: Birth and education, army, first trip to Africa, attraction of Ghana's Nkrumah, Meals for Millions. Work in Ghana (1960-63): contract as surgeon, start of farm machinery company, start of bakery and small school, return to U.S. in 1963. Work in Uganda (1964-71): Attractions of Uganda, hired by Uganda government, establishment of Africa Basic Foods (ABF, 1965), 3 objectives, expansion of soybean production, early food production, home-roasted soy flour, grants, equipment, church ties, 3 early products, marketing and demonstrations, end of government contract, start of private medical practice, Worthington Foods purchase of ABF stock and loan of Sam Yoshimura, new tofu and soymilk products, soynuts and soynut butter, Wenger's extruder, speech to United Nations Industrial Development Organization (1969), balance of business and service, Idi Amin and 1970's instability to present. Work in Kenya (1974-82): Move to Kisii, work with soybean production, start of New Soya Enterprises. Summary. Address: Lafayette, California. Phone: 415-283-2991.

4131. Lee, Kyung. 1983. Re: The soymilk industry and market in Korea. Letter to William Shurtleff at Soyfoods Center, Nov. 23. 3 p. Typed, with signature on letterhead.
• ***Summary:*** "Unfortunately, there is no book or publication either in English or Korean about the history of soybeans or soyfoods in Korea. I am enclosing a book "Science of soybean, tofu and soybean sprout," written by Dr. K.H. Kim. This book discusses the technical procedure to make different soy foods such as tofu and soybean sprout. I hope you can make a good use of this book.

"As far as soy milk industry is concerned, it can be said that soy milk industry is one of the fastest growing food industries in Korea.

"The leading soy milk maker is Chung's Food, which

markets Vegimil (brand). Chung's Food began soy milk business in 1973 and observed the 1Oth anniversary in October.

"The second largest maker is Dong Bang, which markets Green Milk and Hae Pyo Doo Yoo (brands). Dong Bang entered the soy milk market in September 1979.

"The third largest maker is Seo Ju Industry, which markets Seo Ju Mill. It entered the market in October 1982.

"As of March this year, there were 9 makers, out of which three companies went bankrupt. Later during the year, Lotte Chilsung entered the market in May. Currently there are 7 makers.

"Their status is as shown on the attached paper. On The average, one kg of soybeans produces 6 kg of soy milk. The usage of soybeans as allocated by the National Agricultural Corporation was as follows in 1983;

"Chung's Food 7,500 MT (metric tons)

"Dong Bang 2,000

"Lotte Chilsung 800 (Makes Lotte Doo Yoo, started May 1983)

"Dong A 700 (Makes Sun Dew, started March 1983)

"Dae Won 200 (Makes Eggmil, started August 1982)

"Kwang Ju 200 (Makes Supermil, started May 1982)

"Seo Ju * Not using soybeans, but rather soy protein concentrate.

All soymilk in Korea is sold in 180 cc Aseptic cartons.

Dong Bang's sales volume includes soymilk sold to ice cream makers in bulk. Out of the total of 170,000 cartons per day, about 70% is sold in consumer packages and the rest is sold in bulk, which is then converted to consumer package equivalent. Address: Country Director, American Soybean Assoc., P.O. Box 1704, USIS Bldg., 63 Eul Ji Ro 1Ka, Chung Ku, Seoul, Korea. Phone: 722-2601 X-4368.

4132. *Brik Pak-Age.* 1983. In memoriam [Ruben Rausing]. 1(4):3 (insert). Fall.

• ***Summary:*** "Ruben Rausing, founder of The Tetra Pak Group, passed away Wednesday, August 10, 1983 at the age of 88.

"Dr. Rausing is known for inventing the tetrahedron Carton, a triangular package for liquid foods which led to the establishment of the multi-national Company Tetra Pak. During his lifetime, Dr Rausing saw his developments used in 86 Countries.

"His original concepts for packaging and distribution of food, formulated in the 1930s, still serve as standards throughout the world."

4133. **Product Name:** Nuclear Freeze (Soymilk Ice Cream Pops) [Carob-Mint, Raspberry, Maple-Walnut, or Banana-Coconut].
Manufacturer's Name: Garden of Eatin'.
Manufacturer's Address: Los Angeles, California.
Date of Introduction: 1983. November.
Ingredients: Banana Coconut: Soy milk (made from organically grown soybeans and water), bananas, coconut, honey, soy oil, lemon juice, natural vegetable stabilizers (guar, carrageenan, pectin).
Wt/Vol., Packaging, Price: 3 fluid oz on a stick.
How Stored: Frozen.
New Product–Documentation: Spot in Soyfoods. 1984. Summer. p. 43. A sort of 3-ounce soymilk popsicle on a stick developed by Al Jacobson. "One of the tastiest yet lightest soyfoods desserts on the market." Leaflet. 1983, dated. "Jelly beans, no!. Nuclear Freeze, Yes! We have it! 4 Delicious Flavors." Leaflet. 1983, dated. "Get involved in Nuclear Freeze. 100% non-dairy frozen delight. It's delicious!"

4134. Leviton, Richard. 1983. Report of soyfoods research and speaking trip to Europe with American Soybean Assoc., Oct. 8–Nov. 15, 1983. Colrain, Massachusetts. 82 p. Unpublished typescript. 28 cm.

• ***Summary:*** Describes visits to or discusses: ASA Belgium (Dennis Blankenship, Rita Batens, Michael Martin), Parma, Euvepro Conference, Parmalat, Guy Coudert and Dr. Sabin president of ONIDOL, Anuga, Jonathan, Société Soy (Bernard Storup, Jean de Preneuf), Le Bol en Bois, Budapest (Hungary), Agrimpex (Hungary), Migros, Sojalade / Die Genossenschafts Tofurei (Verena Krieger), Galactina, Soyana (Walter Daenzer), Alpro (Belgium; Philip Vandemoortele and Christian Daems), Aarhus (Denmark), Witte Wonder, Manna, Cauldron Foods Ltd. (Phillip Marshall, Peter Fagan). Contains a directory of principal people contacted, listed by country. Those not mentioned above are: England: Wild Oats Wholefoods (Mike & Loes Abrahams), British Arkady Co. (Bill Pringle), Sunworld Inc. (David White), Health Foods Manufacturers' Association (Britain). Belgium: ASA, Le Paradoxe (Dota Figuera). China Trading, Ralston Purina (A.G. van der Horn), Premier Foods (Pauline Six Chan). Italy: Cargill SpA (Claudio Rocchietta), Parmalat SpA (Dr. Alberto Rota, Mr. Barilla), ASA (Sergio Monari). France: Robert Bonneterre, Aux Rayons Verts. Germany: European Federation of Health Products Manufacturers (Wolfgang Reinsch, Bad Homburg). Hungary: Central Food Research Inst. (Balint Czukor), Agrimpex (Potori Karoly). Denmark: Danish Turnkey Dairies, Det Gronne Kokken. Netherlands: Witte Wonder Products (Niko van Hagen), Manna (Hans den Hoed), Albert Heijn Supermarkets, Dutch Seed Crushers & Oil Processors Assoc. (Dr. C.J.M. Meershoek). Switzerland: Sojalade (Verena Krieger), Soyana (Walter Daenzer). Austria: Tom Brennan.

Bound in the back of the report are photocopies of labels and promotional materials (graphics) from the following companies: Witte Wonder, Société Soy (Cerny), Cauldron Foods, Manna, Dansk Tofu (Sdr. Vinge Gl. Mejeri, 8860 Ulstrup), Sojalade, Bonneterre, Mutter Erde, Genossenschaftstofurei Engel (Dorfplatz, Ottenbach).

Note: This is the earliest document seen (May 2005) that

mentions Parmalat in connection with soy.

Migros (p. 18-19) is Switzerland's biggest supermarket / department store; it sells some whole wheat products. Consumers oppose them for their size, but they attract foreign customers. Natural foods people are very political; they are opposed to Third World imports. Migros is expected to start selling tofu soon. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

4135. Leviton, Richard. 1983. Brief history of Cauldron Foods Ltd. (Document part). In: R. Leviton. 1983. Report of Trip to Europe with American Soybean Assoc. 82 p. See p. 26-27. Unpublished manuscript.

• ***Summary:*** Based on an interview with Philip Marshall and Peter Fagan. These two men started their partnership in Cauldron Foods in Sept. 1981. Philip was previously a partner with Paul Jones, and at the time he joined with Peter he was already a Bristol tofu maker selling some tofu in bulk to the converted. They spent 12 months searching for premises. They now make 1,200–1,500 lb/week of tofu, all in one day. They started business doing burgers and tofu, handed out leaflets, and did recipe demos for shops. They prepared and served tofu quiche, cheesecake, mayo, and burgers.

The company was built on the burger. In 1982, selling 6,000 burgers a week, they reached plant capacity in their old 350 square foot plant and in Feb. 1983 they moved to their present location 1,200 square foot plant in Bristol. In 1981 there were 17 natural food stores in Bristol. Today (11/83) there are 24, more per capita than anywhere else in England. In Jan. 1984 Cauldron Foods and Bean Machine (from Wales) will host an all-day meeting in Bristol to form a Tofu & Soymilk Producers Association for England. The main item on the agenda is to take action on "burger" as a product name. Address: Colrain, Massachusetts.

4136. Leviton, Richard. 1983. Visit with Christian Daems and Philippe Vandemoortele at Alpro, Izegem, Belgium. Oct. 28 (Document part). In: R. Leviton. 1983. Report of Trip to Europe with American Soybean Assoc. 82 p. See p. 21. Unpublished manuscript.

• ***Summary:*** Vandemoortele doesn't like soy protein isolates in soymilk because of their poor image. A good tasting plain soymilk is possible if it is properly made. Isolate-based foods don't have the old basic food Oriental image. They also don't like isolates because, if the product's sales become large, the dairy industry will jump on the isolates for fakery and low quality. If used in place of dairy, the product would be called 100% synthetic. So not using isolates is a defensive measure. Codex Alimentarius (in Feb. 1984) will look at this issue. They may allow the term "soymilk" if a product is made from whole soybeans, but "soy drink" if it is made from isolates.

Alpro is opening a new soymilk plant in Ghent in Feb. 1984–the biggest in the world. They will make a 100% natural product from liquid and powder. [Note: Alpro never ended up making the powdered soymilk, says Philippe Vandemoortele 9/91.] This soymilk plant will have a sewage treatment system to recover all the water. The okara will be sold to the mixed feed industry. They will try to make soymilk powder at the same price as subsidized dairy milk and sell the powder for reconstitution. Alpro soymilk will be sold in supermarkets by Sept. 1984. They want high margins, will do promotions, and plan new products. Vandemoortele uses 50,000 tons of soybeans every 2 weeks [for all products, not just soymilk]. Alpro uses organically grown beans from France to make soymilk for Lima Foods in Belgium; these are 100% more expensive than regular soybeans. They will look to the USA and Asia for more markets for this output since the European market is too small. They will focus on areas that have a protein shortage or lactose intolerance. They have sold one turnkey soymilk plant to Madagascar. Alfa-Laval has not sold any soymilk plants recently due to currency problems.

Europe is such a bad market for soymilk, in part because of the many languages. With 10 European countries and languages, labeling requirements make it very complicated to market one food uniformly. Alpro sells more soymilk in north Belgium than in the south. There are more macrobiotics and more money in the north. This is typical for Europe as a whole with natural foods.

At ANUGA, British Arkady received lots of interest in their soymilk made from soy protein isolates, and health foods interest in their soy proteins. It is a Tetra Pack soymilk in raspberry, banana, and strawberry flavors. They exhibited meats and biscuits using isolates. A.E. Staley was pushing isolates for bakery uses.

Michael Martin of the American Soybean Assoc. explains European regulation problems. Soymilk is taxed at 17% when it is traded in the EC. This Value Added Tax (VAT) would be only 6% if soymilk were reclassified as a health food instead of a liquid, powder, or paste. The VAT varies by country but is usually higher on beverages. Dinner with Martin at Le Paradoxe, a natural foods restaurant in Brussels. They serve "croquettes de soja, tofu brochette, and Tofu Ganmo (2 burgers). There are 6 natural foods restaurants in Brussels and all use tofu. The Japanese wanted Alpro to do their soymilk in Europe. They started soymilk in 1975 with the idea of bringing alternative vegetable sources to developing countries.

Vandemoortele's sales are now $600 million/year. In 1936 Philippe's grandfather imported Manchurian soybeans for crushing in Europe. Vandemoortele, which now competes with Unilever in margarine, has a high level of expertise in R&D.

"We sample Alpro soymilk. One tastes thin, metallic, then gives a fatty mouthfeel. Another with sugar and vanilla is too sweet. I'm not impressed with them.

"Philippe is about age 35 and macrobiotically oriented in diet. Very confident, perhaps overly."

The tofu market is completely different from that of soymilk. Tofu is all education work and no comparison of products. With soymilk, there is comparison, but no education work needed. Philippe and Christian are concerned that most of the low-tech soyfoods industry and retailers in Europe are unskilled, small, and unprofessional. They don't want the average public to associate their soymilk with this vegetarian style. They want it to be seen not as a special food, but for everyone.

The European vegetable protein industry made a classic blunder. They put soy steaks in German supermarkets in the 1970s using TVP from British Arkady and ADM. Address: Colrain, Massachusetts.

4137. Leviton, Richard. 1983. Visit to Danish Turnkey Dairies Ltd. at Aarhus, Denmark. Nov. 1 (Document part). In: R. Leviton. 1983. Report of Trip to Europe with American Soybean Assoc. 82 p. See p. 22. Unpublished manuscript.

• ***Summary:*** After making a presentation for 1 hour and 45 minutes, Leviton had lunch with Bengt Ginslov (manager, product development), Holger Christensen (finance director), and K.E. Knudsen (VP, services).

DTD, founded in 1969, has 600 employees. They have initiated 200 dairy projects worldwide, and have built more plants than their competition. Alfa-Laval has to use their own equipment, but DTD can pick from anyone. 1982 sales were 1,200 million krone (or US$132 million; 1 krone is US$0.11).

They started work on soymilk in 1981 and 3% of their effort is now in soymilk, with 35 people at work on the soymilk project. They haven't sold a soymilk plant yet, but they have interested parties in China, the USA (maybe Vitasoy, unconfirmed), and Sri Lanka. Address: Colrain, Massachusetts.

4138. Leviton, Richard. 1983. Brief history of Soyana and Walter Daenzer (Document part). In: R. Leviton. 1983. Report of Trip to Europe with American Soybean Assoc. 82 p. See p. 19-20. Unpublished manuscript.

• ***Summary:*** Based on an interview with Walter Daenzer. Soyana is Switzerland's largest tofu company. Soyana's factory and office are at two very different locations in Zurich. Daenzer, who first became familiar with soy in New York City, has been a vegetarian for 15 years. He first saw soy as textured meats. The company began in 1980, when they started to re-package sell TVP in consumer-size in Zurich. He did 1-3 demos/week that year. "De Gustation" then published his first cookbook about soy protein.

In Sept. 1981 he started to plan tofu production, then on 1 Feb. 1982 he began to produce tofu, and now produces about 6,000 lb/week (2,727 kg/week) of very firm tofu with 13% protein. Of this, it sells about 40 kg/month in bulk to the University of Zurich. The company, which has 5 production and 3 office employees, makes tofu 3 days/week and burgers 1 day/week. They use a Takai W30C system. Daenzer didn't want to use water-filled tubs for packing the tofu, so he uses a Tiromat form-fill-seal vacuum packer that gives tofu a 2-week shelf life (dated), but could actually go to 3 weeks.

Soyana also makes several shelf-stable tofu spreads and dips, packaged in tins, pasteurized, with a 6-month shelf life. "Zurich has the most innovative, dynamic people in Switzerland, I am told, with an international atmosphere; there is a widespread interest in trying new foods." Soyana displays the Biona symbol (a "Y") on its products in recognition of having passed the inspection by the federation of Swiss Reform Houses (about 400 shops). Biona is an association of Reform House stores, "VRSD," with 400 members, called in Swiss the Assoc. of Swiss Reform & Diet Specialty Stores. It corresponds to West Germany's Neuform which has 2,500 members. Only one-half of these shops have refrigeration facilities. The Soyana brand is sold only in Biona stores, whereas Soyana's Sojaquelle brand is sold elsewhere. The *"Bioladen"* stores are more like American natural foods stores. There are 60 of these in Switzerland; they are environmentally oriented, political, and wholistic.

Soyana's director says that Migros, Switzerland's leading supermarket chain with about 2,000 stores and 70-80% of Swiss food sales, is likely to sell tofu, but under its own label and possibly manufactured in-house. Migros has a bad reputation among food manufacturers, because Migros often starts selling a company's product, then if it becomes successful they make their own product and drop the original manufacturer. Co-op is the second largest Swiss food chain. Meanwhile, Soyana is active presenting cooking classes on tofu, has published two tofu cookbooks (each has sold 10,000 copies), and have a third at the printers, *Tofu Kur* (actually it ended up being titled *Schlank mit Tofu*) in full color, a weight-loss book with 127 low-calorie tofu recipes. It should be out in Nov. 1983. Weight Watchers International contributed 30 recipes to the book.

In April 1982 Daenzer tested Tetra Pak soymilk using taste panels and got good reports. The milk was made using his Takai system and flavored with honey. The Swiss Milk Industry Assoc. protested, asking the Tetra Pak company to stop working with Soyana, and they did. 95% of all Swiss milk is in Tetra Pak cartons so if people see a soymilk in such a carton they assume it is dairy milk. Address: Colrain, Massachusetts.

4139. **Product Name:** [Manna Soy Beverages].
Foreign Name: Manna Sojamelk.
Manufacturer's Name: Manna Natuurvoeding B.V.
Manufacturer's Address: Meeuwenlaan 70, 1021JK, Amsterdam, The Netherlands.
Date of Introduction: 1983. November.

Wt/Vol., Packaging, Price: 0.34 liter bottle retails for 1.75 guilder (11/83).
New Product–Documentation: Richard Leviton. 1983. Trip to Europe with American Soybean Assoc. Oct/Nov. Unpublished manuscript. p. 24-25. On 3 Nov. 1983 Manna was still located at Meeuwenlaan 70 in Amsterdam.

Soya Bluebook. 1985. p. 85; 1986. p. 104. Letter from Sjon Welters. 1989. Aug. 10. 350 ml bottle was introduced in 1981.

4140. Shurtleff, William; Aoyagi, Akiko. 1983. Tofu & soymilk production. 2nd ed. Lafayette, California: Soyfoods Center. 344 p. Illust. by Akiko Aoyagi Shurtleff. Index. Nov. 28 cm. [223 ref]
• ***Summary:*** Some information in Chapter 1, Appendix A, and many advertisements have been changed. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

4141. *Vegetarian Times.* 1983. From nuts to milk. Nov. p. 35-36, 53.
• ***Summary:*** Contains a long section on soymilk, "a lovely beverage and well worth a try." Includes a brief description of how to make soymilk at home. No other nut milks are described.

4142. *Toyo Shinpo* (*Soyfoods News*). 1983. Izen juyô junchô [The demand is still strong for soymilk in Japan]. Dec. 1. [Jap]
• ***Summary:*** It is said in regular newspapers and food industry newspapers that in 1983 soymilk industry sales reached 35,000 million yen and are expected to grow well in 1984. But Mr. Okayama of the soymilk association thinks the figure was more like 25,000 million yen, and that next year the industry will reach 35,000 million.

Sales in 1980 were 3,000 million yen. In 1981 6,000 million yen. In 1982 12,000 million yen.

Plain soymilk (Jun) showed the best growth, and 200 ml was the most popular size. Large volume packages didn't sell well. In summer dairylike soymilk (*chosei tonyu*) and soymilk drinks (*tonyu inryo*) sold well but as a year-round product plain soymilk (nothing added) was the best seller.

1982 sales up to August were: Kibun 9,500 million yen. Nisshin Seiyu 2,700 million yen. From Sept. 1982 to Sept. 1983 Marusan-Ai almost reached their goal of 6,500 million yen.

4143. *Toyo Shinpo* (*Soyfoods News*). 1983. [Kibun is still the biggest soymilk maker in Japan, with a 45% market share]. Dec. 1. [Jap]

4144. *Toyo Shinpo* (*Soyfoods News*). 1983. [Study of health food buyers in Saitama prefecture, Japan]. Dec. 1. [Jap]
• ***Summary:*** The biggest buyers of health foods in Japan are women in their 50s and 60s; they are more interested in men. Sea vegetables and vinegar are the two health foods used most frequently (both are alkaline foods and are rich in minerals).

When asked which foods they believed are good for their health, these women replied: Sea vegetables 89.3%. Vinegar 87.9%. Yogurt 71.6%. Health tea 34.4%. Prunes 22.6%. Sports drinks 16.0%.

4145. Southwell, Jane. 1983. Re: Discontinuing Soy Deli at 211 East Ann St. in Ann Arbor. Letter to "Community loan holder," Dec. 5. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "We no longer operate the Soy Deli at 211 East Ann St. The People's Produce Coop, which shares that building space with the Herb and Spice Coop, now handles Soyplant products. You can continue to pick up tofu and soymilk as payment on the principal of your loan, if this is the option you chose. Coordinators of the Produce Coop are keeping records for the Loan Program, and we appreciate their willingness to do this. Other Soyplant products are still available. We apologize for any confusion this change-over may have caused.

"We are seeing a gradual but steady improvement in the company's position. Beginning this month, we will repay loans at the rate of $100 a month, according to the list of loan holders we have compiled who requested cash repayment. We will increase the rate as quickly as we can." Address: The Soyplant, 711 Airport Blvd., Suite #1, Ann Arbor, Michigan 48104. Phone: (313) 663-8638.

4146. Howes, Eric. 1983. Meals for Millions (MFM) Foundation (Interview). *SoyaScan Notes.* Dec. 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** MFM was doing good work when Mark H. Sterner was directing it; then when Peter Davies came in, it went down hill. Hank Sterner, Mark's son, has his own extruder company. Hank has much longer experience at this than Mark. Peter got MFM much more involved in working with governments and not necessarily doing the field work themselves. Mark is a very knowledgeable man, with very wide experience. Mark would be a good person to interview about Meals for Millions. A business card shows that Mark H. Sterner is President, Appropriate Engineering & Mfg. Co., P.O. Box 40, Norco, California 91760. Phone: (714) 784-5877. Mark manufactures a low cost extrusion cooker that makes 300 lb per hour–of CSM or textured soy protein.

When Mark was director, MFM ran a school training people from overseas in both soymilk production and soy extrusion. In Santa Monica, MFM had a Sprout-Waldron extruder and also a small Wenger X-15 extruder. It was a practical, hands-on program. To make soymilk, they used the traditional Asian water extraction method.

4147. *Toyo Shinpo* (*Soyfoods News*). 1983. Kankoku demo tônyû buumu [Soymilk boom in Korea, too]. Dec. 21. p. 1.

[Jap]

4148. *SoyaScan Notes.* 1983. Soymilk and dairy milk prices in California, December 1983 (Overview). Dec. 28. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** In Lafayette, California, whole fluid cow's milk retails for $0.39/pint (1 pint = 16 ounces) and nonfat cow's milk retails for about $0.43/quart. Milk is the least expensive popular beverage, less expensive than Coca-Cola, beer, or orange juice. Prices of unflavored fluid soymilks are as follows: Vitasoy, 8.4 oz. Tetra Brik sold to the Asian-American market $0.35 (which is the equivalent of $0.67 per pint), Quong Hop Soy Fresh 10.16 oz. Pure Pak carton $0.59 ($0.89/pint), Wildwood Yosoy pint plastic bottle $1.05, Brightsong Honey-Vanilla pint plastic bottle $1.08, San-J To-Neu 6.76 oz. Tetra Brik $0.74 ($1.75/pint), Edensoy 6.0 oz. retort pouch $0.74 ($1.97/pint). Vitasoy, the least expensive soymilk, is 1.72 times as expensive as cow's milk. The average price of the pint equivalents of all 6 U.S. soymilk products mentioned above is $1.24 a pint (which would be $2.48/quart). Thus the average soymilk in a typical pack is 3.53 times as expensive as dairy milk per unit volume.

4149. *SoyaScan Notes.* 1983. Chronology of soybeans, soyfoods and natural foods in the United States 1983 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 16. Larry Needleman decides to sell Bean Machines. Looking for a buyer. Jan. 24. "Legume, Company Finds Niche Selling Frozen Foods Made with Tofu, published by The Wall Street Journal.

Feb. *Soyfoods* magazine No. 8 published by Richard Leviton. Blue cover, 5,000 copies

Feb. 6-8. Sixteen soyfoods companies exhibit at the Natural Foods Expo. in Anaheim, California. A new trade association named Soyfoods Association of America (SAA) is formed; it is basically a restructured version of the original Soyfoods Association of North America, which was founded in July 1978 and which now ceases to be active. SAA elects a new board of directors; Michael Austin is chosen new Executive Director and Gary Barat of Legume becomes new President. Fourteen companies pledge $12,000. Headquarters established in New York City.

Feb. 7. The First Great Tofu Burger, a dry mix, made in Oakland, introduced at Anaheim Natural Foods Expo.

Feb. 18. Wm. Shurtleff has idea for forming a Soy Sauce Council to help encourage soy sauce companies to join Soyfoods Association, develop soy sauce terminology and standards, and eliminate mislabeling.

Feb. Jack's Beanstalk, innovative tofu company in Salt Lake City, goes out of business.

March 10. *Soyfoods Industry and Market: Directory and Databook 1983* published by Soyfoods Center, accompanied by glossy flyer and catalog of professional publications and services.

March 10. *Tempeh Primer,* by Juel Andersen and Robin Clute, published.

March 14. Connecticut Agricultural Experiment Station, in Bulletin 810 "Quality of Tofu and Other Soy Products," reports high bacterial and coliform counts. A virtual expose, revealing the tofu industry's erratic quality control, it gets wide media coverage and hurts sales of New England and New York tofu companies.

March. Hinode Tofu Co. starts major tofu ad and coupon campaign, with full-page ads in four national magazines. Most extensive national publicity ever done for tofu. Triggers lawsuit from a rice company over the Hinode brand, with which Hinode Tofu Co. is subsequently forced to part.

April 27-30. Six soyfoods companies exhibit at Whole Life Expo in San Francisco, as part of Soyfoods Association's booth. Shurtleff presents a speech and color slide show.

April. Hartz Seed Co. is purchased by Monsanto.

May. *The Au Naturel Tofu Manual,* by Chloe & Abraham Fox self-published in Canada. Vol. 1 is *Tofu Recipes for Families.* Vol. 2 is *Modern Jewish Tofu Cooking.*

May 3. Michael Austin mails out Soyfoods Association Charter Member letter. By year's end $18,000 in membership fees had been raised.

May 4. Richard Leviton decides to move to California.

May 8-11. Hinode Tofu Co. exhibits five flavors of Tofu Parfait at the prestigious and influential Food Marketing Institute convention in Chicago, a major national supermarket convention, attended by 20,000.

May 9. Dr. Hwa L. Wang of USDA NRRC speaks on "Tofu and Tempeh as Potential Protein Sources in the Western Diet" at the American Oil Chemists' Society symposium on "Potential New Protein Sources" in Chicago.

May 16. Quong Hop & Co. introduces the first Soy Deli cooler display case to Raley's supermarkets in Reno and Sacramento. In July they introduce the idea to Safeway supermarkets in California. By August there are Soy Delis in ten Safeway supermarkets in the San Francisco Bay Area.

May 18. The New York Times article on "Bacteria in Soy Products" as a follow-up on the Connecticut tofu contamination report.

May 24. Wm. Shurtleff goes to China for three weeks to study soyfoods, sponsored by Danish Turnkey Dairies; the first trip for this purpose since Dr. A.K. Smith of the USDA went there in 1949. Shurtleff writes 75-page report on *Soybeans and Soyfoods in China: 1949-83.* After China, Wm. and Akiko Shurtleff spend 3 weeks studying the soymilk industry and market in Japan.

May 31. Leviton and Wang speak on the soyfoods industry at Iowa State University conference on grains and legumes.

June. Worthington Foods introduces Tofu Garden Patties, developed for the health food market as part of a

larger new line of natural food products, all sold under the Natural Touch brand. This is a new trend for the company and they commit money to promoting it. In 1984 they launch Okara Patties (which contain okara as the 4th ingredient).

June. *Quantity Tofu Recipes for Institutions & Restaurants,* by Gary Landgrebe published by Soyfoods magazine and Fresh Press.

June. *The Magic of Tofu,* by Jane O'Brien of Ireland published by Thorsons in the UK.

June. *Tofu: Not Just for the Health of It,* by Jana H. Crutchfield self-published.

June. *Handbook of Indigenous Fermented Foods,* edited by Keith H. Steinkraus, published by Marcel Dekker. Extensive original material on traditional soyfoods. It soon becomes a classic.

June. *Soyfoods* magazine No. 9 published, 7,000 copies. *Soyfoods Newsletter* published in new typeset, 4-page format with new design.

June. Torigoe Seifun, Japan's fifth-largest flour miller, starts production of tempeh. This is the earliest known commercial tempeh ever made in Japan.

July 1. Quong Hop & Co. purchases Pacific Tempeh Co.

July. INTSOY publishes *Proceedings of the First China/USA Soybean Symposium,* held July 1982 at the University of Illinois.

July 3-Aug. 22. Richard Leviton in England, lectures on soyfoods in London and Leicester, and does some soyfoods research.

July 25. Soyfoods Association meeting in Denver. Tom Timmins, president of Tomsun Foods Inc. (one of the companies seriously affected by negative publicity on tofu quality) is asked to be head of the Soyfoods Association's Standards Committee, and to appoint people to work with him on the development of standards, especially tofu standards. In October he sends a 4-page survey letter concerning soyfoods standards to the 18-person Soyfoods Association Standards Committee that he has appointed.

July 28-Aug. 2. Second US/China Soybean Research Symposium, held in Jilin, China

July. NNFA show in Denver. Eden Foods surprises the natural foods industry by launching designed-for-America Edensoy in plain and carob flavors. Made in Japan by Marusan-Ai and exported by Muso, it is packed in a 6-ounce retort pouch. San-J's To-Neu brand soymilk is also debuted in Tetra Brik cartons.

Eden Foods is the first Caucasian-American company to import soymilk, and their gamble soon pays off; sales skyrocket, sparked by an extensive magazine advertising campaign. Between Sept. and Dec. 1983 over 1 million packs are sold. A host of competitors rush to follow Eden's lead... and many of them go to Muso. Eden objects.

July 31. Fifth Anniversary of the founding of the Soyfoods Association of North America.

Late July. Hot, dry summer weather heats up the price of soybeans from $6/bu to over $9.50/bu in August and September, falling back to $8 in December.

Aug. 15. *Time* magazine article on stylish ice creams has a paragraph on Tofutti soy ice cream.

Aug. 15. Delegation of four soyfoods experts from People's Republic of China spends 5 hours at The Soyfoods Center. First stop of the first Chinese soyfoods team to visit the USA.

Aug. 15. Soyfoods Center makes the first photocopy of the entire Log of the Dorsett-Morse Expedition to East Asia, 1929-31. 6,170 pages. The only original is owned by the American Soybean Assoc. in St. Louis.

Aug. Farm Foods serves Ice Bean soymilk ice cream at the American Soybean Association convention in Nashville, Tennessee.

Sept. Legume in New Jersey, in their second public stock offering in 15 months, raises an additional $400,000 ($300,000 net).

Sept. Continental Soyfoods, run by Pat Aylward in Minneapolis, goes out of business.

Sept. 9. Leviton leaves Massachusetts, moves Soyfoods magazine to Encinitas, California. But he decides to leave there a week later.

Sept. 21. New Ten Speed Press edition of *The Book of Miso,* by Shurtleff and Aoyagi published. Extensively revised. Shows miso consumption in U.S. has increased 300% since 1975.

Sept. 25. Open House at new headquarters of Soyfoods Center for 30 people, including Nancy Dailey, who is writing a major story on soybeans for *National Geographic* magazine, and for Richard Leviton, newly arrived in California. Shurtleff shows color slides of soyfoods in China.

Sept. 26–Oct. 1. Symposium on "Soybean in Tropical and Subtropical Cropping Systems" held at Tsukuba, Japan. About 200 people attended. Proceedings were published in 1985.

Sept. 28. Soyfoods Center buys its first computer and begins computerization, which soon leads to development of the world's three largest computerized databases focusing on soyfoods and the soybean industry–from which this chronology is compiled.

4150. *SoyaScan Notes.* 1983. Chronology of soybeans, soyfoods and natural foods in the United States 1983 (Continued) (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued. Oct. 9 to Nov. 14. Leviton travels to Europe as a consultant for the American Soybean Association. Gives six speeches on soyfoods in Italy, Belgium, Denmark, France, Netherlands, and Hungary. The 50-minute speech in Italy is about the soyfoods industry in the USA, presented to 150 members of EUVEPRO, the European Vegetable Protein Association. Leviton studies soyfoods throughout Europe, the first representative of the

American soyfoods movement to do so. He reports that virtually all tofu in Europe is vacuum packaged. On Oct. 28, ASA Belgium Office expresses interest in sponsoring a European Soyfoods Conference and a European Soyfoods Newsletter. Leviton writes a 56-page report on the trip.

Oct. New England Soy Dairy starts to sell its tofu under the Tomsun brand.

Oct. The world's first spray-dried tofu is introduced by Clofine Dairy & Food Products of Linwood, New Jersey. St. Peter Creamery first began spray-drying soymilk powder in late 1984, and tofu in the summer of 1985, under the Oberg patent.

Oct. Kikkoman: Company, Clan, and Community (358 p.) by W. Mark Fruin published by Harvard University Press as part of their series Studies in Business History.

Oct. Major reorganization of The Farm in Tennessee. It is no longer a cooperative. Every participant must pay his/her own way. All workers earn wages. The soy dairy sells its tofu and soymilk to Farm residents. Farm Foods becomes an independent, for-profit corporation.

Nov. Hymowitz and Harlan's "The Introduction of the Soybean to North America by Samuel Bowen in 1765" published in Economic Botany. This brilliant piece of historical research pushes the introduction date back 39 years, and shows that by the late 1760s Bowen, in Georgia, was making soy sauce and exporting it to England. It also credits Benjamin Franklin with the earliest known reference by an American to tofu, in 1770.

Nov. 11. Wm. Shurtleff and Gordon Bennett (Westbrae Natural Foods) mail out a packet including proposed U.S. soy sauce standards, English translation of Japanese Shoyu Standards, and proposal for formation of a Soy Sauce Council to 60 companies connected with soy sauce in the USA.

Nov. Soyfoods Assoc. officers meet with David Mintz of Tofu Time (maker of Tofutti) asking him to either use tofu as an ingredient in Tofutti or drop the term "tofu" from his product name and stop stating or insinuating that his product contains tofu.

Nov. 11. Wm Shurtleff writes a strongly worded letter to Mintz threatening to report the matter to the Securities and Exchange Commission and the FDA if Mintz fails to stop deceptive practices. Mintz quickly re-adds tofu to Tofutti.

Nov. 19. House Shokuhin Kogyo, a major Japanese food company, invests $2.5 million in Hinode Tofu Co. in Los Angeles as part of a joint venture to expand tofu production.

Nov. 25. Dr. Clifford W. Hesseltine of the USDA NRRC receives the award of the Third Class of the Order of the Rising Sun from the Emperor of Japan in recognition of the meritorious services he has rendered: proving the safety of Japan's traditional fermented foods, training Japanese scientists, and promoting technical cooperation in the field of food fermentation between the United States and Japan.

Dec. New England Soy Dairy, in a half-page article in *Inc.* magazine, is named as one of America's 500 fastest growing small private companies.

Dec. Inari Trading Co. in Michigan develops a delicious Christmas Soynut Sampler with seven flavors of Super Soys, including yogurt-coated, carob-coated, and butter-toffee. Runs full page color ad in Soybean Digest.

Dec. *International Bibliography of Soybeans* (3 volumes, 2,500 pages) published in Brazil. 19,571 references total, under 75 subject headings, all published during 1970-1982. Volume III contains author and subject indexes. Mostly soybean agronomy, but 1,584 references on soyfoods.

Dec. 1. The title of *Soyfoods Monthly* is changed to *Soyfoods Newsletter.*

Dec. 5-7. Symposium on Soybean Utilization held at Ibadan, Nigeria, Sponsored by IITA. First event of this type in Africa.

Dec. 8. Tofu Time Inc. in New York raises $3.2 million ($2.4 million net) in their first public stock offering, to finance national marketing of Tofutti soy-based ice cream.

Dec. 10. Doug Fiske becomes majority owner (55%) of *Soyfoods* magazine, Leviton owns 45%. Fiske will take over most publishing responsibilities. Leviton moves to San Francisco Bay Area.

Dec. Soyastern starts to make tofu in West Germany. By 1987 they are the country's largest tofu manufacturer, making 4,000 kg/week.

* *Eurosoya,* the annual publication of the European Cooperative Network on Soybean, begins.

* Soymilk production peaks in Japan at 116,724 kl. By 1986 it has fallen to 43,392 kl, which is only 37% of the peak.

1983 New Trends:

New Capital and Expertise are Flowing into the Soyfoods Industry, leading to many exciting new ideas and products and marketing programs. A dozen or so large companies with nationwide marketing are emerging.

New Emphasis on Soyfoods Marketing, now that production techniques have been fairly well mastered, is seen throughout the industry, and is reflected in new editorial and advertising policies of *Soyfoods* magazine.

Brand-Name Promotion by larger companies is surpassing generic or commodity promotion.

Stylish Second-Generation Products, prepared convenience soyfoods, are appearing with better product quality, better marketing and promotional programs, and better packaging and graphics. These are the fastest growing component of the soyfoods industry.

Extensive Professional Advertising of Soyfoods in natural and health food consumer magazines, as by Legume, Eden Foods, San-J, Hinode, Edward & Sons, and Pure & Simple. Each of these companies run very attractive, professional ads. Brightsong Light Foods has top graphics for a small company.

Exhibits at National Trade Shows are now a matter of

course: The Natural Food Merchandiser show, followed by the National Nutritional Foods Association (NNFA) show are most popular.

Tofu Market Control is Increasingly Concentrated in the hands of large manufacturers, who distribute nationally and have professional marketing. Most companies are getting much more professional, but many small tofu companies are going out of business. The total number of companies is stabilizing.

Soymilk Makes its First Big Splash in the American Caucasian Market, led by Eden Foods' Edensoy. Vitasoy has big plans for early 1984. Vitasoy had the largest total imports in 1983, but mostly sold to the Asian-American market. Large new soymilk plants are planned to open in 1985.

East Asian Soymilk Sales are Skyrocketing, leading to a general soyfoods Renaissance, and reevaluation of traditional soyfoods staples. Production of soymilk in Japan tops 100,000 metric tons (tones) for the first time, reaching 116,724 tonnes, up 71% over last year. The per capita consumption of soybeans in Japan is 5.8 kg/year, up 3.6% from last year.

Soy Ice Cream is becoming fashionable. Made with tofu, soymilk, and/or isolated soy protein, it is emerging as a major way that Americans are discovering soyfoods.

Tofu industry is vulnerable to sanitation and credibility problems as vividly demonstrated by the Connecticut quality / contamination report in March and subsequent adverse publicity, and by a Tofutti mislabeling incident in November. The industry urgently needs standards and better sanitation. Tofu souring and spoilage is the tofu industry's number one problem.

The Soy Deli Concept: Defunct or Ready for Takeoff? No new openings and some closings. But more and more natural food and vegetarian restaurants are starting to use soyfoods, and Chinese and Japanese restaurants are increasing their traditional use. In Soyfoods No. 9, Leviton calculated that as much as 16% of all tofu made in the U.S. is being served in restaurants, but this figure is probably far too high. Most promising, plans by Tofu Time/Tofutti to open a chain of natural, fast food restaurants featuring tofu, soymilk and other soyfoods could bring the Soy Deli concept new life and widespread publicity as a healthful alternative to McDonald's, Burger King, and the like.

European Soyfoods Industry is Flourishing, with lots of innovation. Large producers of tofu and tempeh are emerging in the Netherlands.

Tempeh is Starting to Take Off in Japan and interest is rising rapidly: 13 articles were published on tempeh in Japan this year, followed by 20 in both 1984 and 1986.

4151. *Ann Arbor Observer* (*Michigan*). 1983. [A pair of retrenchments]. Dec. [1 ref]
• ***Summary:*** On Ann Street, just west of Fourth, The Soy Plant is discontinuing its retail operation. "The Herb and Spice and Produce co-ops, which have shared the one-time pizzeria at 211 East Ann with the Soy Plant, have taken over the sale of tofu, tempeh, and soy milk, and will continue to redeem the loans the Soy Plant is paying off in bean curd. But the Soy Plant's specialty deli items (which include soy cheesecake and tofu quiche) will now be sold through Arbor Farms instead." Address: Ann Arbor, Michigan.

4152. **Product Name:** Pureharvest Organic Soy Drink [Natural, or Vanilla].
Manufacturer's Name: Ceres Natural Foods Pty. Ltd. (Importer & Distributor). Made in Japan.
Manufacturer's Address: East Bentleigh, Victoria, Australia.
Date of Introduction: 1983. December.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik.
How Stored: Refrigerate after opening.
New Product–Documentation: Letter (fax) from Don Lazzaro of Ceres Natural Foods. 1995. June 15. In Dec. 1983 they introduced soymilk in vanilla and natural flavors, in 200 ml Tetra Brik cartons, made by and imported from Kibun in Japan.

4153. **Product Name:** Golden Life.
Manufacturer's Name: Martin Pharmaceuticals. Div. of the Nicholas Kiwi Co.
Manufacturer's Address: Australia.
Date of Introduction: 1983. December.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic cartons.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Geoff Wilson. 1987. Jan. Soyfoods (ESFA). Jan. The dates in this article are not clear. The product is said to be "the first Australian soy drink, launched late last year. A sport drink, it contains dextrose and is being packed in tetrabrik cartons in the Leongatha factory of Murray Goulburn Cooperative, Australia's largest farm-owned dairy company. However other soy-based foods are not yet expected to be produced by other dairy companies, because of the anger the new soymilk technology's threat has caused among hard-pressed dairy farmers... The product is currently being sold through health food stores But other manufacturers are tipping that a range of soy based dairy food substitutes will become available to supermarkets in 1985. One health food shop in Melbourne has reported a tenfold sale of soy drinks over the last 6 months. They are made from isolated soy protein."

4154. **Product Name:** Coco Pudding (100% Dairyless).
Manufacturer's Name: San Diego Soy Dairy.
Manufacturer's Address: 2965 5th Ave., San Diego, CA 92103.
Date of Introduction: 1983. December.
Ingredients: Tofu (organically grown soybeans, filtered water, natural nigari), soymilk, coco powder [cocoa powder],

honey, malt syrup, vanilla.
Wt/Vol., Packaging, Price: 4 oz (113.5 gm).
How Stored: Refrigerated.
New Product–Documentation: Label sent by Gary Stein. 1989. 2.5 inch diameter. Dark blue and light blue on white. Talk with Gary Stein. 1989. Feb. 17. He thinks this product was introduced in about Dec. 1983.

4155. STS–Soya Technology Systems Ltd. 1983. Questionnaire. 11 Dhoby Ghaut #11-06, Cathay Building, Singapore 0922. 8 p. Dec.
• ***Summary:*** Asks potential clients many questions to aid in developing a turnkey soymilk plant to suit their needs. A Chinese edition of this was published in 1987 in Singapore.

Accompanying this are three STS pressure sensitive soymilk labels for display purposes only–since the company has none of its own commercial products. Address: Singapore.

4156. Wee, Jae-Joon; Lee, Hyong-Joo. 1983. [Coprecipitation characteristics of cheese whey and soybean proteins]. *Han'guk Nonghwa Hakhoe Chi* (*J. of the Korean Agricultural Chemical Society*) 26(4):199-204. Dec. [24 ref. Kor; eng]
• ***Summary:*** "As a way of utilizing cheese whey to fortify sulfur-bearing amino acids to soybean protein, whey-soybean coagulum was made from whey-soy milk mixture and optimum conditions for coprecipitation of the two proteins were determined." Address: Dep. of Food Science and Technology, College of Agriculture, Seoul National Univ., Suwon, South Korea.

4157. **Product Name:** Wonder-Vite Soymilk Drinks [Plain, or Carob-Honey].
Manufacturer's Name: Blissquik (Natural) Food Products.
Manufacturer's Address: 37 Hammett St., Townsville, QLD 4812, Australia.
Date of Introduction: 1983.
New Product–Documentation: Manufacturer's catalog. 1983, undated. Letter from C.H. Lee of Blissquik Food Products. 1992. Feb. 17. The only soy product his company is now making is soymilk (plain and flavoured). They started in 1983, not 1981. He is interested in making soy ice cream and soy yogurt in the near future. His company also makes Wonder-Vite Biodynamic Loaf (which contains "soyflour" as the second ingredient), Super Sprouts, Super Alfalfa Sprouts, and Mixed Vegies.

4158. **Product Name:** Melobev (Soymilk).
Manufacturer's Name: Dairyland Products Inc.
Manufacturer's Address: 5345 W. 125th St., Savage, MN 55378.
Date of Introduction: 1983.
New Product–Documentation: Soya Bluebook. 1983. p. 62.

4159. Eden Foods, Inc. 1983. Expand your horizons. Edensoy (Leaflet). Clinton, MI 49236. 1 p. Single sided. 28 x 22 cm. Also widely run as an ad.
• ***Summary:*** A color illustration (see next page) shows a boy climbing out on a rock over a pond with a meadow and mountains in the background. Superimposed on this are two large foil retort packages of Edensoy (plain and carob). A table compares the nutritional value of Edensoy/whole cow's milk. Key differences are (gm per 100 gm): Calories 40/65. Protein 3.4/3.0. Fat 3.0/3.3. Ash 0.6/0.8. Calcium 40 mg/100 mg. Iron 1.5 mg/0.05 mg. Also appeared as an ad in *Natural Foods Merchandiser.* 1984. Jan. p. 10 (unnumbered) of 12-page color advertising insert. Soyfoods Pavilion '84. Marketing soyfoods in America. Address: Clinton, Michigan.

Phone: (517) 456-7424.

4160. Eden Foods, Inc. 1983. Process for making soy milk [in Japan, by Marusan] (Leaflet). Clinton, Michigan. 2 panels each side. Each panel: 28 x 21.6 cm. Undated.
• ***Summary:*** Printed with dark green ink on glossy white paper. The purpose of this very interesting leaflet is to give a detailed technical description of the process for making and packaging (in retort pouches) Edensoy soymilk, and to give a floor plan showing the different pieces of equipment used and their location in the building. We applaud Eden Foods for their openness in disclosing exactly how their soymilk is made and packaged.

"Process for making soy milk (the numbers refer to the machines on the diagram): "Cleaned soybeans are fed through a cyclone chamber (105) removing loose skins and hulls. Then the beans are mechanically compressed (crushed slightly) to loosen the skins away from the rest of the bean (106). Next into the enzyme invalidator (106) where they are slowly augured through and cooked with steam, which enters the chamber at 266 ºF, and pressure, which is maintained at 57 lb/sq. in. (201).

"Steam is continuously being added and removed. This releases and destroys enzymes that cause undesirable smells. Enzymes are carried away in the spent steam. The soybeans are in this enzyme invalidator (201) for 30 seconds. From here they go into a grinder (203) and are mixed with hot water (80-85%) and then pumped into the ultrimizer colloid mill (205) where the particle size is reduced to pass through a 200 mesh screen. This is then pumped into a centrifuge (207), which removes the fiber down to about 11.5% solids. This liquid is then decanted in the receiving tank (208) and then deaerated by vacuum in the deaerating tank (209). Soy liquid is now moved to agitating blending tanks (211), and then pumped to seasoning tanks (213), where other ingredients are added. The liquid is now between 122ºF and 140ºF. It is now moved to the first homogenizer (216) and then back to the seasoning tanks (211).

"From there it goes into pasteurizing and smell removing (218) where it is heated with steam and pasteurized at between 266ºF and 275ºF. It is now moved to the high pressure homogenizer (219) and homogenized at 194ºF and 220 lb/sq. inch. The liquid is now passed through a plate cooler (220) where its temperature is reduced to 35 ºF and stored in aseptic tanks (221).

"CIP unit (222) is used to flush and clean the system.

"Once moisture has been introduced to the beans, the only surface that the mash or liquid comes in contact with is SUS 316L stainless steel.

"The soy milk has a specific gravity of between 1.03 and 1.04. The percent of solids is controlled by testing the soy milk after production, then adding the other ingredients to bring it up to standard.

"The soy liquid is tested for solids, PH, Brix : first, after mixing with other ingredients, second, just before packaging, and third, after it comes out of the retort."

"Process for packaging and retort sterilization of soy milk." The same kind of detailed description is given. "The filling machine is a Bosch Form, Fill, and Seal Machine, model number BMR-200ST. It is in a separate packaging room.

"The film used is an RF-P high temperature laminate manufactured by the Toyo Seikan Kaisha Co., Ltd. of Japan." Address: 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: (517) 456-7424.

4161. **Product Name:** [Vita Drink {Soy Beverage} (Vanilla, Chocolate, or Strawberry)].
Foreign Name: Vita Drink.
Manufacturer's Name: Galactina Ltd.
Manufacturer's Address: Birkenwej 1-6, CH-3123 Belp, Switzerland.
Date of Introduction: 1983.
Ingredients: Vanilla: Water, soybeans, maltodextrine, saccharose, sunflower seed oil, mineral salts, vanilla aroma, DL-methionine, vitamins (A, B-1, B-2, B-6, B-12, biotin, C, E, folic acid, pantothenic acid, PP).
Wt/Vol., Packaging, Price: 250 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per carton: Protein 9.7 gm, lipids 7.25 gm (of which 3.9 gm essential linolenic acid), 30 gm carbohydrates, 1.6 gm minerals.
New Product–Documentation: Talk with Peter Speck. 1983. Letter from Peter Speck. 1988. March 11. "In 1983 we developed, in addition to the products for enteral tube feeding, flavored drinks, called Vita Drink, with a very similar composition. In 1987 this line was completed with a protein-enriched product line: Biodelis Plus and Vita Drink Plus."

Labels sent by Peter Speck. 1988. All 3 flavors. Chocolate is brown, red, and white. "Biologically high value/complete diet and energy/recovery drink made from plants. Sterilized (Uperisiert/Uperisee)."

Brochure in German sent by Peter Speck. 1988. "Galactine Vita Drink." 14 p. 21 cm.

Talk with Peter Speck. 1990. May 23. Vita Drink is sold in Switzerland. It is very similar to Biodelis, which is sold only in France. The base and flavors are the same but the vitamin and mineral content is slightly different to meet the different regulations in each country.

4162. Gbikpi, Pascal. 1983. The [Cameroon] Western Highlands soybean pilot project. 6 p. Unpublished manuscript.
• ***Summary:*** Contents: History of the project. The Western highlands. The soybean pilot project: Production, utilization from whole grains (human consumption, animal

consumption), utilization for processed soybeans (human consumption, animal nutrition).

The first soybean varieties were introduced in the Western Province in 1924. However it was only in 1974 that an intensive research program was implemented by the agricultural research station at Dschang. In 1978 a French company named EMC-SATEC conducted a feasibility study, commissioned by the Cameroonian government, of a processing plant, seed multiplication farm, and storage units. In June 1980 an evaluation team decided that it would be wiser to postpone this processing unit and replace it by a pilot phase which is the present Soybean Pilot Project.

This pilot project, which is in the Western Province (one of Cameroon's 10 provinces), started in Jan. 1981. Its has worked on both soybean production and utilization. Concerning production: From Jan. 1981 to Dec. 1983, the Project distributed 43,000 kg of soybean seed to approximately 12,000 farmers, free of charge and with an insecticide (methylparaphene). Two crops were grown each year. Those planted during the first half of the year gave an average yield of 1,700 kg/ha in 1981; those planted during the second dryer and darker half yielded 750 kg/ha. Three years of experience have shown that production is feasible, however the main problem is that farmers consider the price they receive to be too low.

Concerning utilization: A survey which reached 1,331 families in the Western Province who had already consumed soybeans allowed the Project to print a booklet containing 28 recipes which used soybean paste or flour as an ingredient. Soybean flour, added to bread at the 3% level, drew a 73% favorable rating. Soybean milks flavored with coconut and banana, made in France by Alfa-Laval, were submitted to a taste panel. The addition of 10% baked full-fat soy flour gave an excellent biscuit containing 11% protein. The addition of 10% soy flour to cassava flour does not significantly change the color, flavor, or physical properties of the couscous (called "fufu") by it increases the protein content six-fold. In April 1982, 24 tons of defatted soybean meal were produced at a solvent extraction plant in Douala; the plant ordinarily processes palm kernels. Address: UCCAO–Projet Soja, P.O. Box 1002, Bafoussam, Cameroon.

4163. **Product Name:** Nutrameal Nutritional Food (Soy Flour Mix, or for Making Soymilk).
Manufacturer's Name: Global Nutrameal, Inc.
Manufacturer's Address: R.R., Box 6122, Spirit Lake, IA 51360.
Date of Introduction: 1983.
New Product–Documentation: Soya Bluebook. 1983. p. 62, 68.

4164. **Product Name:** Jack 'n Jill Malt Soybean Milk.
Manufacturer's Name: H.K. Peggy Foods Co. Ltd. (Importer). Made in the Philippines by CFC Corp.
Manufacturer's Address: Hong Kong.
Date of Introduction: 1983.
Wt/Vol., Packaging, Price: 250 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Tetra Brik Co. 1983. Brochure. Tetra Brik aseptic 250 ml.

4165. **Product Name:** [Powdered Soymilk].
Foreign Name: Novomilk.
Manufacturer's Name: Industria e Comercio de Oleos Vegetais S.A. (OLVEBRA).
Manufacturer's Address: Main Office: Praca Osvaldo Cruz, 15-16* andar, P.O. Box 2016, Porto Alegre, RS, 90030, Brazil.
Date of Introduction: 1983.
New Product–Documentation: Soya Bluebook. 1983. p. 63. "Hydrosoluble soybean extract as powder soy milk." 1984. p. 62; 1986. p. 102. Spelled "Novomilke." Also spelled that way 1987, p. 90.

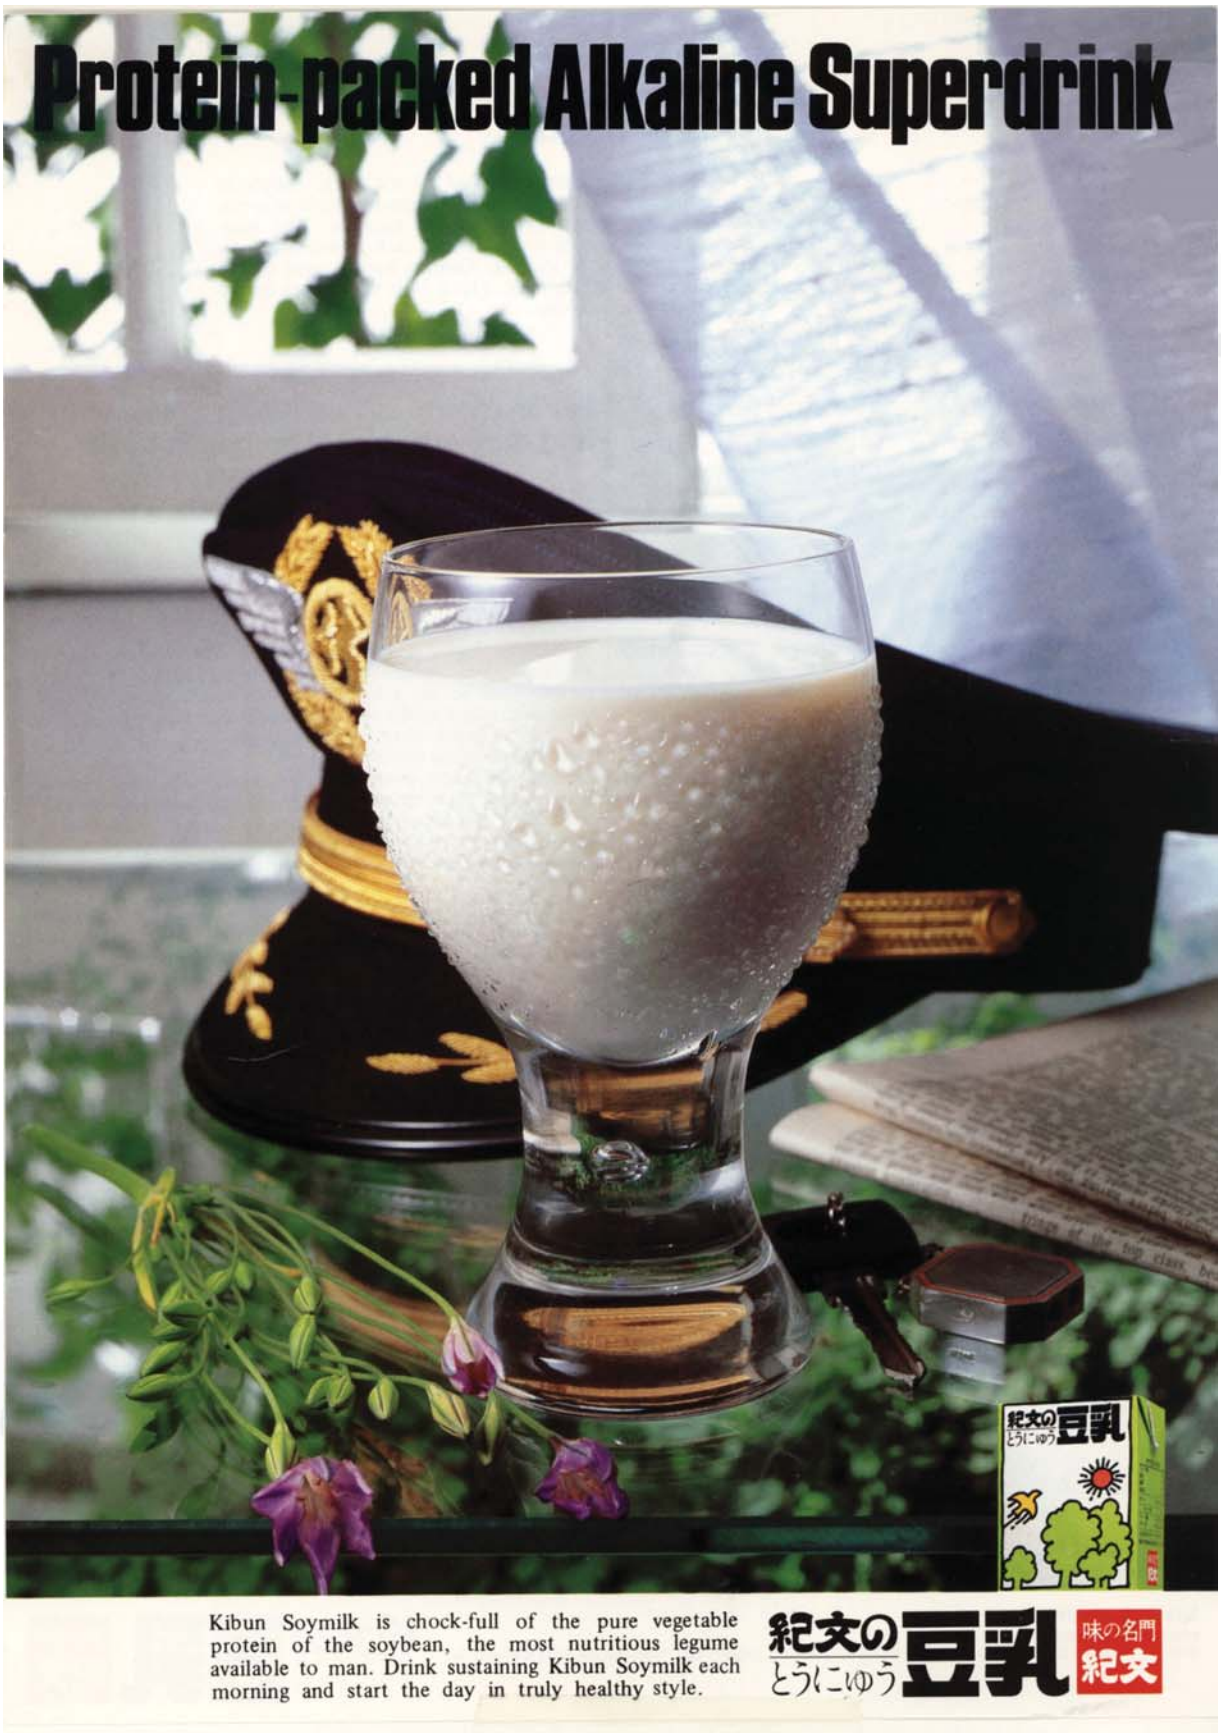
• ***Summary:*** See next page. "Kibun Soymilk is chock-full of the pure vegetable protein of the soybean, the most nutritious legume available to man. Drink sustaining Kibun Soymilk each morning and start the day in a truly healthy style."

A color photo shows a glass of soymilk on a glass table in front of a pilots cap and a folded newspaper. In the lower right ocrner is a carton of Kibun soymilk. Address: Japan.

4168. **Product Name:** Dawn Soya Bean Drink.
Manufacturer's Name: Malaysia Dairy Industries Private Ltd.
Manufacturer's Address: 2, Davidson Road, Singapore 13. Phone: 886421/7.
Date of Introduction: 1983.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 102-03.

Letter from Anders Lindner of STS. 1984. March 9. Dawn is still made by Malaysia Dairy Industries Private Ltd. (Singapore; Thio Kong Poon, Chairman and managing director of both companies) / Malaysia Milk Sdn. Bhd. (Malaysia; Vitagen). Business cards for each are enclosed.



4169. **Product Name:** Marigold Soya Bean Drink.
Manufacturer's Name: Malaysia Milk Industries Ltd.
Manufacturer's Address: Petaling Jaya, 7 Jalan 19/1, Selangor, Malaysia. Also made in Singapore.
Date of Introduction: 1983.
Wt/Vol., Packaging, Price: 250 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Singapore & Malaysia Soymilk Market Study. 1982.

Letter from Consulate General of Malaysia. (Los Angeles, California). 1982. Aug. 3. One of the three soymilk manufacturers in Malaysia is: Malaysia Milk Sdn. Bhd., 7 Jalan 19/1, Petaling Jaya, Selangor, Malaysia. Phone: 03-574388.

Shurtleff & Aoyagi. 1984. Soymilk Industry & market. p. 102-03. STS. 1985. Containers for Soymilk. Shows Tetra Brik carton, green and yellow on white. Lee. 1986. Sunday Times (Singapore). Sept. 7. "Soya Bean Milk Packs More Water than Flavor." Marigold sells for 35 cents per 250 ml. Comments: Contains artificial flavour, sweet, thin, slightly artificial, not tasty.

4170. **Product Name:** [Dawn Soya Bean Drink].
Foreign Name: Dawn Minuman Kacang Soya.
Manufacturer's Name: Malaysia Milk Sdn. Bhd. (Industries Ltd.).
Manufacturer's Address: No. 7, Jalan 19/1, Petaling Jaya, Selangor, Malaysia. Phone: 774388.
Date of Introduction: 1983.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Singapore & Malaysia Soymilk Market Study. 1982; Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 102-03.

Letter from Anders Lindner of STS. 1984. March 9. Dawn is still made by Malaysia Dairy Industries Private Ltd. (Singapore; Thio Kong Poon, Chairman and managing director of both companies) / Malaysia Milk Sdn. Bhd. (Malaysia; Vitagen). Business cards for each are enclosed. Color photo of Tetra Brik carton. Yellow, brown, and red on white. Big yellow soybeans.

4171. **Product Name:** Mighty Soy (Soymilk).
Manufacturer's Name: Mighty Soy, Inc.
Manufacturer's Address: 2805 E. Washington Blvd., Los Angeles, CA 90023.
Date of Introduction: 1983.
New Product–Documentation: Soya Bluebook. 1983. p. 62; 1986. p. 102. Address is now 1227 S. Eastern Ave., Los Angeles, California 90022.

4172. Mikami, Yasuo. 1983. Re: The soymilk market in Japan. Letter to Richard Leviton, Director, Soyfoods Association of North America, Sunrise Farm, Heath Rd., Colrain, MA 01340, Dec. 7. 1 p. Typed, with signature on letterhead. [Eng]
• ***Summary:*** "We thank you for your visit to our stand at the ANUGA in Cologne. You may recall, we discussed the situation of soybean products such as soy milk, soy protein etc in Japan.

"Soy milk market of Japan has been surprisingly expanded during this several years and the total consumption of this year will be one hundred million dollars which is approximately 3 percent of regular cow milk market.

"We are also interested in soy products market in U.S.A.

"We shall be grateful if you will let us have the contemporary situation and the forecast of soy products including To Fu [tofu], soy milk and etc. in United States.

"We do hope to hear from you soon, and remain. Very truly yours,..." Address: Marketing Div., Nisshin Oil Mills, Ltd., Shinkawa 1-23-1, Chuo-ku, Tokyo 104, Japan..

4173. **Product Name:** Soymilk.
Manufacturer's Name: Miller-Soy.
Manufacturer's Address: Route 2, 208-B. Greenbrier, TN 37073.
Date of Introduction: 1983.
New Product–Documentation: Soya Bluebook. 1983. p. 62.

4174. **Product Name:** [Nisshin Soymilk (Fruit {Prune-Apple}, or Matcha {Powdered Green Tea})].
Manufacturer's Name: Nisshin Oil Mills, Ltd. (Nisshin Seiyu K.K.).
Manufacturer's Address: Shinkawa 1-23-1, Chuo-ku, Tokyo, Japan.
Date of Introduction: 1983.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: See next page. Labels, Tetra Brik carton, 200 ml. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Soya Bluebook. 1984. p. 62.

4175. **Product Name:** Nomura Soy Beverage.
Manufacturer's Name: Nomura Tofu Co., Inc.
Manufacturer's Address: 2904 W. Fullerton, Chicago, IL 60647.
Date of Introduction: 1983.
New Product–Documentation: Soya Bluebook. 1983. p. 62.

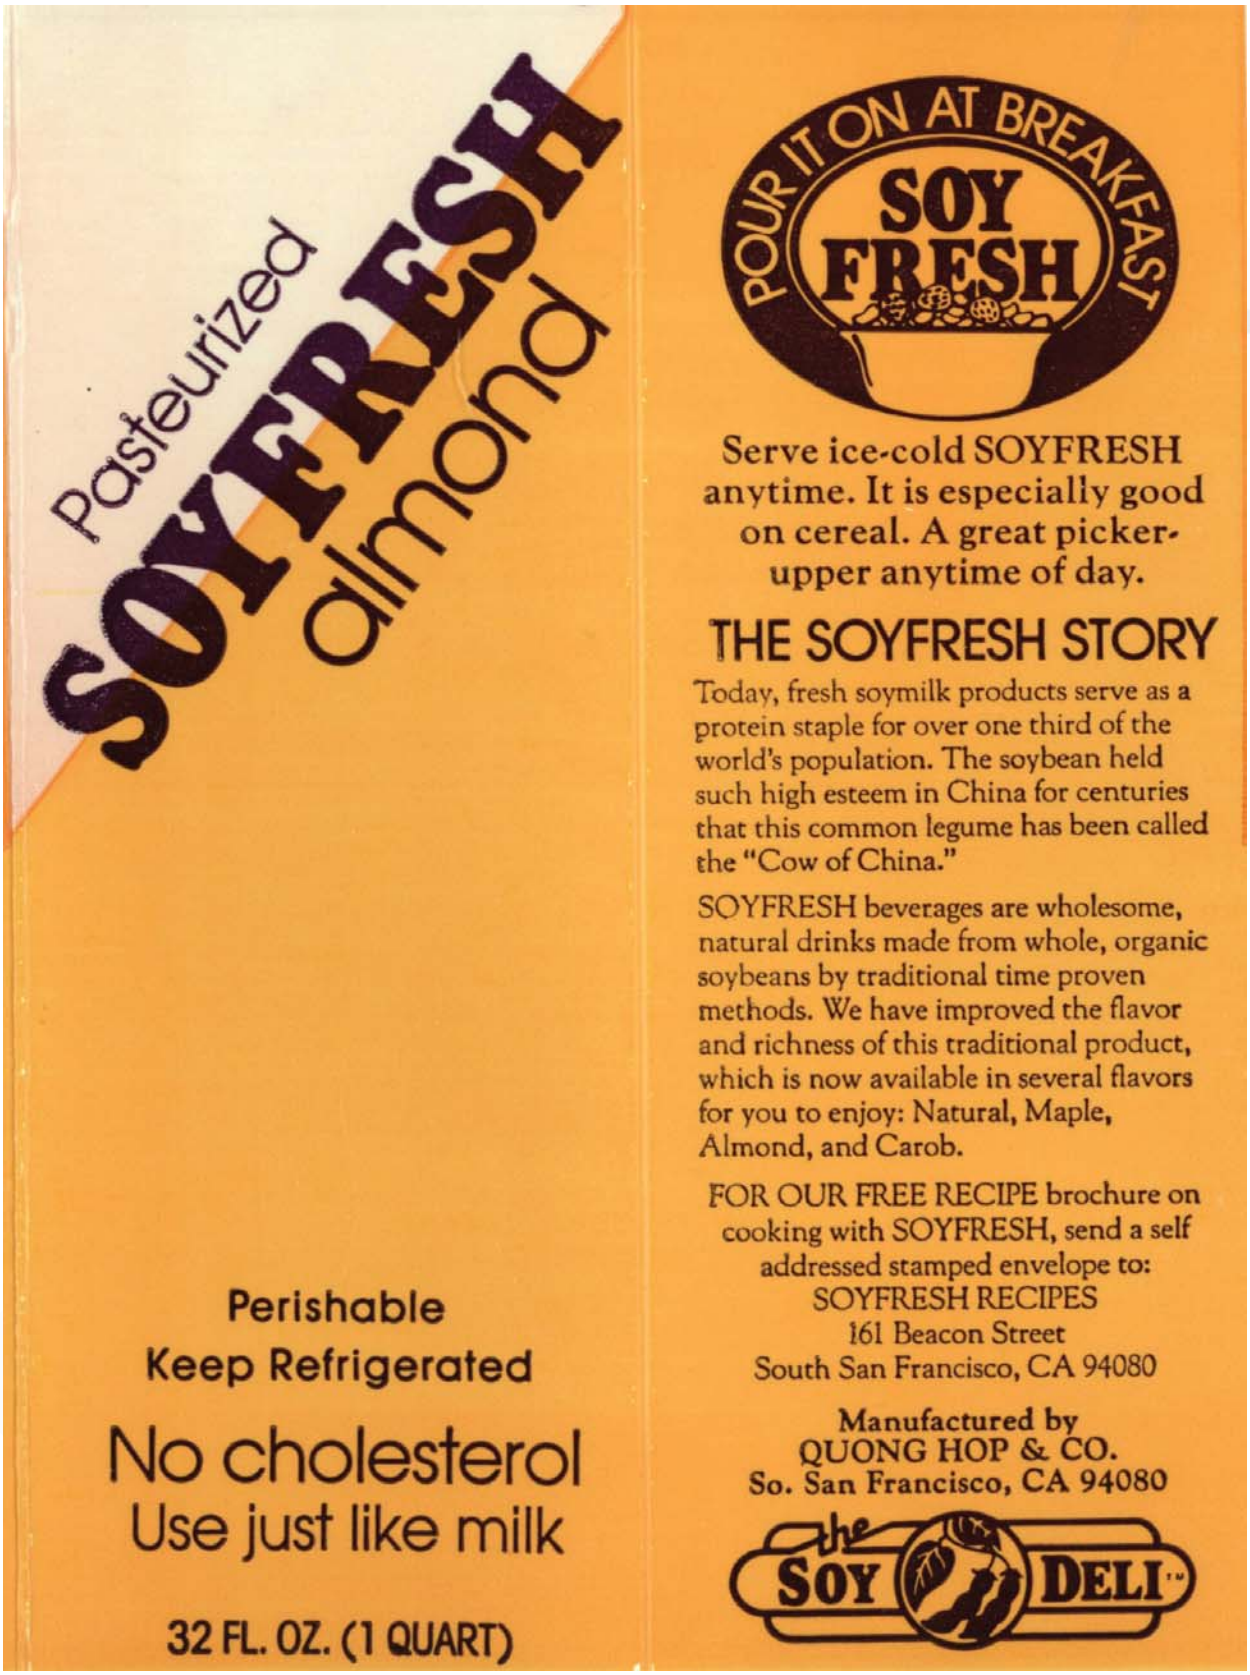
4179. **Product Name:** Pasteurized SoyFresh (Soymilk) [Unsweetened, Natural, Almond, Maple, or Carob].
Manufacturer's Name: Quong Hop & Co.
Manufacturer's Address: 161 Beacon St., South San Francisco, CA 94080. Phone: 415-873-4444.
Date of Introduction: 1983.
Ingredients: Carob: Water, organic soybeans (grown accordance with California Health and Safety Code 26569.11), honey, barley malt, carob.
Wt/Vol., Packaging, Price: 23 fl. oz (1 quart) Pure Pak Carton (Ex-Cell-O Corp. by Weyerhauser).
How Stored: Refrigerated.
New Product–Documentation: See next page. Label purchased in 1983. Leaflet. 1986. 8½ by 11 inches, color. "There is Quality & Variety after 80!" Shows all products. In Pure-Pak quarts and pints. Labels sent by Quong Hop (Carob, Natural). Note: This is one of America's first commercial refrigerated soymilk products.

4180. **Product Name:** Soymilk [Honey, or Maple].
Manufacturer's Name: San Diego Soy Dairy.
Manufacturer's Address: 2965 5th Ave., San Diego, CA 92103.
Date of Introduction: 1983.
Wt/Vol., Packaging, Price: Plastic bottle.
New Product–Documentation: Talk with Gary Stein. 1989. Feb. 17. He recalls that these products were introduced in 1983. He still has 7 flavors of soymilk on the market.

Product with Label purchased at Open Sesame in Lafayette. 1991. Feb. 16. 2 by 4.12 inches. Black, red, and grey on beige. Color illustration of a stream flowing down from snow-capped mountains, through a forest, into a meadow with flowers. "100% non-dairy" 1 pint plastic bottle. $1.29. Maple flavor. San Diego Soy Dairy, San Diego, California 92103.

4181. **Product Name:** Joyce Soya Bean Milk.
Manufacturer's Name: Siam Food Products Co. Ltd.
Manufacturer's Address: Thailand.
Date of Introduction: 1983.
Wt/Vol., Packaging, Price: 250 ml Tetra Brik Aseptic



carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Tetra Pak Co. 1983. Brochure. Packaged in Tetra Brik aseptic 250 ml.

4182. **Product Name:** Soy Leche (Soymilk).
Manufacturer's Name: Southwest Soyfoods.
Manufacturer's Address: 2889 Trades West Rd., Santa Fe, NM 87501. Phone: 505-471-8979.
Date of Introduction: 1983.
Ingredients: Water, organically grown soybeans.
Wt/Vol., Packaging, Price: 1 quart bottle. Retails for $0.75 (9/90, New Mexico).
How Stored: Refrigerated.
New Product–Documentation: Talk with Richard Jennings. 1987. Dec. 28. Gave date of introduction. "Soy Leche" means "I am milk" in Spanish. Richard started at Southwest Soyfoods on 15 July 1982. The company has always been named Southwest Soyfoods. At that time only tofu and one kind of tamale (red chile) were on the market. Katherine Bennett started the company in 1979. Unicorn Village is out of business. For details contact Tucson Co-op Warehouse. "I'm working on Tempeh Chips and a Miso Butter Replacer."

Label sent by Richard Jennings. 1990. Sept. 28. 2.5 by 3 inches. Self adhesive. Red on white. "How to use soy leche. As a milk substitute in cooking and baking. Soy drink: Add to this bottle 2 T [tablespoons] honey, 3-4 drops vanilla, a pinch of salt. Mix well. Soy shake: Blend 1 cup soy leche, 2 bananas, 1 T honey, dash of cinnamon or nutmeg."

4183. **Product Name:** Soya Dhal.
Manufacturer's Name: Soya Foods Research Centre. Sri Lanka Dept. of Agriculture.
Manufacturer's Address: P.O. Box 53, Peradeniya, Sri Lanka.
Date of Introduction: 1983.
Ingredients: Extruded soya beans.
Wt/Vol., Packaging, Price: 250 gm plastic bag with Plenty label retails for Rs. 5/-. 250 gm Soya Foods Research Centre product without label retails for Rs. 4/-.
How Stored: Shelf stable.
Nutrition: 38-39% protein.
New Product–Documentation: Label. 1988. 3.5 by 3 inches. Purple on white paper. "Soya Dhal. Add sufficient water and bring to a boil. Cook for 5 minutes. Add paripoo spices, chilli powder, coconut milk as required." In English and Sinhalese. Form filled out by Jane Gleason. On 23 March 1988 she met with Mr. H.G. Jayatissa, Project Manager, at Plenty Soya Food Centre.

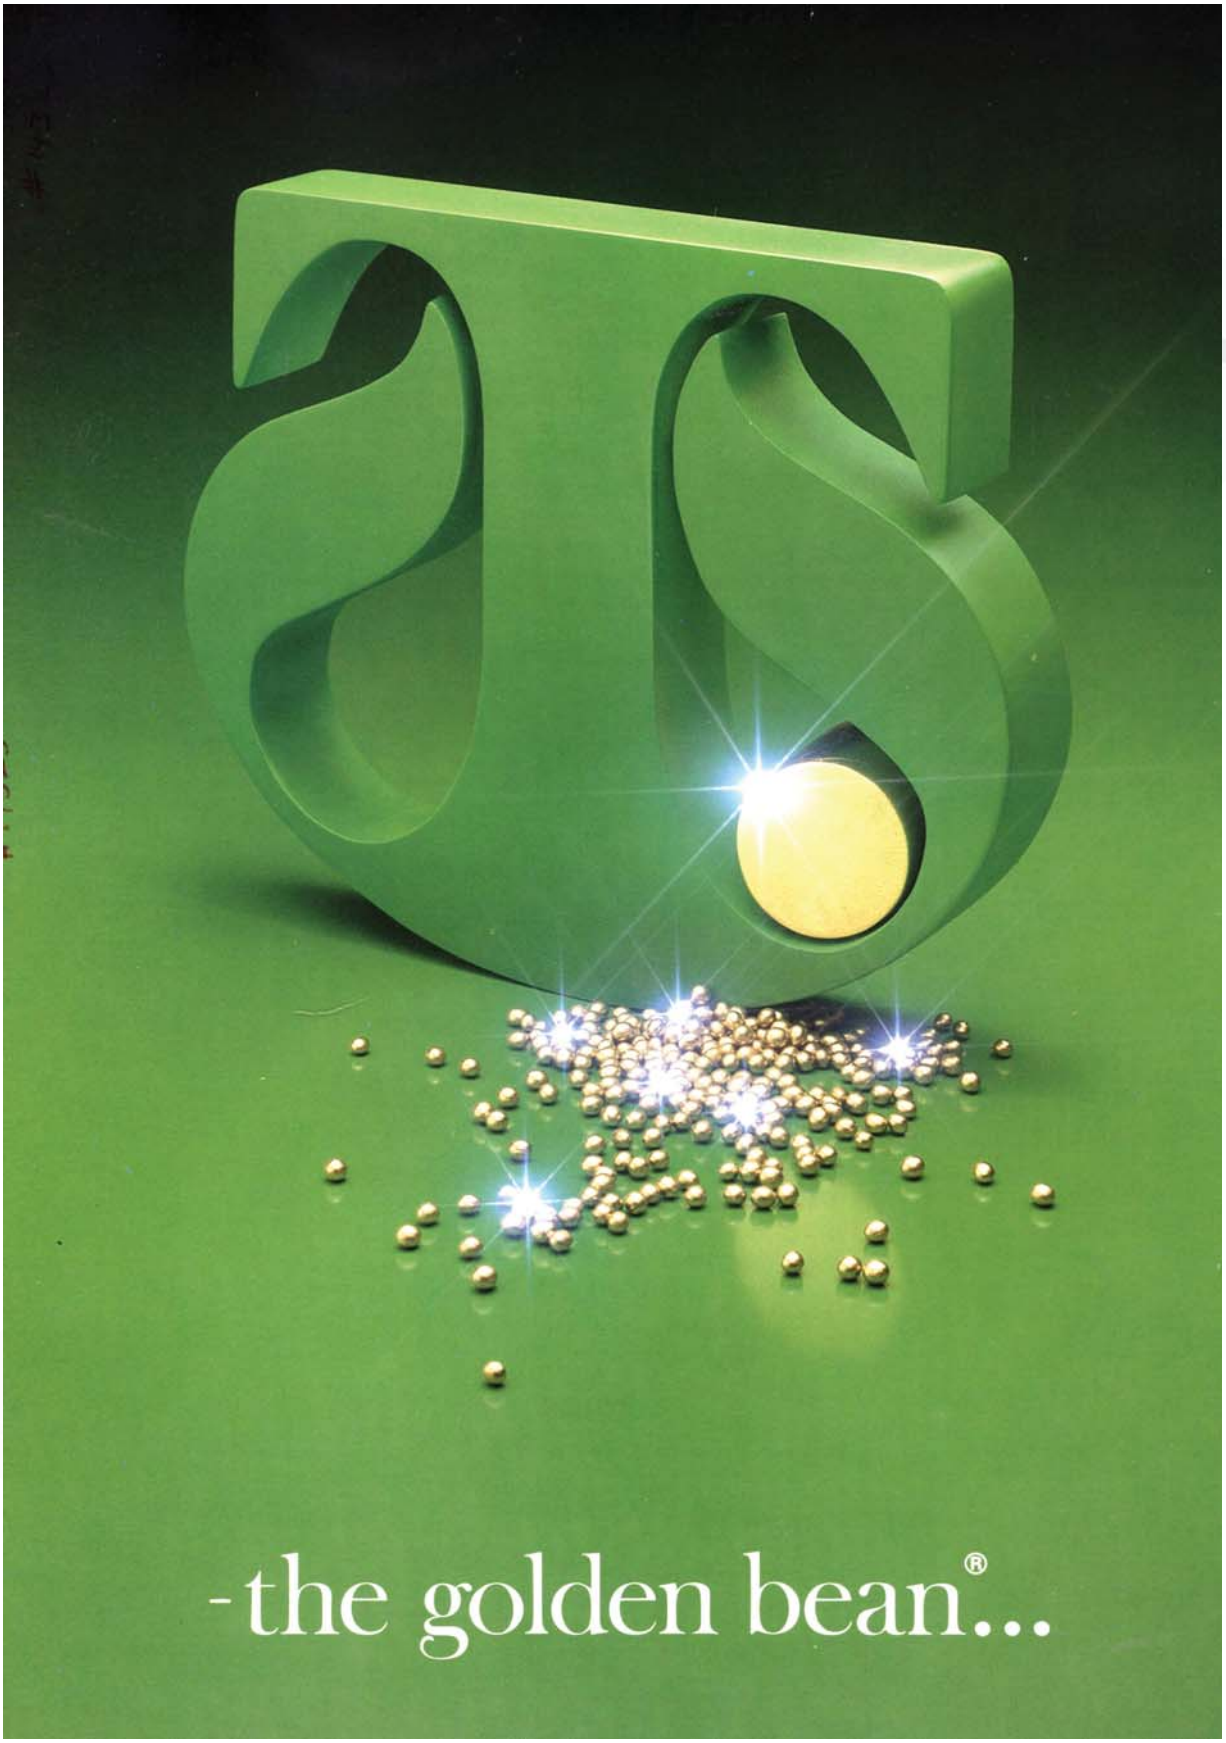
4188. **Product Name:** [Soy–Cow's Milk–Wakame Extract Blend].
Foreign Name: Tônyû 60% + Gyûnyû 30%–Wakame Ekisu 10%.
Manufacturer's Name: Sujiyata Payaki.
Manufacturer's Address: Nagoya, Japan.
Date of Introduction: 1983.
How Stored: Refrigerated.
New Product–Documentation: This colorful Japanese-language label was purchased in Japan in mid-1983. It is blue, green, red, and yellow on white. On the front panel is the yellow silhouette of a boy (Urashima Taro) riding on a sea turtle.

4189. **Product Name:** [Soymilk].



Manufacturer's Name: Tamura Kasei.
Manufacturer's Address: Japan.
Date of Introduction: 1983.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64.

4190. **Product Name:** Wel Pac (Soymilk).
Manufacturer's Name: Tokyo Food Processing Corp.
Manufacturer's Address: 40 Varick Ave., Brooklyn, NY 11237.
Date of Introduction: 1983.
New Product–Documentation: Soya Bluebook. 1986. p. 102. Now an affiliate of JFC International. Interview with Liz Appel. 1987. Oct. 7. She says this is her main soymilk competition. Made by JFC International. Sold in Korean produce stores.

4191. **Product Name:** [Snow Brand Soymilk (Coffee, or "Yogurt Flavored")].
Foreign Name: Yuki-jirushi no Tônyû (Koohii, Yooguruto Fureebaa).
Manufacturer's Name: Yuki-Jirushi Milk Co.
Manufacturer's Address: Tokyo, Japan.
Date of Introduction: 1983.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Label, Tetra Brik carton, 200 ml. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center; Shurtleff & Aoyagi. 1984. Soyfoods Industry & Market. p. 63-64, 66. This is Japan's largest dairy products company, with sales of $1,776 million in FY 1982.

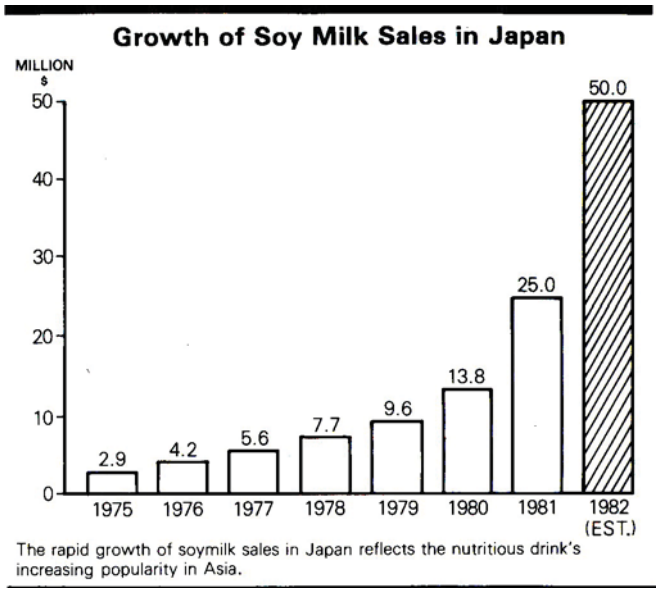
Color photo on cover of Journal of the American Oil Chemists' Society. Dec. 1984. The 250 ml Tetra Brik carton is dark blue, light blue, and white on beige.

4192. Ziegelitz, R. 1983. Soy milk. *Confectionery Manufacture and Marketing* 29(9):5, 7. [3 ref]*

4193. American Soybean Assoc. 1983. ASA helps quench Asian thirst for soymilk. *Checkoff Successfile.* Asia #804. 2 p.
• ***Summary:*** Problem: Soymilk has been a staple in China for centuries. "But the 'beany' taste limited its appeal. Also, in many areas soymilk was made and sold by roadside vendors, and production was inefficient or unsanitary.

"Program: ASA promoted soymilk in Japan, Taiwan, Korea and Singapore. ASA staff worked with food companies to stimulate large scale soymilk production. ASA technicians helped develop new, appealing soymilk flavors. ASA participated in food shows, gave demonstrations and sent out educational pamphlets depicting soymilk's health benefits and good taste.

"Results: Asian soymilk consumption has soared. Consumption in Japan is expected to jump over 200 percent from 1981 to 1982, using almost 1 million bushels of soybeans. Korean soymilk consumption has doubled, requiring over 1 million bushels of beans. Taiwan consumers are drinking over 180,000 gallons of soymilk daily, using over 950,000 bushels of soybeans annually."



The rapid growth of soymilk sales in Japan reflects the nutritious drink's increasing popularity in Asia.

A bar chart shows "Growth of soy milk sales in Japan" from 1975 to 1981, with 1982 estimated. The growth has been exponential.

4194. Aubert, Emmanuelle. 1983. Les 9 grains d'or dans la cuisine [The nine golden grains in the cuisine. 2nd ed.]. Paris: Le Courrier du Livre. 286 p. Illust. by C. Galinet. Index. 22 cm. [Fre]

• ***Summary:*** The subtitle on the cover reads: 400 simple and savory recipes. Menus and advice on good health. Contents: Introduction. 1. The cereals (see p. 28-31 for instructions for making seitan at home from 500 gm wheat flour, plus 8 seitan recipes). 2. Breads. 3. Legumes: Cooking legumes, lentils, haricots, dry peas, chick-peas, azuki beans, soya. 4. Vegetables. 5. Soups. 6. Animal products. 7. Condiments, aromatics, and sauces (incl. tamari and miso). 8. Desserts. 9. Beverages. 10. 80 menu ideas. 11. Pregnancy and the feeding of young infants. 12. Some natural remedies. Where to buy supplies.

Soy-related recipes include: Making tofu at home (p. 87-91; illustrations and method taken without credit or permission from *The Book of Tofu* by Shurtleff & Aoyagi). Yuba. Grilled tofu (p. 91). Tofu with nuts (*noix*) and miso. Skewered tofu. Tofu salad (p. 92). Tofu with vegetables. Onions with tofu. Okara croquettes. Soymilk with fruits (p. 93). Making tempeh at home (p. 94-95). Tempeh goreng. Tempeh bachem (p. 95). Keripik tempeh (tempeh chips; p. 96). Tempeh croutons (p. 96). Pate of vegetables with tofu (p. 126). Jardinière au tofu (p. 128). Peas with tofu (p. 128). Soy sprouts made from mung beans (p. 129-30).

Pages 191-94 give basic information on the following fermented soya condiments: tamari, miso (Hacho [sic, Hatcho] miso, barley miso, rice miso). Pages 278-79 list manufacturers and handlers of various foods used in this book, and pages 280-81 give their addresses: Yellow soybeans: Celnat, Les Sept Marches, Le Seuil, Lima. Miso: Celnat, Lima, Les Sept Marches, Le Seuil, le Bol en Bois, Tenryu. Only Lima and Les Sept Marches manufacture miso in France. Tamari: Celnat, Le Seuil, Les Sept Marches, Lima, le Bol en Bois, Tenryu. Nigari: Le Bol en Bois, Tenryu. Tofu: Le Bol en Bois, Tenryu, Soy. Tempeh: Traditions du Grain, Le Bol en Bois. Tempeh culture: Semailles. Koji: Les Sept Marches, Tenryu, Le Bol en Bois. Amasaké: Traditions du Grain. Soymilk: Celnat, Lima.

A photo on the rear cover shows Aubert, a woman.

Note: This is the earliest French-language document seen that mentions amazake, which it calls "Amasaké." Address: France.

Phone: (214) 934-0338.

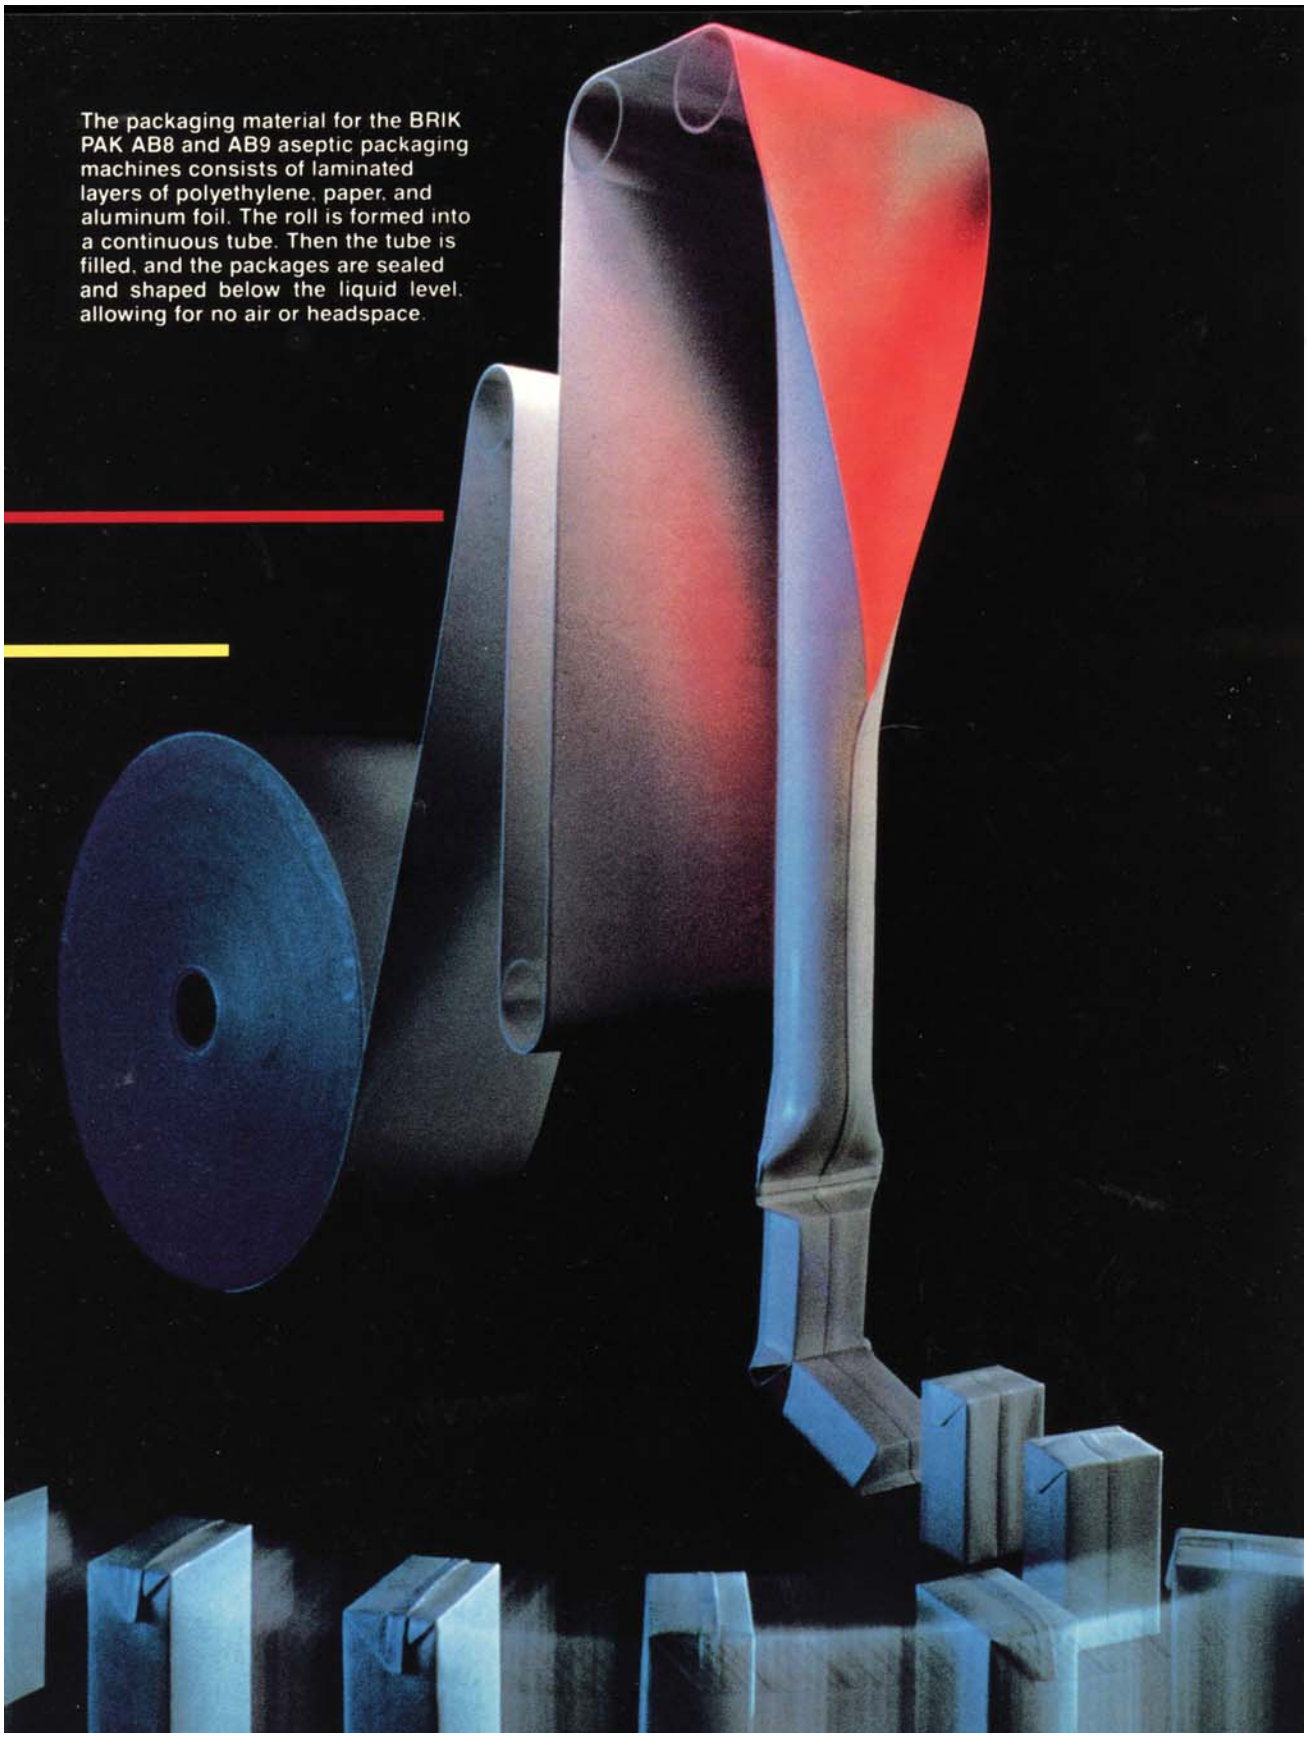
4197. Bryan, Ford R. 1983. A prized friendship: Henry Ford and George Washington Carver. *Greenfield Village Herald* (*Dearborn, Michigan*) 12(2):90-95.

• ***Summary:*** "Beginning in 1937 and continuing until Carver's death in 1943, the two men maintained a correspondence on a variety of subjects." Their letters are now in the Ford Archives and Research Library in Dearborn, Michigan. In 1896 Carver became the first black person to graduate from Iowa State University. His thesis was titled "Plants as Modified by Man." The Tuskegee Institute in Alabama was organized in 1881 by Booker T. Washington to offer practical education for black students. As head of the Tuskegee Research and Experiment Station at the Tuskegee Institute, Carver revolutionized Southern agriculture while earning a worldwide reputation. In 1906, when the boll weevil struck the cotton crop, Carver recommended peanuts as a replacement crop.

"Meanwhile Ford, having gone on to increasing success as an industrialist, became fearful that the automobile which he had helped spread far and wide had destroyed many of the



traditional values to which he was committed. He therefore started on the course that in 1929 led to the establishment of The Edison Institute, comprising Henry Ford Museum and Greenfield Village. Within the village grounds, he built a chemical laboratory and a greenhouse with the objective of finding 'industrial uses for farm products.' Robert Boyer was put in charge of what was called the Chemical Plant. In his account of the plant's first year of operation in 1931, Boyer mentioned the extraction of oils from orange peels, and furfural–a liquid aldehyde–from garbage, as well as experiments with wheat, soybeans, and carrots.

"... in a building near the Engineering Laboratory in Dearborn, Dr. Edsel Ruddiman, Ford's boyhood schoolmate, was experimenting with wheat, soybeans, carrots, and tomatoes in an effort to 'make milk without a cow.'

"In early 1932, Ford issued orders to concentrate on the soybean. His tractors began to plant thousands of acres. In a 25-acre field on Greenfield Village property, some 500 experimental varieties of soybeans were grown. That year the village chemical plant extracted six tons per day of soybean oil, using it to produce soybean bread, milk, butter, ice cream, and an experimental plastic car (chassis excluded)." Carver's extremely competent research assistant was Austin W. Curtis, Jr.

In 1937 Ford and Carver first met; Carver spoke at the meeting of the National Farm Chemurgic Council in Dearborn. In March 1938 Ford made his first of several visits to Tuskegee. After the Fords visited Carver in March 1940, Carver wrote Mrs. Ford and sent her samples of some meatless soy-based gravies he had developed. "I made this same gravy substituting the soy beans. I ground them up very fine and made a very rich milk, and to one pint of this milk I used a tablespoon of soy bean oil. This was cooked down until it creamed, became thick like the richest creamed chicken gravy.

"I hope you and Mr. Ford will try these gravies. They are so rich in protein and other food nutrients and the meat can be greatly reduced, and with some other of Mr. Ford's fine soy bean products, can be left off altogether." Ford and Carver were in complete agreement that plants, not animals, were the solution to human problems. In about 1940 Austin Curtis spent a summer in Dearborn working with Robert Boyer in the Soybean Laboratory.

"The Fords traveled to Tuskegee in early March 1941, to dedicate the George Washington Carver Museum there, inscribing their names in the cement and donating soybeans and a variety of soybean plastic car parts to be placed in the cornerstone."

In the summer of 1942 Ford had a log cabin replica of Carver's birthplace constructed in Greenfield Village and converted the abandoned Dearborn Water Works building into the "Nutritional Laboratory" of the Ford Motor Company. Carver came to Dearborn to dedicate the new laboratory and log cabin in July 1942. The laboratory, under the direction of Robert Smith, soon began producing soybean milk and ice cream. "The soybean foods became standard fare at the Ford plant cafeteria and at Henry Ford Hospital in Detroit. The ice cream–most delicious–was later marketed independently by Robert Smith, a Ford Laboratory manager, as Del(icious) Soy(bean) Topping." Note after talk with Ford Bryan (3 Dec. 1992): Delsoy Topping was a soy-based whipped topping, like whipped cream. It was not an ice cream and Robert Smith never commercialized a soy-based ice cream.

Shortly after Carver died on 5 Jan. 1943, Ford said, in a public statement, "Dr. Carver had the brain of a scientist and the heart of a saint." Address: Dearborn, Michigan.

4198. Burwash, Peter; Tullius, John. 1983. Peter Burwash's vegetarian primer. New York, NY: Atheneum. xvii + 227 p. Illust. No index. 24 cm. [23 ref]

• ***Summary:*** "An incredibly energetic and highly motivated man, Peter Burwash has been described as the most famous vegetarian athlete in the world today." He is best known as a tennis player.

Contents: Contents

Part I: The vegetarian fugitive. Becoming a fugitive. The myth of vegetarianism. So you want to be a fugitive?

Part II: If it's good enough for Pythagoras, it's good enough for me: A short history of vegetarianism. Pythagoras. The Romans, The Renaissance and Enlightenment. Byron, Tolstoy, and Wagner. Gandhi. George Bernard Shaw.

Part III: The pros and cons of meat-eating. Are you turning your body into a garbage can? Is man designed to eat meat? (carnivores, omnivores, herbivores, frugivores, what about man? Man is clearly a frugivore, just like the anthropoid apes, our immediate ancestors). Diseases and impurities in the animals we eat (undulant fever, trichinosis, salmonellosis, toxins in fish). Chemicals we pump into our animals (pesticides in meat, antibiotics in meat, growth promoters, tranquilizers, what slaughtering can do, what the butcher does when he gets his chance). Diseases related to meat-eating (heart disease, cancer, kidney and intestinal disease). The ethical side of vegetarianism (ecological considerations, the waste of our energy and water, the cruelty of modern farming, experimenting with animals, the slaughterhouse).

Part IV: Going vegetarian. Phase One: The nutritional concerns. An adequate diet without meat (making the change gradually, is a vegetarian diet adequate, variety and balance–the keys to a healthy diet, the four basic food groups). Protein (getting the right amounts of protein, but does a vegetarian diet supply enough protein?, protein complementing–yes or no?). Fats and Cholesterol (saturated or unsaturated–does it matter?). Carbohydrates and Sugar (are carbohydrates fattening?, fiber). The Special Problems of a Vegetarian Diet (veganism, the lacto-ovo vegetarian diet, crank diets).

Part V: Going vegetarian. Phase Two: Making Your Vegetarian Diet Work. Shopping for Vegetarian Foods (where to shop, what to look for, grains, legumes, nuts and seeds, dairy products, sweeteneers, oils, fruits and vegetables, miscellaneous foods). Weird foods, or What'll I do with this bag of tofu? (the soybean and its relatives, other weird foods). Selecting vegetables and fruits (vegetables, fruits). The basic preparation of vegetarian foods (basic cooking of vegetables, basic cooking of grains, basic cooking of beans, sprouts). Dining Out (restaurants, handling yourself in a vegetarian restaurant, dining at 40,000 feet).

Part VI: Vegetarianism and the athlete. The vegetarian athlete. How an athlete gets his energy (carbohydrates or protein for energy?, carbohydrate loading, eating before competition, the importance of drinking water).

Part VII: Vegetarian recipes (breakfast, lunch, soups, homemade bread and pastry, salads, dinner, sauces, desserts).

The chapter on "Weird foods" has many nice, very positive things to say (p. 121-23) about tofu, soy milk, soy flour, soy grits, tamari, miso, tempeh okara, lecithin granules and liquid lecithin.

Soy related recipes: Mystery sandwich spread (with 1 cup whole soybeans, cooked until soft, p. 174). Eggless mayonnaise (with soy milk, p. 188). Tofu cabbage casserole (p. 196). Almond stir-fried vegetables with tofu (p. 208-09). Sweet and sour tofu (p. 209). Tofu cheesecake (p. 216-17).

4199. Chen, Steve. 1983. Soymilk. A drink from the great earth. American Soybean Assoc., P.O. Box 3512, Taipei, Taiwan. 38 p. [18 ref. Eng]
• ***Summary:*** Provides general information about soymilk, its nutritional properties, production, and markets. Address: American Soybean Assoc., Taipei, Taiwan.

4200. *Dairy Mail International* (*Danish Turnkey Dairies Ltd., Aarhus, Denmark*). 1983. Soymilk. No. 16. 30 p. [10 ref]
• ***Summary:*** This entire issue of the periodical is devoted to this one subject. No author is given, but it was probably written by Anders Lindner. On the inside front cover, next to the table of contents, is this "Note from the editor": "In the continuous effort to close the ever-broadening protein gap it is no longer enough to just consider cow's milk. Other protein sources must be taken into consideration. One of the most important sources of protein known today is the soybean. As a raw material soybeans are the basis of a wide range of high nutrition products. Soybeans have long been known as China's cow and one of the most popular soybean products, particularly in the Far East, is soymilk. There is no doubt that soymilk has great potential now that an industrialized process has been made possible. We hope that this issue of *Dairy Mail International* will open your eyes to the many possibilities of soymilk as a source of protein."

Contents: Soybeans–A few basic facts. Soybeans–Historical background. Soymilk. Soymilk flavour. The word "soy." Principles of soymilk production: Soybean varieties, dehulling, soaking, grinding, amount of water added, cooking, soymilk extraction, protein and solids recovery and yields, (typically 65% of the protein and 55% of the solids from the soybeans are recovered in the soymilk), flavouring and yields, fortification, homogenization, chalkiness, shelf life, heat treatment & packaging (UHT or ultra high temperature treatment is 140ºC for 2 seconds. Sterilization in a retort / autoclave is 121ºC for 20 minutes), cost and price. Dairylike soymilk: Introduction, soymilk infant formulas, soymilk blends (blended with dairy milk or nonfat dry milk solids), powdered soymilk. Basic soymilk production methods. Soymilk–Nutritional aspects.

4201. Danish Dairy Delegation. 1983. Dairy development proposal: The People's Republic of China–1983. Denmark: DDD. 137 p. Illust. 30 cm. See p. 41 for soymilk.
• ***Summary:*** Soymilk is mentioned only once in this book, published mainly by Danish Turnkey Dairies. In the section titled "Other dairy products" is the following short paragraph: "Soya milk: With recent technological improvements it is today possible to produce a vegetable milk product which is rich in protein and minerals and which is without any off-flavour or rancid taste." A photo at the bottom of the page of soybeans growing in a field bears the caption: "China is one of the world's biggest producers of soyabeans." Address: Denmark.

4202. DE-VAU-GE Gesundkostwerk GmbH. 1983. GranoVita. Health-food & natural food from Germany. Natural nutrition for young and old for every day. P.O. Box 1660, D-2120 Lueneburg, West Germany. 6 p. Manufacturer's catalog. [Eng]
• ***Summary:*** This full-color manufacturer's catalog contains a color photo of each of the company's products and a listing of ingredients. All are natural, vegetarian foods. The lines are Soya-Products, Sandwich-spreads, Baby food, Fruit- and Grain bars, Nut-Creams, Wholemeal Breakfast, Herbal drugs, Drinks (soymilks and coffee substitutes), and Boesen grain-mill. Contains a concise history of the company. Today the Lueneburg plant employs about 120 workers. The company supplies 2,500 health food stores in West Germany and has business dealings worldwide. "By our motto 'One a week a meatless day with granoVita soya-food' more and more customers are induced to try the wholesome and tasty soya-products." In 1977 DE-VAU-GE acquired the Boesen Bakery Ltd. which employs 130 workers. In 1982 total sales for granoVita and Boesen were 50 million DM (German marks). Address: Lueneburg, West Germany.

4203. Eden Foods, Inc. 1983. Edensoy. Clinton, MI 49236. 12 p. 21 cm.
• ***Summary:*** This booklet was written by Mike Potter to

explain the uses of Edensoy. Inset in the red cover, a color photo shows a glass of soymilk next to a blue package Edensoy plain (retort pouch). On the inside front cover a large illustration shows a soybean with the bold caption "Look and feel great." Contents: What is Edensoy? Edensoy–Quality ingredients. Soyfoods popularity: Just another fad? Edensoy–An alkaline food. Good for young and old. Edensoy compares very favorably with cow's milk (2 tables). What about cholesterol. Rich in iron. Good for babies.* Versatile. About the maker. On the inside rear cover, a color photo shows the modern stainless steel equipment used to make Edensoy in Japan. The outside rear cover shows the Eden crane logo with a Muso banner in its beak.

* The paragraph titled "Good for babies later got Eden Foods into big trouble with the FDA. It reads as follows: "Nothing can surpass mother's milk for young children and we strongly recommend breast feeding, but when this is not possible, Edensoy is a quality substitute. It may be used with confidence for bottle fed babies that cannot tolerate the substances found in liquid and powdered formulas or are unable to tolerate dairy milk. Infant formula was developed because babies under the age of one year cannot tolerate (digest) cow's milk.

"Vegetable quality babies cry less." Address: Clinton, Michigan. Phone: (517) 456-7424.

4204. Editors of *China Pictorial,* Beijing. 1983. Chinese cuisine from the master chefs of China. Boston, Massachusetts, and Toronto, Ontario, Canada: Little, Brown and Co. 240 p. Illust. Index. 26 x 24 cm.

• ***Summary:*** An overview with many color illustrations. The section titled "The ingredients" contains color photos of them plus a glossary that includes Chinese names: Dried bean curd stick, dried bean curd sheets, bean curd fresh gluten, fried gluten (p. 42-43). Soybean paste (salted and fermented), fermented bean curd, soy sauce (p. 47). Qingdou (green soybean), huangdouya (soybean sprouts) (p. 51). Doufu (bean curd, tofu), fuzhu (dried soybean milk [dried yuba sticks]), mianjin (gluten), youpi (dried soybean curd sheets [pressed tofu sheets]), kaofu (wheat gluten / vegetable steak) (p. 52). Jiangyou (soy sauce) (p. 54). Huang jiang (soybean paste, salted and fermented), jiangdoufu (fermented bean curd).

White soup (bai tang, with soybean sprouts, p. 56).

Folk nutrition: "All illnesses originate from what is taken into the mouth." On this page is a description of the therapeutic properties of: "Soybeans: their flavor is sweet, raw; their character is warm, and when fried [or cooked] it becomes hot..."

A long section on soybeans (p. 74) begins: "They are the pivot-point of Chinese flavor and nutrition." Includes brief descriptions of how to make soybean milk, bean curd, deep-fried bean curds, "bean curd puffs," and yuba.

Soy-related recipes: Slab bacon with fermented bean curd (Nanru kouru, with "3 cubes fermented bean curd, p. 113). Sweet bean paste sauce (tiendoujiang, for Peking duck; it is made from "fermented black soybeans," p. 140). Braised "shark's fin in white sauce (baipa yuchi, with white soup and soy sauce, p. 199). Mrs. Pockmark's bean curd (mapo doufu, p. 207). Silkworm cocoon bean curd (canjian doufu, p. 208).

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term "fermented black soybeans" to refer to fermented black soybeans.

There is a section of seven vegetarian recipes (p. 199-205).

4205. Flaws, Bob; Wolfe, Honora Lee. 1983. Prince Wen Hui's cook: Chinese dietary therapy. Brookline, Massachusetts: Paradigm Publications. v + 201 p. Index. 23 cm. [16 + 25 footnotes]

• ***Summary:*** The story of Prince Wen and his cook appears in Chuang-Tzu's *Inner Chapters* (trans. G.F. Feng & J. English, New York: Vintage Books, 1974, p. 55). Diet is the third of the Eight Limbs of Classical Chinese Medicine. The other 7 limbs are meditation, exercise, astrology, geomancy, massage, herbology, and acupuncture.

If a man is diagnosed as having a liver imbalance, such as "liver fire blazing upwards," he should consume food and herbs that will sedate, calm, and cool the liver and lower the Yang; foods that raise the Yang, produce internal fire, or aggravate the liver should be avoided.

Page 35 notes that foods that are energetically cool and cold include soy products (such as tofu, tempeh, soymilk). Foods that produce fluid and are damp in nature include soybean and tofu.

In the section titled "Categorization of Foods," a number of individual foods are analyzed in detail, based on characteristics described below: Aduki bean, agar (p. 143), alfalfa, almond, and amasake (fermented glutinous rice) (p. 144), black soybean (p. 148), gluten (seitan, p. 158), kudzu root powder (p. 161), seaweed (p. 179), soybean (p. 181), soybean oil (p. 181), and tofu (p. 185).

Taking tofu, then black soybeans, as examples of the format used. Tofu: Nature: Cool. Flavor: Sweet. Meridian: Lungs, large intestine, stomach. Direction: Descending. Quality: Yin and yang. Elemental quality: Earth. Treatment principles: Tonifies Qi [ch'i] and Blood, clears Heat, sedates Yang, tones Yin, harmonizes the Middle Burner, produces Fluid, lubricates Dryness, counteracts toxins. Commonly used in the treatment of conjunctivitis, chronic amoebic dysentery, diabetes, sulfur poisoning, and alcoholism. Contraindications: spermatorrhea.

Black soybean: Nature: Neutral. Flavor: Sweet. Meridian: spleen and Kidneys. Direction: Ascending. Quality: Yang. Elemental quality: Earth. Treatment principles: Tonifies Qi [ch'i] and Blood, activates the Blood, benefits Water, expels Wind, counteracts toxins. Commonly used in the treatment of edema, Wind Bi (rheumatism),

jaundice, beriberi, and spasms.

The remedial recipes are divided into Chinese (p. 96-116) and American (p. 117-35) types. Soy-related recipes include: Lord Buddha's delight casserole (with tofu, p. 88-89). Clams with black bean garlic sauce (with salted black beans [fermented black soybeans], p. 91). Five jewel casserole (with tofu or tempeh, p. 92). Quick braised soybean sprouts (p. 104).

Amasake cheesecake with cherry topping (p. 119). Shepherd's pie with seitan (Gluten meat, p. 122). Ginger seitan beef (p. 122). Seitan veal marsala (p. 129). Aduki bean brownies (p. 133). Dairyless pumpkin pie (with soymilk or cashew milk, p. 135). Many recipes use soy sauce or tamari in their braising liquid. The cookbook also uses meat, poultry, fish, and sugar quite extensively.

4206. Fujimori, Ikuo. 1983. Daizu. Shizen kindaabukku [Soybeans. Natural children's book]. Tokyo: Fureberu-kan K.K. 30 p. Illust. by Akira SETO. 26 cm. [Jap]
• ***Summary:*** A children's book with superb color illustrations. Shows how to make natto, tofu, and soy sprouts at home. A large color photo (p. 10-11; 2-page spread), titled "All made from soybeans," shows kinako, miso, shoyu, soymilk, yuba in a bowl of clear soup, ganmodoki, abura-age, cooked whole soybeans (*nimamé*), okara sauteed with vegetables, dengaku (made with tofu and miso), and atsu-agé. Address: Daizu kairyo no dai-ichi ninsha [President, Takeya Miso Co., Nagano, Japan].

4207. Herrmann, Karl. 1983. Exotische Lebensmittel. Inhaltsstoffe und Verwendung [Exotic foods. Ingredients and uses]. Berlin, Heidelberg, & New York: Springer-Verlag. x + 175 p. Illust. 21 cm. See p. 111-19. Sojabohnenprodukte. [18 ref. Ger]
• ***Summary:*** The chapter on legumes contains brief introductions to soybeans, green vegetable soybeans (*unreife Sojabohnen*), soy sprouts (*Sojabohnensprossen, Sojabohnenkeimlinge*), soymilk (*Sojamilch*), tofu (*Tofu, Sojaquark*), soy sauce (*Sojasosse, Shoyu*), miso (*Miso, Sojapaste*), tempeh (*Tempeh*), fermented tofu (*Sufu, chinesischer Sojabohnen-Käse*), and natto (*Natto, fermentierte ganze Sojabohnen*). Tables shows the nutritional composition of tofu, deep-fried tofu pouches (*Aburage*), dried-frozen tofu (*Kori-Tofu*), yuba (*Yuba*), roasted soy flour (*Kinako*), and miso, plus defatted soybean meal (*entfettetes Sojabohnenmehl;* 51% protein), and soybean concentrate (*Sojabohnen Konzentrat;* 64.9% protein). Address: West Germany.

4208. Jaffrey, Madhur. 1983. Eastern vegetarian cookery. London: Jonathan Cape. xii + 531 p. Illust. by Susan Gaber. Index. 24 cm.
• ***Summary:*** This is an expanded version of *Madhur Jaffrey's World-of-the-East vegetarian cookery* (1981, New York). The author of this creative book, a woman, was born in British India on 13 Aug. 1933. She first became known as an actress in India, but later found fame as a food writer. She has lived in America for more than 20 years. She presents 21 recipes for bean curd (tofu), 7 for tempeh, and some for yuba and miso. Soy-related recipes include: Aubergine slices with white miso (Japan, p. 4-5). Green beans with soy sauce (Japan, p. 20), Cabbage with miso (Japan, p. 29). Lotus root with soy-sauce dressing (Korea / Japan / Hong Kong, p. 46-47). Yellow pumpkin cooked with soy sauce (Japan, p. 74-75). Fresh soy beans, steamed (China, p. 76, with "fresh green soy beans in their pods"). Yien Koo's Spinach with fermented bean curd (China, p. 78-79). Pecel (Vegetable salad with spicy peanut sauce, plus tofu and tempeh; Indonesia, p. 87). Tempura (with tofu; Japan, p. 89-92). Soy bean sprouts (how to grow, p. 119). Soy-bean and mung-bean sprouts seasoned with sesame oil (Korea, p. 123-24). Tempeh, Fried tempeh, Fried, pre-seasoned tempeh, Sambal goreng tempeh kering (Sweet and sour tempeh), Tempeh cooked in coconut milk (Indonesia, p. 127-30). Thai fried rice (with red fermented tofu, p. 176).

Chapter 4 (p. 187-221), titled "Soy milk, bean curd, and wheat gluten," contains the following: Introduction to each ingredient. Soy milk (making your own at home). Making your own bean curd. Udofu (Yudofu, simmering bean curd with seasonings, Japan). Bean curd with watercress (Singapore Chinese). Bean curd with fresh coriander (Taiwan). Korean-style bean curd in a hot water bath. *Hiya-yakko* (Chilled bean curd, Japan). Bean curd with broccoli (Hong Kong). Cabbage cooked with bean curd (Japan). Bean curd with a deliciously spicy sauce (China). Carrots and beans with a bean-curd dressing (Japan). Bean curd, mushrooms, and peanuts in hoisin sauce (Chinese style). Sautéed bean curd (Korea). Tofu dengaku (Toasted bean curd with a miso topping, Japan). Fried bean-curd cubes (Most of East Asia). Soy-bean sprouts sautéed with fried bean curd (China). Fried bean curd with a sweet-and-sour sauce (China). Fried bean curd cakes with a mustard surprise (Japan). Inari-zushi ("Bags" of fried bean curd stuffed with sushi rice, Japan). Pressed bean curd with cabbage (China). Salad of pressed bean curd, mung-bean sprouts, and agar-agar (China). How to make fried and baked wheat-gluten balls. Stew of baked wheat gluten, potato, turnip, carrot, and cabbage rolls (Japan, p. 215). Fried wheat gluten with broccoli, carrot, and mushrooms (China). Fried wheat gluten and potato stew (Indian style). Shredded wheat gluten and Cabbage with fennel seeds (Indian style). Buddha's delight (A mixed Chinese stew, Hong Kong; with yuba, fried tofu, and fried wheat gluten balls).

Chawanmushi (Steamed savory custards, with tofu; Japan, p. 223-26). Omelette with bean curd (Japan, p. 230-31). Soy-sauce eggs (Thailand / China, p. 245). Paneer (Fresh cheese from cow's milk; India, p. 277-78). Hot or cold noodles with a soy-sauce dressing (China, p. 288).

Noodles with a hot-and-sour bean sauce (China, p. 290). Vegetarian mee krob (Crisp noodles with pressed bean curd and eggs; Thailand, p. 296-97). Noodles with quail eggs, mushrooms, spinach, and yuba (Japan; p. 298-99). Hoppers (yeast pancakes; Sri Lanka, p. 315). Roti (Flat whole-wheat bread; India, p. 320). Delicious stock made with soy-bean sprouts (p. 340). Clear soup with mushrooms, bean curd skins [yuba], and spinach (Japan, p. 346). Clear soup with soft bean curd and Chinese leaves (p. 346). Miso soup with bean curd (Japan, p. 357). Miso soup with carrots and mushrooms (Japan, p. 358). Fried, munchable soy beans [soynuts] (China, p. 373). Potato and tempeh patties (Indonesia, p. 394). Dipping sauces (with soy sauce, p. 414-17, incl. kochu chang–Korean soy sauce). Kombu relish (with soy sauce; Japan, p. 435). Shoyu daikon (White radish pickled in soy sauce; Japan, p. 436). Ginger quick-pickled soy sauce (China, p. 436). Aomidaikon (Quick pickled small white radishes, with slightly sweet yellow miso; Japan, p. 438-39). Chinese-style jellied bean-curd sweetmeat with a peanut topping (Singapore, p. 462-63).

General information [like a glossary] (p. 481-506): See: Bean curd (regular, fried, fermented {*fu-ju, nam-ye, tao-hoo-yee,* red bean curd}, pressed {*doufu kan*}, pressed seasoned {*pai doufu kan*}, dried bean-curd skin or yuba). Beans (azuki, soy). Bean sauce (made from fermented soy beans). Chilli paste with soy bean (and garlic). Hoisin sauce. Miso. Nam yee (see Bean curd, fermented). Nigari. Soy beans, fresh. Soy-bean sprouts. Soy milk. Soy sauce (incl. Japanese, Chinese dark and light, Japanese usukuchi, Indonesian ketjap manis). Tao Hoo Yee (see Bean curd, fermented). Tempeh. Yuba. Sources (of ingredients; p. 507-10). Address: New York City, NY.

4209. Joshi Eiyo Daigaku. 1983. Tôfu kukkingu [Tofu cooking]. Tokyo: JED Shuppan-bu. Kyo no Okazu No. 9. 128 p. Illust. Index. 19 cm. [Jap]
• ***Summary:*** Contents: From tofu in Japanese to tofu in English: Modern thoughts on tofu. Ikuko Hisamatsu's healthy tofu menu: Homemade tofu, western style tofu recipes, second generation tofu products and recipes, okara, natto, soymilk. Fujiko Sakami's Japanese style recipes: Homemade second generation tofu products taste better, Japanese style tofu recipes, okara. Seiko Osato's Chinese-style recipes: Introducing the taste of the homeland of tofu in China, Chinese second generation tofu products. Other comments: The history of tofu, the roots of tofu, the challenge of homemade tofu, tricks of Western style tofu recipes, European and American tofu cooking. Note: A color photo accompanies each recipe. Address: Tokyo, Japan.

4210. Kushi, Michio; Jack, Alex. 1983. The cancer prevention diet: Michio Kushi's nutritional blueprint for the relief and prevention of disease. New York, NY: St. Martin's Press. xi + 460 p. Index. 22 cm. [32 ref]
• ***Summary:*** In this book, cancer preventing effects are attributed to miso (p. 50-51, 220-21, 304-06), and to soybeans (p. 51, 154-55, 293, 306). Natto, soymilk, tamari, tempeh, and tofu are also discussed.

Pages 50-51 note: "A ten-year study completed in 1981 by the National Cancer Center of Japan reported that people who ate miso soup daily were 33 percent less likely to contract stomach cancer than those who never ate miso soup. The study also found that miso was effective in preventing heart and liver diseases...

"Soybeans, a major source of protein in the macrobiotic diet, have been singled out as especially effective in reducing tumors. The active ingredient in soybeans is called a protease inhibitor. Laboratory tests show that soybeans and certain other beans and seeds containing this factor added to the diet prevent the development of breast, stomach, and skin tumors. Whole soybeans and soy products, including miso, tamari soy sauce, tofu, tempeh, and natto are staples of the macrobiotic diet... At St. Luke's Hospital in Nagasaki, a group of macrobiotic doctors and patients who had survived the atomic bombing on August 9, 1945 subsequently protected themselves against potentially lethal doses of radiation on a diet of brown rice, miso soup, sea vegetables, and sea salt."

Pages 220-21 contain a long excerpt from the account of Dr. Tatsuichiro Akizuki, director of internal medicine at St. Francis's Hospital in Nagasaki. He survived the world's first atomic bomb attack on 9 Aug. 1945. He believed that the main reason that neither he nor any of his co-workers at the hospital suffered or died from radiation was because of their diet, based on miso, brown rice, and sea vegetables.

Pages 293, and 304-06 summarize a number of publications which seem to show that consumption of soybeans, miso, or soymilk may prevent cancer. Pages 391-99 contain soyfoods recipes. Address: Boston, Massachusetts.

4211. Lorchirachoonkul, Sophon. 1983. Physico-chemical interactions of ingredients in formulating imitation milk. PhD thesis, Texas A&M University. 122 p. Page 117 in volume 45/01-B of Dissertation Abstracts International. * Address: Texas A&M Univ.

4212. Plenty International. 1983. Caribbean islands: Another rotten day in Paradise (Leaflet). Summertown, Tennessee. 1 p. Front and back. 3 panels each side. Undated. Illust. 28 cm.
• ***Summary:*** A map shows the proposed voyage of the ship *Fri* (rhymes with "Free"), a 105-foot sailing ship, from northern Florida, through the Caribbean, then back to home port. They plan to visit St. Vincent, St. Lucia, Dominica, Antigua, and Haiti. "And in the long run: Food self-sufficiency can happen on these islands. Plenty soy technicians will stay to help local farmers grow and process soybeans into protein-rich foods such as soy milk, tofu and

soy ice cream. This will help fill the need for protein in their diet."

A postcard, printed with blue ink on white, requests donations for: Caribbean project. Guatemalan refugee fund. Wherever needed. "$5 included to mail me–Guatemala: A Commentary on Human Rights."

Note: This cruise stirred up considerable controversy concerning appropriate use of limited funds. Address: Summertown, Tennessee.

4213. Rasic, Jeremija Lj.; Kurmann, Joseph A. 1983. Bifidobacteria and their role: Microbiological, nutritional-physiological, medical and technological aspects and bibliography. Basel, Boston, Stuttgart: Birkhaeuser Verlag. 295 p. Illust. 24 cm. Experientia Supplementum Vol. 39, and Fermented Fresh Milk Products and Their Cultures #2. [1225* ref]

• ***Summary:*** Probably the best and most comprehensive work on this genus of bacteria, which are widely believed to be beneficial to humans. This is the earliest known book about bifidobacteria, the predominant intestinal organisms of breast-fed infants and the major component of the large intestinal flora of human beings. Bifidobacteria were first isolated and described by the French researcher Henry Tissier in the period 1899 to 1900. He named the type species *Bacillus bifidus* and found them to be the predominant organisms in the stools of breast-fed infants.

The history of study of this organism can be divided into 2 periods: 1899-1957, and 1957 to the present. From 1923-1934 the bacterium was named *Bacteriodes bifidus* in *Bergey's Manual* (eds. 1-4), then from 1939-1957 it was named *Lactobacillus bifidus* in the same book (eds. 5-7). Finally in the 8th edition of *Bergey's Manual* (1974) these organisms were designated as a separate genus, *Bifidobacterium,* comprising 11 species. They are non-motile and non-sporeforming rods. Their optimum growth temperature is 36-38ºC. Scientific investigations during the first period were concerned with: "the growth-promoting factors for bifidobacteria; the occurrence of these organisms in the human intestinal tract; their significance in the health of infants; and the devising of culture media for the isolation and maintenance of strains." During the second period, knowledge concerning bifidobacteria advanced rapidly. In 1957 Dehnert divided them into 5 groups. Growth promoting factors were discovered.

Chapter 6, titled "Nutritive and health values of dairy foods containing bifidobacteria" states that "Bifidobacteria may play significant roles in the intestinal tract of infants. They produce organic acids which inhibit the growth of undesirable bacteria, and stimulate intestinal peristalsis. Their consumption also influences the metabolism of the gut bacteria, and some reports have indicated the possible value of bifidobacteria in improving the nutrition of infants.

"This potentially beneficial role of bifidobacteria in the intestinal tract of babies and children has led to their suggested use as dietary adjuncts in combination with their growth-promoting substances. Consequently cultured milk products containing *B. bifidum* (*L. bifidus*) may improve the nutritional and health values of the weaning diet.

"The use of *B. bifidum* together with *L. acidophilus* for the treatment of the side-effects of antibiotic therapy has shown beneficial results.

"Many reports have indicated the role of lactulose and/or *B. bifidum* in the compensational detoxication of subjects with chronic liver disease." Fig. 6.3 (p. 89) compares the protein composition of cow's ilk, human milk, and humanized breast milk substitute. Cow's milk contains much more casein than human milk, much less α-lactalbumin, and a significant amount of Beta-lactoglobulin of which none is found in human milk. Human milk contains lysozyme and lactoferrin, which are not found in cow's milk or humanized breast milk substitute. Address: 1. Food Research Inst., Rumenacka 103, Novi Sad, Belgrade, Yugoslavia; 2. Agricultural Inst., CH-1725 Grangeneuve-Fribourg, Switzerland.

4214. Register, U.D.; Crooks, Hulda. 1983. Nutritionally adequate vegetarian diets. In: Miloslav Rechcigl, ed. 1983. CRC Handbook of Nutritional Supplements. Vol. I. Human Use. Boca Raton, FL: CRC Press. See p. 331-42. [41 ref]

• ***Summary:*** Contents: Introduction. What is a vegetarian diet? Protein requirement. Lacto-ovovegetarian diet. Lactovegetarian diet. Total vegetarian diet. Adequacy of plant proteins. Planning the vegetarian diet. Meat analogs.

There are three basic types of "nonflesh diets": 1. Lacto-ovovegetarians include dairy products and eggs in their diets. 2. Lactovegetarians use only dairy products in addition to plant foods. 3. Total or pure vegetarians avoid all animal products. Many total vegetarians (vegans) "substitute soymilk and soy products for dairy products"; some refuse "even to wear shoes made of leather." Address: 1. Prof. and Chairman, Dep. of Nutrition; 2. Research Asst., Health Education Dep. Both: School of Health, Loma Linda Univ., Loma Linda, California.

4215. Rohé, Fred. 1983. The complete book of natural foods. Boulder, Colorado: Shambhala. xvi + 491 p. Illust. Index. 26 cm. [120 ref]

• ***Summary:*** This book is about "The New American Diet," which is an "omnivarian" diet including some fish and meat. Chapter 14, titled "New and future natural foods," contains a section titled "Soy foods" (p. 162-65) including tofu, tempeh, miso, soy sauce, soy milk, and other soy products (yuba and sufu). The work of William Shurtleff and Aoyagi, and their Soyfoods Center, is mentioned 2-3 times. Toward the back of the book are many soyfoods recipes.

The Prologue tells Rohe's life story and pioneering work with natural foods. In 1964, at the ripe old age of

27, he didn't feel good, didn't look good, and didn't like it–the result of years of smoking, drinking, eating bad food and "burning the candle at both ends." "It was time to do something about it. Adelle Davis became my guru and Thom Hamilton–the health foods store owner who sold me [her book] *Let's Eat Right to Keep Fit* became my mentor." Within a few months he was feeling much better. "So in 1965 I bought a small health food store in the Sunset district of San Francisco." It was named Sunset Health Foods." He discarded most of the dietetic foods on the shelves and replaced them with "old-fashioned groceries–basic stuff, traditional, simple, whole food... What was evolving was a modern version of an old-fashioned grocery store." He would provide information instead of hype, bulk retail foods sold out of barrels, crocks, jars, and drawers instead of packaged products, food instead of food supplements. He renamed the store "New Age Natural Foods."

"My career ended in 1973, after eight years. New Age Natural Foods had served as a model for what were called in those days 'hippie food stores.' It is credited as being the prototype natural foods store, as distinct from a health food store." Since 1973 Fred continued to work in the natural foods industry. In 1979, in his capacity as a consultant, he met the people of Sunburst Farms, who are his collaborators on this book. "Sunburst is the realization of a vision experienced in 1951 by its founder Norm Paulsen, while he was living as a student monk studying yoga at the Self-Realization Fellowship in Los Angeles. He moved to the Santa Barbara area, and while operating a construction business in 1968 established Sunburst Farms as a group of people living communally under spiritual principles on 160 acres of land in the mountains above Santa Barbara. The community-owned business, Sunburst Natural Foods, grew foods organically and flourished. In 1970 they opened a natural foods retail store in Santa Barbara. The community grew to include a second ranch and a total membership of over 200 people. "The business came to include manufacturing and wholesaling as well as retailing. There are now five Sunburst Farmer's Markets, two of them–in Goleta and Ventura–large, complete, natural foods supermarkets. Sunburst also owns and operates a natural foods restaurant, 'The Farmer and the Fisherman,' 35 miles north of Santa Barbara along the coastal highway." Then Norm envisioned a new direction and everything changed. They traded their 6,000 acre coastal ranch for land in northeastern Nevada totaling over 500,000 acres. "It could hardly have been a more radical change. But the soil is rich in minerals and there is abundant water from artesian wells. They are responding strongly to the challenge of, as they say, 'making the desert bloom as a rose.'"

"Appendix eight: Recommended reading list" (p. 470-78) includes a section titled "Soyfoods."

This book was Re-published in 1986 as *Nature's Kitchen* by Garden Way in Brattleboro, Vermont.

Interview with Fred Rohe. 1988. Nov. 3. Fred bought Sunset Health Foods in 1965 and transformed it into New Age Natural Foods at 1326 Ninth Ave. in San Francisco. Address: 4014 Lincoln Way, San Francisco, California 94122. Phone: 415-564-7024.

• ***Summary:*** The most comprehensive book of its type ever written. Most chapters are now available in manuscript form. Those that are, are listed individually in this database. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

4218. Shurtleff, William; Aoyagi, Akiko. 1983. Leaders of the Soyfoods Movement in Europe (Document part). In: Shurtleff and Aoyagi. 1983. Soyfoods Industry and Market: Directory and Databook. 3rd ed. Lafayette, CA: Soyfoods Center. 121 p. See p. 109.
• ***Summary:*** The name, address, and phone number of the following people are given: Wolfgang Furth-Kuby of Sojaquelle, Peter Wiegand of Auenland Tofu, and Boo Massobrio of Weg Der Natur in West Germany. Verena Krieger and Walter Daenzer of Soyana in Switzerland. Sjon Welters of Manna Natural Foods in the Netherlands. Ted Nordquist and Tim Ohlund of Aros Sojaprodukter in Sweden. Bernard Storup of Soy SARL and Alexander Nabben of Europa Farm in France. Gilberto Bianchini of Community Food in Italy. Kym Olsen in England. Pierre Gevaert of Lima Foods in Belgium. Jane O'Brien in Ireland. Dr. Brian J.B. Wood of the University of Strathclyde, Microbiology Department, in Scotland. Lawrence Dreyer of Weg Der Natur in Austria. As of July 1982 there are 609 European names and addresses on the Soyfoods Center Mailing List. Address: Lafayette, California. Phone: 415-283-2991.

4219. Soy Power Co. 1983. Everything you wanted to know about tofu–But were afraid to ask (Leaflet). Santa Monica, California. 2 panels each side. Each panel: 14 x 11 cm.
• ***Summary:*** Contains basic information about tofu, 6 recipes, and a list of Soy Power products: Silken tofu, Chinese tofu, Pressed tofu, Savory baked tofu, Whatta salad, Fiesta salad, Hi-Pro tempeh burger, and Non-dairy soymilk (Plain, Carob & honey). Printed with purple ink on light gray paper. Soy Power's logo is a pyramid. Address: 2811-A Ocean Park Blvd., Santa Monica, California 90405.

4220. Swaminathan, Mahadeva. 1983. Oilseed and nut

proteins. In: Miloslav Rechcigl, ed. 1983. CRC Handbook of Nutritional Supplements. Vol. I. Human Use. Boca Raton, FL: CRC Press. 564 p. See p. 3-27. [147* ref]
• ***Summary:*** Contents: Introduction. Production: Soybeans, cottonseed, sesame seed, copra, sunflower seed. The chemical composition and nutritive value of the proteins of certain oilseeds and nuts: Chemical composition, essential amino acid composition and nutritive value of proteins, amino acid supplementation of the proteins of oilseeds and nuts. Deleterious constituents present in oilseeds and legumes. Effect of processing on the nutritive value. Processed foods based on oilseeds and their meals: Preparation of edible meals, protein isolates from oilseeds and nuts. Infant foods and milk substitutes from oilseeds and nuts: Infant foods and milk substitutes from soybeans (soy milk, dried soybean milk, large-scale production), nutritive value of soybean milk and soybean milk proteins (animal experiments, treatment of protein malnutrition in children), feeding experiments with infants and children, milk substitutes and infant foods from peanuts, nutritive value of peanut milk and its proteins, feeding trials with infants and children, coconut milk and products based on coconut milk. Milk substitutes based on other nuts and oilseeds: Almond milk, cashewnut milk. Protein foods based on oilseed meals and isolates: Supplements based on soybean meal, on peanut meal, on cottonseed flour, on sesame flour, on coconut meal, on sunflower seed meal. Other processed products based on oilseeds and nuts and their meals: Products based on peanut and peanut flour, enriched tapioca flour and macaroni products, products based on soybean and soybean meal (baked products, macaroni products, tofu, natto, tempeh), foods based on protein isolates from peanut and soybean, products based on peanut protein isolate, products based on soy protein isolate (infant foods, textured food products). Conclusion.

Table 13 (p. 18) lists "Supplementary foods for weaned infants and preschool children." The following contain soya (usually defatted soy flour): Protein Food I and II (India). Fortifex (Brazil). Cerealina (Brazil; with full-fat soy flour). Multipurpose Food, CSM, WSB (USA). Pronutro (South Africa).

Note: On pages 156-57 is a brief description of quark, a non-fermented edible milk protein product widely used in Germany. It is a fresh, uncured cheese, usually sold in bulk form. Versatile and easy to use, it is made by coagulating the milk exactly like cottage cheese, "but instead of cutting, cooking, and washing the curd particles, the whole coagulum is passed through a specially designed centrifuge" to separate the whey from the solidified protein curd, which is then cooled and packaged in bulk. When made under sanitary conditions, the quark has a good shelf life under refrigeration. Some 30-40 different food products based on quark (such as spreads, dips, and desserts) are now sold in western and eastern Europe. A survey concluded that quark has considerable potential in the USA if (like yogurt, the most newly accepted dairy food in the USA) it is well advertised and promoted. Address: Retired, Applied Nutrition and Dietetics Discipline, and Emeritus Scientist, CFTRI, Mysore, India.

4221. Wang, H.L. 1983. Oriental soybean foods. In: Ivan A. Wolff, ed. 1983. CRC Handbook of Processing and Utilization in Agriculture. Vol. II: Part 2. Plant Products. Boca Raton, FL: CRC Press, Inc. See p. 91-106. Illust. Index. 26 cm. CRC Series in Agriculture. [10 ref]
• ***Summary:*** Contents: Introduction. Traditional nonfermented soybean foods. Fermented soybean foods. Tables: (1) Oriental nonfermented soybean foods: Fresh green soybeans, soybean sprouts, soybean milk, protein-lipid film [yuba], soybean curd [tofu], soybean flour (local names: Tou-fen, kinako). (2A) Composition of some indigenous soybean foods, 100 g, edible portion. (2B) Composition of some indigenous soybean foods, 100 g, edible portion. (3) Essential amino acid content of some indigenous soybean foods. (4) Oriental fermented soybean foods. (5) Characteristics of rice miso in relation to fermentation condition. (6) Average composition of soy sauce made from whole soybeans and defatted soybean meal. (7) Composition of various types of miso.

Figures: (1) Flow sheet for the preparation of soybean milk and its related products. (2) Flow sheet for manufacture of soy sauce. (3) Flow sheet for manufacture of miso. (4) Flow sheet for making hamanatto. (5) Flow sheet for preparation of sufu. (6) Flow sheet for tempeh fermentation. (7) Flow sheet for preparation of natto.

Note: Vol. 1 is "Animal products." Vol. 2 is "Plant products," Part A. Vol. 3 is "Plant products," Part B. Address: NRRC, Peoria, Illinois.

4222. Women's Auxiliary to the Alumni Association, Loma Linda University, School of Medicine. 1983. An apple a day: Vegetarian cookery by doctors' wives. Vol. II. Loma Linda, California: WAAA. 240 p. Index. 23 cm. [8 ref]
• ***Summary:*** A Seventh-day Adventist lacto-ovo vegetarian cookbook. The Cookbook Committee editor is Mrs. Georgia E. Hodgkin, M.S., R.D., Asst. Professor, Dep. of Nutrition and Dietetics, School of Allied Health Professions, Loma Linda Univ. Soy-related recipes include: Soy milk shake (p. 11). Spring rolls (with FriChik Soyameat, p. 15). Soy chicken salad (with canned soy chicken, p. 33, 34). Soya chick fruit salad (p. 35). Soyannaise (p. 43). Tofu cornbread (p. 49). "Tuna" burgers (with canned chicken-style Soyameat, p. 60). Savory soybean burgers (with whole soybeans, p. 61). Chicken-style spread (with canned chicken-style Soyameat, p. 62). Mild sloppy Joes (with Vegeburger, p. 64). Soy chicken spread (with Worthington's fried-style Soy chicken, p. 65). Tofu, peanut butter, and banana spread (p. 67). Whole wheat-soy waffles (with soy flour, p. 70).

Crunchy granola (with soy flour, p. 74).

Many of the entrees (p. 77-143) call for canned, frozen, or dry soy-based meatlike products. McKay's seasoning (chicken-style) and G. Washington broth, Vegex, Sovex, and Savita are also widely used. The following is but a sampler: Tofu roast (p. 81). Soy bean loaf (p. 82). Soy cheese loaf (with tofu, p. 82). Chicken loaf (with chicken-style soyameat, p. 85). Soyameat broccoli casserole (chicken-style, p. 86). Onion tofu (p. 93). Easy tofu casserole (p. 94). Tofu casserole (p. 94). Lasagne (with textured vegetable protein, p. 95). Soy bean patties (p. 110). Tofu balls (p. 113). Soy beans, southern style (p. 115). Delicious baked soybeans (p. 116). Stir fry vegetables with tofu (p. 127). Tofu quiche (p. 133). Soybean soufflé (p. 138).

Tofu fruit whip (p. 171). There is a chapter titled "Foods for Fifty" (p. 185-201) including: Curried rice with soyameat (p. 195). Address: Loma Linda Univ., School of Medicine, 11136-A Anderson St., Loma Linda, California 92354.

4223. Woodroof, Jasper Guy. ed. 1983. Peanuts: Production, processing, products. 3rd ed. Westport, Connecticut: AVI Publishing Co., Inc. xiv + 414 p. Illust. Index. 24 cm. [100+* ref]

• ***Summary:*** All chapters are by J.G. Woodroof unless otherwise noted. Contents: 1. Historical background. 2. Production and marketing of peanuts in the United States, by D.H. Carley. 3. World production and trade of peanuts, by D.H. Carley. 4. The culture of peanuts. 5. Harvesting, curing, and shelling. 6. Storing peanuts. 7. The aflatoxin crisis, by T.H. Sanders. 8. Composition and nutritive value of peanuts. 9. Peanut butter. 10. Salted peanuts. 11. Peanut confections. 12. Peanut oil. Diversified food uses for peanuts, by Kay H. McWatters: Introduction, white and whole wheat peanut bread, variety breads, cookies, cakes and brownies, doughnuts and sweet yeast products, pies, peanut milk, peanut yogurt, and peanut cheese-type systems, frozen desserts, nonmilk beverages, soups and gruels, peanuts with meats, peanut snack products, breakfast cereals, summary. 14. Peanut protein properties, processes, and products, by John P. Cherry. 15. Nonfood uses for peanuts. Summary and future outlook. Appendices: 1. U.S. standards for peanuts: Farmers' stock white Spanish peanuts, Virginia-type peanuts, and runner peanuts (unshelled or shelled). 2. U.S. standards for grades of peanut butter. 3. Technical inspection procedures for peanut butter. 4. Peanut butter: definition and standard of identity. 5. Common conversions. Address: Prof. Emeritus, Dep. of Food Science, Univ. of Georgia Agric. Exp. Station, Experiment, Georgia. Phone: 404-227-3376.

4224. World of God, Inc. 1983. The cookbook for people who love animals. 2nd ed. Umatilla, Florida. 192 p. Edited by Butterflies. Illust. and cover design by Flowers. No index. 26 cm.

• ***Summary:*** This vegan cookbook is only slightly different from the 1981 edition by the same title, but is 16 pages longer. Recipes with soyfood terms in the title are the same and on the same pages as those in the 1981 edition, except the following recipes added at the back of the book: Avocado-tofu dinner (p. 166). Stuffed avocado with tofu (p. 178). Spaghetti and tofu. Baked macaroni and tofu (p. 180). Tofu omelette (p. 181). Tofu cutlets (p. 182).

The book is interspersed with most of the same nice quotations about vegetarianism, veganism, and animal rights from great thinkers found in the 1981 edition. Address: P.O. Box 1418, Umatilla, Florida 32784.

4225. Yeo Hiap Seng Ltd. 1983. Yeo's quality foods and beverages. Singapore. 25 p. [Eng]

• ***Summary:*** "Yeo Hiap Seng's heritage dates back to 1900 in China. The Company started operations in Singapore in 1935, as a manufacturer of fine soya sauces." A photo shows the store front at one of its early locations. Many color photos show the company's products, which include the following soyfood products: Soy sprouts, salted black beans, salted yellow beans, hoi sin sauce, crushed yellow bean sauce, black bean sauce, salted soya beans, soy sauces (light or dark), and Yeo's soya bean drink (canned). Most product names are given in English, French, and Chinese. The company has offices (whose address and phone are given) in Singapore, Malaysia, Hong Kong, United Kingdom, USA (San Jose, California), and Canada (Richmond, BC).

Photos from this booklet show: (1) One of the company's early offices–the date and place are not given. (2) Yeo's range of Oriental sauces. (3) Yeo's Eastern condiments.

Photos (by William Shurtleff) show: (4) The company's soy sauce products. (5) Other related soy products. Address: Singapore.

4226. Galactina, AG. 1983? Galactina. 3123 Belp, Switzerland. 12 p. 24 x 24 cm. Undated.

• ***Summary:*** On page 6 we read: "Naga-Sonda is a fully-balanced, low-bulk, natural food concentrate for the complete nourishment of adults and children.

"Naga-Sonda is produced from soya by a new process and contains all the essential nutritional constituents such as albumen, fats, carbohydrates, essential amino-acids, vitamins, minerals and trace elements.

"Naga-Sonda is chiefly employed as an ideal, easily digested complete nutrient for feeding by tube in:

"disorders of the swallowing process and oesophagus

"neuro and maxillary surgical operations

"progressive muscular distrophy

"refusal to eat (anorexia)

"loss of consciousness etc.

"Naga-Sonda is free from lactose, possesses ideal osmolarity, and reduces cholesterine.

"Naga-Sonda is available either in powder form

[introduced in Oct. 1964], which is easily prepared simply by adding water, or ready for use as a concentrated liquid [introduced in 1981]."

A photo shows Naga-Sonda products and packages. Address: Belp, Switzerland.

4227. Johnson, L.A. 1983? No. 3. Soymilk technologies. College Station, Texas: Food Protein R&D Center, Texas A&M Univ. 6 p. Unpublished typescript. Undated. 28 cm. [41 ref]
Address: Food Protein R&D Center, Texas A&M Univ., College Station, TX 77843.

4228. **Product Name:** K.K. (Bottled Soymilk).
Manufacturer's Name: King? Kong (KK) Food Products Sdn. Bhd.
Manufacturer's Address: Sabah, East Malaysia.
Date of Introduction: 1983?
Wt/Vol., Packaging, Price: Bottle.
New Product–Documentation: Color photo of Label from STS. 1987. Bottle with red and yellow label.

4229. Nisshin Oil Mills, Ltd. 1983? [Soybean proteins (Catalog)]. Japan. 1 p. Undated. [Jap]
• ***Summary:*** This 1-page color leaflet shows 5 soy protein products made by Nisshin. For each, a photo shows the product in a shallow white bowl, and a nutritional analysis is given; for the first three the package (a 10 kg multiwall paper sack) is also shown. The products are: Soymee S (textured soy protein, 51% protein and 1% fat, probably textured soy flour). Sol-P 600 (powdered product for use in various kinds of fish paste, based on soy protein concentrate; 64% protein and 1% fat). Sol-P-S (powdered soymilk, 27.5% protein and 28.5% fat). Imitation bacon bits (31.5% protein and 39.4% fat). Full fat soybean flour (39% protein and 20% fat).
Address: Japan.

4230. Paradise Distributors. 1983? The latest scoop. . . Tofutti. Its a natural beauty. All natural nondairy tofu frozen dessert. 5 luscious flavors (Leaflet). Torrance, California. 2 panels each side. Each panel: 22 x 14 cm. Undated.
• ***Summary:*** "Tofutti's light, rich taste comes from mixing tofu, soy milk, fresh fruits and pure wild honey into a completely natural frozen dessert." The product is said to contain only 128 calories per 4 oz. serving. Ingredients are listed as "Pasteurized tofu dessert base (water, high fructose corn sweetener, honey, soybean oil, tofu isolated soy protein), all natural flavorings (if chocolate, cocoa is added), soy lecithin, vegetable gums (guar seed, carob bean, carrogeenan [sic, carrageenan]), salt." The use of the term "tofu isolated soy protein" is deceptive, perhaps illegal.

This leaflet was being passed out by Paradise employees at the Natural Foods Merchandiser trade show at Anaheim, California, March, 1984. Address: 18655 Western Ave. (P.O. Box 6396), Torrance, California 90504.

4231. **Product Name:** Butterfly brand Soyabean Drink.
Manufacturer's Name: Pioneer Corporation (Distributor).
Manufacturer's Address: China.
Date of Introduction: 1983?
Ingredients: Cane sugar, soya bean.
Wt/Vol., Packaging, Price: 30 gm foil pouch.
How Stored: Shelf stable.
New Product–Documentation: Label. 1983. A granular product in a small foil packet. "High Protein. Instant." Just mix contents of packet with 8 oz hot or cold water.

4232. *Toyo Shinpo* (*Soyfoods News*). 1984. [Main additives to soymilk in Japan]. Jan. 1. [Jap]
• ***Summary:*** Preservative (*hozon ryo*). Antioxidant (*sanka bôshizai*). Artificial flavor and/or fragrance (*chakko*). Sweetener (*kanmi*). Emulsifier (*nyûka*). Foam extinguisher (*awakeshi*). pH regulator (*pH chôsei*). Quality improver (*hinshitsu kairyo*). Coagulant (*gyôki, gyôkozai*).

4233. Chen, Steve. 1984. Re: Answers to questions about the soymilk and dairy milk industries in Taiwan. Letter to William Shurtleff at Soyfoods Center, Jan. 31–in reply to inquiry of Jan. 23. 2 p. Typed, with signature on letterhead.
• ***Summary:*** Shurtleff asked: 1. What year did President actually start making soymilk. Was it 1977 or l978?. You have told me both. Ans: "The Pulse Quality Food Corporation was established on Oct. 22, 1983. The President Corp. was one of its major share holders. The Pulse started soymilk production in 1975, which was the first large scale commercial soymilk production in Taiwan. Due to a defect of Tetra Pak packaging, the Pulse venture was concluded in February, 1977. The Pulse venture was then bought out by the President Corp and changed to Tetra Brick packaging and started full scale operation in 1978 under new management."

2. What percent of all soymilk consumed in Taiwan would you estimate is sold in aseptic (Brik Pak) cartons? What is the average size in ml of such a carton? Ans: About 10% of all soymilk was consumed in Brick Paks and another 10% in glass bottles, tin cans, plastic pouches. The remaining soymilk was consumed without packaging. The size of Tetra Brick is 250 ml. The glass bottle is 260 ml.

3. Do you have any figures for total cow's milk consumption in Taiwan = production plus imports? Is this the same as the category "per capita fresh milk" on your chart? Ans: The per capita fresh milk consumption is only derived from local production of cow's milk Taiwan (Unit: kg): Per capita consumption of fresh dairy milk increased from 2.42 in 1978 to 2.88 in 1982. Per capita consumption of all dairy milk (including fresh milk, evaporated and condensed milk, milk powder and non-fat milk powder) increased from 5.27 in 1978 to 5.87 in 1982.

4. Is the TFA soymilk sold in 260 ml bottles? Ans:

Yes, TFA soymilk is sold in 260 ml glass bottles and small quantities of flavored soymilk (coffee) in tin can of 250 ml.

5. It is difficult to add local cow's milk of 48,000 MT (liquid) to the imported dairy products of 60,000 MT (semi- and solid, such as evaporated, condensed milk, milk powder and non-fat milk powder). Much of NFMP is used in bakery, ice cream and other food industry. Address: PhD, Country Director/Taiwan, American Soybean Association, P.O. Box 3512 Taipei, Taiwan, R.O.C.

4234. Alfa-Laval Food & Dairy Engineering AB. 1984. Soy milk allied products. Text for explanation of overhead set III. Lund, Sweden. 25 p. Jan. Unpublished manuscript. [Eng]
• ***Summary:*** Probably developed and presented by John Wilson, this document contains reproductions of the 38 slides, tables, and charts used in the presentation, plus text to describe each.

Picture 8. Soy milk plant design depends upon protein balance between: "Protein in soy base and protein in product." A table mentions 11% of concentrate (p. 6).

Picture 11 describes a plant to produce 3,000 kg/hour of soy milk. Equipment requirements include: "Soy base extraction unit size–294 kg/hour of soybeans. Soy base at 5.5% protein–1,495 kg/hour. Soy base storage–17,945 kg/day" (p. 8).

Picture 13 describes "The soy base extraction process" A diagram titled "Extraction" shows "Soy milk extract out" (p. 8).

Picture 15 discusses "Features of Alfa-Laval's soy milk base extraction system" include: Continuous. Maximized protein recovery. Enzyme lipoxygenase destruction to 100%. Waste heat recovery. Hermetic grinding. No foam suppressant chemicals required. Cleaning in place.

18-20. Decanter centrifuge. 21. Enzyme and trypsin inhibitor deactivation and deodorization. 22. Deodorization. 23. Cooling and storage. 24. Dairylike products you can make from soy milk. 25-26. Blending. 27. Clarification (no longer included as standard equipment). 28. VTIS system of direct steam injection into product for UHT processing. 29-30. Steritherm UHT process and features. 31. Recombining and "recombined soy milk" which can be made "from soy protein isolates or from soy milk concentrates or from spray dried soy milk powder." 34. Other product possibilities (incl. "concentrated soy milk"). 38. Mentions "soy base extract." Address: Dept. FD, Box 1008, S-221 03 Lund, Sweden.

4235. *Food Engineering.* 1984. These tasty frozen desserts can be high protein: Frozen desserts are reformulated to double the protein at much less cost. You can cut calories, too. And with good taste. 56(1):49. Jan.
• ***Summary:*** Dr. L. Steven Young is Manager of Product Applications for ADM Foods (1825 N. Laramie, Chicago, Illinois 60639). He has used Ardex Isolated Soy Proteins and Cornsweet 55 (55% high fructose corn syrup) and vegetable oils to replace the milk protein, lactose and sucrose, and butterfat in traditional ice cream. The new products can have twice the protein of standard ice cream at less cost. A good example of how ADM's formulations can succeed is in the Trinidad School Lunch Program. Young reports: "They're using a product that is actually a soy protein fortified milk made with MSNF (milk solids not fat), vegetable oil, isolate, and sweetener." This lower cost product has all the nutrition of milk and twice the protein.

4236. Koehler, Lennart; Meeuwisse, G.; Mortensson, W. 1984. Food intake and growth of infants between six and twenty-six weeks of age on breast milk, cow's milk, or soy formula. *Acta Paediatrica Scandinavica* 73(1):40-48. Jan. [20 ref]
• ***Summary:*** "In 59 normal infants attending well-baby clinics, food consumption was registered until 26 and growth until 52 weeks of age. They were either breast-fed or formula-fed with a cow's milk product or a soy protein product... The soy formula-fed children, who happened to be 200 g. heavier at birth, had lower weight gains during the first 6 weeks than the other 2 groups. Thereafter, the average weights of the soy formula group did not differ from the other groups. At 3 months, the soy formula-fed children displayed a slower mineralisation and maturation of bone, but the difference was no longer significant when re-examined at 6 months. Formulas based on soy protein isolates seem to be acceptable as substitutes for cow's milk formulas in feeding normal infants." Address: Dep. of Pediatrics and Dep. of Diagnostic Radiology, University Hospital, Lund, Sweden.

4237. **Product Name:** [Soymilk].
Foreign Name: Salsa Lait Dilue.
Manufacturer's Name: Lalasoa SA (Societe Anonym).
Manufacturer's Address: Ambatolampy, Madagascar.
Date of Introduction: 1984. January.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable.
New Product–Documentation: Letter from Philippe Vandemoortele, General Manager, Alpro. 1984. Jan. 2. Gives the name and address of the soymilk plant they built in Madagascar. Lalasoa S.A., c/o F.N.I., Maison des Produits 5ème étage, B.P. 719, Antananarivo, Madagascar.

Letter from Chr. Daems. 1984. Feb. 7. Alpro sold a turnkey soymilk plant to a company in Madagascar, which started making soymilk in Jan. 1984.

Label. 1987, undated. Dark and light green on white. Talk with Anders Lindner. 1987. The World Soymilk Market. This product is still being made. The company is run by a woman, Regina.

Letter from Anders Lindner. 1990. April 26. "The Alpro soymilk line sold to Lalosa in Madagascar in 1982

cost US$11 million and the management there feels that it produces a low-quality product. Asger Somer Hansen of STS inspected the plant 2 years ago as the company wanted to know if it could be rebuilt to produce a proper product. I don't know the current situation."

Note: This is the earliest known commercial soy product made in Madagascar.

4238. *Soyanews* (*Sri Lanka*). 1984. A soya factory in soya country. 6(5):1, 7. Jan. [1 ref]
• ***Summary:*** On 1 Dec. 1982 the new dried soya milk factory located at Maha Illuppallama, in the heart of soyabean country [in the dry zone just south of Anuradhapura], was commissioned by the Minister of Agricultural Research and Development, Mr. Gamani Jaysuria. The plant has a capacity of 4 tons per day.

"Speaking on the occasion, Mr. Jayasuriya congratulated Mr. R.S. Wijesekara, Chairman of the Raja Rata Food Grain Processing Co. Ltd. and representative of the private sector, on taking a bold decision to participate in a joint venture...

"The private sector has been reluctant hitherto to enter agricultural projects because of the risks entailed... But Mr. Wijesekara, a pioneer himself in the production of soya as a commercial crop as well as in the marketing of soya products, was confident in the success of setting up a soya based agro-industry.

"The Raja Rata Food Grain Processing Co. Ltd. was formed on Oct. 2, 1980 with a capital cost of Rs. 27 million. The Company is supported by several public organisations including the Paddy Marketing Board, Lanka Milk Foods (C.W.E.) Ltd. and the Mahaweli Development Authority. The Employees Trust Fund, which represents over 1.4 million employees in the public and private sectors of Sri Lanka holds 60,000 shares of Rs. 10 each.

"The dried soya milk factory... had its soft opening last September when it began commercial operations combined with test runs. But the demand for Rajasoya, the company's first product which is recommended as a substitute for coconut milk, was so overwhelming that the factory is now called upon to extend its full capacity.

"At the time of the formal opening the factory was producing 1.8 tons a day of Rajasoya. Arrangements are now being made to operate a second sift which will produce the factory's maximum capacity of 4 tons a day to meet the country's demand for a substitute for coconut milk following an unprecedented drop in the production of coconuts caused by recent droughts."

Rajasoya can also be used in weaning foods for infants and added to breakfast foods to boost nutrition.

A large photo shows flaked soya beans being removed on a conveyor belt to the drier, before being ground to make Rajasoya.

Note 1. This factory appears to be making whole (full-fat) soya flour rather than dried soya milk, since the okara is not removed from the flour.

2. As of Nov. 2010 no trace of this company or its product (Rajasoya) can be found on the Web.

4239. *Soyanews* (*Sri Lanka*). 1984. Consumer guide: Three kinds of [soya] flour. 6(5):6. Jan. [1 ref]
• ***Summary:*** (1) Regular whole soya flour is made by the Cereal Products Factory in Kundasale. The flour is popular with bakers. "It can also be used as a substitute for coconut milk but its dispersibility in water is not as good as the flour prepared by the second method.

(2) The soya beans are dehulled and blanched for 20 minutes, then passed through rollers and flaked. The flakes are dried and then finely ground to a powder. This flour has good dispersibility in water. Called Rajasoya, it is made by the Rajarata Food Grain Processing Co. It is widely referred to as "dry soya milk."

(3) A third method of making whole soya flour is by extrusion cooking. This flour is available only at the Soyabean Foods Research Centre at Gannoruwa.

4240. Soyfoods Assoc. of America. 1984. Soyfoods Pavilion '84. Marketing soyfoods in America (Ad). *Natural Foods Merchandiser.* Jan. 12-page color advertising insert.
• ***Summary:*** Contains large color ads by Legume Inc. (6 frozen tofu entrees), Erewhon, Inc. (shoyu tamari), Vitasoy (USA), Inc. (natural and coconut soy drink, sweetened with maple syrup), San-J International, Inc. (tamari, teriyaki sauce, tamari crackers, teriyaki crackers), Tofu-Time, Inc. (Tofutti "nondairy tofu frozen dessert"), Eden Foods, Inc. (Edensoy soy beverage in plain and carob flavors, retort pouch), and Westbrae Natural Foods (natural ramen in 100% whole-wheat, buckwheat, brown rice, mushroom, seaweed, miso, 5-spice, and curry flavors).

Contains black-and-white ads by Westbrae Natural Foods (shoyu, tamari, and soy sauce), Chico-San, Inc. (imported miso and soysauce), Fantastic Foods, Inc. (tofu burger mix), Penguino's, Inc. (dairy-free frozen dessert), Nasoya Foods (Firm Style Tofu, Soft Style Tofu, Marinated & Broiled Tofu, Tofu Burgers, Tempeh, Tempeh Burgers, Tofu Vegi-Dip [Creamy Dill, Soyannaise, Bleu Cheese, Onion, Creamy Garlic], Corn Cakes [Plain with Bran, Blueberry, Cranberry]; Non-soy products in the "Oriental Cuisine" line include Fresh Noodles, Wonton Skins, Egg Roll Wrappers), Hinode Tofu Co. and Azumaya, Inc. ("The #1 and #2 tofu producers in America").

The only article, whose author is not given, is titled "Soyfoods Pavilion debuts at Natural Foods Expo '84." On the front cover of the insert is a list of members of the Soyfoods Association of America (formed in Feb. 1983) that participated in Natural Foods Expo '84. In addition to the advertisers mentioned above, they include: Farm Foods, Laughing Moon Food Co., Paradise Distributors, Inc., Soyfoods Magazine, Tempeh Works, Inc., and White Wave,

Inc. Address: 526 East 20th St., New York, NY 10009.

4241. Vitasoy (USA) Inc. 1984. Vitasoy invites you to taste the goodness (Ad). *Natural Foods Merchandiser.* Jan. p. 4 (unnumbered) of 12-page color advertising insert. Soyfoods Pavilion '84. Marketing soyfoods in America.
• ***Summary:*** In the middle of this full-page color ad, a photo shows two cartons (8.4 fl. oz / 250 ml) of Vitasoy Natural Soy Drink (in red, yellow, and brown on white), on a wooden table. To their left is a glass of soymilk. Behind them is a jug of maple syrup and two coconuts–one opened to show the white coconut meat. And behind them is a dark green coconut leaf against a black background. In the lower left corner: "Great taste at booth 648" [in the Natural Foods Expo '84 at Anaheim, California].

The text below the photo reads: "We're at booth 648 with two great-tasting, nutritious drinks. They're brand new and we hope you'll stop by to try both.

"To create Coconut Vitasoy we blend real coconut milk and pure maple syrup with soy goodness. Delicious and completely free of cholesterol.

"We sweeten Original Vitasoy with pure maple syrup–just enough to delight your palate. You'd never dream a drink this creamy could be so low in fat."

"Vitasoy is a natural source of vegetable protein. We're sure your customers will like that. They'll find only wholesome ingredients in Vitasoy and, of course, no preservatives.

"Convenient Tetra-Brik packaging keeps our drinks fresh for months even without refrigeration."

"We've been producing soyfoods for over 40 years. Today Vitasoy is number one in soy drink sales worldwide. That's more than 100 million units per year. Our experience has enabled us to create refreshing new drinks for American tastes.

"Coconut Vitasoy. Original Vitasoy. Taste the goodness."

In large letters on the front of each carton is written: "Natural Soy Drink." Above these letters on the coconut flavor is written "Coconut," but the word "Original" does not appear anywhere on the package of the "original" flavor. Thus, the flavor is described in the text of the ad, yet the word "Original" does not appear on the package.

Note: This is the earliest English-language document seen (June 1999) that uses the word "Original" to refer to a soymilk flavor–in this case slightly sweetened, dairylike soymilk. Address: 435A Brannan St., San Francisco, California 94107.

4242. Lindner, Anders. 1984. Re: Contract signed for soymilk plant in Indonesia. Letter to William Shurtleff at Soyfoods Center, Feb. 6. 1 p. Handwritten, with signature on letterhead. Plus 3 p. inserts.
• ***Summary:*** Sri Lanka is next. Then People's Republic of China. He encloses a copy of STS' new soymilk booklet. Address: STS, 1501 Hutchinson House, Central, Hong Kong; 505 Cathay Building, Singapore 0922. Phone: 338-6259.

4243. Daems, Chr. 1984. Re: Alpro's commercial soymilk products. Letter to William Shurtleff at Soyfoods Center, Feb. 7. 1 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** Alpro started commercial production of soymilk in 1979 at a plant in Izegem with a capacity of 6,000 liters/hour. Soymilk production in their new plant in Ghent is expected to start in May 1984. They have 3 brands of their own: Soyamel, Alpro, and Provamel. They also sell their soymilk to several companies who use their own brand. The best known are DE-VAU-GE in Germany and Granose Foods in England. They have recently started selling to Health Valley in California under the latter's brand.

They sold a turnkey soymilk plant to a company in Madagascar, which started making soymilk in Jan. 1984. They were attempting to sell compact soymilk plants with capacities of 2,000 to 4,000 liters/hour to other countries. Address: Alpro, Zuidkaai 33, B-8700 Izegem, Belgium.

4244. Blix, Glen. 1984. Re: Update on soymilk and soy-based infant formula in America. Letter to William Shurtleff at Soyfoods Center, Feb. 8. 2 p. Typed, with signature on letterhead.
• ***Summary:*** "It is our feeling that the soy market has not grown appreciatively over the last couple of years due to a reduction in incidence of use among pediatricians. The American Academy of Pediatrics has recommended that soy use be somewhat more restricted than it has been in the past, due to their fears regarding mineral uptake, etc. I would therefore still place the total gallons of infant formula consumed in the United States at approximately 32 million gallons.

"I believe that Ross and Mead Johnson have achieved somewhat more equitable market share, with Ross possibly commanding 46 percent of the total soy formula market, or approximately l5 million gallons, with Mead Johnson some where in the range of 44 percent or 14 million gallons. We believe that Loma Linda, with the Soyalac and i-Soyalac products sells in the range of 7 percent of the market, with Wyeth being in fourth place at the 3 percent level. This would mean that Loma Linda's market share is approximately 2 million gallons, with Wyeth coming in at approximately 1 million gallons of infant formula.

"I believe the same will be true regarding the adult Soyagen formulation, with Loma Linda Foods still retaining at least 60 percent of the total market, with approximately 1 million gallons of product, Worthington Soyamel would make up the balance of 40 percent of the adult beverage sold with approximately 0.7 million gallons.

Regarding your question concerning the percentage of sales to Seventh-Day Adventists, again, the data we have is somewhat sketchy, but I believe that less than 5 percent

of the total baby formula goes into Seventh-Day Adventist households. However, the Soyagen will probably be the reverse of that, with close to 80 to 90 percent of the Soyagen sold being consumed by Seventh-Day Adventists.

"Seventh-Day Adventists would tend to use the soy based beverage primarily due to their interpretation of certain health counsels given by Ellen White, believing that the discontinuance of all dairy products would be advantageous to health. Of course, the standard allergy problems which many adults experience, as well as lactose intolerance which is particularly prevalent among the black and oriental races, are also significant factors." Address: Vice-President of Marketing, Loma Linda Foods, 11503 Pierce St., Riverside, California 92515. Phone: (714) 687-7800.

4245. Margarida, Jose. 1984. Re: Interest in making tofu and soymilk commercially in Puerto Rico. Letter to William Shurtleff at Soyfoods Center, Feb. 8. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "I am very interested in starting a tofu and soymilk facility to serve Puerto Rico, Latin America, and the Caribbean.

"Many of these Caribbean islands represent an ideal showcase to demonstrate the versatility and logic of soyfoods to solve the world hunger problem and the malnutrition-poverty trap. It's an ideal showcase because many of these islands are not dominated by U.S. food industry interests and therefore you don't have to "fight" the powerful meat and dairy lobbies to introduce new alternatives."

He then asks four questions. William Shurtleff replied and sent him a list of 51 names connected with soyfoods and soybeans in the Caribbean. It is not known if he ever started a commercial business / shop. Address: Compostela 1804, College Park, Rio Piedras, Puerto Rico 00921. Phone: (809) 758-4983.

4246. Lo, Yvonne. 1984. Founding and history of Vitasoy (USA) Inc. (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 10. 2 p. transcript.
• ***Summary:*** Yvonne had the idea and took the risk. The Soya Bean Products Co., N.A. Inc. was incorporated in Jan. 1979. It was a marketing Co. Yvonne and Irene Lo (her sister) were equal stockholders. She was now an entrepreneur. Their first office was (in Jan. 1979) was on Bush St., then they moved to 185 Berry St., then to 435A Brannan St.

In April 1982 Yvonne and Irene sold their company to the parent company, Hong Kong Soya Bean Products Co., Ltd. (HKSBP, founded by her father, K.S. Lo), when the parent company got serious about the U.S. market. They made good money from the sale, and plan to use it to raise capital and facilitate long-term operations. Yvonne's company is now an affiliate of HKSBP, and she owns none of it.

Yvonne graduated from a Canadian university and worked as a city planner for 6 years in Toronto, Ontario. She decided to drop her professional career to become a soy entrepreneur. She felt she was more suited for business; her heart was in marketing. So in early 1979 she switched careers and professions. She had done nothing with her father's company (HKSBP) before starting her own company.

In the early 1970s, HKSBP started using the dry process for making soymilk; before that it had used the typical wet-grind process. Address: 435A Brannan St., San Francisco, California 94107.

4247. Shurtleff, William; Aoyagi, Akiko. 1984. K.S. Lo and the history of Vitasoy in Hong Kong and North America. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 24 p. Feb. 10. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. Contents: Introduction. The early years (1910-1944): Birth and education (K.S. Lo was born on 2 Feb. 1910), Julian Arnold's speech on soybeans in 1937, 1939 refugee camp in Kowloon, sets up soymilk shop, sees potential, sets up The Hong Kong Soya Bean Products Company (HKSBP) with 4 friends in 1939, hard times, spoilage, work with Dr. Y.T. Chiu, schools accept soymilk, Howard Hoover, HKSBP goes broke 1941, refugee in Free China during Japanese occupation of Hong Kong. Starting over (1944-1959): Sold in milk bottles through soft drink outlets as a noncarbonated beverage, new market of common people, instant success, started adding vitamins 1948, franchise for Greenspot orangeade, new plant in Aberdeen, Hong Kong, first sterilized soymilk allowing long shelf life 1953, breakthrough greatly increased demand, competitors forced change of name from Vitamilk to Vitasoy in 1953, other companies copy soft-drink marketing approach, UNICEF interest, train Indonesian technicians, granted Pepsi-Cola bottling franchise in 1957, sold Vitasoy heated during cold months. The 1960's continuing growth: Five-fold growth from 1955-1960, start of mass promotion, slogan "Vitasoy makes you taller, stronger, and more attractive," Hong Kong's best selling soft drink in 1962, introduction of malt Vitasoy, new Kowloon plant built 1962-1963, 1964 presentation of paper at UNICEF symposium in Tokyo, choice of Monsanto to market Vitasoy world-wide, their lack of food experience a problem, media coverage, multinationals follow Coca Cola's lead and start producing soymilk. The 1970's, diversification and internationalization: Sons' new products fail due to poor marketing, conversion to dry process for making Vitasoy, drop in sales due to inflation and depression, four major decisions, new slogan "Vitasoy is more than just a simple soft drink," introduction of Tetra Brik cartons, diversification into fruit drinks and teas, ending of Pepsi franchise 1977, strong sales rebound after 1975, new Aberdeen plant 1978, addition of carbonated soft drinks

to product line summer of 1978, Lo's retirement 1978, leadership of HKSBP to 2 sons, refugee feeding from 1975 on, diversification into dairying 1979, start of export to world market in 1979, overview of market position, competition, new slogan "Taste the feeling" in 1983, prices and ingredients, China's big potential. Vitasoy in North America: First Asian soymilk imported to North America, The Soya Bean Products Co., N.A. Inc. (SBPC) incorporated in San Francisco, California, by Lo's 2 daughters as marketing company, SBPC sold to HKSBP and renamed Vitasoy USA, Inc. in 1982, 60% sales increase, extensive market research on American attitudes and taste preferences, announcement of American products and soymilk plant in CA. The present and future: Same problems as Kikkoman in expanding into world market, changing future markets. Address: Lafayette, California. Phone: 415-283-2991.

4248. Calvert, Francis E. 1984. Work with Ford and Drackett on soybeans (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 19. 3 p. transcript.

• ***Summary:*** Francis (Frank) Calvert was first introduced to soybeans after he went to Detroit. In about 1931, Ford arrived at the Chemical Plant in Greenfield Village (also a lab and a pilot plant), with a 20 pound sack of soybeans. He threw them on the workbench and said, "More people eat these than anything else. There must be something awfully good about them. Why don't you fellows find out what it is." They were already doing research on agricultural wastes and chemurgy, on almost every crop you could think of.

Their first problem was getting soybeans. There were none available. Within the next year or two they planted thousands of acres themselves. Ford plowed up a big field and planted quarter acre plots with different varieties. It was an enormous quantity. Even though they didn't know what to do with them, it was Ford's style. He did nothing small. They raised hundreds of quarter acre plots, testing different varieties.

Dr. Edsel Ruddiman, after whom Edsel Ford was named, was a nutritionist and pharmacologist. He ran the food laboratory and made lots of the foods served in the Ford cafeteria to Ford employees. They were first sold as samples, but didn't sell well because of the flavor. From about 1932-33, the products included soy milk, soy cheeses, and soy ice cream and sherbets. Soynuts were also made in a counter-current fryer in rectangular buckets on a chain. The employees ate most of the products and tourists consumed some. Food was also served from the kitchen at the Wayside Inn in the village. Products were provided as a snack, but most were given as samples, and a few were sold.

Both Atkinson and Calvert, research chemists, reported to Boyer. Calvert left Ford in 1938 and went to Drackett. Boyer and Atkinson left later to do work on soy-based plastics.

ADM bought The Drackett soybean crushing plant in about 1957. Calvert went with ADM for about 5 years, until 1960-61. From 1962-74, he worked for Ralston Purina. In December 1958 Ralston purchased Procter & Gamble's plant in Louisville, Kentucky, and were already somewhat involved with isolates; they began working with foods after 1962.

Ralston went into dietary products and infant formulas in about 1963-64, supplying soy protein isolates to most of the infant formula manufacturers such as Miles and Wyeth Labs. Ralston, Loma Linda and Worthington were the biggest suppliers of infant formula from 1962-74.

Don Walker, Vice President of Ralston Purina, took a strong interest in soy protein. Ralston took the lead primarily because of the strong interest and leadership of Hal Dean, then Chairman of the Board and CEO. Dean was the key motivating force from the early 1960s. He firmly believed in and supported soy protein development.

Ford was the father of the soybean industry in the U.S. He had an impact just through his interest in soybeans. He planted soybeans and promoted and merchandised them in the same way he promoted the industrial barn at the World's Fair in Chicago. Ford set up an extraction plant and actually extracted oil and molded gearshift balls at the Industrial Barn at the Fair. People couldn't believe their eyes! Ford was the single largest soybean grower in the U.S. at that time.

Note: Frank Calvert passed away in about 1986. Address: 1513 Northlin, Kirkwood, Missouri 63122. Phone: 314-822-3187.

4249. United Press International (UPI). 1984. 'McDonald Duck' attack hits China. *Toronto Star* (*Ontario, Canada*). Feb. 20. p. A3.

• ***Summary:*** "China is about to open its first Western-style fast food restaurant, using Donald Duck to lead the hamburger and french fries revolution. Other foods on the menu will be hot dogs, ice cream cones, and box lunches.

The Peking restaurant is named Yi Li Fast Food–Yi Li being the name of Peking's best-known bakery, which will supply the buns. The red neon sign is in English, not Chinese, and all the furniture (tables, chairs in the 60-seat dining area) and atmosphere is Western. Large pictures of American cartoon character Donald Duck are on the walls inside, on the food packaging, and even on the roof.

"For the less adventurous, traditional Chinese snacks of soybean milk, salted duck eggs and long slabs of fried dough sticks will be sold."

4250. *Toyo Shinpo* (*Soyfoods News*). 1984. Soi Haamonii [Soy Harmony is a powdered soymilk]. Feb. 21. [Jap]

• ***Summary:*** Last year, on 1 Aug. 1983 Nihon Harmony KK (a corporation) was established. They are producing powdered soymilk using US soybeans and adding vitamins and methionine. You can add this powder to hamburger, meatballs, or any meat dishes to give them more protein. Or

use it as a drink or dessert. A 450 gm can costs 4,000 yen. Flavors: Prune and Royal.

4251. **Product Name:** Provamel Soya Drink [Without Sugar].
Manufacturer's Name: Alpro.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1984. February.
Wt/Vol., Packaging, Price: 250 ml, 500 ml, 1000 ml.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Food Report (Lehmann). 1984. Aug. Described in leaflets issued to health food stores in the Netherlands. Labels. 1988. No sugar or salt, with sugar and salt. Talk with Ted Nordquist of Aros Sojaprodukter, Sweden. 1988. March 27. "In late 1984 the only soy drink sold in Scandinavia was GranoVita, made for DE-VAU-GE by Alpro in Belgium. When DE-VAU-GE started their own soymilk plant (constructed by STS), Alpro introduced their own soymilk line brand-named Provamel [launched in Dec. 1982]. They marketed it in Scandinavia, competing with GranoVita."

Simon Bailey. 1988. Natural Choice. Aug. 15. A photo shows the Label. "No added sugar. 100% natural. Free of animal fats." CSP form filled out by Simon Bailey. 1988. Sept. 28. Gives date as Feb. 1984. All made with organic soybeans. Adds honey & malt flavor. The importer in England is Vandemoortele (UK) Ltd., Ashley House, 86-94 High St., Hounslow, Middlesex TW3 1NH. Phone: 01-577 2727.

Label sent by Anthony Marrese. 1990. March 22. Green and yellow on white. 1 liter Tetra Brik carton, without addition of sugar. In French, Dutch, Italian, and German. "Organic." Retails for DM 3.85. Imported and distributed by Lucas Meyer s.r.l. Consumer Div., Vigonza (Padova).

4252. **Product Name:** [Soyavit, and Soyalet].
Foreign Name: Soyavit, Soyalet.
Manufacturer's Name: Creation.
Manufacturer's Address: Z.I. Rue de Montréal, Ville la Grand, 74108, France. Phone: 50 38 44 19.
Date of Introduction: 1984. February.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Soyfoods Center Computerized Mailing List. 1984. Feb. 7. EMB Creation, B.P. 158, 74102 Annemasse, France. Makes canned soymilk powder.

Ad in DietExpo '89 (Paris) catalog. 1989. Oct. p. 44.

4253. **Product Name:** Granose Soya Dessert (Vanilla, or Chocolate).
Manufacturer's Name: Granose Foods Ltd. (Marketer). Made in Belgium by Alpro.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1984. February.
New Product–Documentation: Form filled out by Granose Foods Ltd. 1990. June 13. States that the product, made by DE-VAU-GE, was introduced in 1981 in Vanilla, Chocolate, Strawberry, and Banana flavors. The desserts were made by Alpro in Feb. 1984.

Form filled out by Philippe Vandemoortele of Alpro. 1991. Sept. 4. The desserts were first made for Granose by Alpro in Feb. 1984 in Vanilla and Chocolate flavors.

4254. **Product Name:** Soy Moo (Soymilk) [Plain, or Carob].
Manufacturer's Name: Health Valley Natural Foods (Importer). Made in Ghent, Belgium by NV Vandemoortele, Protein Div.
Manufacturer's Address: 700 Union St., Montebello, CA 90640.
Date of Introduction: 1984. February.
Wt/Vol., Packaging, Price: 16.9 oz Tetra Brik Aseptic carton. Retail: $1.75 for plain or $1.99 for carob.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Food Report (Lehmann). 1984. March. A 16.9 oz aseptic carton. Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 33, 44. "In late 1983 Alpro/Vandemoortele picked their first master distributor in the U.S., Health Valley in Los Angeles, which will appoint the product's actual distributors."

Talk with George Mateljan, founder of Health Valley. 1985. Oct. 20. Soy Moo is made by Alpro/Vandemoortele in Belgium.

Shurtleff & Aoyagi. 1985. Soymilk Industry and Market, Update. "During early 1985 Alpro continued to make a private-label soymilk, brand-named Soy Moo, for Health Valley in Los Angeles. Then in mid-1985 Health Valley switched to having their product made in America, probably from powdered soymilk, packaged in 250 ml and 1 liter Tetra Brik cartons by a contract packer in the western USA."

Golbitz. 1987. Soya Newsletter. March/April. p. 8. After severing ties with Vandemoortele in 1985, Health Valley worked for nearly a year on a new Soy Moo soymilk and re-launched the produced in the fall of 1986.

Soyfoods Center taste test. 1988. Sept. 4. Watery. Brown color. Powdery taste but OK, not bad.

4255. Johnson, Lamar D.; Wilson, L.A. 1984. Influence of soybean variety and the method of processing in tofu manufacturing: Comparison of methods for measuring soluble solids in soymilk. *J. of Food Science* 49(1):202-04. Jan/Feb. [11 ref]
• ***Summary:*** The percentage solids in soymilk was measured using three methods: light scattering, refractive index, and hydrometry. Light scattering was found to be the most accurate.

The soybean varieties Vinton, Amsoy 71 and Weber were hydrated then used to make soymilk by grinding in (A) 20-25ºC water, (B) 100ºC (boiling) water and holding the slurry above 90ºC for 10 minutes, and (C) soaking the soybeans in 45ºC 15% ethanol solution for 12 hours and grinding in 20-25ºC water. Address: Food Technology Dep., Iowa State Univ.

4256. Kadan, R.S.; Ziegler, G.M., Jr. 1984. Effects of ingredients on iron distribution in spray-dried experimental soy beverage. *Cereal Chemistry* 61(1):5-8. Jan/Feb. [19 ref] Address: Southern Regional Research Center, USDA, P.O. Box 19687, New Orleans, Louisiana 70179.

4257. Nagasawa, Taro; Miyakawa, H.; Mizuguchi, K.; Kato, R.; Shimamura, S.; Kuwahara, K.; Kawashima, T.; Okonogi, S. 1984. Tônyû no kanetsu shori ga tôfu no iro, kôdo tokuni hozonsei ni oyobosu eikyô [Effect of heat treatment of soymilk on color, consistency and particularly keeping quality of tofu]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society for Food Science and Technology*) 31(2):92-103. [21 ref. Jap; eng]
• ***Summary:*** Tofu made from soymilk thermally processed by the newly-developed HGU method had a better flavor and kept fresh longer than tofu made from typical UHT processed soymilk. By allowing spore-forming microorganisms to germinate before the final heat treatment, the latter can be conducted at 125ºC, rather than the typical 130ºC. Address: 1. Faculty of Agriculture, Tamagawa Univ., 6-1-1 Tamagawagakuen, Machida-shi, Tokyo 194; 2; 2-6,8. Central Research Lab., Morinaga Milk Indsutry Co. Ltd., 4-4-22 Meguro, Meguro-ku, Tokyo 153, Japan.

• ***Summary:*** A comprehensive overview, worldwide, with extensive historical information. The first study of its type, with many statistics, graphs, and tables. Volume 1 is the market study, and Volume 2 is black-and-white copies of soymilk labels and other graphics.

Contents: 1. Introduction. 2. Directory of soymilk manufacturers and related companies worldwide. 3. Definitions and varieties of soymilk. 4. Overview of world soymilk industry and market, and future outlook. 5. United States soymilk industry and market. 6. Japan. 7. Korea. 8. China. 9. Taiwan. 10. Hong Kong. 11. Singapore and Malaysia. 12. Southeast and South Asia: (13. Vietnam. 14. Thailand. 15. Philippines. 16. Indonesia. 17. India. 18. Sri Lanka). 19. Europe (Incl. Plamil Foods in England, Tetra Pak Group in Sweden, Alfa-Laval and John Wilson in Sweden, Danish Turnkey Dairies–DTD and Soya Technology Systems (STS), Alpro / Vandemoortele in Belgium, Nestle, F. de Selliers in Belgium, Dansk Soyakagefabrik in Denmark, Lima Andiran in France, Galactina in Belp, Switzerland, and Semper A.B. in Sweden).

20. Latin America. 21. Africa. 22. History of Vitasoy in Hong Kong. 23. Two modern soymilk manufacturing processes: Marusan and Alfa-Laval. 24. Etymology of the word "soymilk" worldwide. 25. Analysis of ingredients in 49 popular Japanese soymilk products. 26. Bibliography. 27. About the Soyfoods Center. A table on p. 12 gives an overview of world soymilk production in 1983 ranked in descending order of annual per capita consumption. These statistics do not include China (PRC) or soy-based infant formulas, usually made from soy protein isolate. 1. Taiwan, 210 million liters, 11.1 liters / capita, growing at 30% per year. 2. Hong Kong, 39.1 million liters, 7.5 liters / capita, growing at 10% per year. 3. Singapore, 11.2 million liters, 4.7 liters / capita, growing at 15% per year. 4. South Korea, 67.0 million liters, 1.60 liters / capita, growing at 60% per year. 5. Malaysia, 21.4 million liters, 1.53 liters / capita. 6. Japan, 131.8 million liters, 1,10 liters / capita, growing at 101% per year. 7. Thailand, 50.0 million liters, 1.00 liters / capita. 8. USA, 9.6 million liters, 0.04 liters / capita. Total world production: 548.3 million liters.

Page 36 gives an overview of the U.S. market for soy-based infant formulas and adult soymilk. Production of soy-based infant formulas (on a ready to serve basis) in 1983 was as follows: Ross Laboratories made 14,720,000 gallons of Isomil (i). Mead Johnson made 14,080,000 gallons of Prosobee. Loma Linda made 2,240,000 gallons of Soyalac. And Wyeth Labs made 960,000 gallons of Nursoy. Thus 32,000,000 gallons of soy-based infant formula were made in the USA in 1983.

Also in 1983, consumption of soymilk by adults in the USA was as follows: 1,743,000 gallons were made by specialized soymilk manufacturers in the USA (Loma Linda Soyagen 1,000,000 gallons; Worthington Soyamel 670,000 gallons, Miller's Soy (private label) 73,000 gallons). 690,000 gallons were imported (328,000 gallons of Vitasoy by Vitasoy USA, 254,000 gallons of Yeo's by YHS, 50,000 gallons of Edensoy by Eden Foods, 25,000 gallons of President by President, 25,000 gallons of Kibun by Kibun, 8,000 gallons of To-Neu by San-J International). 250,000 gallons were made fresh by tofu companies (45,000 gallons by Mighty Soy, 41,000 gallons by Victor Foods [Scarborough, Ontario, Canada], 39,000 gallons by Quong Hop & Co., 35,000 gallons by Wy Ky, and 90,000 gallons by others).

Yield. 1 ton of raw soybeans yields approximately 4,320 gallons of soymilk. Conversion: 3.785 liters = 1 gallon.

On page 56 is a table of "Large natural food distributors in the US" with the dollar figure being estimated annual sales in millions of dollars."

1. Rainbow Distributing (Denver, Colorado) $13.
2. Arrowhead Mills (Hereford, Texas) $12.

3. Eden Foods (Clinton, Michigan) $10.
4. Rock Island Foods (Ignacio, California) $10.
5. Westbrae Natural Foods (Emeryville, California) $9.
6. Pacific Rim (Seattle, Washington) $7.
7. Cornucopia Natural Foods (Coventry, Rhode Island) $7.

Total estimated sales for the top 7 distributors: $68 million a year.

4259. Shurtleff, William; Aoyagi, Akiko. 1984. Brief history of Yeo Hiap Seng Ltd. and the company's work with soymilk worldwide (Document part). In: Shurtleff and Aoyagi. 1984. Soymilk Industry and Market: Worldwide and Country by Country Analysis. Vol. 1. 177 p. See p. 100-02.

• ***Summary:*** "Soymilk entered the modern age in Singapore in 1954, when Yeo Hiap Seng introduced the first commercial bottled soymilk. The company traces its origins to the year 1900 when the patriarch of the Yeo family, Mr. Yang (in the Amoy dialect, his name was pronounced Yeo Keng Lian) purchased a small company named "Hiap Seng" in the city of Chang-chou (Zhang Zhou), Fukien (Fujian) province, China. "Hiap Seng" means "unite to succeed." Yeo Keng Lian changed the company's name to reflect his family's ownership. He worked as a manufacturer and retailer of fermented soybean seasonings: soy sauce (*jiang-you*), Chinese-style miso (*dou-jiang*), and fermented tofu (*furu*). All three products were sold from day one under the "Light House" brand.

Note: This is the earliest English-language document seen (Oct. 2011) that uses the word "furu" to refer to fermented tofu.

By working together, the family did succeed. Their soy sauce, fermented in the traditional Chinese way in wooden vats and earthenware jars, was of superior quality and the business prospered. The original plant was located near the center of Chang-chou. In about 1920 a second plant was established in the eastern part of the city, and in the late 1920s a third plant was set up in the southern part of the city. Each of the three fermented soy products were produced in all three plants; the second and third plants also produced some pickled vegetables.

In 1935, during the Japanese invasion of China, when life was difficult and unsettled in Fukien province, Yeo Keng Lian sent his eldest son, Yeo Thian In, to Singapore to investigate possibilities there. The son founded the Yeo Hiap Seng Sauce Factory at 410 Outram Road, Singapore 3. He was joined shortly by the rest of the family. The company continued to make the same three fermented soy products that it had made since 1900 in China. In 1947 the growing business was moved into larger quarters at 950 Dunearn Road, its present location. The move out of China was a wise one, for in 1949 the three Yeo Hiap Seng plants in Fukien were taken over by the Chinese Communists. By the mid-1940s, Yeo's quality soy sauce was a common sight in Singapore.

In 1950 YHS decided to diversify into canned products, such as chicken curry, fish, and meat. Then in 1954 they launched their first soymilk. Called Beanvit, it was subsequently renamed Yeo's Soybean Drink. A rather sweet soymilk sold like a soft drink in sterilized bottles, it was marketed in both Singapore and Malaysia, where it was the first product of its type. (Vitasoy was first sold like a soft drink in sterilized bottles in Hong Kong in 1953.) In 1955 the company changed its structure to that of a "Limited" (Ltd.) company. In 1958-59 YHS expanded its soft drink line by bottling favorite traditional Chinese beverages, such as chrysanthemum teas and herb teas. In 1962 YHS began its first export sales to Hong Kong. In 1967 YHS soymilk and teas were first sold in UHT (Ultra High Temperature) aseptic Tetra Pak cartons (tetrahedral/pyramid shaped; 285 ml).

"YHS was the world's first company to package soymilk in aseptic Tetra Pak cartons, and the first to use Tetra Pak for any beverage in Singapore. (Vitasoy in Hong Kong did not start using Tetra Pak until 1976). Shortly after introducing sweetened soymilk in the tetrahedral pack, YHS launched enriched Vitabean in the same carton. It was fortified with half of the adult Minimum Daily Requirement of most essential vitamins. Sterilization in bottles would have destroyed most of the added vitamins, but the UHT process did not. In 1974 packaging was changed to Tetra Brik (250 ml), but bottling continued. During the late 1970's YHS changed its soymilk brand name to Yeo's. By 1976 Yeo Hiap Seng's soymilk production had climbed to 50 million bottles and cartons a year, and by 1980 to 75 million (250,000 a day), prompting the company to build a new plant to double its capacity. In 1983 YHS had the biggest share of the Singapore soymilk market (Alan Yeo, personal communication, 1982, 1983).

"Yeo Hiap Seng pioneered soymilk throughout Southeast Asia. In 1959 they opened their first soymilk plant at Kuala Lumpur in Malaysia. By 1984 they had four soymilk plants there at Kuala Lumpur, Jahore Baru, Prai, and Kuching. Malaysia, with its 14 million people, was a bigger market than Singapore, with its 2.4 million people. By 1984 YHS had the lion's share of the Malaysian soymilk market. During the 1970's, YHS started exporting soymilk to Hong Kong (where they got a small share of the market). In 1979 they began exporting canned soymilk to the USA, where they had offices and a warehouse in San Jose, California. In early 1983 they introduced a low-sugar soymilk to the US. Sales, however, were slow. YHS was not interested in the China market, since they thought that

it would be too difficult to get profits out in hard currency. They were franchising their soymilk process and technology in Indonesia, where the product is being marketed under the YHS name. They plan to share in the promotion, too.

Starting in 1974 Yeo Hiap Seng began a new phase of its expansion and diversification by acquiring the Singapore franchises for Pepsi-Cola and Mirinda. These were followed by franchises for Schweppes in 1985 and 7-Up in 1986. In 1985 the company acquired distribution rights for Budweiser beer and in 1987 they branched out into prawn farming.

"The 1981 Annual Report of Yeo Hiap Seng Ltd. shows that this publicly held company was run by Yeo Thian In (Chairman) and Alan Yeo Chee Yeow (Managing Director). From 1977 to 1981, sales of all products grew from $39.5 to $95.8 million and pre-tax profits from $7.1 to $11.5 million. Their Soft Drinks Division, one of the largest in Singapore, Malaysia, and Hong Kong, provided the main thrust of company growth." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

4260. Shurtleff, William; Aoyagi, Akiko. 1984. Brief history of Alpro in Belgium (Document part). In: Shurtleff and Aoyagi. 1984. Soymilk Industry and Market: Worldwide and Country by Country Analysis. Vol. 1. 177 p. See p. 122-23.
• ***Summary:*** "In 1975 Alpro, the Protein Division of the Vandemoortele group started making soymilk; they decided to introduce alternative, vegetable proteins to developing countries. This Group, established in 1879, by the 1980s ranked as one of Europe's largest food processing companies in the fields of edible oils and fats, and protein foods. In 1978 the Group employed over 1,700 people and had annual sales of over $600 million. In 1979 Alpro started commercial production of soymilk at a plant in Izegem with a capacity of 6,000 liters/hour. They also sold a turnkey soymilk plant to Madagascar (it started production in January 1984) and were attempting to sell compact soymilk plants with capacities from 4,000 to 8,000 liters/hour to other countries. In May 1984 Alpro opened a new soymilk plant at Ghent, reputed to be the largest in the world. The 100% natural soymilk is made from whole soybeans, not soy protein isolates, and is sold under three brands: Soyamel, Alpro, and Provamel. Alpro will look to the U.S. and Asia for additional markets for this product, since the European market is small. They plan to focus on areas with protein shortages or lactose intolerance. In October 1983 an Alpro representative visited the USA and lined up Health Valley in Los Angeles as a master distributor. In early 1984 Alpro got distribution on the East Coast of the USA. Alpro sells quite a bit of its soymilk to other European food companies, which sell it under their individual brands. DE-VAU-GE in West Germany and Granose in England, for example, sell plain and carob soymilks (made by Alpro) in 500 ml packs. The main figures behind Alpro are Philip Vandemoortele (Managing Director) and Christian Daems (Marketing Manager)." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

4261. Shurtleff, William; Aoyagi, Akiko. 1984. Brief history of Alfa-Laval's work with soymilk worldwide (Document part). In: Shurtleff and Aoyagi. 1984. Soymilk Industry and Market: Worldwide and Country by Country Analysis. Vol. 1. 177 p. See p. 120-22.
• ***Summary:*** "Alfa-Laval, the world's largest supplier of dairy plants and systems, with some 10,000 employees, celebrated its hundredth anniversary in Sweden in 1983. It was a pioneer in the development of UHT (ultra high temperature) sterilization plants for dairy milk in the early 1960s. Continuous process UHT, guaranteeing milk and juices a shelf life of a month or more without refrigeration, and giving milk a much better flavor than autoclaved sterilized milk, caught on rapidly in Europe and many developing countries. By 1978 UHT milk, which slowly replaced pasteurized and refrigerated milk, had about 40% of the market in Europe. Alfa-Laval made UHT systems based on both direct heating (injection of high pressure steam into the milk flow to bring the temperature up to 135–140ºC) and indirect heating (in a plate heater, to 140ºC for 4 seconds). Alfa-Laval's direct system was called VTIS (Vacu-Therm Instant Sterilizer) and their indirect system, considered the more advanced and economical of the two, was called Steritherm.

"Starting in the early 1960s Alfa-Laval began to sell soymilk system components to soymilk manufacturers in East Asia. The UHT VTIS system was found to work very well, since the vacuum stripped off beany flavors. Alfa installed a VTIS for Yeo Hiap Seng in 1967 and one for Hong Kong Soya Bean Products Co. (makers of Vitasoy) in 1974.

"A key man behind Alfa-Laval's growing interest in soymilk is John Wilson, who got involved with soymilk in 1967, as technical manager for the Cold Storage Group (CSG) in Singapore and Malaysia. His background was in dairy technology. To help CSG launch a soymilk product, he studied traditional tofu processes in Singapore, then mechanized them. He set up CSG's first soymilk line in Petaling Jaya, a suburb of Kuala Lumpur, Malaysia, in 1969, and then another in Singapore later that year.

"In 1971 Wilson joined Alfa-Laval and started developing complete process lines for soymilk, based on a suspended (unfiltered) product made from full-fat enzyme-active soy flour. But only one plant for making suspended soymilk was ever sold (to Africa in 1982). In 1978 soymilk technology R&D was centered under John Wilson in Alfa-Laval, at Lund, Sweden. Systems for making clarified (filtered) soymilk with low bean flavor were developed.

"Alfa-Laval sold complete soymilk lines to Lam Soon (Ace Canning) in Kuala Lumpur, Malaysia (operation started in December 1979) and Kickapoo, in Bangkok, Thailand (from Feb. 1981). By early 1984 they had sold equipment

or entire plants to at least twelve soymilk manufacturers in East Asia, including many of the largest (Hong Kong Soya Bean Product Co., Kibun, Dong Bang, President, Siam Food Prods., etc.).

"In 1981-82 Alfa stepped up its soymilk activities dramatically. It published attractive and informative 10-to-15-page large-format booklets on soymilk and its production in English, Chinese, and French, and began heavy promotion worldwide. Alfa-Laval went after the China market in a big way. They offered to install a soymilk plant in Beijing for the Ministry of Light Industry to use for one year, free of charge on a trial basis. Their 12-page brochure in Chinese on soymilk (*Douru*) was widely circulated. During a 3-month period in 1983 they sent five soymilk delegations to China, and began to set up an office in Hong Kong, run by a China trader with ten years experience, to focus on the China market.

"In late 1982 Alfa-Laval and Kibun (in Japan) formed a powerful alliance by signing an important, interesting, and unorthodox agreement. Alfa-Laval supplied Kibun with some of Kibun's original soymilk equipment, but eventually Kibun had to modify it extensively. Now, when Alfa-Laval finds a new equipment client, they tell the client, according to the agreement, that Kibun is their preferred supplier of the soymilk process. Kibun then signs a separate contract with the client for technical assistance, including product formulation and quality control. This could be a joint venture, a license for Kibun patents and technology, and/or purchase of actual patented equipment made by Kibun's food engineering company. Likewise, when Kibun licenses others to use its process, it often asks Alfa-Laval to supply the plant. There are no kickbacks between Alfa-Laval and Kibun. The arrangement works nicely since Alfa-Laval is strong in plant design, while Kibun is strong in processing technology and formulation. Yet Kibun holds no soymilk patents.

"Alfa-Laval has made a major contribution to soymilk production by being the world's first company to develop and sell an automated soymilk system. Their system is based on their UHT sterilizer, and incorporates an automated clean-in-place cleanup system. By inactivating the soybean enzymes at the bean stage, before grinding, the system produces a good-tasting soymilk. The economical plant size has a capacity of 2,000 liters/hr, with 1,500 liters/hr the economical minimum." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

4262. Shurtleff, William; Aoyagi, Akiko. 1984. Brief history of Soya Technology Systems (STS-DTD) work with soymilk worldwide (Document part). In: Shurtleff and Aoyagi. 1984. Soymilk Industry and Market: Worldwide and Country by Country Analysis. Vol. 1. 177 p. See p. 122.
• ***Summary:*** "In 1982 Danish Turnkey Dairies (DTD), a major competitor of Alfa-Laval in the field of supplying dairy plants and equipment, decided to compete in supplying soymilk plants as well. Founded in 1969 by Jorn Jensen in Denmark, DTD was acquired in about 1979 by DDS, The Danish Sugar Corporation. By 1983 DTD had built 117 dairy plants in 35 countries. In May 1982 DTD established Soya Technology Systems to focus on soymilk technology. STS opened their main office in Singapore under the direction of Anders Lindner, who had previously worked for 15 years with Tetra Pak. STS licenses soymilk technology, and processes. They published a fine booklet on soymilk and sent out 4,500 copies worldwide in January 1983. A new, improved edition was published and widely disseminated in early 1984. STS is active worldwide in promoting soymilk and selling their systems. In early 1984 they sold a 4,000 liter/hour plant in Sri Lanka. The company emphasized the concept of "Turnkey," which is "single source responsibility. You are guaranteed a complete plant at a fixed price on a fixed date, producing exactly what you had in mind." One of the DTD group of companies called IPT (Integrated Processing Technologies) is an engineering and contracting company that works with STS to design and build plants and install equipment." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

4263. Shurtleff, William; Aoyagi, Akiko. 1984. K.S. Lo and the history of Vitasoy in Hong Kong and North America. (Document part I). In: Shurtleff and Aoyagi. 1984. Soymilk Industry and Market: Worldwide and Country by Country Analysis. Vol. 1. 177 p. See p. 130-153.
• ***Summary:*** Starting in the late 1950s a renaissance of interest in soymilk began in East Asia, eventually spreading from its center in Hong Kong to all countries in the area, and from there to other parts of the world. The company that inspired this development was K.S. Lo's Hong Kong Soya Bean Products Co., Ltd. (HKSBP), makers of the world-famous soymilk, Vitasoy. As of 1984, no person alive had done more to further the world's interest in soymilk (or in soyfoods) than K.S. Lo.

Early Years (1910-1944). Lo Kwee Seong was born on 2 February 1910 in Kwangtung, China. At age 10 he went to Malaya with his mother and at age 20 he went to Hong Kong. In 1935 he graduated from the University of Hong Kong with a BA degree in commerce and business. After graduation he joined the company where his father worked and was soon appointed Hong Kong manager of the firm's real estate branch.

The story of Vitasoy begins in the winter of 1937, when K.S. Lo, then 27 years old, happened to be in Shanghai on other business. There he attended a talk entitled "Soya Bean: The Cow of China," presented by the American Julean Arnold, then the commercial attaché to the American Embassy in Nanking, and actively involved in relief work using soymilk. Lo later wrote (1964), "Arnold called the soybean the 'Cow of China' and practically attributed to it the preservation of the Chinese race. He said the fact that

the Chinese as a race were able to maintain their physical fitness for over 5,000 years in a land where meat was so rare was entirely due to the people's inclusion of soybeans in their diet. I was impressed by his talk and came away with soybeans stuck in my mind." Even after Lo returned to Hong Kong, Arnold's message kept returning to him.

Several years later, in 1939, following the Japanese invasion of China, the first wave of Chinese refugees arrived in Hong Kong. A refugee camp was set up in Argyle Street, Kowloon. A small group of volunteers, including Lo, went to see what could be done to help. Most of the refugees were sick or suffering from malnutrition, including beri-beri and pellagra. Seeing this, Lo again recalled Julean Arnold's message of the promise of the soybean. With the group of friends he raised some money and purchased some soybeans and brown sugar, a stone mill, a kettle, and some cheese cloth. The group set up a small soymilk shop right in the camp and taught the refugees how to make soymilk for themselves. Each refugee received one bowlful every morning. Lo later wrote: "The results were quite startling, as many of them showed significant improvement in their health after the first month. This little experiment gave me full confidence in the nutritional value of soy bean milk and I decided to make it available to the masses of people in Hong Kong who could not afford to buy cow's milk" (Lo, personal communication, March 1981).

In 1939 Lo and four of his friends got together and formed The Hong Kong Soya Bean Products Company (HKSBP), with paid-up capital of HK$15,000. (The company name was expanded to The Hong Kong Soya Bean Products Company, Ltd. in March 1940). The original plant and processing equipment, designed by the founders and located at Causeway Bay (on the site where the Plaza Hotel now stands), officially began operations on 7 March 1940. In his inaugural speech, Lo stated that the company's aim was to provide nutritious soymilk for the masses at the lowest possible price–an aim that has not changed over the years. In those days, when nutritional deficiency diseases such as beri-beri and pellagra were still widely prevalent in Hong Kong, this aim was doubly urgent and important. Yet the day after the plant opened, exactly nine bottles of the product, called VITAMILK, were sold. A dozen delivery boys delivered Vitamilk door-to-door each morning. The strongest supporter of the fledgling operation was a Britisher, Dr. Selwyn-Clarke, then director of Medical and Health Services. The only government official aware of the nutritional value of soymilk, he gave orders that all government hospitals should use the new product instead of cow's milk for all third-class patients.

The first few years were filled with problems. Lo wrote in 1964: "We soon found that, even among us Chinese to whom the soybean was by no means new, there was a strong prejudice against soy milk. They not only did not believe its nutritional values, but they also thought it could cause diarrhea, indigestion, and stomach ache. At that stage the taste of our product, too, left much to be desired. Many customers found it hard to take, because of the strong beany flavor and the slightly bitter taste. Another problem we had to face was the keeping quality of the soy milk. We followed the dairy industry by packing it in standard half-pint milk bottles and sealing them with a paper cap and hood. They spoiled even quicker than milk unless they were kept under refrigeration all the time. As they were packed like dairy milk, we had no choice but to market them as a milk substitute. It was not until years later that we found it was a mistake to adopt such a marketing approach. For among the Chinese community, giving milk to children was considered to be a Western luxury, which only the very rich could afford. And of course to the rich, cost was no problem."

Sales continued to be slow, only 300-400 bottles a day. During the summer, sometimes as many bottles spoiled as were sold. Something had to be done. Lo began working with Dr. Y.T. Chiu, who had a written his PhD thesis at Cornell University in 1927 on methods for improving soymilk and its production, and in 1929 had published an article on the subject in China. Their goal was to get locals schools to start using Vitamilk. Speeches on soymilk and nutrition by Chiu were followed by tasting sessions conducted by Lo at the schools. The idea worked. In fact it was a major breakthrough, and today schools remain the company's single most important customer. After the first year, distribution was extended from Hong Kong Island onto the Kowloon peninsula on the mainland. There a combination soymilk cafe and distribution depot was set up. The spot proved popular with students and young people.

In the spring of 1941, Howard Hoover, who had started and run a small Seventh-day Adventist soy dairy in Canton (Guangzhou), had left that city after it fell to the Japanese. While waiting to return to the US he worked with Lo for 6 months. He taught Lo how to homogenize coconut oil into the soymilk to give it a richer flavor then helped to install the company's first Cherry Burrell homogenizer.

By mid-1941 sales of Vitamilk had risen to 1,000 bottles a day. But that was far below the break-even point, and by December 1941, when World War II broke out, the company went broke. Lo, abandoned by his partners, had sunk HK$30,000 of his own money into the venture.

Sixteen days later Hong Kong surrendered to the Japanese. Four months after the occupation Lo left for Free China (the part of China not occupied by Japanese), taking with him his family of four children. They finally settled down as refugees in a small town called Linshan on the border between Kwantung and Kwansi, west of Canton. Here again the soybean provided Lo with a livelihood and probably saved the family's life. Lo put up a makeshift building and called it The Cafe. After buying a stone mill, he started to make soymilk and home-made cakes, and thus made a living until World War II was over. Their fifth child,

Irene, was born during this hard time. Lo's wife had no breast milk to feed her since she had not nursed the other children. Irene was thus raised on soymilk which, the family felt, saved her life. Continued. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

4264. Shurtleff, William; Aoyagi, Akiko. 1984. K.S. Lo and the history of Vitasoy in Hong Kong and North America. (Continued–Document part II). In: Shurtleff and Aoyagi. 1984. Soymilk Industry and Market: Worldwide and Country by Country Analysis. Vol. 1. 177 p. See p. 130-153.
• ***Summary:*** Continued. Starting Over (1944-1959). The British Navy returned to Hong Kong on 31 August 1944, after the Japanese surrender. Lo returned 2 weeks later and quickly got back his plant from the Custodian of Enemy Properties. He was glad to find that the Japanese had left most of his equipment intact. He borrowed HK$50,000 from a friend and by November 1945 Vitamilk was back on the market. At this time, everything was scarce in Hong Kong and only one company had resumed production of soft drinks. Lo seized the opportunity to sell his soymilk, still in milk-type bottles with paper cap and hood, through soft drink outlets instead of delivering it to households. Now he presented it to the typical man on the street as a noncarbonated beverage rather than as a morning milk substitute. In the "small people in the street," Lo wrote in 1964, "I found my best friends and customers, who have remained the backbone of my business even to this day. Our sales increased so rapidly thereafter that our only problems were how to step up production and enlarge the areas of distribution."

In about 1948 Lo first started adding vitamins to his soymilk. He was probably the first person in the world to do this. Although it was sold somewhat like a soft drink, Vitamilk aimed at replacing the empty calories of conventional soft drinks with protein and essential nutrients.

In 1949, having paid off his loan in less than a year, Lo bought a piece of land in Aberdeen, Hong Kong, and started to build a new plant. However before it was finished Lo had been chosen to be the Hong Kong franchise for Greenspot, a large California-based manufacturer of orange concentrate. When the Aberdeen factory opened in 1950 it was Greenspot orangeade that was made there. Vitamilk stayed in the old factory at Causeway Bay, because Lo could not afford to move it.

For years Lo had dreamed of being able to sell his soymilk in soft-drink type bottles, sterilized to give a shelf life of 6 months without refrigeration–just like the Greenspot they were now bottling. But there were extra problems involved in bottling soymilk this way. Experts with whom Lo consulted said that it probably could not be done without the use of a preservative, but that if anyone figured out how to do it without preservatives, they would become rich. Lo decided to accept the challenge. He hired a man with a US degree in dairy science and asked him to try to sterilize soymilk in Greenspot capped glass bottles. After repeated failures, explosions, and injuries, the project was a success. The two men were overjoyed, for they realized that now, at last, soymilk could be marketed exactly like soft drinks without the handicaps of the milk bottle and short shelf life.

In about 1953 Vitamilk first came on the market in soft-drink bottles, sealed with a metal crown cap and sterilized to allow it to keep for months. Now the soymilk operation was moved into the new plant at Aberdeen and the soymilk was distributed on the same truck as Greenspot. Retailers who previously could order only a dozen bottles at a time for lack of refrigeration space, could now take up to a dozen cases. A major marketing barrier had been broken. Vitasoy had been remade, and was the first beverage of its kind in the world. With this new approach, Lo discovered a new market that has continued to remain the backbone of his business. The change of product concept and distribution channel brought immediate success, and sales began to increase dramatically. For many years thereafter Lo's biggest problem was how to produce enough soymilk to keep up with the growing demand, as sales would sometimes double or triple in one year. By 1958 a million cases (24 million bottles) a year were being sold.

This fast expansion attracted the attention of many, both in and outside of Hong Kong. In Hong Kong the success of Vitamilk aroused the envy and jealousy of companies making competing beverages. They formed a lobby to get the Urban Council to forbid Lo from using the word "milk" in his product name. In 1953, after some wrangling, a compromise was reached whereby Lo was allowed to retain the Chinese characters in his registered trademark if he changed the English name of his product from VITAMILK to VITASOY. The characters were *Wai-ta Nai; Wai-ta* means "vitality" in Chinese, and also forms a part of the Chinese word for "vitamin," *wai-ta ming. Nai* means "milk," such as cow's milk. Lo was not the first person in the world to use the term Vitasoy. It had been used as early as 1936 in the USA as the name for a "soybean milk powder" by Soya Health Products in New York, and as early as 1948 as the name for "vitamin and enriched infant and vegetarian food" made with soy flour by Soya Foods Ltd. in England.

Soon after Vitasoy caught on in Hong Kong, other companies began to jump on the bandwagon, following Lo's basic marketing concepts. In about 1948 in Manila, Soya Lac, launched as a milk substitute in 1941, was reintroduced as a healthful soft drink. In 1954 Yeo Hiap Seng, a big Chinese food manufacturer in Singapore, launched its first soymilk. Called BEANVIT (later renamed Yeo's Soybean Drink) it was sold as a soft drink in sterilized bottles, the first product of its type in Singapore and Malaysia. (In 1967 Yeo Hiap Seng's soymilk became the first in the world to be sold in Tetra Pak, the new tetrahedronal aseptic and disposable cartons, requiring no refrigeration.) In 1958

Green Spot in Thailand started making soymilk, followed in 1959 by Saniku Foods in Tokyo. The pioneers of what would eventually become East Asia's soymilk boom were starting to grow, drawing their inspiration from Vitasoy in Hong Kong.

Outside of Hong Kong, Vitasoy had begun to catch the attention of people in the United Nations, especially those in UNICEF and FAO. Representatives of these organizations, when passing through Hong Kong, often wanted to visit Lo's plant. Thus, in the late 1950s, when UNICEF decided to assist Indonesia in setting up a soymilk plant, four Indonesian technicians were sent for 3 months work and training at Lo's factory.

In 1957 HKSBP was granted the Pepsi-Cola bottling franchise for Hong Kong, which they kept until 1976. Although they did not make any profit on the franchise during all those years, they did manage to learn from the Pepsi people a good deal about marketing, which they employed to advantage in marketing their own products.

In about 1959 Lo set out to find a way to make Vitasoy popular year-round. In Hong Kong 80% of all soft drinks were sold during the 6 warm months, and only 20% from November to April. That year Lo developed a heater that would heat up to four cases (96 bottles) of Vitasoy at a time, and keep them hot (145ºF) during the chilly weather. The idea caught on and retail store owners loved it, for it helped their beverage sales during the typically slack cold months. Customers loved it too, for Vitasoy was the only soft drink available that one could enjoy piping hot to take away the winter's chill. With the help of the winter heaters and the introduction of chocolate-flavored Vitasoy (also in 1959), sales again shot upwards. And throughout the 6 cold months they now stayed at 50% of peak summer sales. Continued. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

• ***Summary:*** Continued. The 1960s, Continuing Growth. During the period from 1955 to 1960 sales of Vitasoy grew 5-fold, from 8.4 million bottles in 1955 to 42 million in 1960. This represented a remarkable compound rate of 38% a year, the highest rate in the company's history up to the present. The time had come to launch a new phase of the business: mass promotion.

In the early 1960s, with sales skyrocketing, Lo set out to take full marketing advantage of the breakthroughs he had made in packaging, distribution, and market domination. He launched a major, modern advertising campaign. The slogan (used until 1975), emphasizing health and nutrition, introduced a much wider public to Vitasoy and its new name. It proclaimed: "Vitasoy makes you taller, stronger, and more attractive."

During the 1960s, sales increased 2.4-fold, climbing to 60 million bottles a year in 1962, then to 67 million in 1965 and 100.8 million in 1970, for a very healthy compound growth rate of 9.2% a year during the decade. By 1962 Vitasoy had become Hong Kong's best-selling soft drink, ahead of such internationally known brands as Coca-Cola, Pepsi-Cola, and Seven-Up (Lo 1964). In 1964 Vitasoy retailed for less than one-third the price of cow's milk in Hong Kong. In the mid-1960s Malt Vitasoy was introduced and soon became very popular. By 1968 Vitasoy had captured an impressive 24% of the highly competitive Hong Kong soft drink market. Here, indeed, was a soybean Cinderella success story.

In 1961 Vitasoy, which had met no competition from brand-named soymilks since its origin, suddenly had its first real rival. Fung Lik Nai, meaning "milk filled with energy and power," was launched that year, only to disappear after one season. Again Vitasoy shared the market only with tiny street-side makers of traditional soymilk.

In 1962-63 HKSBP built a new plant in Kowloon, doubling the production capacity of the old plant in Hong Kong. By the first year it was operating at 90% of capacity. The plant had the most modern, mechanized equipment, including a continuous automatic sterilizer for the sealed bottles.

In 1964 Lo was invited to present a paper on his experience in promoting Vitasoy at the International Symposium on Oilseed Protein Foods organized by UNICEF in Tokyo. The paper was hailed for its description of the commercial marketing of a protein-rich soft drink. It was published in the May 1964 issue of *Soybean Digest.* Because of Vitasoy's proven success, the United States was now willing to grant outright financial aid to any American company willing to introduce protein-enriched soft drinks in any Latin American country. UNICEF was also willing to give financial and technical aid to companies interested in starting similar projects in developing countries in Asia or Africa. Right after the Tokyo conference Lo was approached by more than half a dozen multinational companies, who wanted to franchise Lo's Vitasoy process on a worldwide basis. Lo finally chose to go with Monsanto, a chemical company based in St. Louis, Missouri. Monsanto wanted to diversify into food processing, using Vitasoy as the key catalyst for its new department. Most of the other companies were already heavily into food processing and Vitasoy would be just another item for them. Monsanto and Lo set up a Hong Kong subsidiary, Lomond Ltd., of which Lo owned one-fifth of the stock and got royalties on sales.

The choice of Monsanto, however, proved to be a serious mistake, for they had no experience in developing and marketing a new food. Instead of going out and finding interested bottlers, they spent 3 years on fruitless research,

hoping to develop a concentrate (based on soy protein isolates and containing more than 100 flavor ingredients, including vanilla, orange, and cinnamon) with an improved flavor that they could sell to prospective bottlers like Coca-Cola's secret formula. In August 1968 Monsanto announced that it planned to bottle and market a soymilk soft drink in Guyana, South America, with plans for eventual expansion to other Latin American and Asian markets (*Soybean Digest,* Aug. 1968; *TIME* 1968). The new isolate-based drink, called Puma, containing about 2.5% protein, was launched in 1969. It had a strong banana flavor. In the early years about 29 million bottles were sold annually, all through retail outlets. Yet from Lo's point of view, the Puma project had only limited success. In 1969, when the heavy chemical industry turned sour, Monsanto, itself in larger trouble, stopped putting new money and energy into the project, and they soon sold the entire operation to the local bottler (who was still making Puma in 1976; Aguilera and Lusas 1981). This whole debacle was Lo's biggest setback to date. He had had a world market at his fingertips and lost it. After this apparent failure he was never able to renegotiate with other multinationals. Once again, he would be forced to start all over using an entirely new approach–but that would have to wait until the late 1970s (Lo 1982).

One of Lo's greatest admirers was Dr. Harry Miller, who had pioneered soymilk production in Shanghai in 1936. He and Lo had first met in Hong Kong after World War II. Miller visited the Vitasoy plant. Lo remembers him as "quite business minded and interesting in getting people to use his soymilk manufacturing process, on which he would collect a small royalty." Miller wrote two articles about Vitasoy in the *Soybean Digest* in June 1948 and May 1965. Miller, who was one of the first to see the great potential of soymilk for China, was apparently delighted that Lo had been able to so successfully manifest this potential. In the 1965 article he spoke of Lo's "genius and leadership" and how some 40 large delivery trucks distributed Vitasoy to hospitals and schools. It retailed from street vendors for slightly more than 3 cents (US) per 7-ounce bottle.

"By the late 1960s the international media began to take notice of Vitasoy's meteoric rise to popularity. In 1968 *Time* magazine ran an article stating that "Vitasoy has become the new soft-drink craze of the British Crown Colony. A 6.5 oz. bottle costs 3.5 cents, compared with 4.8 cents for the same sized bottle of Coca-Cola. Vitasoy has captured 25% of the Hong Kong soft-drink market. This year an estimated 78 million bottles, second only to Coca-Cola's 100 million, will be sold from sidewalk stands, sampans and grocery stores for a total of $2,600,000." In about 1974 a major East Asian business magazine did a long story on Lo, his company, and Vitasoy.

As soon as Lo had proved the potential of soymilk, the giant Coca-Cola Company got interested. In 1966 they started a Protein Beverage Project within the company and in 1968 introduced their first soymilk, Saci, in Brazil. Coke was smart enough to join the trend rather than fight it. Eventually other huge multinational corporations, including Mitsubishi in Japan and Nestle in Europe (in the late 1970s) followed Vitasoy's lead, further sparking the soymilk renaissance. Continued. • ***Summary:*** Continued. The 1970s, Diversification and Internationalization. The early 1970s were filled with problems for Hong Kong Soya Bean Products Co., Ltd. During the 1960s Lo had sent his three sons abroad for higher education in fields where the company business needed more professional expertise. Eugene got a degree in biochemistry, Frank in dairy science, and Winston in food technology. A number of patents were granted to the company during the 1970s (Lo 1971; Lundstedt and Lo 1973). As each son returned, he was assigned a project to work on. Eugene developed a soy-based infant weaning food, Frank a soymilk-based blue cheese, and Winston a process for packaging precooked Chinese TV dinners. Each of the three sons was successful in developing his product and the company launched them in the early 1970s, in what was thought would be a great leap forward in diversification. Unfortunately, the marketing plans for each product failed and the entire venture ended up as a great flop. Lo later wrote, "The expensive lesson learned is never to leap before you learn to run." HKSBP returned to its specialty, beverages and Vitasoy.

One positive outcome of research at this period was that in the early 1970s Vitasoy started to be made by the "dry process," rather than the former "wet grind" process. Additional research found ways to recover in the milk 90% of the protein originally in the soybeans. The whole soybeans were subject to optimum conditions of dry heat and pressure, then dehulled and milled to a flour. The flour was soaked in hot water then boiled in a continuous cooker. The milk was extracted in a continuous centrifuge, then formulated, and bottled. The final product contained 2% protein (Shurtleff and Aoyagi 1979).

From 1973 on a series of crises struck. The combination of skyrocketing prices for energy (after the OPEC price hike), soybeans (after the US soybean embargo), and sugar essentially tripled Vitasoy production costs. The price of a bottle of Vitasoy, which had stayed at 20 cents (HK) during the 1950s and 1960s had to be increased sharply in 1974. A recession hit at the same time and sales plunged from 100.8 million bottles in 1970 to a low of 80.4 million in 1975. Something had to be done. During 1975-77 Lo made four

major decisions: to give Vitasoy a new image that would allow it to compete head to head with soft drinks, to package Vitasoy in Tetra Brik cartons, to introduce a new line of products based on fruit juices and Chinese teas in Tetra Brik cartons, and to drop the franchise agreement with Pepsi-Cola.

To revive slumping sales and reflect the spirit of the mid-1970s, Vitasoy needed a new image, which would let it compete with soft drinks. The new slogan, replacing the long-popular nutritional one, proclaimed: "Vitasoy is more than just a simple soft drink."

Vitasoy's first UHT (ultra high temperature) Tetra Brik packaging line began operation in 1976 and the new concept proved to be a great success. Thereafter Vitasoy was sold in both Tetra Brik cartons and glass bottles in sweetened plain and malt flavors. The advantages of the Tetra Brik containers were that they required no refrigeration, they were disposable (unlike bottles which had to be recycled and washed before use), they had a modern fashionable image, they allowed more colorful and vivid package design, they were lighter and more compact to ship, and they were safer, being unable to break or to harbor the potentially dangerous substances sometimes found in returned bottles. Their one big disadvantage was their high cost, which at one time was calculated to be 45% of total production costs of a unit of Vitasoy. Hence the company was forced to sell a package of Tetra Brik Vitasoy for 20-25% more than a bottle of the same volume. (Actually bottling would be more expensive if two new systems were compared.)

Later in 1976, on seeing the popularity of the new Tetra Brik carton, the company decided to diversify by marketing a new line of juice drinks, containing at least 50% natural fruit juices plus water and flavors. An initial line of four flavors was selected: orange, mango, guava, and kalamansi. Sold in 250-ml Tetra Brik cartons and brand-named Vita, these captured 30% of the Hong Kong juice market within 2 years. Then three more items were added to the line: Chrysanthemum Tea, Sugar Cane Juice, and Lemon Tea. A black currant juice and lemon and herbal teas were added later. All the new juice drinks and teas became extremely popular from the moment of introduction.

The decision to terminate the Pepsi-Cola franchise in 1977 marked the close of an era. HKSBP had made almost no money on the franchise, but had learned a great deal about marketing beverages. They were now in a position to take full advantage of this valuable knowledge.

The result of these four bold decisions (combined with some larger market factors) was dramatic. Sales of Vitasoy rebounded sharply after 1975, reaching 129.6 million bottles and packs in 1980, for a respectable compound annual growth rate of 10% during those last 5 years. Despite the discontinuance of the Pepsi franchise, sales of the juices and teas added further to the rapid increase in the company's total sales.

In 1978 a new plant in Aberdeen (41 Heung Yip Rd.) was completed and equipped with the most modern soft drink equipment. The company's head offices were also located there. In the summer of 1978 Vita carbonated soft drinks were added to HKSBP's product line. The four flavors were Cola, Orange, Cream Soda, and Root Beer. The company that had started out to provide an alternative to the empty calories of soft drinks was now selling them under the new philosophy that customers should be given what they wanted, even if these beverages were (as the company acknowledged) "harmful to health."

Also in 1978 the company's founder, K.S. Lo, retired from the post of Managing Director, while retaining the position of Chairman of the Board of Directors. In addition to his pioneering business work, he also had a long and distinguished career of public service in Hong Kong and was a respected collector and student of Chinese ceramics. He handed the leadership of HKSBP over to his two sons, Winston and Frank. Winston soon became Executive Chairman and Managing Director. K.S. Lo had founded his business on a basic faith in the soybean and confidence in his efforts to make it a success. For 38 years he had been the leading pioneer of soymilk in East Asia, and had played a key role in giving the soybean and soymilk a new, very positive, and modern image in the land of their birth.

Following the end of the Vietnam war in 1975 and the subsequent conflicts and famines in Cambodia and other nearby countries, refugees streamed into Hong Kong. Once again Vitasoy returned to play its original role. Working with the Red Cross, the United Nations, and Church groups, the company provided multi-vitamin fortified Vitasoy at half the regular price to refugees in Hong Kong and Cambodia. Letters from refugee workers testified that Vitasoy helped cure nutritional deficiency diseases and was especially important in improving the health of children under the age of 5, old people over 65, and pregnant women.

In 1979 the company decided to diversify again, this time into dairy farming. They entered into a joint venture with the People's Republic of China via the provincial government of Guangdong (Kwantung) to expand and modernize the Kwong Ming Dairy Farm in Shum Chun, 60 km across the border from Hong Kong. They helped to enlarge the herd of dairy cows and took full responsibility for marketing all of the dairy's products, initially in Hong Kong. By 1981 they were selling 15 tons of fresh cow's milk daily in Hong Kong under the Vita brand, using Vitasoy distribution channels. Higher living standards in Hong Kong had stimulated demand for cow's milk. The company saw Vitasoy and cow's milk as complementing one another rather than competing, allowing the business to cater to all economic sectors of the population. Yet the venture had significance far beyond the area of marketing milk. It was a first step into a potentially huge new market, China, where Vitasoy might once again be called on to play its original

role as a stylish source of high-quality, low-cost protein for the masses–1,000 million strong!

In 1979 a major new phase in the history of HKSBP began, as it started to export products, packed in Tetra Brik, to countries throughout the world. The ambition of making Vitasoy an international drink was being rekindled almost 15 years after the joint venture with Monsanto had fizzled. This time HKSBP, much larger and wiser than before, would take on the task itself. The key factor that now made exports viable was the use of Tetra Brik packaging. Exporting a bottled soymilk, then having to either recycle the bottles back to Hong Kong or discard them overseas, was simply too costly. Moreover there was a rapid rise of interest in soymilk in Western countries, primarily from Asian immigrants, but increasingly from those interested in natural foods or alternatives to dairy products. By the early 1980s exports were going to over 20 countries, both developed and developing. By 1983 exports of all HKSBP products (including Vitasoy) were growing at 35-40% a year, with a large portion going to the newly opened Singapore and Malaysia markets, and to North America, as described below.

HKSBP continued to explore the possibilities of making and/or marketing soymilk overseas with multinational corporations. For example, it had lengthy negotiations in 1980 with the Coca-Cola Co. concerning a joint venture for test marketing various flavors of soymilk in Thailand. Interestingly, the deal fell through over failure to reach an agreement regarding nondisclosure of HKSBP's technical know-how. Continued. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

4267. Shurtleff, William; Aoyagi, Akiko. 1984. K.S. Lo and the history of Vitasoy in Hong Kong and North America. (Continued–Document part V). In: Shurtleff and Aoyagi. 1984. Soymilk Industry and Market: Worldwide and Country by Country Analysis. Vol. 1. 177 p. See p. 130-153.

• ***Summary:*** Continued. An overview of HKSBP's market position in the early 1980s showed the following. By 1980 sales (by number of cartons or bottles) of the many and varied non-soy Vita products had passed sales of Vitasoy. Sales of Vitasoy were growing steadily, from 130 million Tetra Brik cartons and bottles (converted to 250-ml equivalents) in 1980 to 150 million in 1983, for a 5% compound annual growth rate in a mature market. In 1983 all products made by HKSBP's accounted for 35% of the Hong Kong Beverage market, second only to the Swire/Coca-Cola Company's products with 42%. Vitasoy, which had had no competition from brand-named soymilks since 1961, suddenly had to worry about competitors again. Nestle's Bonus (launched in 1978), President's soymilk (launched in 1980), and Coca-Cola's Hi-C soymilk (launched June 1982) took away some of Vitasoy's market monopoly. Yet in 1983, according to Hong Kong Beverage Association statistics, Vitasoy had a commanding 96% of the fast-paced Hong Kong soymilk market, versus only 4% for Hi-C. Bonus and President had insignificant shares. Hong Kong had the world's second highest per capita consumption of soymilk (after Taiwan), about 8.2 liters a year. In 1983 Vitasoy was given a new slogan which proclaimed: "Taste the Feeling."

In 1980-81 Vitasoy prices in Hong Kong dollars were as follows: Bottles, 60 cents for 7 oz. and 80 cents for 10 oz. of plain Vitasoy and 80 cents for 8 oz. of malted Vitasoy; Tetra Brik (250 ml or 8.45 oz.), 90 cents for plain and $1.00 for malted. Ingredients in the plain (sweetened) Vitasoy sold in Hong Kong were water, soybean solids, soy oil, cane sugar (5.5%), and salt, plus vitamins A, B-1, B-2, and niacinimide. The exported Vitasoy contained no added vitamins. A typical 250-ml carton of Vitasoy for export contained 100 calories, 16 grams (6.1%) carbohydrates, 5 grams (2.0%) protein, and 3 grams (1.1%) soy oil. In 1981 the company had sold more Vitasoy in bottles than in Tetra Pack, but sales of the latter had increased by 50% a year since 1978. In 1983 sales in Tetra Pak led bottles 6 to 4.

For HKSBP China represented the great untapped market of the future, but also the great unknown. In 1983 HKSBP made two small but important new moves into China, building on experience from the Kwong Ming Dairy Farm. First, the company began to export Vitasoy to China's new Special Economic Zones. And second, they worked with the Chinese on a venture in Shanghai called Jing Jiang United Food Processing Co. Ltd. Initially HKSBP worked as a technical consultant on the project, but negotiations were underway for a joint venture. In August 1983 the plant's first product, Vita orange drink, was produced for a national sports meet. It is hoped that soymilk, perhaps called Vitasoy, will be the company's next product.

Vitasoy in North America. Vitasoy was the first Asian soymilk to be imported to North America. This venture was pioneered by K.S. Lo's two entrepreneurial daughters, Yvonne and Irene. Yvonne, who actually ran the operation, had graduated from a Canadian university then worked for 6 years as a city planner in Toronto, before realizing that her heart was really in business and marketing. In January 1979 Yvonne and Irene incorporated The Soya Bean Products Co., N.A. Inc. (SBPC) as a marketing company for HKSBP's products in North America. They opened headquarters that month on Bush Street in San Francisco, then began immediately to market and distribute plain and malted Vitasoy in Canada, in 8.4-oz. (250-ml) Tetra Brik cartons. In February 1981 they introduced the same products to the USA, immediately after the FDA lifted its ban on Tetra Pak (because of a disproven concern over hydrogen peroxide residues from sterilization). By 1982 some 3.2 million cartons of Vitasoy a year were being sold in the US and Canada.

The venture was so successful that in April 1982, to raise capital and facilitate long-term operations with Hong Kong, Yvonne and Irene sold their company to HKSBP,

which renamed the US affiliate Vitasoy USA, Inc. The parent company now took a serious interest in the US market. In 1983 sales of Vitasoy increased to 5 million cartons, up a whopping 60% from the previous year. The 1983 figure equaled 328,125 gallons or 1.24 million liters. An estimated 90% of this soymilk was sold to the Oriental market; of this, 80% was sold to Chinese, and the rest to Vietnamese, Filipinos, and other ethnic groups. Roughly 45% of all Vitasoy was sold in the three western coastal states. Vitasoy distributed its own products in the San Francisco Bay Area (the single area of greatest sales), northern California, Oregon, and Washington. Other companies, appointed by Vitasoy, sold the product in southern California, and elsewhere in the US and Canada, in 10 market areas designated as having a high concentration of Oriental Americans.

In 1983 Vitasoy was by far America's leading imported soymilk, accounting for just under 50% of total soymilk imports. Heady with success, Vitasoy USA announced in late 1983 that it would launch two American-style products in March 1984 at the big natural foods trade show in Anaheim, California. These would be called Vitasoy Original and Vitasoy Coconut. Each would bear the subtitle: "Natural Soy Drink, Sweetened with Maple Syrup." They would be marketed to the natural and health food trades as a healthful and nutritious beverage, under the slogan "Taste the Goodness." Marketing to mainstream consumers was also planned. Prices in the two markets were expected to be $0.65 and $0.55 respectively (maple syrup was a major part of the product cost), as compared with $0.35 for Vitasoy with a higher water content, sweetened with sugar, sold in the Asian-American market.

In developing these products Vitasoy USA did extensive and thorough, original research on American attitudes to and taste preferences for soymilk. Working with American marketing and product development professionals, they ran "focus group" and "intercept" studies. In September 1982 Yvonne Lo and Hilton Tsui issued a 59-page in-house report titled Market Study of Soymilk Beverage, packed with original information, plus an overview of the US beverage industry and a marketing plan.

Most important, the company announced in late 1983 (after an unsuccessful attempt to acquire majority ownership of the New England Soy Dairy) that it had purchased land in Brisbane, California (just south of San Francisco) and had signed a contract to build a large soymilk plant there. This plant, scheduled to open in 1985, would clearly introduce a new stage in the history of soymilk in America, for HKSBP would be the first major Asian soymilk manufacturer to start a plant in the West.

The Present and Future. The year 1984 saw the Hong Kong Soya Bean Products Co., Ltd. as the world's third largest manufacturer of soymilk (after Kibun in Japan and Chung's Food in Korea), and one of the largest exporters. The tiny size of the Hong Kong market (only 5.2 million people, compared with 120 million in Japan and 42 million in Korea) had been a major factor limiting the company's growth. But now HKSBP was poised on the edge of an era of great potential growth in a world market. The challenges of internationalization, diversification, public versus family ownership, exports versus local manufacture, marketing Asian products in the West, company name changes with diversification, etc. all bear striking resemblance to those faced by Kikkoman, as discussed in Chapter 79 of our book *History of Soybeans and Soyfoods.* We expect that HKSBP, though much smaller than Kikkoman, will follow many of the same patterns; hopefully it will be as successful as Kikkoman has been.

The relatively small Hong Kong market will play a smaller and smaller role in the company's future. The greatest potential for growth may well lie in China. Efforts to introduce Vitasoy into school lunch programs in Third World countries and to help such countries make better use of domestic soybeans for human nutrition could bear great fruit in countries such as Mexico, India, Argentina, Brazil, Paraguay, and Indonesia. In these areas, domestic joint-venture plants probably hold greater promise than imports, since they help rather than hurt foreign exchange balances. Note: Three updates:

1990 Aug. 3–Vitasoy acquires Nasoya Foods (Leominster, Massachusetts).

1990 Sept. 24–Company name changed to Vitasoy International Holdings from Hong Kong Soya Bean Products Co. Ltd.

1993 May 27–Vitasoy acquires Azumaya Inc. (South San Francisco, California). Azumaya (Originally Azumaya Tofu Seizo-sho) had been making tofu in San Francisco since at least 1930. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

Source: Japan Soymilk Assoc., Norin Suisan-sho, and Kanji Tsuchiya, 1983-84.

Leading Soymilk Manufacturers and their Market Share. All major soymilk companies can be divided into three types: (1) Medium sized food companies making soymilk as one of various products (Marusan, Kibun), (2) Huge dairy companies (Meiji, Morinaga, Yuki-jirushi), and (3) Soft drink and beer companies (Kirin, etc.).

Toyo Shimpo (21 July 1982) gave the market shares of major soymilk manufacturers as follows. Inexplicably, the total comes to 110.1%

1. Kibun Foods 41.7%
2. Okazaki Marusan..... 23.3%
3. Mitsubishi Kasei..... 10.0%
4. Saniku Foods 8.0%
5. Kyushu Milk Co. 6.0%
6. Meiji Milk Co. 5.8%
7. Kenbi-sha 2.5%
8. Asahi Shokuhin 2.5%
9. Soken-sha 1.3%
10. Natural Foods 1.3%

Others 7.7%

These figures can be misleading, however. In mid-1983 Kibun, Marusan, and Mitsubishi all had the same installed capacity for soymilk production. One top industry analyst claimed that Marusan's actual production was larger than Kibun's, but that much of Marusan's soymilk was sold in bulk to other companies (Sakura Shokuhin, Dai Tonyu-gyo, Nagano Tomato, and 2-3 others), who repackaged and sold it under their own brands, or used it in breads, etc. After Marusan in total (including bulk) production were Kibun,

became a part of the basic diet. Reference to soymilk (then called *toju* or "bean liquid") may have appeared as early as the 1100s, but the first clear reference was not published until 1895, when Inouye did one of the world's first nutritional analyses of soymilk, and compared it to cow's milk. In 1906 Katayama wrote two articles on soymilk; in one he described preparation of a fermented soymilk cheese, similar to Swiss cheese. Yet both Inouye and Katayama wrote in English. In 1924 Sato Yoshitane wrote a book called *Daizu Kakko,* which is said to contain the earliest known reference to the word soymilk (*tônyu*), written with the present characters.

From this time on (and perhaps from an earlier date) some Japanese (an estimated 1% of the population) would order fresh soymilk from their local tofu shop, usually for health-related reasons, as in diabetic diets or for mothers who had difficulties with breast feeding, or because it was thought or found to be a health-giving beverage.

The earliest known commercial production of soymilk in Japan dates back to the influence of Dr. Harry Miller. In 1957 two Japanese Seventh-day Adventists, following his inspiration, started making soymilk in Hachioji, Tokyo, and selling it locally in 180 ml cartons. In 1958 Dr. Miller set up a small soymilk plant in the kitchen of the Adventist Tokyo Sanitarium. It was used to make soymilk, soy whipping cream, soymilk ice cream, and soy spread, which were served to the staff and patients. In 1959 a small soymilk plant was established in the Seventh-day Adventist Saniku School. From this year, Japan's oldest existing soymilk company, Saniku Foods, traces its origin.

A chronology of the starting date of Japanese soymilk companies is as follows. Only three, each followed by an asterisk, are no longer in business:

During the period from 1973 to 1976 soymilk started to become quite popular in Japan, largely because of developments in processing technology that made it possible to produce soymilk with a bland (non-beany) flavor, and because of promotion by the new soymilk companies. In 1974 Japan's first major book on soymilk was published. By 1976 the Japanese were making the best soymilk in the world–by Western standards.

A new era began in 1976 when Kyushu Milk Co., a long-established, middle sized dairy milk company, started making soymilk. Tremendous momentum was added to this new direction in April l979, when Meiji Milk Co., Japan's second largest milk company also started to sell soymilk (made by Marusan but with the Meiji brand). Meiji first began to make their own soymilk in their own plant in March 1981. That same month Morinaga Milk Co. was licensed by Mitsubishi to distribute their soymilk. Quickly thereafter each of the other major Japanese milk companies (Meito, Yuki-jirushi) followed suit, joining the wave of the future rather than fighting it. Their analysis was that fundamentally soymilk and cow's milk were complementary rather than competing products, and that making soymilk would allow a company to expand its market size by reaching people who did not ordinarily drink cow's milk. In retrospect, this analysis has proven to be correct.

What has since often been called "The Soymilk Boom" really started in Japan in about 1981-82. The main reasons for this were:

1. A growing interest among Japanese in good health and nutrition, through improved diet. A corollary of this was the concept that the elite should be especially healthy, both to improve their own performance and well being, and to set an example for others. The American health, natural foods, soyfoods, and vegetarian movements all had a significant influence on Japanese attitudes toward good health.

2. Improved soymilk quality/flavor, and a growing number of varieties and flavors.

3. Popularization of packaging (such as Tetra Brik aseptic cartons) that would give the soymilk a long shelf life, allowing nationwide distribution from one large soymilk plant.

4. Strong interest and support by the media/mass communications followed, after 1981, by extensive advertising and promotion on TV (especially by Kibun and Marusan), in the print media, and with in-store demos by soymilk companies.

5. The aggressive marketing of soymilk by all of Japan's major milk companies.

6. The establishment of Japanese Agricultural Standards (JAS) for soymilk in May 1981.

7. Large numbers of tofu shops starting selling fresh soymilk (containing its natural "beany" flavor), starting in about mid-1982.

8. Large manufacturers and distributors of beverages and related food products started to buy soymilk in bulk from manufacturers, then to market and distribute it under their own labels. Examples: Kirin Beer, Kagome (a large ketchup maker), Suntory, etc.

From 1978 to 1983 the soymilk market in Japan, on average, more than doubled each year, making it the fast growing food market in Japan! Many new brands started appearing in 1982 and there was a big jump in production. Soymilk was the star and darling of the media and it played a major role in enhancing the image and sales of all soyfoods in Japan.

Market Size and Growth Rate: The following statistics show the increase in size of the Japanese soymilk market: Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

4270. Slough, David. 1984. Milk of human ingenuity and entrepreneurial skill. *Asian Business* 20(2):21-23. Feb. Cover story. See also related article on page 27.
• ***Summary:*** Discusses Hong Kong Soya Bean Products Co. Ltd.'s new connections with China. "The privately owned mini-transnational beverage maker's first product, Vitasoy,

was made from China-sourced soyabeans and its latest product, milk, comes from the dairy farm it established in Guangdong province. The author repeatedly gives the company's name as "Vita."

In 1982 the company had an authorized and paid-up capital of HK$210 million, 70% of which was owned by the Lo family, with the rest privately disposed among more distant relatives and friends. Turnover that year was HK$244 million, and the profits are estimated at 15-20% of turnover. A fair market value for the company is estimated at about HK$750 million.

"Those figures demonstrate quite remarkable growth for a traditional Chinese family-run company formed in 1940 with an initial capital of only HK$18,000. In its first year of operation turnover based on a single product operation was less than HK$90,000. It had 20 employees then and operated in rented premises. Despite a close-down during the Japanese occupation and a financially disastrous entry in the early 1970s into the fast food business, the company enjoyed steady growth to the mid-1970s and impressive growth thereafter."

"In Hong Kong, Vita owns assets valued at HK$220 million, it operates two plants with a combined floor area of 38,000 square meters, and has a labour force of 950. Production of beverages is running in excess of 12 million 24-unit cases per year. It supplies something like 30% of the local soft drinks market."

But now the company is diversifying into dairy milk. In China, Vita has a 5-year compensation trade agreement with the Guangdong Province Guangming Overseas Chinese farm where 1,200 people and 3,500 milch cows produce 8,000 tonnes of fresh milk a year. That agreement cost the company HK$22.7 in borrowed investment capital. Vita has used that milk to capture 60% of the Hong Kong milk market. Vita looks all set to monopolize the Hong Kong fresh milk market by late 1987. "Under that agreement, Vita provided the livestock, technological know-how, equipment, managerial expertise and market for the product of 4 dairy farms and a centralised milk processing facility."

The dairy farm isn't Vita's only investment in China. In late 1983 Winston Lo signed a US$5 million joint venture agreement to establish a vegetable processing facility in Guangdong province. It will pack and chill up to 20 tonnes of green leaf vegetables a day, for sale in Hong Kong.

"Vitasoy was the company's sole product–ignoring a venture into fast foods–until 1976. Turnover rose from HK$87,000 in 1941 to HK$3.3 million by 1955, HK$12.6 million by 1965 and HK$40.2 million by 1975. In 1975, while founder K.S. Lo was still at the helm, Vita installed the first Tetra-brik packaging line in Hong Kong and launched the UHT version of Vitasoy. The time, the product and the packaging were right. Sales took off. Under Winston Lo, Vita then decided to branch out into the packaging of juices. It started with orange, mango, guava and kalamansi and captured 30% of the fruit juice market in just 2 years. Chrysanthemum tea, lemon tea, herbal tea, lime juice and cane juice soon followed. Other lines and carbonated drinks (orange, cola, cream soda and root beer) were added to give Vita a product for every sector of the soft drink market. Vita products are now exported."

"Vita now purchases at least 50% of its soyabeans from Canada and the USA–despite the fact that soya beans from those countries have been developed for oil extraction rather than protein extraction (the latter is the case with Chinese soyabeans) and therefore give a lower protein yield. There are no plans for a public flotation of shares in Vita. Founder K.S. Lo is still wielding considerable power as chairman of the board of directors. Day to day management is in the hands of managing director Winston Lo and deputy managing director Frank Lo."

4271. Slough, David. 1984. Like father, like son. *Asian Business* 20(2):27. Feb. Cover story. See also related article on pages 21-23.

• ***Summary:*** This is an interview with Winston Lo of Hong Kong Soya Bean Products Co. Ltd., whose photo is on the magazine's cover. "Winston Lo, 42 years old, became managing director of the family owned Hong Kong Soya Bean Products Co. Ltd. in 1976 when his father, K.S. Lo–current chairman and entrepreneurial founder of the company–retired from that position. In 1967, Winston Lo–the fifth born son–graduated from New York's Cornell University with a masters degree in food science and technology. He immediately joined his father's company and was eventually appointed director of research and development and later general manager. He introduced aseptic Tetra-brik packaging for the company's then sole product–a soyabean protein drink marketed as Vitasoy–and a range of new drinks: teas, juices and, more recently, fresh cows' milk and milk drinks. Since he has been at the helm, the company's turnover and profits have increased at least seven-fold."

When Vitasoy was launched by K.S. Lo in 1940, it was "virtually the only alternative available to people who, like most southern Chinese, found cow's milk both unpalatable and indigestible. By the time other manufacturers got in on the act we had a 25% share of the Hong Kong soft drinks market. We had also started to diversify into other beverages and were beginning to export. Then as Hong Kong people developed a taste for milk–the result of modern bottle feeding practices, the fast food boom and overseas education or work for large numbers of Hong Kong Chinese–we got into large scale production and marketing of milk."

Questioned about some of the company's projects which were "much less than successful," Lo responded, "You must be referring to our premature and quickly aborted entry into fast food production and marketing back in the early 1970s. We started to produce pre-cooked Chinese dishes,

infant weaning food and a 'cheese' from soyabean milk. The Hong Kong population wasn't ready for them and we lacked experience outside our then one-product operation. But we learned a lot from that failure. We haven't repeated it."

The company diversified into fruit juices in 1976. It is now also diversifying geographically in terms of assets and revenue producing activities, perhaps in anticipation or fear of China's inevitable resumption of sovereignty over Hong Kong. Lo notes that "We intend to have a third of our eggs in the Hong Kong basket, a third in the China basket and the rest spread around the world before the end of the decade."

4272. *Soyanews* (*Sri Lanka*). 1984. Consumer guide: Tofu, soya mash and soya milk. 6(6):6, 8. Feb. [1 ref]
• ***Summary:*** These three soya foods "are being produced by Sri Lanka's only tofu shop at 123 Kitulwatta Gardens off Elvitigala Mawatha, Borella, Colombo 8." In this full page article the name "Soya House" is never mentioned. A photo shows a man carrying bottles of sterilised soyamilk in a metal rack. On the white wall next to him is a large sign that reads: "Soya House Specials. Soya Milk (substitute for coconut milk). Soya bean curd [tofu]. Soya mash [okara]." On the right side of the sign is a large cartoon illustration of a smiling soya bean with a collar and necktie. To the left of the bean we read: "I come from Soya House: Better known for quality."

Note: It appears that the name of Sri Lanka's only tofu shop is "Soya House." But why does the article not make this clear?

4273. Wyeth Laboratories. 1984. Cow's milk intolerance. Wysoy (Ad). *Human Nutrition: Applied Nutrition* (*London*) 38A(1):Facing title page. Feb. [1 ref]
• ***Summary:*** Wyeth Laboratories makes Wysoy, "a nutritionally complete infant soy formula:–milk protein free, lactose free. Wysoy is widely used in hospitals and is available as powder and ready-to-feed. Wysoy can also be used by older children and adults." A photo shows a can of Wysoy powder, and Wysoy soy protein baby formula. Address: Huntercombe Lane South Maidenhead, Berks. SL6 0PH.

4274. Lo, K.S. 1984. Re: Vitasoy production, market share, and history. Letter to William Shurtleff at Soyfoods Center, March 2. 3 p. Typed, without signature on letterhead.
• ***Summary:*** Market shares by company of the Hong Kong soymilk market, according to the latest survey figures, are Vitasoy 94.7%, Hi-C (Coca-Cola Co.) 5%, and Yeo's (Yeo Hiap Seng) 0.3%. Bonus is out of the market altogether.

There have been many competitors in the Hong Kong soymilk market throughout the years. The first was A.S. Watson's "Wood-lit-nai" which was launched in about 1955. It was withdrawn a couple of years later. Now there are only two other brands on the market.

Sales (in 250 ml unit equivalents) for the past 3 years are 1981 = 5,600,000, 1982 = 5,800,000, and 1983 = 5,700,000.

Negotiations for a soymilk joint venture with China in Shanghai never took off. They were unable to find a way of remitting Vitasoy's share of earnings in foreign currency. Address: Chairman, Hong Kong Soya Bean Products Co., Ltd., 41 Heung Yip Rd. Aberdeen, Hong Kong. Phone: 5-528211.

4275. Lindner, Anders. 1984. Re: Soymilk and Soya Technology Systems (STS). Letter to William Shurtleff at Soyfoods Center, March 9–in reply to inquiry. 2 p. Typed, with signature on letterhead. Plus 3 p. inserts.
• ***Summary:*** Answers questions about Alfa-Laval, Marusan and Seikensha, Dawn soymilk made by Malaysia Dairy Industries, Green Spot (Thailand) owned by Mr. C.C. Cheung, packaging variables, Yeo Hiap Seng.

4276. Sterner, Mark H. 1984. More on work with Meals for Millions Foundation, 1966-1973 (Interview). Conducted by William Shurtleff of Soyfoods Center, March 13. 2 p. typed transcript.
• ***Summary:*** A major change in Meals for Millions took place on 14 Sept. 1964 when Florence Rose was replaced by Jerry Miller as executive director. In about 1965 the new officers at MFM began to lay plans for a new building. Clifford Clinton provided moral support from the wings. Funds for the Santa Monica building came from Morris Asimow, PhD (who was president of MFM at the time) and Jerry Miller; they co-signed a note with a Santa Monica bank, which was later converted to a mortgage. The mortgage was paid off over the years by contributions to MFM during Sterner's period there. There were no land grants. Construction started in 1965 and MFM moved into the new building in April 1966. They wanted a building of their own located outside of Los Angeles where they could have a pilot plant and offices.

In India, the original MPF-type food was developed at Mysore based on peanut meal and Bengal gram. It was later manufactured by Gopi Agarwal and his brothers in J.B. Protein Food Industries. They had a peanut pressing operation in northeast India. They started making it in about 1965 and called it Multi-Purpose Food; it did not contain

soy. MFM, instead of sending MPF from the United States, sent money to India to help pay for distribution.

Bob Nave and SPRA of the Methodist Mission, sometime after that, put in a soy extrusion operation. At a later date, just before Mark left MFM, there was an effort with Nave to produce second generation foods. Nave's mission had received MPF from the USA then bought it from the Agarwals. Then Nave got an extruder and started to make a similar product. So MPF sparked Nave's interest; eventually he went into second generation foods. Also, someone in the south of India made a little MPF using peanut meal, but no soy. Lots of peanuts were available, but aflatoxins were a problem.

MFM was more involved in image building than in truth; it was a big problem in the early days. Everyone wanted to embellish the story to help raise funds. For example, the early newsletters said that one meal of MPF cost only 3 cents. No! That was the cost to manufacture it in Los Angeles, not the cost when it arrived for a hungry person in Europe.

Adine Laugh was a promotion person, employed by MFM to promote the organization. When Mark arrived he worked a lot to bring truth back into the picture. Clifford Clinton was a very dedicated man, but there were several years in about 1963-64 when he was alienated from MFM. He got involved with a chiropractic doctor or healer [Dr. Omar Fareed] who sort of mesmerized him. That doctor was flamboyant and lived in Beverly Hills. He threatened to take over MFM but the board would not allow it. Clinton resigned, but soon returned. After Clifford Clinton died, his wife and son were on the board.

The original MPF was based on uncooked soy grits, but early on it became available in both soy flour and soy grit form. This lasted until the 1970s, whereafter it was based entirely on toasted soy grits. Note: General Mills, Inc. began to make Multi-Purpose Food in Dec. 1959; it was based on toasted soy grits.

Mark visited the United Rescue Mission (URM) in Taiwan; they helped care for refugees from mainland China. They may well have received MPF.

In 1966 Mark was hired by MFM (not as new program head) to develop the protein food technologies that would use indigenous third world ingredients and to develop a technology transfer curriculum. That led to a more professional reputation for MFM. Mark worked in that position from 1966 to 1972, when he went to Korea. During that time, Jerry Miller was executive director, followed by Irvin Saunders, a retired colonel, followed by Mark.

In about 1973 USAID in Washington, DC, began to give MFM $1.3 million a year. Some of this money was earmarked for building a workshop, and for enlarging labs and classroom facilities and the program itself.

This month the Korean MFM project [based on extrusion cooking] is being turned over to a Korean MFM foundation to be funded by Koreans for work in Korea. When Mark was director of technology transfer, soymilk equipment was donated by Sam Tubin. A Chinese banker in Los Angeles wanted to set up a soymilk plant there. In 1967-68 he set it up to make soymilk to be bottled in soda pop bottles. He never got it off the ground, although he had all the equipment–which lay around unused for a year or so. Sam Tubin bought the equipment to produce a beverage from fish meal using the Viobin process for making fish meal. That didn't work out, so Sam donated the equipment, worth $250,000 to MFM.

While Mark was in Korea he made connections with the Sam Young Co., a large manufacturer or ramen (instant noodles). They wanted to start making soymilk, so Mark installed MFM's soymilk equipment at their plant outside Seoul and they paid MFM for it in installments in Korean money. Using that money, MFM set up a program in Korea with an in-country director. And they set up an extruder and project in Wanju funded by payments from the soymilk plant.

The soymilk plant began operating in about 1973. They did it in a big way, made 5,000 bottles a day, and soon expanded the plant. Mark thinks the soymilk product was named Super-D; it came in plain (sweetened) and chocolate flavors. MFM's Korean project became self-supporting when one province took on the program to provide infant and weaning foods, as well as commercial foods that were sold. On 20 March 1984 (in about a week) the project will be officially turned over to the Koreans. MFM has been putting a little money into the project. The extrusion project is also very alive. Now the provincial government is trying to persuade other provincial governments to build their own LEC (low cost extrusion cooker) plants.

Starting in about 1966, at the Santa Monica center they used to demonstrate all the state of the art methods of making soymilk including hot grind, whole raw bean, using soy protein isolates, etc. Mark does not know if any of that work took hold and was applied anywhere. It was all pretty academic. The tuition of most students was paid by MFM or by a commercial company.

MPF was an important, pioneering idea and food. History is partly the result of huge, impersonal forces, and partly the work of particular remarkable men and women, who are often pioneers. They have a vision and an idea and are willing to take a risk and to work hard to manifest that idea.

A good historian should be able to trace great movements and ideas back to the men and women whose ideas and vision started them, and then to give them life and to give them credit for what they have seen and done. Clifford Clinton was clearly one such man. Address: Former director, Meals for Millions Foundation.

4277. Robert-Stolow, Johanne B. 1984. Ingredient listing for tofu ["Soymilk" acceptable term for use in Canada].

Manufactured Foods Div., Consumer Products Branch, Hull, Quebec, Canada. 1 p. March 21. Unpublished manuscript.
• ***Summary:*** "To: Regional Managers Attention: Regional Food Specialists in Halifax, Toronto, Winnipeg, Vancouver.

"Subject: Ingredient listing for TOFU. At a recent meeting with Agriculture Canada, it was agreed that the term, 'soymilk' would be the acceptable designation for the aqueous extract of soybeans used in the manufacturing of TOFU. This decision was based on a review of the research literature where the term 'soymilk' has been in use for 60 years or more. It can therefore be argued, as in the case of cocoanut milk, that the common name 'soymilk' is well established within this particular trade, thus barring any objection from the dairy industry.

"'Soymilk' is obtained via the following process... (A flowchart is given). The soymilk is then processed further to produce the TOFU.

"Please be advised that we will be recommending the use of this name and of its French equivalent "jus de soya" (MAPAQ) for labelling. For the sake of uniformity, we would appreciate your doing likewise. We thank you in advance for your cooperation in this matter."

Note: Victor Food Products of Toronto petitioned the government to legalize use of the word "soymilk" in labeling tofu. There followed a lengthy and expensive court battle; on April 27 Victor Food Products finally prevailed. The court ruled that "soymilk" is the "common and ordinary term" for the product, used since 1918 in scientific articles and commerce. Thus it cannot be squelched by dairy interests. Address: Manufactured Food Div., Consumer Products Branch, Government of Canada, Hull, Quebec.

4278. Hesseltine, C.W. 1984. Re: Research on natto. Interest in letters of Frank N. Meyer concerning fermented foods and soybeans. Letter to William Shurtleff at Soyfoods Center, March 22. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "It will be some time before we get a review of natto published since our emphasis just now is to do as much laboratory work as possible. Our interest currently is a study of the genetic stability of *Bacillus natto* which, under many conditions, runs down rapidly. Secondly, we are looking at whether *B. natto* is a separate species from *B. subtilis.*

"Your comments on the letters of the USDA Plant Explorer, Frank N. Meyer, are especially interesting. Where can I see the letters that deal with fermented foods or even soybeans? Next summer I am preparing a lecture on the involvement of USDA in soybean fermented products. I knew there was a man by the name of Meyer associated with soybean exploration, but I was not aware of his description of any soybean foods. I would like to mention these letters since the first scientific paper from USDA was a paper by Church on angkak [red fermented rice] in 1920.

"Thank you also for the information on soy milk and your proposed terminology and standard for tofu. This should be circulated to people in the industry to get their reaction and suggestions as to whether they can live with the standards." Address: Chief, Fermentation Lab., USDA/NRRL, Peoria, Illinois.

4279. Storup, Bernard. 1984. Re: New developments at Société Soy. Letter to William Shurtleff at Soyfoods Center, March 22. 3 p. Typed, with signature on letterhead (photocopy). [Eng]
• ***Summary:*** "A brief history of Société Soy: Oct. 1981–Sept. 1982. Search for a place to settle near Paris, choose and install equipment. The company's first commercial production began in June 1982.

"Oct. 1982–May 1983. Production of tofu (firm for the natural food market and soft for the Japanese community–30,000 Japanese living in Paris); distribution by our own means in Paris only.

"From May 1983. Nationwide distribution of firm tofu–vacuum packed, 24 day shelf-life–and tofuburgers (called 'Croque Tofou') by Paris based distributors (actually, from Rungis, which is the biggest market of its kind in the world, and a key point for fresh products for western Europe).

"We carry 5 types of burgers (see labels), with 26 day shelf-life (we could put 2 months, according to a strict microbiological survey we ran, but prefer to shorten it in order to have a more regular rotation).

"This week have begun a nationwide advertising promotion for 'tonic burgers' (in Paris subway, on the national radio); it is run by a fast food chain that wants to promote a more dietetic way of eating. We make the burgers.

"We should double our production within the next 6 months; We don't really have time to develop new products, at least for this year.

"We are presently making 2,500 kg/week of tofu, including 1,400 kg/week of burgers; one year ago we were making 1,000 kg/week.

"Some news from Europe: Several types of soymilk have recently been put on the market: Lima Soya Drink, Sojal, and Soyo.

"I think the biggest tofu manufacturer in Europe is Vanka-Kawat in Rijswijk, Holland. They sell about 30,000 pieces of tofu (250 gm and 450 gm) per week, mostly for the Asian (Indonesian) community. They also make sprouts and tempeh. They have an automatic plant with only European equipment; there is no way to visit it.

"The French dairy lobby (France is the world's leader in cheese consumption) has recently clearly defined its new priorities: fight by all means against all kinds of substitutes for dairy products–above all soymilk." Address: Société Soy, Plateau de l'Ardennais, 91590 Cerny, France. Phone: (6) 457 52 01.

4280. Vansickle, Janice. 1984. Bean worth weight in gold. *Windsor Star* (*Essex County, Ontario, Canada*). March 26. p.

B1-B2.
• ***Summary:*** Soybeans are now Essex County's major field crop and the third largest cash crop in Ontario province (with a value of more than $203 million in 1982), but few people know what happens to the golden nuggets after they leave the farm. Most of the soybeans are crushed in Canada to make soybean oil and meal. Last week the Ontario Soya-Bean Growers' Marketing Board held a symposium in Toronto titled "Ontario soybeans–A journey into the next century." Sheldon Hauck, vice-president of the Soy Protein Council in the USA and one of the speakers estimated that soy protein is an ingredient in over 2,500 readily available grocery store items. Contains a nice history of the soybean in Canada. Ontario now exports soybeans to 20 countries, "including major shipments to Japan, which buys only top quality soybeans and turns them into soyamilk, soyaflour, tofu, miso–a soyapaste for soup–and natto–a fermented soybean used as an appetizer." Speaker after speaker confirmed a bright future for soybean exports. Moreover, all supermarkets in Windsor now carry tofu, a soya curd. Soy oil is found in margarine and cooking oils. Soy protein appears in soya sauce, simulated bacon bits, and infant formulas. The H.J. Heinz Company in Leamington has been working with the marketing board to develop a line of processed soybean products for the retail market.

Ontario's three soybean crushing plants are experiencing hard times, in part due to competition from canola oil (which enjoys subsidized freight rates); they are operating at 62% of capacity and could be forced to shut down. Photos show: A pair of cupped hands holding soybeans. Peter Epp, chairman of the Ontario Soybean Growers Marketing Board.

Note: This is the earliest English-language document seen (March 2009) that uses the term "soyapaste" to refer to miso. Address: Star agriculture reporter.

4281. Bhatnagar, P.S. 1984. Soybean in India–Retrospective and perspective. *Tropical Agriculture Research Series* No. 17. p. 11-22. March. International Symposium on Soybean in the Tropics and Subtropics. [22 ref]
• ***Summary:*** Contents: Introduction. Soybean in India. A fallacy. Soybean development. Research in India. Seed production. Production technology. Microbiology. Plant protection. Product development, utilization and production economics. Constraints to rapid expansion of soybean.

Table 1 shows imports of soybeans and soy oil to India from 1970-71 to 1979-80. Imports of soybeans were zero or insignificant except for 516 tons in 1978-79. Imports of soy oil fluctuated widely, from 78,956 tons in 1970-71, to only 3,509 tons in 1975-76, reaching a peak of 350,617 tons in 1978-79. Address: Project Coordinator, All-India Coordinated Research Project on Soybean, ICAR, G.B. Pant Univ. of Agriculture and Technology, Pantnagar 263145, U.P., India.

4282. Caty, Thérèse. 1984. Dossier: Le soja [Dossier on soyfoods in France]. *France Dietetique.* Feb/March. p. 24-31. [Fre]
• ***Summary:*** This extremely interesting article gives an introduction to the various soyfoods, then list all known soyfoods products sold in France, complete with the brand, product name, ingredients, nutritional composition, weight or volume, and packaging. The last half of the paper is a French translation of a paper titled "The American boom in traditional soy products," presented by Richard Leviton on 11 Oct. 1983 at a conference in Parma, Italy.

The following products, manufacturers/marketers (and brands) are listed: 1. Whole soybeans and flour: Lima (Organic soybeans, organic whole soy flour). 2. Textured soya: Charusse, Soyavit. 3. Convenience prepared foods for vegetarians: Pural (Frika Vita, Sojafleisch, Pasta Chuta, Sojavite, Soja Mignon, Sojanelles, Sojanelles épicées), Hera (Croq Meal, Herameal, Végémeal, Potage), Fritini (Aux herbes). 4. Liquid soymilk: Celnat (Soyo), Lima, Pural (Sojlactis), Sapov (Sojal), Provamel (Soya Drink, Soya dessert choco [a pudding, made by Alpro in Belgium]), Naturvit (Soyalet, Soyalet sans sucre). 5. Tofu: Le Bol en Bois (Koya-dofu), Soy (Tofu, Croque Tofu [6 types]). 6. Tempeh: Traditions du Grain. 7. Miso: Celnat (Brown rice miso imported from Japan, Barley miso), Lima (Hatcho miso, barley miso). 8. Soy sauce: Celnat (Shoyou), Lima (Tamari, Tamari Shoyu). Address: France.

4283. Chen, W.L. 1984. Soybean processing for food use in Taiwan. *Tropical Agriculture Research Series* No. 17. p. 143-52. March. International Symposium on Soybean in the Tropics and Subtropics. [18 ref. Eng]
• ***Summary:*** Contents: Abstract. Introduction. Soy milk. Instant soy milk powder. Tofu. Soybean pudding. Hard beancurd. Hard beancurd thread. Spiced and dried hard beancurd. Soy protein-lipid film and its products. Sufu (Chinese cheese). Chou tofu [ch'ou toufu] (fetid tofu, fermented). Dehulled soybean powder (enzyme active, full fat; used to prepare soy milk or soy pudding in factories, schools, and homes).

Note: This is the earliest English-language document seen (Oct. 2011) that uses the term "fetid tofu" to refer to stinky tofu.

In 1982 Taiwan imported 1,150,433 tons of soybeans from the USA, and grew 11,942 tons of soybeans in Taiwan. 80% of the soybeans are crushed to make soybean oil and meal, and the remaining 20% are made into versatile soybean foods. In 1983 two new brands of instant soy milk powder appeared on the market in Taiwan. More than 1,400 small tofu plants are located throughout Taiwan. They make and sell their products on the same day. Only two large, modern plants produce packaged and refrigerated tofu. A continuous film-forming method for making yuba was developed by FIRDI in 1977. Address: Food Technologist, Food Industry

Research and Development Inst. (FIRDI), P.O. Box 246, Hsinchu, Taiwan 300.

4284. Epp, Peter H. 1984. The Ontario Soya-Bean Growers' Marketing Board's view of the next century. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 302-311.
• ***Summary:*** Discusses: Soybean pricing and the open tariff-free border with the USA. The Oleomargarine Act. Minimum Compensatory Rates (MCR's) and why they have put the Ontario soybean crushing industry in jeopardy (The program, established by the Canadian Transport Commission, originally encouraged the movement of raw rapeseed from Western to Eastern Canada. The government has poured $3 million annually into the program, which ends up subsidizing rapeseed oil in Ontario), the present status and potential of soybean crushing in Ontario (in 1982-83 three Ontario crushers crushed 1 million tonnes of soybeans). Market development.

Tables and graphs show the following, related to Canadian edible oil production, from 1973-1983: Margarine oil, shortening oil, cooking and salad oil, soymeal and rapemeal, soyoil and rapeoil. Note that for cooking and salad oil, rapeoil has always and increasingly exceeded soy oil production during this period. Total rapeoil production passed soyoil production in about 1975 and is now more than double that of soyoil. Soymeal production has always exceeded rapemeal production.

Note: This is the earliest English-language document seen (Oct. 2007) that contains the word "rapeoil." Address: Chairman, OSGMB, Leamington, ONT, Canada.

4285. Fieldman, Anita. 1984. Spotlight on Westbrae Natural Foods. *Whole Foods.* March. p. 22.
• ***Summary:*** The company was started in 1970 by Gordon Bennett, Kristin Brun, and a few friends making and distributing granola and fruit juice for San Francisco Bay Area stores. Today Westbrae is a $7 million corporation with a line of 150 products in a 50,000 square foot facility in Emeryville, California. Most of the Westbrae labels are designed by San Francisco artist David Gauger. The company deals with about 50 distributors and 1-2 brokers. They do not sell directly to retailers. A photo shows Gordon Bennett.

4286. Gustafson, Nancy J. 1984. What diet can do for diabetics. *Vegetarian Times.* March. p. 32-35, 60. [4 ref]
• ***Summary:*** "Diabetes affects over 10 million Americans, with another four million undiagnosed. It is the eighth most common cause of blindness. Its incidence increases at a rate of six percent yearly."

"Vegetarianism fits in beautifully with the new diet plans for diabetics. Not only is it safe for diabetics to eat vegetarian, but most diabetics are now encouraged to eat more plant foods and less fat, particularly animal fat."

"If you are a non-dairy vegetarian and do not drink at least two cups of fortified soymilk daily, you may need to supplement with 4 micrograms vitamin B-12." Each list contains choices "for both dairy and non-dairy vegetarians,..." (p. 34). A table at the bottom of page 34 titled "Putting yourself on a weight loss program" has this note at the bottom: "For non-dairy vegetarians who prefer not to use fortified soymilk, substitute one fruit and one protein food exchange for each milk exchange omitted." Address: MSc, RD.

4287. Howell, R.W. 1984. Contribution of soybeans to the agriculture of the USA. *Tropical Agriculture Research Series* No. 17. p. 127-32. March. International Symposium on Soybean in the Tropics and Subtropics.
• ***Summary:*** An excellent historical overview. "Perhaps the most important person in soybean history in the United States was William J. Morse, who was appointed in 1907 to be in charge of soybean research in the US Department of Agriculture." Morse "led the development of the cooperative research program of the USDA and the State Agricultural Experiment Stations until 1949. This cooperation, which Mr. Morse had encouraged for many years, was formalized by an agreement between USDA and several stations in 1936. The cooperative program continues in its essentials, but is vastly expanded at the present time. Mr. Morse died in 1959."

1920–Dr. Clyde Melvin Woodworth, a geneticist, joined the faculty of the University of Illinois at Urbana. He was the first breeder / geneticist with primary responsibility for soybeans at this university. He constructed the first chromosome map for soybeans [1933]. He developed the varieties Illini and Chief, and made the cross which led to the variety Lincoln. In 1943 Lincoln was released jointly by the University of Illinois, USDA, and several other universities. It "was the first variety to be developed from a purposeful hybridization and was the first to be cooperatively released under the agreement of 1936.

"A contemporary and colleague of Dr. Woodworth was Professor Jay Courtland Hackleman, a crops extension specialist at the University of Illinois. Professor Hackleman was an ardent promoter of soybeans. He and his extension colleagues in other states appreciated the potential of soybeans and strongly encouraged farmers to try them on their farms."

1921-1951–Professor William Leonidas Burlison was head of the department of Agronomy at the University of Illinois. Along with Woodworth and Hackleman, he was instrumental in the establishment of soybeans in Illinois agriculture.

"These people had counterparts in many states who were equally enthusiastic and effective in encouraging farmers to grow soybeans."

1928–J.L. Cartter, a graduate student at the University of Wisconsin, was hired by the USDA as a soybean agronomist. In 1936, when the US Regional Soybean Industrial Products Laboratory was established, Mr. Cartter moved to Urbana, Illinois, to lead the production research at the Laboratory. He continued at that position until his retirement in 1965.

"Plant breeders were employed by USDA and stationed at Iowa State and Purdue [West Lafayette, Indiana] Universities, at later at Stoneville, Mississippi, North Carolina State Univ., and the Universities of Florida, Missouri, and Minnesota, in addition to Illinois."

1949–After the retirement of W.J. Morse, Dr. Weiss took over his position as leader of Soybean Investigations at USDA; he served in that position from 1949 to 1953. "Under Weiss' leadership the soybean germplasm collection was formalized and facilities established at Urbana, Illinois, and Stoneville, Mississippi, for preservation and management of the collection." Weiss was followed by Herbert W. Johnson (1954-1964), who next to Morse probably had the greatest influence on the development of soybean research.

Before 1965, the only U.S. company "with a soybean development was the Coker's Pedigreed Seed Co. of South Carolina, where Henry Webb was the soybean breeder. In 1965 a group of midwestern seed companies joined to form the Soybean Research Foundation, Inc. (S.R.F.), and employed A.L. Matson of Missouri as a soybean breeder. During the 1970s many companies established soybean variety development groups following enactment by Congress of the Plant Variety Protection Act of 1970. Consequently the number of varieties available to farmers has increased manyfold. In 1983 it is estimated that at least 300 different varieties were offered for sale in Illinois alone."

Also discusses protecting soybeans from diseases, insects, nematodes and weeds, as well as plant physiologists who worked on soybeans (he pioneering work being done by Garner and Allard on photoperiodism). The Northern Regional Research Center at Peoria, Illinois; since 1942 soybean utilization research as been based here. International programs including INTSOY. Growing interest in food uses of soybeans (tofu, soymilk) including the Soycrafters Association. Rise of the soybean processing industry. The American Soybean Association. Address: Emeritus Prof., Former Head, Dep. of Agronomy, Univ. of Illinois, Urbana, IL.

4288. Kantha, S. Sri; Erdman, John W., Jr. 1984. The winged bean as an oil and protein source: A review. *J. of the American Oil Chemists' Society* 61(3):515-26. March. [160* ref]

• ***Summary:*** The past 10 years of published literature concerning nutritional studies on and uses of the winged bean are reviewed, including its origin and cultivation, its overall proximate composition, its nutritional value and antinutritional factors, the functional properties of its proteins, and its use in protein based foods (supplemented breads, weaning food products, fermented products, winged bean milk and tofu). Address: Dep. of Food Science, Univ. of Illinois, Urbana.

4289. Konno, S. 1984. Soybean production in Japan. *Tropical Agriculture Research Series* No. 17. p. 95-102. March. International Symposium on Soybean in the Tropics and Subtropics.

• ***Summary:*** Abstract. Trend in soybean production. Trends in supply and consumption of soybeans. Methods of cultivation currently applied in Japan. Soybean research and extension. Government participation in and support of soybean production. Future prospects of soybean production and main constraints. Discussion. Tables: (1) Production and trade of soybeans in Japan. (2) Soybean consumption in Japan. (3) Varieties registered during the last decade. Figures: (1) Soybean production by region in Japan (1983). (2) Planting and harvesting time of soybean in Japan. (3) Centers for breeding and research on soybean affiliated to the Ministry of Agriculture, Forestry and Fisheries in Japan. Address: Tropical Agriculture Research Center, Yatabe, Tsukuba, Ibaraki 305, Japan.

4290. Krieger, Verena. 1984. Die Tofu Kueche: Koestliches aus Soja [Tofu cookery: Delicacies from soya]. Tanner + Staehelin Verlag, Waserstrasse 16, CH-8029, Zurich, Switzerland. 171 p. Illust. No index. 18 cm. [Ger]

• ***Summary:*** Contents: Resume. Why tofu? List of 120 recipes. Explanation of recipe terms. Meeting with tofu. Into the tofu adventure. Tofu–a fresh product. Fresh plain tofu for experts and epicures. Scrambled & stir-fried tofu to add taste. Pressed tofu and tofu burgers. Fried tofu. Tofu in hot-pots and casseroles. Tofu in baked dishes. Frozen and dried-frozen tofu. Transforming tofu in a blender. Making tofu yourself and how to use the okara. The raw material–soybeans: From the Emperor's table into the feed trough, the treasure of East Asia's art of long-life is a hope for our time, soybean production in Europe, growing soybeans in your own garden. Tofu as the cornerstone of an environmentally sound and healthy diet. Natural ingredients from A to Z. Basic recipes for cooking with whole grains. Making soymilk from whole soybeans or soy flour. Tofu for special diets.

Many full-page black-and-white photos show tofu dishes. A small photo (p. 4) shows Verena Krieger. Note: Leviton (1983, p. 18) gives the publication date as Dec. 1983, but Krieger (7/90) says that is incorrect.

4291. Liu, Shengjie; Guo, Shiping; Chou, Chiyuan (Zhou, Qhi-yuan). 1984. [Studies on milk substitutes. X. The role of egg yolk powder on the growth promoting effect of soybean milk substitute 5410]. *Ying Yang Hsueh Pao* (*Acta Nutrimenta Sinica*) 6(1):13-20. March. [4 ref. Chi; eng]

Address: Inst. of Health, Chinese Academy of Medical Sciences, Beijing.

4292. Meals for Millions / Freedom from Hunger Foundation. 1984. Annual report 1983: Self-help for a hungry world. Davis, California: MFM / FFH Foundation. 16 p. 21.5 x 9.5 cm.
• ***Summary:*** Peter J. Davies is President. Philip E. Barton is chairperson, board of trustees. On the brownish-red, black and white cover is a photo of a mother smiling at her child. MFM's logo of a plant growing in an upturned bowl is on the front cover.

There is a 1-page message from Barton and a 2-page message from Davies. The latter notes: "In 1983 your foundation started two new Applied Nutrition Programs in Sierra Leone and Kenya."

"A milestone was achieved when our staff moved into our new International Center at Davis last March. And we were especially excited to receive a magnificent check for $225,000 from the Kresge Foundation in April; full payment of their challenge grant." Meals for Millions philosophy. MFM has "Applied Nutrition Programs" (ANPs) in Ecuador, Honduras, Sierra Leone, Kenya, Korea, Thailand, Antigua, U.S. Southwest, Papago Applied Nutrition Program (on the Papago Indian Reservation near Tucson, Arizona). Solutions through appropriate technology.

"Korea: At the end of 1983 MFM phased out its direct participation, turning over its programs to an independent local body;... MFM began to work in Korea just after the Korean War, helping a company to produce a high protein soy beverage for schoolchildren. In 1976 we began an Applied Nutrition Program in Wonseong County, which has grown tremendously."

Thailand: "Last July the men, women and children in 53 villages and 29 schools began planting the 753 kilograms of soybeans distributed by MFM. Villages which were previously quiet and listless, 'seem to have come alive.'"

Total income: $1.894 million. Address: P.O. Box 2000, Davis, California 95617. Phone: (916) 758-6200.

(5) Flow sheet of soy milk preparation. (6) Manufacture of vegetable protein products. Address: National Food Research Inst., Yatabe, Tsukuba, Ibaraki 305, Japan.

4294. *Soya Foods* (*ASA, Europe*). 1984. Soyfoods in Belgium: An interview with Pauline Six-Chan. No. 1. p. 8. March.
• ***Summary:*** "Pauline Six-Chan was born in Singapore. She is a graduate in food science from Michigan State University (U.S.). During her study she met her husband, who is Belgian. In 1978, after finishing her studies at Michigan State, she came with her fiancé to Belgium, and got married. Being a major in food science, Pauline started then looking for a job in the food area. It was very hard to find an appropriate job in a Belgian food company. So she decided to start her own business in 1980. An ethnic shop and production of soysprouts!

"Pauline, of Asian origin and brought up with soyproducts, is aware of the versatility and nutritional value of these products. She is very interested in soyproducts as they have a lot of potential–they are so easy to use. Soyproducts also have an economic advantage–they are less expensive than other food products with the same nutritional value.

Q: "What soyproducts are currently available to Belgian consumers? Pauline: Soydrink, soypudding, tofu, tempeh, bean-curd sheets, miso (bean paste), soy sauce, soysprouts, soyflour, soymilk, soy oil. Soydrink and soypudding you can get in reformhouses but tofu, tempeh, miso etc you can only buy in the ethnic stores.

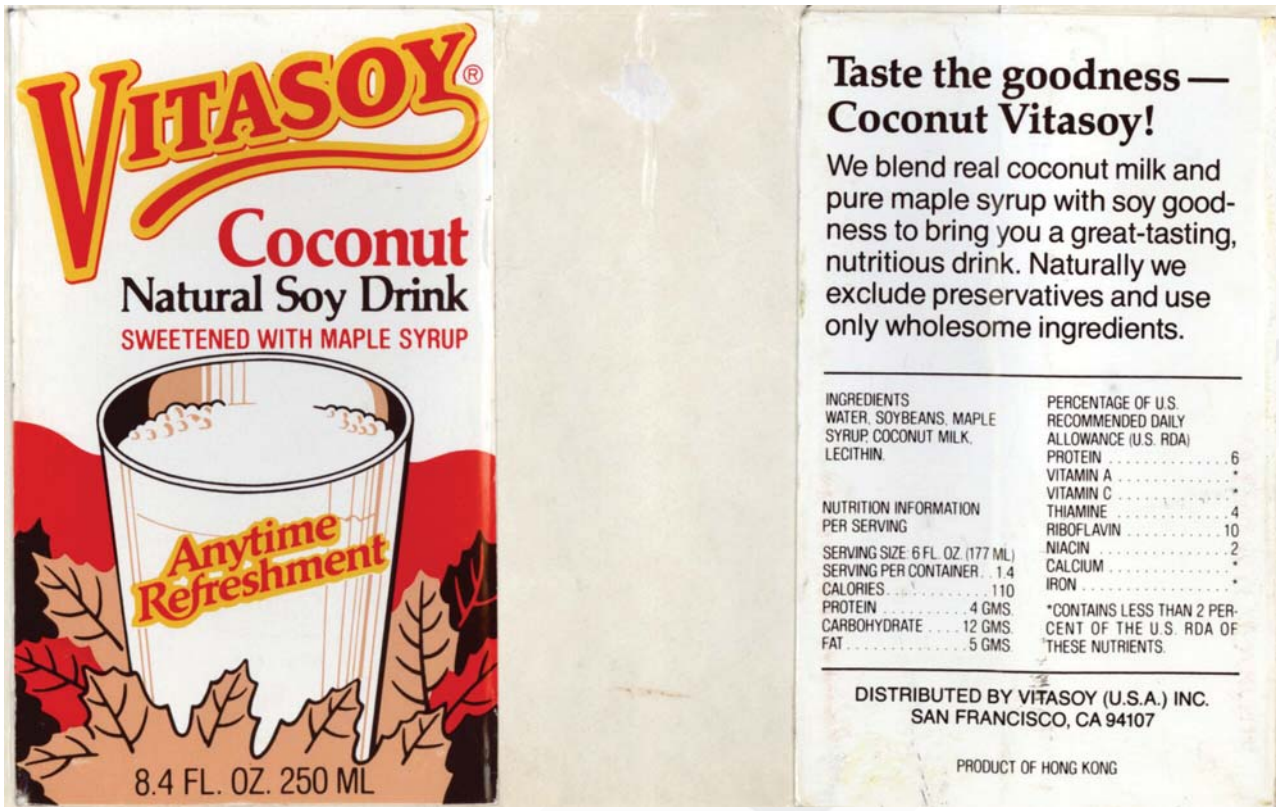
Q: "Who buys soyfoods? Pauline: There are people who want a more balanced diet, more vegetable protein and less cholesterol. In general, there is no specific age group or people with a certain lifestyle who buy soyfoods. I know a lot of older people in their 60s, who are conscious about a healthy diet and who do want to use more vegetable proteins. People knowing e.g. soy oil–a healthy natural product, cholesterol free–sometimes make the relationship to other soy products, and are very keen on using them.

"People who know the products will buy them–Asians as well as Belgians. Asians do buy more soyproducts because it is a part of their daily diet. Also, most of the vegetarians know these products and buy them. However, the general public has to be taught through cooking demonstrations and info leaflets.

Q: "What do Belgian consumers know about tofu?

"Pauline: Belgian consumers know very little about soyproducts because these products are originally not a part of their daily diet and they are not commonly available everywhere at the moment.

Q: "What are you doing to tell Belgian consumers about soyfoods?



"Pauline: My primary goal is to introduce soyproducts to Belgian consumers and to teach them how to use these healthy products in their daily diet.

"We demonstrate to Belgian consumers how to use the soyproducts and this through demos in various small supermarkets, institutions, hospitals, schools, housewife organizations, doctors,... I am also organizing demos in my own shop every first Saturday of the month. I distribute recipes–provide people with background information on where soyproducts come from, on the nutritional value of the products, on how easily soyproducts can be used in the daily diet, how soyproducts can be incorporated with the vegetables and meat that people eat normally every day." Address: Premier Foods, Diestsestr. 197, 3000 Leuven, Belgium.

4295. Suzuki, Steven. 1984. Pacific Rim potential for edible soybeans. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 224-41.

• ***Summary:*** Soybeans were first exported from Canada about 12 years ago when a Japanese house approached the Ontario Soybean Grower's Marketing Board for a trial shipment to Japan. The trial worked out very well and in a short time Ontario's soybean exports became a multi-million dollar business. Ontario soybeans are very clean, the quality is comparable to Japanese and Chinese soybeans, and the supply is consistent. However the price is high in relation to Chinese and U.S. soybeans. As a result, Ontario soybeans are sold in high-priced markets, as for making premium quality miso or soyamilk. The supply of Chinese soybeans is irregular. Address: Manager, Grain Trading Section, Okura & Co. America Ltd., New York, NY.

4296. **Product Name:** Vitasoy Natural Soy Drink [Coconut, Chocolate, or Original].
Manufacturer's Name: Vitasoy (USA) Inc. (Importer). Made in Hong Kong.
Manufacturer's Address: San Francisco, CA 94107.
Date of Introduction: 1984. March.
Ingredients: Natural: Water, soybeans, maple syrup, coconut milk, lecithin.
Wt/Vol., Packaging, Price: 8.4 fluid oz, 250 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 6 fl oz.: Coconut and Natural: Calories 110, protein 4 gm, carbohydrate 12 gm, fat 5 gm. Chocolate: Calories 120, protein 3 gm, carbohydrate 17 gm, fat 4 gm.
New Product–Documentation: Taste test of samples in Seattle. 1982. July 9. Ten Americans at the annual soyfoods conference did a blind taste test comparing 11 brands and flavors of soymilk. The highest scores were given to Mitsubishi orange (57), Mitsubishi coffee (57), Asahi dairylike (lion face; 54), Vitasoy T4 (47), and Midori (46).

Labels. 1984. 2.25 by 4.25 inches by 1.5 wide. Paper carton. Variations of red, yellow, dark brown and tan on white for different flavors. Illustration of a glass filled with soy drink. In large letters on the front of each carton is

written: "Natural Soy Drink." Above these letters on the coconut flavor is written "Coconut," but the word "Original" does not appear anywhere on the package of the "original" flavor. Thus, the flavor was described as "Original" in the company ads (*see Natural Foods Merchandiser,* Jan. 1984) and brochures, yet the word "Original" does not appear on the package.

Note: Vitasoy apparently coined the word "Original" to refer to slightly sweetened, dairylike soymilk. This is the earliest known commercial soymilk that uses the word "Original" to describe its flavor. Below "Natural Soy Drink," in smaller red letters is written: "Sweetened with maple syrup." On the glass is written "Anytime Refreshment," in red letters with a yellow border. Around the base of the glass are beige, brown, red, or yellow maple leaves–indicating that the product is sweetened with maple syrup.

Ad in Natural Foods Merchandiser. 1984. Jan. "Vitasoy invites you to taste the goodness." "To create Coconut Vitasoy we blend real coconut milk and pure maple syrup with soy goodness. Delicious and completely free of cholesterol. We sweeten Original Vitasoy with pure maple syrup–just enough to delight your palate. You'd never dream a drink this creamy could be so low in fat." Ad in *Soyfoods* magazine. Summer [Aug.]. p. 35 "Vitasoy. It's what your customers are asking for. Taste the goodness!" "Original Vitasoy. Coconut Vitasoy. And now rich, creamy Chocolate Vitasoy. Three delicious, healthful drinks–just what your customers are asking for."

Labels, Tetra Brik package, 2.5 by 4 inches, 250 ml. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. "Sweetened with maple syrup. Anytime refreshment."

Talk with Steve Snyder, Vitasoy USA's national sales manager. 1985. Oct. 9. They are not promoting Vitasoy at all now, though it is still sold at Safeway (Sacramento) and Raley's. They are developing new products. The size of the fresh soymilk market in the USA is only $5-6 million and sales seem to be leveling off.

Talk with Steve Snyder. 1986. May 8. The product died very fast. Its main liabilities were maple syrup sweetener (Mrs. Gooch wouldn't let it in her stores, and it raised the price; Vitasoy buys maple sugar, not syrup, from Shady Maple Farms), and poor flavor(s). Dancer Fitzgerald was the ad agency. The company is now reformulating and redesigning the package. Vitasoy in Hong Kong got new equipment and hired a new technologist, Trevor Collins, from Australia.

4297. Vitasoy (USA) Inc. 1984. Vitasoy (Portfolio). 435A Brannan St., San Francisco, CA 94107. One insert. March. 30 cm.

• ***Summary:*** The portfolio is pure white with the word "Vitasoy" printed in raised letters (embossed, with a registered trademark symbol) across the top of the front. The one insert is a 4-page color brochure. At the top of page 1, in white letters, is written "Taste the goodness..." Across the bottom: "Vitasoy." In the middle, a large color photo shows two cartons (8.4 fl. oz / 250 ml) of Vitasoy Natural Soy Drink (in red, yellow, and brown on white), on a wooden table. To their left is a glass of soymilk. Behind them is a jug of maple syrup and two coconuts–one opened to show the white coconut meat. And behind them is a dark green coconut leaf against a black background.

Page 2, titled "Introducing Vitasoy," describes these new products and notes that "We've been producing soy foods for over 40 years."

Page 3, titled "Vitasoy's healthful profile," lists the ingredients and nutritional information for: Original Vitasoy, Coconut Vitasoy, and Chocolate Vitasoy.

The past page gives pack/size, UPC code, case weight, and dimensions for each of the three products. Address: San Francisco, California. Phone: (415) 974-1118.

4298. Wang, Hwa L. 1984. Tofu and tempeh as potential protein sources in the Western diet. *J. of the American Oil Chemists' Society* 61(3):528-34. March. [22 ref]

• ***Summary:*** Contents: Abstract (uses the word "soybean foods" several times). Introduction. Traditional soybean foods. Trends in market growth for tofu and tempeh (based on statistics gathered by Shurtleff & Aoyagi of The Soyfoods Center in California, 1983). Tofu. Tempeh.

Traditional soybean foods can be classified as either nonfermented or fermented. Tables show: (1) Oriental nonfermented soybean foods (gives food name, local names, description, uses): Fresh green soybeans (local names: mao-tou, edamame). Soybean sprouts (huang-tou-ya, daizu no moyashi). Soybean milk (tou-chiang). Protein-lipid film (tou-fu-pi, yuba). Soybean curd (tofu, tou-fu, tubu, tahoo, touhu, tau-foo, dou-fu, dau-fu). Soybean flour (tou-fen, kinako) (Wang 1983).

(2) Oriental fermented soybean foods (gives food name, local names, microorganisms used, substrate, nature of product): Soy sauce (local names: chiang-yu, shoyu, toyo, kanjang, ketjap, see-iu). Miso (chiang, doenjang, soybean paste). Hamanatto [fermented black soybeans] (tou-shih, tao-si, tao-tjo [sic]). Sufu (fu-ru, fu-ju, tou-fu-ju, bean cake, Chinese cheese). Tempeh (tempe kedelee). Natto.

(3) Tofu industry in the United States (No. of manufacturers and annual production in 1975, 1979, 1981, 1982, and 1983).

(4) Soybean solids and proteins in soybean soak water as affected by soaking conditions (temperature vs. time; Lowry protein / Lowry's protein). (5) Ratio of protein to oil content of tofu and soy milk as affected by protein content of soybeans (for different soybean varieties; the highest ratios come from the varieties Wase-Kogane, Vinton, Toyosuzu, and Coles).

Figures: (1) Flow diagram for the preparation of tofu.

(2) Graph: In vitro digestibility of soybean milk as affected by the duration of boiling. Best digestibility is 12-14 minutes. (3) Four graphs: Relationship of concentration and type of coagulant to the yield of tofu. Coagulants are calcium sulfate, calcium chloride, magnesium sulfate, and magnesium chloride. The 4 graphs are: Gross weight of tofu. Moisture content. Total solids recovery. Nitrogen recovery. Calcium sulfate gives the highest values on all four graphs. (4) Four graphs: Relationship of concentration and type of coagulant to the texture characteristics of tofu. Same coagulants. The four graphs are: Hardness. Brittleness. Cohesiveness. Elasticity. (5) Flow diagram for tempeh fermentation. Address: NRRC, ARS, USDA, Peoria, Illinois 61604.

4299. Wernham, Les. 1984. Exports–Problems and opportunities [for Canadian soybeans]. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 246-53.
• ***Summary:*** Soybean exports from Ontario have expanded dramatically during the past 10 years; in 1982 they reached a high of 132,000 tonnes worth $44 million. The East Asian market including Japan, Korea, Hong Kong, and Malaysia accounted for 81% of Ontario's export soybean sales in 1983, with an additional 8% going to Europe. The main buyers in 1982 were: Japan 47,414 tonnes, Netherlands 19,545 tonnes, Singapore 18,039 tonnes, Indonesia 16,652 tonnes, Hong Kong 15,234 tonnes.

Most of these soybeans are sold for human consumption. "For example, one of Sweden's foremost pharmaceutical manufacturers has in the past years been that country's largest single importer of Canadian soybeans. Taking about 3,000 tons annually, this company produced a patented intravenous nourishment called Intralipid." Tiny soybeans (5 mm diameter or less) are used to make bean sprouts and natto. For soybean exports, freight constitutes an average 21% of the net delivered cost to the buyer in his country. They are shipped in bagged or bulk (20 or 40 foot) containers. The main focus of breeding should be to develop varieties that do not carry a common bitterness or beany flavor. Address: Grain Manager, King Grain, Chatham, ONT, Canada.

4300. Simpson, Rita J. 1984. Re: 1982 statistics on production of soybean-based products in Tetra Brik packages. Letter to William Shurtleff at Soyfoods Center, April 18. 1 p. Typed, with signature on letterhead.
• ***Summary:*** The products include plain and flavored soybean milk, plus tofu (million liters):

Japan 51.0
Hong Kong 15.0
Malaysia 11.5
Korea 7.0
Thailand 4.0
Singapore 2.5

"Our international office is aware of your need for the 1983 statistics and I will forward them when received." Address: Vice President, Information, Brik Pak Inc., P.O. Box 802605, Dallas, Texas 75380. Phone: 214 934-0338.

4301. Lo, K.S. 1984. History of Vitasoy (Interview). Conducted by William Shurtleff of Soyfoods Center, April 23. 1 p. transcript. In Lafayette, California.
• ***Summary:*** Discusses: UNICEF interest in Vitasoy (they saw the plant many times), package sizes, Greenspot, current negotiations with China, the dry process for making soymilk using a Wenger extruder (the company started using it right after the joint venture with Monsanto. It is easier to control, gives less off flavors, gives higher protein recovery without the use of enzymes, and is less expensive), early advertising campaign slogans, the trademark Vita (registered by a now defunct noodle company in Hong Kong). Address: 41, Heung Yip Rd., Aberdeen, Hong Kong. Phone: 5-528211.

4302. Rubenstein (Howard J.) Associates, Inc. 1984. David Mintz: The prince of tofu (News release). New York. 2 p. April 24.
• ***Summary:*** "In 1972, while searching for a milk substitute for desserts, pastries, pies and sauces, David Mintz 'discovered' the soy bean product [tofu]." In September 1981 Tofu Time Inc. was founded and on 8 December 1983 it went public. Apparently Tofu Time's first news release. Address: New York.

4303. Lewis, Joseph. 1984. Soymilk and soyfoods in Canada (Interview). *SoyaScan Notes*. April 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Use of the word "soymilk" has been legalized in Canada, but users are not allowed to state that it is free of cholesterol or lactose. Joe will send details in a letter.

The key to getting permission from the Canadian government was to show that the word "soymilk" existed before 1922. Joe will send soymilk patents issued before 1922.

Dr. John Demann is one of the world's foremost authorities on soyfoods. He works closely with Victory Foods and was the keynote speaker at a recent soy symposium in London, Ontario.

In March 1984 there was a super soybean symposium in Canada; Joe will photocopy and send the proceedings.

The single best source of historical material on soy in Canada is the National Archives in Ottawa. It is all on computer going back to the 1920s. He thinks one could find 50 pounds of historical material.

Tofu Products International in Markham, Canada, makes very dirty [unsanitary] tofu; many cakes are also underweight. Its a bad company, is ruining the tofu industry

in Canada, and seems to exist only for quick profits. Address: 102 Hymus Rd., Scarborough, Ontario, Canada M1L 2C9. Phone: 416-752-0161.

4304. Alfa-Laval. 1984. Food & Dairy Laboratory. Lund, Sweden. 6 p. April. 30 cm
• ***Summary:*** This laboratory "is located at Alfa-Laval Food & Dairy Engineering Laboratory in Lund, Sweden." Content of this color brochure with many photos: A complete laboratory for your food product development. Continuous is the key-word. Secrecy essential. Laboratory layout (includes both dairy and "soy bean processes" plus Analysis room, Contherm and Convap, Centritherm, Sterilab, Steritherm, Steritank, Aseptic packaging, and Personnel room). Aseptic processing. Evaporation. Thermal treatment. Multi-processing facilities. Packaging. Analyses. Experienced personnel. Food & Dairy Laboratory at your service. Address: Alfa-Laval, Lund, Sweden.

4305. **Product Name:** [Alpro Soya Drink {Soymilk} (Plain, or Chocolate)].
Foreign Name: Alpro Soya Drink (Plain, Choco).
Manufacturer's Name: Alpro.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1984. April.
Wt/Vol., Packaging, Price: 0.5 liter retails for BF 22.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Soya Foods (ASA, Belgium). 1984. July. p. 1. "Soya milk in Belgium. Alpro N.V., part of the Vandemoortele Group, has just launched Soya Drink in the Belgian supermarket chain Delhaize. Sold in half liter Tetrapacks [Tetra Pak cartons], Soya Drink is available in two flavors: natural and chocolate. Marketing Director Chris Daems says... so far things look good. Alpro's Soya Drink is produced from whole soybeans according to the traditional soymilk process, but with the latest equipment. Attractive point of sale leaflets in French and Dutch give detailed nutritional information."

Color photo on cover of Journal of the American Oil Chemists' Society. Dec. 1984, and on page 1785 of the same issue. On the front panel is an illustration (line drawing) of glass of soymilk in a silhouetted field of soybeans in front of an orange sun. A seal on the right side says, in Dutch, "Vegetal. 100% Plantaardig" (Non-dairy, 100% from plants). Soya Bluebook. 1986. p. 102.

Shurtleff & Aoyagi. 1985. Soymilk Industry and Market, Update. Launched in Belgium in about April 1984. Distributed in Italy by Lucas Meyer by mid-1985.

Leaflet (color, 2 panels each side, each panel 21 x 15 cm, in French). 1989. *Alpro: La force végétale du soja* (Alpro: The plant power of soya). The front panel has a color photo of 4 varieties of Alpro Soya Drinks (plain, enriched with calcium, without added sugar or salt, chocolate) and 2 Alpro Soya Desserts (vanilla and chocolate). The text reads: 100% natural. 100% from plants (végétal). No cholesterol. No lactose. Rich in vegetable protein. The back gives packaging and shipping information and a nutritional analysis of the 6 products. Sold in France by Distriborg, Division Alpro France, Chemin du Grand Revoyet, F-69230 Saint-Génis-Laval. Phone: 72.39.94.25.

Leaflet (color, 2 panels each side, each panel 21 x 15 cm, in French). 1989. *Alpro Soya Drink. Enrichi au calcium, ca vous fait un homme* (Alpro Soya Drink. Enriched with calcium, that makes you into a man). A color photo on the cover shows a boy, leaning back on his heels, as he pulls the reins on a rocking horse.

Form filled out by Alpro. 1990. May 30. Alpro began making this product (in plain and choco flavors) in March 1984 in 500 ml cartons. It is sold only in supermarkets (multiples).

4306. Bates, Cynthia. 1984. Re: History of The Farm's work with tempeh. Letter to William Shurtleff at Soyfoods Center, undated. 3 p. Typed, with signature on letterhead.
• ***Summary:*** Alexander [Lyon] and Dianne Darling began experimenting with tempeh in about 1972. Dr. Hesseltine had sent some literature and starter culture on the hunch we would be interested. I did not work at the [Soy] Dairy at this time, but I have been told about this time space by others who did work there then. Alexander was the Dairy straw boss and overview person; he set up the [soy] milk operation and ran it. Dianne mostly worked with the cultures and got into miso for the most part, I was told, but didn't get into tempeh so much because she thought large scale production was not practical. Occasionally she and Alexander would make a small batch of tempeh, enough for the people who worked there to get a taste. Deborah Flowers started working at the Dairy and liked tempeh, and wanted to turn the Farm onto it. She made a couple of large batches, incubated in the boiler room at the Canning and Freezing plant, that were served for breakfast two different times at our community kitchen; that was the first time I tasted it. Deborah was trying to figure out ways to produce enough spores, a limiting factor along with the lack of an incubator...

"In 1974 I was researching algae for alternative protein sources in human foods and wanted to start an algae farm. I joined the [Soy] Dairy because soy systems looked like a good intermediate step that would accomplish the same ends (i.e. feed more people with less waste). One day we (the Dairy [soy] milk crew, Mary Hubbard, Marsha Ellis, JoAnne Else, and I) made some soy pulp [okara] sausages. Soon after I adopted the project and built an incubator out of an old refrigerator. JoAnne showed me the way the Dairy was currently making spores–inoculating petri dishes of chopped sweet potatoes (sterilized) with cultures in test tubes. Alexander taught me basis lab procedure: transferring cultures with a needle, making agar slants, doing serial

dilutions.

"November 1974 is the first recorded batch of tempeh in the Tempeh Shop, but I was not keeping very good records at the time. I made 20-30 pound batches out of soy pulp [okara] for the rest of the year. Alexander [Lyon] scored us the Flour Mill's old bean dryer for an incubator which we used into 1975. At that time Alexander was still the overall manager of the [Soy] Dairy and, although he didn't actually work at the tempeh shop, he would come in and do a project sometimes, be encouraging, give advice. He was the Dairy expediter and teacher. Deborah Heavens and Valerie Epstein both worked at the Tempeh Shop at different times in its first year."

"So far I haven't been able to come up with a documented date on the first printed instructions [for making tempeh]. They were most likely written in 1975 after *The Farm Vegetarian Cookbook* came out, but they may have been published in late 1975 or early 1976."

For a history of The Farm's pioneering work with tempeh to about 1984 see: *History of Tempeh, a Fermented Soyfood from Indonesia,* by William Shurtleff and Akiko Aoyagi (1985). Available on Google Books in full view. Address: The Tempeh Lab., P.O. Box 208, Summertown, Tennessee 38483. Phone: 615/964-2286.

4307. Cusumano, Camille. 1984. Tofu, tempeh, & other soy delights: Enjoying traditional Oriental soyfoods in American-style cuisine. Emmaus, Pennsylvania: Rodale Press. x + 261 p. Illust. Index. April. 23 x 20 cm.

• ***Summary:*** Each chapter on a specific food describes (with illustrations and nutritional information) how to prepare that food at home, followed by many recipes. Contents: 1. The coming age of soyfoods cuisine. 2. Tofu 3. Tempeh. 4. Soymilk. 5. Japanese soyfoods. 6. Whole dry soybeans. 7. Fresh green soybeans. 8. Soy sprouts. 9. Soy flour and soy grits. 10. Soy sauces. 11. The soyfoods pantry.

Scattered throughout the books are 1-page descriptions of various American soyfoods companies, each accompanied by a black-and-white photo. Photos show: Greg Weaver and two other workers at The Lotus Cafe, Rochester, New York (p. 83). Sharon Rose of Brightsong Light Foods, Petaluma, California (p. 142). Steve and Sara Yurman of The Soy Shop, Atlanta, Georgia (p. 169). A craftsman cutting tofu at Tomsun Foods, Greenfield, Massachusetts (p. 195). Toby Alves of Blair Island Natural Foods Restaurant, Eugene, Oregon. A worker making brown rice and tofu sandwiches at Wildwood Natural Foods, Fairfax, California (p. 235). The company is owned by Bill Bramblett, Paul Orbuch, and Frank Rosenmayer.

Note: As of Sept. 1989 some 25,688 copies of this book had been sold by Rodale Press. It was sold out and will not be reprinted. Address: Rodale Press, Emmaus, Pennsylvania.

4308. Leviton, Richard. 1984. The organic Garden of Eden: A Michigan-based natural foods company [Eden Foods] stresses quality and fidelity. *East West Journal.* April. p. 18, 20-23.

• ***Summary:*** A good history of Eden Foods (although the early dates are incorrect), which has blossomed from a student-run co-op in Michigan in 1967, to a nationally recognized name in 1984. Based on an interview with Mike Potter, who had become interested in macrobiotics in 1967 when, sick with hepatitis in California, he met Herman and Cornellia Aihara and found that macrobiotics "all articulated my own intuition." Potter is now a seasoned businessman, with 13 trips to the People's Republic of China and 7 to Japan.

"Eden's beginnings are a little vague, Mike Potter explains... In July 1967 a group of students in Ann Arbor began distributing macrobiotic staples from Boston. This effort eventually led to a co-op called Eden Foods; in 1968 it became a full-fledged, though small, retail store. Around 1969 Potter visited Ann Arbor and the brand new Eden Foods. At the time, he was busy managing a natural foods store in nearby Birmingham [Michigan].

"In these days Judy and Bill Bolduc and Tim Redmond owned the 1,500 square foot Eden store. By 1971 the group was milling flour and baking granola and they asked Mike [Potter] to become a manager with an ownership position. In 1973 they moved the manufacturing end into a much larger building a half block away, and sales topped $175,000 a year. By late 1973 Eden was sharing a building with competitor Midwest Natural Foods and co-distributing products. They also relocated their retail store, adding on a natural foods restaurant and a whole grain bakery, and employed 25 people. By 1972 Potter and the Bolducs had begun to distribute their products using first a Dodge van, then a couple of refrigerated twenty-food trucks. But all this relocating and moving the retail store about, which had been underwriting the wholesale and manufacturing aspects, used up their cash flow. Financial troubles ensued. Mike bought out the Bolducs. 'I can make this thing work, he told them.

"Potter traveled to Japan and made important contacts with Muso, a leading macrobiotic supplier. Eden imported Erewhon-branded products directly from Japan. They started searching Michigan farms for organic crops... A cornerstone of Eden policy since 1973 is support of local Michigan farmers. Eden supports sixteen farms in Saginaw Bay which grow organic grains and beans (and three organic rice growers elsewhere) for a total of 6,000 acres [in 1984]–up from 1,000 in 1977... In 1977 Eden opened Turtle Island restaurant, which stayed open until the fire. In 1978 Eden started to advertise in magazines. But the company had grown wobbly, bureaucratized, and unwieldy."

"Late in the evening of November 26, 1979 the Eden warehouse was consumed and destroyed by flames... An estimated $800,000 in inventory, machinery, and supplies were lost, much of it irreplaceable, since the eventual insurance settlement covered barely one half the loss. Most

old-timers at Eden agree that the fire was ultimately highly beneficial... 'The fire was constructive,' says Ron Roller. 'The energy here was stagnated, with too many departments each claiming a turf. The management was in disarray; a change was needed...' The Eden of 1979–2,400 products, 100 employees, a natural foods restaurant, a whole grain bakery, a retail store in Ann Arbor, several tractor trailer trucks, a $50,000 computer with eight terminals, a 10,000 square foot building–burned to the ground. Eden, somehow, was out of operation for only two weeks after the fire. Immediately it began to function in an empty 5,000 square foot building next door (the truck garage). They got the cash flowing again on an inventory staggeringly depleted. The insurance company gave them a depressingly small advance against damages and refused to settle on the claim. Eden was advised to declare bankruptcy." About a year after the fire, construction on the new building was completed. By 1980 Eden had moved into this 20,000 square foot building at 701 Tecumseh Road in the tiny town of Clinton, Michigan, (population 2,000) about 60 miles southwest of Detroit. It was 27 months [2¼ years] before the final settlement.

In 1982 Eden imported 25 container loads (each weighing 35,000 lb) of Japanese natural foods, including natto miso and buckwheat miso. Ron Roller is now purchasing manager, Bena Burda is sales manager, Bill Swaney is production manager, and Kathy Nohr is office manager. Cliff Adler and Mike Gorman are also key co-workers. The company has nine shareholders, of whom seven are daily employees. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

4309. Shurtleff, William; Aoyagi, Akiko. 1984. Soyfoods industry and market: Directory and databook 1984. 4th ed. Lafayette, California: Soyfoods Center. 203 p. April. 28 cm. [325 ref]
• ***Summary:*** Traditional soyfoods, which include tofu, tempeh, soymilk. miso, soy sprouts, soynuts and soy sauce accounted for $465 million in annual domestic retail sales. High-tech, modern soy protein foods, which include soy flour and grits, soy protein isolates and concentrates, extrusion textured soy flour and meat analogs, totaled $501 million. When the two sectors are tallied together, Americans spent $966 million in 1984 for soyfoods... not including soy oil or exported products. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

4310. Soyplant (The). 1984. Pickup distributor price list effective April 16, 1984 and subject to change. Ann Arbor, Michigan. 1 p. 28 cm.
• ***Summary:*** This typewritten sheet lists products made by the Soyplant and their prices: Tofu tubs in milk crates. Tofu tubs in cardboard cases. Spiced tofu tubs. Tempetaco tubs. Temperoni tubs. Tofu bulk. Spiced tofu bulk. Soymilk (plain or flavored). Tempeh (8 oz or 8 lb sheet). Soysage (8 oz, 1 lb). Tempeh burgers (3 per package). Tempeh burgers (bulk, 50 singles). Address: 711 Airport Blvd., Suite #1, Ann Arbor, Michigan 48104. Phone: (313)-663-8638.

4311. Soyplant (The). 1984. Produce co-op price list–Delivered. Effective April 30, 1984 and subject to change. Ann Arbor, Michigan. 1 p. 28 cm.
• ***Summary:*** This typewritten sheet lists products made by the Soyplant and their prices: Tofu bulk. Spiced tofu bulk. Soymilk (plain or flavored). Dofu Gan savory baked [tofu]. Soysage (8 oz). Tempeh (8 oz). Tempeh burgers (3 per package). TempeTaco. Temperoni. Address: 711 Airport Blvd., Suite #1, Ann Arbor, Michigan 48104. Phone: (313)-663-8638.

4313. *Presse* (*La*) (*Montreal, QUE, Canada*). 1984. Le soya, la protéine de l'avenir pour les gens d'ici [The soybean, protein source of the future for people here?]. May 2. [Fre]
• ***Summary:*** Canada is now a major exporter of soybeans to East Asia. Some return in the form of soymilk and tofu.

4314. Pendleton, Jennifer. 1984. Vitasoy challenges soft drinks. *Advertising Age.* May 7.
• ***Summary:*** "Vitasoy (USA), San Francisco, the American arm of Hong Kong-based Hong Kong Soya Bean Products Co. Ltd., will introduce Vitasoy, an unusual high-protein drink, in northern California in June. The debut is the first step of an eventual national rollout. The company named Wilton, Coombs & Colnett, San Francisco, to handle the product's introduction. Print and radio ads for Vitasoy are expected to start in July."

"In Hong Kong,... Vitasoy has a 38% share of the soft-drink market there, compared with Coca-Cola's 42% share. While Vitasoy is new to the general U.S. market, the company has been selling it and a line of fruit juices for 3 years in Oriental food stores in the U.S."

"The company intends to promote Vitasoy as a healthy soft drink, but it's determined not to limit itself to the health market. Vitasoy will be positioned as an 'anytime refreshment.'"

4315. Tsuchiya, Kanji. 1984. Re: Soymilk in China, Hong Kong, and Japan. Letter to William Shurtleff at Soyfoods Center, May 12. 5 p. Handwritten. [Jap]
• ***Summary:*** Thanks for the complimentary copy of your book *Soymilk Industry and Market* (SIM). "The content is really outstanding. This is the world's most detailed and in-depth report on soymilk, and I doubt anything will surpass it in the future."

He recommended it at a special soymilk seminar. Ms. Kojima of ASA reviewed it in *Nittokyo News* (Japan Soymilk

Assoc. Newsletter). He'll try to get it reviewed in *Toyo Shimpo* and he'll recommend that Marusan buy a copy at future meetings.

His recent trip to China: In Hong Kong he found Kibun soymilk in department stores. He met with Vitasoy's asst. director. He found Vitasoy deodorizing technology far inferior to that of Japan. Vitasoy agrees and wants to improve it. The plant is old fashioned. He says they soak the soybeans, then grind. Really? Their milk is too sweet.

In Peking, they have decided to install a 350 liter/hr test plant he designed in the Central Government's Heikokyo division, food fermentation Industry Science Research Lab, which is 30 km northwest of Beijing. He went there to discuss installation and train the workers. The site is now under construction. For 2 days he met with technologists, who asked many good questions. It is a 3-stage plant, compact, all automatic and continuous, like a scaled-down Marusan plant that will fit in a space 5 x 10 meters. Improved design will give 10% higher yield than Marusan's plant. They are also planning to make tofu with it, leaving the okara in to give a higher tofu yield and firmer texture.

This equipment will be shipped from Tokyo at end of May and arrive in Peking in mid-June. No packaging equipment has yet been ordered. They plan for now to sell in bottles thru refrigerated outlets.

(p. 4). The same type of plant exactly will be installed in the Liaoning Food Industry Research Lab. in Shenyang city. He held a 3-day workshop there. The equipment will be shipped from Tokyo in mid-July. He will go back there in 3 months. Starting on June 18 somewhere in these northeast provinces there will be a 1-week soymilk expo and workshop. In June he'll go back to these two places to help with production runs. On SIM p. 93 the following is a more detailed explanation of what happened. At that time 20 engineers from the Peking Government were sent to visit the Marusan plant. They came in 5 or 6 groups at different times. Tsuchiya took them on tours of the plant. They said that in China there is a long history of making soymilk so they don't need to learn anything from Japan.

They felt the Japanese were too sensitive about beany flavor, so Japanese equipment was not suited to make soymilk for Chinese tastes, and moreover they didn't want to spend/waste all that much money. But they later realized, after researching the details of the processes and equipment used by Kibun, Alfa Laval, and DTD that Marusan had the equipment that they needed, so they decided to order it.

Page 5: Part of the equipment they ordered will be made by Seikensha, which made most of the equipment in each Marusan plant. If test results in China are good, they will install full-scale plants of 2,000 to 4,000 liter capacity in various places in China. They want to keep production decentralized and small enough so that the equipment does not stand idle.

China's knowledge of sanitation and complex technology is too rudimentary to allow aseptic packaging. He thinks they will either retort or perhaps for groups that use a lot at one time (communes, schools, factories) ship it fresh and chilled in bulk.

Other provinces that have asked Marusan for bids are Henan, Hebei, Fujian, and Canton (Guangzhou). So it looks like Tsuchiya will be busy for the next 2-3 years.

Best wishes. Address: Tokyo [Technical consultant, Okazaki Marusan, Japan].

4316. *Toyo Shinpo* (*Soyfoods News*). 1984. Tônyû men [Soymilk noodles are made by Ajia Protein, a soymilk maker]. May 21. [Jap]
• ***Summary:*** A soba maker is buying soymilk from Ajia Protein [Asia Protein] to put in his soba.

4317. *Toyo Shinpo* (*Soyfoods News*). 1984. Tônyû Fuea nado [Japan Soymilk Association will hold soymilk fairs on May 30 and June 27]. May 21. [Jap]

4318. Wilson, John C. 1984. New soymilk process developed by Alfa-Laval (Interview). *SoyaScan Notes.* May 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The description Alfa-Laval wrote of its soymilk process is now out of date. They now have a new brochure. They no longer steep the soybeans in water, since the deodorizer could not take out the flavor, which is not volatile. Thus the flavor problem was before the grind stage. The Illinois method reduces protein recovery.

Now Alfa-Laval does a hermetic grind, with no air present. They do not dehull, just clean the soybeans. The hulls only cause viscosity. They do a hermetic [air free] hot grind with hot dry beans and hot water. John will send copies of the new brochure. Address: Soya Process Product Manager, Alfa-Laval, Box 1008, S-221 03, Lund, Sweden.

4319. Singh, Minu. 1984. Kinema and other soyfoods in Nepal (Interview). Conducted by William Shurtleff of Soyfoods Center, May 25. 2 p. transcript.
• ***Summary:*** The name of this fermented soyfood is kinema or kinima (not kenima); it is usually pronounced kee-NAY-muh. The food is most widely consumed in Darjeeling which is now in West Bengal, India (but was formerly part of Nepal) and in southern Nepal. Typical Nepalis who speak Hindi do not know this food, nor is it known in Kathmandu. It is used mostly by non-Brahmins and it has a very strong flavor and smell; she did not like it. She knows how to make kinema because a friend used to make it at her home. Boil soybeans for about 2 hours (in Nepal mostly black soybeans, and in Darjeeling some yellow soybeans are used). Pour the cooked soybeans into banana leaves, cover very tightly, put into a paper bag, then put in a warm place for 5 days. No inoculant was used and at the end of the 5 days she recalls that it "smelled terrible." Wash the kinema then cook it with

tomatoes, ginger and garlic. After cooking it did not smell so bad.

Note: This is the earliest document seen (Oct. 2010) that uses the word "kinima" to refer to kinema, a fermented soyfood from Nepal and a close relative of Nepalese kinema and Japanese natto.

In Nepal, green vegetable soybeans are called *hariyo bhatmas* (*hariyo* means "green" and *bhatmas* is the Nepali word for soybean). They are consumed all over Nepal, boiled in the pods, then the green beans are removed and eaten as is with a little salt as a snack; sometimes they are seasoned with black pepper or hot chili, and sometimes they are used in a curry with potatoes. Whole dry soybeans are soaked overnight then cooked with potatoes.

She worked with the Peace Corps for 9 years as a language coordinator. In about 1980 she worked on a project with the Peace Corps making roasted soy flour at a Nepal maternity home. They called it Poshilo Bito ("Nutrition Flour"). They would mix dry soybeans with some corn, barley and wheat. Roast the mixture, grind it, put it in packets, and distribute it free of charge to the poor and to hospitals. She also taught these people how to make it. To prepare: Mix the flour with boiling milk or water. Address: 2708 Virginia St., Berkeley, California 94709. Phone: 415-848-1481.

4320. Lewis, Joseph. 1984. Re: The word "soymilk" has just been legalized in Canada after a long process. Letter to William Shurtleff at Soyfoods Center, May 27. 2 p. [1 ref]
• ***Summary:*** Victor Foods has finally received written permission to use the word "soymilk" from Consumer & Corporate Affairs, Canada, the body that reviews all labels submitted to them for correctness and makes most of Canada's policies regarding labeling.

"It was a long fight and we received no support from any of the other soyfoods processors here in Canada. This seems to be the rule... let Victor do it at his expense and we will be able to use the new regulations at no expense to us.

"We are most interested in the new [soyfoods] association that is being presently formed [by Frances Boyte] and would like very much to be a part of it. How do we go about this?"

Note: This is the earliest document seen (Jan. 2010) that mentions a soyfoods association in Canada–although it was not established until 1985. Address: 102 Hymus Rd., Scarborough, Ontario, Canada M1L 2C9. Phone: 416-752-0161.

4321. **Product Name:** [Soymilk Noodles].
Foreign Name: Tônyû Men.
Manufacturer's Name: Ajia Protein.
Manufacturer's Address: Japan.
Date of Introduction: 1984. May.
New Product–Documentation: Toyo Shinpo. 1984. May 21.

4322. **Product Name:** Soy Drink (Soymilk), and Soysage (Meatless Sausage).
Manufacturer's Name: Green World, Inc.
Manufacturer's Address: Mayfield Stage, Boise, ID 83706.
Date of Introduction: 1984. May.
New Product–Documentation: Interview with James Herrington. 1987. Dec. 30.

4323. **Product Name:** Soymilk.
Manufacturer's Name: Maritime Foods.
Manufacturer's Address: Portland, Maine.
Date of Introduction: 1984. May.
How Stored: Refrigerated.
New Product–Documentation: Barbara and Leonard Jacobs. 1987. *Cooking with Seitan: Delicious Natural Foods from Whole Grains.* Current U.S. seitan manufacturers include Maritime Foods in Portland, Maine. Rosemary Whittaker is currently producing 50 pounds of seitan each week. She also makes fresh soymilk.

Talk with Rosemary Whittaker (Phone: 207-767-5968). 1991. Nov. 17. She and her husband Dwight started Maritime Foods in about the spring of 1984. Their daughter, Emily, was born on November 18 of that year. Their first and only product was fresh soymilk, flavored with barley malt and kombu. They discontinued the business in about 1987, because they could not find a refrigerated distributor for their soymilk, because Dwight (a food scientist) had a stroke and she had 2 babies.

4324. Soyfoods Center. 1984. Tempeh (color slide show). P.O. Box 234, Lafayette, CA 94549. 75 slides. Narration with each set.
• ***Summary:*** Slide show (#4). 1. The Soyfoods Center Presents... 2. Tempeh is a delicious high-protein fermented or cultured soyfood. Sold in 3/4-inch thick cakes and usually deep or shallow-fried until crisp and golden brown, tempeh has a flavor and texture resembling those of southern-fried chicken or fish sticks. For centuries a backbone of the Indonesian diet, tempeh is prepared fresh each morning at some 41,000 shops on Java alone. 3. Tempeh is increasingly available at reasonable prices throughout the United States, especially at natural or health food stores, or at Indonesian specialty shops. Tempeh is an excellent source of nutrients, containing 50 percent more protein than hamburger and completely free of cholesterol; it is also the world's richest known source of vegetarian vitamin B-12. Like all soyfoods, tempeh is rich in lysine, the essential amino acid in shortest supply in most cereal grains. Serving tempeh and grain at the same meal boosts the amount of usable protein by up to 40 percent. 4. Tempeh has many virtues. 5. It promises to be an important part of meatless diets and of the new emerging

American cuisine.

6. A typical package of tempeh. 7. There are various types of tempeh. 8. Here is a kit for making tempeh at home; it contains everything you will need. 9. Tempeh at a market in Bali, Indonesia. 10. Different sized packages of tempeh in Indonesia; made and sold wrapped in banana leaves.

11. Tempeh sold in a market place in Java. On the left is tofu simmered in turmeric, a natural preservative. 12. Now let's learn how to make tempeh at home. The soybeans can be dehulled either wet or dry. We prefer wet dehulling. But this is how it is done dry. For best results with dry dehulling, preheat the soybeans at 250ºF in an oven for 10 minutes, or just until the hulls split. 13. Tempeh is easily made at home. Begin by combining 2½ cups soybeans with 7½ cups water in a large pot. 14. Bring just to a boil. 15. Then remove from heat, cover, and allow to stand for 8 to 16 hours.

16. Carefully pour off water from pot then vigorously rub beans between the palms of both hands for 3 to 4 minutes to remove hulls. 17. Then pour off hulls into a strainer. Repeat this process several times until all the beans are dehulled. 18. To the drained beans in the pot add 10 cups (hot) water and 1½ tablespoons vinegar. 19. Bring to a boil and cook, uncovered, for 45 minutes, then pour contents of pot into a large colander and allow beans to drain well. 20. Then allow beans to dry for 20 to 30 minutes on a double layer of absorbent toweling.

21. To make the container for incubation you can use Ziploc bags, baking pans, pie tins, etc. We prefer Ziploc bags. Take two 7-by-8-inch polyethylene bags and, using an ice pick, make holes in a grid pattern every ½ inch. 22. When the soybeans have cooled to body temperature and are well dried, transfer them to a separate clean tray for inoculation. 23. Now we are ready to inoculate them. The inoculum, tempeh starter, is available from The Farm in Tennessee or from Organic Gardening magazine. Once you buy one small packet you can make more of your own, using illustrated instructions in our book of tempeh. To inoculate, simply take 1 teaspoon of starter, sprinkle it over the beans... 24. And mix well. 25. Then spoon half of the inoculated beans into each of the two perforated bags.

26. Flatten each bag to a thickness of ½ to 3/4 inch. 27. Then place bags in an incubator. This incubator is made from a Styrofoam cooler or picnic basket heated by a 20-watt electric bulb regulated by an aquarium or chick brooder thermostat. A water heater room or any other place as warm as 86ºF (30ºC) can serve as an incubator. 28. Incubate the tempeh at 86 to 88ºF for 22 to 26 hours. When done, the beans should be bound together firmly into fragrant white cakes. 29. A large cake of finished tempeh and tempeh in burger rounds made in yogurt containers. 30. Here is an incubator made from two cardboard boxes, the space between the larger and the smaller being filled with batting for insulation. Note the perforated rack on which the tempeh is placed.

31. Good tempeh looks like this when sliced. 32. Tempeh is as versatile and delicious as it is nutritious and inexpensive. Most of the tempeh in Indonesia is served deep-fried or shallow-fried to give it a crisp texture and savory flavor. Here tempeh is being shallow fried to make crisp tempeh chips. 33. Crisp tempeh chips with creamy tofu dip. 34. Tofu burger. 35. Tofu burgers (open faced) made with round tempeh patties.

36. Some people like to grill their burgers first with a miso sauce. 37. Label of tempeh patties. 38. TLT; Tempeh, Lettuce & Tomato Sandwich. 39. Tempeh Sloppy Joe. 40. Canning Tempeh Sloppy Joe.

41. Tempeh burritos or tacos. 42. Tempeh in pita bread. 43. Tempeh Guacamole and Crisp Tempeh Bits on tortillas. 44. Breaded Tempeh Cutlets or Croquettes. 45. Tempeh Lumpia, a Filipino dish.

46. Tempeh Gyoza or Egg Rolls. 47. Tempeh Felafels; Temptations. 48. Tempeh is delicious simmered in coconut milk with herbs and spices. The milk is easily made at home in a blender as described in *The Book of Tempeh.* 49. Simply pour the mixture of coconut pulverized with hot water into a strainer and press out the coconut milk with your fingertips. 50. Tempeh starter can also be made at home. Here is a method for growing it on soybeans and sifting off the spores. 50A. It can also be grown on pressure cooked white rice, cooked in a Mason jar.

51. Now to Indonesia. A sketch of a large Indonesian tempeh shop. 52. In a few areas, tempeh is incubated packed in bamboo halves. 53. Close-up. 54. Carrying the tempeh to market. 55. Indonesian tempeh wrapped in banana leaves and polyethylene bags.

56. Tempeh in small packets wrapped with banana leaves in the Yogyakarta market, May 1977. 57. Close-up. 58. Here is a wife cooking tempeh in a typical village kitchen. 59. Thin tempeh slices at the marketplace are dipped in a batter of spiced coconut milk and rice flour, then deep-fried to make tempeh chips. 60. Here are tempeh cutlets, seasonings, and chips.

61. Other ready-to-eat tempeh items in a West Javanese market. 62. Tempeh chips in a marketplace in Yogyakarta, Java. 63. Making grilled tempeh on skewers like shish kebab over a home barbecue. 64. Making Sate, a similar skewered delicacy with a wonderful dipping sauce, sold here by a street vendor. 65. Javanese markets are a festival of colors. Most tempeh cuisine includes a load of blazing hot chilies...

66... which are ground by hand in stone mortars for use in sauces. 67. Like most traditional societies, Indonesia has a grain-centered diet. The colors of natural grains and beans in the markets are a feast for the eyes. 68. In Indonesia the remarkable winged bean is also made into tempeh; or it can be made into tofu or deep-fried tofu. 69. A close relative of tempeh is onchom, which is usually made from peanut presscake or okara with a Neurospora mold. It is sold in cakes in the markets of West Java. 70... and may have a

distinctive orange color from the mycelium.

71. To make onchom, steamed peanut presscake is packed into molds, 72. Inoculated with onchom from a previous fermentation, 73. Placed in an incubator where it generates its own heat from fermentation, 74. And looks like this when it is finished. Address: Lafayette, California.

4325. Wolf, W.J. 1984. Food uses of edible soybean protein products in the United States. In: S. Wong, et al., eds. 1984. Proceedings of the Second U.S.-China Soybean Symposium. Washington, DC: USDA OICD. xix + 464 p. See p. 442-43. [3 ref]

• ***Summary:*** Discusses defatted soy flours, soy protein concentrates, soy protein isolates, and textured soy protein isolates. Both isolates and concentrates are widely used in processed meats. Other applications for isolates are in whole and nonfat dry milk replacers, coffee whiteners (coffee cream analogs), cake mixes, beverage products, confections, and infant formulas–which are widely fed to infants who are allergic to cow's milk. Therefore soy may be the only source of dietary protein during the first few months of life. In the USA, the levels of nutrients required in infant formulas are specified by the Infant Formula Act of 1980, based largely on recommendations of the Committee on Nutrition of the American Academy of Pediatrics. For example, the minimum protein requirement is 1.8 gm/100kcal and the quality of the protein source must be at least nutritionally equivalent to casein. Address: ARS/USDA.

4326. Speck, Peter. 1984. Making soymilk dietetic and pharmaceutical products in Switzerland (Interview). Conducted by William Shurtleff of Soyfoods Center in Lafayette, June 2. 1 p. transcript. [Eng]

• ***Summary:*** They have a soymilk plant with 1,000 liters/hour capacity. It is located near Sursee but will soon be moved. They make about 40,000 liters a week of soymilk from whole soybeans. They [Naga Olten] started making only dry product 11-12 years ago, but 2-3 years ago began liquid Tetra Brik. This plant does not run full time. They are now getting a new plant of the same capacity from Alfa-Laval.

Ensure makes a product similar to theirs in the USA, but it may not contain any soy.

They find that using sodium bicarbonate gives their soymilk a more neutral and much more acceptable flavor. Does anyone in Japan do this? How does Galactina use it. Preblanch?

Alfa-Laval now uses direct steam (only?) for cooking their soymilk.

PHAG is a big Swiss distributor to the Reformhauser.

Alpro sells various brands of soymilk in Europe. Alpro is the only big soymilk maker, but their quality is poor. Their carob and plain are not good at all. Alpro is not growing well. It's too hard to compete with milk in Europe.

Nago Olten started their soy business making soy for tube feeding in 1969. Lindt and Sprungli bought Nago Olten in the 1970s, then Galactina bought the company from them in 1979. Initially they sold a dry product. In 1981 they introduced entero feeding in liquid Tetra Brik. In 1983 they introduced three flavors of Vita Drink with 20% solids in 250 ml liquid Tetra Pak: vanilla, cocoa, and strawberry (*erdbeeren*) sold to clinics and hospitals. They export this to France as Bio-Delis. Major features of this product are free of lactose (very important, especially after surgery, when people temporarily lose their lactose tolerance) and free of cholesterol. What is Bebe Nago? When introduced? Address: Galactina, Switzerland.

4327. Wilson, Geoff. 1984. Soymilk "bomb" primed to scatter dairy hopes. *National Farmer* (*Australia*) No. 11. June 14-27. p. 24-26. New Series.

• ***Summary:*** "The development of a soybean milk indistinguishable from cow's milk poses the most serious threat to dairying in nearly 20 years–its like a time bomb on a fast clock... The impact of soymilk on this country's dairy industries is likely to make the margarine wars of the late 1960s look like a kindergarten spat... And even now one of Australia's biggest dairy co-operatives is planning to be ready to swing into soymilk production next year... Soymilk made for about 13 cents a litre puts it at about half what most Australian dairymen now receive for market milk..." Address: P.O. Box 283, Caulfield South, 3162 Victoria, Australia.

4328. Wilson, Geoff. 1984. Expatriate Australians boosting soy. *National Farmer* (*Australia*) No. 11. June 14-27. p. 25. New Series.

• ***Summary:*** John Wilson, who developed the Alfa-Laval soymilk system, is now based in Lund, Sweden. Owen Price is managing director of the Dairy Farm group of companies in Hong Kong. He is guiding his company toward soy products. "The first formulation he admits to is a soy ice-cream well suited to the expanding Hong Kong market. Others can be expected. However Price may well become a force in the supermarket selling of soymilk foods in Australia, as part of his company controls 106 supermarkets in Australia (as well as 140 supermarkets in Asia)–through Franklins in Australia, noted for its cut-price retailing, and its rapid expansion into Queensland and Victoria." Address: P.O. Box 283, Caulfield South, 3162 Victoria, Australia.

4329. Alfa-Laval. 1984. Soymilk: Product and process. Lund, Sweden. 12 p. June.

• ***Summary:*** A color brochure containing many photos and diagrams: Contents: Foreword. Soybeans–background. Nutrition. Soy milk–the product. Cultivation and yield. Processing. Salient features of the Alfa-Laval soy milk process lines. Packaging. Economy.

"After centrifugal separation of the slurry to remove fibre residue (commonly known as 'okara'), the clarified soya base that has been extracted goes on to deactivation of residual enzymes and trypsin inhibitor, and from there to deodorization."

Note: This is the earliest English-language document seen (Aug. 2013) that uses the term "clarified soya base" to refer to soy base (with the okara removed). Address: Alfa-Laval, Lund, Sweden.

4330. Appropriate Foods, Inc. 1984. Eat Appropriately! Summer catalog '84. 137 New Hyde Park Rd, Franklin, NY 11010.
• ***Summary:*** The following lines are carried and distributed: Appropriate Foods (tempeh, soymilk), New York Soy Deli, Grainaissance (amazake and mochi), Garden of Eatin', McZand Products, N.Y. Miso, Nasoya, Nutri-Gest, The Soy Source, Sister Shorter, Swan Gardens, Sprout Delights, Willow Run Margarine, Great Eastern Sun (all of their products). Address: Franklin Park, New York.

4331. Chandrasiri, Vasina. 1984. Assessment of protein quality in soybean processed foods: Available lysine contents. *J. of the National Research Council of Thailand* 16(1):35-50. Jan/June. [18 ref. Eng; tha]
• ***Summary:*** Available lysine contents of soybeans and 10 soyfoods was determined as follows: raw soybeans 6.62 g/16 g nitrogen, cooked soybeans 6.12, white tofu 5.64, yellow tofu 6.24, soft curd tofu 5.63, tube tofu 6.17, yuba 8.13, soymilk 4.43, soy sprouts 3.79 (each g/16g N).

Values for fermented soyfoods were as follows: white soybean paste [miso] 4.72, black soybean paste 3.72, fermented curdcake (okara) 5.35. 30 minutes of boiling did not reduce the available lysine significantly. The study concluded that there was no reduction in available lysine content of soybeans before they were made into fermented or non-fermented soyfoods. There was no change in the amount of available lysine in the non-fermented soyfoods, but there was a small, statistically significant reduction in fermented soyfoods. Address: School of Home Economics, Sukothaithammatirat Univ., Thailand.

4332. Eden Foods, Inc. 1984. From the bounty of Eden (Ad for Edensoy soymilk). *Vegetarian Times.* June. p. 21.
• ***Summary:*** Full page, color (see next page). The top half of the ad shows an illustration of a modern Garden of Eden. A family is enjoying a picnic in idyllic surroundings, with a border of flowers, fruits, nuts, butterflies, etc. The bottom half shows a mother with her 5-year-old daughter, who is drinking Edensoy from a glass. Across the bottom is Eden's colorful symbol of a crane with a banner in its bill bearing the word "Muso" in red.

This ad also appeared in East West Journal. 1984. June. Rear cover. Aug. Inside front cover. And in *Natural Foods Merchandiser.* 1987. July, p. 67.

Note: This is the 2nd earliest ad seen for Edensoy. Address: Clinton, Michigan 49236. Phone: 800-248-0301.

4333. Huff, Murray W.; Giovannetti, P.M.; Wolfe, B.M. 1984. Turnover of very low-density lipoprotein-apoprotein B is increased by substitution of soybean protein for meat and dairy in the diets of hypercholesterolemic men. *American J. of Clinical Nutrition* 39(6):888-97. June. [45 ref]
Address: Senior Research Fellow of The Ontario Heart Foundation, Dep. of Medicine, Univ. Hospital, 339 Windermere Road, London, Ontario, Canada N6A 5A5.

4334. Leneman, Leah. 1984. The foods that are soya good. *Vegetarian* (*The*). May/June. p. 12.
• ***Summary:*** "Soya foods are playing an increasingly important role in the American health food movement, a positive trend which hopefully will be echoed in the U.K. By soya foods I do not mean TVP (which has never really caught on in a big way in the States), but tofu (soya bean curd) and tempeh. These are low-cost, low-technology products simple enough to make in your kitchen." In America the movement away from dairy products is for reasons of health rather than ethics. In Britain, ethics come first. Cholesterol is the real bugbear to Americans. In New York the author tasted a soft-serve tofu ice cream with a "creamy texture I would not have believed possible in a dairyless product."

4335. Sotelo, Angela; Hernandez, M.; Frenk, S. 1984. Evaluacion biologica, en ratas y en humanos, de un producto lacteo sin lactosa, y una formula proteinica de soya para uso en la desnutricion proteinico-energetica [Biological evaluation, in rats and humans, of a milk product without lactose, and of a soy protein isolate for use in treating protein-energy malnutrition]. *Archivos Latinoamericanos de Nutricion* 34(2):333-42. June. [24 ref. Spa; eng]
• ***Summary:*** Tests on 16 infants with protein-energy malnutrition and lactose intolerance showed that formulas made with either lactose-free milk (LFM) or soy protein isolate (SPI) are good alternatives to dairy-based formulas. The PER for each protein source was as follows: Casein 2.71, LFM 2.28, and SPI 1.19. Nitrogen absorption of both LFM and SPI was 80%. Address: Instituto Mexicano del Suguro Social (IMSS), Mexico, D.F., Mexico.

4336. Watanabe, Tokuji; Kishi, Asako. 1984. The book of soybeans: Nature's miracle protein. New York, NY: Japan Publications. 191 p. June. Illust. General index. Recipe index. 26 cm. [21 ref]
• ***Summary:*** Contents: Introduction. Part 1. General information: 1. Characteristic traits: Agronomic and other biological characteristics, physical properties, chemical properties, soybean protein, properties of soybeans as

food material. 2. Current ways of using and processing soybeans: Throughout the world, traditional ways of using and processing, new soybean food products. 3. Tofu and other nonfermented soybean food products: Tofu (Cotton or regular tofu, silken tofu {*kinugoshi*} and soft tofu, packaged tofu, new equipment), deep-fried tofu, dried-frozen tofu (*Kôri-dôfu*), soy milk, yuba, roasted soy flour (*kinako*), soybean sprouts.

Note 1. This is the earliest English-language document seen (April 2013) that uses the term *Kôri-dôfu* to refer to dried-frozen tofu.

4. Miso and other fermented soybean products: Miso, natto, Hama-natto (tera-nattô), soy sauce, sufu, tempeh. 5. Other ways of eating soybeans–Simple traditional Japanese foods: Parched soybeans, boiled soybeans (*budo-mame; hitasahi mame*), beaten and mashed [or ground] soybeans (*go*, or (from edamamé) *zunda or jinda*), molded soybean mash (*jinta-dôfu*), molded mashed soybeans and rice flour (*shitogi*), soybean soybean-mash paste. 6. New soybean protein products.

Note 2. This is the earliest document seen (Nov. 2008) that mentions *zunda.* The text (p. 84) reads: "When fresh green soybeans (edamame) are used in cooking, they are boiled for from ten to twenty minutes; ground; and flavored with salt, sugar, and soy sauce. The resulting dish is called *zunda* or *jinda."*

Note 3. Zunda is a healthy and tasty snack or treat made from mashed edamamé. It is sweet, rich in protein, high in fiber and emerald green. It is said to have originated hundreds of years ago in Japan in Miyagi prefecture. In and around Sendai (capital of Miyagi prefecture) one can find many shops and booths that sell zunda cakes, zunda mochi treats, and zunda shakes, all made from edamamé (green vegetable soybeans). One well-known company in Japan that markets delicious zunda products is Zunda Saryo.

Part 2. Cooking with soybean food products: Tofu, yaki-dôfu (toasted tofu), kôri-dôfu (dried-frozen tofu), nama-agè, abura-agè, gammodoki, yuba (soy-milk film), nattô, miso, soy milk, soybeans, bean sprouts. Afterword. Bibliography.

In the chapter on tofu, pages 43-44 discuss okara or *unohana* (the residue remaining after soy milk production); a photo shows it in a glass bowl. "Though it formerly appeared on many Japanese tables seasoned and cooked with vegetables, today it is most often fed to animals. As the number of animals raised in urban and suburban areas decreases, however, tofu manufacturers are finding it harder to dispose of residue."

Page 99 notes of tofu: "At a certain temple in Kyoto is a plaque bearing the following inscription, which, while comparing this food to religious faith, clearly shows the esteem in which the Japanese people hold tofu. 'Religious faith should be like tofu: it is good under any circumstances. It is good boiled, grilled, or fried. Raw, chilled, served with soy sauce and other seasonings, it is good with steamed rice. Simmered in hot water and flavored, it is good with sake. Because it is soft, old people and sick people welcome it, but children and young people like it too. Men like it, women like it; poor and rich both like it. Though common, it has elegance enough to find a place in the upper class.

"'It cuts clean and well for use in clear broths. It is good in the meatless diets of religious training. It can be crushed for use in miso soup. It is used all the time and in all seasons. It is inexpensive yet numbered among the delicious treats. It is welcomed everywhere, in mountains as well as in big cities. It is well received at dinners for dignitaries and guests yet is convenient enough for college students who do their own cooking. Women especially should be like tofu. The mature and cultivated person should be tender, yet firm, like tofu. Though apparently tasteless, it is delicious. Though apparently ordinary, it is extraordinary.'"

Other ways of eating soybeans (p. 83-84): (1) Parched–"Parched gently in unglazed ceramic dishes made for the purpose," then tossed by people at Setsubun in February around their houses as they chant "'Demon out! Good luck in!' Then they pick up the beans and eat them. Parched soybeans are included in some varieties of *mochi* (glutinous rice cake) and in *okoshi* a confection made of puffed rice bound together with sugar syrup. In the past they were eaten with salt, miso, or soy sauce."

Note 4. In the USA, parched soybeans are called "dry roasted soynuts."

Tables show: (1) World production of soybeans (1977-1982). (2) Price trends in dollars per ton for wheat, soybeans, and corn (1970-1981). (3) Soybean yields in the USA and Japan (1974-1981). (4) Chemical composition of soyfoods: Tofu, abura-agè, kôri-dôfu, yuba, kinako, soybean sprouts, nattô, miso (dark yellow), soy sauce (common), soybean (Japanese). (5) Statistics on production of modern soybean products in Japan (1975-1981). (6) Annual production and prices of modern soy protein products in the USA (May 1983).

Japan once produced a million tonnes (metric tons) of soybeans annually. This figure decreased dramatically during World War II. After the war, as soybean imports from the United States steadily increased, Japan's domestic crop gradually fell to the level of no more than 100,000 tonnes. In 1977 it was 111,000 tonnes, yet by 1982 it had jumped to 226,000 tonnes as rice acreage was reduced.

All photos are black and white. Figures show: (2) Line drawing of soybean plant with flowers and leaves. (2) Cross section of soybean seed-coat and cotyledon. (3) Graph of protein solubility (NSI) of defatted soybean meal at different pH values. (4) Graph of protein solubility (NSI) of defatted soybean meal at different concentrations of calcium chloride. (5) Graph of relationship between time and temperature of soaking soybeans in water (colder water temperature requires longer soak time). (6) Flow sheet for making regular tofu. (7) Photo of regular (*momen*) "cotton tofu." (8) Line drawing of

grinder (horizontal type) used with soaked soybeans when making tofu. (9) Photo of continuous filter for soy-milk preparation. (10) Photo of small-scale soy-milk processing plant. (11) Line drawing of molding box [forming boxes with lids] for making regular tofu. (12) Photo of yaki-dofu [grilled tofu]. (13) Photo of okara in a glass cup. (14) Line drawing of molding box [forming box] for silken tofu. (15) Photo of silken tofu. (16) Flow sheet for packaged tofu production [GDL]. (17) Photo of packaged tofu in package. (18) Flow diagram of large-scale process for making tofu and abura-agè with 26 pieces of equipment labeled. (20) Flow diagram of continuous process for making packaged tofu [GDL]. (21) Photo of 2 pieces of abura-agè. (22) Photo of deep fryer for making abura-agè. (23) Photo of nama-agè [deep fried tofu cutlet]. (24) Photo of two types of ganmodoki. (25) Line drawing for tofu kneader for ganmodoki production. (26) Photo of kôri-dôfu [dried frozen tofu]. (27) Flow sheet for making dried-frozen tofu. (28) Flow diagram of process for making large-scale dried-frozen tofu. (29) Photo of aseptic carton and glass of soy milk. (30) Flow sheet for making aseptically packaged soy milk. (31) Photo of 5 different forms of dried yuba. (32) Photo of kinako in two clear glass bowls. (33) Photo of soybean sprouts in a woven bamboo basket. (34) Flow sheet for making miso. (35) Three different types and colors of miso on 3 bamboo rice paddles (*shamoji*). (36) Line drawing of cut-away view of traditional pressure cooker (*koshiki*) for rice cooking. (37) Diagram of continuous rice cooker with 7 parts labeled. (38) Line drawing of *Aspergillus oryzae* with conidia (spores), sterigmata, and mycelium labeled. (39) Photo of pieces of koji. (40) Diagram of modern fermentation room for making koji. (41) Cut-away view of miso fermenting in a wooden vat with stone weights above vinyl film on top. (42) Line drawing of a mashing machine for miso. (43) Photo of natto in rice straw wrapper and polystyrene tray. (44) Cross sectional view of pressure cooker for soybeans. (45) Line drawing of rotating mixer to combine cooked soybeans with pure-cultured *Bacillus natto*. (46) Photo of soy sauce table dispenser. (47) Flow sheet for making Japanese soy sauce (shoyu). (48) Transparent view of crusher (roller) for roasted wheat in making soy sauce. (49) Photo of modern stainless steel fermentation tanks / vats (indoors). (50) Photo of a jar and a cup of sufu [fermented tofu]. (51) Diagram showing relationships between modern soy protein foods.

Note 5. Surprisingly, edamamé, one of the most popular soyfoods in Japan, is mentioned only once, in passing (p. 84) in this book.

Photos on the rear cover show Tokuji Watanabe and Asako Kishi. A brief biography of each is given.

Tokuji Watanabe: Born in 1917 in Tokyo, he graduated from the Faculty of Agriculture of Tokyo University in 1941, with Doctor of Agriculture. In 1945 he entered the National Food Research Institute (NFRI), of which he became director in 1971. In 1977 he resigned that position and became a professor at the Kyoritsu Women's University, where he now teaches. Address: 1. D. Agr., Kyoritsu Women's Univ., Tokyo.

4337. Wilson, John C. 1984. The manufacture of soymilk which is not contaminated with undesirable "beany flavor," resulting from enzyme induced oxidation of fats. Paper presented at the Singapore Inst. of Food Science & Technology Symposium. 19 p. Held June 14-15 at the Hyatt Hotel, Singapore. [8 ref]

• ***Summary:*** Introduction: "This paper anticipates a series of questions and tries to inform the reason for things pertaining to our topic according to the perspective from which we see things in 1984." Who are the real giants? Shall we not give tribute?" 1. What is the interest in the world regions for a soymilk without the traditional 'beany flavour'? What need creates an interest, creates a demand of such proportions? China, South East Asia, North East Asia, North America, hippies, vegetarians, tofu, *The Book of Tofu,* by Shurtleff and Aoyagi.

2. What is the history behind the long delayed but sudden phenomenal development of this product? Dr. Harry W. Miller in Shanghai (1936), K.S. Lo (of Vitasoy) in Hong Kong [1941], in-bottle sterilizing by K.S. Lo, development of UHT processing and aseptic packaging by Yeo Hiap Seng in Kuala Lumpur, Malaysia (1967), the advent of the brick shaped aseptic carton. The traditional soymilk process: "Filtering off the fibrous material,... one is left with the basic soymilk extract or soybase to which some sugar is added" (p. 8). Improvements in soymilk flavor: Cornell hot-grind process. University of Illinois hot water blanch method "is the basis of most modern soymilk processing." Developments in Japan since the mid-1970s, which have grown "out of the Illinois process but overcoming the 'chalkiness' by a filtration step using a decanter or some form of continuous filtration." The quality is excellent but the yield of protein is unfortunately only about half compared to the almost 100% achieved by the original Illinois method."

3. What are the developments in the market areas? Soyfoods industry and market statistics published annually by Shurtleff. Trends in: Japan, South East Asia, Indian Subcontinent, Mid East [Middle East], Europe (Flavor is not as good as in Japan. "There is also a political impediment. It would be suicidal to set up a soymilk industry as a 'substitute cow's milk...' considering today's ailing European dairy industry and the militant stand of the European dairy farmer. But as surely as margarine has come and been accepted, a prime quality soymilk will come to Europe. It is a matter of time"). Africa (financing troubles, the good work of IITA in Ibadan, Nigeria). South America ("A market spoilt! Take Brazil–the world's 2nd largest producer and exporter [of soybeans]. People have had inferior quality product almost forced down their mouth"). North America.

4. What is the state of the art in the manufacturing

technique for a "bean free" tasting soymilk? (Contains a flow chart with 13 steps, of which No. 10 states: "Blend ingredients: Blend into the soybase the ingredients necessary to a particular formulation, e.g., sugar, vegetable fat, emulsifier–stabilizer, flavouring–aromas," p. 16)

This paper deals with the phenomenal growth of the soymilk industry in northeast Asia, and the likeliness that its influence will spread worldwide in the near future.

Note: This is the earliest English-language document seen (Aug. 2013) that uses the word "soybase" to refer to a concentrated form of soymilk. However, no definition of the degree of concentration or total solids content is given. Address: Soya Process Product Manager, Alfa-Laval, Box 1008, S-221 03, Lund, Sweden.

4338. Praskin, Laurie. 1984. Work with soyfoods on The Farm in Tennessee. Luci Morren working with soyfoods in Mexico (Interview). *SoyaScan Notes.* July 1. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The Farm Soy Dairy had a centrifuge for making soymilk and dewatering soypulp in 1975. Laurie started working in the soy dairy in late 1974 or early 1975. Alexander was still there. There was a centrifuge there before that. All the tempeh at that time was okara tempeh. She does not recall if they used the centrifuge to dewater whole soybeans for tempeh.

Suzie and Chris Jenkins. Utah. 801-532-4289. Suzie made tempeh before she went to Guatemala.

Luci Morren is a woman working in Mexico with refugees from Guatemala. She went to the World Soy Conference. To make tortillas, add soybeans with corn to boiling lime water (cauldron cuts cooking time a lot), soak over night, then rinse, grind, form and cook tortillas.

Also using soybeans with local black beans, 1:5. Soak over night to do away with some SBTI [soybean trypsin inhibitor]. Also cook with rice. People don't use enough wood to cook things longer. Suzi utilizes everything when she does her demos. The whey is drunk with sugar and limes; refreshing. The pulp [okara] used in *masa,* and fried. Luci is a Belgian woman, who got turned onto soy in Mexico. She went to Nicaragua right after the revolution and started a big soy program. Nicaragua has classified soy as one of its protein sources. For 3 years, she worked closely with women; she also has a program with 5 farmers growing soybeans.

Laurie will try to get me Luci's address. Its sickening to see the poor kids. Mexicans do not want to help too much. Foreigners aren't allowed into camps. Including Luci. She works out of San Cristobal in her office, training Mexican promoters, but not all are as dedicated as she. Another student of hers is making tofu in her house to sell to tourists. Laurie taught her to make tofu cheesecakes.

Plenty is funding Luci to do this soy project in Guatemala. Do they buy beans in Tapachala? Are any Chinese in Guatemala making soyfoods?

4339. McLeod, John. 1984. Re: Work with soyfoods in Honduras and statistics on soyfood products manufactured. Letter to William Shurtleff at Soyfoods Center, July 10. 1 + 1 + 6 p. Typed, with signature on letterhead.

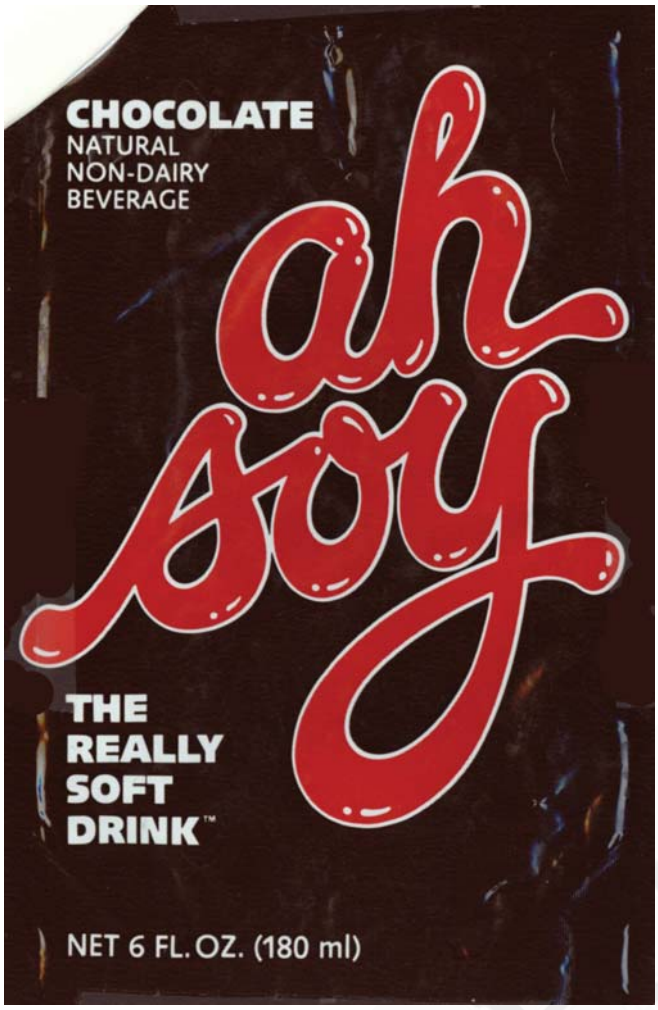
• ***Summary:*** "Since I've been in Honduras for the last year, managing an Emergency Food-For-Work Program, I've been somewhat disconnected with the Costa Rica Soy Program.

"If I'm ever in the Lafayette area, I would like very much to see your new Center. After working on Soybean Programs in Sri Lanka and Costa Rica for about seven years, it is obvious to me that people everywhere must soon begin eating greater quantities of soyfoods." In 197- CARE-Honduras introduced Nutrisoy, its first soy product in Honduras.

Attached are: (1) A form filled out by John giving dates and statistics on four commercial soyfood products in Honduras: Nutrisoy, Frescorchata, Masarina, Vitaleche. CARE now makes about 4,395 metric tons per year of these four soyfoods. (2) Four pages of edited manuscript about the history of soybeans and soyfoods in Costa Rica. Address: CARE-Honduras, 4a. Avenida Y 9a. Calle, No. 810, Colonia, Alameda, Apartado 729, Tegucigalpa, Honduras. Phone: 32-8601.

4340. **Product Name:** Ah Soy: Natural Non-Dairy Beverage (Soymilk) [Chocolate, Vanilla, or Original].
Manufacturer's Name: Great Eastern Sun (Importer). Made in Japan by San-iku Foods.
Manufacturer's Address: Asheville, NC 28806. Phone: 704-252-3090.
Date of Introduction: 1984. July.
Ingredients: Original: Water, organically grown soybeans*, barley malt, pearl barley malt, cold pressed safflower oil, sea salt. * = Organically grown and processed in accordance with Section 26569.11 of the California Health and Safety Code.

Vanilla: Vanilla extract. Chocolate: Natural cocoa, natural vanilla extract.
Wt/Vol., Packaging, Price: 6 fluid oz (180 ml) in stand-up foil retort pouch.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Original: Per 6 oz.: Calories 100, protein 4.5 gm, carbohydrate 9.4 gm, fat 5 gm. Vanilla: Calories 142, protein 4.3 gm, carbohydrate 21.2 gm, fat 4.4 gm. Chocolate: Calories 149, protein 3.9 gm, carbohydrate 25.5 gm, fat 3.5 gm.
New Product–Documentation: Labels. 1984. 4 by 6.25 inches. Plastic packs. Original: Red and white on blue. Vanilla: Red and white on tan. Chocolate: Red and white on dark brown. The words "ah soy" are written in script and look rounded, as if they were made from brightly colored round tubing. Text on front panel: "Made with organically



grown soybeans." "The really soft drink." On back panel: "It drinks like a shake and you can use it to bake. Ah Soy is the most versatile, delicious and nutritious natural non-dairy soft drink you can buy. Can something so smooth, so rich, so refreshing, really be good for you? Ah Soy is. Ah Soy is full of protein, free of cholesterol, low in calories and has no cane, fruit or milk sugars. And of course, there are no chemical additives and no preservatives. Use Ah Soy on breakfast cereal, as the secret to spectacular sauces, to make extra fluffy pancakes, and as a healthy, all natural thirst quencher."

Note: This is the earliest commercial soymilk product seen with an English-language label (June 1999) that has a flavor named "Original." In March 1982 a Japanese company named Nagoya Seiraku introduced a soymilk in Japan named *Sujaata no Gen Tônyû,* which means "Sujaata Original Soymilk."

Shurtleff & Aoyagi. 1984. Soymilk Industry and Market, Update (Based on interview with Bob Ballard, 21 March 1985). This product has been a "fantastic success." During the period from 1 Nov. 1984 to 25 Jan. 1985 (just under 1 fiscal quarter), 525,000 unit packs of 4 flavors were sold.

Shurtleff & Aoyagi. 1985. Soymilk Industry and Market, Update. By March 1985 sales of Ah Soy are growing rapidly, now accounting for 15-20% of Great Eastern Sun's total sales. The favorite flavor is vanilla, followed by original [plain], carob, and chocolate, in that order. By 1987 Ah Soy was being made in the USA in quarts. Shurtleff & Aoyagi. 1986. Soymilk Industry and Market, Update. By March 1987 Ah Soy is selling about 270,000 units (10,906 gallons) per month. Sales by flavor are vanilla (35% of the total), original/plain (30%), carob (17.5%), chocolate (17.5%). Sales have been flat for the past year.

Letter from Bruce Sturgeon, Vice President, Great Eastern Sun, Enka, North Carolina, to East West Journal. 1989. Jan. p. 6. Convincingly refutes EWJ's award to Ah Soy for the "Most Questionable Beverage Label Claim."

4341. **Product Name:** Firm Nigari Tofu, Soymilk, and Soysage.
Manufacturer's Name: Maritime Soycraft.
Manufacturer's Address: R.R. 4, Antigonish Harbor, NS, B2G 2L2, Canada. Phone: 902-863-2903.
Date of Introduction: 1984. July.
New Product–Documentation: Form filled out by Sian McLean (a woman), ca. 1984. They started on 1 July 1984 and now make firm nigari tofu, soymilk, and soysage. The business has no name yet. "Small word-of-mouth operation so far." They use 60 lb/week of soybeans.

Letter from Sam Weinreb. 1988. Jan. 14. He just talked with Hugh and Sian McLean. Talk with Sian McLean. 1988. Feb. 15. They started making tofu July 1984. His company is now named Maritime Soycraft, R.R. 2, Heatherton, NS, B0H 1R0, Canada. Phone: 902-386-2474. Says he started making soysage in 1986, but it is shown on his 1984 form. Call from Sian. 1991. Nov. 18. They make mostly tofu, plus some soymilk. They no longer make soysage. They make about 500 lb/week of tofu. There is a nice little steady market and people really like Maritime tofu. Her first name is Welsh.

Letter from Sian McLean. 1994. July 16. Maritime Soycraft is now located at Keppoch Mountain, R.R. #1, Antigonish, Nova Scotia B2G 2K8, Canada. Phone: 902-863-3978. This is a new tofu shop she built. She presently makes only fresh bulk tofu. She left her former marriage with Hugh and has a new partner who wants to do tofu production.

Talk with lady who works with Sian. 1995. May 15. Sian now has a vacuum packaging machine for her tofu, and she can get a shelf life of two weeks before the product turns yellow. This vacuum-packed tofu is not yet on the market.

Talk with Rick Turner of Maritime Soycraft. 1999. Dec. 2. They moved 1½ to 2 years ago to R.R. #4, Antigonish, NS B2G 2L2. Their phone number has not changed. They are now a partnership with 3 partners, Sian, Rick, and one other full-time person. They make about 1,000 lb/week of tofu, but have to expand to take on a new chain. So their business is

growing and they are looking for new equipment.

4342. Munyati, Nigel M. 1984. Re: Work with soymilk in Zimbabwe. Letter to William Shurtleff at Soyfoods Center, July. 1 p. Handwritten, with signature.
• ***Summary:*** "I have been out of soy for quite some time now. Since I left my former company I have been more involved in dairy milk. I still want to do some work on soy but at this stage I am up to my neck in the dairy business. The way I look at it is that my ultimate objective–of helping to feed the people–is still being achieved.

"I was quite dejected when I left my old company. I had joined them when they were on the wrong trail in the production of soy milk. I helped them to get on the right one but in the process I discovered that they were out to exploit my knowledge for their selfish gains. I had to leave then and what infuriates me is that they might succeed in marketing soy milk from my contributions. Anyway, such is life."

Nigel plans to visit the U.S. in about a month and hopes to visit Bill and Akiko in Lafayette, California.

Note: Chipinge (formerly known as Chipinga) is a town in southeastern Zimbabwe in the province of Manicaland near the Mozambique border. This aerogramme contains four glossy color photos of tall, modern buildings in Harare (before 1982 known as Salisbury), the capital of Zimbabwe. Address: DMB, Box 4, Chipinge [Zimbabwe].

4343. **Product Name:** Homestyle Tofu "No Egg" Salad.
Manufacturer's Name: Sonoma Specialty Foods.
Manufacturer's Address: 2317 Bluebell Dr., Santa Rosa, CA 95403. Phone: 707-525-8822.
Date of Introduction: 1984. July.
Ingredients: Tofu (organic soybeans*, water, nigari), soy oil, soy milk, celery, relish, tamari, mustard, vinegar, nutritional yeast, natural herbs and spices, sea salt, and honey. * Grown in accordance with CA H&S Code 26569.11.
Wt/Vol., Packaging, Price: 8 oz or 15 oz plastic tub.
How Stored: Refrigerated.
Nutrition: Per 2.66 oz.: Calories 105, protein 8.1 gm, carbohydrates 1 gm, fat 6.5 gm, fiber 1.3 gm, sodium 0.80 gm, cholesterol 0.
New Product–Documentation: Label. 1987. 4.5 inches diameter. Black, green and yellow on white plastic lid. 15 oz. "Improved! Non-Dairy. Cholesterol Free. Ready to Eat on Sandwiches, as a Dip & in Salads. Natural. No Preservatives. Nutritious. Delicious. Kosher." Illustration of a cottage in front of a picket fence.

4344. Tsuchiya, Kanji. 1984. Tônyû to sono hinshitsu hoji [The present status of the soymilk market and the preservation of soymilk quality at factories]. Tokyo: Published by the author. 31 p. July. [Jap; eng]
• ***Summary:*** Part I discusses the background of soymilk production in ASEAN countries and the industrial interest in soymilk worldwide. Part II analyzes quality control at every stage in the process from the viewpoint of production theory, based on modern soymilk plants. Also discusses microbiological control and colloidal research on the physical nature of soymilk. Address: Shokuhin Hinshitsu Hoji Gijutsu Kenkyu-kai (Society for the Study of Food Quality Preservation), Tokyo, Japan.

4345. *Vegetarian Times.* 1984. Japan's big-league vegetarian champs. July. p. 6.
• ***Summary:*** The manager of a Japanese baseball team, the Seibu Lions, which climbed from the cellar to first place, says he attributes the success of his team to the players' switch to a vegetarian, macrobiotic diet. In October 1981, when Tatsuro Hirooka took over as manager of the Lions, he prescribed a dietary change for his players, who had finished in last place the previous season. He limited their meat intake and banned polished rice and sugar. Instead he said his players would eat brown rice (unpolished), tofu, fish, and soymilk. The following spring he cut out the fish. They won the Pacific League championship and the Japan Series in 1983.

4346. Viavant, Suzy Jenkins. 1984. Re: Work with soyfoods Sri Lanka and Guatemala. Making tempe at The Farm in Tennessee. Letter to William Shurtleff at Soyfoods Center, Aug. 13–in reply to inquiry. 1 p. Typed, with signature.
• ***Summary:*** Suzy has been "extremely busy getting ready for a soy development tour in Sri Lanka due to happen on the 27th of August through the end of September. I am being sub-contracted by CIDA thru Plenty as a Soy Development Consultant. We will be investigating opportunities for an in-depth soy development project in Sri Lanka. Accompanying me will be the director of Plenty Canada, his wife and a member of the Sarvodaya movement."

"I started making tempe [tempeh, at The Farm in Summertown, Tennessee] in Sept. of 1976 at which time I took over production so Cynthia [Bates] could go full time into making spores [for tempeh]. At this time I was the first one to try using the centrifuge to dewater the soybeans after cooking, although I think it was originally Cynthia's idea. I made tempe until July 1977 when I went to Guatemala."

In Guatemala the "escalation of the political violence made it impossible for our extension workers to hold classes without being looked upon as subversives by the government. Because the dairy [soy dairy at Solola] was just a business it never really threatened the government so it was able to run for a few years. Now the dairy is closed for economic as well as political reasons. We hope to return if it [the political situation] cools down. Our latest report from Guatemala is that people in Itzapa are still growing soybeans and their wives are still making tofu and soymilk. I don't know if the people in Solola are still growing them because

we never quite isolated the best variety for their altitude." Address: Utah.

4347. Word of Nutrition. 1984. The most complete, unique and attractive: More than a health food store in the country (Ad). *Hartford Courant* (*Connecticut*)**.** Aug. 16. p. H13.
• ***Summary:*** This half-page ad appears on the page titled "Spotlighting: Newton." "Come in and let us 'show off' our wares from A-Z. Atmosphere (par excellence)... Herbs (bulk–enormous selection)... Kombu,... Macrobiotic selection (very extensive)... Peanut butter (made fresh by us)...Soy milk... Tofu (fresh)... Tofu entrees... Vegetarian foods..." Address: 194-200 Market Square, Newington, Hartford County, Connecticut.

4348. Pande, Nawin. 1984. Re: Plans to establish a solvent extraction plant and refinery. Letter to Richard Leviton, Soyfoods Association of North America, Sunrise Farm, Heath Rd., Colrain, MA, Aug. 28. 1 p. Typed, with signature on letterhead.
• ***Summary:*** The company is establishing a 300 MTPD [metric tons per day] Soybean Solvent Extraction Plant and a 55 MTPD Refinery in the heartland of India's soybean country. They also plan to process solvent extracted soymeal into various human food products for which India provides a vast market. "Our efforts are geared to establish Soybean in India firmly and to educate the masses about its nutritional value." They also want to establish facilities for extraction of other by-products such as Lecithin, Deodorizer distillates, Soap stocks and other minor chemicals. They also plan to go into production of dairylike soy products (such milk and cheese [tofu]) and industrial products.

"Since you are one of the leaders in Soyfoods and industrial products, we request you to kindly mail us per return the samples of all soya products being manufactured and marketed by you, different packagings used and other technical literature. Please also indicate what help you can extend to us in achieving the target set forth in para [the paragraph] above."

The company's two logos are shown in black at the left and right near the top of the brown and black letterhead. Address: United Soya Products Ltd. (A United Group Venture), E-1/177, Arera Colony, Bhopal, Madhya Pradesh, India. Phone: 62970.

4349. Bean Machines, Inc. 1984. Manufacturers and distributors of fine quality tofu & soymilk equipment (Ad). *Soyfoods.* Summer. p. 29.
• ***Summary:*** "Individual pieces or complete systems. Our own American-made equipment. Strong. Sanitary. Economical. Bean Machines disintegrators. The world's finest all stainless steel soybean grinders. BMI continuous pressurized slurry cooker.

Photos show: (1) BMI 300 Disintegrator. (2) An imported Takai W30C whole system, makes over 2,000 pounds of tofu per 8-hour shift. Costs under $20,000. Address: P.O. Box 1145, Sebastopol, California 95472.

4350. Bean Machines Inc. 1984. Bean Machines disintegrators: Stainless steel soybean grinders (Brochure). San Francisco, California. 4 p. Aug. 28 cm.
• ***Summary:*** On the front cover is the silhouette of a disintegrator in two shades of blue on a gray background. The text: Manufacturers and distributors of tofu and soymilk equipment. The world's finest soybean mills. Strong. Sanitary. Economical. Cable: BMITofu, San Francisco." On the inside left page is a black-and-white photo of the opened disintegrator, with all parts and functions labeled. A table gives specifications for the three models (300, 600, and 1000). The inside right page explains that the disintegrator has only one moving part; the rotor literally mashes the beans through as screen. Photos show options and extras: Hoppers (2), rolling stand, and pedestal.

On the rear cover is a photo on a light blue background of the company's new economy model–the BMI 150 disintegrator (or Mini Mite II). Capacity: 150 lb/hour of dry soybeans. At the bottom of the page is a warranty and a brief history of the company, which was founded in 1977 by William Shurtleff and Larry Needleman. Address: 390 Liberty St., #2, San Francisco, California 94114. Phone: 415-285-9411.

4351. Dagan, R.; Gorodischer, R.; Moses, S.W. 1984. Dietary treatment of acute diarrhea: Comparison between cow's milk and a soy formula without disaccharides. *J. of Tropical Pediatrics* 30(4):221-24. Aug. [21 ref]
• ***Summary:*** "It has been known for more than 65 years that acute diarrhea is associated with a disturbance in the absorption of carbohydrates. This phenomenon is mainly the result of a temporary deficiency of lactase in the mucosa of the small intestine."

The use of soy-based formula (compared with cow's milk) enabled hospitalized infants to recover significantly more quickly from diarrhea. There are two possible explanations: (1) The known transient deficiency in intestinal lactase during diarrhea; or (2) Differences in components other than carbohydrates (e.g., protein). Address: Div. of Pediatrics, Soroka Medical Center and Faculty of Health Services, Ben-Gurion Univ. of the Negev, Beer-Sheva, Israel.

4352. Del Valle, F.R.; Alba, E. de; Mariscal, G.; Jimenez, P.G.; Arellanes, J.A.; et al. 1984. Simultaneous curdling of soy/cow's milk blends with rennet and calcium or magnesium sulfate, utilizing soymilk prepared from soybeans or full-fat soy flour. *J. of Food Science* 49(4):1046-52. July/Aug. [11 ref]
• ***Summary:*** The method produced curds of similar characteristics (yield and compactness) regardless of whether

the soymilk was made from whole soybeans or full-fat soy flour. Address: 1. President, Fundacion de Estudios Alimentarios y Nutricionales, A.C., Apartado Postal 1545, Sucursal O, Chihuahua, Chihuahua, Mexico; and Prof. of Food Science, Facultad de Ciencias Quimicas, Univ. Autonoma de Chihuahua, Chihuahua.

4353. **Product Name:** Soy Milk.
Manufacturer's Name: Eastern Foods Corp.
Manufacturer's Address: 3225 E. Hennepin Ave., Minneapolis, MN 55413.
Date of Introduction: 1984. August.
New Product–Documentation: Regulatory Letter from FDA. 1984. Aug. 27. The term "Eastern Flavor" should be deleted from the label of the company's "Soy Milk."

4354. Eden Foods, Inc. 1984. Just the best [Edensoy, Eden tamari, brown-rice miso, barley miso] (Ad). *Soyfoods.* Summer. p. 37.
Address: Clinton, Michigan 49236.

4355. Hirotsuka, Motohiko; Taniguchi, H.; Narita, H.; Kito, M. 1984. Calcium fortification of soy milk with calcium-lecithin liposome system. *J. of Food Science* 49(4):1111-12, 1127. July/Aug. [15 ref]
• ***Summary:*** "Calcium ion was enveloped with a membrane system before addition of soy protein to prevent soy protein from being coagulated and precipitated by calcium ion. Soy lecithin was first sonicated in calcium salt solution to envelop the calcium ion with a liposomal structure composed of lecithin. Then, the calcium-lecithin liposomes were added to soy protein solution. Precipitation and coagulation were not observed in this soy protein lecithin-liposome system containing 60 mM Ca^{2+}. By this method it was possible to prepare calcium fortified soy milk containing more calcium (120 mg/100 gm) than in cow's milk. These results suggest that this calcium-lecithin liposome system is useful for calcium fortification of soy milk."

Note: *Webster's Dictionary* defines liposome (a term first used in 1968) as "an artificial vesicle composed of one or more concentric phospholipid bilayers." Address: 1-2. Fuji Oil Co., Osaka, Japan; 3-4. Research Inst. of Food Science, Kyoto Univ., Uji, Kyoto 611, Japan.

4356. House, S.L. 1984. Spotlight: Institutional foodservice. Alive Polarity, Murrieta, California. *Soyfoods.* Summer. p. 6.
• ***Summary:*** "Northeast of San Diego and southeast of Los Angeles lies a peaceful place where people can go for a day, a week, a month to experience spiritual renewal and better health practices. Among other diverse activities, Alive Polarity's Murrieta Hot Springs offers mudbaths, marriage counseling and superb vegetarian cooking."

"The lacto-vegetarian diet offered at Alive Polarity emphasizes purifying, health-building and gourmet dishes. Soyfoods make up a large part of the menu.

"'More than 50 percent of our meals contain soy products,' says Breese English, kitchen manager. Tofu is by far the soyfood used most often because it's so receptive; it adds little flavor of its own yet takes on the flavor of ingredients used with it. 'I'd say we consume at least 70 pounds a day."

"Alive Polarity's restaurant serves breakfast, lunch and dinner buffet style, totaling about 1000 meals daily."

"While tofu is a primary ingredient in many of the recipes, other soy products are used extensively as well. Bragg's Liquid Aminos and tempeh are two products that have found a place in Alive Polarity's kitchen.

"Bragg's is a liquid mineral soy bouillon often used instead of soy sauce or tamari. Its slightly less salty flavor had made it a popular item for the cooks as Mary Ann Beauchamp attests. 'I use it in almost everything, sauces, salad dressings, soups.' About 25 gallons of Bragg's Liquid Aminos are consumed weekly.

"Tempeh is the third most popular soy product used. Tempeh is a complete protein food with a texture that lends itself to hearty foods and entrees. Used in place of hamburger for summer barbecues, tempeh burgers are very popular. The kitchen staff estimates they use about 400 tempeh patties a week.

"Two soyfoods recently introduced at Alive Polarity include soymilk and Tofutti. Given that almost 20 gallons of soymilk are consumed weekly, it appears it's already gained acceptance among the clientele."

"Mary Ann Beauchamp, whose mother is Japanese explains, 'My mother is amazed with the things we do with tofu. The Japanese use tofu in traditional ways for specific purposes. I don't feel that they experiment or work with it as we do.' For example, Beauchamp explains a favorite recipe, Tofu Tidbits. 'You take cubes of tofu and bread them in a mixture of flour, nutritional yeast, herbs and spices. Then layer the cubes in a pan with a small amount of oil. Bake for an hour at 500º. Serve with tartar sauce and lemon wedges, it's fantastic. People just love it.'"

A photo shows the staff: Jane Buck, Breese English, Mary Ann Beauchanp, and Diane Luzzi. Contains a "favorite recipe" for Tofu french toast.

• ***Summary:*** In this full-page ad, photos show three machines: Continuous soymilk cooker (Sany Ace Special). Okara squeezer (Big Boy II Model). Soymilk filling/packing machine (ST-4000). Note: In Japanese, *Juten* refers to packaged lactone silken tofu. Address: 33-9, Nakano 3-Chome, Nakano-ku, Tokyo 164, Japan. Phone: 03 (382) 0761.

4360. **Product Name:** Granola: Soya Cereal.
Manufacturer's Name: Soy City Foods.
Manufacturer's Address: 2847 Dundas St. West, Toronto, ONT, M6P 1Y6, Canada. Phone: 416-762-1257.
Date of Introduction: 1984. August.
Ingredients: Dried soy mash [okara], peanuts, honey, soy milk, sunflower seeds, raisins, spices, natural flavour, sea salt.
Wt/Vol., Packaging, Price: 500 gm plastic bag.
How Stored: Shelf stable.
New Product–Documentation: Label sent by Jon Cloud. 1989, May 5. He says the product was introduced in the summer of 1984.

4361. Vitasoy (USA) Inc. 1984. Vitasoy. It's what your customers are asking for. Taste the goodness (Ad). *Soyfoods.* Summer. p. 35. See also 28 x 22 cm. color poster with slogan "Taste the Goodness."
• ***Summary:*** "It's light, its natural, it tastes great! Completely free of cholesterol and low in fat. Vitasoy meets the needs of today's health-conscious consumer.

"We blend pure maple syrup and choice natural ingredients with soy goodness to create three delicious, preservative free drinks. Each a natural source of vegetable protein.

"Vitasoy comes in colorful, convenient Tetra-Brik packages. Easy to stack and store. Fresh for months, even without refrigeration. A natural sales leader.

"We've been producing soyfoods for over forty years. Today Vitasoy is number one in soy drink sales worldwide. That's more than 150 million units per year. Backed with this experience, we've created refreshing new drinks for American tastes.

"Original Vitasoy. Coconut Vitasoy. And now rich, creamy Chocolate Vitasoy. Three delicious, healthful drinks–just what your customers are asking for." Address: 435A Brannan St., San Francisco, California 94107.

4362. Vitasoy (USA) Inc. 1984. Vitasoy [Flamingo lady standing on one leg]. 435A Brannan St., San Francisco, CA 94107. 1 p. each. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.
• ***Summary:*** Poster (16 by 18 inches; see next page) and leaflet (8½ by 11 inches), both color. An attractive, young American blonde woman in an exercise outfit with headband standing on one leg in a sort of yoga position with her right arm resting on her back. She is sipping Vitasoy through a straw from a carton she holds in her left hand. The text reads: "Introducing Vitasoy. It's what your customers are asking for. It's light, it's natural, it's great. Completely free of cholesterol and low in fat, Vitasoy meets the needs to today's health and nutrition conscious customers." Address: San Francisco, California. Phone: (415) 974-1118.

4363. Vitasoy (USA) Inc. 1984. Good taste. Just for the health of it [Flamingo lady doing a pushup]. San Francisco, California. 1 p. Front and back. 15.7 x 11.5 cm.
• ***Summary:*** Glossy color. An attractive, young American blonde woman in an exercise outfit with headband is in pushup position but with one leg bent up over her head. She is sipping Vitasoy through a straw from a carton on the floor in front of her. The front text reads: "Discover new Vitasoy. The all new anytime, anywhere pick me up... Vitasoy has less calories than lowfat yogurt; contains no salt or preservatives and comes in three fun flavors: original, chocolate, and coconut... Look for Vitasoy in the produce section–where real natural foods belong. But, try it for the taste. Not *just* for the health of it."

The rear is titled "Try new Vitasoy." A photo shows a glass of soymilk with cartons of Vitasoy Chocolate and Vitasoy Coconut. Across the bottom: "The all natural soy drink with no cholesterol." Address: San Francisco, California.

4364. **Product Name:** WestSoy Natural (Soymilk).
Manufacturer's Name: Westbrae Natural Foods (Importer). Made in Japan by San-iku Foods.
Manufacturer's Address: 4240 Hollis St., Emeryville, CA 94608. Phone: (415) 658-7521.
Date of Introduction: 1984. August.
Ingredients: Water, organic soybeans, malted barley, expeller pressed corn oil (less than 1%), sea salt.
Wt/Vol., Packaging, Price: 6 fluid oz (180 ml). Stand-up foil retort pouch.
How Stored: Shelf stable.
Nutrition: Per packet: Calories 140, protein 5 gm, carbohydrates 25 gm, fat 2 gm, sodium 124 mg.
New Product–Documentation: Label. 1984, dated. 4 by 6.25 inches, color. Retort pouch. Blue, brown, white and black on orange background. Milk bottle illustration. "Non dairy drink. Organic. Shake well. Serve chilled. Low sodium. Half the fat, all the protein of milk. No cholesterol.

Good taste. Just for the health of it.

Discover new Vitasoy. The all new anytime, anywhere pick me up. It's all natural. Has no cholesterol, a great source of vegetable protein and sweetened with maple syrup. Vitasoy has less calories than lowfat yogurt; contains no salt or preservatives and comes in three fun flavors: original, chocolate and coconut.

You can find Vitasoy at selected supermarkets and health food stores. Look for Vitasoy in the produce section — where real natural foods belong. But, try it for the taste. Not *just* for the health of it.

No refined sugar. No preservatives." Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Shurtleff & Aoyagi. 1984. Soymilk Industry and Market, Update. This plain soymilk, similar to Ah Soy (launched 1 month earlier and also made by San-iku Foods in Japan), is Westbrae's first soymilk product.

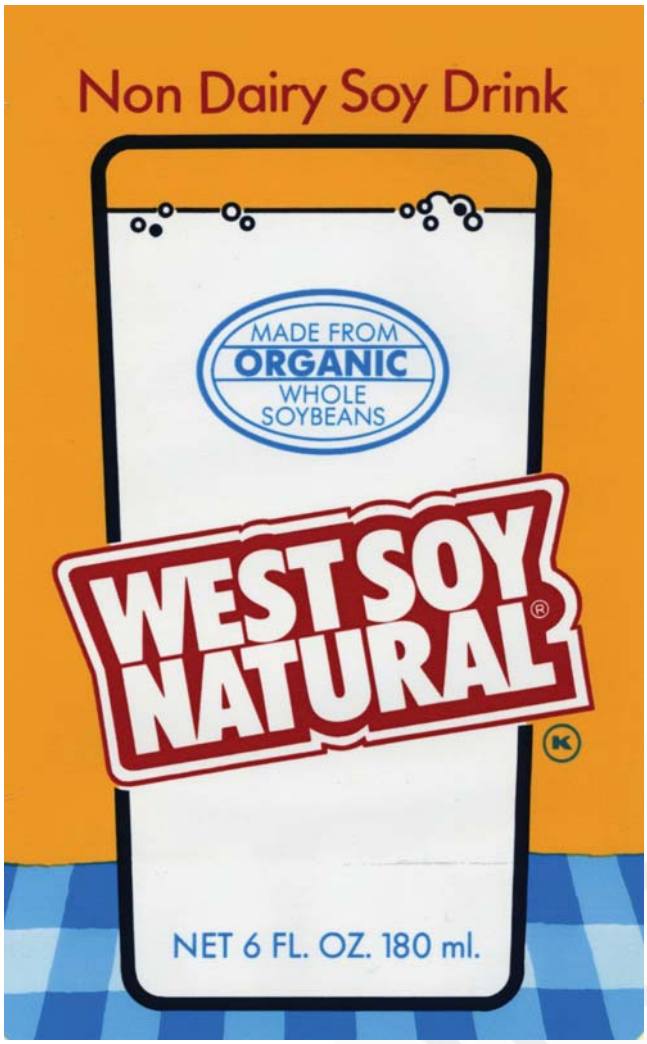
Talk with Marty Roth of Westbrae Natural. 1985. Jan. 3. Their Westsoy natural was a sort of me-too effort, so that Westbrae could have its plain counterpart to Edensoy, Ah-Soy, and Vitasoy. Westbrae didn't put a lot of effort into the product. Westsoy, introduced a little before the Malteds, was not eventually as successful as the Malteds but it quickly became one of the company's better products. Its features: 1. Organic. 2. The lowest price plain soymilk. It was made in the same plant (Saniku Foods in Japan) as Ah-Soy and had a similar flavor.

4365. *High Plains Journal* (*Dodge City, Kansas*). 1984. USSR grain imports approach all-time high. Sept. 10.
• ***Summary:*** Soviet grain imports for 1984-85 are now forecast at a near-record 43 million tons, well above the nearly 33 million tons for the past two seasons. The reason? Large feed requirements from a strong livestock sector and another reduced crop.

The Indian Agriculture Ministry has approved a Rs. 380 million (about U.S. $34.5 million) development project to raise oilseed production. Items such as seeds and fertilizers will be subsidized or supplied free to the project, to try to help reduce India's huge imports of edible oils. These are expected to rise to a record 1.3 million tons in 1983-84.

"The Ministry of Agriculture in Egypt announced informally the previously reported ban on imported soybean meal has been lifted, as the domestic surplus has abated. The local press has reported Egypt will begin to produce soymilk for infant feeding in conjunction with France. This soymilk plant will reportedly use 10% of Egypt's annual soybean crop. The 1984-85 soybean crop is forecast at 180,000 tons; the 1983-84 crop is estimated at 162,000 tons."

4366. *Toyo Shinpo* (*Soyfoods News*). 1984. Zennenhi 30% no daun ka. Yume no inryô tônyû ni kageri genshô [Dream drink soymilk sales in Japan down 30% from last year?]. Sept. 11. p. 1. [Jap]
• ***Summary:*** Soymilk sales in Japan reached their peak



during the first quarter of last year. This year's first quarter is down about 20% from that figure according to the Japan Soymilk Assoc. (Nihon Tonyu Kyokai). And they expect a drop of 60-70% in the second quarter compared to last year.

During the peak last summer, soymilk sales were 25,000 million yen wholesale and 32,000 million yen retail. At that time a continued rise in the market was expected. But since that time the demand has decreased, and total sales this year are expected to be about 30% below those of last year. The basic causes for the drop are: 1. The companies did not develop a good strategy for launching new products. 2. The initial costs for starting soymilk production are high. 3. Soymilk shelf life is short. But the biggest reason was that Kibun, Marusan Ai, Asahi Shokuhin, Mitsubishi, and other large manufacturers expanded their production, then large beer makers (Pokka, Toyô Seiraku, etc.) joined the market. Over-production resulted leading to price wars in the marketplace. Since then a number of smaller companies have dropped out of the market.

Workshop on Export Markets for Ontario Soybeans: Edited Proceedings. 45 p. See p. 18-20. Held 5 Sept. 1984 at Wheels Motor Inn, Chatham, ONT, Canada. 28 cm.

• ***Summary:*** "Historically, soybean breeding efforts in Canada have been directed toward improving yields, increasing the area of adaptation (to shorter season and cooler geographic areas) and improving pest tolerance. As soybean production has increased toward domestic self-sufficiency, the industry has placed more emphasis on development, production, and marketing of special quality beans for specific non-oil export markets...

"In Canada, yield of soybeans per unit land area has remained a primary consideration in soybean breeding (except for natto-type beans) because of licensing requirements for pedigreed seed production and marketing. Among high yielding breeding lines, large seed size, white or yellow hilum colour and high seed quality (resistance to discolouration and cracking) are common selection criteria associated with tofu and miso export potential."

Canadian soybean breeders are generally aware of the characteristics defined during the 1982 "Soybean Export Mission to South East Asia" for various soyfood uses. These desired soybean characteristics are shown in Table 1 for natto, miso, tofu, soymilk, and soy sprouts. Address: Assoc. Prof., Univ. of Guelph, Guelph, ONT, Canada.

4369. Chan, Fred. 1984. General uses of soybeans in Hong Kong and competition from Chinese soybeans. In: Ontario Ministry of Agriculture and Food, Market Development Branch. 1984. Workshop on Export Markets for Ontario Soybeans: Edited Proceedings. 45 p. See p. 15-17. Held 5 Sept. 1984 at Wheels Motor Inn, Chatham, ONT, Canada. 28 cm.

• ***Summary:*** Tofu: The two major types of tofu in Hong Kong are soft tofu (which is displayed in water to maintain its form) and mild tofu (which is firmer, is displayed on wooden planks, and is the most common type). Chinese soybeans are preferred to Canadian soybeans because after a maximum of 5 hours on display in the open market, water will start to weep from the tofu made from Canadian soybeans. In 1983, about 6,000 tonnes of imported soybeans were used to make tofu in Hong Kong; this was about 33% of the total soybeans imported.

Bean curd sheets and bean curd sticks [yuba] are very common snacks and dishes in Hong Kong. "Canadian soybeans have an advantage in this market because they produce whiter soymilk which in turn will produce whiter colour products. However, the bigger size of the Chinese soybean results in a higher yield... Manufacturers will normally mix 60% of Canadian soybeans with 40% of Chinese soybeans in order to achieve a higher output of whiter sheets... Total utilization was around 4,000 tonnes in 1983, with Canadian soybeans representing 78%.

Soy sauce and bean paste: The market is dominated by Chinese soybeans because bigger beans produce more sauce and paste. In 1983 approximately 6,000 tons of soybeans were used to make soy sauce and bean paste, with Chinese soybeans representing 75%, Vietnamese 14%, and Canadian 11%.

Soymilk: In 1983 about 1,800 tonnes of soybeans were used to make soymilk in Hong Kong, mostly by Vitasoy. Chinese and Canadian soybeans each share about 50% of the market.

Discusses various reasons that Chinese soybeans are very competitive in Hong Kong. The Chinese Oil, Cereal and Foodstuff Company in Hong Kong has an office in Hong Kong. Under this national organization are two agents specializing in Chinese soybeans. Transport time from China to Hong Kong is 7 days versus 32 days from Canada. Address: Director, Chung Hing Co., Hong Kong.

4370. Chen, Steve. 1984. Soyfoods in the Far East and USA: Products, markets, trends. In: American Soybean Assoc., ed. 1984. First European Soyfoods Workshop, Proceedings. Brussels, Belgium: ASA. 36 p. See p. C1-C38. Held Sept. 27-28 at Amsterdam, Netherlands. [11 ref]

• ***Summary:*** Contents: Summary. 1. Introduction: Ten reasons why soybeans will be a key protein source for the future. 1. Soyfood products. A. Non-fermented soyfoods: Fresh green soybeans, soybean sprouts, soynuts, soymilk, soy flour, yuba or soy protein film, tofu. B. Fermented soyfoods: Soy sauce, miso, tempeh, natto, fermented tofu, fermented black soybeans (tou-shih, hamanatto). 3. Soyfoods markets and trends in the Far East: Taiwan, China, Japan, South Korea, Indonesia, Malaysia, Singapore, Thailand, Philippines. 4. Soyfoods markets and trends in the U.S. 5. References. Plus 15 tables and 8 figures.

"It is our [American Soybean Association's] strong intention that marketing and consumption of soy protein should not in any way deter the expansion of the production and sale of as much animal protein as the world can be expected to produce in the years ahead. Soy protein foods are being intentionally brought to the market to complement and not necessarily to replace animal protein products."

"Taiwan imported 1.41 million tonnes (metric tons) of soybeans in 1983 and used about 250,000 tonnes as soyfoods for direct human consumption, which made Taiwan one of the highest in per capita consumption of soyfoods (13.2 kg or 29 lb) in the world. In the past 10 years (1974-1983), the consumption of traditional soyfoods showed an average increase of 3% per year as compared to 12% and 8.1% for poultry and soy oil, respectively. The market for packaged soymilk, soy pudding and tofu has also been expanding rapidly in recent years in Taiwan." Table 7 shows the production of soymilk in Taiwan, which grew from 103,600 tonnes in 1974 to 210,000 tonnes in 1983, for an average growth rate of 8.2% a year.

China produces about 9 million tones of soybeans a year, and about half of these are consumed as soyfoods, giving a per capita consumption of 4.5 kg of soyfoods. "An improvement in the general economy and soyfood technology and equipment will bring a sharp increase in soybean demand and more soyfoods consumption."

In South Korea soymilk consumption has increased more than seven-fold in the last 4 years. Currently about 10,000 tonnes of soybeans are used to make 70,000 tonnes of soymilk. "It is projected that soymilk production in Korea will double in 1984 as compared to the previous year."

Indonesia continues to be Southeast Asia's largest consumer of soybeans as food. In 1982/83 soybean consumption was 6.7 kg per capita. Indonesia consumes about 1 million tonnes of soybeans annually, 60-65% of them in the form of tofu and 35 to 40% as tempeh.

Malaysia consumes only about 30,000 tonnes of soybeans per year as food. In Singapore, more than 75% of the population of 2.5 million are Chinese. Therefore tofu, soysauce, and soymilk are the predominant traditional soyfoods consumed.

Thailand consumes about 40,000 tonnes of soybeans a year as food, mainly in the form of tofu. The Philippines uses only 5,000 tonnes of soybeans annually for food, mainly as tofu.

To summarize (Table 6), annual per capita consumption of soybeans in various East Asian countries, in descending order of the amount consumed, is as follows: Taiwan 13.2 kg (population 19 million); Japan 8.3 kg (population 120 million); South Korea 7.5 kg (population 40 million); Indonesia 6.7 kg (population 150 million); Singapore 6.25 kg (population 2.4 million); China 4.5 kg (population 1,000 million); Malaysia 2.1 kg (population 14 million); Thailand 0.8 kg (population 50 million); Philippines 0.3 kg (population 15 million). Address: Director, American Soybean Assoc., Room 603, Kwang-Wu Building, No. 386, Tun Hua South Road, Taipei, Taiwan.

• ***Summary:*** "Soy formula, even when supplemented [with vitamins and minerals], should be used only when specific indications exist." Address: Children's Mercy Hospital, Univ. of Missouri Kansas City School of Medicine, Kansas City, Missouri.

4374. Loh, Michael. 1984. An overview of export markets for edible soybeans. In: Ontario Ministry of Agriculture and Food, Market Development Branch. 1984. Workshop on Export Markets for Ontario Soybeans: Edited Proceedings. 45 p. See p. 1-9. Held 5 Sept. 1984 at Wheels Motor Inn, Chatham, ONT, Canada. 28 cm.
• ***Summary:*** "Ontario first exported edible soybeans in 1972 and over 12 years have built it into a $40 million business. 1981 was our best year when exports totalled $46 million... The bulk of Ontario's soybean exports are sold to the Far East [East Asia]–Japan ($8 million in 1983), Singapore ($6 million), Hong Kong ($3.5 million), Malaysia ($1 million), Indonesia, and Korea." In these countries soybeans are consumed in the daily diet of the people. In Japan, for example, they are made into miso, tofu, natto, soymilk and shoyu. Korea also makes soy sprouts, Indonesia makes tempeh, and Singapore, Malaysia, and Hong Kong make dried yuba. In addition, sales to the Netherlands, United Kingdom, and France are quite significant.

Concerning Ontario's market share of soybean imports for food use: Japan imports 877,300 tonnes, of which 27,000 tonnes or 3.1% is from Ontario. Singapore and Malaysia import 36,000 tonnes, of which 20,000 tonnes or 55.0% is from Ontario. Hong Kong imports 20,000 tonnes, of which

10,000 tonnes or 50.0% is from Ontario.

Japan's sources of its 877,300 tonnes of imported soybeans are as follows: USA 570,000 tonnes (65%), China 280,000 (32%), Canada 27,000, South America 300.

Japan uses its 877,300 tonnes of imported soybeans as follows: tofu 485,000 tonnes (55.3%), miso 180,000, natto 185,000, soymilk 25,000, cooked soybeans 10,000, shoyu 6,500, other 85,800. Within these figures, Ontario's soybeans are used as follows: Miso 20,000 tonnes (11.1% of the total), natto 5,000 tonnes (5.9%), and tofu 2,000 tonnes (0.4%). Address: Export Development Specialist, Ontario Ministry of Agriculture and Food, Toronto, Canada.

4375. Martin, Michael. 1984. World supply and demand for soybeans with special reference to soyfoods. In: American Soybean Assoc., ed. 1984. First European Soyfoods Workshop, Proceedings. Brussels, Belgium: ASA. 131 p. See p. B1-B32. Held Sept. 27-28 at Amsterdam, Netherlands.
• ***Summary:*** The author estimates that European soymilk consumption is about 9-10 million liters / year, which is very small compared to European cow's milk consumption of 22,000 million liters/year. European tofu consumption is estimated at 5-6 million kg/year, which is about one-fourth of U.S. tofu consumption. Other estimates for Europe consumption are: Miso 250,000 to 300,000 kg/year; Soy protein products (probably mostly isolates and concentrates) 40,000,000 kg/year; soy oil 1,700,000 tonnes/year. Europe has a fairly small ethnic population, about 1,000,000 people compared to 3,500,000 in the USA. Europe presently has some 20-25 tempeh companies producing an estimated 400,000 to 500,000 kg/year compared to 900,000 kg/year in the USA. Europe, and especially the Netherlands, are moving ahead quickly with tempeh.

The European food market is more fragmented, diverse, and conservative than its American counterpart. "The European consumer expects freshness and quality as a matter of course, and does not expect to pay a premium for these."

"It is well known that the European healthy foods market is booming. It is part of a much wider social trend which involves ecology and politics, real environmental concerns, alternative medicine and coping with unemployment, an aging population, and a minimum growth economy. It places emphasis on quality of life, individualism and cooperation. It does not exclude any age group.

"Soyfoods will increasingly find a place in our daily diets, but not without significant changes in the existing soyfoods industry, with above all greater attention to product quality and product marketing."

Appendix 1 (p. B-12) lists 9 U.S. "suppliers of food-grade soybeans in small quantities suitable for" tofu manufacturers.

Pages B15 to B32 contain numerous other tables, 8 of them reprinted without permission from *Soyfoods Industry and Market: Directory and Databook,* by Shurtleff & Aoyagi. Address: American Soybean Assoc., Centre International Rogier, Bte 521, 1000 Brussels, Belgium.

4376. Mwangi, -. 1984. The Jamaica nutrition project. *Yard Roots Reports* (*Oakland, California*). Sept. p. 4-5.
• ***Summary:*** The author is working to raise $100,000 to develop a soy dairy in Jamaica to make tofu, soy-burgers, tempeh, soy milk, ice cream, mayonnaise and other products from soy beans. The Afrobean Foundation in Kingston is also interested in this idea. Two groups in Jamaica will find soy products useful in their diet. First, the more than 100,000 Rastafarians, most of whom are attempting to pursue a vegetarian diet. Second, Jamaicans of Chinese descent who have traditionally used soy products. "Most of the imported soybeans today are mainly used for making oil and for poultry and pig feed." Readers are asked to send donations to Caribbean Media and Community Resources, Inc. in Oakland, California. Address: Caribbean Media and Community Resources, Inc., 314 17th Street #188, Oakland, California 94612. Phone: (415) 536-3031.

4377. Ramsey, Harold A. 1984. Protein and amino acid nutrition in calves. In: 45th Minnesota Nutrition Conference. St. Paul, Minnesota: Minnesota Agricultural Extension Service. See p. 7-12. Held 17-18 Sept. 1984. [9 ref]
• ***Summary:*** Contents: Non-milk protein in milk replacers. Amino acid requirements of preruminant calves. Amino acid supplementation of milk replacers.

"The first attempt to use non-milk protein in the diet of the preruminant calf was reported nearly 50 years ago. Since then, especially during the past two decades, a great variety of non-milk products have been tested experimentally (Table 1). Of these, only two are being used presently in substantial amounts by the milk replacer industry: soy flour and soy protein concentrate. Soy flour and soy protein concentrate, though used for many years as milk replacer ingredients, are not utilized as effectively by the preruminant calf as they are by other animals. These products usually contain anti-nutritional factors (antigens and trypsin inhibitor) to which the calf is uncommonly sensitive." Address: Dep. of Animal Science, North Carolina State Univ.

4378. Vandemoortele, Philippe. 1984. Soya milk and soya drink: The outlook for European and other markets. In: American Soybean Assoc., ed. 1984. First European Soyfoods Workshop, Proceedings. Brussels, Belgium: ASA. 131 p. See p. D1-D7. Held Sept. 27-28 at Amsterdam, Netherlands.
• ***Summary:*** Contents: 1. Introduction. 2. Traditional soya bean milk. 3. Isolate based soya milk. 4. Dairy-like soya milk. 5. Markets outside Europe: Third world, Far East market. 6. The European soya milk market: Product and costs, marketing and sales. 7. Alpro. 8. Conclusion.

"Alpro, a subsidiary of the Vandemoortele Group,

started 10 years ago with intensive research on soya milk products. Today, Alpro is the only major soya milk producer in Europe. Production started in 1978. Step by step, Alpro has covered different European markets. Alpro soya milk is not only sold in health food shops, but is also available in drugstores, chemist's shops and supermarkets. Different products and packages have been developed for each market. Alpro soya milk is based on a world exclusive process that provides the best flavor and eliminates the sugars which cause flatulence. It is also the only process that doesn't use any chemicals but just water and heat. Alpro is starting up a new soya milk plant in Ghent with a capacity of 40 million liters/year." Address: Alpro, Zuidkaai 33, B-8700 Izegem, Belgium.

4379. Westbrae Natural Foods. 1984. Westbrae Natural Malted's: Vanilla, Carob, Cocoa-Mint (Ad). *East West Journal.* Sept. Inside front cover.
• ***Summary:*** A full-page color ad (see next page). "Thick and rich non-dairy soy delights. 'Did you make this out of ice-cream?' Ryan Garvy, age 7. All the fun, half the fat of milk shakes. No refined sugar, no preservatives, no cholesterol."

This ad also appeared in *Natural Foods Merchandiser* (Oct. p. 19).

4380. *Yard Roots Reports* (*Oakland, California*). 1984. Plenty in Jamaica. Sept. p. 6-7.
• ***Summary:*** In the summer of 1982 the author (whose name is not given) went to Jamaica armed with a package of information on soy beans. "My dream then was to develop a soy-dairy in St. Ann's Bay, Jamaica, to produce tofu, soy milk, and ice bean [soymilk ice cream]." There was little interest among Jamaican Rastafarians (Rastas).

After returning to California, in March 1984 he met David and Joan Dixon of Oakland, California. They told him about Plenty, a relief organization run by The Farm in Tennessee, and their work with Plenty to introduce soyfoods to Jamaica. Plenty is now attempting to establish a soy dairy in the rural town of St. Ann's Bay. Plenty has tried to grow soybeans on the old Richmond Landowvery sugar estate but without much success. Joan has done soybean cookery demonstrations. Address: Caribbean Media and Community Resources, Inc., 314 17th Street #188, Oakland, California 94612. Phone: (415) 536-3031.

Address: Tokyo.

4382. *Toyo Shinpo* (*Soyfoods News*). 1984. Nomu kara taberu e. Tônyû-kei shokuhin [From beverage to soymilk-based foods. The once explosive soymilk boom has slowed but soymilk- or soy protein-based foods are rising. This new soymilk market is very active]. Oct. 21. p. 20. [Jap]

4383. Yoshimura, Sam. 1984. Re: Update on work with soyfoods. Letter to William Shurtleff at Soyfoods Center, Oct. 21–in reply to inquiry. 1 p.
• ***Summary:*** Shurtleff writes: "I just read a little blurb about you, written by your wife, that was in the *Madison Survey.* It indicated that you were now in Canada and again making soyfoods. Could I ask a few questions for use in the Adventist chapter of our history book?

1. What is your present address and postal code. Ans: See above.

2. When did you leave Worthington Foods? Ans: Sept. 30, 1981 (Retired).

3. Could you please tell me a little about your new business? When did you start selling products? Are you working alone or with another company? What products do you make? Can you send me some descriptive or promotional literature on your products?

Ans: "Name of company: MGM Brans. I am a technical consultant of the above company. We started selling products in January 1982.

"Our main product is meat analogs–franks, sausages, sandwich slices, chicken nuggets & burgers. Currently we are developing tofu-based meat alternates [alternatives] & other products."

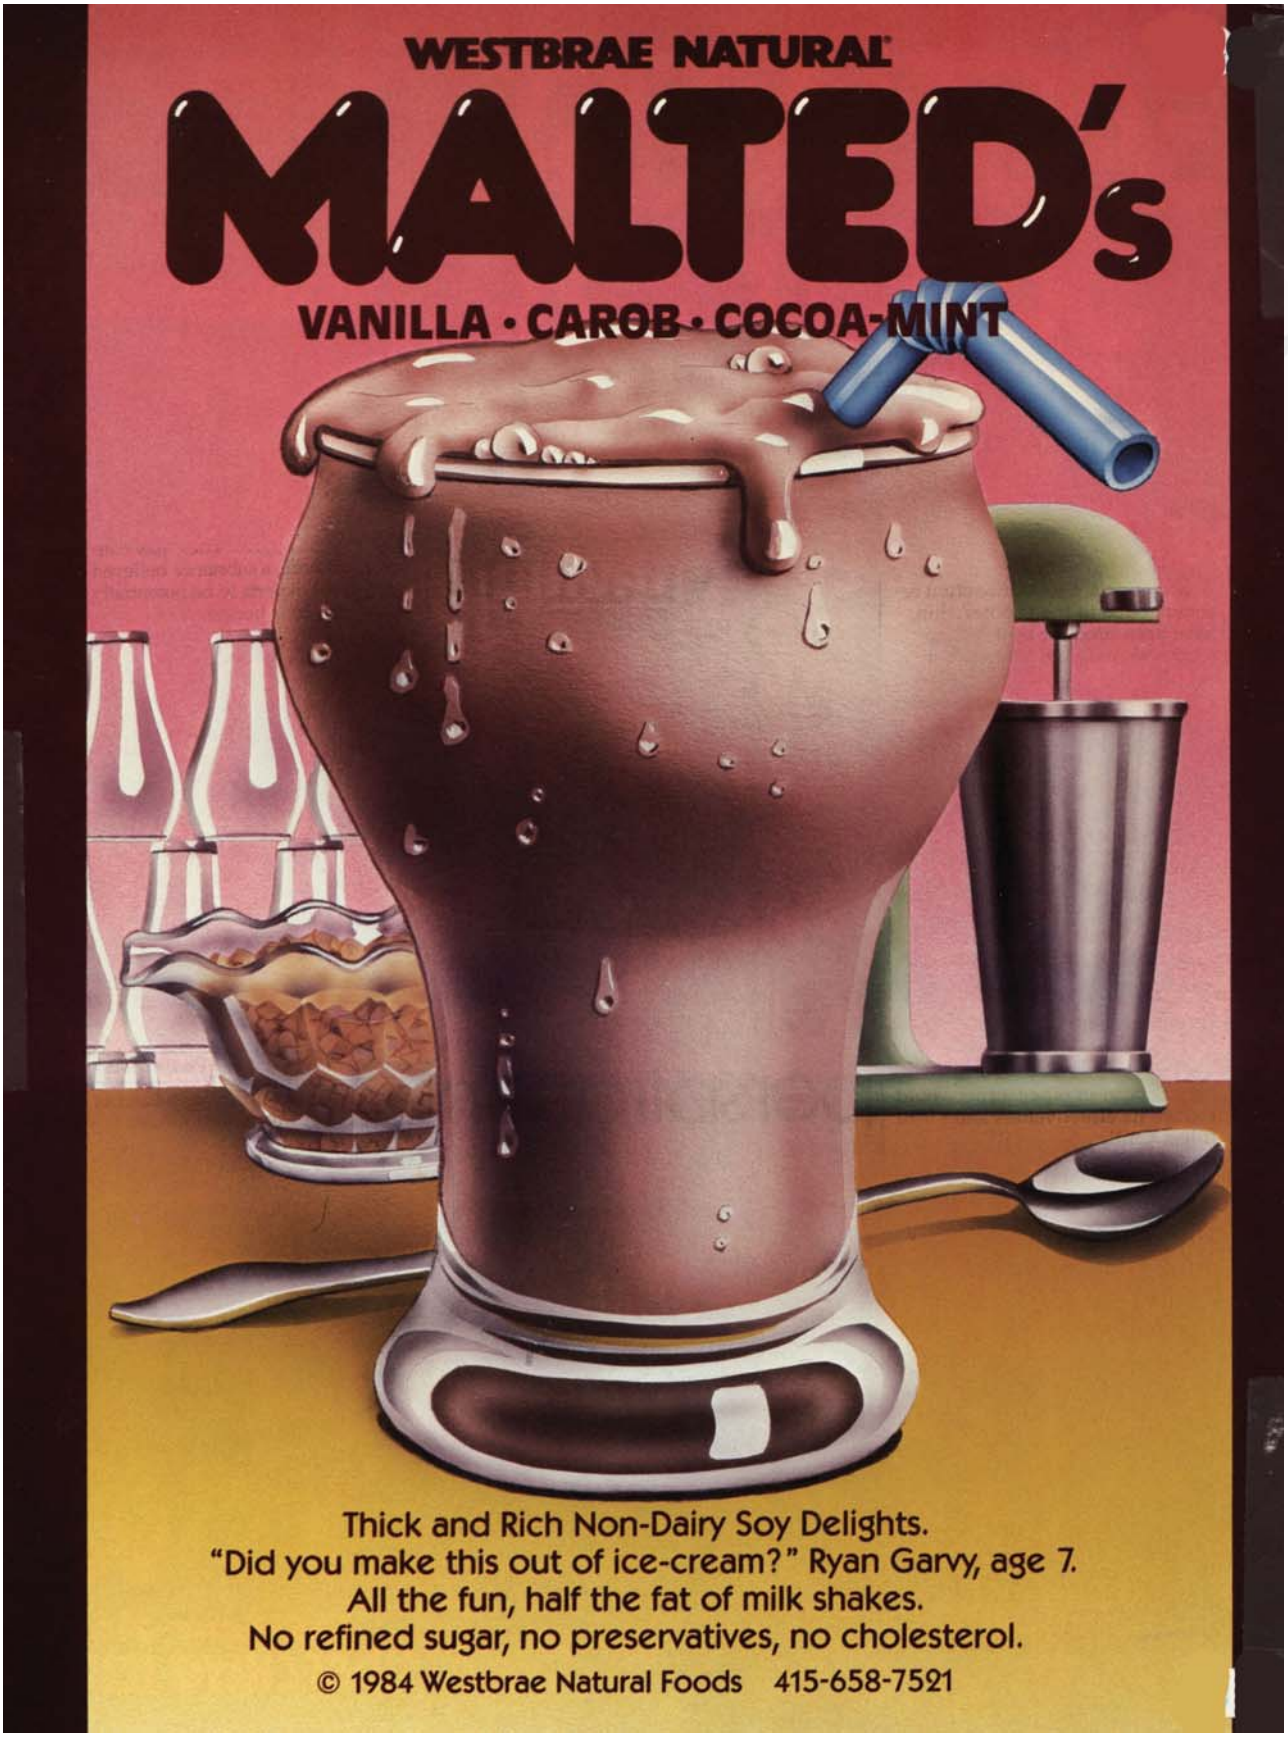
Note: Sam does not send any labels or descriptive literature. Address: Home: 19 Masedale Cres., Willowdale, ONT M2J 3A3 Canada; Plant: MGM Brans, 59-F Howden Rd., Scarborough, ONT M1R 3C7. Phone: 416-473-9254 or 416-752-6600.

4384. Barber, Linda; Lampert, Junko. 1984. The tofu gourmet. Tokyo: Shufunotomo Co. 129 p. Oct. Illust. Index. 27 cm. [Eng]
• ***Summary:*** A beautiful book, packed with superb color photos. Contents. Preface. Preparing, buying, and storing tofu. Recipes–1. Dips, sauces, main dishes. 2. Desserts. On the inside back dust jacket are biographies of Linda Lee Barber and Junko Lampert.

The color dust jacket of the first printing (1984) shows sculpted green kiwis atop a refrigerator tofu cheesecake, whereas that of the second printing (1989) shows a layered "Man's cake" topped with delicate alfalfa sprouts, thinly sliced red radishes, and slivered carrots.

The book was published in London, England in 1986 by Portland House/Windward. Address: Japan.

4385. *Food Engineering.* 1984. Marketplace: Soy drink offers a challenge to soft drinks. Oct. p. 38.
• ***Summary:*** Vitasoy, a soymilk product made by Hong Kong Soya Bean Products Co. in Hong Kong, has recently entered into California test markets. It is available in



natural, chocolate, and coconut, and is geared toward health-conscious Americans. The beverage contains no cholesterol, lactose, salt, preservatives, or refined sugars. Hilton Tsui, Vice president of marketing for Vitasoy, says the drink is a healthy alternative to other drinks.

In June 1984 distribution began to 200 retail stores in San Francisco. It is now being distributed in Southern California and will reach nationwide towards year end.

4386. *Trinidad and Tobago Review.* 1984. The "noble bean" in the Caribbean. Oct. p. 27.
• ***Summary:*** "On the main road about 1 mile south of the heart of Roseau between Dominica's western slopes and the shoreline is the Plenty Canada Soya Shop (a photo of which is shown). After only a week opening in Newtown, this unusual take-away outlet sells out of accras and [soy] ice-cream nearly every day." Each morning the staff prepares batches of soyamilk. which is "used to make ice-cream and Tofu (soyabean cheese) and some is reserved to be sold as milk while the presscake [okara] is combined with tofu, wholewheat flour and seasonings to prepare the delicious and popular fried accras. The shop opens at one o'clock and serves a steady stream of customers until eight, unless stocks run out."

Note. This is the earliest English-language document seen (June 2013) that uses the word "presscake" to refer to tofu.

Plenty Canada's representatives arrived on Dominica in response to requests from local people. "With the co-operation of the government they have demonstrated simple home-scale soyafoods preparation in local areas and conducted soyabean seed trials. The initial interest in soyafoods was enough to encourage them to set up shop in central Roseau, grinding the beans at first by hand in a cocoa mill. As the business grew they needed more production space and more contact with local people on a 'grass roots' level as the shop was intended primarily as a training situation. Since the move to Newtown a Dominican couple are planning to re-open the original premises as a second soya shop, Creole-style.

"Plenty's soya project is staffed by three volunteers from Canada and the USA, who receive only subsistence, and five wage-earning Dominicans who are learning to manage the shop. They have requests for soya shops in other parts of the island...

"Plenty brought in an initial supply of soyabeans from North America and are now supplying seed to two groups of local farmers who are keen to grow for the shop... The shop is beginning production of Tempeh, a cultured soya food from Indonesia."

Note: This is the earliest English-language document seen (Aug. 2002) that uses the term "Noble Bean" in the title to refer to the soybean.

4387. **Product Name:** Westbrae Natural Malted's [Carob Malted, Vanilla Malted, Cocoa-Mint Malted, Almond Malted, or Caffeine-free Java Malted].
Manufacturer's Name: Westbrae Natural Foods (Importer). Made in Japan by San-iku Foods.
Manufacturer's Address: 4240 Hollis St., Emeryville, CA 94608. Phone: (415) 658-7521.
Date of Introduction: 1984. October.
Ingredients: Cocoa-Mint: Soybeans, malted barley, expeller-pressed corn oil (less than 5%), cocoa, sea salt, peppermint.
Wt/Vol., Packaging, Price: 6 fluid oz.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Cocoa-Mint: Per 6 oz.: Calories 250, protein 6 gm, carbohydrate 50 gm, fat 3 gm. Carob: Calories 230, carbohydrate 44 gm. Vanilla: Calories 250, carbohydrate 46, fat 5 gm.
New Product–Documentation: This is soymilk with a thick and rich milk shake-like consistency. Ad in East West Journal. 1984. Sept. Inside front cover. "Westbrae Natural Malted's. [Note spelling, with apostrophe]. Vanilla, Carob, Cocoa-Mint. Thick and rich non-dairy soy delights. 'Did you make this out of ice-cream?' Ryan Garvy, age 7. All the fun, half the fat of milk shakes. No refined sugar, no preservatives, no cholesterol."

Labels. 1984. 4 by 6.25 inches. Plastic retort pouches. Brown, yellow, white. Cocoa-Mint on mint green background. Carob on cherry background. Vanilla on orange background. All have soda fountain picture with glass of malted with straw. "Shake well. Serve chilled. No refined sugar or cholesterol. No preservatives." Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Shurtleff & Aoyagi. 1984. Soymilk Industry and Market, Update. Thick soymilk from whole soybeans (no soy protein isolates) plus malt and 2.65% oil are used to give this product its thickness. Sales of Westsoy and Malteds for 1984 were roughly $700,000 or 1.67 million units at $0.42 each FOB.

Ad (8½ by 11 inches) in Natural Foods Merchandiser. 1985. May. p. 26. "Afternoon Delight." "15% off. On special now." "For a great afternoon treat for the kids (or even the young at heart) try New Morning Honey Grahams and Westbrae Natural Malteds!"

Natural Foods Merchandiser. 1985. May. p. 48-49. Gold medal in 6th annual merchandising contest. Poster. 1986. June. "The Cadillac of Soydrinks." Talk with Martin Roth. 1989. Aug. 17. "Gordon Bennett gave me the assignment to develop a soymilk product for Westbrae. He recognized that Westbrae had already missed the boat on soy drinks, with Edensoy, Vitasoy, Ah Soy, and Health Valley already on the market. I said 'Great. How can you make a soy drink that isn't a soy drink.' Then the Malteds idea flashed into my mind, and I said 'Maybe we can do a thicker, richer, creamy one and make it a dessert.' I designed the graphic idea and

developed the name and formula."

As of about Feb. 1995 this product was made by Cathay Industrial, owned by John Yamauchi, in Los Angeles. Prior to that, it was made by House Foods & Yamauchi in Los Angeles.

4388. Photograph of Kanji Tsuchiya at Soyfoods Center in Lafayette, California, 1984.

• ***Summary:*** Kanji Tsuchiya, soymilk expert and author, visited Soyfoods Center on 10 Nov. 1984 to talk about soymilk. A color photo shows him (left; see next page) standing in the upstairs office, in front of bookshelves, with William Shurtleff.

4389. *Egyptian Gazette.* 1984. Nutritive drinks from oil seeds. Nov. 20. p. 2.

• ***Summary:*** "Scientists of the National Research Centre have succeeded in preparing new drinks from oil seeds which are rich in nutritive value such as, soya bean and sunflower.

"The drinks which have been under experiment during the past three years are distinguished by their high nutritive value of proteins, said Dr Samih el-Noqrashi, researcher at the centre.

"The experiments have been conducted within the context of attempts to find new protein resources, as the per capita share of animal protein in Egypt does not exceed 12 per day, an amount which is insufficient [sic] for the body's needs.

"The drinks have natural and nutritive characteristics which surpass those found in similar drinks, said Dr el-Noqrashi."

4390. Chandler, Michele. 1984. Soybeans had an early friend in Henry Ford. *Detroit Free Press.* Nov. 22. p. 2A. Wayne Central.

• ***Summary:*** Four decades before Tofutti and other types of "soybean ice cream became the latest fashionable East Coast rage, auto magnate Henry Ford was dishing it up to his blue collar Rouge Plant workers. Ford, who rarely ate meat and had an interest in ways to promote more healthful foods, wasn't just a wizard when it came to designing cars.

"During his experiments with soybeans in the 1940s, when he was in his 70s, he devised whole meals made with the beans, which still grow on 350 acres of Ford property

on Dearborn, just north of the Ford Motor Co.'s World Headquarters. Lester Twork, a Dearborn resident who taught job skills to residents at Ford's apprentice school after World War II, well remembers Ford's soybean lunches. 'Mr. Ford would make a point of saying we were having a soybean meal that day. Everything would be made out of soybeans–soybean milk, soybean whipped cream, soybean ice cream, soybean biscuits, a soybean mixture fried like hamburger,' said Twork, now a volunteer at the Henry Ford Estate–Fair Lane.

"'I remember that once, Henry Ford was in line just ahead of me when people were being served cafeteria-style, with large, stainless steel trays with many compartments. He picked up some of the biscuits and turned around and told me they were quite good. I just nodded...'

"Soybeans were planted on 350 acres of Ford Motor Land Development Co.–owned land near the intersection of Ford Road and the Southfield Expressway... The current soybean farmer is none other than Mickey Redmond, the former Detroit Red Wings hockey player who now broadcasts hockey games for the Canadian Broadcasting Co."

4391. *New Chronicle. The Conscience of the Nation* (*Dominica, West Indies*). 1984. Soy foods available. Nov. 30.
• ***Summary:*** Today Nathalie Andrew is opening "Soy Kweyol," a take away health oriented catering service in the heart of Roseau, Dominica. All of her foods are made from soybeans, and are homemade. A photo shows Nathalie serving a beverage from her shop window. "Soy beans, it has been discovered, can now be grown locally. Farmers in areas like La Plaine have successfully produced their first crop of beans and have already begun preparations for planting a second crop. The seeds which take three months to grow can be obtained from the 'Plenty' Office in Victoria Street, New Town." Address: Dominica.

4392. **Product Name:** [Alpro Soya Dessert (Chocolate, or Vanilla)].
Foreign Name: Alpro Soya Dessert (Choco, Vanille).
Manufacturer's Name: Alpro N.V.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1984. November.
Wt/Vol., Packaging, Price: 500 cc or 1000 cc Tetra Brik Aseptic cartons.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Chocolate. Per 100 gm.: Protein 3.0 gm, fat 1.7 gm, carbohydrates 15.5 gm, calories 89, calcium 20, cholesterol 0, lactose 0.
New Product–Documentation: Color photo on cover of *Journal of the American Oil Chemists' Society.* Dec. 1984, and on page 1785 of the same issue. On the front panel is an illustration (line drawing) of v-shaped glass of chocolate soya pudding in a silhouetted field of soybeans in front of an orange sun. A seal on the right side says, in Dutch, "Vegetal. 100% Plantaardig" (Non-dairy, 100% from plants). Soya Bluebook. 1987. p. 98.

Leaflet (8.5 by 11 inches, color, in French). 1989. Alpro: La force végétale du soja (Alpro: The plant power of soya). The front panel has a color photo of 4 varieties of Alpro Soya Drinks (plain, enriched with calcium, without added sugar or salt, chocolate) and 2 Alpro Soya Desserts (vanilla and chocolate). The text reads: 100% natural. 100% from plants (végétal). No cholesterol. No lactose. Rich in vegetable protein. The back gives packaging and shipping information and a nutritional analysis of the 6 products. Sold in France by Distriborg, Division Alpro France, Chemin du Grand Revoyet, F-69230 Saint-Génis-Laval. Phone: 72.39.94.25.

Form filled out by Alpro. 1990. May 30. Alpro began making this product (in chocolate and vanilla flavors) in Nov. 1984 in 500 ml cartons.

4393. Bates, Cynthia. 1984. Re: History of The Farm's work with tempeh. Letter to William Shurtleff at Soyfoods Center, undated. 3 p.
• ***Summary:*** "At long last, here are the last of the changes–none of them too radical."

Note: For our complete history of The Farm's pioneering work with tempeh please see: *History of Tempeh, a Fermented Soyfood from Indonesia,* by Shurtleff and Aoyagi (1985, p. 42-46). Address: The Tempeh Lab., P.O. Box 208, Summertown, Tennessee 38483. Phone: 615/964-2286.

4394. *Food Engineering.* 1984. 30 million people can now enjoy lactose-reduced foods. 56(11):80-81. Nov.
• ***Summary:*** Subtitle: "Whether for health, dietary, or religious reasons, there's a vast market in America for

lactose-reduced foods as well as substitute products."

Since the enzyme lactase became commercially available 7 years ago, "lactose hydrolysis has become the wave of the future in processing dairy products for the lactose-intolerant consumer."

In all its forms, lactose intolerance affects an estimated 30 million Americans. Soymilks include Vitasoy (color photo shown) and Health Valley Soy Moo (which has been on the market for over 6 years). Ice creams include Tofutti (which was discovered in 1981 by David Mintz). Entrees include Legume Cannelloni Florentine (color photo shown).

4395. **Product Name:** Grainwave Amasake (Creamy Pudding-like Dessert, not a Drink) [Natural, Strawberry, Blueberry, Hazelnut], and Seitan.
Manufacturer's Name: Grain Waves.
Manufacturer's Address: 6726 West Coast Rd., Sooke, BC, V0S 1N0, Canada. Phone: 604-642-4424.
Date of Introduction: 1984. November.
Wt/Vol., Packaging, Price: Originally in 175 gm yogurt cup. From 1987 in 1 lb stand-up vacuum pack pouch; Retails for $3.00 Canadian.
How Stored: Refrigerated.
New Product–Documentation: Letter from Frank Marrero/ Allen of Grainaissance. 1987. Dec. 21. Andy Cunningham started the amazake production in Vancouver, and is the key person now in Victoria. His primary influence was macrobiotic. He studied at the Kushi Institute/East West Center in London, England. He makes his own koji and makes a creamy pudding-like dessert, rather than a drink. For a long time he served amazake in yogurt cups (thick); now it is sold in aseptic pouches. He also makes mochi, seitan, and unyeasted bread.

Talk with Andy Cunningham. 1988. Feb. 26. He is British and wife Canadian. He knows of no one in Canada who made amazake before he did, nor anyone else who is making it now. He is in the process of selling the business, hopefully to Sooke Soy Foods in the same town of Sooke. His home is at 5654 Woodlands Rd., R.R. 1, Sooke, BC, V0S 1N0. Canada. He is burned out; hasn't made any money and worked long hours. Never had the money to invest to make the process efficient. His average sales are now 360 lb (43.6 gallons) a week. Good weeks are twice that.

4396. Hillyer, Gregg. 1984. Turkey: A new market arises [for soybeans]. *Soybean Digest.* Nov. p. 29-31.
• ***Summary:*** Turkey's poultry industry is growing rapidly. "Within 5 years it is estimated that Turkish broil numbers will increase from the present 60 million to about 150 to 200 million per year." There are now large, modern poultry farms. Turkey's poultry industry currently feeds 40,000 metric tons (mt) of soybean meal annually... but needs at least an additional 55,000 mt just to meet demand.

Dennis Blankenship "points out that the average fed conversion ratio in the Turkish poultry industry is about 3 to 1. That compares with 2 to 1 and better in the U.S.

Turkey's great ambition is to increase livestock production. "The groundwork has already started on the first link in a trade bridge between the U.S. and Turkey. (1) The U.S. has granted Turkey $85.5 million in GSM-5 direct credits for purchases of U.S. agricultural commodities, including $16.5 million for U.S. soybeans and/or meal." (2) The Turkish government has lifted a law that prohibited importing soybeans and soybean meal into the country, and reduced the grossly large $400 a ton import surcharge on soybean meal down to $10. The surcharge on whole soybeans was reduced to $4 per ton. However a Turkish law still prohibits Turkish crushers from exporting soybean meal (SBM).

Ozdemir Ali Yarar's company in Istanbul is known throughout Turkey for its powdered soft drink mix, Lezzo. Now he's test marketing soy-enriched yogurt, 100% soymilk, and soy-fortified Bulgur.

In 1982 Turkey produced about 40,000 tons of soybeans, about half of which grew in the fertile Cukarova Valley in southern Turkey as a double crop. Nine color photos show scenes in Turkey related to soy.

• ***Summary:*** He first expresses his deepest grief and agony over the shocking death of Mrs. Indira Gandhi, prime minister of India who was assassinated on 13 Oct. 1984.

Orders have been placed for establishing an Edible Soya flour plant. "The products from this plant will cater to industries covering biscuits, protein isolates and concentrates, soya milk, etc."

The company is now a major exporter of Soyabean Meal from Kandla port.

A portrait photo shows Mr. Abhey Oswal. The company's sideways leaf logo is in the lower right corner.

4404. Bisalski, Ed. 1984. Soy ice cream and soymilk at Madison College (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 30. 1 p. transcript.
• ***Summary:*** He never made ice cream himself. Harold M. "Pop" Mathews (he was a staff worker, not a teacher, in charge of the cannery where they canned fruits and vegetables) made the first ice cream. He is quite sure of that. In the cannery they first made soymilk, introduced by Dr. P.A. Webber. But a Japanese boy (a student) named Sam Yoshimura and Dr. Perry A. Webber, then Philip S. Chen, a teacher and native of China, brought soymilk to Madison–he thinks, but is not sure. Pop Mathews' daughter still lives at Madison; Dorothy Mathews.

They never marketed the ice cream–never sold it off campus. Ed ate it often. They made 5-10 gallons at a time, from soymilk. Flavors: No chocolate was used since its a stimulant; most was vanilla. It was served scooped in the dining hall and one could also get it from the soy dairy; just bring own dish and eat it on the spot. It was very popular on campus. He first went to Madison in June 1931; they were not making it then. He took over management of the food factory in Sept. 1933. But a Madison article said Jan 1932 ice cream was made.

Milk was first made in cannery, then about 1934-35, brought over to the food factory; they homogenized it and sold it commercially. Address: 3123 E. Miller Rd., Bancroft, Michigan 48414. Phone: 517-634-5203.

4405. Yoshimura, Sam. 1984. Soy ice cream and soymilk at Madison College (Interview). *SoyaScan Notes.* Dec. 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Sam arrived at Madison College, Tennessee, in 1937. In about 1940 Mr. Shiro Kunihara, a student from Japan like Sam, made soymilk at Madison and Sam thinks he also made a soy ice cream, working with Harold M. "Pop" Mathews. Both the soymilk and the ice cream were served in the school dining hall when Sam was there. The ice cream was also served in the cafeteria. Mr. Kunihara is retired from Loma Linda University. Address: 8200 Colonial Meadows, Westerville, Ohio 43081. Phone: 614-882-0625.

4406. *SoyaScan Notes.* 1984. Chronology of soybeans, soyfoods and natural foods in the United States 1984 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. A highly influential 10-year, $150 million study released by the National Heart, Lung, and Blood Institute in Washington, D.C. proves for the first time a direct relationship between high blood cholesterol and the risk of heart attack, the nation's number one killer.

Jan. Legume, Inc. launches an all-natural line of cholesterol-free low-calorie Italian and international gourmet tofu-based frozen entrees in stylish full-color packages: Tofu Tetrazzini, Cannelloni Florentine, Vegetable Lasagna, Tofu Bourguignon, Sesame Ginger Stir-fry, Stuffed Shells Provencale, Tofu Manicotti, and Tofu Lasagna. Jan. Eden Foods becomes the sole import agent for Muso Shokuhin in the United States.

Feb. 25. *Soymilk Industry and Market: Worldwide and Country-By-Country Analysis,* by Shurtleff and Aoyagi published by Soyfoods Center. 177 pages, 640 references. $350.

Feb. Marusan-Ai, Japan's second largest soymilk maker and one of the five largest miso makers, starts to

market tempeh. They publish a 27-page tempeh booklet and by May are producing 30 tonnes (66,000 lb.) of tempeh a month, making them the largest tempeh manufacturer in the world. During 1984 at least five Japanese food companies are making tempeh, leading to a mini-boom of this soyfood which was first sold commercially in Japan in 1983.

March 2. Based on responses to his Oct. 1983 survey, Tom Timmins drafts preliminary 3-page tofu standards (2 pages of which are microbiological standards) that he circulates to the Soyfoods Standards Committee, inviting comments. On March 6 Wm. Shurtleff of Soyfoods Center expands these, keys them into the Center's word processor, and returns them to Timmins.

March 2. Problems start between Eden Foods and the U.S. Food and Drug Administration (FDA). FDA sends Eden a strongly worded letter citing eleven claims in Eden's brochures that the agency considers erroneous, including the company's apparent endorsement of Edensoy as an infant formula. FDA asks Eden to recall the brochure in which Edensoy is promoted as "Good for Babies." An infant became ill due to copper deficiency on an Edensoy diet.

March 8. Soyfoods Association of America members have 12 pages of impressive color advertisements and information about soyfoods and the Association in Natural Foods Merchandiser, in preparation for the NFM Anaheim Natural Foods Expo in March. Full-page color ads by Legume, Erewhon shoyu, Vitasoy, San-J, Tofutti, Edensoy, and Pure & Simple soy sauce.

March 11-13. At the Natural Foods Expo at Anaheim, the Soyfoods Association organizes the first Soyfoods Pavilion, a 16-booth cluster of soyfoods companies and products, which is the hit of the Expo and a show of strength for the industry. Lots of delicious free food draws throngs from the 9,000 Expo attendees.

March 11. At Anaheim, Vitasoy launches its first designed-for-America soymilk, in natural, coconut, and chocolate flavors, each sweetened with maple syrup, and imported from Hong Kong. Many subsequent eye-catching, health-oriented full-page color ads are run in national health magazines.

March. American Soybean Association's Belgium Office publishes the first issue of *Soya Foods,* a 6-page newsletter edited by Michael Martin, Protein Market Development Manager. It will be issued three times a year in English, French, Dutch, and Italian. This is a completely new direction for ASA in the Western world... but it doesn't last long.

March 29. First draft of the Tofu Standards, 15 pages double spaced, is compiled by Shurtleff. Timmins allocates $2,000 to retain two Washington, DC, attorneys who are specialists in foods and regulations to assist the committee in developing professional standards. The draft is circulated to 38 people who are asked to respond to a poll on 14 key issues.

March 29. The term "second generation" products is first applied to soyfoods by Wm. Shurtleff in the new tofu standards. A computer-related term indicating one step more advanced, it quickly replaces the term "secondary," which has a slightly negative connotation.

April 7. *Soyfoods Industry and Market: Directory and Databook 1984* (4th ed.) by Shurtleff and Aoyagi published by Soyfoods Center. 215 pages, $95.

April 13. Richard Leviton resigns as co-director of *Soyfoods* magazine and decides to discontinue his active involvement in the U.S. soyfoods movement. He plans to go to England to write a novel about King Arthur; he leaves in late April.

April 20. *Tofu, Tempeh, & Other Soy Delights,* by Camille Cusumano published by Rodale Press. It is widely and positively reviewed by national media.

April 27. The term "soymilk" is legalized for use in Canada, after a lengthy and expensive court battle by Victor Food Products. The court ruled that this is the "common and ordinary term" for the product, used since about 1918 in scientific articles and commerce. Thus it cannot be squelched by dairy interests.

April. New England Soy Dairy, America's largest Caucasian-run tofu manufacturer, changes its name to Tomsun Foods, Inc.

May. *Nutritional Cooking* with Tofu by Christine Liu published by Graphique Publishing in Michigan.

May. American Natural Foods (formed in Jan. 1984 by John Troy, creator of miso-containing Hot Stuff) has a private stock offering that raises $150,000. In October ANF debuts a line mainstream American sauces and seasonings, each featuring miso, that are delicious and beautifully marketed.

May. *Die Tofu Kueche* (The Tofu Kitchen), by Verena Krieger, Swiss soyfoods pioneer, published by Tanner + Staehelin Verlag in Zurich. 171 pages with many photos.

June 7. "Tofu" by Barbara Hansen and "Tofu: Americanization of a Soy Food" by Karen Gillingham published in the *Los Angeles Times.*

June. Landstrom Distributing Co. of San Francisco, files for Chapter XI bankruptcy. Keene Distributors of Texas, and Collegedale of Tennessee, both profitable, well-run companies, are also pulled under, innocent victims of the Landstrom collapse. All three units were owned by Nutritional Foods, Inc. and all were major natural / health foods distributors. These bankruptcies seriously hurt the natural foods industry as well as many individual companies; sales and confidence plummeted nationwide. In late 1984 Fillmore Foods purchased Landstrom, and Balanced Foods purchased Collegedale and Keene.

June. Migros, Switzerland's largest supermarket chain, launches Tofu Nature, its own brand of tofu, made at Conserves Estavayer S.A., with widespread publicity and excellent product information on both tofu and soybeans.

It is marketed together with dairy products and eggs. The launch was considered a great success; supply was not able to catch up with demand until late December.

June. *The Book of Soybeans,* by Tokuji Watanabe and Asako Kishi published by Japan Publications. 191 p.

July. Kikkoman completes its second major shoyu (Japanese-style soy sauce) plant outside Japan, in Singapore. The 18,000 square meter factory, with a capacity of 3,000 kl (792,500 gallons) a year and 40 employees, costs $14 million. It will make shoyu and teriyaki sauce. Official opening ceremony was Nov. 21.

July. The requirement in effect since 1965 that isolated soy protein used as an ingredient in meat and poultry products must contain titanium dioxide as a tracer, is removed from federal meat and poultry products inspection regulations, following a petition by ADM, Grain Processing Corp., and Ralston Purina.

July 9. "Its Trendy, Tasty and Tofutti" (2/3 page) by J.D. Reed published in *Time* magazine (U.S. circulation 4.3 million). Probably the biggest media coverage for tofu in U.S. history. Tofutti hits the big time!

July 17. *History of Tempeh,* by Shurtleff and Aoyagi published by Soyfoods Center. 102 pages, including 375 references. Continued.

4407. *SoyaScan Notes.* 1984. Chronology of soybeans, soyfoods and natural foods in the United States 1984 (Continued–Part II) (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued. July 26. At the NNFA (National Nutritional Foods Association) show in Atlanta, Great Eastern Sun rolls out Ah Soy, its new line of soymilk imported from Saniku Foods in Japan, in vanilla, chocolate, and plain flavors, in foil retort pouches. After the show, the Soyfoods Association board meets. Steve Snyder replaces Michael Austin as director of SAA. The next day, SAA directors Snyder, Burke, and Barat travel to St. Louis to meet with the staff of the American Soybean Association to discuss possible areas of mutual interest. ASA appears friendly and open minded, and offers to discuss specific future joint projects. A potential line of communication is opened.

July 30. *People* magazine (circulation 2.8 million) article on Tofutti titled (ineptly) "A Happy Zealot Turns Curd (Yuck!) into a Creamy Treat."

July. "The Soyfoods Industry: Growing Like a Beanstalk" by B. Bialick published in *Whole Life Times.*

Aug. 9. *Soyfoods* magazine No. 10 (color cover) published by Doug Fiske. 7,000 copies printed at a cost of $11,200. Magazine's focus has been changed from production to marketing of soyfoods. This is the last issue of this pioneering magazine.

Aug. 12-17. World Soybean Research Conference III held at Iowa State University. Heavy emphasis on soybean production and agronomy; relatively little new material on soyfoods. Soyfoods movement is not represented.

Aug. 20. Ralston Purina introduces Checkerboard Farms TenderLean, America's first branded ground beef product consisting of 75% ground lean beef and 25% textured soy protein isolate. Some meat journals are harshly critical and many meat departments refuse to carry it. Ralston withdraws the product.

Aug. 24. Westbrae Natural launches WestSoy Natural, a plain soymilk similar to Ah Soy but lower in price and made with organic ingredients. Imported in a foil pouch from Saniku Foods in Japan, it is the company's first soymilk.

Aug. 31. San-J International Inc. announces that it will construct a soy sauce plant (44,000 square foot, $5 million) in Virginia on a 27-acre site just north of Colonial Heights.

Sept. Chico-san, Inc. introduces unpasteurized miso in a revolutionary "Pressure Release Package," a plastic bag with a one-way valve that allows the escape of the carbon dioxide produced naturally during fermentation.

Sept. 9-14. Gloria Vanderbilt announces that she, in conjunction with Dolly Madison and Frusen Gladje, will launch a tofu ice cream.

Sept. 27-28. First European Soyfoods Workshop held in Amsterdam, The Netherlands, at the Grand Hotel Krasnapolski, organized by the American Soybean Association's Belgium office. ASA reports attendance as 105 people from 14 countries, but participants report a maximum of 50 participants. Talks on tofu, soymilk, tempeh, distribution, and microbiological standards, all later published in the Proceedings. There is a large Expo with soymilk equipment from Alfa-Laval and Soya Technology Systems prominently featured. A very successful event, and another ASA first!

Oct. *The Tofu Gourmet* by Linda Barber and Junko Lampert published by Kodansha in Menlo Park, CA. 129 p. Many color photos.

Oct. 15. "Here Tofutti, There Tofutti," a full-page, very positive article with 2 color photos published in *Newsweek* magazine (circulation 3 million).

Oct. 23. The joint managing directors of the International Food Information Service, owners of Food Science and Technology Abstracts (FSTA, the world's largest, oldest, and most widely used food-related computerized database) visit William Shurtleff at The Soyfoods Center to discuss putting the 6,500 bibliographic records in The Soyfoods Center Library into FSTA, thus making this information available worldwide. Both parties are very interested in the project but technical problems remain to be solved.

Oct. Westbrae Natural Foods launches Malted's, billed as "thick and rich non-dairy soy delights." Marketed like a milkshake and imported from Japan in a foil pouch, they come in three flavors: vanilla, carob, and cocoa-mint.

Oct. Three member team from PLENTY Canada

spends one month in Sri Lanka, funded by the Canadian International Development Agency, studying the country's soyfoods program. They learn, teach, and introduce tofu ice cream.

Nov. 13. A.E. Staley Manufacturing Company, America's oldest existing soybean crusher, announces that its soybean crushing operations are for sale.

Nov. 20. Tofu Time's first Tofutti Shop opens in uptown Manhattan, New York. A fast-food retail outlet with a slick, red-and-white plastic, almost gaudy, decor.

Nov. 16. Chico-san Inc. is purchased by H.J. Heinz Co., largely for its rice cake business.

Nov. 21. After years of searching, William Shurtleff, with help from Nancy Florida in Java, discovers an 1815 reference to tempeh in the *Serat Centini*, from the Court in Solo, Java. This pushes the earliest reference to tempeh back 60 years and has it originating in Indonesian rather than in Dutch culture.

Nov. 30. America's first Tofu Standards are issued by the Soyfoods Association's Tofu Standards Committee, in part to help stem the rising tide of products bearing the name "tofu" that contain little or no tofu.

Nov. Galactina, a Swiss manufacturer of soymilks since 1969 (they make Vita Drink / Enteroform, a soymilk sold to in vanilla, chocolate, and strawberry flavors to the dietetic and pharmaceutical markets for tube feeding), starts test marketing tofu in Swiss supermarkets. Attractive recipe booklet attached to each packet, which is pasteurized for a 6-week shelf life.

Dec. Excellent, 19-page cover story on "Soymilk and Soyfoods," published in the prestigious *Journal of the American Oil Chemists' Society.* 1984 is the Society's 75th anniversary.

Dec. Ralston Purina, in its 1984 annual report, notes: "The Company has entered into preliminary agreement with Cargill, Inc., to sell six of the Company's seven soybean [crushing] plants." It also reported strong, steady growth in sales of soy protein products, from about $98 million in 1980 to $152 million in 1984, for an 11.5% compound annual growth rate (but only 4.5% after adjusting for inflation).

Dec. Gloria Vanderbilt's Glace, a soy-based nondairy ice cream, starts being test marketed in Los Angeles, in nine flavors.

Dec. A poll of readers by *Vegetarian Times* magazine finds that 53.1% of readers used tofu one or more times during the past 7 days; 29.4% used it 3 or more times.

Dec. 31. Brightsong Light Foods in Petaluma, California, receives the first funds of a $500,000 equity investment from a Hong Kong investor, who had seen an article praising Brightsong in Venture magazine. Brightsong greatly expands its product development and promotion.

* American Soybean Assoc. phases out its Human Nutrition Dept., headed for years by Judy Trujillo.

* Chicago Board of Trade starts trading options contracts on soybean futures. Continued.

4408. *SoyaScan Notes.* 1984. Chronology of soybeans, soyfoods and natural foods in the United States 1984 (Continued–Part III) (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued. 1984 New Trends: Growing Awareness of Dangers of Excess Cholesterol and Fat Consumption. Since cholesterol became a public health issue in the mid-1950s, the medical profession has been uncertain about the degree of its dangers, largely due to lack of medical evidence from long-term human studies. Yet for years the American Heart Association, United States Dept. of Agriculture, and the Soyfoods Association have been urging Americans to lower their blood cholesterol levels by eating less of the foods rich in cholesterol and saturated fats. In Jan. 1984 the long-awaited medical evidence was finally released, dramatically and extremely visibly. There were repercussions throughout the entire food and health care industries. The public started to pay serious attention.

Then on March 26 *Time* magazine ran a landmark cover story on the dangers of cholesterol. On 13 December *The New York Times* ran a major front-page report titled "Panel Suggests Many in U.S. Need to Reduce Cholesterol" containing the "the most far-reaching health recommendations yet made on cholesterol and heart disease" by an expert panel, convened by the National Institutes of Health. Numerous prestigious groups lowered their recommended safe cholesterol intake levels. These developments made soyfoods (which, like all non-animal products are free of cholesterol) look better than ever nutritionally, and increased their consumption significantly.

It has been known for several decades that consumption of polyunsaturated fatty acids (such as those found abundantly in soybeans) reduces serum cholesterol. During the 1970s Americans were encouraged to reduce consumption of saturated fats and cholesterol and increase consumption of polyunsaturates. Now this advice is changing. The new message is to "Reduce the intake of dietary fat." All fat, including polyunsaturated. In fact, these very words now appear as the first of four dietary guidelines on the letterhead of the prestigious American Institute for Cancer Research.

Continued Drop in U.S. Beef and Red Meat Consumption. From a high of 94.4 lb per capita in 1976, beef consumption has steadily declined, falling to 77.3 lb in 1982, a drop of 18.1% in only 6 years. During the same period, total red meat consumption (including pork, lamb, mutton and veal) fell from 163.6 lb to 148.0 lb, a drop of 9.5%. Many consumers switched to lower priced, lower cholesterol chicken, which rose from 42.7 to 52.9 lb per capita. Still, total annual U.S. meat and poultry consumption increased by over 4 pounds during his period (Stucker and Parham 1984).

Rise and Decline of the Soyfoods Association. The

Soyfoods Association of America (SAA) got off to a promising start in 1984 with a successful fund raising drive. Then in March, soyfoods companies took 16 adjoining booths to form the Soyfoods Pavilion, capturing the spotlight at the Natural Foods Expo in Anaheim. It looked like the "soyfoods movement" was maturing into the "soyfoods industry." But for the rest of the year the Association was largely inactive. This was disappointment to many, since interest in soyfoods in America had never been higher.

Prior to the founding of SAA in 1983, its active forerunner SANA (Soyfoods Association of North America) had six major ongoing activities: (1) Publication of Soyfoods magazine, a quarterly that actually came out about twice a year; (2) Publication of the monthly Soyfoods Newsletter, a key source of communication within the industry between issues of the magazine; (3) An annual summer Soyfoods Conference and Expo, drawing participants from around the world; (4) Periodic press releases; (5) Writing a steady stream of excellent articles on soyfoods for publication in national magazines; (6) An association phone and mail service to respond to outside enquiries for information.

The person primarily responsible for initiating and carrying out all these activities was Richard Leviton. Though funding was hard to obtain, he worked hard, wasted nothing, and made many personal and financial sacrifices for a cause he believed in. Leviton's many and diverse talents, and especially his talents as a careful researcher and outstanding popular writer, were of tremendous aid to the incipient soyfoods movement. In late April, after 5 years of devoted effort and feeling a bit "burned out," he left the soyfoods movement and moved to England to pursue his long-cherished career as a novelist. Leviton, more than any other person, was responsible for the rapid rise and visibility of the soyfoods movement in America. His departure was a major loss to both the association and the magazine. He and his creative efforts will be sorely missed.

Only the last of the six major activities initiated by Leviton has been continued by the "new" Soyfoods Association. However it did initiate the excellent Soyfoods Pavilion at the annual Natural Foods Expo and it started subscribing to the valuable Luce Clipping Service. There were board meetings in June 1984 and Jan. 1985. By summer of 1984 the Association was looking for a replacement for Executive Director Michael Austin, who was also "burned out." In August he was temporarily replaced by Steve Snyder, former marketing director for Hinode Tofu, but shortly thereafter Snyder was hired as national sales manager by Vitasoy USA. After that there was no executive director. Despite relatively large initial pledges, the Association's balance was always low which meant that, lacking Leviton, activity largely came to a stop. The only significant new activity was the development of tofu standards by the Association's Standards Committee.

Unlike the original Soyfoods Association, the "new" one took little interest in small soyfoods companies, arguing that they had no money. The "new" association was therefore composed mainly of larger companies with regional or national distribution and not truly representative of the industry.

Rapid Rise in Soymilk Imports. The boom in soymilk imports, started during the past two years by Vitasoy and Edensoy, accelerated during 1984. New products included Vitasoy's new American flavors, Westbrae Natural's Malteds, and Great Eastern Sun's Ah Soy. All three were very widely advertised in eye-catching color ads. Most of the adult soymilk beverages sold in America are still imported from Japan. Strangely this dramatic development has gone largely unnoticed by the media, which has been focusing its attention on Tofutti.

Two new companies and products were mentioned only briefly by Shurtleff and Aoyagi in their two-volume book *Soymilk Industry and Market: Worldwide and Country-by-Country Analysis,* published in Feb. 1984. The first of these was Westbrae's Malteds and Westsoy. Although Westsoy was launched in August and Malteds in October, sales of both for 1984 were roughly $700,000 or 1.67 million units. They quickly became the best-selling products in the company's history.

From late July when Great Eastern Sun launched Ah Soy, the product was a "fantastic success." During the period from 1 Nov. 1984 to 25 Jan. 1985 (just under one fiscal quarter) 525,000 unit packs of four flavors were sold. By March 1985 Ah Soy accounted for 15-20% of GES's total sales.

Big Food Companies Increasingly Interested in Tofu. Those studying tofu for use in foods include Quaker Oats, CPC International, International Multifoods in Minneapolis, Pillsbury, and Campbell's Soup.

4409. Alfa-Laval. 1984. Alfa-Laval presents new soy processing technology (Ad). In: William Shurtleff and A. Aoyagi. 1984. Tofu & Soymilk Production. Lafayette, CA: Soyfoods Center. 344 p. See p. 339.
Address: Alfa-Laval Food & Dairy Engineering, Box 1008, S-221 03 Lund, Sweden.

4410. Cant, A.J. 1984. Diet and the prevention of childhood allergic disease. *Human Nutrition: Applied Nutrition* (*London*) 38A(6):455-68. Dec. [54* ref]
• ***Summary:*** Breast feeding may be protective against childhood allergic disease, but soya formula and nutritionally inadequate goat's milk are not. Note: AFRC stands for "Agriculture and Food Research Council." Address: AFRC/MRC Training Fellow in Clinical Nutrition, Dep. of Child Health, St. Georges Hospital Medical School, Cranmer Terrace, London SW17 ORE, UK.

4411. **Product Name:** Pureharvest Organic Soy Drink

[Natural, Vanilla, Barley Malt plus Other Flavors].
Manufacturer's Name: Ceres Natural Foods Pty. Ltd. (Importer & Distributor). Made in Japan.
Manufacturer's Address: East Bentleigh, Victoria, Australia.
Date of Introduction: 1984. December.
Wt/Vol., Packaging, Price: 500 ml Doypack stand-up retort pouch.
How Stored: Refrigerate after opening.
New Product–Documentation: Australian Dairy Foods. 1985. Feb. p. 51. "Soy report." Over the past year sales have increased greatly. Also distributing Morinaga Tofu. Don Lazzaro is director of this company.

STS. 1985. Containers for Soymilk. Shows color photo of package. Brown, yellow, and orange.

Australian Dairy Foods. 1986. Feb. p. 84. Shows two sizes of Tetra Brik cartons, each vanilla flavor.

Letter (fax) from Don Lazzaro of Ceres Natural Foods. 1995. June 15. In Dec. 1984 they introduced Pureharvest soymilk in vanilla and natural flavors, in 500 ml Tetra Brik cartons, made by and imported from Kibun in Japan.

Letter (fax) from Daniel Hannaford of Ceres Natural Foods Pty. Ltd. The company's brand is Pureharvest. They apparently import soymilk from Mitoku. The address is now 18 Ardena Court, P.O. Box 187, East Bentleigh, Victoria 3165, Australia. Phone: (03) 579 3422.

4412. *J. of the American Oil Chemists' Society.* 1984. Soymilk processing: How manufacturers try to reach Western market. 61(12):1794. Dec.
• ***Summary:*** Mainly about the work of Alfa-Laval and STS.

4413. *J. of the American Oil Chemists' Society.* 1984. Soymilk: New processing, packaging expand markets. 61(12):1784-93. Dec.

4414. *J. of the American Oil Chemists' Society.* 1984. Soymilk packaging: Aseptic packaging spurs increased sales. 61(12):1796. Dec.
• ***Summary:*** "The advent in 1969 of the brick shaped Tetra Brik Aseptic carton was a milestone for soymilk's commercialization. The effects were immediate, lasting, and are continuing... Since the late 1970s aseptic containers have dominated soymilk packaging."

4415. *J. of the American Oil Chemists' Society.* 1984. Soyfoods used in anti-hunger programs. 61(12):1807-08. Dec.
• ***Summary:*** Poor people want to eat what rich people eat. Focuses on the work of INTSOY, especially in Sri Lanka, Costa Rica, India, and Peru. Work in Mexico with Soyaven is also mentioned.

4416. *J. of the American Oil Chemists' Society.* 1984. Soymilk worldwide: Shurtleff, Aoyagi chronicle soymilk industry. 61(12):1798, 1800. Dec. [1 ref]
• ***Summary:*** A summary and review of *Soymilk Industry and Market: Worldwide and Country by Country Analysis* by Shurtleff and Aoyagi.

4417. *J. of the American Oil Chemists' Society.* 1984. Soyfoods entering mainstream U.S. diet. 61(12):1800-02, 1804. Dec. [1 ref]
• ***Summary:*** One relegated mainly to small natural foods outlets, soyfoods are now found in regular supermarket chains throughout the USA. The most widely available are soy sauce and tofu. Contains a discussion of the soyfoods market in the USA. One of the most popular new products is Tofutti, a non-dairy frozen dessert.

4418. Kotzsch, Ronald E. 1984. Made in Japan–naturally: Natural foods from the Muso Company are popular worldwide. *East West Journal.* Dec. p. 14-21.
• ***Summary:*** "Muso was founded in 1966 as a macrobiotic food company, aiming to provide the highest quality traditional Japanese foods. It is now the oldest and largest macrobiotic food concern in Japan. Within the natural foods movement in the country it is one of the top three firms. Also, since 1969, it has been a major exporter of macrobiotic foods. With its Tokyo-based competitors the Mitoku Company and Ohsawa Japan, it dominates the large and growing international trade in Japanese foods."

Shuzo Okada, one of George Ohsawa's earliest and most devoted disciples, was the son of a family of Osaka textile merchants. After Ohsawa's death in 1966, Okada invested $3,000 to establish Muso Shokuhin in Osaka, with his eldest son Teizo as director. Yuko Okada, the second eldest Okada son, was head of the export division; he had spent 6 years living in Boston, mostly working for Erewhon. Initially the company was located in Fukusenji, a dilapidated Buddhist temple.

Today "the company has gross annual sales of over $25 million and employs over 120 people. In addition to the Osaka headquarters, built at a cost of over $1 million, it has an 18,000-square-foot production and warehouse facility in Osaka, as well as branch offices in six other cities. It wholesales over 1,800 products in the domestic market... Muso has accounts with nearly half of Japan's 3,400 natural food outlets. In addition, it has developed a rapidly growing franchise chain of fifty-two stores, mostly in the Kansai area...

"About $5 million a year comes from international sales... Growth in the international sector has been steady despite the blow of the 1981 Erewhon bankruptcy. (Muso had credits of about $200,000 when its chief customer failed, and lost over $150,000 of that.) Muso, which is now owned by more than fifty investors, was able to survive the shock. Muso exports about 270 different products...

"At present a runaway best seller is a soybean drink made of soybeans, pearl barley, kombu sea vegetable, and malt sweetener. Marketed in North America as Edensoy it has proven an excellent dairy substitute."

There follows a description of the Nanki Umeboshi Co., Muso's principal supplier, and then of the Kanemitsu Miso Co. (in Fuchu City, Hiroshima prefecture) which has been in business for 300 years. "While it once made sake and soy sauce as well, it now produces only miso–1,300 tons a year." There are now some 2,000 miso makers in Japan and Kanemitsu is one of only 200 which produce more than 1,000 tons annually. It is one a of a very few which produce miso according to traditional methods... It is aged in natural temperatures for two years, run through a masher, then packed in either 40-pound wooden kegs or 1-pound plastic pouches. "All the miso going into the pouches is pasteurized by 84ºC heat. If it were not, gases produced by the continuing fermentation would burst the bags. Kegs may or may not be pasteurized."

Photos show Yuko Okada.

4419. Liebman, Bonnie. 1984. Tofu tales. *Nutrition Action* 11(10):11. Dec.
• ***Summary:*** Tofu is used in commercial frozen entrees and desserts. The nutritional value of tofu relative to cheddar and part-skim ricotta cheeses as a lower calorie substitute is illustrated.

4420. **Product Name:** Cake (Non-Dairy, No-Egg, Made with Soymilk and Tofu Frosting) [Blueberry, Banana, Black Forest, Carrot, German Carob, Poppyseed-Rice].
Manufacturer's Name: Michigan Soy Products Co., Inc.
Manufacturer's Address: 1213 N. Main St., Royal Oak, MI 48067. Phone: 313-544-7742.
Date of Introduction: 1984. December.
Ingredients: Whole wheat flour, walnut, carrots, cinnamon, nutmeg, clove, corn oil, soy margarine, honey, barley malt, soy milk, ginger, lemon juice, vanilla, baking powder, baking soda, and salt. With tofu almond butter frosting.
How Stored: Refrigerated.
New Product–Documentation: Talk with Dorothy Hwang. 1988. Feb. 18. Label. 1987. Dot matrix printed on white.

4421. Picciano, Mary F.; Weingartner, K.E.; Erdman, J.W., Jr. 1984. Relative bioavailability of dietary iron from three processed soy products. *J. of Food Science* 49(6):1558-1561. Nov/Dec. [32 ref]
• ***Summary:*** The relative bioavailability of iron from soy flour (SF), freeze-dried soy beverage (SB) and soy concentrate (SC) was determined utilizing a hemoglobin repletion bioassay. Weanling male rats were used. Slop ratio analysis revealed that the relative iron bioavailabilities from SC (92%) and SF (81%) were not different from the reference standard, ferrous sulfate added to a casein-based diet, whereas that from SB (66%) was significantly less ($P<0.01$) than the inorganic source of iron. Analysis of results at individual iron levels suggested an iron bioavailability of SC > SF > SB. Address: 1. Dep. of Food & Nutrition, 457 Bevier Hall, Univ. of Illinois, Urbana, IL 61801; 2-3. Dep. of Food Science, 567 Bevier Hall.

4422. **Product Name:** [Proti {Soymilk}. Later renamed Purana].
Foreign Name: Proti, Purana.
Manufacturer's Name: Ralston Purina España, S.A.
Manufacturer's Address: c/ Aribau, No. 125, 08021 Barcelona, Spain. Phone: (93) 202 21 25.
Date of Introduction: 1984. December.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Color photo on cover of Journal of the American Oil Chemists' Society. Dec. 1984, and on page 1784 of the same issue. Front panel shows stylized rolling hills planted to soybeans, with a blue sky overhead. Blue on yellow letters at top of package state: Bebida 100% vegetal (100% non-dairy beverage). At the bottom is written: "No colorings or preservatives."

Talk with European soymilk producer. 1990. April 19. This product is made and packaged in Spain. It is distributed by a company that is linked with Ralston Purina and that distributes Purina Protein products. This soymilk is based on isolated soy proteins and produced in a dairy. It has had some success because it was the first soymilk available in Spain at a reasonable price, in part because they have custom/tariff protection.

Letter (fax) from Hernadette Dechamps, American Soybean Assoc., Madrid. 1990. May 23. "The only company known to be manufacturing soymilk now in Spain is Ralston Purina España, S.A. (gives address and phone). The product, previously named Proti, is currently sold under the name of Purana."

4423. **Product Name:** Soy Supreme Spray-Dried Soymilk Powder.
Manufacturer's Name: St. Peter Creamery, Inc., Oberg Foods Div.
Manufacturer's Address: 119 W. Broadway, St. Peter, MN 56082. Phone: 507-931-3160.
Date of Introduction: 1984. December.
New Product–Documentation: LaBelle. 1987 Food Processing. May. "The company uses a patented 'hot break' process that produces a very bland soymilk." Soya Newsletter. 1987. 1(3):2. "St. Peter Creamery first began spray-drying soymilk powder in late 1984."

4424. Viaene, M. 1984. Joint FAO/WHO Food Standards Programme. Codex Committee on Vegetable Proteins. Working group on "Soy drinks." Questionnaire. Ministere

de la Sante Publique, Inspection des Denrees Alimentaires, Batiment Vesale, 1010 Bruxelles, Belgium. 6 p. Dec. Unpublished manuscript. [Eng]
Address: Bruxelles, Belgium.

4425. *AOK Magazin* (*Germany*). 1984. Soja: (2) ein Tausendsassa! [Soya: The bean of a thousand forms!]. 25(4):15. [Ger]
• ***Summary:*** A brief introduction to the many foods made from the soybean, including soy sauce, soymilk, tofu, and miso. Note: This is the major health insurance magazine in Germany, with a huge circulation.

4426. **Product Name:** Calco Tofu (Many Kinds), and Soymilk.
Manufacturer's Name: Calco of Houston.
Manufacturer's Address: 2400 Dallas St., Houston, TX 77003. Phone: 713-236-8668 or 713-699-4420.
Date of Introduction: 1984.
New Product–Documentation: List of Tofu and Sprout Manufacturers. 1989. Kent Wang, owner. Talk with Kent Wang. 1989. Nov. 13. He began to make tofu and soymilk at this address in 1984.

4427. **Product Name:** Soy Milk.
Manufacturer's Name: Country Cottage Foods.
Manufacturer's Address: R.R. 1, Ohaton, ALB, T0B 3P0, Canada.
Date of Introduction: 1984.
New Product–Documentation: Soya Bluebook. 1984. p. 62.

4428. **Product Name:** [Woorean {Soymilk} (Apple, or Choco)].
Manufacturer's Name: Dr. Chung's Foods Company, Ltd.
Manufacturer's Address: Insong Building 18A, 194-15, 1-Ka, Hoehyun-Dong, Choon-Ku, Seoul, South Korea.
Date of Introduction: 1984.
New Product–Documentation: Soya Bluebook. 1984. p. 79; 1985. p. 100; 1986. p. 103; Dr. Chung's Foods Co. Ltd. 1985. These products are a mixture of undiluted Vegemil soymilk and either apple juice or chocolate powder.

Photocopy of Label for chocolate. Sent by Anders Lindner. 1989. The front panel shows a glass with a wave leaping out of it, surrounded by pieces of chocolate.

4429. **Product Name:** [Soy Beverages].
Manufacturer's Name: Fuji Oil Co. Ltd.
Manufacturer's Address: Nissei Midosuji Hachiman-cho Building, 6-1 Hachiman-cho, Minami-ku, Osaka 542, Japan.
Date of Introduction: 1984.
New Product–Documentation: Soya Bluebook. 1984. p. 62.

4430. **Product Name:** Amazake Shake [Vanilla, or Carob].
Manufacturer's Name: Grain Country.
Manufacturer's Address: 787 Melrose Ave. (at Orange Ave.), Los Angeles, California.
Date of Introduction: 1984.
Ingredients: Frosty Amazake, Westbrae Malteds.
Wt/Vol., Packaging, Price: Sold fresh from soft serve machine.
How Stored: Frozen.
New Product–Documentation: Talk with Marijke Steevensz. 1988. Jan. 30. Phone: 213-851-2023. Pronounced Ma-REE-kuh. "A more recent product is our Amazake Shake, which we make by blending one package of Westbrae Malted with some of our plain Frosty Amazake in the blender on the side of the Taylor soft serve machine. We started in 1984. It was great, a real seller. We loved the Westbrae flavors, the vanilla and the carob."

4431. **Product Name:** Sojal Soya Milk.
Manufacturer's Name: Haldane Foods Ltd.
Manufacturer's Address: Hayhill Industrial Estate, Unit 25, Sileby Rd., Barrow Upon Soar, Leicestershire LE12 8LD, England.
Date of Introduction: 1984.
New Product–Documentation: Letter from Bernard Storup. 1984. March 22. "A new type of soymilk is Sojal, sold in France by Ste. Sapov, 10 Place Jean-Juares, 13410 Lambesc. It is made in a dairy with Brazilian powdered soymilk, with 0.3% sugar, and is the best soymilk I have ever tasted."

Soya Bluebook. 1987. p. 104. Product originally launched by The Regular Tofu Co. Simon Bailey. 1988. Natural Choice. Aug. 15. "Soya-based products." A photo shows the carton. "By Hera." CSP form filled out by Simon Bailey. 1988. Sept. 28. Gives date of introduction as 1984. Letter from Simon Bailey. 1988. Oct. 10. Haldane joined forces with British Arkady in Feb. 1988 as part of Arkady's Health Food Div. Brian Welsby and Peter Fitch are joint managing directors.

Talk with Philip Marshall. 1990. July 9. Brian Welsby started this company. He sold Sojal, which was made in France using powdered Brazilian soyamilk from OLVEBRA. He had it packaged and marketed in the UK as made with soybeans. Marshall thinks there was some argument between Welsby and Sojal, because he trademarked "Sojal," which was in fact their name, in the UK. There was apparently a falling out between Welsby and Sojal, so he probably had to get his soymilk produced in the UK by some other company. He would not have used Haldane's own soymilk, because the flavor would not have been acceptable. Haldane was big in dry mixes, which is why Arkady bought them. When Haldane was acquired by Peter Fitch, Welsby was "given the golden handshake." He no longer works with the Haldane Group.

4432. Hill, D.J.; Ford, R.P.K.; Shelton, M.J.; Hosking, C.S. 1984. A study of 100 infants and young children with cow's milk allergy. *Clinical Reviews in Allergy* 2:125-42. *
• ***Summary:*** Soy protein can cause allergenic disease with GIT symptoms as well as acute anaphylaxis and up to 40% of infants allergic to cow's milk also have soy protein allergy.

4433. **Product Name:** [Soymilk].
Foreign Name: Leche de Soya.
Manufacturer's Name: Instituto de Investigaciones Para la Industria Alimenticia (IIIA–Food Industry Research Institute (FIRI)).
Manufacturer's Address: Carretera al Guatao KM 3.5, La Lisa, Ciudad de Habana, Cuba.
Date of Introduction: 1984.
Ingredients: Water, soybeans, sugar.
New Product–Documentation: Garcia Uriarte, Alvaro; Ortega, Alberto. 1996. "Recent history of soyfoods in Cuba." Part I (Interview). *SoyaScan Notes.* Jan. 9. Conducted by William Shurtleff of Soyfoods Center. This phase of Cuba's work with soyfoods began in early 1984, when Fidel Castro obtained a Mechanical Cow from Brazil. It had been developed in Sao Paulo, Brazil, by Dr. Roberto H. Moretti of Vanguarda Mecanica. Fidel has long been interested in and concerned about food, nutrition, and malnutrition worldwide, and especially in developing countries. It was for this reason that he obtained a Mechanical Cow–which cost about $40,000. After 48 hours without sleeping, Alvaro and his collaborators finished installing the Cow at the Food Industry Research Institute (FIRI). They began using it with much enthusiasm. One month later when the Brazilians arrived, they were to surprised to see it in operation, making soymilk and various products. Ten copies of the Cow were soon made at Cuba's Ministry of Mechanization. But despite much research and attempts to flavor the soymilk with various fruits, it continued to have a strong beany flavor. Soymilk from the Cow was first sold in 1984 at 15 outlets in Havana at non-rationed dairy products stores in the "parallel market." It was not well accepted by the Cuban people, who ended up feeding it to their pets. The product was withdrawn after 1 to 2 years, but scientists at FIRI began a new project to study soyfoods and flavor problems in greater depth.

4434. Magdoub, M.N.I.; Shehata, A.E.; El-Samragy, Y.A.; Mohammad, N.H.; Hofi, A.A. 1984. Gross composition of some soybean varieties and the extracted milk. *Annals of Agricultural Science* (*Ain Shams University, Cairo*) 29(2):763-78. [26 ref. Eng; ara]*
• ***Summary:*** The nutritional composition of 6 varieties of soybeans (Harosoy, Clark, Clark 63, Green, Williams, Dare) was analyzed. Green had the highest protein content (42.85% whole and 50.04% dehulled) and the lowest oil content (16.13% and 15.50%) and carbohydrate content (14.19% and not given). Therefore Green was chosen for soymilk production. The following were studied further: Effects of various heat treatments on soybean trypsin inhibitor, soybean protein fractions, amino acid and oil profiles. Address: Food Science Dep., Ain Shams Univ., Cairo, Egypt.

4435. **Product Name:** Tofu, Tempeh, and Soya Milk.
Manufacturer's Name: Molly Turner Tofu & Tempeh.
Manufacturer's Address: Malahide, County Dublin, Ireland. Phone: 01-8453853.
Date of Introduction: 1984.
New Product–Documentation: Letter concerning an interview with Molly Turner and her mother and helper (Laura Turner) conducted by Anthony Marrese. 1993. March. Molly is the owner of this small company. She started selling commercially in 1984. She started because of her interest in diet and in supplying other interested people. She is macrobiotic. Although they have sold in various ways (through private sales, health shops, etc.) now they sell only through the local whole-food co-op once every 2 weeks. Presently tempeh sales are 3-5 kg every 2 weeks and tofu sales are 5-10 kg every two weeks. They also sell a small quantity of soya milk (3 liters every 2 weeks). They make their own tempeh starter. They also supply fresh herbs and plants, and books about macrobiotics and gardening at the co-op. They have no present plans for changes except to meet the growth in demand at the food co-op.

4436. **Product Name:** Tempeh, Soysage, and Soymilk.
Manufacturer's Name: Oryana Soy Shop.
Manufacturer's Address: 16591 Cherry Bend Rd., Traverse City, MI 49684. Phone: 616-941-0254.
Date of Introduction: 1984.
New Product–Documentation: Talk with Tom Slater (nicknamed Tom Tofu). 1988. Sept. 7. The company started making these three products in about 1984, as part of the Oryana Food Co-op, Inc. Today Oryana Soy Shop makes 35-50 lb/week of tempeh, and that is increasing. They make 2-3 gallons/week of soymilk, mostly by special request.

4437. **Product Name:** Soymilk, Tofu, Soy Ice Cream, Fried Accras, or Tempeh.
Manufacturer's Name: Plenty Canada Soya Shop. Renamed Soy Development Center by 1987.
Manufacturer's Address: Roseau, Dominica.
Date of Introduction: 1984.
How Stored: Frozen.
New Product–Documentation: Trinidad and Tobago Review. 1984. Oct. p. 27. "The 'noble bean' in the Caribbean. Accras (fritters), a traditional local food, are now made by mixing tofu and okara with wholewheat flour and seasonings, then frying.

Plenty Bulletin. 1987. Fall. p. 4. Note: This is the

earliest known commercial soy product made in Dominica.

4438. **Product Name:** [Tofu, Soymilk, and Soy Sprouts].
Manufacturer's Name: Próvida Lda.
Manufacturer's Address: Rua 28 de Setembro 12–Cortegaça, 2715 Sintra, Portugal. Phone: (1) 927.05.40.
Date of Introduction: 1984.
New Product–Documentation: Letter from Miguel Azguime, owner of Miso Producoes. 1989. Nov. 30. This company started making soyfoods in Portugal in 1984 and is currently in operation.

Article in SoyaFoods (ASA, Europe). 1991. 2(2):4-5. The executive director of Provida is now Mr. Alcino Rodrigues de Sousa. The company is now located at Quinta dos Linhais, Cortegaca, 2715 Pero Pinheiro. It is said to be the only tofu manufacturer in Portugal, and it makes 2,000 kg/month of tofu. "Provida also packs textured soya protein (meat extender) and would like to produce soya milk as well."

4439. **Product Name:** [Pure Harvest Soy Drink].
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: Sodegaura-machi, Chiba-ken 299-02, Japan.
Date of Introduction: 1984.
Ingredients: Whole soybeans, barley malt, pearl barley malt, wheat germ, safflower oil, sea salt.
Wt/Vol., Packaging, Price: Retort pouch.
How Stored: Shelf stable.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 47. "San-iku Foods has been exporting Pure Harvest Soy Drink to Australia for several years."

Letter from San-iku Foods. 1990. June. This product was introduced in 1984.

4440. **Product Name:** [Soymilk (Natural, or Flavored)].
Foreign Name: Lait de Soja (Nature, ou Aromatisé).
Manufacturer's Name: Sapov.
Manufacturer's Address: 13410 Lambesc, France. Phone: (42) 92 80 16.
Date of Introduction: 1984.
New Product–Documentation: Letter from Patrick Roger of Arts. 1985. June 12. Mr. Delamarge makes natural and flavored soymilk.

Talk with Bernard Storup. 1990. June 13. Société Soy is now making the soymilk for Sapov, which buys it in bulk in 25,000 liter tanks. About 7 years ago they began to make soymilk using soymilk powder imported from Brazil. The powder was mixed with sugar and water, etc., then packaged in Tetra Brik cartons. There is only one man in this company, Mr. Delamarge (pronounced dey-la-mar-JAY). About 1½ years ago he began to buy his soymilk from Société Soy. He is now buying about 50,000 liters/month, but it does not look like he will be in business much longer.

4441. **Product Name:** Nutrien (Mixture of Chinese Herbs and Soy Protein for Making Protein Drinks).
Manufacturer's Name: Sunrider (Distributor).
Manufacturer's Address: 3111 Lomita Blvd., Torrance, CA 90505. Phone: 213-534-4786.
Date of Introduction: 1984.
Nutrition: 28.8% protein, 47.8% carbohydrate, 11.5% fat.
New Product–Documentation: Talk with Larry Hutton. 1988. March 22. This product is sold in the form of a fine white powder, which is claimed to be fermented. Sunrider is a multi-level marketing (MLM) company in Torrance, formerly in Utah. Their main products are Chinese herbs, imported from Taiwan. The FDA has recently detained the product claiming possible Salmonella contamination. The name of the manufacturer in Taiwan is unknown.

Talk with Sunrider. 1988. Sept. 22. This product, sold in a dried form, has been discontinued. "They had problems with it." It was introduced about 4-5 years ago. It was a good selling product, imported from Taiwan. It was not fermented.

Sharon's Sunrider's Bulletin. 1988. March 1. The first batch of Nutrien, 4 tonnes (metric tons) has finally been shipped by air freight. When the recall was announced, Dr. Chen voluntarily destroyed 60 tonnes of Nutrien to satisfy the government agency responsible for the recall. Sunrider relocated its plant after the recall.

Talk with man who knows Sunrider well. 1988. March 6. In late 1987 the FDA came in, tested the product, and found Salmonella in it. But they did not test it properly. At the time FDA thought all imported soy was contaminated. So Sunrider removed the soy, concentrated it and made it better. The Utah Dep. of Agriculture finally issued a statement saying it was okay. The FDA retracted their objection. John Siliker Labs was Sunrider's main testing facility. He found nothing wrong with it.

Sharon Farnsworth. 1988. March. "The Doctors Chen: East Meets West. As a young child, Tei-Fu Chen was very sick. His grandfather nursed the boy back to health using the formulas found in herbal manuscripts that had been passed down through the Chen family. He regained his strength to such an extent that he went on to become the Taiwanese National Judo and Kung-Fu Champion... After years of tutorial with the manuscripts, Dr. Chen began his formal study in 1968 at Kaohsiung Medical College in Kaohsiung, Taiwan, where he was awarded a degree in pharmacy." There he served as a research assistant for more than 4 years, developing the groundwork for the Sunrider formulations. During the summer of 1970 he worked as a technician in the Drug Synthesis Dept. and Medicinal Chemistry Research Dept. at the Sin-Tng Pharmaceutical Co. in Taiwan. After completing his degree, from 1973 to 1974 Dr. Chen served as a pharmacist officer at the hospital of the General Airforce in Taipei, studying herbal medicines. Dr. Chen then came

to the USA and studied chemistry at Brigham Young Univ. For 2 years he worked as teaching assistant in the Chemistry Dept. Then he became Director of Product Development at Naturalife in Utah. Dr. Chen is licensed to practice medicine in Taiwan. He is not licensed and does not practice in the USA.

NuPlus. 1988. June. Nutrien has now been replaced by NuPlus, the "long-awaited Sunrider concentrate" that comes in bulk (1 lb. 6.18 oz.) or envelopes (42 x 0.53 oz). "NuPlus is the all new herbal concentrate without soy as the carrier for the herbs. With soy no longer as the herb carrier, a higher concentration of herbs was used for the formula." It comes in 5 "fantastic" flavors. Ingredients: Coix fruit [Job's tears?], Chinese yam, fox nut, lotus seed, lotus root, apple, water lily bulb, and imperate root. Mix 3 heaping teaspoons in 6-8 oz. of water.

Dear Sunrider Leader. 1988. Sept. 30. The company has survived the scrutiny of the Utah State Dep. of Agriculture and the State Dep. of Business Regulation. Sales now exceed $10/month worldwide. Dr. Chen has a bachelor's degree in pharmacy from Kaohsiung Medical College in Taiwan.

Sunpack I. 1989. Jan. NuPlus is the first product listed of the 9 products in Sunpack I, which sells for $135.00. "Do you need more energy and stamina throughout the day? If so, NuPlus is the answer!... It mixes best with a blender. It may be used as a partial meal replacement twice daily with a third light meal... to help lose excess fat and inches."

Talk with Don Smith, Sunrider Distributor. 1989. June 6. Nutrien was a cell energy food designed to give a person greater overall energy, stamina, and feeling of well being. It was discontinued in early 1988, and replaced by NuPlus, which was launched in June or July of 1988. NuPlus sells for $32 in bulk or $35.00 for the envelopes. Takes up to 1 month for results to show.

4442. **Product Name:** Promil Infant Food Powder & Soy Beverage.
Manufacturer's Name: Tata Oil Mills Co. Ltd.
Manufacturer's Address: Bombay House, Homi Mody Street, Bombay 400-023, India.
Date of Introduction: 1984.
New Product–Documentation: Soya Bluebook. 1984. p. 62.

4443. Tetra Pak International. 1984. Tetra Pak V.I.P. Brochure (or Visitors Guide). Lund, Sweden. 46 p. 20 x 5 cm.
• ***Summary:*** This narrow booklet, out of print by 1990, contains a chronology of main events connected with aseptic packaging. V.I.P. Guides published after 1984 did not include this time line.

1944. The first development work starts on creating a package for milk that requires a minimum of material and gives maximum hygiene. This results in the principal on which the tetrahedral carton is based. Development work continued from 1944-1951.

"1951. AB Tetra Pak is formed in Sweden. The new packaging system, presented to the press in May 1951.

"1952 the first Tetra Pak machine was placed for a commercial operation in Sweden.

"1959. Development works starts on Tetra Brik, the new rectangular carton.

"1961 Oct. The first machine for filling bacteria-free milk aseptically is exhibited at a press conference in Bern, Switzerland." Note: All the company's machines prior to this date had been non-aseptic! The features of the packaging were low cost and hygienic. Much of the milk in Europe at this time was still sold unpackaged, in bulk.

"1963. March. Tetra Brik, the rectangular carton [non-aseptic], comes into commercial use in Medallia?, then in Stockholm, Sweden, later in the year.

"1964. The first AT machine [making aseptic tetrahedron packages] to be installed outside Europe is placed in Lebanon.

"1965. Deliveries of machines for aseptic filling gather speed–the trend towards longlife milk as a supplement to pasteurized starts in Europe and in several of the developing countries.

1968. The ½-litre Tetra Brik is introduced in Bochum, West Germany. The first version of Tetra Brik Aseptic is set up for field trials at Thun in Switzerland.

"1969. The first series of Tetra Brik Aseptic machines is ready for delivery. A new type of machine, the AT-1000, is introduced and the first deliveries go to Spain. Completion of the two-year delivery plan comprising 7 complete conversion lines and 25 aseptic filling machines for the Soviet Union.

"1974. Tetra Brik Aseptic is introduced in North America by Laiterie Cité in Canada. Concentrated juice is packed in 200 ml Brik Aseptic cartons and becomes a major dairy product.

"1979. Tetra Pak delivers the first aseptic Tetra Brik machine to the People's Republic of China, for chrysanthemum tea and sugarcane juice.

"1980. On exhibition at the DLG Fair in Frankfurt, West Germany, is the first Tetra King machine for 500 ml packages. Also presented is the new generation of aseptic Tetra Brik machines, AB 8. This machine has a capacity of 5,000 cartons per hour, made possible by a new sterilization bath.

"The market for portion packs continues to grow and a special space-saving aseptic Tetra Brik machine, AB 9, is now available for small volumes."

The original tetrahedron package, developed by the founder, Dr. Rausing, was originally called the Tetra Pak. Then the brick-shaped package, developed later, was called the Tetra Brik, and the company was named Tetra Pak, and the tetrahedral pack was renamed the Tetra Standard.

Concerning the "aseptic process": It was developed

years before by Dole for a canning system. Then it lay dormant for a while. Address: Sweden.

4444. **Product Name:** Wysoy (Soy-Based Infant Formula).
Manufacturer's Name: Wyeth Laboratories.
Manufacturer's Address: England.
Date of Introduction: 1984.
New Product–Documentation: Arturo R. Hervada. 1984. "Alternatives to Cow's Milk: Soybean Formulas." p. 163. In: David L.J. Freed, ed. Health Hazards of Milk. London, Philadelphia, Toronto, etc.: Ballière Tindall. Nursoy (made by Wyeth Laboratories, Radnor, Pennsylvania) is known as Wysoy in the UK. It is an infant formula based on soy protein isolate.

Dorothy E.M. Francis. 1984. "Alternatives to Cow's Milk: Comparisons." p. 147-48. In: David L.J. Freed, ed. Health Hazards of Milk. London, Philadelphia, Toronto, etc.: Ballière Tindall. Wysoy, made by Wyeth, contains beef fat.

McGraw, M.; Bishop, N.; Jameson, R.; Robinson, M.J.; O'Hara, M.; Hewitt, C.D.; Day, J.P. 1986. *Lancet* i(8473):157. Jan. 18. "Aluminium content of milk formulae and intravenous fluids used in infants." Wysoy, an oral (locally reconstituted soy-based infant milk) contains 330 micrograms of aluminum per liter.

4445. ADM Co. 1984. Dairy products update. Decatur: Illinois: Archer Daniels Midland. 24 p.
• ***Summary:*** On the cover are two colorful scoops of ice cream on top of a cone which is an ear of corn. It's called an "Ice cream corn."

Contents (soy related): The use of corn sweeteners and soy protein in dairy products... The use of soy protein in fluid and frozen products. The use of soy protein in cheese substitutes and cheese-like products. Characteristics and use of Ardex brand isolated soy protein (90% protein)... Additional brochures available.

"Field performance of soft serve mixes is critical. The product must be dry and stiff to remain on cones." "Frozen yogurt is likened to something between ice milk and sherbet. Lactic fermentation provides tartness, which is highly compatible with fruit flavors."

Various types of yogurt include: Regular or unflavored, Swiss style, sundae style, and liquid yogurt.

Ardex F is dispersible isolated soy protein. TVP can be used to add protein and "crunch." "Ardex isolated soy proteins [F] can be used effectively to produce tofu-like products" (p. 19).

A table (p. 20) gives formulas for "Yogurt" soft curd. "Tofu" firm curd. "Tofu" from dry mix. Chocolate dessert.

Ardex F is dispersible; used for dairy foods. Ardex SP-6 is dispersible; used primarily for injected whole muscle meat products. Ardex R is used where special functionality is required, e.g. coffee whitener, liqueur, cheese, etc. Ardex D is an emulsion stabilizer for use in meat systems,... Ardex DHV is a water and fat binder and adhesive agent. Address: Illinois.

4446. Bhumiratana, Amara. 1984. ASEAN Protein Project, 1974-1984. Bangkok, Thailand: ASEAN Subcommittee on Protein. 111 p. Illust. 29 cm. [Eng]
• ***Summary:*** The ASEAN nations are Indonesia, Malaysia, the Philippines, Singapore, and Thailand. Contents: 1. Malnutrition problems in ASEAN countries (incl. Soy-based products as a solution to malnutrition). 2. Administration of the ASEAN Protein Project. 3. Objectives. 4. Methodology. 5. Results of ASEAN member country research: Soy products developed (high-protein, low-cost foods for infants and children, soy milk and soy milk powder, full-fat soy flour), fermentation products developed (tempe: from shophouse business to modern factory, oncom chips and flour, soy sauce, the ASEAN culture collection), other related projects, exchange of information (incl. details on the 15 ASEAN protein workshops held between July 1975 and Oct. 1984, and the publications resulting from each). 6. New ASEAN projects. 7. Conclusion.

This book, which contains many color photos and focuses on soybeans, describes one of the most successful ASEAN programs, emphasizing cooperation among the ASEAN nations in an attempt to solve the problem of malnutrition common to the region. The project, conceived in Aug. 1971, receives major funding and technical assistance from the Australian government. In May 1978 the ASEAN Full-Fat Soy Flour (FFSF) Factory in Chiang Rai, Thailand, was completely installed and has been producing continuously since then. It has a capacity of 100 tons/month. Numerous photos of the facility are shown. A pilot plant has produced up to 50 tons/month of Kaset Infant Food, which has been well accepted in 573 health centers throughout Thailand and is being evaluated in other ASEAN countries. A photo of the package (plastic bag) is shown. Address: Bangkok, Thailand.

4447. Bloodroot Collective; Beaven, Betsey; Furie, Noel; Miriam, Selma. 1984. The second seasonal political palate: A feminist vegetarian cookbook. Bridgeport, Connecticut: Sanguinara Publishing. xli + 242 p. Illust. Index. 23 cm. [35 ref]
• ***Summary:*** An excellent book and cookbook with a crystal clear explanation of why feminists should also be ethical vegetarians. The "Prefatory material" includes sections on "Feminism in the eighties," "Ethical vegetarianism," "Soyfoods," and "On collectivity and work."

The glossary includes brown rice, hoisin, koji, queso blanco, shiro miso, shoyu (the correct name for tamari), tahini, and tofu.

The index contains 27 entries for tofu, 19 for miso, 10 for tempeh, 4 for soymilk, and 1 each for okara and soysage. Address: 85 Ferris St., Bridgeport, Connecticut 06605.

Phone: 203-576-9168.

4448. Brennan, Jennifer. 1984. The cuisines of Asia: nine great oriental cuisines by technique. New York, NY: St. Martin's Press. ix + 542 p. Illust. (line drawings). Index. 24 cm.

• ***Summary:*** The "Nine great Oriental cuisines" are those of "China, India, Indonesia, Japan, Korea, Malaysia, The Philippines, Thailand, Vietnam" (as stated on the book's cover). The book contains many recipes, yet it is largely organized into chapters by cooking techniques: barbecuing, steaming, stir-frying / using a wok, deep-frying, etc.

The chapter on "Japan" discusses soybeans, miso, tofu, and shoyu on pages 44-45. Soyfoods are said to be the 2nd largest source of protein in the Japanese diet.

The section on "Soybeans" (p. 97-104) includes a discussion of the names of various soyfoods in different Asian languages and countries. For example: "The basic bean curd is called *tau-fu* in Cantonese, *tau-hu* in Hokkien, and *tofu* in Japanese." Or consider this (p. 99): "During the basic process of making bean curd, at the stage where the bean and water mixture is boiled, a skin or residue forms on the top. This skin [yuba] is skimmed off and dried. It is commercially available in sheets... and in the form of sticks that bear the picturesque name of 'second bamboo' [dried yuba sticks] in Chinese, meaning that they are the second residue from the curd."

There follows a 3-page table titled "Soybean products" (p. 101-03) which has four columns: Description, Chinese name [Cantonese], Japanese name, comments.

Note: Before proceeding, we believe that the design of this table is fundamentally flawed. (1) Why are the names of the basic soyfoods not given in the other languages with which this book is concerned, including Mandarin Chinese, Korean, Indonesian, Vietnamese, Filipino, etc.? (3) Why is no English name given for each basic soyfood product? Sometimes the description is the English name, yet that name is rarely the name a person would use if they were selling the product in an English-speaking country. (3) Why are so many common "soybean products" omitted from this table, such as the various basic other types of Japanese miso and of Japanese shoyu (besides koikuchi shoyu), fermented black soybeans (douchi, dow see), soymilk, soy sprouts, roasted soy flour, whole soy flour, soybean oil, textured vegetable protein, etc. These problems are easily solved with alternate table designs. For example, have one table for each language, with the name of each soyfood product given first in English and then in the language of that country. Put the description and comments in a glossary to avoid repetition. Or, have a glossary entry for each soyfood, with the English name, description, comments.

The table is divided into four basic types of soybean products. After each, we will give the Cantonese name and then the Japanese name, and we will indicate disagreements using [sic]. NL = Not listed.

(1) Bean curd: Tau fu fu [sic] = kinugoshi tofu. Tau fu = momen tofu. NL = yaki tofu [sic, yaki-dofu]. NL = koya tofu or kori tofu [sic, koya-dofu or kori-dofu]. Tau fu pok = abura age. Fu chu = yuba [sic, fu chu is dried yuba sticks. Yuba in Mandarin is doufu pi]. fu joke [sic, fu jook] (bean curd sticks) = NL. Tim joke [sic, tiem jook] (sweet bean curd sticks) = NL. tau fu kon [Mandarin: doufu gan; pressed tofu].

(2) Soy sauce: Light = chan ch'an or sang chu = usu kuchi shoyu [sic, not the same]. Dark, medium = see yu chan yan = shoyu [sic, see yu is soy nugget sauce, not made in Japan. Japanese shoyu is not traditionally made in China]. Dark, heavy, sweet = chu yan = NL.

(3) Fermented bean pastes and cheeses. Black bean paste = dau see tau ch'ih = NL. Sweet, white bean paste = NL = shiro miso. White soy cheese [fermented tofu, should be classified under tofu] = pai doufu-ru or foo yee or foo yu = NL. Red soybean paste = NL = aka miso. Red soy cheese or spiced red bean curd = hung doufu-ru or nom yee or nam yu.

(3) Miscellaneous soybean productions. Soy jam = yun shi jeung = NL. Whole fermented soybeans = NL = nato [sic, natto]. Red bean sauce = saang see jeung = NL. Soybeans and malted rice = NL = moromi miso. Hoisin sauce = hoisin = NL.

In the "Basic recipes" section is a recipe for Indonesian dark sweet soy sauce (*ketjap manis*).

The Glossary (p. 499-515) contains the following soy-related entries: "Bean Curd (*tofu,* Japanese; *tao foo,* Chinese; *tahu,* Indonesian and Thai; *tokwa,* Philippines): A curdled, soft, cheeselike preparation made from soybean milk. Used as a source of protein in Asian cooking. Available loose or in packages."

Bean paste, red sweet [from azuki beans]. "Substitute Chinese sweet red bean paste, p. 132."

Bean paste, yellow (Chinese).

"Beans, black salted fermented. (Called dow see in Chinese) These are very salty soybeans, sold in cans in Chinese markets. Used with garlic as a flavoring for fish and pork dishes. substitute: Soybeans, cooked until soft and seasoned with plenty of soy sauce."

Bean sprouts: Usually refers to mung bean sprouts, "although alfalfa and soybean sprouts are also used."

Hoisin sauce: Soybeans are a major ingredient, along with garlic, chili peppers, and various other spices and ingredients.

Miso. Oyster sauce: "A Chinese sauce, made from oysters cooked in soy sauce and brine." Used as a seasoning with cooked foods and as a table sauce. See recipe p. 146.

Red bean sauce: "A strong table sauce made from mashed soybeans." Available in cans from Chinese stores.

Soy sauce

Also contains entries for: Kombu. Monosodium glutamate (MSG; "I do not use it nor do I recommend its use"). Mung beans.

The index contains 28 entries for soybean, 22 for soy sauce, 14 for miso, 6 for bean paste, oyster sauce, teriyaki, 4 for bean curd–deep fried, hoisin sauce, vegetarian dishes, 2 for ketjap, and 1 each for beans–black salted fermented, bean curd–fermented, jam–soy, jang (see miso), milk–soybean, ragi, shoyu (see soy sauce), soybean oil, sukiyaki, tahu, tau-fu or tau-hu (see bean curd), tempe [tempeh], textured vegetable protein (TVP), tofu (see bean curd), tou shih [fermented black soybeans],

About the author (from the rear cover): "Jennifer Brennan grew up in Pakistan and India and has spent many years in Southeast Asia. She is the author of *The Original Thai Cookbook."* She is "Winner of the IACP [International Association of Culinary Professionals] Award for the Best Literary Food Writing."

4449. Clergeaud, Chantal; Clergeaud, Lionel. 1984. Mystères et secrets du soja [Mysteries and secrets of soya]. Paris: Editions La Vie Claire. 134 p. Illust. 21 cm. [Fre]
• ***Summary:*** Contents: 1. A little history, the properties of soya, soybean culture, soya and animal feeding, recipes based on whole soybeans (*fèves de soja*). 2. Soy flour, soy proteins, recipes based on soy flour and soy proteins. 3. Soy sprouts, recipes based on soy sprouts. 4. Soy oil, recipes based on soy oil. 5. Soymilk, recipes based on soymilk. 6. Tofu, recipes based on tofu. 7. Fermented soy products: miso, recipes based on miso, tamari, tamari-shoyu, recipes based on tamari and tamari shoyu, tempeh, recipes based on tempeh. 8. Other [fermented] soy-based products consumed in the world: Chee fan (fermented tofu), Hamanatto, ketjap (Indonesian soy sauce), Meitauza (fermented okara tempeh), Sufu (fermented tofu). Address: Naturopathes–Ostéopathes, France.

4450. Francis, Dorothy E.M. 1984. Alternatives to cow's milk: Comparisons. In: David L.J. Freed, ed. 1984. Health Hazards of Milk. London, Philadelphia, Toronto, etc.: Baillière Tindall. xvii + 281 p. See p. 145-150. [8 ref]
• ***Summary:*** In the section on "Milk Substitutes," table 8.1 is titled "Milk substitutes suitable for different age groups." The following soya products are listed with their manufacturers and osmolality in mmol/kg (millimole/kilogram): Infants from birth: Formula S Food (Cow & Gate), Prosobee liquid and powder (Mead Johnson), Wysoy (Wyeth, contains beef fat). Infants from three months, in addition: Granolac Infant (Granose). School age children and adults requiring enteral feeds: Fortison Soya (Cow & Gate). Social replacements of milk: Granogen (Granose), Plamil (Plant Milk Ltd.), Soy Bean Milk (Itona), Soya Milk Liquid (Granose).

A discussion of "Soya formulas" is given on p. 148-49. Social replacements of milk "do not contribute significantly to the nutritional intake, particularly for calcium and riboflavin." Address: SRD, Group Chief Dietitian, The Hospital for Sick Children, Great Ormond St., London, WC1N 3JH, England.

4451. Freed, David L.J. ed. 1984. Health hazards of milk. London, Philadelphia, Toronto, etc.: Baillière Tindall. xvii + 281 p. Illust. Index. 24 cm.
• ***Summary:*** Contents: Introduction. Acknowledgments. Foreword. 1. Chemical contaminants of milk: Cow's milk, human milk. 2. Milkborne infectious disease in England and Wales, 1938-1982. 3. Breast is best–isn't it? 4. Human milk banking–Pros, cons and facts. 5. Lactation and feeding patterns in different species. 6. Milk allergy and intolerance: Clinical aspects, difficulties and values of breast milk for atopic babies, does breast feeding protect against atopic disease?, experimental studies on sensitization to cow's milk. 7. Dietary habits and urolithiasis. 8. Alternatives to cow's milk: Comparisons, goat's milk, soybean formulas. 9. Naturally occurring toxicants in plant foods and milk.

10. Milk and atheroma. I Pathology: Aetiology of atheroma, immunology of experimental atheroma, immunology of human atheroma. 11. Milk and atheroma. II Epidemiology and theoretical aspects: Milk oestrogens, lactose, xanthine oxidase. 12. Milk and atheroma. III Clinicians' approaches: A milk-free, egg-free diet in symptomatic coronary disease, dietary fats and coronaries. Afterword: Highlights on the hazards and some good points about cow's milk. Appendix.

Chapter 2, "Milkborne infectious disease in England and Wales, 1938-1982," indicates that such disease is decreasing. The most serious disease before the early 1950s was tuberculosis, of which there was one major outbreak and an estimated 33,000 cases resulting in an estimated 19,000 deaths. However there have been very few cases since the early 1950s and none since 1979. The two possibly increasing diseases are (1) Salmonellosis, of which there have been 179 outbreaks, 3,818 cases, and 7 deaths. Outbreaks increased from less than 1 per year in 1938-1950 to over 14 per year in 1981-1982; (2) Campylobacter enteritis, of which there have been 25 outbreaks, over 4,797 cases, but no deaths. It was first reported in 1978. Address: M.D., Lecturer in Immunology, Dep. of Bacteriology and Virology, Univ. of Manchester, England.

4452. Gerras, Charles. ed. 1984. Rodale's basic natural foods cookbook. Emmaus, Pennsylvania: Rodale Press. xi + 899 p. Illust. Index. 24 x 20 cm.
• ***Summary:*** This book, containing over 1,500 recipes, does not use salt or white sugar, but does use meats, poultry, and fish. It was also published by Simon & Schuster as "A Fireside Book." It contains extensive information on and many recipes for soyfoods, including whole dry soybeans, tofu, soy ice cream, soy flour and grits, miso, soymilk, soy oil, okara (soy pulp), soy sauce, tamari, and soy sprouts. Address: Pennsylvania.

4453. Greenwood, Sadja. 1984. Menopause, naturally: Preparing for the second half of life. San Francisco, and Volcano, California: Volcano Press. 201 p. Illust. by Marcia Quackenbush. 23 cm. [36 ref]
• ***Summary:*** This is a pioneering, wonderful book on menopause. Chapter 10, titled "Estrogen replacement therapy: The pros, cons, and unknowns" states (p. 89) that when estrogen was first isolated in the 1920s, it was used for women who had lost their ovaries through surgery and for women with severe problems after natural menopause. "However, its use was not widespread until the 1960s, when a book entitled *Feminine Forever,* by Robert Wilson, popularized estrogen use for all women who wanted to retard aging and retain their feminine allure. The use of 'estrogen replacement therapy,' or ERT, spread widely among middle- and upper-class women treated by private physicians."

Chapter 15, titled "Nutrition: All about eating and drinking" (p. 147-76) advocates a diet low in meat and high in whole grains, beans, vegetables, and fruits. Beans are excellent foods; they are high in protein, low in fat, and a good source of fiber. If gas is a problem, cook the beans well and serve small portions. "Fresh green beans and peas, bean sprouts, and soybean foods like tofu rarely give you gas." An illustration (line drawing) shows sacks and boxes of various types of beans (not including soybeans) and a cake of tofu. People who get much of their protein from beans and grains are also helping to make most efficient use of world food resources–an idea developed in *Diet for a Small Planet.* Sprouts are a delicious food, high in nutrients. Anyone can make bean sprouts in the kitchen from lentils, aduki beans, mung beans, etc. Sea vegetables are excellent; avoid canned veggies.

Concerning meat fish and poultry: Try to cut back, replacing them with a combination of whole grains and beans–which provides high-quality protein without added fat. "You can eliminate entirely and be healthy! Vegetarians have good health records, with lower rates of heart disease and cancer than meat-eaters." Nonfat or low-fat milk, yogurt, and cheese are good foods for mid-life women because of they are high in calcium. But some adults lack the ability to digest milk sugar (lactose), and experience cramping, gas, and diarrhea after consuming milk products. "Soy 'milk' can be used, especially in cooking, as a milk substitute." A table shows common foods that are high in calcium, including "tofu (soybean curd)." 4 oz. contains 150 mg of calcium.

Note: This is the earliest English-language document seen (Aug. 2013) that contains the term "Soy 'milk.'"

Cut down on fats, sugar, salt, alcohol, and caffeine. A table titled "Suggestions for healthy breakfast foods" (p. 171) includes "Tofu (bean curd): Eat steamed, scrambled, or grilled with onions, curry, soy sauce, or other flavorings." Tofu is high in calcium. Suggestions for a healthy lunch include mashed tofu as a filling in sandwiches made from whole grain bread. Suggestions for healthy snack foods include slices of raw vegetables with tofu or cottage-cheese dip. Suggestions for a healthy dinner (p. 173) include brown rice with stir-fried vegetables and tofu. On p. 175 are recipe suggestions for Stir-fried vegetable dishes with tofu, meat, or fish.

On the rear cover is a photo of Sadja Greenwood, M.D., M.P.H., and a biographical sketch. She is age 53, "mother of two grown sons, a vegetarian, a slow jogger, looking for the truths about life and the joy in every day." A general practitioner, she has long been associated with women's health programs. "She is Medical Director of Min An Health Center, which utilizes Eastern and Western medical treatments, and is Assistant Clinical Professor at the University of California Medical Center, San Francisco."

Note: In 1984 the phytochemicals in soybeans and their possible benefits for menopause were largely unknown.

Note: This is the earliest document seen (Sept. 1999) in which soy is mentioned in connection with relief of menopausal symptoms. Address: M.D., MPH, San Francisco, California.

4454. Hervada, Arturo R. 1984. Alternatives to cow's milk: Soybean formulas. In: David L.J. Freed, ed. 1984. Health Hazards of Milk. London, Philadelphia, Toronto, etc.: Baillière Tindall. xvii + 281 p. See p. 157-68. [39 ref]
• ***Summary:*** Contents: Historical background. Nutrient comparison of U.S. soy formulas based on 100 ml (Nursoy, Isomil, Prosobee, I-Soyalac, Soyalac). Soy protein isolate formulas. Clinical studies. Soy protein formulas and cow's milk allergy. Address: M.D., Dep. of Pediatrics, Jefferson Medical College, Thomas Jefferson Univ., Philadelphia, Pennsylvania 19107.

4455. Hung, Jerry Jer-San. 1984. Studies on processing, functional characteristics and nutritional quality of hydrothermal extracts of soybeans. PhD thesis, Kansas State University. 210 p. Page 1145 in volume 45/04-A of Dissertation Abstracts International. *
• ***Summary:*** Soymilk processed by a modified "rapid hydration hydrothermal cooking" (RHHTC) method had higher thiamin and protein concentration than traditionally extracted soymilk. Address: Kansas State Univ.

The first complete soya cookbook]. Munich, West Germany: Gräfe und Unzer GmbH. 102 p. Illust. Index. 20 cm. [11 ref. Ger]

• ***Summary:*** Foreword. Everything about soy (*Soja*)**.** Basic soy recipes (How to make at home): Soy grits. soy sprouts, light soybean pulp (cooked ground soybeans), dark soybean pulp, cooked soybeans, sweet cooked soybeans, cooked azuki beans, soymilk, tofu–Soya quark or soya cheese (*Sojaquark oder Sojakäse*)**,** sokar.

Soups and one-pot dishes. Refines ragouts. Delicate meatballs or rissoles. Pies, pastries and spreads. Hearty vegetable dishes. Special salads. Side dishes, garnishes, and entrements. Fine sauces. Soya for those in a hurry. Desserts and confections. Drinks and energy-spenders. Delicious spreads for breads. Bread, cakes, pastries (*kuchen*) and baked goods. Appendix: Glossary, books and addresses: gomashio (sesame salt), graham flour, Indonesian soy sauce, margarine, miso, nigari, soy oil, tahini (*sessamus*)**,** defatted soy flour, whole (full-fat) soy flour, soy sauce, tofu mayonnaise, Worcestershire sauce. Address: West Germany.

4458. Leung, Albert Y. 1984. Chinese herbal remedies. New York, NY: Universe Books. 192 p. Illust. (drawings by Bing Fun Leung). Index. 21 cm. [48 ref]

• ***Summary:*** The book is arranged by plant- or food type. Each entry has all or most of the following subcategories: General information, effects on the body, traditional uses, modern uses, home remedies (and specific conditions it is used to treat), availability. Entries include:

Bean curd [tofu] (p. 33-35). Types include "dried bean cake" [pressed tofu], fried bean cake [fried tofu] and fermented bean cake [fermented tofu]–"all derived from bean curd." Bean curd is said to have cooling properties. Since it does not have much taste of its own, "it can be made to taste like anything–hence its popularity in vegetarian dishes." "Bean-cake residue" has traditionally been used therapeutically "mainly for skin conditions, such as ulcers and sores, for which both the uncooked and cooked (baked) forms are made into patties and applied directly onto the affected skin." A common use for bean curd in Canton is for treating the common cold. It was made into a soup with green onions; optional ingredients include mint leaves, ginger, and fermented black beans. The exact recipe used by the author's grandmother is given.

Garlic (p. 67-70). Ginger (p. 71-74). "To treat coughing, wheezing, and excessive phlegm due to colds, a popular Cantonese remedy combines the use of ginger and black beans" [fermented black soybeans].

"If one has accidentally ingested an unknown poison which cannot be treated with a specific antidote, a decoction of 31 gm. (1.1 oz.) each of licorice and black soybeans [fermented black soybeans] or mung beans can be used" (p. 94-95).

Mung bean (p. 105-07): Used as a home remedy to "prevent heat rash or prickly heat."

Soybean (soya) (p. 142-45). "Two varieties of soybean are used in Chinese medicine–black soybean and yellow soybean" (*hei da dou* and *huang da dou*)**.** Black soybean skin [hull, seedcoat], when used medicinally, is known as *hei da dou pi***.** Traditional food products derived from the soybean include "bean cake [tofu], soybean milk, soy sauce, soybean oil, and bean sprouts." Plus "fermented black beans."

"Traditional uses: The recorded use of black soybean in Chinese medicine preceded that of yellow soybean. The former dates back at least 2,000 years, being listed in the Shennong Herbal, while the latter dates back to only around A.D. 1330."

Black soybean skins are prepared as follows. Black soybeans are soaked in water until they germinate / sprout, or until the skins / hulls / seedcoats separate easily. The latter are then removed and sun-dried, then stored in a dry place. The earliest known medical use of black soybean skins dates from the middle of the 8th century [mid-700s] during the Tang Dynasty [618-906]. They are said "to nourish the blood, clear one's vision, and drive away disease-causing factors." They are also "used in treating excessive sweating, night sweat [night sweats], dizziness, headache, and rheumatoid arthritis." They are usually taken in the form of a decoction, with a typical daily dose of 9-16 gm (0.3 to 0.6 oz).

There are two types of fermented black soybeans (*dou chi* in Chinese)–unsalted and salted. "Although the only difference between the two is the added salt, the former is more commonly used in Chinese medicine." In making fermented black soybeans, black soybeans are soaked in a water extract of white mulberry leaves and a wormwood herb (such as *Artemesia annua*) followed by steam cooking and fermentation. Other herbs, such as licorice and *Ephedra*

sinica (*ma huang,* in which ephedrine [a stimulant] was first discovered) are also used.

The earliest known use of fermented black soybeans in Chinese medicine dates from the early 6th century (early 500s) during the Liang dynasty (502-557). It is said to have a bitter taste "and is said to be good for treating illnesses that affect the lungs and the digestive system. It is used in treating colds, fevers, typhoid, headache, and discomforts in the chest." For these illnesses it is consumed as a decoction, with a daily dose of 6-12 gm (0.2 to 0.4 oz). Many other medicinal uses are given.

"Availability: Yellow soybeans are available in health food stores, groceries, Chinese groceries, and some supermarkets. Black soybeans, fermented black beans, and yellow soybean sprouts are available in Chinese groceries."

4459. Liener, Irvin E. 1984. Naturally occurring toxicants in plant foods and milk. In: David L.J. Freed, ed. 1984. Health Hazards of Milk. London, Philadelphia, Toronto, etc.: Baillière Tindall. xvii + 281 p. See p. 169-87. [84 ref]
• ***Summary:*** The first section of this chapter, titled "Soybean Milk," discusses trypsin inhibitors, lectins, goitrogens, oestrogens (estrogens), phytate, flatulence factors, and allergens. The second section, titled "Cow's Milk as a Vector of Transmission of Plant Toxins," discusses goitrogens, alkaloids, lupin alkaloids, bracken fern, cycads, milk sickness, carotinaemia, cardiac glycoside, caffeine and theobromine. Also discusses mycotoxins.

Note: *Webster's Dictionary* defines theobromine (derived from the New Latin *Theobroma* = a genus of trees), a word first used in 1842, as "a bitter alkaloid $C_7H_8N_4O_2$ closely related to caffeine that occurs especially in cacao beans [used to make chocolate] and has stimulant and diuretic properties." Address: Prof., Dep. of Biochemistry, Univ. of Minnesota, St. Paul, MN 55108.

4460. Liu, Chiung-Pi; Shanmugasundaram, S. 1984. Frozen vegetable soybean industry in Taiwan. In: Proceedings of the Symposium on Vegetables and Ornamentals in the Tropics. See p. 199-212. Held 27-28 Oct. 1982 at Universiti Pertanian Malaysia, Malaysia. [Eng; mal]
• ***Summary:*** The term "vegetable soybean" refers to "immature green soybeans, either in pods or as shelled beans." Vegetable soybean varieties were introduced into Taiwan in about 1967 by Japanese trading companies. Frozen soybeans now constitute about 45% of all frozen vegetables exported from Japan, making them the most important and profitable frozen vegetable exported from Taiwan. Approximately 60% of Taiwan's frozen soybeans are exported through Japanese trading firms, especially C. Itoh Co. Ltd., Mitsui Bussan Co. Ltd., Mitsubishi Co. Ltd., Marubeni Co. Ltd., and Toshoku Co. Ltd. In 1981 Taiwan exported 25,000 tons of frozen vegetable soybean pods worth US$21 million to Japan. These frozen exports have been rising steadily since 1975, as shown in Fig. 1.

Although new varieties of vegetable soybeans are now being tested, 95% of the vegetable soybean area in Taiwan is planted with the variety Tsurunoko ("Child of the crane"), known to Taiwanese farmers as #205. In Taiwan an estimated 4,600 ha were planted to vegetable soybeans in 1980, increasing to 5,300 ha in 1981. Most of this area is concentrated in Pintung and Kaohsiung counties in southern Taiwan (just below the Tropic of Cancer), but significant amounts are also planted to the northwest in Changhwa and Taichung counties. The primary cropping season is autumn.

Table 6 shows expenditures (in US dollars per year) on selected foods in Taipei, Taiwan, from 1977 to 1981. The figures 1977–1981 for various soy-related foods are: Soybean curd (tofu) 7.9–7.1. Soybean curd cake (okara) 9.3–8.4. Soybean milk 3.0 (1978)–5.0. Vegetable soybean without pod 2.5–2.6. Soybean 0.5–0.6. Address: AVRDC, Tainan, Taiwan.

Address: Ramagiri, Blue Mountain Center of Meditation, Petaluma, California.

4463. Sacharoff, Shanta Nimbark. 1984. The ethnic vegetarian kitchen. San Francisco, California: 101 Productions. 190 p. Illust. (by Richard Chiriani). Index. 21 x 20 cm. [22 ref]
• ***Summary:*** In the section titled "The vegetarian shelf" is a subsection on "Legumes and their products" (p. 37-40) which includes entries for soybeans, soy milk, tofu, miso, and tempeh.

The index contains 41 entries for tofu, 7 for tempeh, 5 for miso, and 4 for soymilk.

On the last page of the book is a nice biography of the author and the illustrator. Shanta is a lifelong vegetarian who spent much of her youth in her family's kitchen in Gujarat, India. In 1964 she came to the United States to attend college and graduated with a degree in psychology from Adelphi College in Long Island, New York. Later she traveled worldwide. Address: San Francisco, born in Gujarat, India.

4464. Saito, Akio. 1984. [Chronology of soybeans in Japan, 1970 to 1984] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Feb. p. 16-18. [Jap]
• ***Summary:*** 1970–Soybean cultivation area in Japan drops to 95,500 ha, falling below 100,000 ha for the first time. Soybean cultivation area in Japan is nearly 10% of total

cultivation area for all crops.

1970–Soybean imports rise to 3,243,790 tonnes, passing 3 million tonnes for the first time.

1972–Production of defatted soybean meal reaches 2,035,000 tonnes, topping 2 million tonnes for the first time. Production has risen 2.8 fold during the past decade.

1972–Production of deep-fried tofu pouches (*aburage*) reaches 200,000 tonnes.

1973–Soybean imports reach 3,635,000 tonnes, up 7% over last year despite U.S. export regulations.

1973–Some 2,740,000 tonnes of soybeans, representing about 80% of all soybeans in Japan, are crushed to make soy oil. 1973 Jan. 27–An extraordinary Cabinet meeting is held and the decision is made to import soybeans from the USA urgently. The price of soybeans in late 1972 was 3,000 yen per 60 kg sack but now it has become very difficult to get them even if you pay 15,000 yen per 60 kg. Soybeans are called "yellow diamonds."

1973 June 27–President Richard Nixon sets new regulations for U.S. soybean exports. These give the Japanese tofu, miso, and soy oil industries a big "shock."

1973 July 6–The Japanese government passes a new law that forbids soybean brokers or sellers in Japan from buying up and selling at inflated prices 16 important items–including soybeans.

1973 July 12–The Japanese Department of Commerce announces that it permits the export of soybeans for special food uses, such as tofu and high-quality misos, which were planted under previous contracts.

1973 Sept. 7–The U.S. Department of Agriculture removes all regulations that concern exports of agricultural products.

1973 Oct. 17–OPEC nations decide to regulate the production and supply of crude petroleum. This leads to huge price increases in petroleum products–known in Japan as the "oil shock." Japanese buy up toilet paper and wash detergents causing much confusion.

1974–Good quality miso now retails on average for 251 yen/kg, up 22.4% from last year. The average retail price of shoyu in Tokyo is 434 yen for 3 liters, up 33.5% from last year.

1974 Feb.–The Japanese Ministry of Agriculture and Forestry asks manufacturers of tofu, natto, deep-fried tofu pouches, and dried-frozen tofu to reduce the retail prices of their products to the levels they were at in November 1973.

1974 July 30–In order to get rid of AF2 (a preservative widely used in tofu), the City of Tokyo decides to make a public announcement of all foods which may contain AF2 and announces that food inspections will start immediately, on August 1.

1974 Aug.–The Japanese Ministry of Public Welfare forbids the usage of AF2.

1974 Oct.–The JAS food certification system, formerly applied to widely distributed foods, is applied to tofu, natto, konnyaku, etc., which are foods that are distributed over a small area.

1975–The typical price of Tofu in Tokyo is 60-70 yen per 300 gm. Yet in supermarkets it averages 50 yen, and some sell it for as little as 25 yen.

1976–Soybean production in Japan drops to 109,500 tonnes, the lowest level since 1878 when production statistics started to be recorded.

1978–The soybean cultivation area reaches 127,000 ha, topping 100,000 ha for the first time in 9 years.

1978–Soybean imports rise to 4,260,000 tonnes, topping 4 million tonnes for the first time. This is 4.5 times as much soybean imports as 20 years ago.

1978 Aug.–Unbranded generic foods, such as shoyu, miso, and salad oil, start to be sold. They retail for about 30% less than major branded products.

1979–Tofu production continues to rise, reaching 1,114,000 tonnes, an topping 1.1 million tonnes for the first time.

1980–Production of natto reaches 153,000 tonnes, up 33% compared with 10 years ago (when it was 115,000 tonnes).

1981–The area occupied by registered soybean varieties rises to more than 60% of total soybean area.

1981 Per capita consumption of miso drops below 6 kg/year to 5.9 kg/year, down 30% compared with 20 years ago (when it was 8.4 kg) This is a reflection of the health food movement in Japan.

1981 Sept.–Dr. Hirayama of the National Cancer Center announces that miso soup has some effect on lowering the death rate from stomach cancer, stroke, and sclerosis of the liver.

1981 Nov.–The Ministry of Agriculture and Forestry announces JAS (Japanese Agricultural Standards) for soymilk. The soymilk boom starts. The total yen value of the soymilk by all major Japanese manufacturers is 5,000 million yen.

1982–There are now 77 registered varieties of soybeans cultivated in Japan. Two of these (Norin 1-go and Norin 5-go) have a Norin [Ministry of Agriculture] number, and 25 have various place names.

1982–Production of soybeans in Japan this year is 226,300 tonnes, and soybean imports are 4,344,000 tonnes–which is only 5% self sufficiency.

1982–Per capita consumption of soy oil rises to 5.1 kg, topping 5 kg for the first time. It is 3 times higher than it was 3 years ago.

1982–Production of defatted soybean meal reaches 2,800,000 tonnes–up 38% over the last 10 years.

1983–Production of soymilk in Japan rises to 116,724 tonnes, topping 100,000 tonnes for the first time. It has risen 71% during the past year.

1983–Per capita consumption of soybeans in Japan is 5.8 kg, up 3.6% during the past year.

1984–The use of soymilk as a beverage is declining in Japan. The movement to use more soymilk as an ingredient in foods (such as noodles, breads, ice creams, and creamy soups) is becoming more active.

1984–Soybean yields in Japan reach 1,770 kg/ha, an all-time record. The old record was 1,540 kg/ha in 1982. Address: Norin Suisansho, Tokei Johobu, Norin Tokeika Kacho Hosa.

4465. Sharpe, Dennis B. 1984. Project 2002: Planning the future of soybeans. St. Louis, Missouri: American Soybean Assoc. iv + 78 p. 27 cm.

• ***Summary:*** This report is a joint project of the American Soybean Association and the Elanco Products Company. Contents: Preface. Introduction. Key issues identified. Synopsis of results and recommendations. Blue ribbon panel members (20 men). Advisory panel members (21 men). Demand, production & acreage projections. Project 2002 survey results: Economic survey, soybean yield survey, soil erosion policy survey, genetic engineering survey, soy protein market potential survey. Assessment of major competition. Appendix I–Project 2002 survey respondents: Economic survey, soybean yield survey, soil erosion policy, soy protein market potential survey (24 people), genetic engineering survey. Appendix II–Genetic engineering glossary of terms: Biotechnology, callus, cell fusion, chromosomes, cultivar, DNA (deoxyribonucleic acid), DNA vector, enzyme, gene, gene expression, genetic code, genetic engineering, gene mapping, genome, germ cell, hybrid, in vitro, meristem, mutants, mutation, phenotype, plasmid, protein, protoplast, protoplast fusion, recombinant DNA, RNA (ribonucleic acid), somatic cell, tissue culture, vector.

Pages 50-54 give a very interesting "Soy Protein Market Potential Survey." This survey polled leaders in the U.S. processing and research area. The results indicated "the market for U.S.-produced edible soy protein should rise to nearly 1,900 million pounds (50% flour equivalent) by the year 2002. This is nearly a three fold increase from the estimated 650 million pounds produced in 1982. While this represents a large increase, it is considerably more conservative than estimates made in the mid-1970s.

"The fastest growing segment of the edible soy protein market is soy isolate. Isolate production was projected to grow at a 7% compound annual rate versus 4.5% for soy flour and 5.4% for all products combined." Specifically, soy flour was projected to grow from an estimated 400 million lb in 1982 to 958 million lb in 2002, a compound annual growth rate of 4.5%. Soy protein concentrate was projected to grow from an estimated 80 million lb in 1982 to 251 million lb in 2002, a compound annual growth rate of 5.9%. Note: Three respondents estimated the 1982 concentrate figure to be 100 million lb and two others estimated 90 million lb.

Soy protein isolate was projected to grow from an estimated 80 million lb in 1982 to 308 million lb in 2002, a compound annual growth rate of 7.0%. Note: Two respondents estimated the 1982 isolate figure to be 100 million lb, and three others estimated 110 million, 75 million, and 50 million lb respectively. Pet foods and specialty feeds (such as calf milk replacers) were projected to grow from an estimated 1,500 million lb in 1982 to 2752 million lb in 2002, a compound annual growth rate of 3.1%. Note: Several respondents estimated the 1982 figure to be 500-700 million lb, and one respondent estimated it to be only 200 million lb.

"The pet food and specialty feeds market is the single largest market for soy protein other than bulk soybean meal for livestock and poultry. Some of the respondents took major exception to the 1982 estimate of 1,500 million pounds of soy protein utilized in pet foods and specialty feeds. In fact one respondent cut the estimate to only 200 million pounds. The 1,500 million pound estimate was derived from data based on the Selling Areas Market [Marketing], Inc. (SAMI) report of pet food tonnage that assumed an average protein content of 24% with 35% of the protein provided by soy ingredients. The SAMI figures were factored up 10% to allow for sales by rural feed stores and sales direct to kennels. The disparity in pet food estimates of actual sales highlights what seems to be a considerable amount of uncertainty about the actual size of the soy protein market, exclusive of bulk soybean meal.

"While growth rates for food and pet food use of soy protein are impressive, the total volume is expected to remain only a small fraction of projected U.S. soybean production–about 3% of the same as 1982. The greatest potential was seen for soy milk, imitation cheeses, ground meat blends and extenders, and commercial bakery or confectionery ingredients.

"Increased health consciousness in the general population, improved palatability of soy foods and higher meat prices were seen as the keys to increasing demand for meat, dairy and bakery uses of soy protein." Address: 2002 Project Manager, American Soybean Assoc., St. Louis, Missouri.

4466. Shurtleff, William; Aoyagi, Akiko. comps. 1984. Soyfoods labels, posters & other graphics: 4. Soymilk and soymilk products. Lafayette, California: Soyfoods Center. 148 p. 28 cm.

• ***Summary:*** This book is a collection of black-and-white photocopies of materials ranging in date from 1975 to 1984. The books in this series, each a unique collection of graphic materials, are designed for a number of purposes: (1) To serve as a source of ideas, ingredients, inspiration, legal specifications, and basic guidelines for companies in the process of designing graphics for their own soyfoods company. (2) To document the tremendous diversity of soyfoods products and ways of introducing them to the public. (3) To document, through this, the rise and history of

the soyfoods industry and market in the Western World.

Contents: Soymilk: Labels and packages, posters, recipes. Second generation soymilk products.

Note 1. All labels, posters, and other graphics relating to soymilk ice cream are in our book titled *Tofutti & Other Soy Ice Creams.* Most of these contain isolated soy proteins or tofu as the major ingredients.

Note 2. This book contains photocopies of Japanese soymilk packages (the most popular brands in Japan). Translations and analyses of the contents of each of these labels are given in Chapter 25 of Soymilk Industry and Market. Translation includes analysis of ingredients, nutritional composition, percent solids, package type, and shelf life. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

Address: Sacramento, California.

4470. Vegetarijanska kuhinja [Vegetarian cooking]. 1984. Zagreb, Yugoslavia: SNL (Sveucilisna maklada Liber). 389 p. Photos by Luka Mjeda. 25 cm. [Scr]
• ***Summary:*** This attractive, hardcover book, printed on glossy paper and containing many excellent color photos of dishes, has a lengthy section on soya (Soja; p. 291-307). It gives descriptions of and recipes for using (or making) whole dry soybeans, soymilk, tofu, and miso. Address: Zagreb, Yugoslavia.

4471. Vitasoy (USA) Inc. 1984. The company–Vitasoy (USA) Inc. (Leaflet). San Francisco, California. 1 p. 28 cm.
• ***Summary:*** Contains a brief history of Vitasoy (USA), which is the U.S. affiliate of Hong Kong Soya Bean Products Co., Ltd.–which was founded in 1939 by Mr. K.S. Lo and began operation in 1940. Address: 435A Brannan St., San Francisco, California 94107.

4472. Yeh, Sing-Wood. 1984. Gelation characteristics of Illinois soybean beverage base. PhD thesis, Dep. of Food Science, University of Illinois, Champaign, Illinois. 131 p. Page 1985 in volume 45/07-B of Dissertation Abstracts International. 6 black and white pictures. No index. 28 cm. [130 ref]
• ***Summary:*** Contents of the "Literature Review" section: Soybeans: Historical, soybean protein, problems of utilization (lipoxygenase enzyme induced off-flavor, trypsin inhibitors, flatulence). Methods of soymilk manufacture: Traditional methods, modified methods (hot water extraction, acid extraction, alkaline extraction), defatted soymeal method, protein isolate method, lipid-protein concentrate, whole bean methods. Soybean curds: Historical, regular tofu manufacture in the traditional way, factors affecting the quality of soybean curds (variety of soybean, composition of soybean milk, heat treatment, coagulants, others). Texture profile analysis.

Describes the characteristics of tofu made from Illinois beverage base (soymilk made by the Illinois method). "There was no difference in the textural data between the Illinois curd and the Oriental tofu. The total solids and protein recoveries in the Illinois curd were 82.2 and 94.9% which were much higher than 57.2 and 69.4%, respectively, in the Oriental tofu. The best curd from Illinois soybean base was obtained by blanching cotyledons in tap water without bicarbonate, grinding with water to 10% total solids, homogenizing at 82º with 5000 psi pressure on the first stage, coagulating with 0.5% calcium sulfate at 75ºC and pressing as usual. This curd was somewhat grainy so the mouth-feel was not quite as good as that for tofu. However, it compared favorably with tofu in all other respects while showing a large advantage in protein recovery." Address: Urbana, Illinois.

4473. Yntema, Sharon K. 1984. Vegetarian baby: A sensible guide for parents. 2nd ed. Ithaca, New York: McBooks Press. 224 p. Illust. by Tom Parker. Index. 22 cm. [105 ref]
• ***Summary:*** Text on cover: "A complete and valuable source book for vegetarian parents. Gives you the confidence to bring up your child on a meatless diet." A good handbook for vegetarian as well as vegan parents. Contains nutrition facts as well as good tips for feeding babies, plus special recipes for babies. Covers babies up to two years of age. Contains extensive, positive information about soyfoods, especially tofu and soymilk, including the nutritional value, specific uses in infant nutrition, and how to make each food at home. Tofu may be introduced to an infant's diet at age 8-9 months. Appendix B contains brief reviews of baby food cookbooks, most published after 1970. The author was born in 1951. Address: Ithaca, New York.

4474. *Caribbean Contact.* 1984? Canadians experiment with soybean in Jamaica.
• ***Summary:*** In Jamaica, Plenty Canada is "conducting an integrated soy foods programme involving the growing

of soybeans and other food crops and the introduction of soyfoods such tofu, soy milk, and tempeh to householders. The project, which began in Sept. 1983, is currently assisting over 40 farmers in the growing of soybeans... and has produced soy foods at nearly 30 demonstrations to well over a thousand Jamaicans." Plenty has conducted variety trials for over 200 varieties of soybeans with the Hillside Farmers Association. "Plenty is working with six schools in St. Ann parish to supply materials and training for establishing school gardens. The produce from these gardens will be used in the school lunch programmes...

"Generally, two types of demonstrations are provided. First the people are shown how to cook with tofu and soy milk and are given samples of the foods prepared. In the second demonstration, the actual production of these products is shown, and instruction sheets provided...

"Plenty Canada is currently seeking funding from the Canadian International Development Agency for a three year extension of the project in Jamaica. During this time, a small production facility for soy foods will be set up, nutritional study and training undertaken, and further school lunch programmes developed...

"Plenty Canada is also conducting projects in Antigua, Dominica, St. Lucia, and St. Vincent in the Caribbean and Lesotho in Southern Africa."

4475. **Product Name:** Formula S Food (Soy-Based Infant Formula).
Manufacturer's Name: Cow & Gate.
Manufacturer's Address: England.
Date of Introduction: 1984?
New Product–Documentation: Dorothy E.M. Francis. 1984. "Alternatives to Cow's Milk: Comparisons." p. 147-48. In: David L.J. Freed, ed. Health Hazards of Milk. London, Philadelphia, Toronto, etc.: Ballière Tindall. "Formula S Soya Food is entirely of vegetable sources."

4476. **Product Name:** Fortison Soya (Soy-Based Enteral Formula).
Manufacturer's Name: Cow & Gate.
Manufacturer's Address: England.
Date of Introduction: 1984?
New Product–Documentation: Dorothy E.M. Francis. 1984. "Alternatives to Cow's Milk: Comparisons." p. 147-48. In: David L.J. Freed, ed. Health Hazards of Milk. London, Philadelphia, Toronto, etc.: Ballière Tindall. "Fortison Soya, from Cow & Gate, is for school age children and adults requiring enteral feeds."

4477. Grain Processing Corp. 1984? Pro-Fam: Isolated soy protein products (Catalog). 1600 Oregon St., Muscatine, IA 52761. 14 p. Undated. 28 cm.
• ***Summary:*** Contents: Pro-Fam isolated soy proteins. Viscosity. Water absorption test. Oil absorption test. Emulsification tests I and II. Gel strength. Wettability / dispersibility. Solubility. Density. Compressibility. Functional properties of Pro-Fam isolated soy proteins (table). Suggested applications for Pro-Fam isolated soy proteins (table)–Baked goods: Breads & rolls, cakes, cookies & crackers. Confections: Compound coatings, nougat & fillings. Egg replacement. Meats: Comminuted products, sausage, frankfurters, patties & loafs, canned meats. Non-dairy products: Imitation cheese spread, flavored drinks, liquid coffee whiteners, whipped toppings, milk replacers. Nutritional supplements: Powdered drinks, protein tablets. Pasta products. Pet foods: Canned, dry extruded. Sauces. Textured proteins: Meat analogs, cereal, snacks, breading.

Details are given on the company's following isolated soy protein products: High gel: G-902. High functionality: S-970, S-972, S-920. Medium functionality: S-640, S-646, S-648, S-636. Low functionality: S-950, S-955. Isoelectric: S-901. Low viscosity: S-972. Address: Muscatine, Iowa.

4478. Thomas, Patrick. 1984? Early work with soyfoods on The Farm in Summertown, Tennessee (Interview). *SoyaScan Notes.* Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Patrick founded the milling operations on The Farm in the spring of 1972. He made various types of flour, including soy flour, which was used to make soymilk and tofu. His mill was a large, commercial steel-roller corn mill driven by a 7.5–10 horsepower motor. In about 1977 The Farm started to sell its soy flour and split soybeans that could be used for making tempeh. Address: Historian, The Farm, Summertown, Tennessee.

4479. Nordquist, Ted. 1985. The ASA soyfoods conference in Amsterdam. New developments with soyfoods in Europe (Interview). *SoyaScan Notes.* Jan. 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** During the 3-day conference 30-50 people were actively involved, not 120. Alfa-Laval and STS had exhibits in the expo hall. Why did the American Soybean Assoc. (ASA) organize this conference? To sell more soybeans. They were very forthright about this. Big drop in sales of soybean meal in Europe due to strong dollar and more use of European oilseeds? The conference was very professional. Amsterdam is definitely the European center of soyfoods. Nutana buys 4 million liters a year of aseptic soymilk from Alpro and sells it through their 7th day Adventist distribution network generally under the brand GranoVita. Nutana claims that when they started soymilk they were responsible for half of Alpro's production. They started distributing it 3 years ago. Alpro was making 3-4,000 liters/hour of milk. A new factory just opened with a capacity of 40,000 liters/hour. Milk from the new plant tastes better. Reliable sources have told Ted that last year 10 million liters of soymilk were sold in Europe, and that 80% of that was made by Alpro.

At least half of the attendees were from big businesses

in either the dairy or soy technology areas. There were also about 12-13 soyfoods manufacturers. The smallest soymilk plant from Alfa-Laval or STS is 2,000 liters/hour. A full-scale plant is 20,000 to 40,000 liters/hour. Address: President, Aros Sojaprodukter, Bergsvagen 1, S-190 63 Orsundsbro, Sweden. Phone: 0171-604 56.

4480. *Times of India* (*The*) (*Bombay*). 1985. City notes: United Group. Jan. 10. p. 10.
• ***Summary:*** In the near future, the United group plans to further expand and diversify its operations in a big way.

As part of its diversification, the group plans to construct a large scale soyabean solvent extraction plant and refinery at Mandideep, near Bhopal, Madhya Pradesh; it hopes to use the latest West German technology. "The refinery will be commissioned [ordered] in April and the solvent extraction plant by November."

Negotiations will soon begin with foreign companies for collaboration in the manufacture of soya foods and soya milk.

4481. Sierra, Edward. 1985. Re: Plenty's work with soybeans in the Caribbean. Letter to William Shurtleff & Akiko Aoyagi at Soyfoods Center, Jan. 11. 2 p. Typed, without signature on Plenty letterhead.
• ***Summary:*** Thanks for joining Plenty with a kind donation. Plenty was founded in Oct. 1974. PAS stands for Plenty Ambulance Service.

On page 8 of the Tenth Anniversary Newsletter [about Oct. 1984] the top photo shows our soy tech and a rasta friend looking over *The Book of Tofu.* We have taken to heart your suggestion for spelling "soyfoods" as one word–an appropriate industry standard.

Plenty's work with soybeans and soyfoods in the Caribbean is going well. On Jamaica, Plenty Canada is funding some agricultural work with variety trials of soybeans and other vegetables.

"On St. Lucia, as a result of our work last year, there are 135 farmers now growing soybeans and plans call for setting up a "Soy Shop" [to sell soyfoods] there soon. The first Soy Shop is on the island of Dominica where Plenty volunteers Sara [sic, Sarah] & Norman Ayerst have launched an integrated soy program (agriculture, variety trials, soy demonstrations, etc.) which, last year, flowered into the Soy Shop. Sara, who did the soy demonstrations on Dominica, found that there was a popular and tasty food called "rootis" (pronounced 'roadie'), which are sauce & meat wrapped in dough and fried. She whipped together a tasty tofu recipe and popped that in, and they're a great success! I quote to you from Norman's most recent letter:

"'The soya shop is still doing quite well. We sell about 800 accras (fritters) per day (25 cents ea.). We're open Mon. thru Fri.–can't handle the weekends yet. Ice cream is also a big seller and when we get our own machine we have requests for wholesale lots of the ice cream. We recently put tempeh on the market and it sells slowly (but steadily), at this point–along with the tofu and bottled soymilk. We are planning for some promotion of these last three products–milkshakes, sandwiches, etc. Once the folks taste some appetizing dishes they're much more willing to take the product home in its raw form. There are a lot of vegetarians here and people interested in health, and everyone seems to have a great love of good food.

"'We're operating out of a big house in the Newton district of Roseau... A friend of ours has reopened our old shop under the name of "Soy Kweyole". The new shop is its own entity [self owned by the local folks, which was one of our original goals for the project... ed.] but we have provided backup in many ways and we supply the basic raw materials for the soyfoods they sell. They're going into baked goods–high protein breads, cakes, pies, etc. It looks like they are going to do very well.

"'We are just gearing up to go into soyflour production and sales–it's probably going to be a big seller, judging from our initial marketing survey. Soy fever has definitely hit these parts...It seems as though people are starting to see the economic benefits to soy (not to mention nutritional value) and our project has gotten its feet on the ground. People want to help move things in a positive direction.'

"One of the heart connections that has come of our work with soy in the Caribbean, is with the rastas. Many of them have long ago vowed to "not eat no flesh mon!" stick with "Ital"–godfood, pure stuff. Many were into soy but had none. One fellow, Ras Bongo on St. Vincent, had been given four soybean seeds by one on another island. Ras Bonga planted them, and carefully saved the seed each year, until he could afford to try some. Meanwhile, he asked around for soy, how to use it, recipes, ideas for growing them, but found little. When we showed up we were able to supply him with more seeds and show him how to cook soyfoods. This is one of the intangible rewards that come with the work." Address: Plenty USA, P.O. Box 90, Summertown, Tennessee 38483. Phone: (615) 964-3992.

4482. Mehra, A.V. 1985. Making soymilk in Pantnagar, India (Interview). Conducted by William Shurtleff of Soyfoods Center in Lafayette, Jan. 17. 1 p. transcript. [Eng]
• ***Summary:*** His company plans to market soymilk in a very big way in India. Now they do it on a small scale. They have a private company under franchise from Pantnagar university and the Univ. of Illinois.

The company is named Pantnagar Soymilk Products Pte. Ltd. The soymilk plant is located at: C-2, Sector 11, Noida, UP [Uttar Pradesh], India. (No phone).

He is one of the directors of the soymilk company. Production started about 6 years ago but it has not been doing very well. Previously they sold their soymilk in sterilized bottles. Now they plan change to poly pack (little

plastic bags without the UHT); shelf life of only 3-4 hours. They plan to distribute it refrigerated. They hope to sell 20,000 packets a day. Address: Office: Pantnagar Soymilk Products Pte. Ltd., B-68, Mayapuri Industrial Area, Phase 1, New Delhi 110064. Phone: 592782 or 590908.

4483. Boyer, Robert A. 1985. Henry Ford, soymilk, soy ice cream, Bob Smith, Rex Diamond, and Rich Products (Interview). *SoyaScan Notes.* Jan. 30. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Soymilk and soy ice cream: "We made soy ice creams in the early 1930s, as a sort of by-product of our work with soymilk. We actually built quite a nice little production unit for making soymilk. It was a natural evolution to make soymilk from ice cream; we didn't learn the idea or the process from anyone. To make the ice cream, we coagulated the soymilk to make a curd, like fresh tofu, which we then dispersed (without drying it) in a colloid mill. We found we got a better product from the curd than from the soymilk itself. So you could call the final product a sort of tofu ice cream. The ice creams were made in the laboratories at Greenfield Village in Dearborn. We had 2-3 labs there. Henry Ford used to call it the Engineering Laboratory. The ice creams were served to special visitors. Mr. Ford would put on special press luncheons for journalists, food editors, etc. and soy ice cream was always on the menu. It was also served in the VIP lounge. It remained an experimental item that we and Mr. Ford would serve to impress people with the good taste and versatility of soy. We served it in the basic favorite American flavors: Chocolate, strawberry, and vanilla. I don't recall whether or not it was served at the 1934 World's Fair in Chicago [probably not], or whether it was served after the start of World War II.

"Later at Ralston Purina we made soy ice cream prototypes from soy protein isolates in order to show the potential and versatility of isolates. We served the ice creams to potential customers. I started to work with Purina in 1960 and our team (headed by Ralph Hoer and soon joined by Frank Calvert) started building an isolate plant in St. Louis, Missouri, shortly after that, so the first ice creams at Purina were probably made in about 1962-63.

"When I joined Ralston Purina, the company already had a commercial isolate plant in Louisville, Kentucky, that made industrial isolates for paper coatings. It was only after I arrived that Purina became involved in edible food-grade soy protein isolates, and these isolates are now a major, rapidly growing product line–which trace their origin back to Henry Ford.

Rich Products Corp. in Buffalo, New York got interested in soy via Rex Diamond, who worked for Henry Ford as Bob Smith's assistant. "Rex Diamond was the original spark plug for Rich. I'm not sure who had the original idea for whip toppings, coffee creamers, etc. Rex finally became the research director for Rich Products Corp. and that company developed the first good whipped topping and coffee whitener.

"When Bob Smith went out on his own to put out his own soymilk [sic, Delsoy whip topping], Rex went with him [though several years later]. After that, Rex left Bob Smith and eventually went with Rich Products. Later there were some hard feelings between Rich Products and Rex, but I don't know what that was all about. I once visited Rex in Buffalo, New York." Address: 632 Edgewater Dr., Apt. 731, Dunedin, Florida 33528. Phone: 813-734-2415.

4484. **Product Name:** Tofu, Tofu Cheesecake, Tofu Burger, and Soymilk.
Manufacturer's Name: Dragonfly.
Manufacturer's Address: 9, Moorashes, Totnes, South Devon, England. Phone: 86-4724.
Date of Introduction: 1985. January.
Ingredients: Tofu (11/91): Organically grown soya beans, filtered water, nigari.
New Product–Documentation: Owner: Sue Harker. Note from Simon Bailey. 1988. Oct. 10. Not operating at present. Business for sale. Future uncertain. Talk with Philip Marshall. 1990. March 29. This company now makes a small amount of organic tofu.

Letter from I.J. Mohammed of Oasis Wholefoods. 1991. Oct. 13. He worked for a while in about 1986 at Dragonfly as a partner. Since 1986 Dragonfly has been sold four times.

Letter and Labels from Simon and Dawn Boreham of Dragonfly Foods. 1991. Nov. 1. They are now located at 19A Riverside Buildings, Staverton Bridge Mill, Totnes, Devon, TQ9 6AQ, UK. Phone: 0803 865667. They first wrote on 9 Feb. 1990 to order books on tofu. Then Simon and his wife "purchased in June 1990 a small tofu factory in Devon called Dragonfly Foods. Together we regularly produce each week up to 200 kg of handmade organic nigari tofu, and 2,000 x 100 gm tofu burgers, with 4 different recipes, distributed and sold throughout the southern part of England. We are certified organic by the Soil Association and our products are approved by the Vegetarian Society." They are now developing a "business plan with a view to move to a larger site with greater production capacity." Label for Handmade Dragonfly Organic Tofu. 4 by 3 inches. Self adhesive. Green on white. "Soya bean cholesterol-free protein. Store below 4ºC. Once opened, refrigerate in a bowl of fresh water." The company is listed as "Dragonfly Kitchen, Staverton Bridge Mill, Totnes, Devon TQ9 6AQ. Phone: Staverton 0803 865667."

Handwritten letter from Simon Boreham in reply to typed questions from William Shurtleff. 1991. Dec. 2. Hard to read. "Dragonfly first began making tofu in 1984, with the organic status of tofu certified by the Soil Association in 1991. Dragonfly was founded by Sue Harker and Sarah Budd. Simon is trying to persuade the Polytechnic South

West Plymouth Business School (Drake Circus, Plymouth, Devon PL4 8AA, UK) to conduct a market research project on tofu. He encloses a copy of a letter from this organization stating that they plan to conduct such a study to be completed by early December 1991.

Letter from I.J. Mohammed of Oasis Wholefoods in England. 1991. Dec. 16. Dragonfly (which was the company's official name) was probably founded at about the end of 1984 as a partnership by Sue Harker and Sarah Child. Their private home address was 9, Moorashes, Totnes, Devon, England. They started selling soyfoods (mainly tofu, tofu cheesecake, and tofu burgers) in early 1985. In Feb. 1985 Mr. Mohammed started to work with Dragonfly. Soon the business changed to a partnership between Sue Harker and himself. While he was there, the company made tofu (which he had learned how to make in Japan) and miso. He left the company in Oct. 1985. The company was then owned by Mark, and then by Linsey, who sold it to Simon and Dawn Boreham. Dragonfly Foods now makes tofu and tofu burgers.

Talk with Simon Boreham. 1999. Dec. 7. On 1 Jan. 1994 the company moved to its present address: 2A Mardle Way, Buckfastleigh, Devon TQ11 ONR, England. Phone: +44 1364 642700. When Simon and Dawn bought Dragonfly, the turnover (sales) was £25,000/year. Today it is £325,000/year. The company, which is growing nicely, now makes three types of tofu (natural, smoked, and deep-fried), and ten types of beanies (veggie burgers containing 45% okara). Simon has just registered to web domain names: beany.com (which will be a fun site) and tofu.co.uk (which will be a serious site).

4485. Hellerstein, Stanley; Duggan, E.; Merveille, O.; Scarth, L. 1985. Follow-up studies on children with severe dietary chloride deficiency during infancy. *Pediatrics* 75(1):1-7. Jan. [11 ref]
• ***Summary:*** "In 1980, we [Grossman et al.] described 12 infants with a syndrome characterized by anorexia, failure to thrive, and hypokalemic metabolic alkalosis due to ingestion of a diet consisting almost exclusively of chloride-deficient Neo-Mull-Soy...

"After 4 to 5 years, ten children who had severe dietary chloride deficiency during infancy appear to be growing and developing normally and to have normal intellectual abilities. Three of them show behavioral patterns that may interfere with normal performance. Although the origin of these disturbed behavioral patterns is unclear, the stress surrounding the severe illness during infancy was a likely contributing factor." Address: The Children's Mercy Hospital, 24th at Gillham Rd., Kansas City, Missouri 64108.

• ***Summary:*** Recipes use soy flour, whole or split soybeans, soymilk, tofu, tempeh, okara ("soya milk residue"), and soynuts. Address: Instructress, Soybean Foods Research Center.

4487. Kopstein, Ernest. 1985. Non-dairy not necessarily non-milk (Letter to the editor). *Vegetarian Times.* Jan. p. 4. [1 ref]
• ***Summary:*** "Your readers who avoid milk may be interested in the following: While excluding milk and its derivatives from my diet, I've noted that sodium caseinate, a milk derivative, is routinely included in various foods labeled 'non-dairy,' especially the so-called 'non-dairy creamers.' Trying to clarify this apparent contradiction, I wrote to one of the large supermarket chains, which in turn sent me a copy of a letter from one of the manufacturers. The following is a direct quote from this letter:

"'Inasmuch as milk is the chief raw material in the manufacture of sodium caseinate, it might be claimed that a synthetic beverage of which it is a component would not be called a non-dairy creamer. At present, however, sodium caseinate is not regulated by regulatory agencies as a dairy product or milk ingredient but as a chemical or food additive, generally regarded as safe (GRAS) for human consumption.'

"Perhaps others who, like myself, avoid animal products on both ethical and health grounds would agree that 'non-dairy' on these products is non-truthful advertising." Address: Baltimore, Maryland.

4488. Leviton, Richard. 1985. Soyfoods year in review 1984. Colrain, Massachusetts: Soyfoods Magazine. 3 p. Unpublished typescript.
• ***Summary:*** A month by month chronology of important events in the soyfoods industry from January to December 1983, followed by a summary of ten important trends and key events. Address: 100 Heath Road, Colrain, Massachusetts 01340.

4489. Mwale, J.M.; Luhgu, E.M.; Mutinta, M.; Mabusya, S. 1985. The state of soyabean utilization in Zambia: A brief summary. In: 1985. Sri Lanka Soybean Utilization Training Program and Workshop: Proceedings. See p. 458.
• ***Summary:*** "Soyabean Utilization in Zambia dates back to 1971 when a Netherlands team conducted seminars in various provinces in the country to demonstrate and popularise the various products that can be made from Soyabeans. Agriculture production started around 1975 when about 500 tons of soyabeans were grown." Since then soyabean "growing has increased steadily and at present 1984/85 projected yields are estimated at 15–20,000 tonnes."

In recent years soyabeans are "reported to be used in bread, and breakfast and cereal preparations. At the National Council for Scientific Research (NCSR), it is used in experimental formulations in preparation of weaning foods in which maize flour, full fat soya flour and other nutrients are

incorporated... It is also used in the preparation of biscuits by the country's Dairy Product Board (DPB)."

"Although traditional dishes do not normally incorporate soyabeans there is sufficient justification to believe... that dishes such as soyamilk, tofu, tempeh, etc., would find acceptability in the country..." Address: Zambia.

4490. Nelson, A.I.; Wei, L.S. 1985. Utilization of whole soybeans–INTSOY basic concepts. In: 1985. Sri Lanka Soybean Utilization Training Program and Workshop: Proceedings. See p. 205-23. [9 ref]
• ***Summary:*** The University of Illinois' involvement in commercial utilization of whole soybean foods was started in a very limited manner in 1969, when the Illinois group made a limited survey of food products containing soy components which were presently on sale on the U.S. market. That year only two other U.S. organizations were engaged in utilization research on foods made from whole soybeans: Cornell Univ. at Ithaca and Geneva, New York (liquid soy beverages), and the USDA Northern Regional Research Laboratory at Peoria, Illinois (dry/powdered soy beverage).

Research work was started at the University of Illinois in January 1970 by Wei, Steinberg, and Nelson of the Univ. of Illinois, Dept. of Food Science, Processing-Engineering Group. A second Processing-Engineering Group in the Dep. of Food Science began to publish their work on soybean utilization in 1977. Located in the Dairy Manufacturers Building, they included researchers Munir Cheryan and O. Omosaiye, who did pioneering work on ultrafiltration. A third group in the Department of Food Science, the Nutrition Group, began to publish its work on soybean utilization in 1977 also. This group included John W. Erdman, K.E. Weingartner, R.M. Forbes, etc. They did many studies on mineral bioavailability of soyfoods. Address: Univ. of Illinois, Urbana, Illinois.

4491. **Product Name:** Sunrise Soya Milk [Unsweetened, or Sweetened with Raw Cane Sugar].
Manufacturer's Name: Soya Health Foods, Ltd.
Manufacturer's Address: Unit 4, Guinness Rd., Trafford Park, Manchester M17 1UA, England.
Date of Introduction: 1985. January.
Wt/Vol., Packaging, Price: 500 ml or 1 liter Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: The Grocer (London, UK). 1985. April 6. p. 23. "Soya milk spearheads move into yogurt, ice cream." The Grocer (UK). 1985. July 27. p. 18 "Sunrise hopes soya yogurt will follow milk success." Note the use of the word "Milk" in the name of this product.

Natural Food Trader (UK). 1985. Sept. p. 25. "Soya yoghurt launched [by Soya Health Foods of Manchester, England]." Michael Cole is director of this company.

Shurtleff & Aoyagi. 1985. Soymilk Industry and Market, Update. "Michael Cole, a 39-year-old Londoner (who spent years in California) and a strict vegetarian for most of his life, forms Soya Health Foods Co. with a Sikh partner, Mr. Arora. The latter owns 51% equity and has all of the risk, while Cole has 30% and the finance company 19%. They open a soymilk plant at Trafford Park, Manchester, using relatively small Japanese equipment, including a continuous roller extractor. Sales grow rapidly as they challenge the near monopoly enjoyed by Alpro in the European soymilk market... By December 1985 sales of the sweetened and plain Sunrise Soya Milk in 500 ml Tetra Briks have reached 250,000 liters a week."

Leaflet (8½ by 11 inches. Color photo). 1986. Be good to yourself. Sunrise Soya Milk. A Choice. 100% vegetarian. Shows a tall 500 ml Tetra Brik of Sunrise Soya Milk sweetened with raw can sugar and a squat 500 ml Tetra Brik of the product that "contains no sugar." "A high quality soya milk ready to drink produced in the British Isles! Sunrise Soya Milk is made from the finest Canadian hulled soya bean combined with soft Welsh mountain water to create a pure, refreshing soya milk drink. Sunrise soya milks are: Free of animal produce, lactose, cholesterol, sugar (some varieties), and salt. It is a long life U.H.T. treated soya milk lasting 6 months unopened and up to 7 days in the fridge once opened. Available at your local health food store."

Michael Cole. 1986. Soya Health Foods Ltd. Production began in Jan. 1985 with a 500 ml no sugar added longlife pack.

Note: This is the earliest record seen (Feb. 2013) concerning Soya Health Foods, Ltd. (Manchester, England).

4492. Tetra Pak Inc. 1985. Stepped-up production characterizes past year at Tetra Pak Inc. (News release). P.O. Box 802605, Dallas, Texas 75380-2605. Undated.
• ***Summary:*** "Continuing to make inroads into the American packaging market, Tetra Pak Inc. experienced another impressive year. Corporate activities of 1984 were highlighted by the inauguration of the Denton, Texas packaging material plant. The 210,000-square-foot facility officially began production in June.

"In the United States, Tetra Pak Inc. reached the 1.2 billion mark in package sales. Since 1981, 450 pieces of equipment have been installed.

"Worldwide, The Tetra Pak Group maintained a dominance in the packaging industry by producing approximately 35 billion cartons during the past year. Of those, 64 percent were aseptic packages. The total number of installations throughout the world stood at 5,150 at the end of 1984. Over three thousand of those machines were aseptic. The Tetra Pak Inc. Denton, Texas plant was one of three inaugurated in 1984. The Tetra Pak Group also added production facilities in Kenya and Finland. The company now has 24 plants worldwide which produce packaging material for Tetra Pak filling machines.

"To produce the packaging material, Tetra Pak used 580,000 tons of raw paper, 150,000 tons of polyethylene, and 30,000 tons of aluminum foil.

"Each layer of the packaging material provides a specific purpose. The paper provides stiffness and a good surface for printing. Layers of plastic serve as barriers to liquid and bacteria, and they protect the aroma of the product. Aluminum foil acts as a barrier to light and oxygen, and it conducts heat to seal the carton during filling.

"About 75 percent of all raw paper processed by the group is purchased from Scandinavian mills. In addition, Tetra Pak imports paper from the U.S. for some markets. Paper is also produced locally in Mexico, Brazil, Japan, India, Italy and Pakistan.

"Contact: Rita J. Simpson, Vice President, Information, Tetra Pak Inc."

Note: An undated news release that arrived in Jan. 1985 was titled "Good-by Brik Pak. Hello Tetra Pak: We're changing our name but you can still reach us at the same locations." Six addresses and phone numbers are given, including 3 regional offices in: (1) Rancho Cucamonga, California 91730. (2) Arlington Heights, Illinois 60005. (3) Somerset, New Jersey 08873. A technical center is in Irving, Texas 75063. Address: Dallas, Texas.

4493. **Product Name:** Tofruzen (Non-Dairy Soft Serve Soy Ice Cream) [Multiberry, Strawberry, Dutch Chocolate, Orange Coconut Custard, Vanilla Almond, or Peach Melba, Mountain Berry, Tropical Sunshine, Chocolate Peanut Crunch].
Manufacturer's Name: Tofu Today (Marketer). Made in Boulder, Colorado, by White Wave, Inc.
Manufacturer's Address: 333 W. Hampden, Suite 1010, Denver, CO 80110.
Date of Introduction: 1985. January.
Ingredients: Incl. tofu.
Wt/Vol., Packaging, Price: Pints, soft serve, 3.5 oz cups, or bulk. Pint hard pack costs $2.49.
How Stored: Frozen.
Nutrition: 4 oz. has less than 130 calories.
New Product–Documentation: Shurtleff & Aoyagi. 1985. Feb. Tofutti & Other Soy Ice Creams. p. 81. Made with tofu and isolated soy proteins. Private labeled for Tofu Today in Denver; Spot in Product Alert. 1985. May 27. Vanilla, chocolate, and strawberry flavors available. Company is in Englewood, Colorado. Product Alert. 1985. Sept. 23. A new variety is Orange Coconut Custard, in pint cartons for $2.49. "Tofu Today, Inc., located in Denver, Colorado, is the manufacturer [sic].

Spot in Natural Foods Merchandiser. 1985. Oct. Six flavors. Spot in Food & Beverage Marketing. 1985. Nov. "Tofu Heads for Rockies." The product is being introduced into the Denver area. Jason Bois is president of Boulder-based Tofu Today.

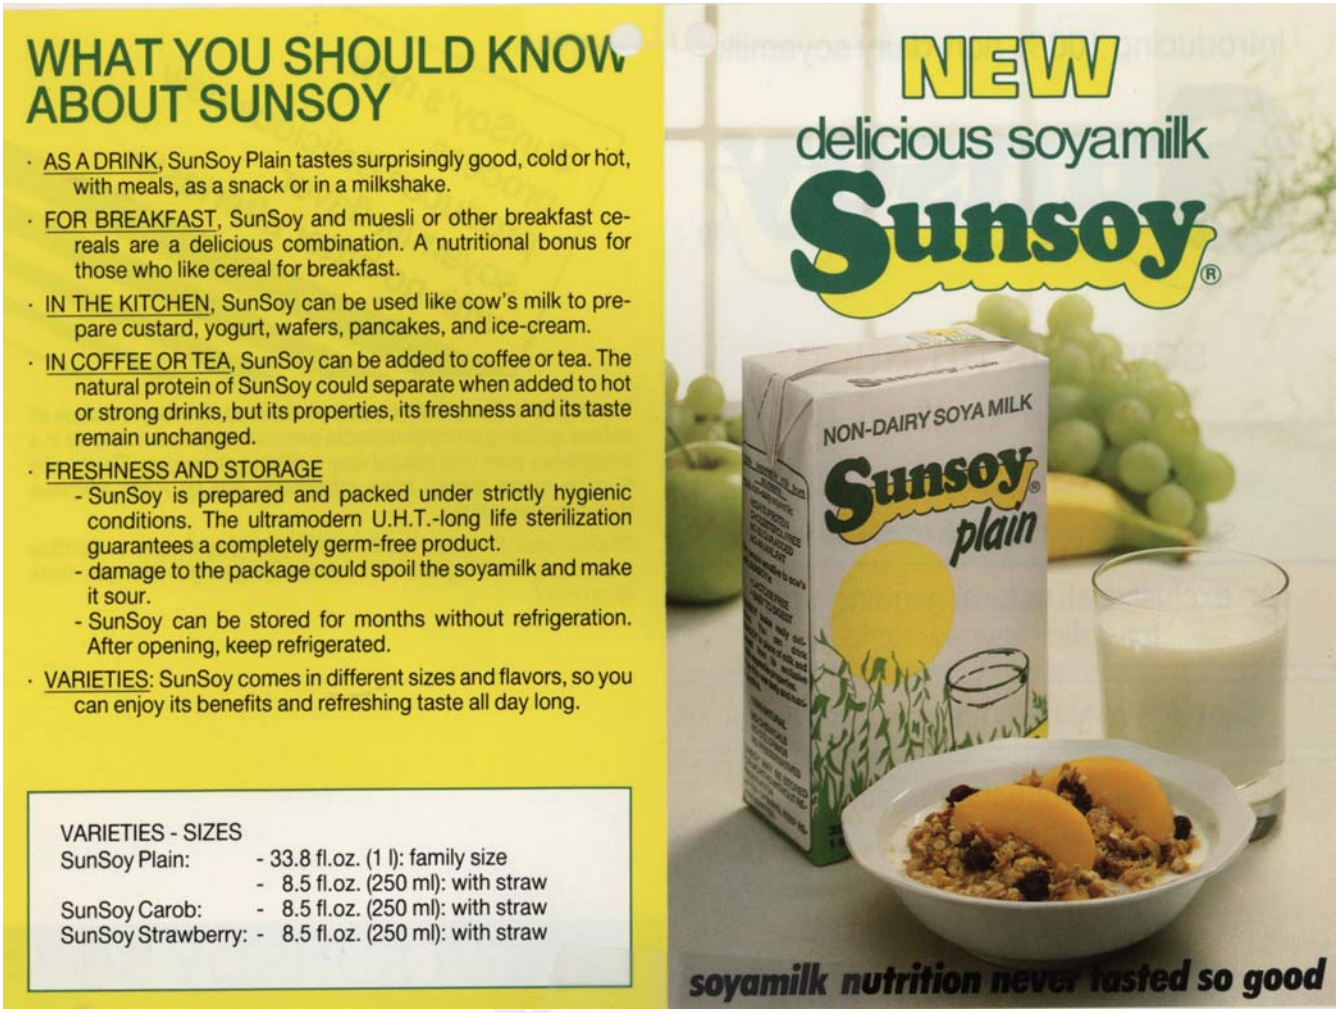
Sentinel (Lakewood, Colorado). 1986. Jan. 30. "Local Competition for Tofutti." It sells for a little over $2/pint at King Soopers. By Aug. 1986 Tofu Today Inc. was at 300 East Hampden, Suite 403, Englewood, CO 80110. Leaflet. 1987. March. 8½ by 11 inches, color. "Introducing the hottest new seller in frozen desserts... Tofruzen, Instead of Ice Cream. The frozen dessert with tofu that meets Soyfoods Association standards."

Talk with Steve Demos of White Wave. 1989. Nov. 1. Tofruzen is in very bad shape, largely from poor management. They want the fast buck. A market exists for their product. White Wave's sales to them were last year $800,000 last year but only $300,000 this year. Now they are starting to rise a bit. They greatly over-ordered last year and had huge inventories. Most of their sales are from hard pack. Sales of bars are small. Tofruzen Light, announced in Aug. 1987 (see Soya Newsletter. 1(3):11. Coming soon. To be made entirely without sugars), has not yet been launched.

4494. **Product Name:** Sunsoy (Soymilk) [Plain, or Carob].
Manufacturer's Name: Vamo Foods USA, Inc. (Importer). Made in Belgium by Alpro.
Manufacturer's Address: 20 Shawnee Dr., Watchung, NJ 07060. Phone: 201-769-0290.
Date of Introduction: 1985. January.
Ingredients: Plain: Filtered water, dehulled soybeans, honey, chicory syrup, barley malt, seaweed, natural vanilla.
Wt/Vol., Packaging, Price: 8.45 fluid oz, 1 liter and 250 ml Tetra Brik Aseptic cartons.
How Stored: Shelf stable.
Nutrition: Per 6 fl oz.: Plain: Calories 97, protein 6.5 gm, carbohydrate 8.0 gm, fat 4.4 gm. Carob: Calories 114, carbohydrates 12.5 gm.
New Product–Documentation: Label. 1985. 2.5 by 4.25 inches by 1.5 wide. Paper carton. Plain: Green, light green and yellow on white. Carob: Brown, light green and yellow on white. Glass of soy drink with sun in background illustration. "Non-dairy soy drink. New, delicious. High in protein. Cholesterol free. Easy to digest. 100% natural. No Chemicals. No preservatives. No sugar added. No animal fat. For people sensitive to cow's milk." Note: This is one of the few U.S. soymilk products with no added sweetener.

Leaflet (4 panels each side, each panel 15 x 10 cm, glossy color). "New delicious soyamilk: Sunsoy." Undated. A photo on the front panel shows an aseptic package of Sunsoy plain next to a glass of the milk and a bowl of cereal with milk. Printed in Belgium.

Shurtleff & Aoyagi. 1985. Soymilk Industry and Market, Update. Imports started in January 1985. Vamo is a sister company of Alpro in Belgium; both companies are owned by Belgium-based Safinco, a holding company which also owns Vandemoortele, one of Europe's largest oilseed (and soybean) crushers. Sunsoy is the first liter-sized soymilk to be sold in America. All of Vamo's soymilk was initially sold



to Balanced Foods, a large company that owns four natural/health foods distributors, as part of an exclusive distribution agreement which lasted until 1986, when Vamo wanted to pick up more distributors. Balanced Foods, however, was always free to distribute other brands of soymilk.

Talk with Vamo Foods (Watchung, NJ). 1986. Nov. 17. Mr. Hoefnagels (Pron. = HOF-nay-guls) is president. David Clark is Sunsoy sales rep. Hoefnagels works in Belgium and comes here once a month. Alpro makes their product. They are an importer, owned by Vandemoortele. In 1984 they started US operations; Sunsoy came later.

Form filled out by Alpro. 1990. May 30. Alpro began making this product in March 1985. Plain, carob, and strawberry flavors were sold in 250 ml Tetra Brik Aseptic cartons, and the plain flavor was also sold in 1 liter cartons.

4495. Doblin, Stuart. 1985. Plans to make soymilk ice cream, soy yogurt, and soymilk at Cream of the Bean (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 11. 1 p. transcript.

• ***Summary:*** His company, Cream of the Bean, is building a new, fully-automatic plant, which will be ready in about a month. His first product will be a soy yogurt, his second a soymilk, and his third a soy ice cream. The soy ice cream probably won't be out, on a small scale, until Sept. 1985, in vanilla and carob flavors. The name of the ice cream has not yet been decided, but it may be "Cream of the Bean." The company will do its own distribution in the Chicago area. Eventually he also hopes to make a soy kefir.

He is using the Illinois method for making the soymilk and ice cream. He signed a licensing agreement with an independent firm appointed by the University of Illinois in Dec. 1984. This is the first University of Illinois license for ice cream or yogurt; it is valid until 1987. (Beatrice Foods licensed the rights to produce a soymilk). Most ice cream is made from "condensed skim," which is less expensive than nonfat dried milk. His ice cream will be made from condensed soymilk and will contain no tofu.

Update: Talk with Stuart Doblin. 1989. Aug. 14. He made the soy ice cream for one summer, the summer of 1987. He made the soymilk only for those who brought their own container to his plant, so it was not really a commercial product. Soymilk sales were never more than $100/month. Address: Cream of the Bean, 3973 Grove Ave., Gurnee,

Illinois 60031. Phone: 312-623-4114.

4496. Aldon, Don. 1985. Work with Swift & Co. and non-dairy frozen desserts (Interview). *SoyaScan Notes.* Feb. 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Don started with Swift & Co. in 1961 in the "Vegetable Protein Products Division," a brand new division of the oil mill department. The oil was their main product and the protein-rich meal was a by-product. The president of the oil mill department started this department to turn the meal into food. Research on vegetable proteins started in about 1957-58.

Their first product, launched in early 1961, was brand-named SFP (Swift's Protein Food), a water-extracted, granular soy protein concentrate, containing 70% protein. It was not an isoelectric concentrate, and it was not texturized. It was used mostly in ground beef products, but also in some breads. More was sold to other companies than used in Swift's meat products.

The next product was Texgran, a textured soy flour (somewhat like today's TVP), invented by Dean Wilding in about 1963-64. He invented a texturization process while trying to find a way to extrusion cook soy flour. He visited Wenger and saw a variety of products they made. He recognized their value and bought a machine. Don worked for about 18 months developing the process, doing research, and generating information to be used in the patent. Swift started selling the product before they applied for the patent. "As soon as our competitors saw this product, they recognized its value because they had been extruding dog food. Ralston Purina slammed things together and got a patent application in first. Two weeks later ADM had one in. Then 3-4 weeks later Swift applied." Swift started selling Texgran in 1964-65. The patent was finally issued in about 1971-72. Litigation went on for years and years between the three companies. Finally Ralston got the basic patent since they had applied first. ADM and Swift got a royalty-free license. They did that just to settle the litigation. Note: The final key U.S. patent (No. 3,940,495) was issued to Ronald Flier of Ralston Purina in Feb. 1976, based on an application field on 17 Jan. 1973, but based on an earlier application filed on 10 July 1964.

Texgran was used by Swift as a meat extender and sold to other companies as well. The first retail product in which Texgran was used was artificial bacon bits, the first such product on the market. Don developed this product, which was launched in about 1977-78. It was based on Texgran, with flavors added then smoked in a smokehouse. Right after that, General Mills introduced Bac*O's.

Swift, which had a combined dairy and ice cream department (the main plant was in Holland, Michigan) was also involved in making soy ice creams, using soy protein isolates purchased from Central Soya. For years, Swift also made an artificial nonfat dried milk (NFDM) called Provide, based on soy flour and cheese whey. They introduced it in about 1973-74. It was used by bakeries in place of NFDM. But Swift never really got into using isolates commercially. They were preparing to do so when they sold the business.

Dean's Dairy in Arizona was the first to start selling Swift's artificial milk, which contained vegetable fat, nonfat dry milk, and soy isolates. The product didn't last very long; it was used to sort of test the market. For details, ask Tony Scaletto, who was Mr. Dipper Dan–head of Swift's ice cream operations. "We had those ice cream parlors nationwide at one time. He developed all the ice creams and novelties. He may not remember all that went on with soy; we were compartmentalized." Note: Talk with Tony Scaletto (Feb. 26): He is certain that Swift never had a frozen dessert containing soy protein on the market. He tried using soy protein in a soft-serve product but it was unsuccessful.

Swift got out of the soy protein business because it was driven by the vegetable oil business. They sold the whole oil business (3 crushing plants) to A.E. Staley in about 1979. The one making soy products was in Champaign, Illinois. He is not sure exactly why, but probably because sales and earnings fluctuated too much and could not be controlled. Also, most of the old-timers who really knew the business had retired.

Staley kept Provide and had it custom made outside. Since Staley had its own textured soy protein product, it shut down the Swift protein plant; SFP lingered on, then died.

Concerning Swift's early history: They started as a meat packer. Then in the 1930s or 1940s they started making oil products from lard. In about 1938, to extend their business, they got into the oil extraction business and soybeans. Today their big products are processed meats and poultry. Swift bought Hunt-Wesson in late 1983 or 1984. Swift & Co. is now a division of Beatrice Meats, Inc. in Oak Brook, Illinois. All the old company records on soy have been discarded.

Dean Wilding is now in the Philippines building houses. He left Kraft several years ago. His son is a contractor. Address: Alberto Culver, 2525 Armitage, Melrose Park, Illinois. Phone: 312-450-3000.

4497. Pathiravitana, S. 1985. Re: The possible end of *Soyanews.* Letter to William Shurtleff at Soyfoods Center, Feb. 28. 2 p. Typed, with signature on aerogramme.
• ***Summary:*** February marks the end of *Soyanews* under CARE funding. The agreement is that the Dept. of Agriculture now takes it over. The CARE agreement was to go on until 1983; the extensions were given because the Dep. was not ready to take over. In 1985 they are still not ready–the main reason being lack of finance. At present they have the resources to produce an occasional issue. If John McLeod were there–the only one at CARE who was sincerely interested in soya–a way might have been found to keep the publication going. A team from Plenty Canada led by Larry McDermott was here to do a report for CIDA on the

grass roots development of the soya program in Sri Lanka. They seemed like the right people for making a contribution. But there has been no word from them for a long time.

There is a lot of competition now in Sri Lanka among multi-nationals to introduce soya milk as part of the school feeding program. Countries involved are Denmark and Sweden with the name Alfa-Laval figuring prominently. Address: 3 Jaya Rd., Colombo 4, Sri Lanka.

4498. *Australian Dairy Foods.* 1985. Soy report: Soy blends to overcome disadvantages? Frozen soybean desserts. Technology is here for soy beverages. Feb. p. 46.
• ***Summary:*** Blends of soymilk and dairy milk are being considered in Australia. Address: Australia.

4499. *Australian Dairy Foods.* 1985. Soy report: Six new soy drinks expected. Soy products will enter market. Feb. p. 48.
• ***Summary:*** The first Australian soy drink last year was "Golden Life," a "sport food" launched by Martin Pharmaceuticals in Tetra Brik cartons. Also concerns: Anders Linder of STS-Soya Technology Systems, Rajasoya, Vital, Soyvita, Granose. Address: Australia.

4500. *Australian Dairy Foods.* 1985. Soy report: Tofutti is tantalising U.S. tastebuds. Flavored soy drinks selling well. Feb. p. 51.
• ***Summary:*** "Americans are devouring 180,000 litres of Tofutti a week."

Ceres Natural Foods Pty. Ltd. in East Bentleigh, Victoria, Australia is currently distributing 7 varieties of soymilk plus a Tetra Pak tofu. Mr. Don Lazzaro is the company's director. Address: Australia.

4501. Boyer, Robert A. 1985. Reminiscences: Automotive design–Oral history project. Dearborn, Michigan: Henry Ford Museum and Greenfield Village. 130 p. Accession #1673.
• ***Summary:*** This is the transcript of an interviews conducted by Dave Crippen of the Henry Ford Museum on 7 Feb. 1985 at Mr. Boyer's home in Dunedin, Florida. It covers all aspects of Boyer's work with soybeans at the Ford Motor Co., including: Growing up in Royal Oak, Michigan; his father worked in the accounting department of the Ford Motor Co. at Highland Park, Michigan (p. 1). Boyer's first meeting with Frank Campsall (p. 2). Growing up at the Wayside Inn (the oldest hotel in America, in South Sudbury, Massachusetts, p. 1-6). Attending high school in Framingham, Massachusetts (p. 6). First meeting with Henry Ford when the two ice skated together on the mill pond behind the Wayside Inn (p. 7). Moving to Dearborn in Sept. 1927 to attend Ford's Trade School (p. 7-11). Early work at the chemical plant (quarter-size model of Iron Mountain plant) in Greenfield Village (p. 12-13). Ford's trip to Germany [Peace Ship to Europe, in 1915 during World War I?] crystallized a lot of his thinking. The Great Depression and the origins of his chemurgic thinking. In 1934 the first National Chemurgic Conference was held at Dearborn Inn; Boyer was in charge of the program. Mr. Irenee DuPont attended and Mr. Ford spent a lot of time with him. Before that, the DuPonts and the big banks did not trust Ford. (p. 14). Opening of Greenfield Village in late 1929 on the 50th anniversary of Edison's first successful light bulb (p. 15). Chemical experiments on truckloads of farm crops using a retort; Frank Calvert (p. 16-19).

Experiments starting in about 1933 using hexane as a solvent to extract the oil from soybeans; the Ford Extractor (p. 20-23). Boyer's group wanted to get pure protein from soybeans. So "in the lab we developed our own process for extracting the oil... We used hexane solvent, like dry cleaning. We'd flake the beans and run them through a pipe that was full of hexane on an angle with a screw in it." Hexane solvent is "distilled out of petroleum. It has a very narrow boiling point–66º centigrade. The Ford extractor... got quite a lot of attention. We built it across the street from the chemical plant. It was about 150 feet away. Mounted it all by itself because everybody was afraid of fire." A roof was built over it but no walls. It was probably built in about 1933.

In 1933 at the World's Fair [sic, the Ford Exposition of Progress] in New York City, Boyer's group had a glass model (on a table) of this extractor that used hexane solvent.

Note: Ford boycotted Chicago's A Century of Progress Exposition which opened in 1933, in part to call attention to the company's 30th anniversary; he held his own "industrial fair," first in Detroit and then in New York, in late 1933. *Business Week* described it as "the greatest industrial show ever held." Some 2.3 million people attended the two-week show in New York.

A working model of the Ford extractor, using hexane solvent, was at the Chicago World's Fair, starting in mid-1934, in the Ford Industrial Barn. "They would never let you do that today. Too dangerous."

Research on purified soy protein and soy plastics with formaldehyde; Bakelite (p. 24-25). Use of soy oil for foundry core binders for casting the Ford V-8 engine block; thus, the soy experiments are now commercialized. Building a 50 ton/day extractor (p. 26-27). Spinning soy protein fiber like rayon, based on spinning milk protein in Italy. Using the fibers to make wrinkle resistant synthetic wool, a suit of clothes for Henry Ford and others, overcoats, neckties, felt hats. "We also found that these fibers blended in very well with rabbit fur for making men's felt hats. So the Hat Corporation of America took all the fiber we could make. It wasn't very much and they would blend it in with rabbit fur. And they actually had them [the men's felt hats] on the market." Rabbit fur is very expensive (p. 29-36). Ford's suit of clothes contained 65% wool and 35% soy fiber. Boyer

leaves Ford Motor Co. in 1943. Problem with fiber was tensile strength, especially wet strength. Ford's interest in this fiber work, and his fitness at age 75 (p. 37-38). Ford "was not a true vegetarian but he was pretty close" (p. 38). Edsel Ruddiman's work with foods (p. 39-47). Boyer and Ruddiman attend American Soybean Assoc. soybean conference in Washington, DC [in Sept. 1932] where they saw "leather-like products that the Chinese make" [yuba]. Boyer tried unsuccessfully to use the idea to make "synthetic leather." USDA's experimental farm in Holgate, Ohio, where many soybeans sent back by W.J. Morse were tested (p. 40-42). Work with soybean milk (p. 43-46). The executive dining room in the Engineering Laboratory. Henry Ford invited Boyer to lunch there about 6 times (p. 45). Development of soy ice cream; lipoxidase enzyme inactivation (p. 45-46).

Visits to Battle Creek, Michigan and Dr. John Harvey Kellogg (p. 47). Boyer's work was with industrial products; the plastic car and structural plastics with hemp, flax, and phenol formaldehyde (soya protein Bakelite resin) (p. 47-64, 70). Making trunk lids using a hydraulic press (p. 50). Ford's famous axe demonstration on a trunk lid (p. 50-52). Lowell Overly and Joe Stewart (p. 53-56, 61, 78-79). Boyer drives the plastic car home (p. 63). Ford's aim with the plastic car: to provide industrial markets for farmers (p. 65). World War II stops plastic car development (p. 65-66). Contract to build an airplane wing of plastic (p. 66-70). The plastic lid and car contain little or no soy (p. 70). Fiberglass and the Chevrolet Corvette (p. 71). Plexiglas and the B-24 bomber made at Willow Run (p. 72). Edsel Ford's death of stomach cancer in the spring of 1943 and its effect on his father, Henry (p. 73-74). Ending work with soy fiber (p. 74).

Boyer leaves Ford in 1943 and goes to work for Drackett Co. in Cincinnati, Ohio. Wife needs to leave Detroit. After 1943 Boyer's career really takes off. Dr. Gangloff (p. 75-77). Use of soy fiber by Drackett in felt hats. "We sold them a lot of fiber and we decided to build a bigger plant." Building a protein plant and a fiber plant in Cincinnati big enough to supply the hat company's demands and larger "than we needed just to supply our fiber operation." They also had a big operation in Cincinnati for high-impact (not structural) plastic (p. 78-80). Drackett's marketing people knew how to market Windex and Drano "but they had no feeling for the soybean operation. So when Mr. Drackett died, they sold the whole soybean plant to Archer-Daniels-Midland (ADM, p. 81-83). Before Mr. Drackett died, Boyer's division had developed commercial soy products, and Drackett was making money on the plastic (phenol formaldehyde plus hemp) and the fiber (p. 81). Use of soy protein as a paper coating (p. 83). ADM finally closes the old Drackett protein plant and sells it to Central Soya, which used the million bushel elevator capacity for storage (p. 83-84).

Shortly after Mr. Drackett died, Boyer left Drackett to work on his edible soy fiber, where he owned patents. "If we can make a fiber from soy protein that resembles the outside of a sheep, why not make a fiber that will resemble the inside (p. 84-86). Idea of building an edible soy protein plant is in Cincinnati, with Mr. Drackett's approval (p. 87). Boyer tries to find companies to license rights to his landmark patent: Virginia Carolina Chemical (Taftville, Connecticut, p. 88); Swift & Co. (p. 89-92); Unilever, which was interested in peanut protein in Africa and at Port Sunlight near Liverpool (p. 92-94, 112-13); General Foods and Nabisco (Fairmont, New Jersey research lab) (p. 94, 99). Unilever and Swift pay licensing fees of $20,000 a year plus consulting fees. General Mills and Ralston Purina (p. 94-95). Why Swift dropped its interest (p. 95-96). General Mills and Bacos (p. 96). Patent expires in 1971 after 17 years (p. 96). Worthington Foods (p. 97). Ralston Purina was getting into protein. In about 1956-58 they "had bought Procter & Gamble's protein plant in Louisville [Kentucky], which was making industrial protein for paper coating" (p. 98). Worthington Foods was too small to make their own soy protein fibers, so Ralston Purina made it for them (p. 78-80). Ralston Purina's great success with edible soy protein and their small conflict: pet food vs. human food (p. 100-01). From 1961 to 1971 Boyer was receiving licensing fees / patent royalties from Ralston Purina, Worthington, and General Mills (p. 102). General Mills and Bacos (p. 103-04). Ralston Purina's patent lawsuit against Far-Mar-Co. Ralston won $8 million. Boyer testified as an expert witness (p. 104-05).

Boyer remarries and retires in 1971 (p. 102, 105, 107). Subsequent work with Miles and Worthington; the Morningstar Farms line (p. 105-08). Companies now spinning soy protein fiber (two in the Netherlands, one in Japan, one in Australia). Ford Foundation was not interested in his work with soy protein for Third World nations (p. 110). Central Soya bought the ADM plant that was located in Chicago (p. 113-14). Kellogg's Corn Soya breakfast cereal (p. 114-15). Worthington's Soyloin Steaks; all early Kellogg and Worthington vegetarian products based on wheat gluten (p. 119). When Worthington bought Battle Creek they got their lady research director; she worked at Worthington until she was quite elderly. Boyer visited her in her lab at Battle Creek several times (p. 119-20. Note: Josephine F. Williams was in charge of the lab and product development at Battle Creek, where she worked closely with Dr. John H. Kellogg. She kept similar positions at Worthington Foods, according to Ron McDermott). Henry Ford as a soybean pioneer and visionary. The soybean is now America's No. 2 cash crop and also our second largest earner of foreign exchange. "That really started from Ford. When we first started in 1931, hardly anybody ever heard of the soybean, and Henry Ford's penchant for publicity publicized the soybean... He certainly made it popular and made people become aware of it. Today it's darned important." He should be remembered as the "Father of the Soybean." "I always thought it would be nice if they would rebuild the [Soybean] laboratory [in Greenfield

Village] or restore it like it was when we were doing the soybean work and give it the real credit that it deserves..." (p. 120). After Henry Ford died in 1947 his family wanted no part of any of his pet projects. They completely eradicated the old Ford company (p. 121). Henry Ford was deeply interested in the welfare of American farmers. His tractors and Model T were of great use to them (p. 121). Origins of Ford's interest in chemurgy; William Hale and Dow Chemical Co. in Midland, Michigan; the first three chemurgic conferences in Dearborn, Michigan, in May 1935, 1936, and 1937 (p. 122-27). Ford and Ruddiman establish a complete canning line for good-tasting green soybeans on the outskirts of the Ford estate. The equipment was quite expensive. When World War II threatened, Ford gave it to Michigan State University to teach canning to students. (p. 129-30). Boyer's personal impressions of Henry Ford (p. 128-30). Address: 632 Edgewater Dr. #731, Dunedin, Florida 33528.

4502. **Product Name:** [Nigari Tofu, Tofu Spreads, Soymilk].
Manufacturer's Name: Fonte della Vita S.r.L. (La).
Manufacturer's Address: Via Matteoti, Fossano, Italy. Phone: (0172) 66 397.
Date of Introduction: 1985. February.
New Product–Documentation: Entry in SoyaScan Names database. 1987 Jan. 23. They are said to make tofu and soymilk.

Talk with Jean de Preneuf of Société Soy in France. 1990. July 13. He says this is the biggest tofu manufacturer in Italy. They are now located at Via Monviso 18, 12049 Trinita (CN), 50 miles south of Turin (Torino).

Talk with Michael Brenger, production manager at Fonte della Vita. 1990. July 18. This company started in Feb. 1985. Its first product was tofu. In April 1986 they moved to the following address: Via Circonvallazione 87, 12049 Trinita (Cuneo), Italy. They are now located in the same place but the address has changed: Via Monviso 18, 12049 Trinita.

4503. Honer, Clem. 1985. Keeping up with soy technology: Why soy protein isolates offer unique opportunities for dairies in fluid products and frozen desserts. *Dairy Record.* Feb. p. 62, 64.
• ***Summary:*** "recent research into the manufacture of all soy-based products using soy protein isolates has opened new opportunities for the small- to medium-volume dairy processor..." "Soy-based frozen desserts can be manufactured easily in any ice cream plant." The author explains how.

4504. Langley-Danysz, Pernette. 1985. L'entrée discrète du soja en Europe [The discreet / cautious entry of soya into Europe]. *Revue Laitiere Francaise* No. 438. p. 16-20. Feb. [Fre]
• ***Summary:*** An illustration on the cover shows an American cowboy-like man, wearing a cowboy hat and cowboy boots, smoking a cigarette, and carrying a briefcase on which is written ASA. He appears to be emerging from a garbage can labeled "soya" and from his briefcase are flying several cartons of soymilk. The article begins: "Two soy products, milk and tofu, were at the center of a conference organized in September 1984 at Amsterdam [Netherlands] by the American Soybean Association (ASA)."

Gives data on the chemical composition and nutritive value of soy beverages, soymilks, and tofu. Discusses the products recently introduced in Europe. Consumption of soy products in the E.E.C., principally as soy protein concentrates or isolates, has never exceeded 40,000 tonnes/ year. Consumption of traditional East Asian soyfoods such as tempeh, miso, sufu, and soy sauce, is still low in Europe, but consumption of tofu and soymilk is growing significantly. Nutritional composition of cow's milk and soymilk are compared, and various commercial soy products are discussed.

Soy ice creams (including Ice Bean and Tofutti) are discussed in detail on page 19, col. 1. The pioneer of these soy ice creams (*ces ice cream au soja*), named Ice Bean, was developed by Farm Foods in Tennessee. Today there are a dozen other brands of tofu ice cream (*glaces au tofu*). One of these ice creames (*ces crèmes glacées*), Tofutti, made by the company Tofu Time and presented at SIAL in 1984, took the first place last fall on the hit parade of dairy products from the United States." Note: This is the earliest French-language document seen (March 2007) that mentions soy ice cream which it calls *ice cream au soja,* or *glaces au tofu,* or *crèmes glacées.*

Photos show the following products, each in a Tetra Brik carton: Nestle Bonus Soya Bean Milk, Plamil Soya Milk Concentrated, Morinaga Ever-Fresh Silken Tofu, Yeo's Soya Bean Drink, Alpro Soya Drink. Address: France.

4506. Levitt, M.D.; Savaiano, D.A. 1985. Lactose intolerance and yogurt. I. Understanding the problem. *Practical Gastroenterology* 9(1):-. Jan/Feb. *
Address: 1. Dep. of Food Science & Nutrition, Univ. of Minnesota, 1334 Eckles Ave., St. Paul, MN 55108; Veterans Administration Medical Center, 54th Street and 48th Ave. South, Minneapolis, MN 55417.

4507. **Product Name:** Tofreezi (New Name for Frozen Buddha Soy Ice Cream) [Mocha Royalle, Berry Banana, Amaretto, Pineapple Coconut, Chocolate Mint, or Maple Walnut].
Manufacturer's Name: Metta Tofu Products Ltd.
Manufacturer's Address: Wren Rd., Denman Island, BC, V0R 1T0, Canada.

Date of Introduction: 1985. February.
Ingredients: Incl. soymilk, tofu, honey, fruits, nuts, natural flavorings.
Wt/Vol., Packaging, Price: Half liter and full liter cartons.
How Stored: Frozen.
New Product–Documentation: Label. 1985, undated. Red and blue with black letters on white. Shurtleff & Aoyagi. 1985. Tofutti & Other Soy Ice Creams. p. 78. Product Alert. 1986. March 3. Lists flavors. "Tofreezi is 75% soymilk and tofu by volume." Leviton. 1986. East West. June. p. 37. Rated the highest of all soy ice creams in America.

4508. Recker, Robert R.; Heaney, Robert P. 1985. The effect of milk supplements on calcium metabolism, bone metabolism and calcium balance. *American J. of Clinical Nutrition* 41(2):254-63. Feb. [47 ref]
• ***Summary:*** In a Dairy Council sponsored study, 13 healthy postmenopausal women who drank an extra three eight-ounce glasses of low fat milk every day for a year showed no significant increase in calcium balance. Even with all the extra milk-derived calcium, they were still in negative calcium balance after a full year of the regime. The scientists who conducted the test knew why. They said the women continued to have a negative calcium balance, and continued to develop osteoporosis, due to "the average 30% increase in protein intake during milk supplementation." The additional protein load from the milk tended to wash calcium and other minerals out of the subjects' bodies, and thus throw them into negative calcium balance. The researchers, instead of facing squarely the consequences of their discovery, concluded by recommending a reduction in protein intake from sources other than milk (such as chicken or fish) in order to improve calcium balance.

Note: This study seems to imply that the more milk a person drinks, the more calcium he or she will lose. In other words, the protein and fat in milk carries all of the calcium in the milk out of the human body, and also carries out some additional calcium, creating a negative calcium balance. Address: Creighton Univ. School of Medicine, Dep. of Medicine, Omaha, Nebraska.

4509. Rich, Robert. 1985. History of Rich Products Corporation's work with soy-based dairy analogs (Two interviews). Conducted by William Shurtleff of Soyfoods Center, Feb. 8 and March 20. Followed by 6-8 letters of questions and answers and Mr. Rich's reading of this manuscript. 12 p. transcript.
• ***Summary:*** Early Years to 1949. Bob Rich was born on 7 July 1913 in Buffalo, New York. He was one of five children of a local ice cream manufacturer, formerly a dairyman, who had switched to the ice cream business because he didn't like selling milk. During the summers Bob acquired a working knowledge of dairy plant operation at his father's ice cream plant. In 1935 he graduated from the University of Buffalo, where he was two-time captain of the football and wrestling teams. After graduation he used a $5,000 gift from his father to make a down payment on Wilber Farms Dairy, a small milk plant in Buffalo. He eventually developed it into one of the city's leading wholesale and retail operations. But he grew to dislike the dairy business just as his father had.

"In 1942 Bob Rich, having established a reputation as a milk plant operator, was called to Washington, DC, as a consultant in the dairy section of the War Production Board. A year later he was sent to Detroit by the War Food Administration (WFA) as milk order administrator for the state of Michigan.

"One day in 1943 the chief purchasing agent of Detroit's Ford Hospital came into Rich's office in search of additional butter ration points. Rich explained that his job was concerned solely with the diversion of non-essential civilian milk supplies into the production of dry and condensed milk for the U.S. armed forces and for Lend Lease. The purchasing agent replied that the Ford Hospital was not in need of milk. The entire supply of milk and cream was produced in Dearborn, Michigan, by Henry Ford's Carver Laboratory (named after Dr. George Washington Carver)–from soybeans!

"Those last words sparked what was to become a lifelong interest for Bob Rich. He had never heard of soymilk before, but during the war he had seen the potential for dairy-like foods. After Ford's purchasing agent had told Rich more about soymilk and soy cream, he invited Rich to visit the Carver Laboratories at Henry Ford's Greenfield Village in Dearborn, Michigan. (Note: Dearborn and Detroit are about 350 miles by road from Buffalo.) There Rich saw the continuous process, 3-vat system that Ford's researchers had developed from as early as 1940 for extracting protein from soybean flakes. The extraction equipment resembled a Rube Goldberg contraption. The protein was used as the basis for the soymilk they made for the Ford Hospital. During his visit, Bob Rich met Rex Diamond (chief chemist there), and Diamond told Rich that if Rich was interested in using soy protein to make a soy cream, he could license the rights to Ford's patented continuous protein extraction process for $1 a year.

"In a sense Henry Ford's career can be seen as a plot to eradicate large domestic animals. Having rendered the horse obsolete with his automobile, he now set out to eliminate the cow. Ford's unspoken antagonism toward cows struck a responsive chord in Bob Rich. Though neither the protein extraction nor the soymilk formulation operations were in operation during his visit, Rich was impressed by what he saw that day. Sales of whipping cream were forbidden during the war, so he began to dream of developing a 'soy cream' that would whip. For more than a year Rich kept thinking about his new idea."

After resigning from the WFA in Oct. 1944, Bob returned to Buffalo and engaged a leading chemists and

dairy engineer to help him transform his "soy whipping cream" idea into reality. The Ford Motor Co. had backed off on its original offer to license Bob the rights to their patented method of continuous protein extraction. So Bob and his advisors developed a batch process that extracted a significantly higher percentage of isolated soy protein from soy flakes–which he obtained from the Glidden Co. The flakes were first mixed with water in 300-gallon stainless steel tanks. The pH of the flakes was raised to 9.6 to extract the protein, then lowered to near the isoelectric point (pH 4.6) to precipitate the protein. After the supernatant liquid (soy whey) was removed, the isolate curd was neutralized to pH 6.9 then centrifuged with a dairy clarifier (with the discs removed) to lower the moisture content. The wet isolate was then run through cooling tubes into stainless steel settling tanks. The original "soy cream" formulation called for (in order of predominance): water, 27% soy oil shortening, corn syrup, 1.5% isolated soy protein (slurried with water), flavoring, coloring, salt, and the stabilizer they had developed (propylene glycol monostearate). In the all stainless steel processing room, the "soy cream" was pasteurized at 185 ºF, homogenized at 3,500 pounds pressure, then cooled to 35 ºF. When the product was satisfactory, Bob Rich decided to call it Whip Topping.

In November 1944, after he was satisfied he had a good protein extraction system and a good "soy cream" formulation, Bob Rich founded and incorporated Rich Products Corporation in Buffalo, New York, to manufacture his non-dairy whipped cream. He converted his dairy's 3-car garage into the production plant. Joe Robida was production manager. Whip topping hit the market in April 1945, shortly after Delsoy was introduced. It was sold as a thick liquid in a ½ pint container the shape of a truncated cone–the same shape as Delsoy's container. Both companies chose the same unique container because the machine needed to fill it was less expensive and Pure Pak refused to give a license for use of their carton to any competitor of dairy products.

Rich's Whip Topping had a number of advantages over whipped cream ÿ- aside from the fact that whipping cream was completely unavailable during the war: (1) It stood up longer after being whipped, retaining stiffness and overrun better without drooping or weeping; (2) it sold for about 25% less than heavy cream; (3) because it could be frozen (which heavy dairy cream could not, if it was to be later whipped), it stayed fresh longer; (4) it could be re-whipped even several days after it had been whipped initially; (5) one volume of the liquid whipped up to 3.0 volumes of topping in 45 seconds, versus only 1.86 volumes for regular dairy whipping cream. Thus Whip Topping gave 61% more yield by volume; (6) dairy cream could be easily over-whipped, resulting in a kind of buttery substance. This was not a problem with Whip Topping; (7) it was a kosher and pareve product from 1946 on; (8) it was advertised as being almost twice as nourishing as heavy cream and (believe it or not) non-fattening!

Whip topping was a war baby. Initially it was sold only as a retail product. Rich distributed it to the customers on his milk routes, billing it variously as "the Miracle Cream from the Soybean" and "Gold from the Soil." During the early months it was not a fabulous success. Its developers were not chemists and the soy proteins were made by a relatively primitive process, so the product's quality left much to be desired. Sales during the first year (9 months) were $28,000.

In the summer of 1945 an unexpected breakthrough occurred. Rich had been invited to make a sales presentation to the Henry Pape Co., a refrigerated foods distributor on Long Island, New York. He packed some samples in dry ice and newspaper and set out on the overnight train from Buffalo. The next morning, while facing the sales manager and 18 salesmen, Rich took out his samples then discovered to his horror that they had frozen solid. He had inadvertently packed them in too much dry ice. He began to perspire, for he knew well that cow's cream would not whip after freezing. He cracked a few jokes to stall as long as he could, then borrowed a knife and hacked nervously at his frozen "soy cream" until he could fit the pieces into a mixing bowl. Then he held his breath. It whipped to perfection!

No one was more surprised than Bob Rich. But he had the presence of mind to realize that he had done more than escape from a potentially embarrassing situation. He had invented the world's first frozen non-dairy whipped cream. This meant that his market was no longer confined to Buffalo. Now he could sell Whip Topping nationwide. Quite by accident Rich Products Corp. had entered the frozen food business. Three months later the company was freezing all its products. The modern frozen food industry, which often dates its origins from 1929 when Clarence Birdseye froze his epochal fish, was still quite young in 1945, and Rich Products later came to be regarded as one of its pioneers (Frozen Food Age 1977; Owen 1983). (Continued). Address: Chairman of the Board, Rich Products Corp., P.O. Box 245 (1150 Niagara St.), Buffalo, New York. Phone: 716-878-8000.

4510. Rich, Robert. 1985. History of Rich Products Corporation's work with soy-based dairy analogs (Continued–Document Part II). Conducted by William Shurtleff of Soyfoods Center, Feb. 8 and March 20. 12 p. transcript.

• ***Summary:*** Continued. In January 1946, to get national distribution for his frozen whip topping, Rich Products ran a quarter page ad in Quick Frozen Foods–the company's first ad for the product. From among the 134 frozen food distributors who responded, Rich Products appointed its first 100 distributors. America's housewives took to Whip Topping. Sales snowballed. The plant at 1149 Niagara St. began to operate 24 hours a day. Also in January 1946 Rich Products entered the foodservice business, when they sold

their first case of Whip Topping to Ohio State University. To use Whip Topping, a chef would chop the frozen product into pieces with a cleaver (one was provided free of charge with each case!), then whip it. Later, Rich Products added sugar to the formulation, which made the product thaw and pour.

Over the years institutional and bulk sales of Rich's Whip Topping increased. From 1945 on Rich had taken his whip topping to food trade shows and dietitian's shows, attending up to 30 a year. The pioneering product was well received. A good part of Rich's success from 1946 on was in the South; there the problem of dairy whipped cream's turning sour or rancid in the warmer climate restricted its usage, the people were more accustomed to the use and flavor of soy since soy margarine was widely used in frying, and southern frozen food distributors were very aggressive.

Then on 20 November 1946 disaster struck. With no advance notification, the U.S. government lifted all restrictions on the sale of cream and other dairy products, months before the earliest predicted date for such a move. With regular whipping cream now available, retailers and distributors canceled all orders for Whip Topping. For Rich Products, it was a nightmare, and for a while it looked like the young company might perish. But Bob Rich, his sales staff, and his advertising agency worked for days around the clock on a new marketing strategy to overcome the product's ersatz wartime image and to play up the its many unique attributes.

In December 1946 *Soybean Digest* ran a nice article on Rich Products and Whip Topping–written before the surprise notification. The firm had just spent $60,000 constructing a new, modern plant, which was working 24 hours a day, 7 days a week producing 1 million half pint containers of Whip Topping a month.

A huge national campaign was launched but recovery came only slowly; not until late 1948 had sales reached their first-year level. At that time Whip Topping was introduced in a pressurized all-metal container, which replaced its former heavy wax paper cartons–half pints for the retail trade and quarts for institutions and bakeries. Previously it had been necessary to partially thaw the product, then whip the topping by hand or in an electric mixer. Now the topping emerged from the container nicely whipped, under 90 pounds pressure from nitrous oxide and carbon dioxide.

As Whip Topping gained popularity, the dairy industry began to take notice. The first lawsuit against the non-dairy product was in 1949 in California. The charge was that Whip Topping was an imitation dairy product, and hence illegal. Rich Products' defense was that their product was not an imitation (which implies inferiority to the real product) but a replacement. Likewise the Model T Ford was clearly a replacement for the horse and buggy, not an imitation. As we have seen above, Whip Topping had many definite advantages over its dairy counterpart. Rich Products won the case. Then in 1951 the product was seized again. In the interim, the dairy industry had gotten the state food laws changed and, as Bob Rich recalled, "done everything but mention Rich Products' name." Rich Products won the 1952 trial, and judge Bernard Shawman notified the state's attorney general that if he should attack Rich Products at any time in the future, Mr. Rich would have an excellent chance for indemnity against the state. That was the last lawsuit ever brought against Whip Topping.

The 1950s. By the early 1950s, as Whip Topping began to become popular, other companies began to use Rich's brand name. Although it was a registered trademark, listed on the Supplemental Register, it sounded almost like a generic term. Rich's attorney's protected the term, suggesting that those with trademark infringements call their products something else, such as "whipped topping." But eventually Rich formally renamed his product "Rich's Whip Topping" to give it better trademark protection.

By 1946, Rich Products had obtained kosher and pareve certification for Whip Topping from the prestigious Union of Orthodox Jewish Congregations of America. By about 1946-47 kosher Jewish catering services in New York City (and soon thereafter housewives) had discovered that Rich's Whip Topping (which they purchased from Henry Pape Co.) was remarkably similar to real whipped cream in texture and flavor, and could be used to make a completely new type of non-dairy frozen desserts. These were America's first such desserts based on isolated soy proteins. Soon an estimated 5-10% of Rich's sales of whip topping to the foodservice market were being used by other companies to make non-dairy kosher ice creams.

Rich's followed this lead and in about 1951 unveiled Chil-Zert, the world's first isolate-based commercial non-dairy frozen dessert having a registered trademark. Although Chil-Zert was well made (with 2-3% soy protein, soy oil, and corn syrup) and tasted good, like many pioneering products it ran into problems. First, it was transported and stored by frozen food distributors who couldn't keep it cold enough. (Ice cream distributors, who operated at 20 degrees below zero, wouldn't touch Chil-Zert.) No emulsifying system could be found to prevent it from softening then becoming icy when refrozen. Second, the FDA impounded the product from Arrow Frozen Foods in New Orleans, claiming that it was an imitation ice cream and thus misbranded. The case was to be tried in federal court in Syracuse, New York. But Rich Products did not even go to the trial to contend the charge, for distribution problems had already forced them in 1952 to discontinue Chil-Zert. David Rich, son of the company's founder, enjoyed Chil-Zert as a boy. He recalled that when he first tasted vanilla Tofutti in the 1980s, it distinctly reminded him of Chil-Zert.

On 15 Nov. 1955 Rex Diamond (the Henry Ford researcher that Rich had met on his visit to the Carver Labs) went to work for Bob Rich in Buffalo. Rich hired Diamond after the American Maize Products Co., where Diamond was

formerly employed, dropped their plans to make a powdered non-dairy topping. Diamond was put in charge of the laboratory and development and research of Rich Products. From that time until at least 1959 he was the only chemist employed by the company. On 25 Nov. 1955, as part of a business agreement, Diamond sold, assigned, and transferred all rights, titles, and interests to all of his patents (3 issued and 1 applied for) to Bob Rich in return for $5,000.

In May 1956 Rich Products added a completely new formulation of Whip Topping to its line. Named "Rich's Whip Topping–The Diamond Process," it contained no protein and was made by a process developed and patented by Diamond. Diamond eventually became vice president of Rich Products. In the new formulation, soy oil was replaced by coconut oil, which had a better flavor. A key new ingredient in the non-protein whip topping was methyl ethyl cellulose, developed by Dow Chemical.

Rich's new non-protein Whip Topping came in two forms: a base (containing 46% fat) and a regular strength. It was initially sold only to foodservice institutions (which comprised about 20% of total sales); the original soy protein formulation continued to be sold (largely in a pressurized container) to the retail trade, which accounted for 80% of total sales. Rich Products continued to produce its own soy isolates. Good quality powdered isolates would not be available commercially in America until about 1959 (Continued). Address: Chairman of the Board, Rich Products Corp., P.O. Box 245 (1150 Niagara St.), Buffalo, New York. Phone: 716-878-8000.

4511. Rich, Robert. 1985. History of Rich Products Corporation's work with soy-based dairy analogs: Rich wins legal battles for non-dairy products. (Continued–Document Part III). Conducted by William Shurtleff of Soyfoods Center, Feb. 8 and March 20. 12 p. transcript.

• ***Summary:*** Continued. The new formulation had numerous advantages over its predecessor. Its flavor was better and its shelf life at 40ºF was extended to 6 months, from 3-4 weeks. It could be whipped to a stiffness never before attained by any cream or filled cream (containing added vegetable fat). It whipped up to 4 times its liquid volume, giving more than double the yield of dairy whipping cream. It retained overrun, freshness, flavor, and a "decorator's edge" for more than 48 hours at temperatures as high as 80ºF. The base had a unique advantage over dairy whipping cream. It could be reconstituted or extended with either the usual water or nonfat milk, or with fruit juices to give special effects such as an orange icing or filling. Now Rich began to introduce the new Whip Topping in various sizes. In 1952 came Sundi-whip in an 8-ounce pressurized can for soda fountains and over-the-counter trade. In about 1953 appeared Rich's Green Label Whip Topping, which was developed for bakery and institutional use. Prior to mid-1955 Whip Topping had been Rich's only product. At that time they launched Rich's Frozen Chocolate Eclairs, which had Whip Topping as the filling. The eclairs quickly became enormously successful, and were called "the hottest thing to hit the frozen food industry in the last five years." In February 1955 Quick Frozen Foods published an excellent 27-page, tenth anniversary story of Rich Products' first decade, upon which we have drawn heavily. The 1960s. In 1963 Rich Products introduced Coffee Rich, a frozen liquid coffee whitener. It was test marketed in Baltimore. Rich deliberately used the generic disclaimer "coffee whitener" rather than "non-dairy creamer" to avoid as much as possible stepping on the toes of dairy interests. Coffee Rich was the second such liquid product to be sold in America; Presto Food Products in Kansas City, Missouri, had introduced a non-dairy coffee creamer named Mocha Mix (containing soy protein) in 1950, although Rich was not aware of it. But Rich's product was the first frozen liquid non-dairy creamer. The original Coffee Rich used coconut oil and contained no protein, being based on the 1953 patent formulation. The lack of protein gave the product a long shelf life when sold refrigerated in dairy cases, as was planned. But the product started settling out, so the company switched to using sodium caseinate as a protein source, then in about 1963 began using soy protein (typically about 0.75% by weight) as the main protein source. In the mid-1970s soy oil replaced half of the coconut oil, then later in the 1970s all of it. The dairy industry spent a small fortune trying to keep Coffee Rich off the market. Its fight against Whip Topping had been short lived largely because heavy whipping cream (of which little was sold and lots spoiled) was not a big money maker for milk dealers and dairies. But cream was the "bread and butter" of the dairy industry, and it girded to fight in state after state to the bitter end. In some states dairy interests claimed Coffee Rich was an "imitation cream" and hence against the state law; in others they claimed it was mislabeled because the words "imitation cream" did not appear on the label. The first lawsuit was in Louisiana in 1961. Rich Products won in a one-day trial. The defense was exactly the same as it had been for Whip Topping. Coffee Rich was a replacement, not an imitation. Angered by this defeat and hoping to break Rich by exhausting his financial resources on court cases, dairy interests had Coffee Rich seized in Virginia, Michigan, and Washington. But the former college wrestling and football star wasn't easily downed. He parried by persuading the Carnation Company (which sold Coffee Mate, a powdered caseinate-based coffee whitener) to split all forthcoming legal fees. Two or three years later General Foods joined the non-dairy defense fund. Their Birdseye Division sold Dream Whip, a powdered whip topping, and later the famous non-dairy Cool Whip. Now all legal fees were split three ways. Dick Borne of RGB Labs says they were sharing expenses too before the association was formed, and the General Mills came in after. At about this time (in 1968) the group finally established the National Association for Advanced Foods, to

defend the rights of non-dairy products and to be sure that no small companies went off half-cocked and lost precedent setting lawsuits. Ellis Arnall was the Association's first director; they charged annual dues plus assessments and took in new members. The many trials continued to be fought in the name of Rich Products Corp., since it had prestige. In the 1960s a small company selling Instant Blend, a non-dairy creamer or topping, after deciding to defend itself, lost its lawsuit 7-0 in the Massachusetts supreme court. They were kindly permitted to continuing selling the product as long as it was distinctively colored–blue! The dairy industry gloated. A year later Rich Products deliberately sold Coffee Rich in Massachusetts so that it would be seized. Their case also went to the state supreme court, but this time Rich's team of seasoned attorneys won... 7-0! By 1966 some 15 consecutive court decisions had ruled in Rich's favor, though five of these went as far as the state supreme court. By 1974 the number of cases and victories for Coffee Rich had grown to 40. That year the Kansas Supreme Court declared Coffee Rich "a new and distinct food" and the milk lobby gave up. Rich Products' success in these suits led to the creation of a new food product category: Coffee whitener. Coffee Rich was the company's third product to contain a significant amount of soy protein. But Rich did not especially promote the fact that his products contained soy on the labels or in advertising, though he often discussed it with reporters. The company initially bought its isolated soy protein isolates for Coffee Rich from one or more of the big manufacturers (Central Soya, ADM, or Glidden) In the mid-1960s a powdered Coffee Rich was developed. In about 1965 Rich Products stopped using soy protein in its retail Whip Topping and switched over to the non-protein formulation adopted for institutional use in 1953. At about that time, company stopped making isolated soy proteins. By 1967 Bob Rich had built Wilber Farms Dairy into the largest solely owned, independent milk company in America. That year he decide to sell it and get out of the dairy business. Rich Products (whose plant was now 140,000 square feet) was doing well enough with non-dairy products to support him amply. In 1969 Bob Rich's oldest son, Robert Rich, Jr., started to work at the company's Buffalo headquarters as sales manager. After graduating from Williams College in 1963, he had run the Rich Products plant in Fort Erie, Ontario, Canada. After setting up the company's first marketing department in Buffalo, he embarked on a bold program of acquisitions, based on the observation the Rich Products then had more frozen food distributors than any other frozen food packer in the USA. Company sales in 1969 were $33 million. The first acquisition, that year, was the Elmtree Baking Co. in Appleton, Wisconsin. Sales began to rise by leaps and bounds. The 1970s. In 1975 food sales from Rich Products and affiliates had topped $100 million a year. That year the company was awarded the National Frozen Foods Convention's first Grand Award, for "achievement in developing the frozen food industry..." and for his "pioneering work in researching and popularizing simulated frozen dairy products" (*Quick Frozen Foods* 1975). In November 1978 Rich Products launched an exciting new product and a revolutionary new process. The product was Bettercreme, a non-dairy icing that whips and is used primarily on cakes. It contained an enzyme-modified isolated soy protein (made perhaps by A.E. Staley's Gunther Products) (Continued). Address: Chairman of the Board, Rich Products Corp., P.O. Box 245 (1150 Niagara St.), Buffalo, New York. Phone: 716-878-8000.

4512. Rich, Robert. 1985. History of Rich Products Corporation's work with soy-based dairy analogs: (Continued–Document Part IV). Conducted by William Shurtleff of Soyfoods Center, Feb. 8 and March 20. 12 p. transcript.

• ***Summary:*** Continued. The process was Freeze Flo, a dramatic processing breakthrough that was " first used to make Bettercreme. Freeze Flo makes it possible to use a frozen food without thawing it. By eliminating the need to thaw, Freeze Flo quickly began to change the very concept of frozen foods. The process, invented by Marvin L. Kahn (who worked with a company Rich acquired), replaces free water in a product with water bound to fructose or other natural sugars in the product. Binding water in a product (such as a fresh or dried fruit) it does two things: (1) It eliminates a medium for bacteria to grow, so that spoilage is greatly retarded, and (2) it makes it impossible for ice crystals to form. Rich Products soon had high hopes that Freeze Flo might become the most revolutionary development in this field since Clarence Birdseye froze his first fish in 1929.

In 1978 Bob Rich Jr. became president of Rich Products. His father retired but remained chairman of the board and chief executive officer, and his brother, David, was/ head of the public relations department.

The 1980s. By the early 1980s Freeze Flo had already become very popular in Europe, some exciting medical applications were being investigated. By 1983 Rich Products was using the Freeze Flo process to make many of its "Fresh 'n Ready No Thaw Desserts," including Grand America (a dairy ice cream), Fresh 'n Frosty (a mellorine, resembling ice cream but with the butterfat replaced by soy oil), the fillings for chocolate eclairs, Bavarian cream puffs, creme pies, cakes, and cheesecakes--as well as Bettercreme. It was billing this "gentle freezing process" as "the most significant breakthrough in Frozen Foods in 50 years." Because of Freeze Flo, the ice cream and mellorine, both introduced in 1983, could rise in temperature to 5º above zero without defrosting; typical ice creams defrost at 20º below zero. But Freeze Flo is not used to make some other of Rich's products, such as frozen fish and meat balls (Rich Products 1983; Owen 1983).

In the late 1970s Rich hired Mike Billoni, a local sports

reporter, to write a company history. It was to be titled 35 Years Below Zero and published in 1980 to commemorate the company's 35th anniversary. But so many exciting things began happening with Freeze Flo that Rich postponed publication and is now hoping that it will eventually be the first chapter in a longer work. The company also maintains a large scrapbook that goes back to the founding in 1944.

In 1985 Rich Products, still privately owned, was the world's largest maker of non-dairy products, with sales of $545 million a year. Roughly 75% of Rich Products' sales were to foodservice organizations, and 25% to retail consumers. Starting in 1972, I.D. magazine picked Rich Products for 12 out of 13 years as the outstanding frozen foodservice packer in America. The most popular retail products (in descending order of sales) were Coffee Rich, Rich's Frozen Chocolate Eclairs, and Rich's Donuts. A little of Rich's Whip Topping is sold retail in pressurized containers. Richwhip Topping, a beat-it-yourself liquid, sells well only in Milwaukee and Minneapolis.

From the 1970s on, the only two of Rich's products contained a significant amount of soy protein: Coffee Rich and Bettercreme. Of the two, Coffee Rich used the larger amount in total annual tonnage. The company bought its isolated soy proteins from Ralston Purina. But as of 1985 Rich Products was seriously considering at least one product that would get the company much more actively involved with soy protein. It is still on the drawing boards, so details are not yet available.

There are two basic types of coffee whiteners or coffee creamers: Powdered and non-powdered. Coffee Rich is the only non-powdered coffee whitener that is distributed nationally. It has an estimated 90% of the branded, non-powdered market.

In 1985 Robert E. Rich Sr. recalled: "In the frozen food business, my heart has always been in the non-dairy segment of it. I always figured that was my baby. That's what put our company on the map. . . Its always interesting to recall the early days of the soybean business. I foresee a steady growth in that area" (personal communication) (Continued). Address: Chairman of the Board, Rich Products Corp., P.O. Box 245 (1150 Niagara St.), Buffalo, New York. Phone: 716-878-8000.

4513. Shurtleff, William; Aoyagi, Akiko. 1985. Henry Ford's work with soy ice cream and other non-dairy products (Document part). In: Shurtleff and Aoyagi. 1985. Tofutti & Other Soy Ice Creams: The Non-Dairy Frozen Dessert Industry and Market. Vol. 1. 145 p. See p. 17, 20, 23-24.
• ***Summary:*** Henry "Ford's researchers did much of the important early work with non-dairy products in America, but there was no attempt to commercialize them. In the 1930s [Robert] Boyer [plus Bob Smith] and co-workers made America's first experimental whip toppings, coffee creamer, and most other dairy analogs from soymilk. The pioneering work with whip toppings played a key role in the future development of soy ice creams. By Aug. 1935 Henry Ford was serving soy ice cream for dessert at VIP and press luncheons held at the Ford Engineering Laboratory. Until the 1940s Ford's tofu ice cream remained an experimental food, meant to demonstrate the good taste and versatility of soy. When Ford's soybean researchers finally left the Ford Motor Co. in the early 1940s, when World War II forced Ford to abandon his soybean research, they took what they had learned to a number of pioneering companies that launched successful products. Thus Ford was the fountainhead of commercial soy ice creams in America (R. Boyer 1981, 1985; Dick Borne 1985; Bob Rich 1985, personal communications; Dahlinger 1978)."

"For a while during World War II, the Ford Motor Company, as a result of Henry Ford's interest in soybean products, sold soybean 'ice cream' in its cafeterias. All the usual milk ingredients of ice cream were replaced by soy ingredients" (M.L. Anson 1958, p. 281).

"Robert E. Rich had owned a milk retail and distribution company since 1935. During World War II he was a milk order administrator for the War Food Administration in Detroit, Michigan. One day in 1943 he heard that Henry Ford's researchers had developed a soymilk plant and were producing all the milk they needed for Henry Ford's hospital during this time of milk rationing. Rich visited the Carver Laboratory (named after Dr. George Washington Carver) at Henry Ford's Greenfield Village in Dearborn (Bob Smith and Rex Diamond were top researchers on the project), studied the soymilk process, and was impressed. Sales of whipping cream were forbidden during the war; Rich began to dream of developing a whipped cream made out of "soy cream" or soy proteins. In 1944 he founded a company named Rich Products Corporation in Buffalo, New York, to make non-dairy foods. The company's first product was Rich's Whip Topping, a non-dairy whipped cream, made from isolated soy proteins that were produced from soybean flakes at Rich's plant. It was introduced on 30 March 1945, a little more than one year after Delsoy [the first soy-based whipped topping] had been introduced... It has grown in popularity over the decades and was still a best-seller in 1985."

"In the early days, Rich's got O-U kosher certification. By about 1946-47 kosher Jewish catering services in New York City (and soon thereafter housewives) had discovered that Rich's Whip Topping, so similar to real whipped cream in texture and flavor, could be used to make a completely new type of non-dairy frozen dessert. These were America's first such desserts based on isolated soy proteins. Soon an estimated 5-10% of Rich's sales of whip topping to the foodservice market were being used by other companies to make non-dairy kosher ice creams. Rich's followed this lead and in about 1951 unveiled Chil-Zert, the world's first isolate-based commercial non-dairy frozen dessert having a registered trademark."

In short, Chil-Zert was the world's first commercial soy ice cream. Unfortunately, however, due to various problems, Chil-Zert was discontinued in 1952. But by the mid-1980s Rich Products was the world's largest manufacturer of non-dairy products, with sales of $500 million a year. (*Quick Frozen Foods* 1955, 1975; Rich Products Corp. 1983; Robert E. Rich and Robert Boyer 1985, personal communications).

4514. Kahn, E.J., Jr. 1985. Profiles (soybeans). The staffs of life. V. The future of the planet. *New Yorker* 61:50-56, 60-66, 68-85. March 11.
• ***Summary:*** This wide-ranging overview of the soybean, from earliest times to the present, is well written though a little patchy and scattered. Among the topics it discusses: Soybeans as a relief food. Ted Hymowitz, Benjamin Franklin, and tofu. The Shah of Iran switching to soybean oil. The attempt by the Hunt Brothers of Texas to corner the soybean market. The Nixon soybean shock. Soybeans in Brazil and Manchuria. The origin of the soybean in China and Japan. Soymilk and Dr. Harry Miller. The dissemination of the soybean to Europe and America. How the soybean became popular in America; William Morse and the USDA. Henry Ford's work with soybeans and William Atkinson. Dwayne Andreas and ADM. "There is no question in my mind but that the soybean is the fundamental future of the planet," Dwayne Andreas says.

Also discusses amaranth, the winged bean, IBPGR, loss of genetic diversity, and water shortages. The article closes with a quotation from Monkombu Sambasivan Swaminathan, the director general of the International Rice Research Institute in the Philippines: "We live in this world as guests of green plants."

4515. Tetra Pak Inc. 1985. Chief executive officer of The Tetra Pak retires (News release). P.O. Box 802605, Dallas, Texas 75380-2605. March 14.
• ***Summary:*** "After more than 30 years as chief executive officer of The Tetra Pak Group, Hans Rausing will retire on Sept. 1. Rausing will assume the role of non-executive chairman of the Board of Directors of the Tetra Pak Group.

"On the same date, Gad Rausing, senior vice president, will become vice chairman of the board.

"Bertil Hagman will become president of Tetra Pak Rausing, SA, Lausanne, and he will assume the role of chief executive officer of the Tetra Pak Group... Hagman will become a member of the Board of Directors of the Tetra Pak Group." Address: Dallas, Texas.

4516. Miller, Bryan. 1985. Diner's journal. *New York Times.* March 15. p. C16.
• ***Summary:*** Pig Heaven is a Chinese restaurant at 1540 Second Ave. (corner of 80th Street). They recently introduced a special Shanghai breakfast which consists of two types of soybean milk soup, one slightly sweet, the other somewhat sour. These soups are eaten with two types of traditional Shanghainese bread.

"One, called *yu tiao,* is a long piece of fried dough that is sometimes referred to by Westerners as a Chinese cruller. The other, *shao bing,* resembles pita bread covered with sesame seeds. The Chinese usually insert the cruller into the pocket bread, then dip both into the soups."

4517. Ballard, Bob. 1985. Ah-Soy! and Great Eastern Sun (Interview). *SoyaScan Notes.* March 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ah-Soy was launched at the NNFA show in Atlanta, Georgia, in the summer of 1984. Initial flavors were vanilla, chocolate, and original (plain). It was made by Saniku Foods in Japan and imported via Mitoku. Carob flavor was introduced in the fall of 1984. Vanilla is now the best seller because it is the most unique. The product is a "fantastic success." The four flavors account for 15-20% of Great Eastern Sun's total sales from 1,100 products. GES only sells to distributors [i.e. it is a master distributor].

Sales reports for the period 1 Nov. 1984 to 25 Feb. 1985 show the following number of units sold (there are 30 units/per case): Vanilla 210,000 units. Original/plain 110,000. Carob 105,000. Chocolate 100,000.

Other GES soyfoods that sell well: Mellow white miso (made by American Miso Co.), 35 lb tub, #9 best seller by dollar volume. Onozaki rice miso, 11 lb tub, #20 best. Mellow white miso, 15 lb tub, #20 best. Instant miso soup from Japan (ranking unknown). This month's sales are annualized. The company is now doing $4 million/year in sales. They used to import freeze-dried tofu; the FDA forced them to change the name to "dried tofu." Shurtleff notes that he prefers the term "dried-frozen tofu."

Another best seller (about #3-5) is their White Cloud Rice Syrup It is made from rice with sprouted barley for malt. Address: Great Eastern Sun, 92 Macintosh Rd., Asheville, North Carolina 28806. Phone: 808-438-4730 or 704 252-3090.

4518. Byrne, Maureen. 1985. The future for soyfoods. The first European Soyfoods Workshop was held in Amsterdam by the American Soybean Association, and papers covered subjects from marketing to microbiological standards. *Food Manufacture* (*London*) 60(3):49, 51, 53. March.
• ***Summary:*** This workshop was held on 27-28 Sept. 1984 at the Krasnapolski Hotel, Amsterdam, the Netherlands–organized by the American Soybean Association. Gives a brief summary of each paper presented.

Contains an interesting full-page table (p. 51) in which Oriental soyfoods are classified into two types: Non-fermented and fermented. For each non-fermented food is given the local names, description, and uses. The non-fermented soyfoods are: Fresh green soybeans, soybean sprouts (huang tou ya, Chinese), soynuts (hueh huang tou,

Chinese; iri-mame, Japanese), soymilk (tou chiang or tounai, Chinese; tonyu, Japanese; kongkuk, Korean), [roasted] soy flour (huang tou fen, Chinese), soy protein-lipid film (yuba, tou-fu-pi), soybean curd (tofu).

For each fermented soyfood is given the local names, organisms used, description, and uses.

The fermented soyfoods are: Soy sauce, miso, tempeh, natto, fermented tofu, and fermented black soybeans.

Soy sauce includes chiang-yu from China, shoyu from Japan, ketjap from Indonesia, kanjang from Korea, toyo and see-ieu from Southeast Asia.

Fermented black soybeans include tau-shih from China, tao-si from the Philippines, tau-cheo from Malaysia, tauco from Indonesia, and Hamanatto from Japan.

Address: Massachusetts.

4523. **Product Name:** Soyarella (Imitation Soy-Based Cheese Containing Casein; Later also called Soy Mozzarella).
Manufacturer's Name: Nature's Best Co. (Marketer). Distributed by Neshaminy Valley Natural Foods of Huntingdon Valley, Pennsylvania.
Manufacturer's Address: Osseo, Michigan.
Date of Introduction: 1985. March.
New Product–Documentation: Talk with Richard Kane. 1985. May. Richard is a piano tuner and president of Richard Kane Co. of Mill Valley, California (phone 415-388-3310), a company he started to distribute Soy Mozzarella. He has no idea who makes the product or where it is made.

Medoff. 1985. Whole Life. June. p. 26-27. Soy Mozzarella sells for about $4.79 a pound, but little information is available about the manufacturer or ingredients. It may be a new name for Soyarella. Medoff. 1986. Whole Life. June. p. 82-84. "Will the Real Soy Mozzarella Please Stand Up."

Talk with John Moore of Healthy's Inc. in Hawaii. 1986. Aug. 4. Phil Margolis of Neshaminy Valley Natural Foods of Huntingdon Valley, Pennsylvania, sent 100 lb of Soyarella to Hawaii but would not send the name of the manufacturer or the list of ingredients. Soyarella was analyzed by Anderson Clayton, who said that it contains less than 10% soy protein. It has got to be bogus; he is appalled.

Medoff. 1986. Whole Life. Oct. p. 54-56. "Imitation Cheese Raises Suspicions. Independent Lab Tests Prove Soyarella Hoax; Large Quantities of Casein Found in So-Called 'Soy' Cheese. Note: This is the earliest known soy product which contained casein but also claimed to be non-dairy.

San Francisco Vegetarian Society Newsletter. 1986. Nov/Dec. "Richard Kane, distributor of Soy Mozzarella, still insists that the product contains no dairy or casein." Medoff. 1987. Whole Life. June/July. p. 49-50. Whole Frauds in the News. Soyarella Hunt Update." This imitation Mozzarella cheese claimed to be non-dairy, but was later found to contain 15% casein. Whole life obtained very reliable information that James Harper of Nature's Best company of Osseo, Michigan was the "source" of this product. They tried to get hold of Mr. Harper, but he wouldn't return calls.

Talk with Richard Kane. 1987. Sept. He never found out who made Soyarella. As far as he knows, it is no longer being made. He bought it from Mark Stroud in Cincinnati, Ohio, who runs a health food store & restaurant named Great American Health Foods (Phone: 513-541-8333 or 541-6782). It melts. The ingredients are said to be: Soymilk, water, organic soybeans, soy oil, vegetable gum, vegetable enzyme, lecithin, natural flavor, and salt. The Florida Dept. of Health has testified that it contains soymilk and nigari.

Talk with an expert on soy cheeses in America who wishes to remain anonymous. 1994. April 13. Nature's Best did not make Soyarella, though they may well have marketed it. He has talked with the owner of the company that made Soyarella who said: "Some guy started buying imitation mozzarella cheese from us. The product was regular mozzarella cheese in which soy oil replaced all of the butterfat. It contained no soy protein. This guy would come in the middle of the night with a pickup truck. He would pay cash and did not want an invoice because he did not want to leave a paper trail, then he would disappear. We never knew what he did with our imitation cheese. One day he just stopped calling in and ordering the product. We never heard

from him again and we could not reach him because he never gave us his phone number. We did not know about the name Sojarella or that it was being mislabeled–until later."

Talk with another expert on soy cheese in America. 1994. April 26. He thinks Soyarella was made by Savoldi Cheese Co. in New Jersey or Pennsylvania. They make cheese analogs.

4524. Public Sector Consultants, Inc. 1985. The potential for expanding the Michigan soyfoods industry. In: 1985. The Potential of Food Processing for Economic Development in Michigan. PCS, Knapp's Centre, 300 S. Washington Square #401, Lansing, MI 48933. See p. III-45 to III-67. 28 cm. [47 ref]

• ***Summary:*** Michigan soyfoods manufacturers include Michigan Soy Products (Royal Oak; Tofu, soymilk; 1,650 lb/week of tofu), Oryana Soy Shop (Traverse City; Cooperative. Tofu, tempeh, soysage; 275 lb/week of tofu), The Soyplant (Ann Arbor; Cooperative. Tofu, tempeh, tempeh burgers, soymilk, dofugan, soysage; 7,500 to 10,000 lb/week of tofu), INARI Ltd. (Mason; Soynuts), Michigan Farm (Bitely; Miso), Hercules, Inc. (Harbor Beach; HVP), Eden Foods (soymilk importer, which hopes to build a soymilk plant in Michigan), and Midwest Natural Foods (Ann Arbor).

"Hercules produces nonfermented soy sauce [HVP] and sells its product to large final producers, such as La Choy and Beatrice Foods, located outside Michigan for sale under their labels." This report was prepared for the Michigan Dept. of Agriculture. March 15. Address: Lansing, Michigan.

4525. Rosario, R.R. del; Maldo, O.M.; Macias, A.N. 1985. Development of improved vegetable milk formulation. *Philippine Agriculturist* 68(1):112-17. Jan/March. [11 ref]

• ***Summary:*** Soymilk was made from whole soybeans using coconut milk as a masking agent. Using the traditional hot-grind process, the optimum level of coconut milk to effect masking was 23 ml per 750 ml of soymilk. The bland tasting soy-coco-milk was then used to produce various flavors. Address: Inst. of Food Science & Technology, UP at Los Baños, College, Laguna 3720, Philippines.

4526. Russell, Nathan; Cassaday, K.; Keyser, Janet M. 1985. Institute workshop sparks interest in production of soybeans to fill demands of nutrition clinic. *IITA Research Briefs* 6(1):2-2. March.

• ***Summary:*** Describes how Nigerian mothers come to the Kersey Home in Ogbomosho, Nigeria, to make soymilk for their babies. "Fifteen months ago, Ruth Womack, a missionary nurse who has for 29 years operated a clinic in Ogbomosho, Nigeria, to combat the effects of protein deficiency in children, attended a soybean utilization workshop at IITA. Miss Womack came away from the workshop with a new solution to the children's health crisis at her clinic, where she was using imported canned soymilk supplemented by 'blood cheese' made from boiled animal blood to restore the vitality of the children. She learned how Nigerian women could make soymilk themselves and escape the difficulty of obtaining expensive imported supplies. 'We are certain that soybeans are the answer to the malnutrition problems of West Africa,' Miss Womack says."

The Kersey Home was founded in the early 1920s by a Southern Baptist Convention missionary nurse. The Home is now run by a staff of 19 on both an outpatient and inpatient basis. "Last year the clinic had more than 24,000 outpatient visits. At any given time the clinic is temporarily home to about 40 severely malnourished children who are placed on a diet consisting mainly of various traditional foods fortified with soybean. Meals are prepared by mothers or guardians, who attend weekly classes given by staff members on the use of soybeans in making soups, soymilk, and other foods... Many of the women who come to the home already are engaged in agriculture. The objective now is to make them just as capable in growing soybeans as they have been in using them." Address: IITA, Ibadan, Nigeria.

4527. Shurtleff, William; Aoyagi, Akiko. 1985. The book of tempeh: The delicious, cholesterol-free protein. 2nd ed., revised & updated. New York, NY: Harper & Row. 175 p. March. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [374 ref]

• ***Summary:*** Contains 130 Western-style and Indonesian recipes. Appendix A: "A brief history East and West," is extensively revised from the earlier Professional Edition, and discusses the world's earliest known reference to tempeh in the *Serat Centini* manuscript, which was probably written in about A.D. 1815. The history of tempeh in the Europe, Australasia, in the United States has also been updated and expanded.

Appendix B: "Tempeh makers in the West" has also been updated and expanded. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549 USA.

4528. *Grocer* (*The*) (*England*). 1985. Soya milk spearheads move into yogurt, ice cream. April 6. p. 23.

• ***Summary:*** Michael Cole, managing director of Soya Health Foods of Trafford Park, Manchester, reports that he is selling about £3 million worth of his new Sunrise soya milk each year, and producing 46,000 gallons a week in half-liter aseptic Tetra Pak cartons. Major grocery chains have shown great interest in the product. Most competing soya milks are imported to England. Cole imports only his soya beans–from Canada. His company's biggest competitor is Granose, which is selling through Safeway and other outlets.

Cole presently has to feed his okara, a by-product of soymilk production, to pigs. "But in the next few weeks we will be installing a vegetarian sausage and burger plant which will take care of that."

Cole is a former health food shop owner who has all

been involved in the marketing and manufacturing side of the trade, not only in England but also in India and America.

A large photo shows Cole standing next to stacked cartons of his Sunrise Soya Milk. The caption reads: "'Soya yogurt possible–Michael Cole."

Note: This was the article that led to the founding of Genice in Wales. Ray Pierce, who was with Classic Ices in Wales at the time read the article, learned that Michael Cole of Soya Health Foods Ltd. was planning to make a soy ice cream, then contacted Cole and offered to work with him in developing the product. It became Classic Ice's first non-dairy ice cream. Seeing its potential, Ray and Irene Barclay left Classic Ices and started Genice. Address: Manchester, England.

4529. Central Soya Co., Inc. 1985. Central Soya to acquire Remington protein plant [from Griffith Laboratories, U.S.A., Inc.] (News release). 1300 Fort Wayne National Bank Building, Fort Wayne, IN 46802. 2 p. April 11.
• ***Summary:*** The plant in Remington, Indiana, which employs 41 people, produces a line of functional soy protein concentrates which, when used in cooked meat products help retain juices and improve cooking yields. Primary customers are meat processors that produce cooked, portion-controlled meats. The product is also used in dietary beverages and protein drinks. Trademarks included in the acquisition are GL-301 and Promax. Central Soya currently is the leading marketer of refined soy lecithins in the U.S. and markets soy proteins that are produced at its nearby Gibson City, Illinois, soybean processing plant. "The Remington and Gibson City operations will complement each other well and offer some significant manufacturing efficiencies." Central Soya has annual net sales worldwide of $1,730 million. Address: Fort Wayne, Indiana. Phone: 219-425-5298.

4530. Praskin, Laurie Sythe. 1985. New developments at The Farm and with Plenty (Interview). Conducted by William Shurtleff of Soyfoods Center, April 15. 3 p. transcript.
• ***Summary:*** Laurie has just returned from a Plenty Board of Directors meeting at The Farm in Tennessee. Only 300 people are living there now–it has a deserted feeling. But the Plenty meeting was good. Plenty is doing some excellent work with soyfoods in the Caribbean (especially on Dominica), and in Lesotho. There were color slides shows of each program. Their soy dairies there are selling soyfoods.

The Farm Soy Dairy in Tennessee is now run by Ron Maxen and Michael Lee. They sell 100 lb/week of tofu, half of it off The Farm in 1-gallon plastic bags that hold 5 cakes each, or in tubs. On The Farm it sells for $0.90/lb. Off The Farm it sells for $0.75/lb in bulk or $0.85 in tubs. Their yield averages 2 lb of firm tofu from 1 lb of soybeans. They do all their own distributing. They also make 150 gallons/week of soymilk sold as such plus another 4,500 to 5,000 gallons/month for ice bean (2 runs a month). Twice a month they load it into a milk truck and ship to an ice cream company near Memphis. Also 15-20 gallons/week of soy yogurt and 80-90 lb/week of tempeh is sold on The Farm.

The soy dairy in Lesotho is beautiful, housed in a traditional stone hut with a thatched roof. Inside are white walls, a concrete floor, and drains. It is making a little soymilk and soymilk ice cream. It has a nice little Okita stainless steel mill that runs off a generator and also a bicycle-powered mill. They are also growing some soybeans now. Address: 17969 Oak Dr., Los Gatos, California 95030.

4531. Shurtleff, William; Aoyagi, Akiko. 1985. History of soya and the soybean development program in Sri Lanka. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 31 p. April 16. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** www.soyinfocenter.com/HSS/ AsSoSriL1. A comprehensive history of the subject. Contents: Introduction. Demographic background. Early history of soya in Sri Lanka. Meals for Millions in Ceylon (1955-1972). Establishment of Sri Lanka soybean development program. A brief chronology of key events: 1973-. Activities of the soybean development program: summary. Soybean production project. Soyanews. The Soyabean Foods Research Center. Role of Sri Lankan government and Thriposha. Commercial production of soyfoods. Institutional use of soyfoods: hospitals, prisons. Ongoing training abroad. Future prospects for soybeans and soyfoods. Conclusion.

Note: By the year 2000 it was clear that the soybean programs that had been so active during the period from 1955 to 1990 had not succeeded in helping the soybean to take root permanently in Sri Lankan food culture and agriculture. We would suggest several reasons. (1) The Meals for Millions program ended up as basically a food giveaway program, which was unsustainable. (2) The program that involved the University of Illinois and INTSOY was conceived by the government with relatively little focus on starting new business in Sri Lanka. When the government lost interest or money, the program stalled and eventually fizzled out. (3) The Soyabean Foods Research Center used state of the art technology from the USA and Europe. But this technology was inappropriate in Sri Lanka except for potential large soyfood processing businesses. The Center would probably have been much more effective if it had been conceived as a center where people who wanted to start new businesses came to learn how to make soyfoods, such as tofu, soymilk, soy yogurt, roasted soy flour, etc. using relatively simple and inexpensive appropriate technology, then returned home with a small loan and with the necessary equipment, plus plenty of follow-up from the program. (4) The idea of making soyfoods at home has never worked anywhere in the world; it takes too much time. Making them on a village level will work if the village is large enough to support one person who makes the soyfoods or, equally

good, if a group of people in the village forms a cooperative, individuals or small teams can make one or more soyfoods on a rotating basis. That way each member would get fresh soyfoods each day free of charge. (5) The program gave little emphasis to edamame / green vegetable soybeans as a new garden vegetable. (6) From about 1983 until 2009 there was a terrible civil war in Sri Lanka between the militant Tamil Tigers in the north and the government of Sri Lanka in the south. The Tigers fought to create an independent Tamil state named Tamil Eelam in the north and the east of the island. After a 30 year long military campaign, the Sri Lankan military defeated the Tamil Tigers in May 2009. But this war took the government's attention and resources away from many other worthwhile projects–including soybeans and soyfoods. Address: Lafayette, California. Phone: 415-283-2991.

4532. Leung, Carolyn. 1985. Taxing time for Vita. *South China Morning Post.* Business section. April 21. p. 27. Sunday. [Eng]
• ***Summary:*** In Hong Kong, there is a dispute with the Financial Secretary, Sir John Bremridge, as to whether Vitasoy should be taxed as a soft drink or whether it is exempt because of its nutritional value and the fact that it is not carbonated. A tax on all soft drinks was announced Feb. 27. There is another dispute with the government of China as to whether the "Vita" in Vitasoy is a generic term and therefore unable to be registered. A factory in Fushan, China, is now making large quantities of a soy beverage using the Vitasoy name. Winston Lo, president of the Beverage Manufacturer's Association, says that 320 million liters of non-alcoholic beverages are sold annually in Hong Kong. Also discusses the Guang Ming Dairy Farm.

• ***Summary:*** About the effectiveness of Galactina Diaetetica's Naga-Sonda soy protein drink used for enteral feeding of ten geriatric patients. Address: 1. Medecin-chef de la Clinique medicale geriatrique, Hopital cantonal de Bale, 4031 Bale.

4534. Chan, Gilbert. 1985. Business owner sings tofu's praises. *Marin Independent Journal* (*Novato, California*). April 27.
• ***Summary:*** Bill Bramblett, a former breakfast cook at the Sleeping Lady Cafe, a musician and owner of Wildwood Natural Foods in Fairfax, California, has written a song titled "Tofunction." The lyrics go: "White 'n' creamy / Hot 'n' steamy / Smooth 'n' dreamy / Soya beany. In less than 5 years, Wildwood has grown from about 12 workers and $52,000 in yearly sales to 47 employees and more than $1 million sales. Each day more than 1,300 people enjoy a Wildwood sandwich, and Wildwood is proud to be one of the first companies in America to make and sell a sandwich that contained tofu. The company distributes tofu, tofu sandwiches, and other healthy foods to about 100 stores in the Greater Bay Area from Mendocino in the north down to Santa Cruz in the south. Most of the stores are located in Marin County, San Francisco, the East Bay, and the Peninsula.

Bramblett, who sports a button reading "I've joined the tofu revolution," is a partner in the business with Paul Orbuch and Frank Rosenmayr. "Wildwood began in August 1980 in the kitchen of the Sleeping Lady Cafe [sic]. Brown rice and tofu sandwiches were prepared every morning for the Good Earth Natural Foods in Fairfax."

"The company later added salads, health snacks and soy milk to its line. Wildwood also distributes natural foods such as tacos and burritos for other health food companies."

Photos show: (1) Tofu maker Greg Whalen as he pours soaked soybeans into the hopper of a grinder. (2) Bill Bramblett, seated at a desk with hands folded, wearing his Wildwood T-shirt and tofu revolution button.

4535. *Food Processing* (*Chicago*). 1985. Tofu-based non-dairy frozen desserts: Reduced calories, no cholesterol, no lactose are health implications. 46(4):41-42. April.
• ***Summary:*** Discusses the introduction and composition of Barricini Tofulite. "The first introductions were made in New York during the early part of February." The company also plans to introduce soy-based "cheesecake, frozen novelties, lasagna, frozen tofu burgers, frozen tofu enchiladas, soy-based yogurt, and soy milk."

4536. Kass, Monica. 1985. High-tech soymilk pouch creates market success: Stand-up retortable pouches for soymilk boom in natural-food stores, break into supermarkets. *Packaging.* April. p. 36-37.
• ***Summary:*** On the cover of the magazine and the first page of the article is a large color photo of Westbrae Natural Cocoa-Mint Malted. On the second page is a color photo of ten brands of soymilk in stand-up gussetted retort pouches, the type of soymilk packaging now most popular in America. "Marusan Ai and San-iku Foods are two Japanese companies currently processing and retort packaging soymilk for export to the USA. Marusan forms the retort pouch from multilaminate rollstock supplied by Toyo Seikan Kaisha Co. (Toyo Seikan is licensed by Doy-n-pak [Doypack] to produce the material.) And San-iku Foods retorts soymilk in preformed pouches, also made from the Doy-n-pak patented lamination.

"Sources say the fact that Doy-n-pak's design patent on the stand-up, gusseted pouch runs out this fall has prompted some scrambling among American materials suppliers who

see the potential of the stand-up pouch and want to establish market position with the pouch.

"American companies importing soymilk in the preformed retort pouch include Westbrae Natural Foods and Great Eastern Sun. Eden Foods Inc. was the first company out with soymilk in the rollstock formed pouch. Structural differences between the two pouch varieties are minimal. The rollstock-formed square-cornered pouch must be opened with a scissors and is somewhat narrower in shape than the round-cornered preformed pouch which has an easy-open feature.

"Lamination for both pouch types consists of an outer layer of PET laminated to nylon, aluminum and an inner layer of polyolefin film that meets FDA food contact material requirements.

"Processing methods Marusan and San-iku use to adapt soymilk to American tastes differ, but both companies retort pouches up to 250ºF giving them an unlimited shelf life.

"Graphics reflect positioning: The real difference between the various retorted soymilks is in positioning. Eden Foods is strictly interested in promoting the product for its nutritional benefits. Great Eastern Sun's soymilk appeals to health-conscious consumers with an eye on trends. And Westbrae has two soymilk varieties. One is a plain soymilk, targeted for the health-conscious crowd. The other is a line of dessert-type malted drinks–'fun' products the company is targeting at younger consumers."

Note: This is the earliest document seen (Sept. 2011) with the term "high-tech" (or "high tech") in the title in connection with soyfoods–in this case soymilk, historically a low-tech product.

4537. Kueneman, E.A.; Russell, Nathan. 1985. Soybean utilization: Its relevance to Africa's food crisis. *Ceres: FAO Review on Agriculture and Development* 18(2):39-42. March/April.

• ***Summary:*** In sub-Saharan Africa, population growth is far outstripping food production. Protein deficiency exacts a greater toll on African children than anywhere else in the world–in part because starchy roots such as cassava and yams, are so widely consumed. There is a brisk demand for soybean products in Africa "In 1981, according to FAO figures, African countries imported about 259 000 metric tons of soybean cake and 440 000 of soybean oil." Research on soybeans at IITA in Nigeria and in various national soybean programs have largely removed traditional constraints to high soybean yields. "At a workshop held in December 1983 at Ibadan, Nigeria, 60 scientists from IITA, various Nigerian research institutes, agricultural agencies in other African countries, and two US soybean organizations, in addition to representatives from private industry, explored a range of soybean processing and utilization methods. The methods that show the most promise for Africa are village-level hydraulic extraction of oil and meal and soybean beverage production."

"There is also considerable scope in tropical Africa for direct use of whole soybeans in human food... A Belgian firm currently plans to establish a factory for producing flavoured soy milk in Benue State, Nigeria's major soybean growing area."

"In rural areas of Benin, for example, child health centres are buying full fat soybean flour as a nutritional supplement for malnourished children. The country also has a programme for training villagers in soybean production and utilization. 'Many farmers in Benin,' says P.C. Gnacadja of the National University of Benin, 'now understand how to produce soybeans and mix soybean flour with local cereals.'"

"Cameroonian researchers have developed a technique for using soybean flour to fortify 'fufu', a popular cassava preparation. By itself fufu has a protein content of only about two per cent. The addition of 10 per cent soybean flour raises the protein content to about seven per cent, without changing the product's taste. Protein-enriched fufu has been tested in two provinces of the country, according to food technologist Festus Numfor, with very promising results."

"This approach could have great impact if applied to wheat bread, which has become a kind of fast food for Africans, especially children. Combining some soybean flour with the wheat flour would not only increase the bread's protein content, but help reduce Africa's huge wheat imports, which in Nigeria alone reached 1.5 million tons in 1981. Use of such composite flours for bread is already being tried in Zambia.

"Zaire provides several striking examples of how soybeans can be incorporated into local diets and used to combat kwashiorkor or protein deficiency. G.H. Nguyen says that 300 malnourished children at the *Centre Nutritionel* in Lubumbashi receive soybean flour daily as part of their treatment. The soybeans come from local production and from church-run farms in other parts of the country. Nguyen also points out that in the area around Kananga experiments have been carried out for the past 20 years on soy food processing, use of soybeans in local diets, and related subjects. Their work has led to the establishment of a soy food factory, which increased its production from 80 tons per year in 1973 to 300 tons in 1981 and still was not able to keep up with local demand for its product. The factory's soy biscuits proved especially popular.

"In both Zaire and Rwanda, small soybean flour mills have been set up in villages. Local processing has created such a high demand for soybeans that their price in these areas now exceeds that of groundnuts and *Phaseolus* beans. These examples are modest and few, but if they can be repeated, soybeans might have a major role to play in improving the quantity and quality of African food production." Address: 1. Senior soybean breeder; 2. Editor and writer. Both: Staf, International Inst. of Tropical Agriculture, Nigeria.

4538. Levitt, M.D.; Savaiano, D.A. 1985. Lactose intolerance and yogurt. II. Diagnosis and treatment. *Practical Gastroenterology* 9(2):-. March/April. *
Address: 1. Dep. of Food Science & Nutrition, Univ. of Minnesota, 1334 Eckles Ave., St. Paul, MN 55108; Veterans Administration Medical Center, 54th Street and 48th Ave. South, Minneapolis, MN 55417.

4539. **Product Name:** [Soy Horchata (Local Fresh Beverage)].
Foreign Name: Horchata de Soya.
Manufacturer's Name: Productos Alimenticios Soyavyn.
Manufacturer's Address: Planta Soyavyn, 2a Calle Poniente No. 2-4, Lourdes, Colón, Depto. La Libertad, El Salvador. Phone: 51-0705 or 23-3554.
Date of Introduction: 1985. April.
Ingredients: Soya, morro seeds (*Semilla de morro; seeds of Crescentia alata,* a tropical tree. Traditional ingredient of horchata), peanuts, coriander, sesame, nutmeg (*nuezmoscada*), peanut butter (*pepitoria*).
Wt/Vol., Packaging, Price: 1 lb pre-printed plastic bag.
How Stored: Shelf stable.
Nutrition: Per 100 gm.: Carbohydrate 43.2 gm, protein 32.6 gm, fat 13.4 gm, ash 2.4 gm, moisture 1.6%.
New Product–Documentation: Letter and Label sent by Kris Duville of Productos Alimenticios Soyavyn. 1992. April 22. 4.5 by 11 inches. Pre-printed plastic bag. Blue and red on white. The back panel gives ingredients and simple instructions or recipes for using this product. "Soya, vida, y nutricion. Rico en proteinas, vitaminas y minerales."

Letter from Kris Duville. 1992. June 2. This product (along with 3 related products) were launched in April 1985. They are semi-soluble powders made by grinding roasted soybeans and other seeds. The powder is added to water (2 spoons per cupful) and the mixture filtered and sweetened before being consumed.

Letter from Chris Duville. 1992. Dec. 13. In 1985 PNS (formerly it was named PNNS) had soy products prepared on a 'kitchen' scale at several places in Sonsonate and Santa Ana. There was only one package for commercial products and the production and commercialization were minimal. In 1990 the "plant" in Lourdes started with soymilk and took over the production of meals from the small places. It now has about 20 persons working "full-time" and operates as a regular small business.

Note: This is the earliest known commercial soy product made in El Salvador (one of four products).

4540. **Product Name:** [Sahm Yook Soymilk (Plain)].
Foreign Name: Sahm Yook Dou Ru.
Manufacturer's Name: Sahm Yook Korean Foods.
Manufacturer's Address: 320 Panjeong-ri, Jiksan-myun, Chunwon-gun, Choongchungnam-do 333-810, South Korea.
Date of Introduction: 1985. April.
Ingredients: Soy milk, high fructose corn syrup, corn oil, rapeseed oil, salt.
Wt/Vol., Packaging, Price: 200 ml foil retort pouch (Doypack). Retails for 230 Won (6/90).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Eric C. Fehlberg. 1990. March 8. The Seventh-day Adventist food company in South Korea, Sahm Yook Foods, now makes soymilk (only plain, no flavors) packaged in Tetra Brik cartons and foil Doypack (Doynpack). The company was established in about 1978, and it began to make soymilk in May 1985. After launching soymilk, the company began to grow dramatically, as that product grew. Last year they built a very large, new soymilk plant (based on Adventist technology) and they are now about the 2nd or 3rd largest soymilk maker in Korea.

Label (Foil retort pouch). Sent by Eric Fehlberg. 1990. May 24. 4 by 6.75 inches Red, yellow, dark green, and light green on silver. Front panel says "Soy Milk" and an illustration shows 3 yellow soybeans in a green pod. The back panel shows the package being immersed in boiling water or heated in a microwave oven. So this package is probably sold during the cold months.

Form filled out and label sent by C.Y. Yoon, General Manager, Sahmyook Korean Foods. 1990. June 23. Note that on the envelope the company name is printed Sahmyook Korean Foods, but the brand name is typed 4 times on the form as Sahm Yook. The address on the envelope is 320 Panjung Jiksan Chunwon Choongnam, Korea. The soy milk in a foil retort pouch was introduced in April 1985. The same product with the same ingredients was launched in a Tetra Brik carton in July 1987. All four of the company's soymilk products contain no sugar (sucrose), chemical flavorings, or preservatives.

A brief company history. In 1981 they purchased a 31,313 square meter plant to make foods using wheat gluten. In 1984 they installed a soymilk processing plant, then began to sell soymilk starting in April 1985. Concerning prices, there are 720 Won to 1 U.S. dollar. Thus the Tetra Brik soymilk (200 ml) retails for the equivalent of US$0.31.

Leaflet for Sahm Yook soymilk products (7.5 by 10 inches, color photo). 1990. Shows 5 packages of soymilk and a glass of soymilk surrounded by fresh green vegetables and mikan oranges.

Key institutions working with soyfoods worldwide. 25. Measures, weights, and equivalents. 26. About the Soyfoods Center & soyfoods consulting services. 27. Bibliography.

In February 1977 a Gallup poll in America showed a remarkable shift in the public's awareness of and attitudes toward soyfoods. The sampling of 1,543 adults across the nation found that: 33% believe that soybeans will be the most important source of protein in the future–ahead of fish at 24% and meat at 21%. 55% believe that "soy products have a nutritional value equal or superior to that of meat." 54% reported that they "had eaten foods containing soy protein as a prime ingredient within the past 12 months." Younger age groups living in large cities and those with college or university educations had the most favorable attitudes toward soy protein, indicating that support for soyfoods is likely to grow in the future. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

4542. **Product Name:** [Sojella Soymilk].
Foreign Name: Sojella (Soja-Filtrat; Sojamilch).
Manufacturer's Name: Sojvita Produktions GmbH.
Manufacturer's Address: Hauptplatz 1, 2493 Lichtenwoerth, Austria. Phone: 02622/75494.
Date of Introduction: 1985. April.
Ingredients: Soybeans, oil, salt, soy lecithin, maple syrup or vanilla.
Wt/Vol., Packaging, Price: 500 ml glass bottle.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: 42 calories/100 gm.
New Product–Documentation: Label. 1985. 4 x 3 inches. Dark green, light green, black, and yellow-orange on white. "Sojella is suited for use as a drink, in coffee and tea, for cooking, baking, and delicious desserts. By mixing it with fruits, nuts, etc. you can make wonderful soymilk shakes. Protect from light and refrigerate. Shake before using."

Letters from Norbert Brunthaler. 1988. Jan. 4 and Feb. 2. "This soymilk was made from dehulled soybeans, alkali soak, preblanched, hot grind, open cooked, then formulated and homogenized with an ultra turax machine. Filled in bottles and sterilized. We had the same content of proteins and fats as dairy milk. We discontinued this product in March 1987 because our equipment was too small for economical production."

4543. **Product Name:** Tofu, Soymilk, Tempeh.
Manufacturer's Name: Soy Shop, Inc.
Manufacturer's Address: 210 Laredo Dr., Decatur, GA 30030. Phone: 404-377-8433.
Date of Introduction: 1985. April.
New Product–Documentation: Talk with Mr. Kich Lam. 1989. Nov. 8. He bought this business from Steve and Sarah Yurman in April 1985, and moved it to Decatur. He now makes tofu, soymilk, and tempeh. He is Chinese.

4544. Staehelin, Hannes B.; Seiler, Walter O. 1985. Kuenstliche Ernaehrung–wann und wie? [Synthetic nutrition–when and how?]. *Ernaehrungs-Umschau* 32(4):99-104. April. [19 ref. Ger]
• ***Summary:*** About Galactina Diätetica's Naga-Sonda soy protein drink. Address: Medizinisch-geriatrische Kliniken Kantonsspital and Felix Platter-Spital, CH-4031 Basel, Switzerland.

4545. *Toyo Shinpo* (*Soyfoods News*). 1985. Shin seihin rasshu-jidai [A rush of new products: Nestlé will start to sell lactic fermented soymilk in Japan this summer]. May 1. p. 7. [Jap; eng+]
• ***Summary:*** Nestle plans to sell a lactic fermented soy drink named Fandy, which is made from soybeans fermented with lactic acid. The product is sold as a concentrate, and must be diluted with water before you drink it. Their slogan is "A

14-year-old's on-the-rocks" (*mizuwari*). One 330 ml bottle will retail for 415 yen. Address: Kyoto.

4546. *Toyo Shinpo* (*Soyfoods News*). 1985. Tônyû o beesu ni–shin seihin [Tofu and soymilk dessert shop opens in Osaka]. May 1. p. 7. [Jap; eng+]
• ***Summary:*** A tofu and soymilk dessert specialty restaurant will open in April in the Kintetsu department store in eastern Osaka at Fuse city. It will be named Tofeez. It is connected with Furuichian Enterprises which owns the Tofu Kan restaurant. It will serve about 30 soyfoods including tofu ice cream, soymilk bread, tofu burgers, tofu pies, soy yogurt, etc.

On 1 April 1985 a popular Western-style tofu restaurant opened in Nagoya. Named Tcha-na-Time, it is located in the NBN Izumi Building, 1-23-36 Izumi, Higashi-ku, Nagoya, Japan, Phone: 052-951-1877. The owner is Ms. Ishiki. In addition to various soyfoods, they also serve meat and fish. Address: Kyoto.

4547. Siriwardena, T.D.W. 1985. Re: Requesting visit. Letter to William Shurtleff at Soyfoods Center, May 9. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Mrs. F. Hwavitharana, a research worker attached to his center, expects to visit Canada in early July, 1985. She holds B.Sc. and M.Sc. degrees and is a research bio-chemist who has 3 years experience as a research worker at the Soybean Center.

He is writing to Shurtleff to expedite possibilities for her to visit Soyfoods Center to learn about making tempeh, tofu, and soy beverage. He proposes that she spend about 2 weeks at Soyfoods Center. A few visits to tofu and tempeh manufacturing centers in California would also be useful. Address: Sri Lanka Soybean Project, Dep. of Agriculture, Soybean Foods Research Centre, Gannoruwa, Peradeniya, Sri Lanka.

4548. Tetra Pak Inc. 1985. Tetra Pak moves U.S. headquarters to Shelton, Connecticut (News release). P.O. Box 802605, Dallas, Texas 75380-2605. May 10.
• ***Summary:*** "Tetra Pak Inc., the world's leader in aseptic packaging, has announced the relocation of its U.S. corporate headquarters to Shelton, Connecticut from Dallas, Texas.

"Tetra Pak is an international company which originated in Sweden but is now headquartered in Switzerland. The Tetra Pak Group's turnover in 1984 was approximately $1.5 billion. The company specializes in packaging systems for liquid foods. In 1984, 35 billion packages were sold in 90 countries.

"Venture Center, the new two-story office building, is situated on eight and one-half acres in southeast Fairfield County. The 55,000-square-foot building will house corporate management personnel and the regional office for the eastern U.S.

"A lease agreement with an option to purchase the property has been negotiated." "Approximately 100 people will be employed at the site by the end of 1985." Address: Dallas, Texas.

4549. Ayerst, Norman. 1985. Re: Work with Plenty in Dominica and Central America. Letter to William Shurtleff at Soyfoods Center, May 16. 3 p. Typed, with signature.
• ***Summary:*** "I received your message from Maya Shearer and am glad to hear of your interest in our Caribbean projects. Actually my wife [Sarah] and myself worked mostly on the island of Dominica. We spent 18 months there and returned to Canada on the 18th of Feb. '85.

"We worked on an integrated soybean project similar to the program that Laurie Praskin was involved in in Guatemala. My wife and I spent 6 months in Guatemala during 1980 with Laurie and all. At that time, I was responsible for the administration of the Solola Soy Dairy from the Canadian end.

"In Dominica we carried out the INTSOY variety trials and then went on spacing trails, companion planting trials and various other trials to test the long-range capacity of soybean growth in Dominica. Some of these trials were undertaken with the Government, some with the cooperative farming groups and some with individual farmers. We were somewhat overwhelmed with the response of farmers eager to try out soybeans–Dominica is a very agrarian society, by the way, and most people grow a portion of their own food. They are especially eager to find any new crops that can be sold on the local market–it is, overall, a very poor society. We have identified a few varieties that seem to be well suited for Dominica–one is R315. We obtained the original seed through the Intsoy programme and their seed originated in Cuba. It's a very fast growing variety (90 days to harvest) and seems to dry out well in the field even under damp conditions. There is definitely more work to do to identify the exact varieties suited for Dominica but I think we have made a good start and many Dominicans are now participating in the program.

"We opened our initial Soya Shop in downtown Roseau (the Capital pop. 12,000) in May of 1984. Originally, we produced soymilk and tofu which we incorporated into popular local recipes. A fritter that was tofu / okara / bean based became a very big hit in town and surpassed our expectations of immediate interest in soyfoods. A sandwich spread based on tofu / okara and 50% local vegetables was also very popular–and of course the soy based ice cream (especially peanut flavour) is very popular.

"From the original shop, we moved to the edge of town–the most densely populated area of Dominica–to larger premises on the main road south–down the coast. Here we were able to expand our production facility and go more into training programs and wholesaling products. (We do continue with the retail outlet using soyfoods in local recipes.)

"A second soy shop has opened in Roseau called Soy Kweyol. This was opened by a woman who had previously worked with our program. Her name is Natalie Andrews and she has had a history of experimentation with soybeans/soyfoods in Dominica. We are currently working with Natalie to produce flours from local produce (Natalie initiated this project 5 yrs. ago)–cassava, banana, pumpkin, breadfruit etc. With these flours we are adding toasted soyflour to bring up the protein content and experimenting with tastes and recipes to see what the potential of soyflour is in Dominica.

"Through the Ministry of Education we have been able to set up a series of soyfoods preparation courses–for the home and small business. These courses are part of their adult education program and summer school program. There is some talk of the schools incorporating the preparation of soyfoods into their home economics courses.

"The Soya Shop has been purchasing any soybeans that farmers are growing, with most being resold or given away as seed stock. This is the cycle that we are working towards being self perpetuating in the hands of Dominicans. We are working towards a number of small-scale farmers growing enough soybeans to supply the local market.

"I think that I have touched on the basic outline of the soy aspects of the Dominican project–we also have been working on community development projects such as building an addition onto a small rural school, supplying a school with lighting, building a breakwater with a fishermen's group etc. -

"Plenty Canada has also undertaken an integrated soybean project in St. Lucia, Jamaica, and Antigua.

"I have enclosed some articles and part of a report on the Dominican project and hope that this gives you an idea of what we have been doing. I would appreciate receiving any comments or further queries from you. I have a high regard for your tofu books and we have used them often.

"My wife, Sarah, has become somewhat of an expert on soy cookery and nutrition over the past 15 years. She is very good at making soyfoods taste extremely delicious. The initial success of our Soya Shop in Dominica can be attributed, to a great degree, to Sarah's soy experience and the participation of some very enthusiastic Dominican women.

"As far as the slides go, I am currently working on duplicating my originals. I am also making prints from negatives. When I have this completed I will let you know and then perhaps we could make an arrangement whereby you can see them.

"Thanks again for your interest, wishing you all the best, Norman Ayerst."

The letter ends with two handwritten addresses on page 3: (1) Noble Bean, c/o Allan & Susan Brown, R.R. 4, MacDonald's Corners, Ontario, Canada. Sarah [Ayerst] has been working with Allan & Susan since we returned from Dominica. (2) Norman's home address.

Letter (e-mail) from Norman Ayerst. 2008. Aug. 3. "At the times we were working in Guatemala and Dominica, we were working for Plenty Canada–and Plenty Canada was in pretty close partnership with Plenty International on planning and executing the programs." Address: 64 Oxford St., Toronto, Ontario M5T 1P1, Canada. Phone: 416-920-2668.

4550. *Dairy Industries International.* 1985. Soya Health Foods opens in Manchester. 50(5):43. May.
• ***Summary:*** "A factory to produce soya milk has been opened in Trafford Park, Manchester. UK supplies of this low fat, high protein drink have previously been imported from Belgium, France, and Germany.

"Sales [of soya milk] in the UK have increased five-fold in the last year to total £3.5 million; the company behind the new venture, Soya Health Foods, estimates that the market will reach £20 million within the next three years. They are already producing 46,000 litres a week, packed in cartons and sold under the brand name of Sunrise. Later in the year, they are hoping to launch a soya yogurt and soya milk ice cream. There are also plans for a soya milk by-product, presently sold as pig feed." Note: Taking the retail price at UK£0.64 per liter, these values correspond to 5,600 tonnes of soya milk for 1984 and 32,000 tonnes projected for 1988. Address: England.

4551. **Product Name:** Edensoy (Soymilk) [Cranberry].
Manufacturer's Name: Eden Foods, Inc. (Importer). Made in Japan by Marusan-Ai Co., Ltd.
Manufacturer's Address: 701 Tecumseh, Clinton, MI 49236.
Date of Introduction: 1985. May.
Ingredients: Plain: Water, soybeans, kombu seaweed, pearl barley. Carob: Water, soybeans, pearl barley, barley malt, carob, kombu.
Wt/Vol., Packaging, Price: 6 fluid oz (180 ml) free-standing retort pouch.
How Stored: Shelf stable.
Nutrition: Plain: 89.9% water, 1.9% protein, 1.5% fat, 7% carbohydrates, 48 calories/100 gm.
New Product–Documentation: Spot in Whole Foods. 1985. March. p. 65. "Berry added: Eden Foods has expanded its soy beverage line with Cranberry Edensoy... It is available in a 6 oz. retort pouch... Suggested retail price is 79¢ per package." A small photo shows the new packages.

Dairy Record. 1985. Sept. p. 86. Cranberry Edensoy was added in May 1985.

4552. *Natural Foods Merchandiser.* 1985. 6th Annual Natural Foods Merchandiser Merchandising Awards. May. p. 1, 48, 49.
• ***Summary:*** Three soy products won awards. A color photo shows each. Gold: Naturally Preferred Miso Mustard by

American Natural Foods, Malteds by Westbrae; Silver: Ah Soy by Great Eastern Sun. Color photos show all three products.

4553. **Product Name:** [Sojal Soya Milk (Natural, Banana, Strawberry, or Carob)].
Foreign Name: Sojal Soja Melk.
Manufacturer's Name: Pharma Food (Distributor). Made [actually marketed] in England by Haldane Foods.
Manufacturer's Address: Netherlands.
Date of Introduction: 1985. May.
Wt/Vol., Packaging, Price: Liter cartons. Natural is Hfl. 3.10 retail. Flavored is Hfl. 3.30.
New Product–Documentation: Food Report (Lehmann). 1985. May. 1986. June. Two varieties of Sojal soya milk are newly available: one contains 9% soya flour and honey, the other has no added sweetener. See also the Sojal soymilk imported to England by Haldane from a company in France; it is made from powdered Brazilian soybeans.

4554. *Soya Foods* (*ASA, Europe*)**.** 1985. The Soyafoods Interview. Lucas Meyer. May. p. 2-4.

4555. STS–Soya Technology Systems. 1985. Containers for soymilk (Leaflet). 11 Dhoby Ghaut #11-06, Cathay Building, Singapore 0922. 2 panels each side. Each panel: 30 x 21 cm. Also published in Chinese. [Eng; Chi]
• ***Summary:*** Color photos (see next pages) show carton containers (Tetra Brik, Combibloc, Pure Pak), plastic bottles (incl. Remy/Serac Aseptic UHT), glass bottles, cans, and plastic bags (Prepac/UHT, Doypack/Toyo Seikan standing pouch/retort sterilized). Brands include Granose, Marigold, GranoVita, Soy Moo, Magnolia, No Cow, Vegemil, Vitamilk, Amofood, Milho Verde, PureHarvest, Yeo's.

Note 1. Milho Verde is made by Pennone–Produtos Alimenticios Ltda., Av. Adolfo Pinheiro 1247, Sao Paulo, Brazil. Their factory is at another address.

Prepac is at 62 Rue Pasteur, 94800 Villejuif (a commune in the southern suburbs of Paris), France. Address: Singapore.

4556. **Product Name:** [Tofu Salad Dressing].
Foreign Name: Tofu Salat-Creme.
Manufacturer's Name: Tofukost-Werk TKW GmbH.
Manufacturer's Address: Siemensweg 1, D-4724 Wadersloh-Diestedde, West Germany. Phone: 02520-1300.
Date of Introduction: 1985. May.
Ingredients: Tofu, soymilk, soy oil, mustard, cane sugar, fruit vinegar, sea salt, citric acid.
Wt/Vol., Packaging, Price: 150 gm or 10 kg plastic tub.
How Stored: Refrigerated, 6 week shelf life at 8ºC.
Nutrition: Protein 6.6%, water 62.8%, fat 20.0%, pH 4.4, ash 1.6%, carbohydrate 6.4%, energy 243 calories/100 gm.
New Product–Documentation: TKW color products catalog. 1988. April. Shows Labels. Red, light green, and orange on white. Label. 1988, received. 3.25 inch diameter.

4557. *Times of India* (*The*) (*Bombay*)**.** 1985. Classified ad: Required the following in bulk quantities. June 9. p. 13.
• ***Summary:*** (1) Malt extract. (2) Edible groundnut flour. (3) Pectin... (6) Soya milk. (7) Natural food colours.

"Manufacturers may contact Box F 592-, Times of India, Bombay 400 01 with detailed specification."

4558. Roger, Patrick. 1985. [Re: New developments with soyfoods in France, and the Association Rurale des Travailleurs sur Soja]. Letter to William Shurtleff at Soyfoods Center, June 12. 3 p. Typed, with signature. [1 ref. Fre; eng+]
• ***Summary:*** "Many of the farmers in my region have told me that they grew soybeans during World War II. It seems that this was a sort of culture (tax or duty on which the farmers were owing/in debt), for the German occupants considered the soybean to be a strategic commodity.

"More recently, in 1974, it is under the impetus of Mr. Jean Claude Sabin, sometimes called 'Mr. Soja,' that the culture of soya has taken off again in France, starting with the Department of Tarn. Mr. Sabin is presently president of various organizations actively involved with popularizing soybean culture in France. I'd like to point out the little newsletter edited by l'ONIDOL (Office of Oilseed Development) titled *L'Inoculum.* It contains extensive useful information on the culture of soya in France. Subscriptions are free. Write: L'Inoculum, 17 rue Fleurance, 31400 Toulouse, France.

"Finally a little history of l'ARTS. Our association was officially created in December 1983 by Olivier Attie, who is today its president, by Jacques Isnard and Alain Lacombe, who manage SOJADOC, which makes tofu and tofu products, and by myself who am now director. The base of the association is now widened to include other members. Those in charge of businesses such as Mrs. Sakaguchi, Colin, Wintzer, Garcia; people working in public organizations; soy researchers; wholesalers. Presently the three of us most actively involved are (1) Olivier, who is most particularly interested in the development projects in Africa. (2) Anne Caderas de Kerleau, who is collecting important documents and writing a book on soya, and (3) me, who keeps people connected by publishing *La Lettre de l'ARTS* and does investigations as on markets, adapted varieties of soybeans, etc.

"By the way, we have a project to launch in the near future the idea of a European Soyfoods Manufacturers Assoc. (but there is no good equivalent for the word 'Soyfoods' in French). We are in the process of working out the laws but the divisive political and linguistic context in Europe makes these things very delicate. In this body we will try to work together to establish standards for production and labeling, to

protect soyfoods from the attacks of the dairy lobbies, and to publish a 'Soyfoods Letter' in English and French...

"Here is a list of recent arrivals on the market in France: Sojadoc (fresh tofu and tofu cuisine), Sojagral Ouest (tofu), La Maison du Tofu (tofu), L'Athanor (tempeh), Sapov (soymilk, natural or deodorized)... It seems that 1986 will be the boom year for soy products in France...

"Our training session on tofu took place in November 1984 at Penne and Corbarieu. It has been followed by Mani Coulibali of Senegal, who has since been sent by AGROPOL [Association pour le Developpement International Agronomique et Industriel des Proteagineux et des Oléagineux] as a soya expert for Africa, and by Koffi Aquereburu, who is looking for partners/financiers for a tofu project in his country, Togo.

"I have previously set up a shorter session in the same way (at the same time) a dossier of study (in Spanish) for Hidegar Garcia of Venezuela in view of setting up an experimental shop in that country. I have had no news from him since then.

"The next stage, organized by Olivier Attie, will take place in July by a person from Burkina Faso (formerly Upper Volta) in view of implementing a low technology shop in his country." Address: Director: 1. La Guitarde, 82370 Corbarieu, France; or 2. ARTS (Association Rurale des Travailleurs sur Soja), Presbytere de Saint-Paul-de Mamiac, 81140 Penne du Tarn, France. Phone: 63/56 34 09.

4559. Torii, Yasuko. 1985. Re: New developments with soyfoods Japan. Letter to William Shurtleff at Soyfoods Center, June 13. 2 p. Handwritten.

• ***Summary:*** Discusses the Soybean Symposium in Tsukuba, The Book of Tempeh, History of Tempeh in Japan, Bruce Walker (who is doing soba research). Marusan's tempeh is not selling very well at Mitsukoshi or other department stores (more and more Japanese like instant foods). Article in Hikari. Two natural foods restaurants named Alicia and Healthy-Kan are doing lots with tempeh on their daily menus. She learned a new method for making homemade soymilk from Miyazaki Gakusha: Drop 200 gm clean whole soybeans into 400 cc boiling water. Allow to return

to the boil, then boil for 4 to 4½ minutes; this inactivates lipoxygenase. Turn off the heat and add 700 cc water. Soak for 5-6 hours. Blend until smooth in a blender. Bring to a boil and simmer for 8 minutes, Strain and serve. Address: Kamitsuchidana 324, Ayase-shi, Kanagawa-ken 252, Japan. Phone: 0467-76-0811.

4560. Wilson, Geoff. 1985. Drinks pinta soya day? *Age* (*The*) (*Melbourne, Australia*). June 15.

• ***Summary:*** "The Australian dairy industry may soon face the greatest challenge to its markets. Its rival will be a range of soy-bean products indistinguishable from dairy foods.

"The soy-bean industry can produce milk, yoghurt, ice cream and cheese that not only taste like dairy products, but are cheaper and are perceived in some quarters to have health advantages."

4561. Crump, Constance. 1985. FDA probing use of local soy beverage. *Ann Arbor News* (*Michigan*). June 19.

• ***Summary:*** "The inquiry concerns Edensoy, a soy drink made by Eden Foods of Tecumseh and manufactured in Japan by the Marusan Co. A recall of the product's explanatory pamphlet is expected, probably today. In Toronto, Ontario [Canada], a woman fed her infant Edensoy as the child's only food for five months after she developed difficulty in nursing, said Mike Potter, president of Eden Foods. At six months of age, the baby was hospitalized for malnutrition." The FDA investigation was confirmed by Alan Hoeting, FDA district director in Detroit.

The pamphlet was written by Potter in 1983 to explain the uses of Edensoy. About 9,000 copies were distributed in 1983 and 1984. It contains one sentence [actually one page] which could easily be misinterpreted to mean that Edensoy could be used as an infant formula.

"Eden's Store and Deli, 330 Maynard, was once part of Eden Foods, but there has been no connection in ownership or management for several years." Address: News Staff reporter.

4562. Food and Drug Administration. 1985. [Warning on use of Edensoy and similar soy drinks as an infant formula] (News release). Washington, DC. 1 p. June 19. Address: Washington, DC.

4563. *Import Alert* (*U.S. Food and Drug Administration*). 1985. Edensoy and other soy drinks that may serve as infant formulas. No. 40-01. June 26. 3 p. PAC Code 17R043. ADFS-DFRG (HFO-415). Field Compliance Branch.
• ***Summary:*** Also concerns Soy Moo (Belgium, Health Valley); Sun Soy (Belgium); Ah Soy (Japan, San-iku Foods, Great Eastern Sun); Westsoy (Japan, San-iku, Westbrae), Vitasoy (Hong Kong), Malteds (Westbrae), Marusan. Address: Washington, DC.

4564. Bray, Franco. 1985. Un gelato vegetale a base di soia [Vegetable ice cream based on soya]. *Industrie Alimentari* 24(228):513-15. June. [12 ref. Ita]
• ***Summary:*** Discusses methods and procedures for making a bland tasting tofu for use in Tofutti, a non-dairy ice cream made in the USA. Tables compare the chemical composition of cow's milk and soymilk, the dry okara (*residuo secco*) from Amsoy, Vinton, and Weber soybean varieties as a function of the extraction method, and the amino acid composition of soy protein and milk proteins.

Note 1. This is the earliest Italian-language document seen (March 2007) that mentions soy ice cream, which it calls *Une gelato vegetale a base di soia.*

Note 2. This is the earliest Italian-language document seen (June 2013) that mentions okara, which it calls *Il residuo secco* and *materiale insolubile.* Address: Via Crimea 21, 20147 Milan, Italy.

4565. Chiang, Wenchang; Shih, M.J.; Chen, S. 1985. [Effect of soaking and grinding conditions on quality of soymilk and physical properties of bean residue]. *Chung-Kuo Nung Yeh Hua Hsueh Hui Chih* (*J. of the Chinese Agricultural Chemical Society, Taiwan*) 26(2):165-72. June. [19 ref. Chi; eng]
• ***Summary:*** Soybeans were ground with water at 20ºC and at 80ºC with injected steam. The hot water grind gave soymilk with less volatile beany flavor and a lower yield of okara, with a yellower and greener color. Address: 1-2. Graduate Inst. of Food Science & Technology, National Taiwan Univ., Taipei, Taiwan; 3. American Soybean Assoc., Taiwan Office.

4566. *Food Processing* (*Chicago*). 1985. 101 new food plants: Tofu, soymilk–Mighty Soy, Inc. June. p. 46.
• ***Summary:*** A color photo shows the front of Mighty Soy's new 8,000 square foot facility in Los Angeles, California. It began operation in Nov. 1984 and cost $250,000.

4567. King, Victor A.E. 1985. [Studies on the production of banana juice powder (with soymilk) using spray drying]. *Chung-Kuo Nung Yeh Hua Hsueh Hui Chih* (*J. of the Chinese Agricultural Chemical Society, Taiwan*) 23(1/2):62-72. June. [20 ref. Chi; eng]
• ***Summary:*** Milk or soymilk was added to an equal volume of banana products diluted with various amounts of water and spray dried at different inlet temperatures. A 1:1 or 2:1 mixture of soymilk and banana gave good results. The product became more hygroscopic as more soymilk was added or the drying temperature was decreased. Address: Dep. of Food Science, National Chung-Hsing Univ., Taichung, Taiwan.

4568. Kushi, Aveline; Jack, Alex. 1985. Aveline Kushi's complete guide to macrobiotic cooking: For health, harmony, and peace. New York, NY: Warner Books. xvii + 414 p. June. Illust. Index. 23 cm. [36 ref]
• ***Summary:*** Index entries include: Miso 61, Tofu 50, Tamari 19, Tempeh 17, Whole dry soybeans 6, Natto 3, Soymilk 3, Yuba 1. This book calls ganmodoki "Tofu Croquettes" and further states that "*Gan* means 'crane' and *modoki* means 'looks like.'" Among the 31 chapters are ones titled Beans (incl. basic black soybeans, and brown rice with black soybeans); Tofu, Tempeh, and Natto (including yuba); Sea Vegetables; Condiments and Garnishes (incl. miso), and Fish and Seafood.

Under "Black Soybeans" (p. 257) we read: "These nice shiny beans are also called Japanese black beans. They have a strong, delicious taste. Their juice is said to make the voice clear and beautiful. Throughout Japan, mothers prepare their children for music tests and singing lessons with this dish. Black soybeans are also used medicinally to help discharge animal toxins from the body." Note: This is the earliest macrobiotic cookbook seen that uses the term "Black soybeans" in a recipe title. All previous macrobiotic cookbooks called them "Black beans."

Contains recipes for homemade tofu, tempeh, and natto. Address: Brookline, Massachusetts.

4569. *Natural Foods Merchandiser.* 1985. Refrigerated/frozen foods get a blast from the past. June. p. 1, 54-59.
• ***Summary:*** Includes excellent discussions of tempeh, soymilk, and non-dairy frozen desserts including Tofutti, Ice Bean, and Rice Dream. One retailer says: "We've never had a product line like Tofutti, where customers practically tell us they'll bomb our store if we don't carry it." Tofutti continues to show strong sales, but it is facing competition from other soy-based frozen desserts (such as Ice Bean), as well as ice cream facsimiles made from fruit (such as Yodolo) or rice (such as Rice Dream).

On the same pages as the article are color ads for Rice Dream and Legume "Enlightened Entrees with Tofu."

4570. Plenty Canada. 1985. Plenty Canada project highlights (Brochure). Lanark, ONT, Canada. 6 p. June.
• ***Summary:*** Includes discussions of Plenty Canada soy projects in Sri Lanka, the Caribbean (Dominica, St. Lucia, Jamaica), and Lesotho. On Dominica, within 6 months of Plenty Canada setting up a Soy shop, one other successful

Soy Shop (named Soy Kweyol) has been opened by a local Dominican who happened to be the first wholesale customer of the Plenty Soy Shop. On St. Lucia, a group of farmers at La Pelle succeeded in growing approximately 10 acres of soyabeans. Denn Farm, a commercial farm, grew 5 acres of soyabeans.

On Jamaica, over 1,000 people received actual training in soybean processing over a 1-year period.

Note: In 1985 Plenty Canada sent Soyfoods Center a 4 by 6 inch color photo (taken recently) of the Lesotho Soy Dairy, part of the Village Technology Training Centre (VTTC), with solar panels on the thatched roof and two Plenty volunteers seated on the thatched roof. Address: Lanark, ONT, Canada.

4571. **Product Name:** [Sahm Yook Soyalac (Plain Soymilk)].
Foreign Name: Sahm Yook Soyalac.
Manufacturer's Name: Sahm Yook Korean Foods.
Manufacturer's Address: 320 Panjeong-ri, Jiksan-myun, Chunwon-gun, Choongchungnam-do 333-810, South Korea.
Date of Introduction: 1985. June.
Ingredients: Soy milk, vegetable oil, glucose, high fructose corn syrup, salt.
Wt/Vol., Packaging, Price: 200 ml foil retort pouch (Doypack). Retails for 300 Won (6/90).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Form filled out and label sent by C.Y. Yoon, General Manager, Sahmyook Korean Foods. 1990. June 23. The product was introduced in June 1985. Ingredients are listed in English.

Label (Foil retort pouch). Sent by C.Y. Yoon. 1990. June 23. 4 by 6.75 inches Red, yellow, dark green, and light green on silver. Front panel says "Soyalac" and an illustration shows 3 yellow soybeans in a green pod. The back panel shows the package being immersed in boiling water or heated in a microwave oven. So this package is probably sold during the cold months.

4572. **Product Name:** Soymilk [Maple, Honey-Vanilla, or Plain].
Manufacturer's Name: Wildwood Natural Foods of Santa Cruz, Inc.
Manufacturer's Address: 1560 Mansfield Ave., Suite D, Santa Cruz, CA 95062. Phone: 408-476-4448.
Date of Introduction: 1985. June.
Wt/Vol., Packaging, Price: Pints and quarts.
New Product–Documentation: Talk with Jeremiah Ridenour. 1988. Aug. 26. The company started production in June 1985, making tofu and soymilk.

4573. *Food Chemical News.* 1985. FDA conducts undercover probe of soy drinks in health food stores. July 8. p. 17-18. [1 ref]

4574. Gupta, Rajendra ("Raj"). 1985. Work with soymilk and tofu (Interview). *SoyaScan Notes.* July 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** On 23 May 1985 a company that Raj helped to establish started production of tofu in India in Kanpur (a city in northern India in southern Uttar Pradesh, on the Ganges River, 250 miles southeast of Delhi; Population 1.2 million). Last year he bought and imported a Takai W30B tofu system–which can actually process 50 kg/hour of soybeans. There is a big demand for his tofu; he can't keep up with it. One month ago he was making 500 kg/day of tofu, but soon, when his packaging improves, he will be making 1,500 kg/day.

For packaging, he uses a heat-sealed pouch, which is sealed with a Takai K-1020 sealer. He makes his own plastic containers. His larger plan is to establish franchises, and to manufacture tofu equipment in India.

He has applied for a process patent (not a machine patent) on a cold grind process for making soymilk with no beany flavor. He wants to license the patent. The concept sounds like a breakthrough. He has patented it in India, the USA, and internationally. It is based on a special machine which can be made inexpensively, in small shops.

Another tofu company in India is Tofu India Ltd. One company that was located near Delhi is no longer in business.

Note 1. This is the earliest document seen (July 2013) concerning the work of Raj Gupta with soyfoods.

Note 2. Raj Gupta first met Bill and Akiko Shurtleff on 6 April 1984 when he visited Soyfoods Center in Lafayette, California. He was on his way to Japan, well before his Indian tofu company came into existence. Address: PhD, 627 Gaines Dr., Ottawa, ONT, K1J 7W7, Canada. Phone: 613-741-2558.

4575. *Toyo Shinpo* (*Soyfoods News*). 1985. Kyuto Bussan. Tôfu "Aisukuriimu." Seizô sôchi, "noohau" o kaihatsu. Shôwa Sangyo, Mitsubishi Jûkô ga kyôryoku [Kyuto Bussan Tofu Ice Cream. They have developed the equipment and know-how. Showa Sangyo and Mitsubishi Heavy Industries helped]. July 21. p. 9. [Jap; eng+]

• ***Summary:*** This ice cream is made using soymilk. Kyuto Bussan is inviting large tofu manufacturers to start producing it in Kyushu. Raw materials are provided by Showa Sangyo, equipment by Mitsubishi Juko, marketing by Kyuto Bussan.

4576. *Toyo Shinpo* (*Soyfoods News*). 1985. Tônyû dezaato shin meniyuu ni [Adding soymilk dessert to their new menu]. July 21. p. 53. [Jap; eng+]

• ***Summary:*** The famous Kyoto tofu restaurant Junsei added a soymilk dessert to their menu. There are four flavors (like a custard cup): peppermint, matcha (green tea), ao-ume (green plum), and aka-ume (red plum).

This is a sign of Junsei's internationalization.

4577. Harrison, Slater. 1985. Re: The state of soybean usage in Bangladesh. Letter to William Shurtleff at Soyfoods Center, July 25. 3 p. Handwritten, with signature on two aerogrammes. [1 ref]

• ***Summary:*** There are now four MCC people working with soybeans. George Horlings is an extensionist working almost exclusively with soybean at the farm level. He has been having lots of trouble getting the seed to last from one harvest to the next time of planting. Carl and Ilean Bergan are food technologists; they recently replaced Ron Martins. Their only soyfood project is supervising the pilot soymilk plant started by Ron Martins. Slater is the fourth person working with soybeans although that is not part of his job description. He is trying to entice the Bergans with tempeh; they have never tasted it.

Slater and his wife are active food gardeners. They have grown soybeans for "edamame"–so well known in Japan–and they really love them. They have gotten hold of the very tiny seed that farmers are being encouraged to plant. There is said to be a really spectacular variety named PB (Punjab) that has tested well in Bangladesh. Address: c/o Mennonite Central Committee, Box 785, Dhaka 2, Bangladesh.

4578. *Grocer* (*The*) (*England*). 1985. Sunrise hopes soya yogurt will follow milk success. July 27. p. 18.

• ***Summary:*** "Six months ago, Michael Cole, a strict vegetarian for most of his life, formed the Soya Health Foods company and opened the first soya milk factory of its kind in this country at Trafford Park, Manchester. In that time sales of his Sunrise no-added-sugar UHT soya milk have risen from 46,000 litres a week to 250,000.

"Recently he signed a two-year own-label contract for sweetened soya milk with Lancashire Dairies, and is now supplying Co-operative Retail Services, and supermarket chains.

Cole has now launched three more soya products under his brand: (1) Sunrise Soya yogurt in four flavors–strawberry, peach melba, black cherry and raspberry. Cole says there have never previously been any soya milk yogurts available in the UK or Ireland; (2) Sunrise Ice Dream (soya milk ice cream) in two flavors–hazelnut and vanilla. "This is a natural ice product, free from dairy produce, lactose and cholesterol and containing only sugar made from fruit."; and Sunrise Vegetarian Burgers, each weighing ¼ pound; they are high in proteins and fibres. A photo shows his company's four products, including 2 flavors of soy yogurt. Cole says there are three large markets for soya products in the UK: (1) The slimmers, dietary and allergy foods market; (2) the natural food market; and (3) the Kosher market. Address: Manchester, England.

4579. *Times of India* (*The*) (*Bombay*). 1985. Company news: Kalyan solvent. July 27. p. 13.

• ***Summary:*** The company, which is planning a debenture issue, "proposes to set up a project to manufacture lecithin with a capacity of 350 tonnes per annum, and also another

project to manufacture soya milk with a capacity of 4,000 litres per hour."

4580. Caderas de Kerleau, Anne. 1985. Le soja en Afrique [The soybean in Africa]. *Lettre de l'ARTS* No. 2. p. 1-2. Summer. [3 ref. Fre]
• ***Summary:*** Africa has had a long-term interest in the soybean. Most African countries have had or have–a soybean project. The early projects, generally oriented toward exporting the crop, were often not successful. Recent projects, aimed more at food self-sufficiency, and initiated by the governments concerned, seem to have a better chance of success.

Sources of information for article are cited, followed by a brief history of soya in Africa. Currently African countries can be divided into two types: Those that produce soybeans commercially and those that are experimenting with the crop. The main soybean producing countries are Zimbabwe (91,000 tonnes on 35,000 ha) and Nigeria (75,000 tonnes on 195,000 ha). Other producers are South Africa, Zaire, Uganda, Rwanda, Tanzania, Côte d'Ivoire, and Zambia.

Countries experimenting with soya include: Senegal: A project in the pre-popularization stage has an estimated potential of 1,000 tons. Cameroon: The soy project of 1980, costing 255 million francs CFA, has a goal of 30,000 tons. Cote d'Ivoire: The soy project of 1977, costing 7,000 million francs CFA, is conducted in collaboration with the Brazilian group COCAPEC. The Brazilians withdrew for various reasons, leaving the plan inactive. Togo: Soy project of 1981. Goal: 10,000 ha, but discontinued for lack of finances. Benin: Experiments of 1969 show possibilities of good yields. Ghana: A study is in progress. Prospects look very favorable because of outlets of oil for food uses (10,000 tonnes) and huge needs for soybean cake or meal due to a new level of livestock. Rwanda: Five-year plan of 1977-81. Goal: 20,000 tons of soybeans and an oil mill of 60 tonnes/day. Burkina Faso (Upper Volta): Project for a soymilk plant, with soybeans produced by farmers under contract. Experimentation with tofu. Gabon: A soy project which is doing very well and feeds an industrial livestock ranch, giving good prices to soybean producers.

Other feasibility studies are underway. For example, the Cameroon project. Soya was introduced to Cameroon in 1924, In 1974 IRA at Dschang intensified research on this crop. Since 1981 the UCCAO soy project has actively popularized soybean culture among farmers and organized an active campaign on the utilization of soybeans for human food and livestock feeding. Financing is assured by the governments of Cameroon and France.

Soy has taken root in Africa because of 3 main reasons: National, economic, and agronomic interest. The crop, which has been shown to give good yields under proper African conditions, can promote food self sufficiency and provide local jobs. But there are obstacles. The soybean is not a traditional African crop, so farmers need to learn how to grown, food companies how to process it, and consumers how to prepare and eat it. The price received by producers is relatively low. The sales price is not competitive on the world market: An American farmer can obtain yields of 1,700 kg/ha with 14 hours work, but a Senegalese farmer obtains only 850 kg/ha with 450 hours work. Thus the success of soy projects in Africa depends largely, at least initially, on the political interest and funding of governments. Production of the crop for export seems to have less potential for success than for local use. Address: ARTS, 108 rue St. Honore, Paris, France.

4581. Haumann, Barbara Fitch. 1985. Annual meeting report: Trends of processing, consumption around the world. *J. of the American Oil Chemists' Society* 62(7):1070-76. July.
• ***Summary:*** Based on an all-day session on trends in edible oil processing and consumption around the world held at the AOCS annual meeting. Contents: Supply and demand. Europe. Central America. Canada. Asia. South Asia. Southeast Asia. Far East [East Asia]. China.

Although soybeans are grown throughout China, they are grown most intensively in northeast China in the provinces of Liaoning, Jilin, and Heilongjiang. Dalian, an industrial city and seaport on the Yellow Sea, is reported to be China's main soybean crushing center.

Soybeans in China are consumed mostly as traditional foods such as tofu, soymilk, soy sprouts, soy sauce and soybean paste. "Only about 20% of the crop is crushed for oil and meal." Address: JAOCS.

4582. Plenty Canada. 1985. Sri Lanka Soy Utilization Project. R.R. #3, Lanark, ONT, K0G 1K0, Canada. 10 p. Unpublished manuscript.
• ***Summary:*** The 5-year project, aimed at increasing consumption of soyfoods in Sri Lanka, proposes to establish four soya nutrition centers in Kandy, Colombo, Vavuniya, and Tanamalwila. Each center will have equipment to make soymilk, tofu, soy ice cream, tempeh, and soy flour (to use to fortify wheat in rotti, pittu, etc.). Each center will conduct demonstrations and training classes to community groups. Address: Lanark, ONT, Canada. Phone: 613-278-2215.

4583. Datz, B. 1985. Augusta [Maine] woman's complaint gets [Edensoy] formula folders recalled. *Kennebec Journal* (*Augusta, Maine*). Aug. 3.
• ***Summary:*** Eden Foods has sold 8 million single serving packages of Edensoy in the last 2 years, according to company president Michael Potter in a phone interview. A six-month old Canadian infant was fed nothing but Edensoy for 5 months. Severely malnourished, the child developed rickets from a lack of vitamin D and vision problems from a lack of vitamin B. Edensoy was launched on the U.S. market in August 1983. Mary Owen, a dietitian from Augusta,

Maine, has been vocal about raising questions the suitability of Edensoy for infants. She obtained a brochure describing Edensoy then in late 1983 wrote Eden Foods several questions about Edensoy's level of calories, protein, fat, minerals, and vitamins compared with breast milk. Michael Potter said that, until about 9 months ago, he didn't know about the requirements of the Infant Formula Act of 1980.

In April 1985 the FDA recalled Eden's brochure describing Edensoy "in response to false advertising and nutritional deficiencies of two soy drinks produced by another firm. Their brand names are Nutra-Milk and Kama-Mil."

4584. Altaner, David. 1985. His passion flavors the blandest of foods. *Courier-News* (*Bridgewater, New Jersey*). Aug. 6. p. A8-A9.
• ***Summary:*** The company receptionist answers the phone "Tofutti-All-Rootie." "Thank God, I've been blessed with taste buds that like what the masses love." New products? "Next comes tofu jogger, an instant breakfast soy drink. In the future, consumers can expect to see soy-based chocolate and vanilla pudding, potato topping, onion dip, tofu cultured non-dairy yogurt, tofu whipped cream and pancakes... His personal Mount Everest is a tofu burger... To meet the competition Tofu Time is rolling out its first television commercial, which was unveiled last week. In it, the question, 'Has New York gone totally Tofutti?' causes a staid board of directors meeting to erupt into frenzied dancing to 'Tofutti-All-Rootie,' which sounds a lot like Little Richard's 1955 hit 'Tutti-Frutti.'"

4585. Steinkraus, Keith H. 1985. Re: Comments on your recent book, *Soymilk Industry and Market* (1984). Letter to William Shurtleff at Soyfoods Center, Aug. 8. 2 p. Typed, with signature on letterhead.
• ***Summary:*** "I do not think you are aware that the first 'boiling water grind' soymilk was made in my laboratory.

"In my opinion, you have neglected the importance of the 'Saridele' spray-dried soymilk plant that operated in Indonesia in the 1950s. UNICEF contributed $500,000 to the plant and the Government of Indonesia supplied the land and buildings. It was a very well engineered plant producing a very high quality spray dried soymilk available in several flavors that required the consumer only to stir a spoonful of the powder into a glass of water. The original factory could not satisfy the demand in Indonesia alone. The Saridele plant, by the way used a hot water (8O to 90ºC) grind sufficient to inactivate lipoxigenase. It is surprising that the spray dried soymilks have not been adopted by more recent soymilk producers as it gets around the need to use aseptic packaging and is cheaper to transport." Address: Prof. of Microbiology, Dep. of Food Science & Technology, New York State Agric. Exp. Station, P.O. Box 462, Geneva, NY 14456-0462.

4586. *Country Folks* (*Palantine Bridge, New York*). 1985. Consumer alert issued on "soy drinks" fed to infants. Aug. 12.
• ***Summary:*** "The Maine Department of Agriculture, Food and Rural Resources has issued a consumer alert warning parents that so-called 'soy drinks,' or soy 'milks,' should not be used as a sole source of nutrition for infants."

"The federal Food and Drug Administration recently issued several such warnings about specific brands of soy drinks often sold in health food stores. Earlier this year, a 6-month-old child in Canada developed rickets, vision problems and malnutrition after being fed a soy drink product called Edensoy as a sole source of nutrition for 5 months." Brands with serious nutritional deficiencies and false advertising included Nutra-Milk and Kama-Mil. Also published in The Journal (Lewiston-Auburn, Maine). Aug. 5.

Note: This is the earliest document seen in which the U.S. Food and Drug Administration uses the term "milk" to refer to soymilk. Address: Maine.

4587. *Food Chemical News*. 1985. FDA knew of Edensoy situation for 20 months prior to recall: Metzenbaum. 27(23):3-4. Aug. 12. [3 ref]

4588. Nichrome Metal Works. 1985. Display ad: Pack & preserve. *Times of India* (*The*) (*Bombay*). Aug. 13. p. 17.
• ***Summary:*** "Pack:... Edible oils, Vanaspati, Ghee, Soya milk, Milk, Buttermilk, Fruitjuices." Manufactured by Nichrome Metal Works. Sold and serviced by Voltas Limited, Ballard Estate, Bombay.

Photos show four packaging machines. Address: 46, Dr. Ambedkar road, Near R.T.O. Office, Sangam, Pune [Poona] 411 001.

4589. *Toyo Shinpo* (*Soyfoods News*). 1985. [Mitsubishi's new Mapuron straight]. Aug. 21. p. 1; Nov. 11, p. 1. [Jap; eng+]
• ***Summary:*** This plain ("straight type") soymilk contains no added oil, so it also contains 30% less calories (96 per 200 ml) and 25% more protein (8 gm per 200 ml) that Mitsubishi's former Mapuron product. And it is specially processed to remove the beany flavor.

4590. H&K (Holstein-Kappert S.A.). 1985. Mechanical Cow HK-200 (Brochure). Industria de Maquinas, Av. Franz Lizst, 200, Cx. P. 146, CEP 01051, Sao Paulo, Brazil. 4 p. 30 cm. [Por; Eng; Spa]
• ***Summary:*** A color photo on the cover of this glossy brochure shows the Mechanical Cow. The text is written equally in Portuguese, English, and Spanish. The equipment consists of the following: Soya peeler (dehuller). Double maceration (in a hot-water bath). Trituration (disintegrating / milling), Centrifugation. Formulation. Pasteurizing. Refrigeration. Packaging. Drying. On the rear panel is an

aerial view of the plant.

Accompanying this brochure is a letter (typed on letterhead) from the manufacturers, replying to 4 questions from Wm. Shurtleff: "(1) The cost of one machine is around US$47,000. (2) The machine capacity is 200 liters/hour. (3) The inventor of this machine is Dr. Marsaiolli, a colleague of Dr. Moretti. (4) We have sold around 200 machines and soy milk use in Brazil is a reality." Address: Sao Paulo, Brazil.

4591. Gupta, Rajendra ("Raj") P. 1985. Re: Visit to Soyfoods Center, work with soymilk. Letter to William Shurtleff at Soyfoods Center, Aug. 24. 1 p. Typed, with signature on letterhead.

• ***Summary:*** "It was indeed very nice meeting you last week. Your reaction to the soymilk samples I brought with me was very gratifying." Raj is enclosing a "proprietary submission agreement" and, after it is signed, will send a copy of the invention patent.

Note: This is the earliest document seen (Oct. 2010) that contains the word "ProSoya" or the company name "ProSoya Foods International." Address: VP Tech., ProSoya Foods International, 627 Gaines Drive, Ottawa, Canada K1J 7W7. Phone: 613-741-2558.

4592. Barrett, Clare. 1985. A practical guide to soyfoods. *Vegetarian Times.* Aug. p. 33-40. No. 96. [14 ref]

• ***Summary:*** An overview of fresh green soybeans, whole dry soybeans, soynuts, soy sprouts, soy flour & soy grits, soy oil, soy protein isolates, soymilk, okara, tofu, tempeh, soy sauces, miso, natto. Concludes with a list of 14 recommended books on soyfoods.

4593. **Product Name:** GranoVita Soya Drink [Unsweetened White, Sweetened White, Coconut, Strawberry, or Carob].
Foreign Name: GranoVita Soja Drink (Ungesuesst, -, Kokos, mit Erdbeer-Geschmack, Caroba).
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1985. August.
Ingredients: Water, soybeans, cane sugar, sea salt, natural flavorings.
Wt/Vol., Packaging, Price: 500 ml and 1 liter Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 ml: Calories 50, protein 3.6 gm, fat 2.3 gm, usable carbohydrates 3.6 gm, linoleic acid 51%, sodium 58 mg.
New Product–Documentation: STS. 1985. Containers for Soymilk. Shows color photo of 500 ml Tetra Brik carton. Red and green on white. "Made purely from plants. Free of cholesterol. Rich in protein (Rein pflanzlich. Cholesterinfrei. Eiweissreich)." This product is marketed mainly in West Germany. Note the absence of a chocolate flavor in the German health market. Label. 1987. 500 ml Tetra Brik carton. In German, Dutch, and French. The unsweetened is orange and red on white. "Pure and from plants. Rich in protein. Cholesterol free." Neuform certification symbol. In Nov. 1989 the coconut retails for DM 1.69.

Manufacturer's brochure. 1989? "GranoVita Soja-Drinks und -Desserts... ein erfrischender Genuss [a refreshing enjoyment]." 6 pages, with many color photos. Describes the products (with a photo of each) and how they are made. All 5 are in 500 ml Tetra Brik cartons and 2 white are in liter cartons. A table compares the composition of cow's milk containing 3.5% fat with sweetened white. Note, per 100 gm: Cholesterol: 11 mg vs. 0 mg. Protein 3.3 gm vs. 3.6 gm. Calories 64 vs. 55. Fat 3.5 gm vs. 2.8 gm. Saturated fatty acids: 64% vs. 16%. Polyunsaturated fatty acids: 4% vs. 60%.

Form filled out and Labels sent by DE-VAU-GE. 1990. June 11. Labels for 500 ml Tetra Brik cartons in unsweetened, strawberry, plain (sweetened), and coconut, and for 1 liter cartons in unsweetened and plain (sweetened). All were apparently launched in 1985.

4594. **Product Name:** [GranoVita Soja Dessert {Pudding Gelled with Carrageenan} (Vanilla, Strawberry, or Chocolate)].
Foreign Name: GranoVita Soja Dessert (Vanille, Erdbeer, Schoko).
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1985. August.
Ingredients: Vanilla: Water, soybeans, cane sugar, modified starch, fructose, vegetable gums, sea salt, natural aromas.
Wt/Vol., Packaging, Price: 500 gm Tetra Brik Aseptic carton. Retails for DM 2.45 (1/90).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Vanilla, Per 100 gm: Protein 3.1 gm, fat 2.9 gm, usable carbohydrates 10.0 gm, calories 79.
New Product–Documentation: Lindner. 1987. Interview. Color photo of 500 ml Tetra Brik carton. Three Labels (cartons). 1988. Each is one unique color plus red and green on white. The unique color for vanilla is yellow, for strawberry is pink, and for chocolate is brown. Front panel illustration of a dish of pudding. "Pure vegetable protein (Rein pflanzlicher Eiweissträger), cholesterol free." Ingredients and nutritional analysis are listed in German, Italian, French, and Dutch.

Manufacturer's brochure. 1989? "GranoVita Soja-Drinks und -Desserts... ein erfrischender Genuss [a refreshing enjoyment]." 6 pages, with many color photos. Describes the products (with a photo of each of the 3) and how they are made.

Form filled out and 3 Labels sent by DE-VAU-GE. 1990. June 11. They started making this product in 1985.

4595. Eckett, Alison. 1985. Beating the protein crunch: A growing number of people are discovering the range of soyfoods, both traditional and modern, that can be made from this bean. *Food Processing* (*UK*) 54(8):25-28. Aug.
• ***Summary:*** "The term 'soyfoods' is a recent generic expression that has been used to describe the complete range of soy products prepared for human consumption. It covers both high technology, modern products such as soy [protein] fibres, concentrates and isolates which are mainly used as ingredients by food manufacturers... and includes the traditional low technology products of soymilk, soy sauce, miso, natto, tofu, tempeh and soy sprouts that have formed part of the staple diet in East Asia for thousands of years."

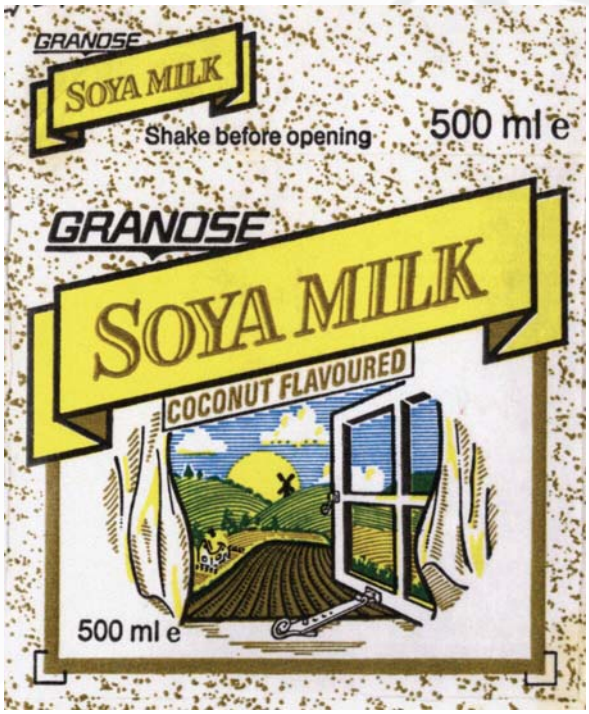
Soyfoods are divided into non-fermented and fermented. Photos show: (1) Miso Dip (front of two packages). (2) Cubes of tofu under water. (3) Nasoya Tofu Vegi-Dip. (4) Sliced cakes of tempeh. (5) The front of four tempeh packages, made by The Tempeh Works. (5) White Wave tempeh, a tempeh burger, and a promotional piece. (6) A box of Tofu Lasagna, made by Legume, Inc. (7) The front of a package of "6 All Natural Vanilla Ice Bean Sandwiches," made from Ice Bean by Farm Foods.

4596. Escueta, Elias E.; Bourne, Malcolm C.; Hood, Lamartine F. 1985. Effect of coconut cream addition on the composition, texture, and sensory properties of tofu. *J. of Food Science* 50(4):887-90. July/Aug. [13 ref]
• ***Summary:*** Coconut cream was added to soymilk at 0, 4.7, 9.0, 16.6, 33.3 and 50% levels before coagulation of the mixture with calcium sulfate. The acceptability at the different levels of added coconut milk was 4.6, 4.8, 4.9, 4.8, 4.8, and 4.6. Therefore the finished product was most acceptable when 9% coconut milk was added.

The coconut cream, which was purchased from a local "sari-sari" (variety) store, contained 77.2% moisture, 2.2% protein, and 17.3% fat.

With increasing levels of added coconut cream, the protein and moisture content of the tofu decreased while the fat content increased. "The percentage yield of tofu did not increase up to 4.7% added coconut cream, but increased significantly when 9.0% or more coconut cream was added to the soymilk." Address: 1&3. Cornell Univ., Ithaca, New York, NY, 14850; 2. Inst. of Food Science & Technology, Univ. of the Philippines at Los Baños, College, Laguna 3720, Philippines.

4597. **Product Name:** Granose Soya Milk [Sugar Free, Plain/Dairylike, Organic; Coconut, Chocolate, Strawberry, Banana, Carob].
Manufacturer's Name: Granose Foods Ltd. (Marketer). Made in West Germany by DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1985. August.
Ingredients: Coconut: Water, dehulled soya beans, raw cane-sugar, coconut powder, sea-salt.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 100 ml: 70 calories. Fat fractions: polyunsaturates 39%, saturates 15%.



New Product–Documentation: STS. 1985. Containers for Soymilk. Shows color photo of 500 ml Tetra Brik carton. Orange and green on white. "100% Vegetable. Rich in protein. High in polyunsaturates." Use by 7/84.

Spot in Food Trade Review. 1986. June. Granose Foods Ltd. (UK) launched new strawberry soya milk in 500 ml Tetra Paks. Ad in The Vegan. 1986. Summer. p. 17. "Why does Granose Soya Milk flow so smoothly? Well, its the natural choice." Shown in 500 ml and 1,000 ml. Sugar free or sweetened with raw cane sugar.

Photo and Spot in The Vegetarian (UK). 1986. Sept/Oct. "Granose strawberry flavoured soya milk. Absolutely delectable–pure strawberry essence, no artificial flavour or colour so its not bright pink!"

Label. 1987. Gold, yellow, brown, blue, and green. Illustration of sunrise seen through a farmhouse window.

Soyfoods (ESFA). Granose Foods Ltd. has launched a strawberry soya milk, made from soya beans, pure strawberry essence, raw cane sugar, sea salt, and natural vegetable flavoring. Presented in 500 ml "Tetra Paks," it has

a 6-month shelf life unopened.

Ad in The Vegan. 1988. Summer. p. 16. "Granose Soya Milk [Banana flavoured with no added sugar]."

4598. Leneman, Leah. 1985. Tomorrow's world [soyfoods]. *Vegetarian* (*The*) (*England*). July/Aug. p. 21-24.
• ***Summary:*** There are now 8-9 brands of soya milk sold in Britain. "It is a shame that most people's introduction to tofu is in the form of Morinaga silken tofu which... is now found in most health food stores. Silken tofu is pleasant and nutritious, but is much softer than regular tofu and is therefore much less versatile. Following recipes meant for firm tofu with it can be frustrating.

"*Granose* is the first big-name health food manufacturer to feature a line of tofu-based products (imported from Denmark). Two of the three tinned convenience meals seem to me less than ideal. The tofu adds nothing special to either the Tofu and Tomato Sauce nor to the Tofu in a Savoury Bean Sauce; they might just as well have used tvp. However, the Chinese-Style Tofu is really excellent, with a nice balance of tastes and textures, including the cubes of tofu– just about the nicest tinned convenience meal around.

"The first national distributor of tofu (to the best of my knowledge) was *The Regular Tofu Company...* Like all other national distributors, their tofu is vacuum-packed, which considerably lengthens its shelf-life... *Paul's Tofu* (The Old Brewery, Wheathampstead House, Wheathampstead, St. Albans, Herts.) produces another vacuum-packed firm tofu, which is available in London and South-East England...

"*Bean Machine* (Station Road, Crymych, Dyfed) produces not only tofu but also a range of 'soysage' foods made from okara... They also make 'Soyannaize,' a dairy-free dressing. *Duchesse* All-Natural Tofu Dressing and Dip (made by St. Giles Foods Ltd, St. Giles House, Sandhurst Road, Sidcup, Kent DA15 7HL) is another mayonnaise-type product..."

She is writing The International Tofu Cookery Book for Routledge & Kegan Paul. Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

4599. *Natural Foods Merchandiser.* 1985. New products, changing diets propel soyfood sales. Aug. p. 1, 39-40, 42-44.
• ***Summary:*** "The soyfoods revolution is being fueled by several powerful trends... Many consumers are attracted to soyfoods because they are an excellent no-cholesterol 'replacement' for meat and dairy products. Soyfoods are also growing with the rising tide of macrobiotics, which promotes the use of various soy products. And there are now enough soyfoods on the market to create synergy within the category: consumers buying soymilk try tofu, and go from tofu to tempeh.

"Tofu is by far the best-selling product in the soyfoods category, according to figures provided by the Soyfoods Association [and Soyfoods Center]. An estimated $60 million worth of tofu is produced and sold in the U.S. annually, while frozen tofu desserts, entrees, and prepared products account for approximately $25 million. Soymilk sales have jumped from near zero a few years ago to $10 million today, while tempeh is an emerging growth category at 5 million in yearly sales." All of the retailers interviewed by NFM indicated that the soymilk category is experiencing major growth. Most of the growth has been in six-ounce aseptic individual serving packages supplied by such companies as Westbrae, Ah Soy, Vitasoy and Eden. Health Valley's Soy Moo has recently been repackaged in a 8.45-ounce package.

"Tempehworks produces approximately 7,000 pounds of tempeh a week during peak months, including that used in its processed tempeh products, such as Fakin' Bacon, New York Style Strami and Kansas City Barbecue."

Includes "A directory [sic, glossary] of soyfoods terminology" that defines tofu, tempeh, soybean, miso, soymilk, shoyu/tamari, TVP or TSP, soy protein isolate, defatted soy flour, and "secondary" soyfoods products.

4600. Santosham, M.; Foster, S.; Reid, R.; Bertrando, R.; Yolken, R.; Burns, B.; Sack, R.B. 1985. Role of soy-based, lactose-free formula during treatment of acute diarrhea. *Pediatrics* 76(2):292-98. Aug. [20 ref]
• ***Summary:*** A lactose-free formula containing isolated soy protein has been successful in treating infants with diarrhea during the gastroenteritis recovery phase. Address: Francis Scott Key Medical Center and Johns Hopkins Univ. School of Medicine, Baltimore, Maryland.

4601. Premier Extractions Limited. 1985. Display ad: When you believe in performance, you can let the figures do the talking. *Times of India* (*The*) (*Bombay*). Sept. 3. p. 10.
• ***Summary:*** A large illustration (graph), in the top two-thirds of the ad, shows the growth of turnover [sales] from 1976 (55.16 lacs [lakhs]) to 1984 (790.47 lacs), an average annual growth rate of 167%.

Smaller bar charts show the growth in gross block (220%), turnover (1333%), gross profit (16.9-fold), and reserves (732%) during the same period. Moreover, exports in 1984 were 309.82 lacs.

"A constant programme of modernisation and expansion has enabled the Company to keep abreast of the latest technological advances in the field. The company's plant at Dewas operates at well over 100% capacity!"

"The future holds even greater promise. The capacity of the Soyabean extraction plant is being increased to 45,000 tonnes per annum. Diversification into manufacture of edible soya flour and extruded soya products are also on the anvil. Negotiations to set up a Soya Milk plant are also in an advanced stage.

"So keep an eye on Premier Extractions. A Company with an excellent track record of growth, And tremendous

future potential." Address: Registered office: Chetak Centre, 1st Floor, 12/2 R N T Marg, Indore 452001, Madhya Pradesh, India.

4602. Shurtleff, William. 1985. Re: Your delicious soymilk. Letter to Raj Gupta, ProSoya Foods International Inc., 627 Gaines Dr., Ottawa, Canada K1J 7W7, Sept. 5. 1 p. Typed, on letterhead.
• ***Summary:*** "Dear Raj: I was so happy to see you again during your last visit. You have made some remarkable discoveries, and I will do whatever is possible to help you introduce them to the world. I am enclosing the signed agreement, and will be very discreet about not leaking your secrets. Please be sure to let me know when the patent is granted and the information becomes public.

"I honestly thought your soymilk was one of the best, if not THE best, I have ever tasted. When Akiko returned home, I asked her to sample each flavor. Her comment was that she wished you had brought an unflavored, plain sample so that we could really see how well you had succeeded in eliminating the beany flavor. I then realized that I felt exactly the same. Is there any way you could ship us such a sample, perhaps on ice. I know it is possible. I really wish you would send about 1-2 pints. That will allow us both to give you a better evaluation of your basic product.

"I still want to urge you to write an article for soyfoods magazine about your new soymilk. And I look forward to receiving the patent application.

"Sincerely,..."

Note: By Oct. 11 the company's new address was: 801-275 Slater St., Ottawa, Canada K1P 5H9. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

4603. Freundlich, Michael; Zilleruelo, G.; Abitbol, C.; Strauss, J.; Faugere, M-C.; Malluche, H.H. 1985. Infant formula as a cause of aluminium toxicity in neonatal uraemia. *Lancet* ii(8454):527-29. Sept. 7. [27 ref]
• ***Summary:*** Though acute toxicity from consuming aluminum is rare, young children with kidney failure or impaired kidney function are "very susceptible to aluminum toxicity." The authors report 2 cases of aluminum toxicity in infants fed soy-based infant formulas. They developed encephalopathy, inflammation, and injury of the brain. Both infants died. They were found to have high aluminum levels in the brain, although bone aluminum levels were normal.

The authors tested several infant formulas and found them to contain "high concentrations of aluminum." They recommend the use of aluminum-free infant formula in infants with reduced kidney function. They indicate that it is "unclear" whether aluminum in infant formula represents a health hazard for normal infants.

Note 1. In response to this article, Fisher and co-workers in England wrote in *The Lancet* of 6 May 1989: "One study attributed encephalopathy and fatal illness in two infants with severe congenital renal [kidney] failure to aluminum from this source [infant formula], although the validity of that conclusion is doubtful.

Note 2. *Webster's Dictionary* defines encephalopathy (a term first used in 1866) as "a disease of the brain; especially one involving alterations of brain structure."

Note 3. This is the earliest document seen that discusses aluminum toxicity in any soyfood product. It prompted considerable subsequent research on the subject. Address: 1-4. Div. of Pediatric Nephrology, Dep. of Pediatrics, Univ. of Miami, Miami, Florida; 5-6. Div. of Nephrology, Bone and Mineral Metabolism, Univ. of Kentucky, Lexington, KY.

4605. Bonapace, A. Augusto. 1985. Re: The tragic or irreversible effects of hunger in the world are due above all to lack of proteins. Letter to William Shurtleff at Soyfoods Center, Sept. 13. 1 p. Typed, with signature on letterhead. [Ita]
• ***Summary:*** "For a modest initial investment, any country afflicted by malnutrition can undertake the local production of Pre-Digested vegetable proteins. Obtained from the by-products of Oil Mills (the oil-less flours of oily seeds), the protein is partially hydrolized to render it completely edible, tasteless, readily and fully assimilated. These vegetable proteins, high in Lysine and other essential amino acids, are suitable for

"Human and Animal Consumption"

"in powder as a hydrolized protein nucleus, for subsequent mixing

"as a 33% concentrated liquid vegetable milk (UHT long-life in Tetrabrik) digestible even by individuals who cannot tolerate cow's milk.

As a result, all the natural milk produced in the country can be devoted exclusively to human consumption, while Calves (males too, which are often killed at birth because of the lack of milk and the inconvenience of feeding them with imported Milk Replacer) and Lambs are fed entirely on vegetable milk produced locally as if by

"An Inexhaustible Vegetable Cow." Address: Dr., President, Dott. Bonapace & C., P.O. Box 1840, 20100 Milano, Italy.. Phone: 316251.

4606. *Times of India* (*The*) (*Bombay*). 1985. City notes: Tri-Star Soya Products. Sept. 21. p. 10.
• ***Summary:*** Tri-Star will soon be entering the capital market with a public offering to help finance the expansion of its

processing capacity to 400 tonnes [metric tons] per day from the present 200 tonnes, with a corresponding increase in its refining capacity.

"The company also plans to invest about Rs. 2.5 crores every year for the next three years to create facilities for the manufacture of value added products such as soya food and pharmaceutical grade lecythene [sic, lecithin] from waste and full fat and no fat soya flour and soya dal."

The company is considering a proposal to make soya food and soya milk with a well known American company.

Note: This article mentions the HDFC or Housing Development Finance Corporation Limited (of India).

4607. Shenon, Philip. 1985. Agencies split in baby-formula case [involving Syntex Laboratories]. *New York Times.* Sept. 24. p. 28.

• ***Summary:*** "The Food and Drug Administration strongly recommended criminal prosecution of a company that manufactured defective infant formula, but the Justice Department decided not to file charges last year on the ground that evidence was lacking, according to internal Government documents...

"The company, Syntex Laboratories of Palo Alto, California, has acknowledged that two of its baby formulas, which were withdrawn from the market in 1979, did not contain enough of the essential nutrient chloride. It has settled nearly 200 lawsuits brought by parents who fed their children the formulas, but it says there is no evidence of long-term health problems resulting from use of the products...

"Richard K. Willard, who heads the [Justice] department's civil division, noted that the F.D.A. had not previously called the company's attention to the problem with its formulas and that at the time, Federal law did not require a specific amount of chloride in infant formula...

"Documents regarding the Syntex case were provided by Senator Howard M. Metzenbaum, the Ohio Democrat who was a chief sponsor of a 1980 bill that broadened regulation of infant formula. He had urged prosecution of Syntex...

"According to a Justice Department fact sheet, Syntex removed salt from infant formulas in 1978, apparently in response to reports that the amount of sodium in infant diets should be reduced...

"In explaining its decision, the Justice Department has noted that the F.D.A. and other agencies agreed that Syntex acted promptly and responsibly in its recall of the formulas, Neo-Mull-Soy and Cho-Free...

"Mr. Willard said in a memorandum last year that at least 247 infants using the two soy-based formulas had documented health problems, ranging 'from very minor illness to death.' Preliminary results of a study by the National Institutes of Health found that more than 20,000 infants had been exposed to the chloride-deficient formulas, which were sold in 1978 and 1979. After studying 21 of the children, the researchers said there were indications that the formulas had caused long-term developmental problems.

"According to Syntex, eight lawsuits against the company have gone to trial and three were ended in the company's favor. Others ended with Syntex ordered to pay damages of between $9,000 and $27 million. Syntex said it would appeal the $27 million award."

• ***Summary:*** Part I describes ADM's daily work. "ADM. Where the people who feed the world buy their groceries." Pages 8-9 note: "We unlock the protein inside the soybean." Contains color photos of many soy products including Protoveg Vegetable Goulash, and Betty Crocker Hamburger Helper (p. 1), Similac (p. 7), ProSobee, Rich's Coffee Rich, Betty Crocker Bac*O's, and Protoveg Sizzles (p. 9), Tofutti (p. 15).

Part II, an insert in the portfolio, is the annual report financial data (34 pages). Net sales and operating income: $4,738,767,000. Net earnings: 163,908,000. Total current assets: $1,367,826,000. Total current liabilities: $328,822,000. Address: Decatur, Illinois.

4609. *Cultivar.* 1985. Le soja en alimentation humaine [Soya in human nutrition]. No. 186. p. 77-78. Sept. [Fre]

• ***Summary:*** A brief introduction to tofu, soymilk, soy sauce, tempeh, miso, soy flour, soy protein isolates, and concentrates. Address: France.

4610. **Product Name:** [Aminolat (Soymilk with Pre-Digested Soya Protein from Defatted Soya Flour for Humans, or Animals)].
Manufacturer's Name: Dott. Bonapace & C.
Manufacturer's Address: P.O. Box 1840, 20100 Milano, Italy. Phone: 316251.
Date of Introduction: 1985. September.
New Product–Documentation: Milk replacers (Aminolat) and high-quality proteins from vegetable raw materials. 1985. 2 p. brochure. Aminolat liquid concentrate. 7 p. brochure. Soya Protein Hydrolysate (Patent: Prof. Orban). Animal food series and human food series. 4 p. brochure. In the human food series, Aminolat could be used for: 1. Vegetable milk powder with pre-digested soya protein. 2. Hyperproteic liquid vegetable milk in Tetra Brik 200-250 ml. 3. Instant hyperproteic vitamin vegetable milk powder (E.D.T. coated). 4. Milk and chocolate. 5. Nut flavored sweet cream spread (like Nutella). 6. Soya milk ice cream. 7. Soya protein yogurt. 8. High protein mozzarella cheese. 9. Hyperproteic smoked slices.

Note: The president of this company is Dr. A. Augusto Bonapace.

4611. Dott. Bonapace & C. 1985. Milk replacers (Aminolat) and high-quality proteins from vegetable raw materials (defatted flours of soya, cotton, sunflower, castor, etc.) (Leaflet). Milan, Italy. 1 p. [Eng]
• ***Summary:*** This company's process is based on hydrolysis of vegetable raw materials to create a milk for consumption by humans or calves. It is an instant milk powder with a higher protein content than cow's milk and good taste. "In most countries where milk production is insufficient, male calves of dairy cattle are usually killed after birth, while female calves are fed to a strict survival level, to save milk for human consumption.

"Just as an example, in Mexico we think about two million newborn male calves are killed every year; with a local production of Aminolat those animals could be fed up to a body weight of 500 kg, thus making available to the market something like 1 million tons/year of meat. In addition, Aminolat could represent a larger feed supply for female calves during their first very important months of life..."

A letter from the Secretary of Agriculture of the Central Government of Rio Grande do Sul, Brazil, describes results of a successful experiment in March-May 1979 (77 days) on the feeding of weaning calves on natural cow milk as well as on a soya -based milk substitute (Aminolat). Address: P.O. Box 1840, 20100 Milan, Italy.

4612. Dott. Bonapace & C. 1985. Soya protein hydrolysate (Patent: Professor Orban): Products that are ready* or under study in Italy and Brazil (Brochure). P.O. Box 1840, 20100 Milano, Italy. 4 p. [Eng]
• ***Summary:*** Animal food series: 1. Aminolat * Substitute milk for calves, lambs, piglets. In powder or 33% liquid concentrate. 2. Protein base * to be mixed with milk serum or milk powder for reconstitution, or with molasses, mineral salts, or mixed feeds. 3. Aminoplus (Protamina) * Protein derivatives mixture (soya and offal hydrolysates). 4. Race horses * Amino Complevit–Nutramix. 5. Dogs and fur animals * Puppy mix.

Human food series: 1. Aminolat–Vegetable milk powder with pre-digested soya protein. Refers also to Vegelact from Gallia; Nutrilact from Mellin, Milupa; Multilac from Dieterba. Aminolat could be used in the following applications: Hyperproteic liquid vegetable milk in Tetra Brik 200-250 ml. Instant hyperproteic vitamin vegetable milk powder (E.D.T. coated). Milk and chocolate, similar to Ovomaltina (cf. Diabetic Breakfast Chocolate Stella Lugano). Nut flavored sweet cream spread (like Nutella). Hyperproteic [high-protein] soya milk ice cream, soya protein yogurt, mozzarella cheese, and smoked slices. 2. Protein Base * Source of vegetable protein. 3. Hyperprotein emulsifier for sausages, meats, etc. (In Italy the law allows 30% soya protein, in Brazil, 50%). 4. Fabricated Foods (Fudex Plant), as for snacks, crackers, etc. 5. Textured products (Fudex plant). 6. Vegetable Protein Meat Substitutes. Incl. soy protein hydrolysate, soya protein plus beef blood, etc. Also: Tomato powder dressing. Broth cubes (like Soya Wurfel or Morga CH Soya Cubes). Instant broth powder in packets. Soups in packets. Powder meals–high protein diet. Individual meals in Tetrabrik (UHF). Address: Milan, Italy.

4613. Dott. Bonapace & C. 1985. Aminolat liquid concentrate. P.O. Box 1840, 20100 Milano, Italy. 8 p. [Eng]
• ***Summary:*** 1. Uses and benefits as a calf milk replacer. The product is 33% of dry matter; 3 kg = 1 kg of powdered milk. 2. Concentrated Aminolat Liquid (36% dry matter). For human consumption–Long-life UHT. Aminolat is made from defatted soya meal, which is then hydrolyzed (predigested). For this reason, "Aminolat is also superior to the current milk substitutes for pediatric use like Similac, Isomil, Prosobee, Mullsoy, Vegelact, etc. where the soya proteins are in the 'isolated and micronized' form, but still as whole proteins to be digested." Address: Milan, Italy.

4614. *FDA Consumer.* 1985. Warning on soy drinks. 19(7):34. Sept.
• ***Summary:*** "Edensoy and similar drinks should not be used as an infant formula or substitute for mother's milk or sole source of nutrition, FDA has warned. The warning came in June after the agency learned from a Canadian hospital physician of a 6-month-old infant who had rickets due to vitamin D deficiency, vision problems due to vitamin A deficiency, and general malnutrition. It was reported that the infant had been consuming Edensoy as the sole source of nourishment for five months after its mother experienced difficulty in breast feeding...

"A pamphlet and various advertisements and other promotional materials distributed by Eden Foods since 1983 have erroneously suggested that Edensoy may be used as a substitute for mother's milk or as a substitute for infant formula. The pamphlet also states that 'Edensoy compares very favorably with cow's milk.' This statement is false. Soy drink products such as Edensoy are nutritionally inferior to milk...

"FDA advised Eden Foods about the Canadian incident on June 14, and the firm has cooperated fully with the agency."

4615. Groom, Jon; Groom, Sarah. 1985. Bean Machine story. *Point Soja–Soyfoods.* Autumn. p. 8. [Eng; Fre]
• ***Summary:*** Jon and Zorah Groom started a business in 1982 making tofu, soysage, and Soyanaize (vegan mayonnaise) from their kitchen. They learned how to make tofu and soymilk while living in Eire [Ireland] with some people from Stephen Gaskin's Farm in Tennessee. With a co-op of 7 people (The Bean Machine Co-op Ltd.) they transformed an old car spares shop at Crymych into Wales' first soy dairy.

It began operation in January 1984. A new product was Tofu Pasties. They are now building a new plant in Cardigan. Address: Crymych, Wales.

4616. Mitz, Bea. 1985. The joy of soy. *Total Health* (*California*). Sept. p. 55-56.
• ***Summary:*** An overview that contains photos of products made by Legume (Tofu Stuffed Shells Provencale), Loma Linda (Ocean Fillets, Griddle Steaks), Worthington Foods (Tofu Topper), Eden Foods (Edensoy), plus Tofutti and Tofulite (made by Barricini).

4617. Patni, Manmath. 1985. Soybean–Present situation and future possibilities. *Poultry Guide* (*India*) 22(9):53-62, 85-90. Sept.
• ***Summary:*** This paper was presented at the Zonal Agricultural Research Station, College of Agriculture, Indore. Contents: Miraculous tiny seed. Source of vital goodness. World leader soybean. Processing of soybean. Effect of heat treatment on nutritive value / functionality. Basic protein food from soybean. Soya protein concentrate. Soy protein isolate. Texturized protein product. Whole soybean products: Soya milk, tofu, tempeh. Full fat soya flour. Miracle crop of many uses. Present situation and future possibilities.

"For over 5,000 years this tiny seed has been the staple food of certain parts of the East, including North China, Japan, Korea and some areas of India. The ancient Yogis, who were among the world's first vegetarians, placed great faith in the soya bean as a supplement to their meatless diet. In fact it became known as, and is still in the Far East referred to as, 'The Meat of the Soil.'"

Note: In a letter to William Shurtleff of Soyfoods Center dated 21 May 1997, M. Patni states that the source of his information about ancient yogis and soybeans was a book titled *About Soya Beans,* by G.J. Binding (1970, p. 10).

"Source of Vital Goodness: Soybean is not new to India. Black soybean has been cultivated for ages in the low hills of Kumaon and Garhwal regions of U.P. [Uttar Pradesh] as well as on the foot hills of the Himalayas and in some scattered pockets of central India. However, strangely enough the crop has not so far become popular in the Indian sub continent and other tropical countries."

The Soybean Processors' Association of India is opening a Research & Development cum-Training Center at Indore. Address: Product Development Manager, Prestige Group of Industries, Indore.

4618. Shurtleff, William; Aoyagi, Akiko. comps. 1985. Bibliography: Vitasoy. Lafayette, California: Soyfoods Center. 2 p. Unpublished. 28 cm. [34 ref]
• ***Summary:*** Consists of bibliographic records sorted alphabetically by author, printed on a dot-matrix printer. None of the records has a summary or abstract. Nor is there any index. Note: This was made as a gift for K.S. Lo of Vitasoy (Hong Kong). Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

• ***Summary:*** Consists of bibliographic records sorted alphabetically by author, printed on a dot-matrix printer. None of the records has a summary or abstract. Nor is there any index. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

4620. Tani, Tadato; Katsuki, T.; Kubo, M.; Arichi, S.; Kitagawa, I. 1985. Histochemistry. V. Soyasaponins in soybean. *Chemical and Pharmaceutical Bulletin* 33(9):3829-33. Sept. [12 ref]
• ***Summary:*** Using high-performance liquid chromatography, the authors conducted histochemical analysis to clarify the distribution of "soyasaponins, which are the bioactive constituents of the seeds" of the soybean. Soyasaponin I [later named Saponin A] was found to reside mainly in the plumule, hypocotyl, and radicle of the soybean seed. Note: Saponins, especially soyasaponin I, are responsible for the bitter taste of soymilk. Address: 1-4. The Research Inst. of Oriental Medicine, Kinki Univ.

4621. *Daily Leader* (*Stuttgart, Arkansas*). 1985. Far Eastern food market offers outlet for food-type soybeans. Oct. 2. p. 16C. Insert.
• ***Summary:*** Chris Hartz is manager of the Food Beans section of the Hartz Seed Company. He sells food-type soybeans in the USA and Far Eastern markets for use in making food products such as natto, tofu, bean sprouts, and soymilk. Hartz Seed Company has made a commitment to expanding its position in the soybean food markets and to taking a position as a leader in this field. A photo shows Chris Hartz, who is also involved in real estate.

4622. Steinkraus, Keith H. 1985. Re: Thanks for book. Update on his work. Letter to William Shurtleff at Soyfoods Center, Oct. 4. 1 p. Typed, with signature on letterhead. Address: Prof. of Microbiology, Dep. of Food Science & Technology, New York State Agric. Exp. Station, P.O. Box 462, Geneva, NY 14456-0462.

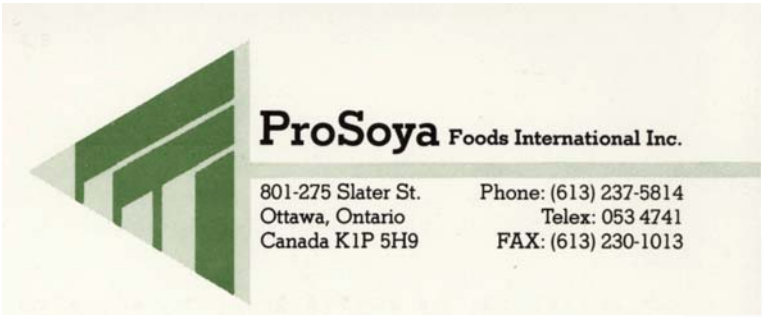
4623. Gupta, Rajendra ("Raj") P. 1985. Re: Plans to make small soymilk plants. Letter to William Shurtleff at Soyfoods Center, Oct. 7. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Thank you for your letter of 29 Sept. 1985.

"The only reason I sent you the soymilk samples, which were not really good, was for you to see if these had any beany flavor."

"I am grateful to you for your suggestions for improving

my article for soyfoods magazine, and for giving me the latter's new address.

"Our present plan is to make batch type soymilk plants and lease them to the interested tofu shops based on the equipment rental and production rental. These will most likely be $200 per month and $0.05 to $0.10 per litre, respectively, with nominal security deposit at the time of leasing. We do not intend to sell any equipment outright, for one cannot make much money selling the inexpensive equipment costing less than $10,000. The idea is to make enough money to make it available for fast expansion of soyfoods, especially in developing countries."



Note: The company's letterhead has been redesigned and now has a color logo (a dark green and light green arrow pointing to the left) which could be seen as a stylistic rendering of the letters "PFI." Address: Ph.D., Vice President, ProSoya Foods International Inc., 801-275 Slater St., Ottawa, ONT, K1P 5H9, Canada. Phone: 613-237-5814.

4624. Tepper, Robert. 1985. Soy Supreme and Oberg's spray dried tofu (Interview). *SoyaScan Notes.* Oct. 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The process uses whole soybeans to make a full-fiber soymilk. This can be either spray dried directly or made into calcium sulfate tofu, which is spray dried using large cheddar cheese spray driers. Paul Taylor is the active man. Mr. Oberg is not involved. Lou Osterbur in Quincy, Illinois is the sales and production manager. Address: Barricini Foods, Oyster Bay, New York.

4625. Pathak, B.K. 1985. Glaxo's interests in soybean products (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 11. 2 p. transcript.
Address: India.

4626. Gardiner, Doris Kloss. 1985. Jethro Kloss, his work with soyfoods (Interview). *SoyaScan Notes.* Oct. 21. Conducted by William Shurtleff of Soyfoods Center. Followed by letter of 17 Jan. 1986.
• ***Summary:*** Jethro Kloss definitely made commercial soy ice cream in chocolate and vanilla flavors. He made it himself and sold it in Washington, DC. "My aunt, Promise Kloss Moffett, recalls how he would put it in the ice chips and sawdust to keep it cold. They had a concession stand somewhere down on Pennsylvania Avenue near the White House. My uncle Eden recalls selling lunches there commercially to the public. They included soy ice cream, soy coffee, and sandwiches. He does not recall exactly when or for how long they sold these food products."

Jethro had so many interests that he didn't stick with one idea long enough to make it a real success. He was so creative and had so many ideas, but he was rather like a Gypsy.

"When I was about 9-12 years old I recall vividly that Jethro had a soybean bread baked commercially. It was his recipe. He used to send me to the bakery in Takoma Park, Maryland, to pick it up. The particular bread recipe is found on page 645 of *Back to Eden* and was made using soy bean milk instead of water. It is delicious!

"During the years 1939-1941, Jethro and his wife lived in the Butternut Apartments near Walter Reid Hospital, on the border between Washington, DC, and Takoma Park, Maryland. My grandmother (Jethro's wife) would sometimes go across the street to do 'special duty' nursing at Walter Reed. She died in 1944." Address: Back to Eden Books, P.O. Box 1439, Loma Linda, California 92354. Phone: (714) 796-9615.

• ***Summary:*** "Our firm, owner of the Doy-n-pak patent, supplies the machines designed for making and filling pouches." Address: Thimonnier machines d'emballage, 79 rue de Bourgogne, 69338 Lyon cedex 09, France. Phone: (7) 883.55.55.

4629. **Product Name:** Provamel Soya Drink [Carob, or Honey & Malt].
Manufacturer's Name: Alpro.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1985. October.
Wt/Vol., Packaging, Price: 250 ml, 500 ml, 1000 ml.
How Stored: Shelf stable; refrigerate after opening.

New Product–Documentation: CSP form filled out by Simon Bailey. 1988. Sept. 28. All made with organic soybeans. Adds honey & malt flavor. The importer in England is Vandemoortele (UK) Ltd., Ashley House, 86-94 High St., Hounslow, Middlesex TW3 1NH. Phone: 01-577 2727.

Form filled out by Philippe Vandemoortele of Alpro. 1991. Sept. 4. The carob and the honey & malt flavors were launched in Oct. 1985.

4630. Bayona, Luis. 1985. Cultura da soja [Cultivation of soya]. Maputo, Mozambique: Ministério da Agricultura. iv + 123 p. Illust. 21 cm. Divulgaçao Série–Agricultura No. 4. [18 ref. Por]
• ***Summary:*** Contents: Introduction. Overview: Origin and dissemination, taxonomy, morphology, phases in the development of soya. Cultural needs: Temperature, rain and its distribution, the effect of photoperiod, soils. The technology of soybean production. Diseases and pests. Harvest and storage. Production of soybean seeds. Importance of the soybean as a food for human consumption: How to resolve the problems of flavor, smell, and time of boiling or baking; soymilk, other forms of consuming soybeans (e.g. roasted or as flour). Address: Engenheiro Agrónomo, CEDASPE, INIA, Maputo, Mozambique.

4631. Coudert, Guy. 1985. Le soja dans l'alimentation [Soyfoods]. *Point Soja–Soyfoods.* Autumn. p. 7. [Fre; Eng]
• ***Summary:*** A brief introduction to soyfoods, traditional products (Asia), modern products (Occidental), markets. Concerning modern products: "Isolates are expanding the fastest. The pet food market would be the biggest market for vegetable proteins. This market will remain highly specialized, to the difference of the one for traditional products, because it will save the agribusiness industry in priority." Address: Director of Marketing, ONIDOL.

4632. *EMBRAPA-CNPSo Documentos* (*Centro Nacional de Pesquisa de Soja, Londrina, PR, Brazil*). 1985. A soja na alimentacao [The soybean as a food]. No. 14. 28 p. Oct. [Por]
• ***Summary:*** Contains 46 (mainly) Brazilian recipes including: Homemade soymilk. Homemade soy flour. Almondegas (meatballs / croquettes). Ambrosia with soymilk. Rice with soymilk. Soya beefsteak (2 types). Beefsteak hamburgers (*Bife Hamburgues*). Bolinho with soya meat. Fried soya bolinho. Bolinho for coffee. Address: [Brazil].

4633. **Product Name:** [Soymilk (Natural, and Vanilla)].
Foreign Name: Leche de Soya (Natural, Vanilla).
Manufacturer's Name: Empresas Soya-Soy.
Manufacturer's Address: Km. 4 Carretera Transpeninsular al Norte, La Paz, Baja California Sur, Mexico.
Date of Introduction: 1985. October.
Ingredients: Purified water, soybeans, sugar, vanilla.
Wt/Vol., Packaging, Price: 100 ml in pre-printed plastic bag.
How Stored: Refrigerated.
Nutrition: Per 100 ml: protein 3.6 gm, carbohydrates 13 gm, fat 1.81 gm, calcium 18.7 mg, total solids 5.83 gm, calories 83.
New Product–Documentation: Leaflet (2 panels each side, each panel: 22 x 13 cm, blue on white) sent by Fran Barnes. 1988. June. *Ya Esta Aqui. Leche de Soya. Soya-Soy, el alimento del futuro* [It's already here. Soymilk. Soya-Soy, the food of the future]. Drink it at your favorite store. With four recipes. On the front panel is a smiling young man wearing a sort of space helmet.

Letter from Fran. "Several year ago I wrote you that I was beginning a soymilk factory in Baja. There are many advantages to producing in Mexico and it was a good experience. Now we would like to sell ($8,000 for everything) or lease our tofu and soymilk factory. There is a good market in existence and a very potential future for soymilk here." Response from Fran to questions. 1988. Aug. 1. The soymilk was introduced in Oct. 1985 by Soya-Soy in

natural and vanilla flavors, and produced intermittently as a liquid. They made a maximum of 2,000 liters/month. They also made tofu but only about 15 kg/month, which they sold only to friends. "Ejo Takata has equipment at his acupuncture school but has not produced soymilk since the earthquake. A lot of information goes out now to the people from the Social Services Government Dept. on how to cook with soybeans and make foods."

Label. Received Aug. 1988. Green, blue and purple printed on 7 by 9 inch clear plastic bag. An illustration (line drawing) shows a soybean with a football helmet on throwing the world. "Keep refrigerated. Product of vegetable origin. Rich in protein, minerals and vitamins. Does not raise cholesterol."

4634. **Product Name:** Frostig (Non-Dairy Beverage) [Chocolate, Mountain Berry, Piña Colada, or Orange Juice].
Manufacturer's Name: Frostig Inc.
Manufacturer's Address: Incline Village, Nevada.
Date of Introduction: 1985. October.
Ingredients: Water, tofu, sucrose, corn sweetener, orange juice, pectin, natural flavors, citric acid, sodium citrate, annatto.
Wt/Vol., Packaging, Price: 32 fluid oz laminated milk-carton type container.
How Stored: Refrigerated.

4635. Latzke-Begemann, Ute; Walker, Judith. 1985. Soybean household utilization in South Western Nigeria. In: Proceedings of Tropical Soybean Workshop. 164 p. See p. 69-91. Held 30 Sept. to 4 Oct. 1985 at IITA, Ibadan, Nigeria. Unpublished manuscript. [1 ref]
• ***Summary:*** Contents: Introduction. Recipes: Preparation of soypaste. Ground soybean with ogi. Ground soybeans with rice. Tuwo with ground soybean paste. Sweet potato with ground soybeans. Pounded yam with ground soybeans. Vegetable soup with soybean paste. Soybeans with maize. Yam porridge. Soymilk. Akara. Moyin moyin. Iru or dadawa.

Contains many photos, especially of soyfoods preparation at the Kersey Children's Home at Ogbomosho. The recipes were developed at this Home, a situation which is recognisable to many low income African families, both rural and urban. The recipes use the simplest kitchen technologies.

Note: This is the earliest English-language document seen (Jan. 2012) that uses the word "dadawa" or the word "iru" to refer to dawa-dawa, a close relative of Japanese natto. Address: Socio-Economic Unit, Farming Systems Programs, IITA, Ibadan, Nigeria.

4636. *Point Soja–Soyfoods.* 1985. L'intérêt du Club de Dakar pour le soja [The Club of Dakar's interest in soybeans]. Autumn. p. 3. No. 3. [Fre; Eng]
• ***Summary:*** The Club of Dakar is a non-governmental organization, unique in the sense that it is composed of about 200 people from both inside and outside Africa. Their purpose is to develop efficient solutions in the fields of cooperation and development. Three years ago, when the Club got involved with the soybean and saw its real usefulness for African countries, it requested an overview of the situation. Two young Africans, M. Gomes and M. Toumbi, were asked to make the first survey of soybean cultivation in Africa and of information available regarding the development of soybeans in Africa. The main conclusions of the report are: Soya is not unknown in Africa, but it has undergone an uneven and discontinuous development. The only perspective that would allow the development and prosperity of Africa's soybean complex would be in cooperation with Europe. Also new soyfood products such as tofu, tempeh, and flavored soymilk must be tested in Africa. A great deal of work on soybean cultivation has been done by the IITA in Ibadan, Nigeria, and by various institutes in Senegal. For more information and to order publications on soy in Africa and on Biotechnics, contact The Club of Dakar, Administrative Secretary, 4 Avenue Hoche, 75008 Paris, France. Phone: 42-67-16-00.

4637. STS–Soya Technology Systems Ltd. 1985. STS–Soya Technology Systems Limited (Leaflet). 11 Dhoby Ghaut #11-06, Cathay Building, Singapore 0922. 2 panels each side. Each panel: 30 x 21 cm. Oct. Manufacturer's catalog.
• ***Summary:*** A glossy color leaflet. The green, gold and white cover has the STS symbol on the cover. Contents: Who are STS? Who do STS do? Why a turnkey project? The DDS Group. STS Services. Soymilk Processing (steps in process). Merits of soymilk (Highly nutritious, inexpensive, can provide food self-sufficiency, lactose free and highly digestible, non-allergenic, healthful, versatile. "Add it all together–Soymilk makes sense!"). Shows model of plant. STS was incorporated in 1982. A Chinese-language edition of this was also published in Oct. 1985.

4638. Sugarman, Carole. 1985. Selling what comes naturally: From whole grains to tofu mayonnaise, health foods have hit the mainstream. *Washington Post.* Nov. 3. p. K1-K2.
• ***Summary:*** Mentions: Westbrae, Fantastic Foods, Second Generation Tofu Products. Address: Washington, DC.

4639. *Times* (*Carmi, Illinois*). 1985. Search for more soybean uses. Nov. 5.

4640. Golden Proteins Limited. 1985. Display ad: High yielding soya oil production and deep sea fishery. *Times of India* (*The*) (*Bombay*). Nov. 9. p. 17.
• ***Summary:*** "New project: Soya. And now, from strength to greater strength, Golden Proteins diversifies into the high profit Soya field–with 100 tonnes per day capacity soya solvent extraction plant at Sahibabad, Dist. Ghaziabad,

Uttar Pradesh. Besides producing refined soyabean oil, the Company plans to process soya milk, curd, cheese, soyameal into soya flour, protein concentrates and isolates, and texturised vegetable products.

A bar chart shows that the Company's sales grew from Rs. 21 lacs in 1982 to Rs. 136 lacs in 1984. Address: Registered office: C-2 Vasant Vihar, Main Market, New Delhi 110057, India.

4641. Kloss, Eden P. 1985. Re: Jethro and Eden Kloss selling soy products in Washington, D.C., in about 1930. Letter to William Shurtleff at Soyfoods Center, Nov. 15. 1 p. Typed, without signature.
• ***Summary:*** "I remember helping my father, Jethro Kloss, prepare quick lunches which we sold to passersby on Pennsylvania Avenue, near the White House. We had a space allotted to us where we parked our small trailer equipped to serve the people, and when the workers poured out of the government buildings at noon, many would stop and buy our lunches.

"Some things had to be prepared before, of course, like the ice cream, which was quite a process, for we made the soy cream directly from the raw soybeans. They were soaked (over night), then parboiled, cooked about two and a half hours, ground in a mill, put into sugar bags, and the cream squeezed out with water. This rich soy milk was then used to make the ice cream. I don't recall the exact recipe (any more), but I remember he used egg whites in those days (later he used agar-agar) with honey for sweetening, and made the ice cream in strawberry, chocolate and vanilla flavors. We froze it with a hand-powered freezer and put the ice cream in metal containers and packed them in ice with salt to take in the trailer.

"We made sandwiches with various nut meats, lettuce and sliced tomatoes. We also served soybean coffee kept hot with a gas hot plate we had in the trailer. Our soy cream for the coffee was kept sweet on ice." Address: c/o Promise Joy Kloss Moffett, Route 1–Box 194, Hagerstown, Maryland 21740. Phone: (301) 739-1546.

4642. *Times of India* (*The*) (*Bombay*). 1985. Company news: Golden Proteins for public issue. Nov. 25. p. 13.
• ***Summary:*** "Golden Proteins, an export-oriented dividend paying company, will enter the capital market on December 14, with a public issue of 7.50 lakh equity shares of Rs. 10 each at par." Since 1982 the company has been in the business of deep sea fishing and exporting the creatures it catches, freshly frozen, to South East Asia.

Future plans include the manufacture of texturised protein foods, plus soya milk, curds, and cheese.

4643. Golden Proteins Limited. 1985. Display ad: Extracting big profits from little soyabeans–netting high returns from deep sea fishery. *Times of India* (*The*) (*Bombay*). Nov. 26. p. 10.
• ***Summary:*** Note: This ad, which is quite similar (except in its title) to the one that appeared in this newspaper on Nov. 9 (p. 17), repeats a clearer version of a statement printed in the former ad: "Besides producing refined soyabean oil, the Company plans to process soyameal into soya flour, soya milk, curd [tofu], cheese flour, protein concentrates and isolates, and texturised vegetable products." Address: Registered office: C-2 Vasant Vihar, Main Market, New Delhi 110057, India.

4644. Wenzel, John S. 1985. Re: Work with soy at Griffith Laboratories Ltd. in Canada and developing countries. Letter to William Shurtleff at Soyfoods Center, Nov. 22–in reply to inquiry of Nov. 12. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "You ask about my work with soya in Canada. Most of the work before retirement in 1982 from the Griffith Laboratories Ltd concerned: (1) Manufacture of textured soy protein and allied texturized products using soy and other protein materials; e.g. peas, meat, etc. (2) Investigation and manufacture of other products; e.g. soya concentrate, soya milk, spray dried full fat soya flour.

"Since July 1982 I have had a variety of consulting jobs with the Canadian International Development Agency and the Canadian Executive Service Organization on: (1) utilization of soybeans in Sri Lanka to make T.S.P. [textured soy protein] and full fat soya flour. (2) development of a T.S.P. industry in Thailand. (3) manufacture of soya milk in Sri Lanka."

"Over the years I have been interested in the utilization of soya in developing countries more from the standpoint of industrial processing... but more on smaller scale processing which is where some of the countries must start.

"I do hope that our paths will cross in the future." Address: J. Wenzel Food Technology Associates Inc., 14 MacDonnell St., Kingston, Ontario K7L 4B6, Canada. Phone: (613) 546-6826.

4645. Ahmadu Bello University, Agricultural Extension and Research Liaison Services. 1985. Soyabeans in the Nigerian diet. *Ahmadu Bello University, Extension Bulletin.* No. 21. 74 p. Nov. Home Economics Series No. 1. [64 ref]
• ***Summary:*** See the original 1977 edition. Address: Agricultural Extension and Research Liaison Services, Ahmadu Bello Univ., P.M.B. 1044, Samaru-Zaria, North Nigeria.

4646. Bennett, Gordon; Snyder, Steve. 1985. Soymilk standards: First draft. Emeryville, California. 11 p. Nov. Unpublished manuscript. 28 cm.
• ***Summary:*** Contents: Purpose of standards. General definition of soymilk: History, terminology, types of soymilk. Plain soymilk (traditional and new type): Ingredients, manufacturing process, varieties and nomenclature according

to consistency, varieties and nomenclature according to method of growing soybeans (organic soymilk), varieties and nomenclature according to protein ingredients (soybeans, isolated soy proteins, etc.), varieties and nomenclature according to fat content, soymilk with (dietary) fiber, pasteurized soymilk.

Dairy-like soymilk (traditional and new type): Note: Each of the following have all or many of the same subcategory headings as for Plain Soymilk. Dairy-equivalent soymilk (traditional and new type). Infant formula soymilk. Blended soy beverages. Flavored soy beverage.

Labeling and advertising of soymilk: General, statement of identity, ingredient labeling, use date labeling, refrigeration information labeling, bulk products, substantiation of advertising claims. Microbiological guidelines for soymilk. Endorsement: "Seal of Soymilk Integrity." Soymilk Standards Committee: Adoption and amendment of standards.

Gordon Bennett took the lead in creating an Ad Hoc Soymilk Group and in compiling these standards, which were based on and modeled after the tofu standards developed during the previous year. Bill Shurtleff of Soyfoods Center, who compiled the tofu standards and served as a consultant for these standards, is listed on the front page as a "Source." Address: 1. Westbrae Natural Foods, Emeryville, California; 2. Vitasoy (USA) Inc., San Francisco, California: Both: Ad Hoc Soymilk Group.

4647. Horlings, George; Martens, Ron. 1985. Soybeans in Bangladesh: A background report. Dhaka [Dacca], Bangladesh: Mennonite Central Committee. 65 p. Nov. [36 ref]

• ***Summary:*** Contents: Introduction: Agronomic, nutrition, soybean in Bangladesh. Existing situation: Area and production, yields, soybean varieties, agronomic details, competing crop survey, soybean in India. Soybean utilization: Soybeans as a pulse, ramgati cooking demonstration evaluation, oil expelling, soymilk, soya biscuits, chanachur, suggestions from BCSIR, other soybean foods, soybean oil, soymeal. Marketing system and prices. Soybean programs: Bangladesh Coordinated Soybean Research Project (BCSRP), Bangladesh Agriculture University (BAU), Bangladesh Agriculture Research Institute (BARI), Bangladesh Agriculture Development Cooperation (BADC), Bangladesh Council of Scientific and Industrial Research (BCSIR), Directorate of Agricultural Extension (DAE), other organizations in Bangladesh, International Soybean Program (INTSOY), Asian Vegetable Research and Development Centre (AVRDC), International Institute of Tropical Agriculture (IITA), Food and Agriculture Organization (FAO). Seed production and storage: Seed multiplication, seed storage. Constraints: Market and demand, land competition, research & development, seed availability, inoculant availability and use, extension services. Conclusion. Appendices: Unreleased soybean varieties tested by MCC, soybean cultivation guide, cultivation guide for soybean in West Bengal, soybean recipes, objectives of the BCSIR, integrated oilseed research project (soybean breeding).

"Soybeans were first introduced into Bangladesh in 1942. In 1960-61 varietal screening resulted in the selection of S3, Pelican and Barmeli for the *kharif* season. These varieties were later found to be susceptible to yellow mosaic virus.

"In 1972-73 MCC began with research and extension work on soybeans, primarily as a *rabi* season crop. The Bangladesh Coordinated Soybean Research Project (BCSRP) was established in 1975. This project involved Bangladesh Agriculture Research Institute (BARI), Bangladesh Agricultural University (BAU), Bangladesh Council of Scientific and Industrial Research (BCSIR), several other government institutions, and Shilpee Food Products, as well as the Mennonite Central Committee (MCC). In 1981 the BCSRP was discontinued. The two main problems were felt to be: difficulty in producing high quality seed and the lack of a solvent oil extractor.

"MCC has continued with soybean research and extension work, believing these problems can be overcome or other solutions found. BAU is continuing with work on soybeans in its Integrated Oilseeds Research Project (IORP). BCSIR continues to work on soyfoods and the Bangladesh Sugar and Food Industries Corporation (BSFIC) produces some soybeans on its farms. Other institutions and organizations are still involved to varying degrees." Address: 1. Agronomist; 2. Food Technologist, Mennonite Central Committee, Dhaka, Bangladesh.

4648. **Product Name:** [PHAG Soya Dessert (Chocolate, Vanilla, Strawberry)].
Foreign Name: PHAG Soja Dessert (Choco, Vanille, Fraise).
Manufacturer's Name: PHAG Sàrl (Produits Hygièniques Alimentaires Gland) (Marketer-Distributor). Made in Belgium by Alpro.
Manufacturer's Address: La Ligniere, CH-1196 Gland, Switzerland. Phone: 022/64 11 18.
Date of Introduction: 1985. November.
Ingredients: Chocolate: Water, cane sugar, soybeans, defatted cocoa, modified starch, fructose, thickener, natural aroma (vanilla), sea salt.
Wt/Vol., Packaging, Price: 500 gm Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Chocolate: Per 100 gm.: Protein 3.5 gm, fat 1.7 gm, carbohydrate 13.0 gm, calories (kcal) 77 (325 kJoules).
New Product–Documentation: Letter from Remy Mayer of PHAG. 1990. Oct. 2. This product was introduced in Nov. 1985. His company distributes the product, which is made by

their sister company DE-VAU-GE in Lueneburg, Germany. The strawberry flavor is no longer sold.

Labels sent by Mayer. 1991. Jan. 24. 500 gm Tetra Brik Aseptic cartons. Chocolate: Dark brown, tan, red, and green on white. "Pure and made from plants. Ready to use. It can also be used as a pastry filling. 100% from plants. Contains no coloring agents."

4649. Saio, Kyoko. 1985. [Tofu processing characteristics of Japanese domestic soybeans: Technical report]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 47. p. 128-49. Nov. [6 ref. Jap; eng]
• ***Summary:*** This technical report is by "Kyoko Saio and the Research Group of Tofu." Japanese domestic soybeans were found to be superior for making both regular and packaged tofu due to the whitish color of the tofu and soymilk they produced, and to the quality of the finished tofu. Address: 1. National Food Research Inst. (Shokuhin Sogo Kenkyujo), Ministry of Agriculture, Forestry and Fisheries, Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan.

4650. Praskin, Laurie Sythe. 1985. The Farm soy history: An overview. Part I. Los Gatos, California. 10 p. Dec. 1. Unpublished manuscript. [Eng]
• ***Summary:*** "In 1971, a unique group of people settled in the Tennessee backwoods to live an alternative lifestyle, committed to living collectively off the land. The community of 200 people came to be known as The Farm and over the years grew to 1,500 residents, gaining international and domestic fame for its community ideals, lifestyle, alternative technologies, [midwifery], and vegetarian diet based on soybeans. Soy technologies practiced and developed on The Farm became the seed for many tofu and tempeh shops that sprang up around the world in the years that followed. Community members started the first [sic, sixth] commercial soy ice cream company, and the first soy 'deli.' Some went on to start several of the major tempeh shops across the United States and Canada and others helped start a network on international soy programs in underdeveloped countries. Innovative recipes developed by Farm members led to the publication of three cookbooks which have made a large contribution to the growing acceptance of soybeans and tofu in the American diet.

"When The Farm was first settled in 1971, most of the people were already vegetarians. There were a variety of reasons for their personal choices: (1) an unwillingness to kill in order to live (feelings which stemmed from religious beliefs similar to the Buddhist religion, as well as pacifist attitudes deepened during the Vietnam War); (2) a growing awareness that meat was too costly to produce and that if more people at lower on the food chain there would ultimately be more food to go around in the world; (3) evidence of the healthful benefits of a vegetarian diet; (4) a belief that the dairy industry practiced cruel and exploitive methods on animals and a reluctance to support that system.

After the community was established, the entire membership decided to adhere to a complete vegetarian [vegan] diet devoid of all animal products, including eggs and dairy. They wanted to create a self-sufficient community, eating primarily what they grew on the land. They also wanted to be an example of how people could eat foods lower on the food chain to help create a larger supply of food in the world. During the search for a nutritionally sound vegetarian diet, they settled on soybeans as the main form of vegetable protein, as soybeans have one of the highest and most complete protein contents and are more versatile than any other vegetable protein. Many of the members had already been eating tofu and other soy products before The Farm, but acquiring these foods in the middle of the Tennessee woods was not an easy job. Soybeans were readily available, as they were used as local cattle food, but the challenge was how to create healthy and appetizing foods from them. Besides the Asian population and some Seventh-day Adventists, there weren't many people in the U.S. at the time actually eating soybeans, let alone trying to use them as the main source of protein.

"There were not many physical resources available as the people arrived with few possessions, lived in buses and tents, and had little capital to work with (a typical Third World situation). Some people owned Corona hand mills and occasionally ground soybeans to make fresh milk or tofu, using the recipe in the Seventh Day Adventist's Ten Talents cookbook. Fearn Instant Soya Powder was purchased and used for making soymilk, tofu, yogurt, and 'soy butter.' Just a few families owned pressure cookers so people cooked large communal pots of soybeans, taking turns 'watching the pot,' since they boiled them for 16 to 20 hours, to be sure they were digestible.

"By 1972 the Farm had its own flour mill that ground soybeans into full-fat soy flour and soy grits. The community was then able to make fresher soymilk, and tofu, as well as add soy flour to baked goods for added protein. They developed a curded soy flour base that was spiced and used as a sandwich spread, and they also baked soy flour 'souffle.'

"During these early days while the diet was still being worked out, the young children were given eggs for their protein source. Margaret Nofziger, the Farm's dietician, wanted to provide the babies and young children with a soy formula as a weaning food. She asked Alexander Lyon, a Farm member with a Ph.D. in microbiology, to research how the community could make the formula. He began an extensive research both in libraries and through correspondence. Fortunately, there were studies available about the uses of soy for human food consumption. Alexander, (Dr. Lyon) contacted Dr. Hesseltine and Dr. Wang of the Northern Regional Research Center in Peoria, Illinois, and Dr. Steinkraus of Cornell University in New York. These researchers provided a treasure of information to Dr. Lyon

and to the soy technicians that followed. Other scientists who should be credited for their early and helpful research are Dr. Harry Miller with Loma Linda Foods and Malcolm Bourne with Cornell University.

"All of the information gathered by Dr. Lyon led to the start of the Farm Soy Dairy in 1972. After learning the basic processes involved in soy milk preparation, Alexander began collecting used equipment that could be adapted for the use of making soymilk. The original soy dairy was very small, with a production capacity of 20 gallons of soymilk a day, and expanded over the years as the soy technicians were able to find and add new equipment to their dairy. This dairy became a cross between a Japanese tofu shop and American ingenuity. The Farm Soy Dairy had no capital to start operations and no investors beside the Farm itself. Cash was hard to come by and as with all other commodities on the Farm, the products were distributed freely to community members. For these reasons, the soy technicians had to be creative and imaginative in how they obtained equipment and how they adapted such equipment to their needs. Over the years, they went to auctions, scrap metal yards and used restaurant equipment houses. They bought, bartered and traded for their equipment. They designed their own systems in their welding shop and then re-designed them to make improvements and to increase production. They became a school, learning as they went along. In 1975, Laurie Sythe Praskin, one of the early workers in soy dairy, succeeded Dr. Lyon in managing the operation. Over the next 4 years, with David Handel and Michael Halpin as equipment developers, weekly production increased to 800 gallons of soymilk, 600 lbs. of tofu, 80 gallons of soy yogurt, and a varied amount of soy ice cream." Continued. Address: 17969 Oak Dr., Los Gatos, California 95030.

4651. Praskin, Laurie Sythe. 1985. The Farm soy history: An overview. Document part II. Los Gatos, California. 10 p. Dec. 1. Unpublished manuscript. [Eng]

• ***Summary:*** Continued: In 1975, Farm members started a company to promote the use of soybean products in the America diet. The company, named simply Farm Foods [Farm Food Company], began sales on the East Coast with full-fat soy flour (ground fresh on The Farm), TVP (texturized vegetable protein), Good Tasting Nutritional Yeast, split soybeans, and Tempeh Starter Kits (developed by Cynthia Bates and Dr. Lyon). In 1976, under the management of Leticia Coate and Robert Tepper, Farm Foods began participating in national health food trade shows. At the time, they were one of the only companies representing soyfoods. Along with their packaged products, they sold cookbooks and served free samples of tempeh, TVP chili, and nutritional yeast crackers.

"The products and recipes developed over the years led to the publication of three cookbooks: *The Farm Vegetarian Cookbook* (1975) and *Tofu Cookery* (Oct. 1982), edited by Louise Hagler, and *Tempeh Cookery* (March 1984), edited by Colleen Pride. These books made a major contribution in westernizing recipes previously Oriental in origin. They were available in all natural food stores throughout the country.

"The work with soy products on The Farm also inspired members to start two vegetarian restaurants; the Farm Foods Cafe [opened Aug. 1976], in San Rafael, California, managed by Robert Dolgin, was the first "soy deli" in the United States. Everybody's, located in Nashville, Tennessee [opened July 1980], was managed by Judd and Diane Hoffman.

"The acceptance by the public of Farm Foods Cafe was overwhelming, and although it only operated from 1976 to 1977, it pioneered the path for many tofu delis that have followed since. The unique characteristic of this deli was the tofu and tempeh shop producing fresh products located in the rear of the store. The Farm Foods Cafe also became the first [sic] company to market a non-dairy ice cream made from soybeans. This frozen dessert, marketed under the name of 'Farm Foods Ice Bean,' is still being sold in health food stores nationwide.

"In 1977-78, The Farm Foods Cafe closed, and the soy processing equipment was moved to San Francisco. Farm Food Company began wholesaling soy products throughout California under the management of Robert Tepper. They continued marketing Farm Foods Ice Bean, and added tofu salad [like eggless egg salad], 'tofu cheesecake,' a frozen soy yogurt dessert, and the first firm-pressed tofu to hit the California market. In 1980 it was decided to drop the perishable tofu business and concentrate on the nationwide distribution of Farm Foods Ice Bean. The plant in San Francisco was closed, and large scale production began in a Memphis, Tennessee, dairy and ice cream factory. This new location gave the company easier access to East Coast distributors, and they soon established additional warehouses in Connecticut and California.

By 1984, under the management of Ron Maxin and Michael Lee, the weekly production of The Farm Soy Dairy [in Summertown, Tennessee] was 1,000 lb of tofu, 150 gallons of soymilk, 20 gallons of soy yogurt, 20 gallons of soy ice cream, 400 ice cream sandwiches, and 90 lb of tempeh. Today, the Soy Dairy produces an average of 5,000 gallons of soymilk a month for Farm Foods to use in Ice Bean production. The soymilk is shipped by tanker truck to the Ice Bean production plant [in Memphis], and the Farm Soy Dairy also markets its products in Nashville and Columbia, Tennessee.

"The Farm's uniquely controlled vegetarian diet led to two official studies of its effect on the children. In 1979, Dr. Jeffrey Hergenrather, et al., conducted a study on the pesticide levels in the breast milk of vegetarian nursing mothers on the Farm. He submitted a letter of his findings to the editor of the *New England Journal of Medicine,* March 26, 1981. His letter challenged a previous article written by

Rogan, et al, (New England Journal of Med. 1980) which stated that 'there are no obvious dietary predictors' of chemical pollutant in human milk. Rogan went on to say 'For certain fat-soluble chemicals, nursing infants can be regarded as living at the top of the food chain and are exposed to much more than background levels.' Dr. Hergenrather's study included 12 women whose breast milk was analyzed for 17 chemical substances. When compared to the seven contaminants studied by Rogan, in all but one of the contaminants, which showed no difference in contaminant levels, the milk of the vegetarian women had lower levels of contamination.

"The second study was conducted by Jean Roberts Fulton in 1980 and was published in the *Journal of the American Dietetic Association.* She studied a group of the Farm nursery school children and found their amino acid and iron intake to be adequate. (The diet was low on calories, however.)

"The innovative methods used by the Farm soy technologists inspired many groups and individuals to start all over the world to train in the Farm Soy Dairy, and many who couldn't come personally were encouraged through correspondence. In 1977, Plenty, the non profit relief organization founded by the Farm, established an international training program whereby people from other countries could come and train in soybean processes and other technologies that The Farm had to offer. The Farm Soy Dairy received its first trainees from Guatemala and Mozambique.

"From the beginning days of the Farm Soy Dairy, the technicians realized the value that soybeans could have in Third World countries. Eventually they were able to share their knowledge and training in the field of soybeans by starting a dairy in an impoverished country. In 1979, Plenty Canada and Plenty USA sent Farm Soy Dairy technicians Laurie Sythe Praskin, Suzy Viavant and Richard Decker to Guatemala to help establish Plenty's first international soy dairy/tofu shop. Other technicians who trained on the Farm have gone on to help start soy programs with Plenty Canada in Lesotho (in Southern Africa, 1979-present), Jamaica (1983-present), St. Lucia (1983-present), and Dominica (1984-present).

"Many of the people who lived on The Farm and trained in the Soy Dairy or with Farm Foods have started their own soy companies or are working in underdeveloped countries. The common goal felt by all has been to provide healthful, delicious foods for all people, rich and poor alike. Because soybean products can be presented as gourmet dishes, yet can also be prepared very simply, they continue to be accepted by all classes of people." Continued. Address: 17969 Oak Dr., Los Gatos, California 95030.

4652. Praskin, Laurie Sythe. 1985. The Farm soy history: An overview. Document part III. Los Gatos, California. 10 p. Dec. 1. Unpublished manuscript. [Eng]

• ***Summary:*** "The Farm soy dairy was started in 1972. The original equipment consisted of a 15 gallon electric coffee pot to cook the [soy] milk, a washing machine [whose spin cycle was used] to extract the milk from the okara, and a peanut grinder to grind the dry soybeans into fine grits. The dry soy grits were added to the boiling water, cooked, and then poured into a bag that was placed in the washing machine. As the washing machine spun, the milk was extracted by the bag by centrifugal force. The soymilk was distributed immediately in glass gallon jars, as there was no refrigeration system available. The capacity of this operation was around 20 gallons a day at this time, the soy dairy was located in the sorghum mill, a split-level, cement block building with concrete floors.

"In 1973, a Farm member's parents donated some used dairy equipment that they had used on their goat farm. The soy dairy made its first technological leap. Included in the equipment was a 45 gal. electric pasteurizer/cooker, a drip system plate cooler, and a 90 gal. refrigerated milk tank. The washing machine was too inefficient and unsanitary, and a simple hand-lever press was constructed, modeled after a Japanese-style press observed by Lesli Jordan in 1973. Lesli apprenticed for one week in a small Stockton Tofu company where she compiled information on procedures for making tofu and age pouches and also took photographs. When she returned to the Farm, her husband Darryl built the soy dairy's first tofu box. The new presses were made from two galvanized wash tubs with holes on the bottom. These were placed on a strong wooden stand and lined with a light cotton cloth bag. Wooden racks were placed on the bottom to keep the bag of the hole, allowing the milk to flow from the tubs freely. The milk was pumped into the bags from the cooker. The filtered milk flowed into buckets, which were then carried and poured into the small holding tank of the plate cooler. The slightly cooled milk was then carried by bucket to the refrigerated milk tank, where it was cooled to 30 degrees Fahrenheit and stored until delivery to the store. The milk was transported in 10 gal stainless steel milk cans to the store where it was distributed. The okara in the bags was pressed to extract all of the milk using a lever system come-along. At this time, the beans were being ground into dry grits at the Farm Flour mill. The capacity of the soy dairy was now 90 gallons of soymeal [not defatted] a day. Occasionally, large blocks of sour milk cheese were made, and 12 to 16 gallons of acidophilus yogurt were made daily. The yogurt was made in one gallon glass jars, incubated in an old refrigerator, and stored in a conventional refrigerator. Tempeh was also being experimented with, using the okara left over from soymilk production. Soy ice cream was being made on a very small scale, using two table top ice cream machines with one quart capacity. Alexander Lyon was still managing the soy dairy. By this time, the Farm was no longer producing sorghum, and the soy dairy had taken over

two levels of the three level building. Only cold water was available, so pots of water were carried to the second floor, where they were heated on a stove to be used for cleanup. During the cold winters, a pot belly stove was added to the array of equipment and centered right in the middle of the production room.

"Early in 1975, Alexander left the soy dairy and Laurie Sythe Praskin took over managing production. David Handel and Warren Jefferson stepped in as full-time equipment men to help improve the operation and increase production. Laurie began doing research on how to improve the flavor of the milk, which was very cereal-tasting because of the dry grits. She and David added an industrial Hobart meat grinder to the system and began soaking their beans and grinding them fresh each day. The beans were initially soaked in a bath tub and later in one of the copper lined sorghum tubs. The tub was placed on the second level, so the beans could gravity feed into the grinder. The flavor was greatly improved, but the grinding was very slow and the grind was not very fine.

"They began working on new ideas for a press that could omit the bag and muscle needed to press with the come-along. David devised a system using an upside-down bumper jack mounted over a stainless tank. Inside the tank was a stainless cylinder with holes drilled in the bottom and sides. The milk was pumped or bucketed into the inner cylinder and flowed out the holes when vibrated. The cylinder was vibrated with a rubber mallet. A stainless press plate was placed on top and jacked down to press out all the milk. This system was slow and the okara had to be shoveled out after each batch.

"In late 1975, it was decided to move the soy dairy to The Farm's cannery building so that it would be in a more central location to the Farm's growing population and to make use of the steam boiler that was located there. Even though it had a wooden floor, it was a great improvement for the dairies production. They immediately added some steam jacketed cooking kettles acquired from a scrap yard and production capacity doubled to 150 gallons of soymilk a day. The slow points of operation were now the grinding, separation of milk and okara and cooling of the milk. They began hot blanching the soy beans before grinding for improved flavor. A 150 gallon refrigerated milk tank was added to handle the increase in milk production. While looking for an improved separating system, one that could be continuous, David and Laurie started eyeing some equipment that had been scrapped by one of the Farm's crews. The equipment came from an old evaporated milk plant and included a vibrating separator and a tubular heat exchanger. The separator was converted for the use of the wet soymilk separation. A stainless frame was built to fit in the vibrator with a cloth secured around it. The milk was bucketed and later pumped over the screen while the vibrator was on. The milk flowed through the screen and out the end into a holding tank. The pulp was sprayed with a little water to wash out the milk and the pulp was deposited into buckets. The tubular heat exchanger was converted to be used as a pre-cooler. Cold tap water was run through jacket that surrounded inner stainless tubing that the milk was pumped through. A wet corn masa mill was made by Michael Halpin to be used to grind corn for tortillas and to grind the soybeans for the dairy. Now the grinding time was no problem and production increased to 200 gallons of milk a day. Tofu was still not being made on a community scale as the milk came out of the separator too cold to curd properly. Laurie was also making thirty to forty gallons of yogurt a week." Address: 17969 Oak Dr., Los Gatos, California 95030.

4653. Praskin, Laurie Sythe. 1985. The Farm soy history: An overview. Document part IV. Los Gatos, California. 10 p. Dec. 1. Unpublished manuscript. [Eng]
• ***Summary:*** Continued: "In 1977, Laurie visited her home town in California. She went to visit her favorite Japanese tofu shop and ran into Bill Shurtleff and Akiko Aoyagi outside the closed shop. They were delivering a copy of their *Book of Tofu* to the owner and tofu maker of the shop. Bill took Laurie to the tofu makers' home and helped arrange for Laurie to observe in his shop for one day. Upon returning to the Farm, Laurie immediately set up the Farm's first tofu shop in a small corner of the soy dairy. She set up a very simple shop using one of their cooking kettles and designating it for cooking milk only for tofu. A wash tub was mounted on a stand with a simple lever for pressing out the milk. The tub was lined with a coarsely-woven bag, and a sawed-off whiskey barrel was placed underneath to catch the milk. A finer nylon cloth was stretched over the top to strain out the finer pulp [okara]. Hot milk was bucketed into the press, the bag twisted shut, and a heavy wooden press plate placed on top. The original wooden tofu box was finally in use as well as two additional round stainless boxes made by Michael Lovett. The tofu was pressed with cement blocks or buckets of water. Tofu was made in the whiskey barrel and a 20 gal [gallon] aluminum Hobart bread bowl. The tofu shop's capacity was 200 lb of tofu on a production day. In total, about 600 lb/wk in addition to 800 to 1000 gal/wk of soymilk. Most of the tofu went to people with special dietary needs.

"It seemed very energy inefficient to run a separate tofu and soymilk operation, so technicians started designing a separator that could service both operations. Michael Halpin, one of the Farm's equipment technicians, designed a hydraulic press which cost less than $1500 to build. This was the first large amount of money spent by the dairy for equipment. The inspiration for the money came from the delicious tofu produced in the small shop. Once everyone realized how good it was, the decision to invest community money for improved nutrition followed. The idea of the press was good, but all of the bugs were never worked out.

It was supposed to require no bag. The milk was pumped into a stainless cylinder that was drilled with holes and set inside another stainless holding tank. Then with press plate and gasket, the hydraulic ram came down from above, squeezing out the milk. When pressed, there was a trap door at the bottom that was opened, and the pulp pressed right out into a container. The trap door shut, and the press was ready for another batch. The system was supposed to work easily and efficiently. It never did. Gasket failures were a problem, spewing hot soymilk and pulp all over the dairy. In addition, the trap door never worked easily. In an expedient measure to get the dairy back in operation, Laurie removed the cylinder and replaced it with a Japanese pressing sack. The hot soymilk and pulp pumped into the bag which was set down in the stainless holding tank. There was a stainless rack on the bottom to keep the bag off the hole and a stainless plate was set on top of the bag after it was filled. The hydraulic ram came down and pressed the bag. This worked all right, but the bag had to be lifted out by hand, and the position was very awkward and left many sore backs. The milk went directly into a curding barrel or was pumped through the tubular heat exchanger. The capacity jumped to 300 gal of milk and 250 lb of tofu approximately 4 days/wk. At this time, the dairy had concrete floors and was starting to get sheetrocked. Soy yogurt production became unsuccessful because of the close proximity of the cannery, and vegetable contamination was airborne. Tempeh was also in the cannery and experiencing the same difficulties. Ice cream was very popular and being produced in large commercial soft-serve machines. Production of ice cream was varied, but its popularity was unquestionable.

"While the Farm was piecing together its operation, a small settlement of Farm members began in Northern California. In 1976, they opened a small commercial soy deli in California under the management of Robert Dolgin. To supply the deli, a small soy dairy and tempeh shop was set up in the back room. This consisted of Japanese equipment specifically designed for the purpose of making soymilk and tofu. They had a Japanese grinder, 45-gallon pressure cooker, and a small, efficient hydraulic press. It was a nice small kit which they took out a loan to buy. The deli's business was excellent and lasted over one year before it closed and relocated to San Francisco (SF) in order to expand production and market products throughout the health food store industry in California. So with more investment and loans and a warehouse in SF, Farm Foods re-opened. The building was fixed up to meet all the strict California codes, and the equipment was improved for increased output. They continued cooking with the 45-gallon pressure cooker but went for a continuous separator. This was a Brown, an orange juice extractor, and a vibrating screen to remove the finer pulp. They got a plate heat exchanger to cool the milk and a state-of-the-art Mark 25 continuous ice cream maker. They were running an extremely sophisticated operation complete with walk-in coolers and freezers. The Farm management council sent many of the Farm's trained technicians, business managers, and distributors out to SF to operate the business. In total, 60 Farm residents moved to support the growing business, which was under the direction of Robert Tepper and Daniel Lloyd. They started the first commercial soy ice cream company that marketed Soy Ice Bean. Laurie Praskin and her husband were sent to help run the shop and perfect the ice cream recipe. In April 1979, they left to work on the Guatemala soy program and were replaced by Michael and Deborah Lovett and Bobby and Michael Bonnickson. Because of the high cost of operating a business in downtown SF and the increased interest of Ice Bean nationwide, Farm Foods decided to move the Ice Bean production to Tennessee. The Farm Soy Dairy purchased the continuous extractor from the SF Soy Dairy and once installed, it immediately increased the production to 1500 lb/day of tofu and 300 gal/day of soymilk–enough for everyone.

"The soy dairy is now under the management of Michael Lee and Ron Maxin and consists of a 400 gallon bean soak tank and a one-and-a-half horse-powered Japanese grinder. Beans are ground with hot water, and the resulting slurry is pumped into one of three 60 gallon stainless kettles. Direct steam injection cooks this milk. When done, it is pumped into the brown extractor. It flows over a second vibrating-screen filter and is gravity-fed to a 45 gal stainless holding tank where it is tapped off into curding barrels or pumped through the same heat exchanger which now has chilled water running through it for more efficient cooling. A chilled water system also provides cold water to cool and store our tofu. When cooled, the tofu is transferred to 40 gal plastic tubs and wheeled into a walk-in cooler where it awaits distribution. (For more information on the Farm Soy Dairy as it is today, contact Ron Maxin or Michael Lee.)" Address: 17969 Oak Dr., Los Gatos, California 95030.

4654. Nair, G.K. 1985. MP's leap forward in farm, industry. *Times of India* (*The*) (*Bombay*). Dec. 13. p. 23.
• ***Summary:*** MP stands for "Madhya Pradesh," India's largest state. The western part sits atop the vast Malwa plateau, an archaeologist's paradise. Despite the Bhopal poison gas disaster of 3 Dec. 1984, the worst industrial accident in world history, massive reconstruction and development work are in full swing across the state–sparked by both the private and public sectors. Over 80% of the population (60 million people) is in the farm sector.

"Oilfed, clumsily designated M.P. State Cooperative Oilseed Growers' Federation Limited, has introduced soyabean on a large scale as a cash crop in the fertile Malwa plateau and a few other districts.

Oilfed's main job is to organise the mostly illiterate cultivators into farmers; co-operatives and to develop a processing and marketing mechanism. There are now 513 such co-operatives with a total membership of 58,000

farmers.

Soybean cultivation has been introduced mainly in the wheat-producing areas; the soybeans are grown in the kharif season instead of jowar–which has long brought farmers a miserably low profit. Wheat is a rabi crop.

By contrast, soyabean earns the farmer good money, Rs. 2.75 through the co-operatives, to which he sells the new crop as soon as it has been harvested. Farmers seem genuinely excited about soyabean, in part because he never has to take it to market where middlemen have long fleeced them. The co-operatives now market the soybeans and are in a much better position to get the best possible prices.

Construction of a vanaspati plant with a capacity of 30,000 tonnes per annum has been completed at Churhat (in eastern Madhya Pradesh); it is expected to begin production in Jan. 1986.

Oilfed has started exporting soya meal to West Asian and North African countries at "remunerative" prices. New products such as soya paneer [tofu], soya milk, weaning food, vegetable protein, snacks, and margarine are among the new products it plans to introduce.

4655. Sokolov, Raymond. 1985. Soy, most useful bean: In disguised forms, its use grows in U.S. *Detroit News.* Dec. 13. p. A-1, A-20.

• ***Summary:*** First came soy-based margarine, then soybean oil–which now surpasses corn oil and peanut oil in sales. Then tofu, a soybean curd, began to show up in supermarkets. The latest soy-based product is Tofutti, a trendy alternative to ice cream.

Business Trends Analysts reports that retail sales of soy foods (including the familiar soy sauce) have jumped nearly fivefold since 1979. They exceeded $200 million last year. A body of "evangelical literature has sprung up to educate a carnivorous populace in the mysteries of tofu." *The Book of Tofu,* by William Shurtleff and Akiko Aoyagi, had sold 340,000 copies when Ten Speed Press in Berkeley published a 2nd edition in 1983.

Photos show two workers at The Soy Plant in Ann Arbor: (1) Mark Ducharme cutting tofu. (2) Geoffrey Beck stirring soy milk. Address: Michigan.

4656. Gupta, Rajendra ("Raj") P. 1985. Re: Interest in starting branches of Soyfoods Center in Canada and India. Letter to William Shurtleff at Soyfoods Center, Dec. 15. 1 p. Typed, with signature on letterhead.

• ***Summary:*** "I wonder if you have a branch of Soy Foods Center in Canada and India. If not, we would like to establish your branches in the two countries. Please let me know the procedure for doing so.

"There has been considerable interest in our new process shown by corporations at all levels. A small pilot plant has been built and debugged and a full size batch type is being built here. Also, we now have perfected a 3L per batch domestic/laboratory scale equipment for making soymilk with our process. This is expected to be very inexpensive to make and could retail as low as $39 when used with a food processor / blendor. However, we do not intend to go into its production until our patents are published and thereby the inventions become known to every one. I should reiterate that we want to make profit from the invention so that we can generate resources to help develop a healthy soyfoods industry worldwide, the industry which can deliver unsubsidized, affordable, quality soyfoods to those who need them most.

"Merry Christmas and a Happy New Year, also to Akiko. With personal regards, Sincerely yours..." Address: Ph.D., Vice President, ProSoya Foods International Inc., 801-275 Slater St., Ottawa, ONT, K1P 5H9, Canada. Phone: (613) 237-5814.

4657. Cole, Michael. 1985. Re: Introducing Soya Health Foods, Ltd. Letter to William Shurtleff at Soyfoods Center, Dec. 16. 1 p. Typed, with signature on letterhead.

• ***Summary:*** "Dear Bill, This is just a short line to introduce you to our Company, Soya Health Foods, Ltd.. In one year we have become the largest U.K. supplier of Soya Milk in 500 ml Tetra Bricks, and to increase our sales further we are introducing 200 ml Organic Soya Milk drinks with straw, in 3 flavours: i.e. Malted Barley, Malted Carob, and Coconut.

"Our Ice Dream is now the top selling Soya ice-cream in England and we hope to launch Ice Dream into the European Market in 1986, by selling licences [licenses] to ice cream manufacturers, who we will supply with our Ice Dream mix in powder form.

"There are a lot of ideas and possible questions that I am sure we both have and I would welcome the chance to meet and discuss them. In the meantime have a Great Xmas and a Meaningful New Year."

Note: Michael, age 39, comes from London and has been a strict vegetarian for most of his life. He launched Soya Foods Ltd. in about Aug. 1984. During the past year sales of his soymilk have risen from 46,000 liters/week to 250,000 liters/week by Aug. 1985. Address: Director, Soya Health Foods, Ltd., Unit 4, Guinness Rd., Trafford Park, Manchester M17 1UA, England.

4658. *Asahi Shinbun* (*Evening Ed., Japan*). 1985. Hiekomu tônyû ninki [Popularity of soymilk in Japan cools down]. Dec. 25. p. 10. [Jap]
• ***Summary:*** Soymilk gets no reward for all the efforts made to remove its beany flavor. and now it has fallen behind Japan's beverage industry competition. At one time there were more than 100 companies making soymilk in Japan; now there are about half that many.

Kibun: During the past year Kibun had soymilk sales of about 7,000 million yen. But at its peak in Sept. 1982 its sales were about 11,000 million yen.

4659. *China Daily.* 1985. Artificial milk. Dec. 31. p. 3. [Eng]
• ***Summary:*** "China has developed a kind of artificial milk, the newspaper 'health news. reports.

"The milk is processed from peanuts, soy beans, animal fat and eggs and is free from chemicals. It is similar to cow milk in properties, structure and taste, but without the smell. It can be preserved three to four times longer than dairy milk and is one-third cheaper, the report says."

Note that Chinese dislike the smell of cow milk.

4660. *SoyaScan Notes.* 1985. Chronology of soybeans, soyfoods and natural foods in the United States 1985 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 2. The soybean crushing industry begins a year of major restructuring as the big get bigger and two pioneers drop out. Ralston Purina announces that it has sold six of its soybean crushing plants to Cargill, Inc. A seventh at Memphis was closed. This removed the company from the soybean commodity business. With this transaction Cargill passes ADM to become America's largest soybean crusher.

Jan. 3. "Myth or Miracle: Debunking the Tofutti Fad" by Mark Medoff published in *Whole Life Times.* The first exposé of Tofutti, which contains very little tofu. Jan. 13 Medoff appears on the Gary Null Show, Natural Living, to discuss his findings for 1 hour on prime time radio.

Jan. 12. A.E. Staley Manufacturing Co. announces that it is basically getting out of the soybean crushing business. It has sold five of its six soybean plants (having a combined crushing capacity of some 275,000 bushels daily) to Independent Soy Processors Co., which is closely affiliated with Archer Daniels Midland. Staley was unable to sell its Decatur facility, which ceased operations indefinitely in Jan. 1984. With this transaction ADM has probably regained a slight lead as America's largest soybean crusher.

Jan. 14-26. Soybean Utilization Workshop held at Soyafoods Research Center in Gannoruwa, Peradeniya, Sri Lanka, sponsored by the Sri Lanka Soybean Project and INTSOY. 24 representatives from 12 developing countries participate. The world's first event of its kind (*Soyanews,* Dec. 1985).

Jan. 25-27. Natural Foods Expo at Anaheim. Soy ice creams steal the show. Tofu standards are debated heatedly at Soyfoods Association board of directors meeting on Jan. 28, especially by Ralston Purina attorney. Board decides funds are too limited to try to hire an executive director for SAA. Jan. 31. Paul Obis, founder and editor of *Vegetarian Times,* is seriously considering buying *Soyfoods* magazine from Doug Fiske. He makes a firm offer in late March.

Feb. "Designer Beans," an excellent overview of the U.S. soyfoods movement and its gourmet connections by Sandy MacDonald, published in *New Age* magazine.

Jan. American Soybean Association introduces SIS (Soybean Information Service), a computerized database focusing on soybean production and marketing, and oil and meal. The earliest record is 1958.

Feb. 21. *Tofutti and Other Soy Ice Creams: Non-Dairy Frozen Dessert Industry and Market,* by Shurtleff and Aoyagi published by The Soyfoods Center. Two volumes, 352 pages. This is the first study of the rapidly emerging soy ice cream market, and of Tofutti.

Feb. 27. "Tofu Products May Be In, but Its Fans Wonder if There's Tofu in the Products" by Trish Hall published in *The Wall Street Journal.* Second major exposé on so-called "tofu ice creams" (such as Tofutti and Gloria Vanderbilt Glace), which contain only a token amount of tofu, as a marketing gimmick.

March 13-14. The theme of the Feb. 27 *Wall Street Journal* article picked up by the NBC evening news and the Today Show. Very positive coverage for tofu. Gary Barat of Legume, David Mintz of Tofu Time, and Gloria Vanderbilt each speak about tofu.

March 22. *The Book of Tempeh,* extensively revised second edition by Shurtleff and Aoyagi, published by Harper & Row. New bibliography (374 entries), history chapter, and list of tempeh producers.

March 26. Soyfoods Association's Tofu Standards (7th draft) presented to eight senior officials at the U.S. Food and Drug Administration's Center for Food Safety and Applied Nutrition, in Washington, DC, by Tom Timmins (Head of SAA Standards Committee), Gary Barat (President of SAA), Steve McNamara and Tom Donegan (SAA Food & Drug attorneys). The FDA group hears an hour long presentation on tofu, the standards, and the Soyfoods Association of America.

March. Soyarella (later renamed Soy Mozzarella), a tofu-based cheese, is introduced. It becomes an instant hit. Distributed by Neshaminy Valley Natural Foods of Huntingdon Valley, Pennsylvania, it is labeled as "non-dairy," yet it melts, and it tastes like cheese. Shrouded in secrecy, its manufacturer is unknown and the ingredients are questionable. It is sold in large blocks and labeled at individual stores.

March. American Soybean Assoc. launches a campaign among its members to write USAID and encourage them to cancel support for U.S. programs (such as INTSOY) aiding

soybean production in Third World nations. The campaign is successful.

April 1. INTSOY signs a new cooperative agreement with USAID. Their work will henceforth focus on soybean utilization. The shift toward utilization began in 1983 and all work on soybean production and varietal development stopped in Aug. 1986.

April. *Tempe: An Annotated Bibliography,* compiled by Siagian and Sofia in Indonesia. Containing 273 references, it is the first bibliography to introduce the extensive Indonesian-language research on tempeh, the majority of which has been published since 1980.

April 15-16. International Symposium on Tempeh held in Jakarta, sponsored by the Indonesian Ministry of Health. 113 people attend.

April. Central Soya buys Griffith Laboratories' line of protein products.

May 31. Barricini Foods acquires Farm Foods, which then becomes a trade name for Barricini's natural / health foods line of non-dairy frozen desserts, including the pioneering product, Ice Bean, and Barricini Tofulite.

May. Morinaga, one of Japan's largest dairy companies, establishes Morinaga Nutritional Foods, Inc., a subsidiary with offices in Los Angeles, to focus on promoting their long-life silken tofu in America.

May. At the 6th Annual Natural Foods Merchandiser Merchandising Awards, soyfoods do well. Miso Mustard by American Natural Foods and Malteds by Westbrae win gold medals. Ah Soy by Great Eastern Sun wins a silver.

May. Soft Tofu Cheese, a non-dairy cream cheese cultured in miso, launched by Simply Natural, Inc.

June. Tofu Topper launched by Worthington Foods.

June. Ralston Purina publishes its 1985 Consumer Attitudes Monitor. Soy Protein in Foods, based on a nationwide survey of 628 adults. Indicates positive attitudes toward soy protein and soyfoods.

July 19. Shamrock Capital, a private company headed by Roy Disney, buys Central Soya, a publicly owned corporation. Agreement to buy was announced April 2.

July. Soy Supreme, spray-dried tofu powder, launched by Oberg Foods Div. of St. Peter Creamery.

July. Asian Symposium on Non-Salted Soybean Fermentation held at Tsukuba, Japan.

July 31. Tofu Time's sales of Tofutti increased more than sevenfold last year to $17,114,886 as compared with $2,361,391 for the previous year. Net income increased nearly 100-fold to $2,006,451.

July. New Gallup survey on vegetarianism of 1,033 Americans shows that millions are eating less meat and tens of millions agree with the move away from meat. 72% disagree with what used to be the standard notion: "The vegetarian diet is just a fad that will pass." A majority (52%) believe that "no one really needs to eat meat more than once or twice a week."

Aug. The DE-VAU-GE soymilk plant in West Germany starts production. Built by STS, with 4,000 liters/hour of soymilk capacity, they make Granose and GranoVita brands of soymilk.

Aug. Lightlife Meatless Tofu Pups (hot dogs) introduced by Tempehworks / Lightlife Foods of Greenfield, Massachusetts. The product sold nearly $250,000 in the next 10 months.

Sept. Soyfoods Center introduces SOYA, a computerized bibliographic database on soybean utilization, history, nutrition, processing, marketing, and production. Contains 18,500 references from 1100 B.C. to the present.

Sept. 30. Fearn Natural Foods in Illinois sold by Louis Richard to Modern Products, Inc. in Milwaukee.

Sept. 30 to Oct. 4. Tropical Soybean Workshop held at the International Institute of Tropical Agriculture (IITA), Ibadan, Nigeria. Proceedings are published in 1987 as Soybeans for the Tropics. Also this year IITA established a soybean utilization unit.

Sept. Tofulicious, a tofu-based non-dairy ice cream launched by Eastern Food products of Minneapolis. It was developed in conjunction with the University of Minnesota and funded by the Minnesota Soybean Research and Promotion Council. By 1986 it has become the first soyfood product in recent times to be actively promoted by state soybean associations, who sell it at many state and county fairs... where it is a big hit. Through Tofulicious many soybean growers begin to warm up to soyfoods.

Oct. 8th Draft of the Tofu Standards finished, incorporating extensive suggestions from FDA. Compiled by William Shurtleff.

Oct. Mori-Nu brand aseptically packaged tofu introduced by Morinaga Nutritional Foods.

Oct. Cream of the Bean Soygurt, a cultured soymilk yogurt, launched by Cream of the Bean, Inc.

Nov. Kikkoman introduces a long-life tofu in a foil retort pouch, imported from Japan. Poor quality causes the product to be withdrawn. It was re-introduced later.

Dec. Tofu Time starts exporting Tofutti to Japan. The first order by Daiei (a large retailer) of tubs for their parlors, is $350,000. This may be the first major export of a soyfood product (not including ingredients such as soy protein isolates) to Japan.

* The International Institute of Tropical Agriculture (IITA) in Ibadan, Nigeria, starts a program to promote processing and utilization of soybeans in Nigeria and throughout Africa. Continued.

4661. *SoyaScan Notes.* 1985. Chronology of soybeans, soyfoods and natural foods in the United States 1985 (Continued) (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued. 1985 New Trends:

Dramatic Rise of Tofutti and Other Soy Ice Creams.

1985 will go down in the soyfoods history books as the "Year of Tofutti." Never before in history of the United States has any soyfood product achieved such widespread and sudden popularity or notoriety.

During 1985 at least 50 brands of soy ice cream (many with "Tofu" on the label) were on the market worldwide, most in the USA. And many were made by America's biggest dairy companies. An estimated 2.5% of all frozen desserts except novelties (popsicles, bars, etc.) sold in supermarkets were soy-based nondairy. The result of all this was to introduce tofu and isolated soy proteins to millions of people in a very positive context.

But many of the companies that sold so-called "tofu ice creams," while emphasizing tofu in their product names and marketing programs, actually had surprisingly little (if any) tofu in their products. In fact they contain so little that this marketing gimmick might be misbranding and a deliberate deception of the consuming public.

Rise of Soyfoods in Europe. Thanks to the Belgian Office of the American Soybean Association (ASA), and specifically to the efforts of Michael Martin, Europe's growing soyfoods movement is starting to become organized and active. In March 1984 Martin launched Europe's earliest known soyfoods newsletter, *Soya Foods,* and in September organized the First European Soyfoods Workshop, for which bound proceedings were published. This is the first time in recent decades that ASA has promoted soyfoods (other than soy oil) in the Western World. The strong U.S. dollar has led to a recent dramatic decline in imports of soybeans and soybean meal to Europe for feed and oil use (European rapeseed and sunflowerseed are being substituted), so the ASA is exploring new outlets where soy is unique.

The launching of tofu production and marketing by Switzerland's biggest supermarket chain, Migros, and by Galactina, a large and respected maker of dietetic and pharmaceutical products (including soymilk) is a landmark for tofu in Europe. In early January, *Tages Anzeiger,* one of Switzerland's biggest newspapers, had a special report on tofu, followed on Jan. 9 by a 30-minute TV feature on tofu.

The total number of soyfoods companies in Europe continues to show a steady increase. Many of these are being founded by people interested in macrobiotics. By Jan. 1985 there were 1,113 names on The Soyfoods Center's computerized mailing list of people actively involved with soyfoods in Europe.

At the 1984 ASA soyfoods workshop, Martin reported the following estimates of annual European soyfoods consumption: A table with three columns shows: Soyfood name, consumption, percentage of U.S. consumption.

Soy oil–1.7 million metric tons–38%

Modern soy protein products–40 million kg–28%

Soymilk–9 to 10 million liters–7%*

Tofu–5 to 6 million kg–22%

Tempeh–400,000 to 500,000 kg–50%

Miso–250,000 to 300,000 kg–11%

* U.S. figure includes soy based infant formulas. European figure is not clear on this point.

Note that the population of the USA is about 234 million compared with 489 million for all of Europe (not including the USSR), but 237 million for Northern and Western Europe, where most of these products are consumed.

Rapid Growth of Second Generation Soyfoods. In the 1984 edition of this book, we stated that the three fastest growing soyfoods in the USA (in terms of production increases) were tempeh (33% a year compound annual growth rate), tofu (15%), and soy sauce (14%). But now the picture has changed. In 1984 the fastest growing category was second generation products, ready-to-eat, all-American preparations, especially those based on tofu. The leader in this group is clearly soy ice creams (led by Tofutti), with a production growth rate of roughly 600% a year for the past 1-2 years. Then comes convenience tofu-based entrees such as Legume's products, tofu burgers and tofu burger mixes, and the like. This is the number one way that soyfoods are now entering the mainstream American diet. And the biggest gains are being made by marketing companies, rather than manufacturers. The second fastest growing category may now be imported soymilks, growing at about 40-60% a year.

Major New Capital Influx. The following is a brief summary of new capital influx to the soyfoods industry: A table with four columns shows: Company name, date of offering, $ amount, equity or debt; use.

Legume–Oct. 1982–$100,000 net–Equity. For tofu frozen entrees

Legume–Oct. 1982–$100,000–Debt. For tofu frozen entrees

Legume–Nov. 1983–$400,000 net–*Equity. For tofu frozen entrees

Legume–Nov. 1983–$200,000–Debt. For tofu Frozen entrees

Hinode Tofu–Nov. 1983–$2,500,000–Equity For general expansion

Tofu Time–Dec. 1983 $2,760,000 net–Equity. For soy ice cream

Tempehworks–July 1984–$265,000–Debt. For tempeh expansion

Legume–Feb. 1984–$200,000–Debt. For tofu frozen entrees

Legume–Aug. 1984–$1,248,000 net–Equity. For tofu frozen entrees

Brightsong–Dec. 1984–$500,000–Equity. For tofu products

Legume–April 1985–Expecting lots more. For tofu frozen entrees

White Wave–Expecting.

Note: Equity = Sale of equity ownership in the company via stock in a public offering or in a private placement. Debt = Debt financing by taking out a private loan.

How have these companies fared? Tofu Time has done spectacularly well. The value of the company has increased more than five-fold since Dec. 1983, and profits are excellent. Legume, a marketer of low-calorie, cholesterol-free frozen entrees featuring tofu, has had the hardest sledding. A preliminary prospectus by Huberman Margaretten & Straus dated 5 June 1984 stated that from its inception through 31 March 1984, the company incurred aggregate losses of $709,773, including a loss of $18,465 in 1982, then $225,302 in 1983, increasing again to roughly $486,500 in 1984. Legume's common stock had a negative book value; 1984 sales were "a little less than $1 million." Yet the company has excellent products and in early 1985 landed some foods big chains, which could help its bottom line considerably.

Growing International Interest in Tempeh. During 1983-84 Japan became a major tempeh producer. By May 1984 the world's largest tempeh producing company was Marusan-Ai (of Japan), which made 15,150 lb. a week. New marketing and production techniques were pioneered. The full story was described by Shurtleff and Aoyagi in Tempeh Production (1984).

Three Major International Symposia Featuring Tempeh were held: 15-16 April 1984 in Jakarta, Indonesia; 15-17 July 1984 in Tsukuba, Japan; and May 1986 in Honolulu. A special 13-day group study tour on Japanese Food Fermentations, led by Dr. Keith H. Steinkraus, has been organized by the Japanese-run, New York-based Technology Transfer Institute. Tempeh continues to be one of the fastest-growing soyfoods in the USA.

Growing Interest in Spray-Dried Tofu. Eleven articles were published this year on a product that promises to revolutionize the tofu industry. The first and largest manufacturers (St. Peters Creamery and Clofine) are both dairy companies. Spray dried tofu should appeal to the food industry, since it is easy to ship, store, and process.

Dairy Magazines Publishing Many Positive Articles About Soy-Based Dairylike Products. Traditionally the dairy industry has seen dairy analogs as a threat and fought to oppose them. The decades-long struggle against margarine is a good example of this. But now, many small dairies, struggling to survive, are looking for new products. A number (such as St. Peter Creamery and Clofine) have gained a new lease on life by starting production of soyfoods.

Major Changes in the U.S. Soybean Crushing Industry. Narrow crushing margins, a depressed export market for U.S. soybean meal, and poor profitability have led two of America's biggest soybean crushers, the A.E. Staley Manufacturing Company and Ralston Purina, to decide to get out of the soybean crushing business in Jan. 1985. Clearly they view poor profitability as a long term problem, and plan to diversify away from unpredictable agricultural commodities toward the "value added," retail end of the nation's food supply. Staley, in effect, sold its plants to ADM and Ralston Purina sold its to Cargill. In Nov. 1984 Staley acquired CFS Continental, Inc., the nation's second largest supplier to the foodservice industry. Staley, previously the oldest existing soybean crusher in America (since 1922), now relinquishes that honor to ADM. ADM is now the largest soybean crusher in America, but Cargill (which has many overseas plants) is the biggest in the world. These changes have led to a concentration of control in the U.S. soybean crushing industry. Both Staley and Ralston Purina plan to keep their edible soy protein (isolates, concentrates, etc.) operations.

Biotechnology is Emerging as a Major, Promising Factor in future soybean breeding development. Some agricultural experts are predicting that it could usher in the latest agricultural revolution, following the agrichemical revolution of the 1940s and the Green Revolution of the 1960s and 1970s.

The "Calcium Craze" Starts in America, aiding sales of tofu (curded with calcium sulfate), which is one of the best non-dairy sources of calcium.

4666. Jacobs, Leonard. 1985. Menage: Why the Chinese don't drink milk: Mongol rule and other factors led to a dairy-free diet. *East West Journal.* Dec. p. 16.
• ***Summary:*** "A cheese from goat milk has been widely

consumed in many parts of China, particularly in Sinkiang [Xinjiang] and Chinghai [Qinghai], as well as in Tibet and Inner Mongolia. Yet dairy products in general have an unpopular history among the Chinese.

"One reason is that the Chinese were subjugated by the Mongols for long periods of time, and one of the terms of their subjugation was that all milk was the property of the Mongols. Hence consumption of dairy products became regarded as something only 'barbarians' do. If you couple this explanation with the fact that if you never consume milk before age five, you will likely exhibit lactose intolerance, we come up with an explanation of why milk left Chinese culture and never reappeared.

"In some parts of China, cheese cultured from soybeans, called 'Doufu-ru" [fermented tofu] is highly appreciated. In Guichou, and part of Sichuan, soy cheese cubes are eaten heated in a spicy sauce.

"A good source for further information on Chinese food is James D. McCawley's book, *The Eaters' Guide to Chinese Characters* published by The University of Chicago Press, 1984. This book explains the sub-language of Chinese food and gives you enough knowledge to translate the signs in food stores and restaurants written only in Chinese." Address: Publisher, East West Journal.

4667. Johnson, Kirk. 1985. The Edensoy-FDA saga: A misleading claim about Eden's top product led to a pamphlet recall. *East West Journal.* Dec. p. 30, 32-35.
• ***Summary:*** Chronology of events: 1984 March 2–The FDA (U.S. Food and Drug Administration) informs Eden Foods, in a strongly worded letter, that it considers eleven claims in a promotional pamphlet for Edensoy to be erroneous. The FDA advised that the "Good for Babies" section of the pamphlet be deleted. Indeed the agency was so worried about the possible impact of the pamphlet that it asked Eden to stop distributing it, a request to which Potter agreed.

Exactly what happened next is unclear. The FDA says it has invoices proving that Eden continued to distribute the pamphlet. Potter admits that "eight or nine" of the pamphlets did leak out.

1985 June 14–The FDA informs Michael Potter that a six-month-old child in Canada had become seriously ill after being fed the company's soymilk as an infant formula. The mother said her decision to forgo regular infant formula was inspired by Eden's own literature–the promotional pamphlet cited above which said that Edensoy was "Good for Babies." For Eden, a company with 40 employees, the news came at a bad time since the company was geared up to begin a national promotion of its soymilk starting June 15–the very next day. By this time the come had sold some 18 million foil pouches of Edensoy. Eden took the position: "There's a problem and were responsible for it."

1985 June 23–Eden Foods voluntarily mails 10,686 requests for a recall of the pamphlet to its distributors and to individual retail stores. The company also agrees to insert a statement on the Edensoy label warning that the product is not to be used as an infant formula or as a sole source of nutrition. Until new labels could be printed, Eden Foods would mail red on white warning placards to be placed on store shelves where Edensoy is sold.

1985 Sept. 1–Sales and Edensoy for the last 2 months (July and August) were 50% higher than normal, thanks to a summer discount promotion. A photo shows Eden's Michael Potter.

• ***Summary:*** Traditionally the U.S. dairy industry has seen dairy analogs as a threat and fought to oppose them. The decades-long struggle against margarine is a good example of this. But now many small dairies, struggling to survive, are looking for new products. A number have thrived by starting production of soyfoods. E.g. St. Peter Creamery, Clofine, etc.

4670. Tofu Shop Specialty Foods (The). 1985. Price increase Jan. 1 (Leaflet). Arcata, California. 1 p. Single sided.
• ***Summary:*** Due to rising operating costs, the prices of all Tofu Shop products will go up approximately 5% starting January 1, 1986.

"Traditional tofu? Did you know that The Tofu Shop in Arcata is one of only a few such traditional-style tofu companies operating successfully in the United States today." They do not make "mass-produced" tofu.

"About The Tofu Shop: Founded in 1980, The Tofu Shop employees eight trained soyfoods workers who produce monthly: 6,000 pounds of fresh, traditional-style tofu, 2,500 tofuburgers, 50 quarts of soymilk, and thousands of tofu cutlets, sausages, salads and desserts. Almost all of our products are distributed right here in Humboldt County!

The Tofu Shop also operates a retail delicatessen near Humboldt State University in Arcata (768 18th Street).

Illustrations show: The front of the deli. (2) The little house on stilts by the ocean, with an Oriental-style roof and

a wind-blown tree arching overhead. Address: 768 18th St., Arcata, California 95521. Phone: (707) 822 7409.

4671. **Product Name:** Tofutti Take Five (Non-Dairy Beverage).
Manufacturer's Name: Tofu Time, Inc.
Manufacturer's Address: Rahway, New Jersey.
Date of Introduction: 1985. December.
New Product–Documentation: News Release. 1985. Aug. 29. The company announced today that it has completed development and is preparing to launch a Tofutti brand beverage product named "Take Five" for the 1985 Christmas season. 8 ounces will provide 20% of the US RDA of all vitamins and minerals. Reprinted in Food Merchants Advocate. 1985. Oct. And in Product Alert. 1985. Dec.

4672. **Product Name:** [Sojafit (Slimming Drink)].
Foreign Name: Sojafit.
Manufacturer's Name: Unknown.
Manufacturer's Address: Switzerland.
Date of Introduction: 1985. December.
Wt/Vol., Packaging, Price: 3 size packs retail for 39.5, 69.5, or 99.5 Swiss francs.
New Product–Documentation: Food Report (Lehmann). 1985. Dec. "A highly active slimming medicine. An appetite suppressant."

4673. **Product Name:** Soybean Drink [Plain, or Cane Sugar Added].
Manufacturer's Name: Aloha Products.
Manufacturer's Address: 4515 Centinela Ave., Los Angeles, CA 90066. Phone: 213-822-2939.
Date of Introduction: 1985.
Ingredients: Sweetened: Soybeans, water, cane sugar.
Wt/Vol., Packaging, Price: 16 oz and 48 oz plastic jugs.
How Stored: Refrigerated.
New Product–Documentation: On sale at Yaohan Japanese supermarket in Los Angeles. 1988. Oct. 23. For 48 oz: Plain in $1.19 and sweetened is $1.29. Talk with Tom Uyehara. 1988. Oct. 24. These product were introduced in 1985.

4674. **Product Name:** Provamel Soya Dessert (Vanilla, Carob, or Strawberry).
Manufacturer's Name: Alpro.
Manufacturer's Address: Zuidkaai 33, B-8700 Izegem, Belgium.
Date of Introduction: 1985.
Wt/Vol., Packaging, Price: 525 gm aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Food Report (Lehmann). 1984. Aug. Described in leaflets issued to health food stores in the Netherlands. Labels. 1988. Simon Bailey. 1988. Natural Choice. Aug. 15. A photo shows the Label. "No added sugar. 100% natural. Free of animal fats. CSP form filled out by Simon Bailey. 1988. Sept. 28. Adds strawberry flavor. The importer in England is Vandemoortele (UK) Ltd., Ashley House, 86-94 High St., Hounslow, Middlesex TW3 1NH. Phone: 01-577 2727.

Spot in The Vegan. 1988. Summer. p. 16. "Note that the strawberry soya milk and dessert made by Provamel is coloured with the insect derivative cochineal."

4675. **Product Name:** Amofood Soya Bean Drink (Boisson au Soja).
Manufacturer's Name: Amoy Canning Corp.
Manufacturer's Address: 254 Bukit Timah Rd, 13 km, Singapore.
Date of Introduction: 1985.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: STS. 1985. Containers for Soymilk. Shows can, red and white on green.

Alfa-Laval. 1988, June. Soyfoods: Old traditions with new potentials. p. 9. Shows a color photo of the front of the can. Same colors as above.

4676. **Product Name:** Calco Soymilk.
Manufacturer's Name: Calco of Atlanta.
Manufacturer's Address: 2059 Manchester St., N.E., Atlanta, GA 30324. Phone: 404-874-3650.
Date of Introduction: 1985.
Wt/Vol., Packaging, Price: 16 oz packed in water in molded plastic tray with heat-sealed, peel-off plastic film lid.
How Stored: Refrigerated.
Nutrition: Per 4 oz.: Calories 70, protein 10 gm, carbohydrates 7 gm, fat 0.5 gm.
New Product–Documentation: Talk with Jimmy Wang. 1989. Nov. 9. This product was introduced in 1985.

4677. **Product Name:** Non-Dairy Soybean Drink (Soymilk) [Plain].
Manufacturer's Name: Eastern Foods Corporation.
Manufacturer's Address: 3235 E. Hennepin Ave., Minneapolis, MN 55413.
Date of Introduction: 1985.
Ingredients: Water, soybeans.
Wt/Vol., Packaging, Price: Quarts and half gallons.
How Stored: Refrigerated.
New Product–Documentation: Labels. 1985. 2.5 by 3.5 inches. Yellow and black on white. "Drink plain or flavor with vanilla, honey, or carob." Letter from Tom Menie. 1988. June. The product was introduced in 1985, in quarts and half gallons.

4678. **Product Name:** Fearn Natural Soya Powder.
Manufacturer's Name: Fearn Natural Foods. Div. of Modern Products, Inc.
Manufacturer's Address: P.O. Box 09398, Milwaukee, WI 53209.

Date of Introduction: 1985.
Ingredients: Soybeans.
Wt/Vol., Packaging, Price: 11 oz retails for $1.65 (8/88).
How Stored: Shelf stable.
Nutrition: Per ¼ cup (25 gm): Calories 100, protein 10 gm, carbohydrate 6 gm, fat 5 gm, sodium 2 mg (7 mg/100 gm). Contains 15% of the RDA for protein and 30% of the RDA for thiamine.
New Product–Documentation: Label. Copyright 1985. Box. 4 by 6.5 by 1 7/8 inches. Red, green, brown, yellow, and white. Leaf logo. "Low sodium. Contains all the natural oil of the soybean. Precooked, finely ground soybeans. For use in baking and for use in soya milk." Soybeans are washed in water, steamed at a maximum temperature of 215ºF, dehulled, and ground to a fine powder, finer than is typical for soy flour, hence the name. Instructions are given for using soy powder in cake or bread, pie dough, cookies, doughnuts, puddings, pancakes, or waffles, soya milk, or creamed soups.

4679. *Federal Register.* 1985. Rules and regulations. 50(210):45106.
• ***Summary:*** In the USA, soy-based infant formulae are supplemented with 5-75 micrograms of iodine per 100 kcal (418 kJ) formula, a level considered sufficient to avoid the problem of goiter. Address: FDA.

4680. **Product Name:** Nutrisoy (Soy Beverage).
Manufacturer's Name: Fraser & Neave (Singapore) Pte. Ltd.
Manufacturer's Address: 475 River Valley Rd. Singapore 1024, Singapore.
Date of Introduction: 1985.
New Product–Documentation: Soya Bluebook. 1985. p. 85; 1986. p. 104. Soya Bluebook Plus. This company (the name is unchanged) is now located at 457 Jalan Ahmad Ibrahim, Singapore 2263, Singapore. Phone: +65 861-7600. Fax: 861-2652. They make soymilk beverages, tofu and tofu products. Contact: Kalin S. Kwok, R&D Manager.

4687. **Product Name:** [Won, Charm, and Young Soymilk].
Manufacturer's Name: Lotte Chilsung Beverage Co. Ltd.

Manufacturer's Address: Seorak Bokji Center, 5th Floor, 433 Shinsa-Dong, Kangnam-ku, Seoul, South Korea.
Date of Introduction: 1985.
New Product–Documentation: Soya Bluebook. 1985. p. 84; 1986. p. 103.

4688. **Product Name:** [Manna Banzai Soy Beverage].
Foreign Name: Manna Bonzoi Soybeverage.
Manufacturer's Name: Manna Natuurvoeding B.V.
Manufacturer's Address: Weerenweg 28, 1161AJ Zwanenburg, Netherlands.
Date of Introduction: 1985.
Ingredients: Water, soybeans, pearl barley, kombu, barley malt.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic Carton.
New Product–Documentation: Letter from Sjon Welters. 1989. Aug. 10.

4689. Masson, A. 1985. Le contrôle microbiologique des aliments dans la province de Québec: Compte-Rendu d'un stage effectué au Canada du 3 au 21 Juin 1985 [Microbiological control of food in the province of Quebec: Report of a study conducted in Canada from June 3-21, 1985]. *Swiss Food* 7(11):7-11. [Fre]*
• ***Summary:*** Contains results of microbiological analyses of soymilk, with or without magnesium chloride added, and of tofu. Identification of the pathogenic bacteria in the finished products and raw materials. Gives Canadian norms or standards on the microbiological quality of food products. Address: Univ. Lausanne, Lab. Cantonal, Controle Denrees Alimentaires, Epalinges, Switzerland.

4690. Nakayama, T.O.M. 1985. Co-precipitation of peanut and soybean milks to form tofu. *Proceedings of the American Peanut Research and Education Society* 17:56. *
• ***Summary:*** A mixture of 1/3 (weight/weight) peanuts and 2/3 soybeans was used to prepare tofu in a traditional manner, coagulated with calcium sulfate. The resulting curds were shown to reflect the increased contribution of oil from the peanuts. Composition of minerals and protein were similar. Address: Dep. of Food Science, Univ. of Georgia Agric. Exp. Station, Experiment, GA 30212.

4691. **Product Name:** [Soymilk].
Foreign Name: Muji Milho Verde. Bebida a base de extrato de soja.
Manufacturer's Name: Pennong Produtos Alimenticios Ltda.
Manufacturer's Address: Av. Brasil 130, CEP 18.130, Sao Roque, SP, Brazil. Phone: 246-0144.
Date of Introduction: 1985.
Ingredients: Extrato de Soja, acucar, e sal [Soymilk, sugar, and salt].
Wt/Vol., Packaging, Price: 200 ml Prepac UHT plastic bag.
How Stored: Shelf stable.
Nutrition: Protein 3%, fat 1.7%, carbohydrates 1.3%, minerals 0.9%.
New Product–Documentation: Label. 1985, undated. STS. 1985. Containers for Soymilk. Shows Prepac bag, green and yellow on white. Business card from company: Klaus Speelmanns is director.

4692. Shimazaki, K.; Tojo, H.; Sukegawa, K. 1985. [Differentiation of bovine milk proteins and soy proteins by 2-dimensional electrophoresis]. *Rakuno Kagaku Shokuhin no Kenkyu* (*Japanese J. of Dairy and Food Science*) 34(5):A123-28. [13 ref. Jap; eng]*
• ***Summary:*** The soy proteins included soymilk proteins. Address: Dep. of Animal Science, Obihiro Univ. of Agriculture and Veterinary Medicine, Obihiro, Hokkaido, Japan.

4693. Singapore Institute of Standards & Industrial Research. 1985. Specification for soya bean milk and soya bean drink. Singapore. 21 p. SS 302. [Eng]
• ***Summary:*** The drink contains less protein and fat than the milk. Both are made from either soybeans, full-fat soybean meal, or defatted soybean meal, and are sterilized. They may contain optional sugar, colorings, flavorings, emulsifiers, stabilizers, or added vitamins and minerals. Requirements for soy milk and soybean drink respectively include: minimum protein (N x 6.25), 2.0 and 1.0%; minimum total solids less added sugar, 4.0 and 2.0%; minimum fat 1.0 and 0.5%; and pH, 6.5 to 7.0 for both. Tests methods are described in appendixes. Address: Singapore.

4694. Sohn, J.W.; Kim, W.J. 1985. [Some quality changes in tofu on addition of dried okara]. *Hanguk Sikp'um Kwahakhoe Chi* (*Korean J. of Food Science and Technology*) 17(6):522-25. [14 ref. Kor; eng]*
• ***Summary:*** Dried okara (the residue from making soymilk) was added at up to 30% to the soybean water extract used to make tofu. As proportions of okara increased, volume and water holding capacity of the curd were reduced and penetration value increased. Sag value increased up to 20% residue, then decreased drastically to 30%. Overall physical and sensory attributes indicate that 10% residue inclusion would be acceptable. Address: Dep. of Food & Nutrition, Sook-Myung Women's Univ., Seoul, South Korea.

4695. **Product Name:** [Soyana Soya Drink (Natural, Chocolate, Strawberry, Raspberry, Lemon)].
Foreign Name: Soyana Soyadrink (Nature, Choco, Erdbeer, Himbeer, Citron).
Manufacturer's Name: Soyana.
Manufacturer's Address: Friedensgasse 3, Postfach 8039,

CH-8002 Zurich, Switzerland. Phone: 01-202-8997.
Date of Introduction: 1985.
Ingredients: Water, whole soybeans, flavorings.
Wt/Vol., Packaging, Price: All flavors are available in 250 ml and 500 ml Tetra Brik Aseptic cartons. Natural also sold in 1 liter carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: R. Leviton. 1983. Report on trip to Europe with American Soybean Assoc. Oct-Nov. p. 20. In April 1982 Walter Daenzer tested Tetra Pak soymilk using taste panels and got good reports. The milk was made using his Takai system and flavored with honey. The Swiss Milk Industry Assoc. protested, asking the Tetra Pak company to stop working with Soyana, and they did. 95% of all Swiss milk is in Tetra Pak cartons so if people see a soymilk in such a carton they assume it is dairy milk.

Letter from Michael Karlen. 1986. Feb. 16. They now sell soymilk. Brochure. 1986. Soyana. The Future has begun. 10 panels. Blue and white. In German.

Alfa-Laval. 1988, June. Soyfoods: Old traditions with new potentials. p. 9. Shows a color photo of the front of the package. 250 ml Tetra Brik carton. Against a blue background, at the top a bird is flying over some clouds and the Soyana logo; at the bottom are green soybean leaves.

Talk with European soymilk producer. 1990. April 27. He thinks that Soyana has its own soymilk plant. They have been selling a Tetra Brik soymilk for about 4 years. It does not sell very well.

Letter from Bernd Drosihn of Viana. 1990. May 10. Soyana seems be making their own soymilk, but it seems to be packed by another company.

Talk with Peter Speck, formerly of Galactina. 1990. May 23. He thinks Soyana makes its own soymilk. They bought a plant from Alfa-Laval about 4-5 years ago (in 1985-86). He has no idea what the capacity of the plant is. They definitely do not have their own aseptic packaging line, so they probably let another company pack it, probably a dairy near Zurich, and not at Thun. Soyana is the only company in Switzerland that makes soymilk for normal healthy adults. The other brands are all imported. The soymilk market in Switzerland is small. Soymilk products are only sold in Reform Houses and health food shops.

Talk with Walter Daenzer. 1990. May 30. In 1983 he had his first soymilk product sold in white Tetra Brik cartons that were not printed. The Swiss dairy industry prevented him from getting the packs filled with soymilk. Then in about 1985 or 1986 the president of the Tetra Pak company helped Walter to get the approval of the Swiss Association of dairy Products. He got the approval and a permit, and shortly after that time the product was introduced in printed Tetra Brik cartons in the above flavors.

Letter from Monica Kjellker Gimre of Alfa-Laval. 1990. May 30. Alfa-Laval sold a complete soybase plant to Soyana in Switzerland. It had a capacity of 1,000 liters/hour and began operation in 1985.

4696. **Product Name:** [Soyaquell Soya-Drink (Natural, Fruit Flavored, or Chocolate)].
Foreign Name: Soyaquell Soya-Drink (Natur).
Manufacturer's Name: Soyaquell [Soyana].
Manufacturer's Address: Friedensgasse 3, CH-8039 Zurich, Switzerland.
Date of Introduction: 1985.
Ingredients: Natural: Water, soybeans, fruit sugar [fructose], malt, seasalt (0.1%), natural vanilla. In addition, for chocolate: chocolate powder, vegetable gelling agent.
Wt/Vol., Packaging, Price: ½ liter Tetra Brik Aseptic carton. Retails for DM 2.40.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Plain, per 100 gm.: Protein 4.3 gm, fat 2.1 gm, carbohydrates 3.0 gm, calories 49.
New Product–Documentation: Label sent by Anthony Marrese. 1990. March 22. 3.75 by 3.5 by 2.5 inch carton. Blue, white, green, and red. Illustration of a soybean plant with pods and red flowers. Logo of a small bird flying. "Non-dairy (rein pflanzlich). Soyaquell-Soyadrink is a new staple food of the finest quality. It is prepared carefully in Switzerland using Swiss water, selected soybeans and quality ingredients... Here is a delicious drink with its full-bodied taste, light and easily digestible–for breakfast, breaks, and also in cooking." Note: A sticker atop the Natural flavor states that the product is made with organically grown soybeans.

4697. Takai Tofu & Soymilk Equipment Co. 1985. Modern soymilk plant: Makes delicious dairylike soymilk with no beany flavor. 1-1 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan. 4 p. 30 cm. [Eng; Jap]
• ***Summary:*** Manufacturer's catalog. The front and rear covers are black letters on light blue. With 5 inserts including excellent fold-out layouts and floor plans, flow chart, and "Information sheet: Your soymilk production plans."

4698. **Product Name:** Soft Tofu, Firm Tofu, Fried Tofu, Baked Tofu, Tofu Strips (like noodles), Spiced Tofu (Wu Hsiang Doufu Gan), Soymilk.
Manufacturer's Name: Visoy.
Manufacturer's Address: 111 West Elmyra, Los Angeles, CA 90012. Phone: 213-221-4079.
Date of Introduction: 1985.
New Product–Documentation: Talk with Shoan Yamauchi. 1988. Oct. 23. This company is a small, Chinese-run company. Talk with David Ma. 1988. Oct. 24. The company started making all these products in 1985.

4699. **Product Name:** Doll (Soy Beverage).
Manufacturer's Name: Winner Food Products Ltd. Affiliate of Beatrice Companies, USA.

Manufacturer's Address: Room 1103, Hong Kong & Shanghai Bank Building, 673 Nathan Rd., Kowloon, Hong Kong.
Date of Introduction: 1985.
New Product–Documentation: Soya Bluebook. 1985. p. 84; 1986. p. 103. Talk with Hilton Tsui of Vitasoy. 1988. March 14. The product is no longer sold.

4700. **Product Name:** [Yakult Soymilk (Pineapple, Passion Fruit, Chocolate, and Apple)].
Foreign Name: Tohnyu (Abacaxi, Maracuja, Chocolate, Maca).
Manufacturer's Name: Yakult S/A Ind. e Com.
Manufacturer's Address: Via Anchieta, Km 31–Sao Bernardo do Campo, Sao Paulo, Brazil.
Date of Introduction: 1985.
Ingredients: Chocolate: Extract of soybeans, chocolate powder, corn oil, sugar.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Labels. 1988. May. Chocolate is Brown, yellow, orange, and black on white. Abstract illustration of two cocoa beans on front panel. "Natural. Vegetable protein. Tohnyu is a natural liquid food based on an extract of soybeans in various flavors. Contains all the riches of the soybean: Vegetable protein, vitamins, minerals, and linoleic acid. Tohnyu is free of cholesterol. Tohnyu is healthful and delicious. Keep refrigerated." By 1988, this was one of the most successful soyfoods in Brazil, with sales apparently growing rapidly. Total sales of Yakult beverages in Brazil (their fermented cow's milk and soymilk) grew from $13 million in 1984 to $46.2 million in 1987. Profits grew from a large loss in 1984 to 12% on sales net. Color brochure. 1988. Ta Com Tohnyu Ta Com Todo. "You get everything with soymilk."

4701. **Product Name:** [Soymilk {Sterilized in bottles}].
Foreign Name: Soja Milc. Renamed to Soja Trunk after 1-2 years.
Manufacturer's Name: Yamato Tofuhaus Sojaprodukte GmbH.
Manufacturer's Address: Moessingerstr. 41, D-7406 Moessingen 2-Belsen, West Germany. Phone: 07071-71094 or 95.
Date of Introduction: 1985.
Wt/Vol., Packaging, Price: Glass bottles.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Klaus Gaiser. 1990. March 12 and May 8. This soymilk product was launched in about 1985.

4702. **Product Name:** [Soya Milk].
Manufacturer's Name: Zuaitzo.
Manufacturer's Address: Calle Diputacion 5* Piso, Calle Correria 39 Bajo, 01001 Vitoria-Gasteiz, Spain. Phone: 945/28 86 30.
Date of Introduction: 1985.
New Product–Documentation: Soya Bluebook. 1985. p. 85; 1986. p. 104. Letter from Javier Arocena (on letterhead). 1986. Sept. 10.

4703. Ang, H.G.; Kwik, W.L.; Theng, C.Y. 1985. Development of soymilk–A review. *Food Chemistry* 17(4):235-50. [48 ref]
Address: 1-2. Chemistry Dep., National Univ. of Singapore, Kent Ridge, Singapore 0511.

4704. Batt, Eva. 1985. Eva Batt's vegan cookery. Leatherhead, Surrey, England: The Vegan Society. 144 p. Index. 22 cm.
• ***Summary:*** "A classic vegan cookbook recommended by the Vegan Society. Produced in co-operation with the Vegan Society, Ltd."

This edition is quite similar to the book with almost the same title published in 1985 by Thorsens. One major difference is: (1) The word "Plamil" is used instead of "vegetable milk." Chris Olivant, former head librarian at VSUK writes (e-mail of 24 March 2012): "Plamil was by far the most popular of the few soya milks available when the recipes were first written in 1973, and, of course, was a company with close links to the Vegan Society. Plamil, from 1965, always referred to their product as a 'plant milk' or 'vegetable milk', so it would appear that Thorsons decided that they didn't want to continue with the free advertising after the first edition of the book, and used the term 'vegetable milk' in a generic sense, even though by 1985 there were other products on the market specifically called 'soya milk.'

"The small amounts [3 tablespoons for a bowl of Muelsi, p. 28] must be because the use of the term Plamil specifically refers to their concentrated liquid milk product (if I remember correctly you had to add the same amount again of water to produce the correct strength), which they later dropped in favour of a fully made up product. Later readers may end up with disappointing dishes if they just use normal soya milks." Address: The Vegan Society, 47 Highlands Rd., UK.

4705. Batt, Eva. 1985. Eva Batt's vegan cooking. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. 144 p. Illust. (55 line drawings) by Margaret Leaman. Index. 22 cm.
• ***Summary:*** Across the bottom of the front cover: "The classic vegan cookbook. Recommended by The Vegan Society."

Contents: Acknowledgements. Introduction. Mueslis. Soups and small savouries. Salads and Salad dressings. Ways

with vegetables. Main meals. Small savouries. Savoury sauces, stuffings and spreads. Desserts and ice cream. Bread, cakes and buns. Pastry, biscuits and cookies. Miscellaneous. Useful information.

Soy related: In the Introduction are sections on "Soya" (p. 13-14) and "Textured Vegetable Protein (TVP)" (p. 17; several brands are available. "Most come in flavoured and unflavoured varieties, in chunks and mince." This nutritious food is low in fat, "high in protein, economical, easily stored, requires very little cooking, and no waste {bone, skin, gristle or fat} is involved").

Recipes include: Beauty breakfast (with "3 tablespoons vegetable milk" [Plantmilk concentrated soymilk], p. 28). Fresh fruit muesli (with vegetable milk, p. 29). Cream of onion soup (with "2 teaspoons soya flour" and "¼ pint {140 ml} undiluted concentrated vegetable milk," p. 34). Salad cream (with "1 tablespoon undiluted concentrated vegetable milk," p. 41). Tofu mayonnaise (with "4 oz {120 gm} silken tofu," p. 41). Basic nutmeat mixture (with "2 level teaspoons soya flour," p. 54). Curried textured vegetable protein (with "1½ oz {45 gm} unflavoured textured vegetable protein, mince or chunks," p. 55). Mushroom pie (with soya flour, p. 62). Fricassee with mushrooms (with "2 oz {55 gm} tvp mince," p. 63). Savoury steak (with "tvp slices" and "soy sauce," p. 66). Bengal curry (with "1 teaspoon soya sauce," p. 68). Pizza (with "10 oz {285 gm} cooked tvp or tin of soya beans," p. 75). Onion tart (with "Soya sauce," p. 76). Soya fritters (with soya flour, p. 79). Soya burgers (with "2 oz. tvp mince," p. 81). Soya crispie (with soya flour, p. 92). Plamil and banana shake (with "½ pint Plamil vegetable milk"). Soya 'cheese' (cream style) (with "4 oz soya flour," p. 122). Soya 'cheese' (cheddar style) (with "3½ oz Soyolk or other heat-treated soya flour," p. 122). Soya compote (with "2 oz. soya flakes"). Soya milk and/or soya flour are used in many baked goods (breads, cakes, and buns, etc., see p. 99-137).

Note: Eva has basically not yet realized how tofu, tempeh, miso and good-tasting soymilk can transform a vegan diet.

Previous edition published as *Eva Batt's Vegan Cookery,* the first major vegan cookbook ever published, with over 300 recipes, plus practical advice and nutritional information. The "corporate author" is given on OCLC as the Vegan Society.

Plamil Foods put this at the top of its list of recommended vegan cookbooks. "This cookery book is most comprehensive and advises on preparing nutritious appetising meals without meat, fish, eggs or dairy products. Essential nutrients from vegetable sources, planning meals for best food value, savoury dishes, snacks, desserts, cakes, bread, biscuits, sauces, garnishes, etc." Address: Vegan Society, UK.

4706. Brody, Jane E. 1985. Jane Brody's good food book: Living the high-carbohydrate way. New York & London: W.W. Norton & Co. xxviii + 700 p. Foreword by Pierre Franey. Illust. (line drawings by Ray Skibinski). Index. 24 cm.

• ***Summary:*** Advocates a diet with more complex carbohydrates and starches–including whole grains and beans.

The section titled "Soy, the queen of beans" has the following contents: Soy protein, the meat of the East. Soy oil, a boon to blood vessels. A selection of super soy foods: Tofu–fast track to soy nutrition, tempeh–a treat from Indonesia, soybean sprouts–growing nutrients, soy flour–a protein boost, textured vegetable protein, for more recipes.

"Soy, the Queen of beans. The soybean may be the single most important food produced in the world today. It is certainly the most versatile." A praiseful introduction to soy protein, soy oil, soy grits, flakes and flour, soy powder (isolate), soy milk, soy nuts, tofu, tempeh, soy sprouts, and textured vegetable protein... by one of America's most widely read food writers.

Dr. C.R. Sirtori and collaborators at the University of Milan found that a diet rich in soy protein is considerably more effective in lowering cholesterol than is the traditional low-fat "prudent" diets. Even when 500 milligrams of cholesterol–the equivalent of two large egg yolks–were added to the soy diet, blood cholesterol levels did not rise, the study showed.

On the inside rear dust jacket is a portrait photo of Jane Brody and a brief biography. Born in New York City, she received her B.S. degree from Cornell University [Ithaca, New York] and her M.S. in Journalism from the University of Wisconsin School of Journalism. She lives with her family in Brooklyn, New York.

Note: This book is not vegetarian; meat, fish and poultry are used extensively, but not as extensively as in many cookbooks. Address: Food writer for The New York Times.

4707. Brown, James T. 1985. Harvest of the sun: An illustrated history of Riverside County. Northridge, California: Windsor Publications, Inc. 248 p. See Loma Linda Foods. p. 188-89.

• ***Summary:*** "In the early 1900s Southern and Northern California Seventh-day Adventists were actively working in the areas of diet and health. Some of their efforts resulted in the formation of the Loma Linda Sanitarium and Loma Linda College of Medical Evangelists.

"Loma Linda Foods began in 1906, supplying bakery goods for the sanitarium, the college, and the small community of Loma Linda. It made a variety of baked stone-ground, whole-wheat breads, health cookies, and fruit crackers.

"Demands from residents for the bakery goods grew quickly. They liked the life-style and diet and came to rely on the company for its products. By 1907 increased production

required the construction of a separate building, a small white-frame structure located on Anderson Street across from the railroad station in Loma Linda.

"Now there was room for the production of foods similar to Dr. Kellogg's original line of foods as well as experimentation with new lines. Breakfast cereals, meat analogs from soybean and wheat, soy milk, and canned tofu were added, and bakery items became less important over the years.

"In 1933 the name was officially changed to Loma Linda Foods and by 1935 delivery routes brought the firm's products to stores within a 125-mile radius. Since working space was cramped and Loma Linda Foods wanted to concentrate on production of the breakfast cereal, Ruskets, the decision was made to relocate. The company opted for a site next to La Sierra Junior College near Riverside, with the promise of student employment cinching the move. In Nov. 1938 the first section of the present plant began operation."

"Before the relocation sales had totaled $60,000 a year. Sales increased rapidly during World War II, almost doubling during the first 6 months of 1943. Annual sales now total several million dollars..."

"Loma Linda Foods' association with Dr. Harry Miller provided a major impact on its growth. In January 1951 the company took over his International Nutrition Laboratories, Inc., in Mt. Vernon, Ohio. Dr. Miller donated the sales profit to form the International Nutrition Research Foundation at the Arlington plant near Riverside. Under his direction the foundation did much to establish soy foods as a scientifically recognized source of superior vegetable protein for human needs.

"By 1966 the company was producing six types of soy milk, which now accounts for 70% of its market. In the late 1960s Loma Linda Foods adopted a further innovation in the vegetarian protein foods field–spun protein fiber, which it now manufactures."

"From humble beginnings Loma Linda Foods has now grown to employ 250 people in its two plants and to carry a line of 70 products."

Large photos show: (1) The original building and staff in 1925; over the doorway is written "Loma Linda Food Co. Bread and Health Foods. Wholesale Only." (2) The present facility at 11503 Pierce Street, Riverside. Address: California.

4708. Carter, O.G. 1985. Breeding soybeans for special uses. In: R. Shibles, ed. 1985. World Soybean Research Conference III: Proceedings. Boulder, Colorado: Westview Press. xxiii + 1262 p. See p. 374-79. [27 ref]
• ***Summary:*** Contents: Oil quality. Protein: Tofu, soymilk. Oligosaccharides. Cookability. Anti-nutritional factors. Conclusions. Address: Asst. Principal, Hawkesbury Agricultural College, Richmond, New South Wales, 2753, Australia.

4709. Dr. Chung's Foods Company, Ltd. 1985. Dr. Chung's Foods Company, Ltd. Seoul, South Korea. 8 p. [Eng; Kor]
• ***Summary:*** The title page reads: "Chung's Foods offers health: The nutrition of soymilk and the expertise to produce it. We developed the system for producing nutritious soymilk for the first time in Korea and patented the invention." The company's main soymilk product is Vegemil. Photos show: (1) Chai-Won Chung M.D., Chairman of Dr. Chung's Foods Co., Ltd. (2) Vegemil in 180 ml bottles and 200 ml Tetra Brik cartons. Choco Woorean is a newly developed type of health food made from a mixture of undiluted Vegemil soymilk and chocolate powder. Apple Woorean is a similar product made with apple juice instead of chocolate. The company has two soymilk plants, the first at Singal, and the second at Chung Joo. The latter is one of the largest and most modern in the world. The head office is in Seoul, Korea. Address: Seoul, South Korea.

4710. Findlater, Evelyn. 1985. Making your own home proteins: Tofu, tempeh, soft cheeses, yoghurt and sprouted seeds. London: Century Publishing. 151 p. Illust. Index. 20 cm.
• ***Summary:*** Contents: The soya dairy (The soya bean, products of the soya bean {soya flour, shoyu and tamari, miso, cooking with miso}, soya milk, how to make it at home, recipes, tofu, silken tofu, yuba, soya milk yoghurt, soya milk yoghurt cheese, tempeh). Gluten (wheat protein). Goat's milk dairy produce. Sprouting beans, grains and seeds (beans: aduki, alphatoco, chick peas, flageolet, lentils, mung beans, soya beans).

A portrait photo of the author appears on the front cover; a brief biography is found on the first page and in the introduction. Address: England.

4711. Harper, Judson M.; Jansen, G. Richard. 1985. Production of nutritious precooked foods in developing countries by low-cost extrusion technology. *Food Reviews International* 1(1):27-97. [53 ref]
• ***Summary:*** Contents: Introduction: Importance of weaning foods, centrally processed weaning foods, transition from imported to locally processed weaning foods. Manufacturing alternatives: Extrusion processing, roller drum drying process, spray drying process, baked products line, milling process, selection of alternative processes, production capacity range, capital costs, operating costs, type of weaning food product, type of packaging, local equipment, energy, skill requirements, sanitation requirements, summary. Capabilities and limitations of LECs: Characteristics of low-cost extrusion cookers, Brady extruder (M&N Distributors, Torrance, California; or CIATECH, Chihuahua, Mexico), Insta-Pro extruder (Div. of Triple "F" Feeds, Des Moines, Iowa), Anderson extruder (Cleveland, Ohio), summary of LEC characteristics. Cost associated with LEC plants:

Elements of a LEC plant, plant costs, manufacturing costs, project planning and implementation, preliminary study, project implementation. Cereal/legume blends: Specifications, energy, protein, dietary fiber, vitamins and minerals, ingredients, storage stability, calorie density, protein quality evaluation (corn/soy blends, corn/sorghum blends with cottonseed), metabolic studies in human infants and preschool children (extruded corn/soy blends, extruded sorghum). Full-fat soy flour: Storage studies, protein nutritional value, rat growth evaluation, baking study, potential utility of extrusion processed full-fat soy flour. Applications in developing countries: Sri Lanka (1976, Thriposha). Costa Rica (1976, 1979, Frescorchata). Tanzania (May 1978, Lisha). Guyana (1979, Cerex). Mexico (CIATECH 1978, many products), other commercial applications (Pro-Nutre in San Jose, Costa Rica; Maisoy in Santa Cruz, Bolivia), miscellaneous developments (INCAP in Guatemala, Meals for Millions in Korea, PINFST in the Philippines, Thailand, Leche Arroz in Ecuador {an extruded mixture of ground broken rice and whole soy}). Technology transfer (Colorado State University). Discussion. Summary. Sources of funding for this publication.

Figures: (1) Graph of infant mortality rate vs. duration of breast feeding for 19 countries (mostly developing countries). In general, the longer the breast feeding, the greater the infant mortality. (2) Extruder, showing rotating screw which forces product through a discharge die. (3) Typical extrusion process for food production (from storage bin to packaging). (4) Schematic of roller drum drying process for food production. (5) Typical spray drying process for weaning food production. (6) Systematic of baking line to make biscuits. (7) Systematic of simple missing process. (8) Cross sectional schematic of Brady extruder. (9) Photo of Insta-Pro 500 extruder. (10) Anderson extruder showing braker bolts, water / steam injectors, and face cutter. (11) Diagram of sequential processing operations of a LEC processing plant. (12) PERT chart showing key steps in feasibility study to establish essential process parameters. (13) PERT chart showing steps necessary to complete a central processing facility for weaning foods. (14) Viscosity of uncooked or cooked gruels made from raw dehulled corn or dehulled corn extruded from a Brady extruder at 149ºC. (15) Inside Thriposha LEC plant (in Sri Lanka; LEC started in 1976). (16) Four labels of packaged Thriposha products. (17) Outside front of Costa Rica LEC plant. (18) Four packages of Lisha baby food (Tanzania). (19) Four plastic laminated bags used to package Cerex in Guyana.

Also contains 18 tables–many related to soy.

Note 1. The LEC project in Korea (p. 91) uses a lower capacity extruder (less than 100 kg/hour) designed by the Meals for Millions Foundation (MFM) and constructed by the Korean Institute of Science and Technology (KIST). This extruder is made from parts that are easily available and consists of a screw 6.35 cm in diameter and 63.5 cm long driven by 22.3 kW (30 HP) electrical motor. A nutritious snack has been made for the Wonseong County Comprehensive Nutrition Program using the MFM LEC (see Cheigh 1984).

Note 2. This is the earliest and only document seen (Jan. 2011) that mentions "Leche Arroz." It appears to be a beverage resembling a mixture of rice milk and soymilk, made from rice that might otherwise go to waste. Good idea! Address: Colorado State Univ., Fort Collins, Colorado.

4712. Hieatt, Constance B.; Butler, Sharon. eds. 1985. Curye on Inglysch: English culinary manuscripts of the fourteenth century (including the *Forme of Cury*). London, New York, and Toronto: Published for the Early English Text Society by the Oxford University Press. vi + 224 p. Illust. Index. 23 cm. [61 ref]

• ***Summary:*** Contents: Table of manuscript sigla [signs, abbreviations, letters, or characters standing for words in ancient manuscripts]. Introduction: The fourteenth-century menu, fourteenth-century recipes: Historical development and characteristics, manuscript sources (Parts I-V), variants and editorial principles. Select bibliography. Fourteenth-century menus from MS Cosin v iii 11: Part I: Diuersa Cibaria (63 recipes). Part II: Dieursa Servisa (92 recipes). Part III: Utilis Coquinario (37 recipes). Part IV: The Forme of Cury (205 recipes). Part V: Goud Kokery (35 recipes). Appendix A: Manuscripts cited but not given sigla. Appendix B: Chart of recipes in *The Forme of Cury.* Index and glossary.

This is one of the best books on medieval English cooking. The editors do not translate from Middle English but they do have a detailed glossary and index at the end.

In Part III, Utilis Coquinaro (P. 81+) we read: "For to make crem & botere of almoundes" (p. 84). "Botere of almand melk" (p. 84).

In Part IV, The Forme of Cury (p. 93+) we find: "almaund melke" (p. 100). "with a lytell almaund mylke" (p. 102). "Draw an almaunde mylke: (p. 108). On page 117 are recipes for: "87 Creme of almaundes. 88 Grewel of almaundes. 89 Iowtes of almaund mylke [Iowtes are chopped herbs and greens]. 90 Cawdel of almaund mylk" [Cawdel is a smoothly thickened sauce or soup]. Also: "almaund mylke" (p. 123).

In the Index and glossary are entries for: Aftermelk. Alma(u)nd and almaund mylke. Blanc / blank, with several references to almond milk.

Note: Charles Perry (2001/05) says this is the earliest English-language book he has seen that mentions almond milk. This book contains a number of early recipe collections including an edition of the Middle-English text of *The Forme of Cury.* The word "Cury" means "cookery." Address: 1. Univ. of Western Ontario; 2. Univ. of Toronto. Both: Canada.

W.D. 1985. Soyabean (*Glycine max* (L.) Merrill). In: R.J. Summerfield and E.H. Roberts, eds. 1985. Grain Legume Crops. London: Collins. xvi + 859 p. See p. 391-432. Illust. Index. 24 cm. [192 ref]

• ***Summary:*** Contents: Introduction: History, current status and future projections. Principal economic yield and uses of crop products. Principal farming systems. Botanical and agronomic features: Symbiotic nitrogen fixation potential. Principal limitations to production and yield: Developing countries, developed countries. Fertiliser requirements. Quality of seed constituents. Germplasm resources. Principal breeding strategies: Adaptation to new geographic areas, breeding methodology, breeding objectives, seed quality, pest and disease tolerances, current trends in soyabean breeding. Avenues of communication among researchers (INTSOY, AVDRC, IITA, FAO). Prospects for larger and more stable yields.

Tables: (1) Area (1000 ha), yield (kg per ha), and production (1000 tonnes) of soyabeans from 1969-71 to 1982. (2) Maturity durations and productivity potentials of soyabeans in selected countries. (3) *Glycine* species collections around the world. (4) Sources of resistance among soyabeans to selected insect pests. (5) Sources of resistance among soyabeans to selected diseases.

Table 9 shows that there are soybean germplasm collections in 15 countries. This table has 4 columns: Country, location (city), curator, and number of accessions. AVRDC in Taiwan has the largest germplasm collection in one location (10,400 accessions, Tainan), followed by USA (9,648, Illinois and Mississippi), India (4,000, Pantnagar; 1,800 Amravati), Japan (3,541, Tsukuba; 200, Morioka), USSR (3,000, Leningrad), China (3,000 Jilin; 3,000 Hubei; 2,930 Shadong [sic, Shandong {W.-G. Shantung}]; 2,500 Beijing; 960 Heilungjiang [Heilongjiang]). Also: Australia 400, France 500, Nigeria 1,300, Indonesia 600, South Korea 2,833, North Korea 300, South Africa 600, Sweden 1,200, and Thailand 1,686. Address: 1&3. Univ. of Guelph, Dep. of Crop Science, Guelph, Ontario N1G 2W1, Canada; 2. Asian Vegetable Research and Development Centre (AVRDC), PO Box 42, Shanhua, Tainan 741, Taiwan, Republic of China.

4714. *IITA Research Highlights.* 1985. On-farm performance of a new soybean and the use of soybeans in treatment of protein malnutrition in infants. p. 6-8. For the year 1984.

• ***Summary:*** A new soybean line–TGx 536-02D–has been developed by IITA to meet the increasing demands of farmers in the central and northern Guinea savannas of Nigeria, which are outside the traditional soybean growing areas. This new line, with a maturity of 105 to 110 days, is higher yielding and earlier maturing than the widely grown Malayan variety, which was introduced into Nigeria in the early 1900s and which matures in about 140 days.

"An expanding market for soybean is due largely to the popularity of soybeans to prepare 'dawadawa,' a fermented paste used as a flavoring. There is also a growing interest in using soybean milk and flour as an important source of protein for feeding babies and young children."

"An outstanding example of the promotion and use of soybeans to combat infant protein malnutrition (kwashiorkor) in a Nigerian rural area was recently brought to the attention of IITA scientists. A children's home near Ogbomosho specializes in treating infants with severe symptoms of malnutrition, e.g. swollen bellies and skeletal limbs... The infants are admitted to the children's home with their mother or guardians who prepare all the food for themselves and their babies under the supervision of the staff. Soybeans are prepared as a milk substitute by boiling, grinding, straining, and recooking this liquid. This "milk" contains about 35 gm of protein per serving. It is especially important because about 40% of the infant 'patients' are intolerant to cow's milk. Also, soybeans are prepared as a wet-milled full-fat flour added to a cereal pap. A normal ration for a one to two year-old child is the equivalent of about 200 gm of whole soybeans per day at a cost of approximately 20 cents (U.S.).

"Not only are staff members of the children's home concerned with the infants brought to them, but they visit villages near Ogbomosho to promote the cultivation and use of soybeans and teach women how to prepare them in local dishes. Several farmers–both men and women–in the area are now growing the crop and soybeans are being sold in local markets.

"Women in other African countries including Ghana, Cameroon, Uganda, Rwanda, and Zaire, are also using soybeans in local dishes. A village with small-scale equipment can provide soybean oil and meal for partially defatted soybean flour."

Photos show: Nigerian mothers preparing soybean milk for their babies at the children's home near Ogbomosho, Nigeria. A mother bottle-feeding soybean milk to her baby. A mother preparing soybean/cereal pap for her infant. Address: Ibadan, Nigeria.

4715. Johnson, Dale W. 1985. Nonfood uses of soy protein products. In: R. Shibles, ed. 1985. World Soybean Research Conference III: Proceedings. Boulder, Colorado: Westview Press. xxiii + 1262 p. See p. 175-81. [3 ref]

• ***Summary:*** "In the past, cracked, dehulled beans were processed to make a full fat soy flour, which was used mainly for human food, although some was used in calf milk replacers."

In the early 1960s "the industrial use of soy flour in the U.S. was in the range of 50 to 55 thousand tons per year in plywood. It is estimated that the current use is in the range of 7,000 tons annually.

"Industrial isolated soy protein was being produced at the rate of 18 to 20 thousand tons per year in the 1960s and increased to about 27 thousand tons per year in the early 1970s. Since that time, the largest producer of industrial soy

proteins shut down its operation, so at present, there is only one producer of industrial isolated soy protein. It is estimated that the current production of industrial isolated soy protein is in the range of 9,000 tons annually...

"It is estimated that the production of textured soy flour products could be in the range of 80 to 100 thousand tons per year... a substantial amount of the textured soy flour products are used in canned pet food, primarily dog food, but there are no accurate figures available as to the amounts going into pet foods." An estimated usage is around 0.8 to 1.0 million tons of 50% soybean meal.

A table of "Commercial applications for defatted soy flour" includes: Pet foods (dog, cat, fish, bird), calf and other milk replacers, feed pelleting, fermentation, bee feed, tanning, joint cements, wallboard, mortar cement, asphalt, sprays-insecticide, pesticide, pan grease, wall paper coating, plywood glues, putties and metal polishing. A table of "Commercial applications for industrial isolated soy protein" includes: Paper coating, joint cement, detergent products, water base paints, fire fighting foam, wall paper coating, shoe polish, fiber board, textiles, paper board laminating, foamed concrete, putties, printing inks and spun fibers.

"In fermentation, a significant amount of soy flour is used as one of the ingredients in the media for growing the organisms that produce the desired products. The major use of soy products is in the 'mycin' type fermentation... It is estimated that the use in fermentation is several thousand tons per year. At one time there was some soy flour used in producing beer, where the soy served as a nutrient for better yeast growth... Defatted flour is used for making a diet to feed bees for honey production...

"Industrial isolated soy proteins differ from edible isolated soy proteins in that industrial soy protein undergoes hydrolysis during processing. The degree of hydrolysis will determine the characteristics of the industrial soy protein. Usually, the criterion for determining the degree of hydrolysis is viscosity."

A wall washing detergent was the first commercial production of industrial isolated soy protein, more than 40 years ago. "The product is still on the market, but other compositions are now used rather than soy protein.

"At one time there was a considerable amount of soy protein used in water-based paints, but this use has also disappeared due to the developments of more useful polymers. During World War II most of the industrial isolated protein being produced was used for making fire fighting foam for the Armed Services.

"At one time a very high percentage of wall paper was coated using isolated soy protein, but again, other polymers have replaced soy protein to a considerable extent...

"The only significant nonfood use of soy protein concentrates is in milk replacer products for calves and other young animals. It is estimated that as much as 40% of the soy protein concentrate produced goes for this application. Total production of soy protein concentrate is estimated to be in the range of 40,000 to 50,000 tons per year... The type of product that is used is that produced by an aqueous alcohol extraction process... Combined nonfood and food use of soybean meal is about 10% of the total meal produced, with 90% being used in animal feed." Address: Food Ingredients (Minnesota), Inc., 2121 Toledo Ave. No., Golden Valley, MN 55422.

• ***Summary:*** An attractive cookbooklet. Contents: Introduction. Green seeded soybean recipes. Yellow soybean recipes. Making tofu at home. Tofu sweets. Soymilk recipes. Miso soups. Soy granule recipes. Soy granule sweets. TVP recipes. Soy burgers (*Sojastangerln*). Address: Vienna, Austria.

4718. Kolar, C.W.; Richert, S.H.; Decker, C.D.; Steinke, F.H.; Vander Zanden, R.J. 1985. Isolated soy protein. In: A.M. Altschul and H.L. Wilcke, eds. 1985. New Protein Foods. Vol. 5. Seed Storage Proteins. New York: Academic Press. xxi + 474 p. See p. 260-99. Chap. 8. [88 ref]
• ***Summary:*** Contents: Introduction. History. Manufacture of isolated soy proteins. Manufacture of structured isolated soy proteins. Research in soy protein isolation. Composition of isolated soy proteins. Physical and functional properties. Nutrition factors. Meat, poultry, and seafood applications. Infant formulas. Dairy-type applications. Bakery applications. The future of isolated soy protein. Address: Ralston Purina Co. St. Louis, Missouri.

4719. Kushi, Aveline; Kushi, Michio. 1985. Macrobiotic diet. Edited by Alex Jack. Tokyo and New York: Japan Publications. 288 p. Illust. Index. 26 cm. [74 ref]
• ***Summary:*** This is perhaps the best, most comprehensive book seen to date by Aveline and Michio Kushi about the macrobiotic diet. The rear cover states:

"Humanity has been continuously degenerating in spite of scientific and technological achievements. This degeneration is reflected in physical disorders, psychological disorders, and general distrust in human relations. Since diet affects our physical and psychological functions, macrobiotics strives to change our health and behavior through a proper diet in harmony with the environment in which we live.

"This book is a basic and readable presentation of

the principles behind the macrobiotic diet. It explains the foodstuffs that comprise the diet, appropriate cooking techniques, proper attitudes toward food and its preparation, and applications of the diet for weight loss, increased energy, relief from and prevention of sickness, and encouragement of psychological health, spiritual development and social stability. Dietary adjustments and modifications are given for men, women, and children, as well as differing climates, levels of activity, and ages."

Macrobiotics, which originated in Japan, has done much to introduce Westerners to soyfoods. This book is an excellent example: The chapter on "Soup" has a long section on miso soup (p. 99-101, 104-05) and the main varieties of miso: Barley miso, soybean miso (Hatcho miso), brown rice miso, light misos, and natto miso (a spicy condiment not usually used in soups).

In the chapter on "Vegetables," the section on "Pickling" has subsections (p. 118-19) on "Tamari soy sauce pickles" and "Miso pickles."

In the chapter on "Beans and bean products" is a long section on "Soybeans" (p. 141-49) which includes an introduction (discusses the "vegetable soybean" vs. "field soybean") and descriptions of miso, natto, okara, soy flour, soy grits, soy milk, soy oil, tamari soy sauce, tempeh, tofu (incl. nigari, oden, Yu-dofu, aburage, inari-zushi), viilia (somewhat like soy yogurt from Finland), and yuba.

The subsection on "Soybeans" (for example, p. 147) states: "Yellow soybeans are hard and require thorough cooking. They should be soaked overnight with a strip of kombu and then pressure-cooked for a short time prior to boiling. Properly cooked, yellow soybeans are very soft and delicious and give no problems with gas. A delicious dish called Colorful Soybean Casserole is made from yellow soybeans, kombu, shiitake mushroom, lotus root, dried tofu, daikon, carrot, burdock, and celery. The yellow variety also goes very well served with hijiki sea vegetables. Black soybeans, also known as Japanese black beans, have a strong, delicious taste. They may be prepared plain or cooked with rice. To sweeten black soybeans, a little barley malt, rice syrup, or mirin is often added. Black soybeans are usually cleaned by rubbing with a damp towel to prevent their skins from falling off under water. During cooking, some of the skins from these beans may float to the surface and should be skimmed off. Foam also arises and needs to be discarded. Yellow soybeans are nice seasoned during cooking with a little tamari soy sauce or miso. Black soybeans are usually seasoned with tamari soy sauce."

The chapter on "Snacks and desserts" has a good section on Amazaké (p. 190, 196) and also notes: "In the West, the introduction of tofu has resulted in the creation of many tofu-based desserts such as tofu cheesecake, tofu ice cream, and tofu whip topping. In the Far East, however, tofu is not traditionally combined with barley malt, rice syrup, or other sweetener. It is recognized that tofu's cooling qualities are naturally balanced by a salty taste, not a sweet one. As a result, tofu is customarily cooked and served warm, rather than prepared raw and eaten cold, except in special cases for cooling and refreshment, usually in the hot summer. The macrobiotic diet does not encourage the use of tofu in sweetened desserts except for those in transition from dishes made with dairy food and sugar."

The chapter on "Salt, oil, and other seasonings" includes sections on tamari soy sauce (p. 203-04, 209), miso (p. 204, 210-11), and soybean oil (p. 207).

The chapter on "Dressings, sauces, garnishes, and condiments" includes sections on "Dressings" (p. 215-16, with tamari soy sauce dressings, umeboshi dressings, miso dressings, tofu dressings, sesame dressings), "Condiments" (p. 216-17, with gomashio or sesame salt, sea vegetable powders, tekka, umeboshi plums, miso with scallions or onions, etc.).

The chapter on "Beverages" has sections on amazake and soy milk (if naturally processed, good for those in transition from cow's milk and other dairy foods).

This book also contains a wealth of information (see the index) on such varied foods as azuki beans, barley malt, brown rice, kuzu, sea vegetables (many species), sesame seeds and sesame oil, umeboshi, etc.

Note: The macrobiotic diet is not vegetarian; it allows the inclusion of fish and seafood (see index). Address: Brookline and Becket, Massachusetts.

4720. Matsuura, M. 1985. [Improvement of chalkiness present in soy milk]. In: Development of New Protein Foods. Yokohama: Tekunoai Press. See p. 315-24. [Jap]*

• ***Summary:*** A bell-shaped graph shows the effect of the pH during soaking on the activities of Beta-glucosidase. The activities are highest at pH 6, and lowest at the extreme pH values of 3.5 and 8.5.

There are two types of Beta-glucosidases in soybeans, and they tend to produce chalky flavors. Beta-glucosidase A is active in the pH range 4-7, has an optimum pH of 5.0, has an optimum temperature of 40-45ºC, and is inactivated by heating at pH 5.0 at 60ºC for 5 minutes.

Beta-glucosidase B is active in the pH range 4-7, has an optimum pH of 5.0, has an optimum temperature of 45-50ºC, and is inactivated by heating at pH 5.0 at 60ºC for 5 minutes.

4721. McDougall, John A. 1985. Osteoporosis, calcium, and protein (Document part). In: J. McDougall. 1985. McDougall's Medicine: A Challenging Second Opinion. New Century Publishers, Inc. 220 Old New Brunswick Road, Piscataway, NJ 08854. xi + 308 p. See p. 73-77. [107* ref]

• ***Summary:*** "Osteoporosis is a disorder related to aging, which is characterized by loss of enough bone minerals so that, even with little force, one or more bones can be broken. The more bone material that is lost, the greater is the risk of

breaking your bones. Such a break is known as a fracture. Fractures due to osteoporosis are most common in the wrists, the backbone, and the hips...” Osteoporosis is found most often in women after menopause, when the ovaries’ production of female hormones, estrogens, gradually ceases. Estrogens slow the rate of bone breakdown. In American women over age sixty-five, 35-40% have suffered one or more osteoporosis-related fractures. In men, osteoporosis is less severe and rarely begins to appear before age 75. There is a high incidence of osteoporosis in Caucasian American women and a low incidence in Asians and African blacks. Cultural factors affecting osteoporosis include smoking tobacco, drinking alcohol and caffeine, lack of exercise, and diet. Of the various dietary factors, calcium and protein are the most important. Worldwide, most people consume 200-500 mg/day of calcium. The WHO recommendation for minimum intake for adults in 400-500 mg/day. The Food and Nutrition Board recommendation for the USA is 800 mg. “In most published studies about calcium, the correlation between dietary calcium intake and bone density has been weak or nonexistent.” In other words, people who consume more calcium have not been found to develop stronger bones. “If we examine the worldwide distribution of cases of osteoporosis today [as measured by hip fractures], we are struck by the fact that this disease is most common in countries where dairy products and calcium supplements are consumed in the largest quantities: The USA, Sweden, Finland, and the UK. The occurrence of osteoporosis is rare in Asian and African countries, where milk is not consumed because it is not available or because of a very high incidence of lactose intolerance... Worldwide, the incidence of osteoporosis has a direct correlation to the total protein, and especially the animal protein, intake of a population of people. The more animal protein consumed by the people, the more the osteoporosis in the population. Plant foods are also good sources of calcium, though fiber, oxylates, and phytates may prevent some of this from being absorbed. Yet this is not much of a problem. All natural diets, including purely vegetarian diets, contain adequate calcium. Osteoporosis is not caused by a deficiency of calcium.

“Proteins in excess cause the body to lose large amounts of calcium and other minerals, which are excreted through the kidneys into the urine... This creates a condition called a negative calcium balance.” At most, an adult needs no more than 20 grams of proteins a day, or about two-thirds of an ounce. These proteins are needed to grow hair, replace skin, produce hormones, form tissue cells, and for many other uses. Most Americans consume 105 to 120 grams or more of proteins each day. What happens to the excess 100 grams of proteins? They cannot be stored in the form of body fats. Most of the proteins we eat are broken down into their component amino acids, which pass through the intestinal wall into the bloodstream. Once they enter the blood, some of the amino acids are used for the body’s various needs, and some of the excess is metabolized in the liver into urea, a powerful diuretic which promotes urination and loss of body water. When urea and amino acids enter the kidneys on the way to elimination in urine, they cause not only the loss of excess water but also the excretion of large amounts of minerals. One of the most important minerals lost in that way is calcium. The more proteins that are consumed, the greater is the loss of calcium. Researchers estimate that doubling the amount of proteins in the diet will increase by 50% the amount of calcium lost in the urine. “The calcium-losing effect of protein on the human body is not an area of controversy in scientific circles. The many studies performed during the past 55 years consistently show that the most important dietary change that we can make if we want to create a positive calcium balance that will keep our bones solid is to decrease the amount of proteins we eat each day.” Adding more calcium to the diet will not compensate for the loss caused by excess protein intake.

In addition to the diuretic effect, there are at least three other mechanisms that cause proteins to decrease calcium absorption: 1. Some amino acids prevent the tubules of the kidneys from reabsorbing calcium that enters the tubules from the bloodstream; that soluble calcium is lost in the urine; 2. Proteins and amino acids are weak acids. They must be neutralized to prevent them from harming the body. To accomplish this bone material must be dissolved to provide calcium and phosphates. The alkaline phosphate neutralizes the amino acids and the freed calcium ions are available to be excreted by the kidneys; 3. Of the 20 common amino acids, 3 contain sulfur, and these have a powerful calcium-losing effect on the kidneys. Animal proteins have an especially high content of sulfur-containing amino acids, such as methionine and cystine. In 1930 the first study was published that showed that in humans a diet with a high meat content caused the loss of large amounts of calcium and a negative calcium balance. Eskimos, for example, eat large amounts of animal proteins and have very weak bones.

Exercise is another very important factor in maintaining strong bones. Address: San Rafael, California (1/88).

4722. McKeown, Thomas. 1985. Food, infection, and population. In: R.I. Rotberg and T.K. Rabb, eds. 1985. Hunger and History: The Impact of Changing Food Production and Consumption Patterns on Society. New York and London: Cambridge Univ. Press. 336 p. See p. 29-49. [16 ref]

• ***Summary:*** “The rise in population was due to the decline in mortality which led to the increase of life expectancy. Mortality declined essentially because of a reduction in deaths from infectious diseases. With the possible exceptions of starvation and infanticide, a decline in non-communicable causes of death made no substantial contribution to the improvement in health before the twentieth century. The central problem in interpreting the modern changes in

health and population size is the explanation for the decline of deaths due to infectious disease. The earliest and most important reason for the decline in infectious diseases was an improvement in nutrition which resulted from advances in agriculture and transportation...

"Second only to nutritional influences over time, and probably in importance, were the improvements in hygiene introduced progressively from the second half of the nineteenth century. They were the main reasons for the decline in water- and food-borne diseases... In the nineteenth century there were no great improvements in working and living conditions, and the main advances were in the purification of water and in sewage disposal (which coincided with the decrease of deaths from intestinal infections). From about 1900 these measures were greatly extended by food hygiene, affecting most critically the quality of milk. Before that time it was not possible to protect milk from micro-organisms, and the rapid fall in the number of deaths from gastroenteritis, which contributed substantially to the decline in infant mortality, was due to the introduction of sterilization, bottling, and safe transportation of milk... The influence of immunization... contributed little to the reduction of deaths from infectious diseases before 1935...

"The other reason for the modern transformation in health was the change in reproductive behavior which led to a decline in the birth rate. The significance of this change can hardly be exaggerated... The reduction in the birth rate was the essential complement without which the advances, like those associated with the first agricultural revolution, would soon have been reversed.

"It would be unwise to estimate numerically the contribution that different influences have made to the decline in mortality and population growth. Nevertheless, it is possible to draw some general conclusions concerning the main influences during the past three centuries.

"First, an improvement in nutrition exerted the earliest and, over the whole period since about 1700, the most important influence. Second, hygienic measures were probably responsible for at least a fifth of the reduction in the death rate between the mid-nineteenth century and the present day. This is the proportion of the decline which was associated with water- and food-borne diseases. Third, with the exception of vaccination against smallpox, the contribution of which was small, the influence of immunization and therapy was delayed until the twentieth century and had little effect on national mortality trends before the introduction of the sulphonamides in 1935. Since that time immunization and therapy have not been the only nor even the most important influences. Fourth, the change in reproductive practices which led to a decline in the birth rate was very important, since it ensured that the improvement in health brought about by other means was not reversed by rising numbers." Address: Prof. Emeritus of Social Medicine at the Univ. of Birmingham.

4723. Mennonite Central Committee. 1985. Soybean recipes (Brochure). Box 785, Dhaka-2 [Dacca-2], Bangladesh. 4 p. [Eng; Hin]

• ***Summary:*** All recipes are homemade: Roasted soynuts. Soybean flour: Soya satu, Soya khichuri, soya dal, soya chatni [chutney], soya–sweet pumpkin curry, soya-potato curry, soya peaju, soya patora, soya mistano, soya milk, soya yogurt, soya halua, soya khir.

The printed version is in Hindi, the mimeographed one in English.

4724. Nabben, Alexander. 1985. Soja-Kueche: Vielseitig und gesund [Soya cookery: Versatile and healthful]. Schaafheim, West Germany: Pala Verlag. 144 p. Illust. Index. 21 cm. [Ger]

• ***Summary:*** Contents: Soya, the wonderbean (*die Wunderbohne*). A cultural history of the soybean. A little soybean botany. Soya is versatile. The world market and world hunger. Health through proper nutrition and diet. Product types and buying tips. Recipes. About the author (autobiographical, with photo; he was born in 1953 in Viersen. Since 1978 he has worked in a whole-grain bakery, a soya kitchen, and in a vegetarian restaurant in Munich).

This vegan cookbook contains a large number of tofu and tempeh recipes, as well as recipes for most of the other types of soyfoods. Note the following German terms: *Ganze Sojabohnen* (*getrocknete gelbe Sojabohnen*) = whole dry soybeans. *Vollsojamehl* = Whole soy flour. *Sojasauce* = soy sauce. *Miso* (*Sojapaste*) = miso. *Okara* (*Sojakleie*) = okara. *Tofu* (*Sojaquark oder Sojakäse*) = tofu. *Tempeh* (*Soja-"Brie"*) = Tempeh.

On the last page of the book (p. 144) is an advertisement for Morgenland Naturkost, located at: Auf dem Anger 2, 3410 Northeim 19, West Germany. Phone: 05551-64592. They offer tofu and tofu dishes, seitan and seitan products, and utensils for the production of tofu and tempeh.

Apparently a second edition or printing appeared in 1988 (ISBN 3-923176-35-x). Address: Morgenland Naturkost, Auf dem Anger 2, 3440 Northeim 19, West Germany.

4725. Ontario Soya-Bean Growers' Marketing Board. 1985. Soybeans: Nature's miracle–teaching unit. Chatham, Ontario, Canada: OSGMB. 33 p. Undated. 28 cm.

• ***Summary:*** This interesting portfolio of materials is designed to teach children in Ontario, Canada, about the growth development of a soybean from seed to mature plant, soybean cultivation, soybean processing and products, the importance of soybeans to Ontario's economy, and the Ontario Soya-Bean Growers' Marketing Board.

Contents: Introduction to teacher's unit. 1. From seed to pod: A brief history of soybeans in Canada, biology of the

soybean seed, its germination and seedling growth, soybean nodules and rhizobia bacteria, parts of a young soybean plant, reproductive stages from flowering to maturity, corn heat units, tillage, word scramble.

2. Soybeans–Nature's miracle: A brief history of soybean utilization, ways that soybeans are used, soy oil, meal and soyfoods, recipes, word search. 3. Imports and exports: Importance of soybeans to the economy of Canada and Ontario, how soybeans get to market, The Ontario Soya-Bean Growers' Marketing Board.

A table on page 20 shows "Soymeal consumption by Ontario's livestock and poultry." Hogs consume 45% of the total (the total is 503,000 tonnes), poultry 34%, dairy cattle 20%, and beef cattle 1%. Page 22 notes that the bulk of Ontario's soybean exports (77%) are sold to East Asia–especially Japan, Hong Kong, Singapore, Malaysia, Indonesia, and Korea. Soyfoods are listed and discussed in a positive way, with recipes for: Bran muffins (with soy flour and soy oil). Tofamole (tofu guacamole). Tofu fruit pudding. Tofu shake.

Note: This is the earliest English-language document seen (Dec. 2003) that contains the term "Tofu shake."

The three largest farm crops in Ontario in terms of total area are hay (1,050,000 ha), grain corn (902,000 ha), and soybeans (425,000 ha). Address: Chatham, ONT, Canada.

• ***Summary:*** This gourmet vegan cookbook, containing over 250 recipes, uses many soyfoods in its recipes: Tofu, soy sprouts, soymilk (Plamil), miso, soy flour (Soyolk), vegan cheese (nonfermented, made with Soyolk soy flour, margarine, and yeast extract), tofu ice cream, and whole dry soybeans. Address: England.

4730. Skinner, Sherlyn; Martens, Richard A. 1985. The milk sugar dilemma: Living with lactose intolerance. Medi-Ed Press, P.O. Box 957, East Lansing, MI 48823. 193 p. [13 ref]
• ***Summary:*** A continuation of high lactase activity to adulthood is limited to persons of northern and western European ancestry and some nomadic tribes of Africa. The approximate incidence of lactose intolerance in various ethnic groups is as follows: African blacks 97-100%, Dravidian Indians (India) 95-100%, Orientals 90-100%, North American Indians 80-90%, Central/South American Indians 70-90%, Mexican Americans 70-80%, North American blacks 70-75%, Mediterraneans 60-90%, Jews 60-80%, Central & Northern Indians (India), 25-65%, Middle Europeans 10-20%, North American Caucasians 7-15%, Northwestern Indians (India/Pakistan) 3-15%, Northern Europeans 1-5%.

Contents: About the authors (autobiographical). Foreword. Preface. 1. Lactose intolerance: A case history, the origin of lactose intolerance, congenital lactose intolerance, primary acquired lactose intolerance, incidence of lactose intolerance, secondary lactose intolerance, other case examples, why did lactose intolerance appear, symptoms of lactose intolerance, diagnosis of lactose intolerance, the trouble with tests, the do-it-yourself test (lactose challenge, lactose-free test), conclusion, counter-point, living with lactose intolerance. 2. Digestion. 3. Good nutrition without lactose. 4. The lactose-restricted diet. 5. Setting your lactose level. 6. Shopping for foods. 7. Dining away from home. 8. Lactose-free food products. 9. Recipes. 10. Appendices.

Soyfoods that are mentioned include Isomil, Nursoy, Prosobee, Soyagen and Soyamel (made by Worthington Foods), Tofutti, Tofree. Pages 90-91 discuss soymilk. Address: 1. Nutritional consultant, Gastroenterology Associates, East Lansing, Michigan; 2. Clinical gastroenterologist (M.D.), East Lansing, Michigan.

• ***Summary:*** Describes in detail this compact, fully-automatic soymilk plant, 2.6 by 1.2 by 1.55 meters, capable of producing 250 liters/hour of fluid soymilk. A large black-and-white photo shows the stainless steel unit, with a conical hopper and contral panel on top. Electric power: 16 kilowatts. By August 1987 this plant sold for about US$135,000. Address: Thonon-Les-Bains Cedex, France. Phone: 50 26 23 32.

4737. **Product Name:** Light Foods Soymilk.
Manufacturer's Name: Light Foods.
Manufacturer's Address: 37 Richards St., Hindmarsh, SA 5007, Australia.
Date of Introduction: 1985?

4738. **Product Name:** [Nicky Sari Kedelai (Soymilk)].
Foreign Name: Nicky Sari Kedelai.
Manufacturer's Address: Indonesia.
Date of Introduction: 1985?
Wt/Vol., Packaging, Price: Bottle.
New Product–Documentation: Color photo sent by Anders Lindner of STS. 1987. Nov. 14. Bottle with red lettering on white oval. Cartoon of Mickey Mouse.

4739. **Product Name:** Mahewu (Beverage Made from Soybeans and Maize).
Manufacturer's Name: Nutresco Foods.
Manufacturer's Address: P.O. Box ST 61, Coventry Road, Harare, Zimbabwe.
Date of Introduction: 1985?
Ingredients: Soybeans, maize.
How Stored: Shelf stable.
New Product–Documentation: K.E. Weingartner et al. 1987. FAO Food and Nutrition 13(2):24. "Possibly the most popular soy food in sub-Saharan Africa is a beverage called Mahewu which is manufactured by Nutresco in Harare, Zimbabwe. It contains mostly maize and soy. When reconstituted with water, it forms an opaque, cereal-tasting beverage. The drink is consumed daily by thousands of Zimbabweans."

Weingartner. 1987. Processing, Nutrition and Utilization of Soybeans. p. 169.

4740. **Product Name:** Simply Better Soymilk.
Manufacturer's Name: Simply Better.
Manufacturer's Address: 24-B Braeside Dr., Braeside, VIC 3195, Australia.
Date of Introduction: 1985?

4741. **Product Name:** Sunrise Flavoured Soya Milk Drinks [Banana, Chocolate, or Strawberry].
Manufacturer's Name: Soya Health Foods, Ltd.
Manufacturer's Address: Unit 4, Guinness Rd., Trafford Park, Manchester M17 1UA, England.
Date of Introduction: 1985?
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable.
New Product–Documentation: Cole. 1986. Soya Health Foods Ltd.

The Grocer (London). 1987. Oct. 3. p. 41. Non-dairy 'choc ice.' Soya Health Foods has launched Sunrise Carob Ice, a non-dairy 'choc-ice' [vanilla soy ice cream bar coated with carob]. The company has also launched a range of Flavoured Soya Milks in ½ litre plastic bottles and three flavors (chocolate, strawberry, or banana). The rsp [recommended sales price] is 35 pence. A photo shows the three flavors in plastic bottles.

4742. **Product Name:** [Hong Kong Meal Vegetable Milk].

Manufacturer's Address: South Korea.
Date of Introduction: 1985?
Wt/Vol., Packaging, Price: Bottle.
New Product–Documentation: Color photo sent by Anders Lindner of STS. 1987. Nov. 14. 180 ml bottle with green lettering.

4743. **Product Name:** [Yuhanmil Vegetable Milk].
Manufacturer's Address: South Korea.
Date of Introduction: 1985?
Wt/Vol., Packaging, Price: Bottle.
New Product–Documentation: Color photo sent by Anders Lindner of STS. 1987. Nov. 14. 180 ml bottle with green lettering.

4744. *Times of India* (*The*) (*Bombay*). 1986. City notes: Prestige Foods. Jan. 2. p. 10.
• ***Summary:*** Prestige Foods, a leading soyabean processor in India, will enter the capital market on January 30, with an issue of nine lakh [900,000] equity shares of Rs. 10 each at a premium of Rs. 2 pence per share, to help finance its Rs. 1.70 crore [17 million rupees] expansion project.

"The company located in Dewas has a commendable track record. Between 1982 and 1985, its turnover [sales] rose from Rs. 4.24 crores to Rs. 12.69 crores [a 3-fold increase], exports from Rs. 1.80 crores to Rs. 4.10 and gross profit from Rs. 61 to Rs. 230 lakhs" [a 3.7-fold increase].

The company exports soyabean meal to the Middle East, Europe, Asia, and Africa.

Future plans include the manufacture of winterised soya oils for the first time in India and soya milk.

4745. Simas, Luiz; Joels, Bobbi. 1986. Re: Miso, tempeh, shoyu, and macrobiotics in Brazil. Letter to William Shurtleff at Soyfoods Center, Jan. 7. 2 p. Typed, with signature on letterhead. [Eng]
• ***Summary:*** "When we returned to Brazil from the USA in Nov. 1981, we decided to hold a series of classes on natural foods processing, including a class on making tempeh at home. (Tempeh was completely unknown around here at that time.) We also began to make tempeh for our own consumption, but ended up setting up a small shop in our apartment. Because of the limited space, our tempeh production never went beyond 50 pounds per month, in spite of the large demand. So after a year or so, as we had originally planned, we handed the business over to a couple of friends who, unfortunately, for many reasons, were not able to continue tempeh production.

"However there is now another group of people making and selling tempeh here in Rio: Jurema and Mariá Paulinho, Rua Raimundo Correia, 27, apt. 504, 22.040 Rio de Janeiro (RJ), Brazil. Phone: (021) 237-7897. We will always be available for providing any kind of information about or classes on tempeh. One of our dreams is to see tempeh introduced in Brazil's tropical northeast, where an incubator would not be necessary.

"At present we are involved in setting up miso and koji production in our house in the mountains of Minas Gerais for the coming year (1986). It's an old dream, but it looks like it will finally come true. At first it will be a small-scale farm-house style production.

"Miso and shoyu, as well as tofu, are soy products with a long history in Brazil, mainly due to the large number of Japanese immigrants in Sao Paulo. There are many shops there and some here in Rio which sell Oriental products, including miso, shoyu, tofu and natto. Nevertheless, they are usually semi-industrialized and include sugar, preservatives, etc. among the ingredients.

"Production and consumption of quality miso, shoyu, tofu and natto only began with the arrival of Tomio Kikuchi, a student of George Ohsawa's and one of the first people to introduce macrobiotics to Brazil. Until today the best known good quality miso and shoyu are the miso and shoyu distributed by Kikuchi's Instituto Princípio Unico. There are, however, other good misos as well.

"Instituto Princípio Unico, Sao Paulo (SP); Arma-Zen Produtos Naturais Ltda., Rio de Janeiro (RJ); Terrazul, Nova Friburgo (RJ).

"We're sure there are many, many small producers of quality miso and shoyu all over Brazil, but we don't know their addresses. There is also a large company which claims to devote part of its production to naturally-fermented miso and shoyu, with no sugar. The company's name is Tozan. Their factory address is: Bairro Carlos Gomes s/nº, Campinas (SP); phones: (011) 278-2495 or (011) 278-5826.

"There are also two individuals who have a lot of experience in making miso and koji at home. They are available to provide information as well. They are: Dr. Sakae Maki, Praia de Botafogo, 428, s/304, Rio de Janeiro (RJ), phone: (021) 266-0503; Edson Hiroshi Seó, Fazenda Escola, 45.260 Poçoes (BA), phone: (073) 431-1108.

"We will continue to give classes on making homemade miso here in Rio, and we plan on eventually turning our small miso shop in the mountains into a school. We will always be available for any type of assistance or information concerning soy products.

"Several years ago the Brazilian Government tried to introduce soybeans in the public's diet. It was a complete fiasco, mainly because of the lack of information on the part of the authorities. They simply tried to introduce soybeans as a substitute for the traditional black (turtle) beans, and soy milk as a substitute for cow's milk. It didn't work." Address: Rio de Janeiro, Brazil.

4746. Jain, Laxmi; Jain, Manoj. 1986. Re: Proposal for a book on "Indian Vegetarian Cooking with Soy Bean." Letter to William Shurtleff at Soyfoods Center, Jan. 8. 3 p. Typed, with signature.

• ***Summary:*** The authors have been working on this project for several years, creating and testing some 150 recipes. Now they are looking for a publisher. A proposed outline of the book and biography of both authors is included.

"Mrs. Laxmi Jain has lived in the United States for the past 18 years. She is interested in actively promoting the use of soybean in India and America and had developed many original recipes. She has lectured and gave demonstrations with OilSeed Federation at various colleges at Indore...

"Mr. Manoj Jain is a medical student at Boston University, USA and is also working on his Masters in Public Health. He has a B.S. in Biomedical Engineering. Some of his achievements have been, first place winner in Massachusetts State Science Fair for his experiment on 'Irradiation of Cellulose', winner of $1000 scholarship, tuition scholarship at Boston University ($30,000), travelling through several countries including Israel and China to study world religions on a full paid scholarship by International Religious Foundation and is a president of Indian Youth Association of Boston. Mr. Jain has held a Research Assistant position at Massachusetts Institute of Technology and has first authored a paper on 'Mathematical Modeling of Human Inner Ear.' As part of his interest in promoting health care and nutrition in Indian villages, Mr. Jain is studying the role of soybean in daily diet. Manoj Jain, age 22, is son of Mrs. Laxmi Jain."

In response, Shurtleff sent them a lengthy History of Soya in India, and Bibliography of Soya in India.

In return the Jains sent numerous recipes plus a chapter titled "Tofu (soy paneer) as a nutritious, economical and tasty substitute for paneer." Address: 83 Fullerbrook Rd., Wellesley, Massachusetts 02181.

4747. *Times of India* (*The*) (*Bombay*). 1986. Company news: Hindustan Proteins. Jan. 12. p. 13.
• ***Summary:*** The company proposes to start by making potato and banana chips at its plant to be located at Noida. The company also hopes to "enter into the manufacture of high protein soyabean meal, soya flour, soya oil, soya milk and soya extruded products including" soy protein isolates.

4748. Schneider, Keith. 1986. Drug study faults FDA: Residues in animals put humans at risk. *Contra Costa Times.* Jan. 13. p. 5A. [1 ref]
• ***Summary:*** "Washington–The Food and Drug Administration has inadequately monitored the use of toxic drugs and nutrition supplements in raising livestock, posing a grave threat to the health of consumers according to a congressional report. Residues of these substances, many of which have been identified as causing cancer and other illnesses, have been found in beef, pork, poultry, eggs, and milk, the report says.

"The study, 'Human Food Safety and the Regulation of Animal Drugs,' is to be made public today. It is the most detailed congressional evaluation in 15 years of the agency's ability to oversee and regulate the nation's $2 billion-a-year animal drug industry. The study was prepared by the House Government Operations subcommittee on inter-governmental relations and human resources." Address: New York Times.

4749. Hugelshofer, Alison. Assignor to Nestec S.A., Vevey, Switzerland. 1986. Process for the production of soya jelly and product resulting therefrom. *U.S. Patent* 4,564,530. Jan. 14. 1 p. Application filed 23 Aug. 1984. [4 ref]
• ***Summary:*** Made from whole or defatted soya solids, agar, and sucrose. Aseptically packaged. Address: Konolfingen, Switzerland.

4750. McGraw, M.; Bishop, N.; Jameson, R.; Robinson, M.J.; O'Hara, M.; Hewitt, C.D.; Day, J.P. 1986. Aluminium content of milk formulae and intravenous fluids used in infants. *Lancet* i(8473):157. Jan. 18. [4 ref]
• ***Summary:*** A table lists the aluminium content (in micrograms per liter) of infant milk formulae and intravenous fluids. It is not clear which of these compositions are made from soybeans. However, one brand named Wysoy, an oral (locally reconstituted soy-based infant milk) contains 330 micrograms of aluminum per liter.

Another problem is the North West England tap water aluminum concentrations range from 10 to 300 micrograms per liter and are occasionally much higher. Aluminum accumulation in the human body leads to anemia, bone disease, and encephalopathy. This aluminum can be potentially toxic to infants with increased gastrointestinal absorption or impaired renal function. Address: 1. Dep. of Child Health, Royal Manchester Children's Hospital, Manchester, M27 1HA; 2-4. Special Care Baby Unit, Hope Hospital, Salford; 5-7. Dep. of Chemistry, Univ. of Manchester. All: England.

4751. Tsuchiya, Kanji. 1986. Re: Address of the soymilk association in Japan. Change in his personal address. Letter to William Shurtleff at Soyfoods Center, Jan. 20. 1 p. Typed, with signature.
• ***Summary:*** "The Soymilk Association exists and its address has not changed for several years. When I checked the address in your letter with the one I have, there is one thing missing: the name of the building is Ogura Bldg. Following is the address.

"Mr. Okayama Tadashi Managing director
"Nihon Tonyu Kyokai
"Ogura Bldg. 2F 11-8 2-chome, Shinbashi Minato-ku, Tokyo

"Incidentally my address has changed since last February; would you change your record as follows:
"Kanji Tsuchiya
"1-1 3-chome Kamiogi
"Suginami-ku, Tokyo

"Please note that I can not receive any letter addressed to my old house from this February, as our post office stops transferring service one year after we moved." Address: Kamiogi 3-1-1, Suginami-ku, Tokyo, Japan.

4752. *Times of India* (*The*) (*Bombay*). 1986. City news: Kalyan Solvent. Jan. 22. p. 10.
• ***Summary:*** "Kalyan Solvent Extractions is offering on a rights basis to its existing shareholders. convertible debentures worth Rs. 2.85 crores [1 crore = 10 million] to meet the cost of further expansion and diversification plans."

As part of its expansion, the company plans to increase the capacity of its soya solvent extraction plant to 400 tonnes per day from its present 150 tonnes, and the capacity of its oil refinery to 50 tonnes per day from its present 25 tonnes. It also plans to make one tonne per day of soya lecithin and 50,000 litres per day of soya milk, which will be packed in Tetra Pak containers with different flavours and a shelf-life of six months.
